31. In Berlin and Hamburg doctors are appointed who in all questions concerning the health and industrial capacity of the poor persons have to give their opinion, and, as far as it is a question of sick persons, to see to their treatment or assign them to suitable hospitals and nursing institutions. The districts of these doctors are strictly adapted to the relief districts, so that as a rule not more than two (Hamburg) or three (Berlin) districts fall to a single poor relief doctor. He receives as remuneration for this activity a lump sum, which in Hamburg amounts to 1,000 marks for two districts, in Berlin to 1,500 marks for three to four districts. But in Berlin there is an intention to raise these salaries by 20 to 25 per cent. The question of the so-called free choice of doctor, i.e., whether every poor person should have the right to consult any approved doctor at the expense of the poor relief administration, is much debated. Theoretically, this question is readily answered in the affirmative, because one cannot begrudge the poor person his having at hand the doctor in whom he has confidence. From the practical point of view, on the contrary, the free choice of doctor is rejected by all experts. It is necessary that every poor relief district should have at hand a trustworthy doctor, acknowledged by it and always available. Since further authority is granted the poor relief doctor to prescribe not only medicines, but also remedies like milk, meat, eggs and the like, it is to be feared that the doctors who prescribe the said remedies mostly and most freely will be those most sought. This fear has been confirmed by the experiences hitherto made in France and Germany. In the case of free choice of doctor, it would also be difficult to regulate the remuneration for individual cases of treatment. It is sought in the big towns with permanently appointed doctors to prevent possible inconvenience by selecting the doctors very carefully, and carefully controlling their activity. For the most part it may be said that the medical care of the poor in large towns, especially in Berlin and Hamburg, satisfies reasonable claims, the more so as in these towns there are large well-organised hospitals, as well as clinical establishments for the treatment of out-patients in almost as great numbers as in-patients; and, finally, the poor relief administration has, in addition, made agreements with a large number of specialists, particularly oculists, ear specialists, gynecologists, nerve specialists, etc., so as to assure to the poor person special treatment in such cases. A much harder question is medical care in the country, which also in Germany leaves much to be desired. The rural parishes have no, or very small, means with which to appoint doctors; also the doctors themselves are little inclined to settle in the country. In my opinion the only remedy here is for the Provinces and the State to undertake this duty, and either grant the rural parishes means with which to appoint doctors, or to directly effect the appointment of doctors.

13.—CARE OF CHILDREN.

32. As regards the question put to me as to what system in Germany is specially favoured, I can answer that the system of family care (i.e., boarding out) has almost entirely supplanted the system of institutional relief. The big towns have, as in Berlin and

Hamburg, an orphanage into which the children to be maintained are taken first of all. The children can make longer stays in the institution where it is a question of comparatively short absence of the parents, especially of the mothers, and the children can be forthwith given back; or where they are sick children who require special care and medical treatment; or, finally, where they are children of refractory character who must be observed for some time first of all so as to form an opinion as to whether they should be given to family care or to an institution. The Prussian Law on Compulsory Education also places family care in the first rank. The premises unconditionally laid down by all experts as regards family care are, however, firstly, the foster families must be selected most carefully; with the help of special trustworthy persons this careful selection is secured; secondly, the foster families must be continually supervised, which is likewise effected by trustworthy persons who live in the neighbourhood, as also by inspectors directly sent by the Poor Law Boards; thirdly, that suitable money be paid for the care of the children. Its amount depends on local circumstances; but by all means one must aim at securing that the foster parents do not think of money-making in the first place, but take a liking to the child, and consider and treat it as their own. On the whole the experiences made in this connection are to be characterised as favourable.

100301. (*Chairman.*) You attach great importance to large areas of administration, I think?—Yes.

100302. Because then the rich districts help the smaller and poorer ones?—Yes.

100303. You find that in the small districts the difficulty is very often that of finance?—Yes.

100304. As regards the Elberfeld system, I think you consider its great characteristic the constant visitation of the people by the visitor who is responsible; am I right in that?—Yes. As I have pointed out, it is a mistake to call it exclusively the Elberfeld system, as the system has existed ever since Christianity has occupied itself with charities. The chief point of the system is to inquire into the single cases, and to have as many helpers as are needed to inquire into the single cases. We have a system of honorary helpers, and there are so many of them that they only deal with three or four cases each. The system in its modern form has been re-organised in Elberfeld, where they had the great advantage of getting very many helpers, so that they had very few cases for each helper, and every case could be investigated so thoroughly that the total burden on the town became very much decreased, while at the same time the relief granted to the single case became much higher.

100305. In Berlin the grant of continuous relief for a whole year is permissible, but I presume the person to whom such relief was given would be constantly visited during the year by some one?—Yes. I am sorry to say that I am not quite sure that my district committees are so careful as they should be in every case. It is a mistake to allow permanent relief for a whole year, and if I could do away with it I would. I think every case must be inquired into at least every month. By our General Orders, of which I have quoted some in my Statement, it is prescribed that the helpers must have a permanent over-watching of the poor, and if the orders were carefully followed, then it would be impossible that any change in the conditions of the relieved persons could escape the view of the helper; but as a fact I must confess that we have cases in which the change does escape the view of the helper. That is a fault of administration only, and not a fault of the rule.

100306. Have you paid officers who are associated with the visitors?—In Berlin, not; in other towns, yes.

100307. In Berlin then you trust the visitors entirely as regards visitation?—Yes.

100308. Should you like to have paid officials, or do you think that would be unadvisable?—We should like it very much. We think it would be very helpful to have some paid officers, but no men of an inferior class. I want really educated social workers, who will help the helpers, the district committee, to understand their task better. We are now occupied in considering that question. We have in the smaller towns such paid officers besides the honorary helpers, and as far as I know they have proved very well.

Dr. Emil Muensterberg

11 May, 1908.

Superiority of "boarding out" system over others.

Advantage of large areas for administration.

Advantages of Elberfeld system and need of paid officials.

Dr. Emil Muensterberg 100309. In Berlin you have now 4,000 helpers, I think?—Yes.

11-May, 1908. 100310. How are these helpers obtained? Do you ask people to join, or is it the head of each particular district who does that?—They are appointed by the town councillors. It is an honorary duty, and it is not by appointment through the magistrate but by the town councillors, who are elected by popular vote. The whole town is divided into a great many districts; every town councillor is a kind of chairman for his district, and if there is a vacancy in one of the districts the town councillor for the district is requested to see that new helpers are provided. On this proposal they are appointed by the town council itself.

Appointment of "helpers," and disfranchisement on refusal.

100311. Would the councillor ask the person whom he proposed to nominate whether he was willing to serve?—Yes, he would as a rule. But it happens sometimes that he does not ask, and then we may have difficulties.

100312. Can anybody decline to serve after he has been nominated?—Yes; after three years' service he may decline.

100313. But in the first instance can he decline?—No, he cannot. If he does, we have a bye-law which gives the power to punish him by increasing his income-tax on the quarter and by depriving him of his electoral vote for three years. I wish to add that it is very seldom that we make use of that power, because we do not wish to deal with unwilling helpers.

100314. Do you act on a bye-law of the municipality?—Yes.

100315. It is not an Imperial law then?—No. The Imperial law prescribes nothing else but that the poor must be maintained; that is done in two lines, and there is nothing else in the Imperial law. The State laws add that the poor must be relieved by shelter, medical treatment, institutions for out-relief, and so on. The execution of all these prescriptions is absolutely left to the municipality, which can do as it likes.

100316. They have the power of raising the taxation?—Yes; but that is not a poor tax—it is the general tax of the municipality. The whole cost is taken from the money of the municipality. Poor relief is only a department of the whole of the administration of the town. I am an alderman of the city corporation of Berlin, and it is in my quality of alderman, and as a member of the general administration, that I am appointed by the mayor president of this one department of public relief.

100317. Do those who have performed this work like it, so that after they have served three years they will remain longer?—Yes; as a rule they will remain, the greater part of them, for ten years or twenty years or twenty-five years.

100318. So you really have little difficulty in getting people to serve, even without applying the penalty?—We have now a difficulty on one point, in which we are perhaps similar to your conditions in the suburbs of London. We have land which is not built on until the population increases, and then in the new parts of the town where there are only newcomers it is very difficult to get helpers. In the older parts of the town there is no difficulty in that regard.

Co-operation of charities with public relief.

100319. Passing on to the second part of your paper, which deals with the co-operation of public relief with private charity, there is no obligation, as I understand, at present on the charities to co-operate with the public bodies?—Only in a very small degree. The Prussian law prescribes that every incorporated charity and endowed charity—no private charities as such, but endowed charities, church corporations and corporations which are of *utilité publique*—shall give the names of the poor they assist, and the amount of the help which is given to them. It is very seldom that we make use of that power.

100320. Do they offer to give you that information?—Yes. We ask them for it, but it is a little difficult to keep the registers in a big town like Berlin. In many others of the German towns, the relations between the public charities and the private charities in this way are very good and very helpful to the administration.

100321. As regards the relief given, outdoor relief greatly preponderates in Germany, I think?—You may

say that it more than preponderates; you may say that it is the regular form of relief. Preponderance of outdoor relief.

100322. You say in your Statement that indoor relief is only given to certain classes?—Yes.

100323. Your experience is that the system of outdoor relief is a good system where the practice is that of individualised relief?—Yes.

100324. You attach great importance to that, I suppose?—Yes.

100325. You can inquire into the conditions of each individual, and shape your relief accordingly?—Yes.

100326. I understand that in Berlin you frame your own bye-laws?—Yes.

100327. You give us some of them in Paragraph 14. Does each great municipality in Germany frame its own bye-laws?—Yes, they nearly all do.

100328. I was going to ask you if you would not mind letting us see all the Articles of the Instructions as to Outdoor Relief framed by you for Berlin?—Yes. It will be a pleasure for me to send you twenty-five copies.

100329. If you send us three or four that will be sufficient, as we can get them translated. These articles seem to me to be very well drawn; they are comparatively modern, are they not?—Yes. I will send them to the secretary.

100330. You have a system of public insurance in operation which does not exist in the same way here; and old age and you take into account the insurance allowances in giving relief?—Yes. Invalid pension.

100331. I think you have an insurance for sickness, for unemployment, and for old age?—Not for unemployment.

100332. But you have for sickness and old age, I think?—For sickness, invalidity, old age, and accidents.

100333. Would you kindly tell us something about sickness and invalidity?—Do you find that in a great many cases it is difficult to distinguish between sickness, invalidity, and an old-age pension?—Yes, that is so. That is a question which is very much discussed, before all other questions connected with insurance. We want to unite the different institutions for sick relief, invalidity, and old-age relief, because a man who is sick is apt to become invalid before he reaches old age; and so he has not to wait until his seventieth year, but if he goes invalid before seventy, he gets his pension earlier.

100334. That is a point I rather want you to make clear. Under the old-age scheme he would not get his pension till seventy, but if he becomes sick before seventy, and invalidity is proved, he gets a sick pension, which is much the same as old-age pension, I take it?—No, a pension is not allowed for sickness. The allowance he receives for sickness he receives only during his illness. It is usually a weekly allowance; or he is treated in a hospital, or he has free medical relief. The insurance for sickness is not meant as a permanent relief or a permanent allowance. Sickness in our system of insurance is a temporary state, and if the patient becomes a man who is permanently sick he is, so to say, transferred from the sick insurance to the invalidity insurance. All people who are insured against sickness must be at the same time insured against invalidity and old age.

100335. At what age may an invalidity payment begin—I mean when could a person be maintained on the ground of invalidity?—From the moment in which he is declared to be invalid. It does not depend upon a certain age.

100336. Supposing somebody could prove invalidity at sixty years of age, would he receive the invalidity payment up to seventy?—Yes, and after seventy, the old-age pension having been changed before reaching the age of seventy into an invalidity pension. They are to closely connected that one is like the other. If he gets at sixty years the invalidity pension, then he remains in possession of that allowance after having reached his seventieth year.

100337. Do you know if the invalidity pensions are greater than was anticipated?—Yes. They grow from day to day, and whilst in the beginning the old-age pensions were higher, now the invalidity pensions are very much more numerous.

Preponderance of outdoor relief.

100338. Does the man receive under the invalidity pension as much in the year as he would under an old-age pension?—More. It depends a little upon his contributions. If he is unfortunate enough to become invalid after ten years or more, perhaps in his thirtieth year, the pension is smaller, of course, than if he becomes invalid in his sixtieth or sixty-fifth year.

100339. I understand that these invalidity pensions are becoming a serious charge upon the funds?—Yes. The invalidity and old-age pensions will be now nearly £8,000,000 or £9,000,000, or 150,000,000, marks; and the whole amount of sick insurance and old-age pensions and accidents is a little more than £25,000,000.

100340. The medical insurance is not universal, I gather, because a certain number of workmen not in regular employment do not pay that insurance?—Of course.

100341. Do you provide medical relief for those who are not medically insured?—Yes.

100342. You have a large staff of doctors for that purpose in Berlin, have you not?—Yes. I do not know the exact number, but we have now between 100 and 110.

100343. Are those doctors allowed to practice as well?—Yes.

100344. You pay them a lump sum a year, do you not?—Yes.

100345. And they have to attend to those cases?—Yes.

100346. How do you settle which case a doctor has to attend to?—The whole arrangement is managed by the chairman of the district committees. Everyone who is in need of help of any kind, outdoor or institutional, has to apply to the chairman of the district committee. The chairman gives him a certificate for the doctor, and then the doctor is allowed to do whatever he thinks fit for the patient. He can send such a person to a hospital or to an infirmary, or he can treat him immediately by medical relief, giving him medicine and such things. He has to do everything that is necessary to restore the man.

100347. No one in Prussia has a legal right to relief?—That is so.

100348. But if he objects to the relief given he can appeal, can he not, to an authority?—Yes, but not to a court—only to the administrative power.

100349. You are rather doubtful as to the advantage of a tariff system of relief?—Yes, but only for practical reasons. Theoretically I agree absolutely with the tariff system; but practically speaking, judging from my experience, and I have now been twenty years on the administration, the helpers do not calculate so exactly.

100350. The employment of good and adequate case-papers is an essential part of your system, I think?—Yes, but more as a matter of custom than of prescription. We employ very many forms, and I think it is quite indispensable to have the full particulars of the case before us. Then, if a family or a man moves from one point of the town into the area of another district committee, the new committee would have the whole papers before them and in consequence could deal with the case much more easily. It also makes it easier for control by the board.

100351. Passing on to your fifth subject, the procuring of means, I understand that you prepare a budget, taking into account all receipts, and then obtain from the municipality the sum which you have just budgeted for; but if there is greater distress than was anticipated and you require more money, you would get your budget supplemented?—Yes, without any difficulty. Nobody would refuse the means which are wanted for the poor.

100352. May I put a personal question? Do you think that is because you are the head of the administration, or is it the practice to give it? Is it because they have confidence in you, or do you think it is because it would be the practice?—It is the practice. Practically it would be unheard-of, if the Board of which I am president were not to get the money. For instance, at this moment I know that I shall exceed my budget this year, because we are passing through unusual times. Perhaps I shall want £5,000 more. If I go to the town council it will be granted without a word.

100353. We have dealt already with the next heads, the right of the poor and the loss of the electoral vote.

There is a difference of opinion as to what does disqualify; sometimes it is a question whether the person who has received the relief has lost his economic independence or whether he has only received a merited and temporary relief; the law is not very clear on that point, is it?—No, it is not. As a rule the man loses his electoral vote when he receives temporary relief; but, rather on account of administrative difficulties, there is a little leniency shown really. It is too difficult to give an account of all the medical reliefs—the medicine that is given for 2d., for instance; we cannot write that down—it would be such an immense piece of work. Therefore, practically, we do not take an account of the medical relief. But now the question is being very much discussed, and all theoretically agree about the point that treatment in a hospital and in an infirmary must not be bound up with the loss of the electoral vote, because it is a disaster and not a fault of the man. We hope, therefore, that that condition will be abolished.

100354. Would medical relief now disqualify?—Yes; according to the system of our law it disqualifies, but the practice is a little more lenient.

100355. (Sir Samuel Provis.) You ignore it a little, and you do not exactly take account of it where it is small?—That is so.

100356. (Chairman.) I think I need not deal with the figures that you give in your eighth section, as they speak for themselves. Coming now to unemployment, I think you have a labour agency in every populous district?—Practically, yes, but not always as a municipal institution. At Munich, for instance, it is a municipal institution, but in Berlin it is not—though in Berlin it is maintained in such a way that it is nearly a municipal institution.

100357. In Berlin it plays a very considerable part in industrial questions between employers and employed, does it not?—Yes.

100358. Then as to insurance against unemployment, you think the only system which promises success is that on the principle of the Belgian system?—Yes.

100359. That hardly touches the poorest class of workmen, does it? The Ghent system only applies to or affects the organised trades, and not the poorest class?—That is so; it is quite without influence on the latter.

100360. Therefore it is no insurance of the poorest class?—No. That is the real difficulty that we have. Then also a great many trade unions take care of their members in times of unemployment. I made observations in connection with the great building strike last year. We have had nearly no applications from the side of members of the building trade unions; but those people who do not belong to a trade union, and who are unemployed, give us great difficulty.

100361. Do you think that unemployment can be dealt with by the provision of work by the parishes?—Yes, partly. We have in every town work similar to what is provided by the distress committees, but not by order of the law; it is done by the free decision of the administrations, because we think it desirable to have some work which is useful but not urgent, which can be reserved for other times. So practically in Germany a great deal is being done for the unemployed in the harder times, but it is done without rule and without law. It is done by individual town administrations.

100362. Passing on to compulsory detention, I see you have two classes of measures—you have the penal measures detention, under the Imperial Penal Code, by which drunkards, idlers, and tramps can be punished either by imprisonment or by compulsory labour in the workhouse for two years?—Yes.

100363. Are those penal measures much used?—No. I am sorry to say they are very useless, because they are employed by judges who have no understanding of social conditions of this kind. In all our meetings we complain of this state of things. It is really a pity to see the healthy and able-bodied people walk through the town and desert their families, because we have no means to punish them, or if we bring them before the judge he merely fines them 10 marks, which they can earn within a week. The law is not bad, but the administration of the law is bad.

Dr. Emil Muensterberg
11 May, 1908.
Disqualification of medical relief.

Unemployment in Germany and application of Ghent system of insurance.

Compulsory detention, and classes so detained.

Dr. Emil Muensterberg
11 May, 1908.
Compulsory detention and classes so detained.

100364. Then you had administrative measures which were enacted by the law of 1855, under which persons could, by administrative procedure, be assigned to the workhouse if they deserted their families; but that law has been repealed?—That is not in practice now; that is abolished.

100365. But in Hamburg they have got a law something like that, have they not?—Yes, a quite new one. It is not yet in force, but I think it will start very probably next January, and we are very curious to see what will be the success of it.

100366. I see you say that: "For a decision establishing the enforcement of work, a majority of four is requisite"; the court consists of five, does it not?—Yes.

100367. And four of those would have to agree?—Yes.

100368. Is that right?—It is to give the greatest protection that is possible against abuse.

100369. Do you think something of the kind described in your Statement ought to work well?—I hope so. In Germany we are really very anxious about this new step at Hamburg; we hope very much from it, and we hope that it will be a model for other States, and perhaps for the Empire.

100370. At present, the only means of detaining a person is through the Imperial Penal Code, apparently. Have you any other power of detaining a person?—No; we can only act through the Criminal Courts. But Hamburg will now have the power of such a kind of detention without a judicial decision.

Labour colonies and home inns for wayfarers.
100371. The labour colonies to which certain people go are not institutions maintained at the public expense, are they?—No.

100372. But you have penal workhouses?—Yes.

100373. Which are maintained at the public expense?—Yes. They are put up not by the municipalities, but by the provinces, which would correspond perhaps with your counties.

100374. Do the provinces combine to maintain one for the use of a great many?—They do not combine. A province is a great administrative division of the whole kingdom. The whole kingdom is divided into thirteen provinces, and the province is one of the greater departments.

100375. You say: "The labour colonies have proved themselves a means of now and then restoring to work persons unaccustomed to work; but the number of the really improved is comparatively small." Not many have been reclaimed through these colonies, have they?—I daresay in a year nearly 4,000. But first we send old people and people who are really destitute and outcasts—drunkards and wayfarers.

100376. Then I see you have in Germany Home Inns where persons who want work can receive lodging for the night. I understand that workmen who are really in want of work get better treatment there than the ordinary vagrant; is that so?—I cannot say so, because we admit able-bodied people also to other relief. If the district committee can prove their willingness to work, then they are admitted. The invalidity card is a great help. If a man, for instance, has the twelfth or thirteenth card with stamps, that is a sign that he has had work all the time. If he shows such a card, and if the other information in the house is good, then he gets other relief. We have for the able-bodied without employment very large night shelters and refuges.

Rural and urban medical relief in Germany.

100377. Now I come to the medical service. In paragraph 31 you describe to us the system of Berlin and the big towns, and at the end of that paragraph you say a much harder question is the medical care of the poor in the country?—Yes, that is so.

100378. Your idea is that they want more money?—Yes.

100379. And a larger area I suppose?—Yes.

100380. As they at present are unable to appoint the number of doctors that is necessary?—Yes. That is my opinion in regard to all Poor Law administration in the smaller towns and villages. Poor Law relief there is only a question of money—nothing else; its administration is very easy in a small village. But in a large and big city, it is not so much the want of money as the

question of administration, and in the country generally the case is very bad.

100381. The last subject you deal with is the care of Boarding-out children; the system that you adopt is that of general boarding-out the children, is it not?—Yes, absolutely.

100382. Do you find that works well?—One cannot answer with a quite bare yes or no. In Berlin we are now very careful in selecting the foster-parents, and to over-watch them by the inspectors. If good inspection is not guaranteed, the system works very badly.

100383. Have you any difficulty in getting the right sort of people with whom to board these children?—No, we have not. We do it very much in the country and not in Berlin. We have many hundred colonies in several parts of the Empire where we board our children.

100384. If you send Berlin children to a district some way from Berlin, who looks after the children, and inspects the children?—We have in every one of those little villages, which we call colonies, trustworthy people such as clergymen, teachers, farmers, to whom we pay a little compensation for every child in order that they should look after it. From time to time we send inspectors to the different colonies. The system works fairly well.

100385. There is no direct election in Germany for the Poor Law, but it is part and parcel of the municipal government, I think?—Yes. The Poor Law is only a general prescription that every poor person must be relieved conformably to his need. There are towns which refuse outdoor relief, and others which refuse money and give relief only in kind, so that the practice everywhere is quite different; but as a rule, one can say that outdoor relief is prevalent.

100386. Do politics in Germany enter very much in municipal contests?—Absolutely not.

100387. Not at all?—No. They do a little in educational work, but there are rather Confessional questions and such like, that arise. In our work I may say absolutely not.

100388. When a contest takes place in a new municipality, would not politics enter into the contest?—No, as a rule not.

100389. (*Sir Samuel Provis.*) With regard to the care of the children, what is the area which bears the expense outside the large towns?—Every municipality. There does not exist any part which is not covered with a municipality, a borough, or a village. It is done conformably to the laws of settlement.

100390. When it is not a large town, is that a small area?—Yes.

100391. Does that make the expense heavy sometimes for small towns?—Not only expensive but absolutely ruinous for small towns. Two weeks ago our Law of Settlement was changed on that account. Our aim is to help those little villages by contributions of the larger departments and the State; but at this moment it is really ruinous. It is impossible to stand such a budget.

100392. How do you propose to meet that; by making the area larger, or by making a contribution?—We who are experts, if I may say so without lack of modesty, agree with creating a larger area so that a number of small villages are combined into a greater union. It is allowed now by law, for such a law exists; but, as a fact, none of those small communities have ever made use of it, because if the one has a little more wealth than the other they are in fear that they will have to pay for the other; therefore it must be by compulsory law. It will never succeed if you have it dependent upon the good-will of the single villages. We now aim to have compulsory law to compel the small villages to unite.

100393. That is more on the lines of our union system?—Yes.

100394. Going back for one moment to the question of the right of the poor to relief, I think you said there was an appeal to an administrative officer? Is that an appeal to a Government officer?—Not to an officer; it is to the Government itself. It is to the province government, what we call oberpräsident; we have some administrative powers with administrative courts, and the appeal is to the administrative court; but it is not dealt with by a judicial procedure.

Appeal and right of poor to relief

and 100395. What I understand is this : that a person who poor is refused relief may appeal ?—Yes.

100396. But the appeal is to an administrative body, which does not decide on judicial grounds, but on administrative grounds ?—Exclusively.

100397. (*Chairman.*) Is the body to whom the person appeals connected with the Poor Law ?—No, only connected with the general administration—all kinds of administration.

100398. (*Sir Samuel Provis.*) Do you have many cases of such appeals ?—No, very seldom, it depends. For instance, in Berlin I am the court of appeal. I am kind-hearted with regard to all the poor ; and if they appeal to me I enter into the case ; but as a rule we very seldom have appeals of that kind.

100399. I see that you are not in favour of the workhouse test, but would regard a very stringent system of examination and a very full system of examination as superseding the necessity for a workhouse test ?—Yes. That is a very difficult question. We have not what you call workhouse tests for the greatest part of our cases. We have no workhouse tests at all except in this way : If a man or woman applies to be helped, and the district committee has inquired into the case and is of the opinion that such person cannot be helped or cannot be relieved by outdoor relief, then they say : “ If you are in such need that you cannot help yourself, we will take you into the workhouse.”

100400. (*Mr. Loch.*) That workhouse would be the Poor Law workhouse ?—It is not prescribed that every union must have a workhouse ; but most of the bigger cities and of the greater communities have such a workhouse or almshouse ; but it is not quite the type of workhouse in the sense that you have.

100401. They are more like a poor-house ?—Yes.

100402. (*Sir Samuel Provis.*) Your scheme involves a very great number of investigators, does it not ?—Yes.

100403. Are you able to secure uniformity of investigation or uniformity of action on the part of those people ?—Yes.

100404. How do you do that ?—We have a general order or rule of which the Chairman spoke ; and I will send you copies of it. That is directed by the Board, of which I am the President ; and I myself am very careful to see that the instructions are followed. I allow audience to every poor person in the town, which consists of more than 2,000,000. Every poor person may apply to me directly. I have three days a week audience, and everyone may apply to me ; so that by this personal influence care is taken that the district committees are not out of touch with the head of the administration.

100405. Do you find your helpers rather tender-hearted and rather desirous of giving relief ?—It differs ; in the wealthy districts they are sometimes a little generous, but in the poor ones they are more reluctant.

100406. Do you find difficulty from that in securing uniform action on the part of your helpers ?—Yes, there is uniformity only in the one community, not in the whole country. Every town rules as it likes.

100407. (*Mr. Loch.*) In your organisation of poor relief in Berlin you group your small areas into larger ones, kreise, do you not ? You have three authorities ; the central, then somebody over a group of small districts, and lastly the small districts ?—Yes ; there is the general board of direction ; and then under the general administration there work nearly 400 district committees, who have to deal with the single cases without approval of the Board. They have to decide upon the single cases.

100408. In this way the control which you exert from the central body extends over the whole of the area ?—Yes.

100409. And the smaller local areas are controlled by a group of committees with one president ?—Yes, in a certain way. We have arranged for some years that between the Board and the district committee there should be another authority which consists of the chairmen of the single committees ; fifteen to twenty are grouped as an authority ; and they have to decide upon the complaints of the poor, and upon certain general questions. That has proved itself a very good means of

taking the burden from the general board, and from my own work, because we have an intermediary between the districts and the Board. *Dr. Emil Muensterberg*

11 May 1908.

100410. These districts are not in any way connected with the wards for electoral purposes, or anything of that kind, are they ?—No, they have nothing to do with the wards.

100411. They are entirely independent of the other districts ?—Yes.

100412. At the central office which you preside over you have a register of all the cases in this population of 2,000,000 ?—Yes.

100413. Do you include the suburbs at all ?—No ; because the suburbs are quite separate municipalities. I am sorry to say that, but it is so. We give mutual information ; but we have no insight into the cases which are in the suburbs.

100414. Do you think that a system of registration such as you have would be applicable to a larger population such as we have, say 5,000,000 ?—Of course, it must be possible. We cannot do without it. Every case is registered in alphabetical order ; and, when we have the papers, it is found out in a moment, whether we have investigated the case before or not.

100415. Then your district committee is always obliged to consult you, before going on with a case, as to whether it is known ?—Yes, they report every month. After their monthly meeting they have to report to the general board, and give in the report the papers of the new cases which they have treated ; then the papers are embodied in the general register, and sent back to the district committee.

100416. Your clerk or clerks look through the papers, to see if the case is already known elsewhere ?—Yes, they should do so ; but that is also a little deficient. I have a separate office in which the reports of the district committees are controlled. I think there are perhaps twenty or twenty-five people who have nothing to do but to control the reports of the district committees, partly with regard to the accounts which they have to give, and partly on account of the quality of the case ; so that, for instance, a case which does not conform to our rules may be reproached or sent back.

100417. Then, in that way you are practically checking the whole administration of the town in detail from the centre ?—Yes.

100418. Not merely in general ways, but in detail ?—Yes ; not in a general way, inasmuch as we have in control the whole administration, and give rules and orders, and deal with single committees whom we control, besides the single cases ; but as a rule the single committee is quite independent.

100419. Do you have inspectors besides ?—No.

100420. Do you think that would be a good thing to have with your system ?—Yes, I think it would be a very good thing, but I should not be very anxious to do so, because I think the members of my district committees would kill me if I gave them inspectors. It is nearly impossible to give them with honorary officials. I am very cautious. There is a board they know, and it is empowered to reproach them or give them orders ; that they are accustomed to ; but to give them inspectors, paid inspectors who have to watch over them, I would not say it would be quite impossible, but very difficult. I can assure you it is such a serious question that we are very much occupied with it, and I think to do it, but in a concealed way, so that they do not become aware that there is an inspector.

100421. With regard to the applicants who are placed by you in hospitals, do you pay for those out of some fund that is granted to you ?—Yes, the same budget. It is divided into titles and divisions, but it is the same budget. *Co-operation of Poor Law with voluntary institutions.*

100422. And you would include those persons in the total of the number of poor persons in Berlin for the particular day or year ?—Yes.

100423. Do you send them to any large extent to voluntary or municipal hospitals, and pay for them there ?—Not so very many ; there must be made the distinction between infirmaries and sick hospitals, and hospitals in the larger sense for old people, and such like. Private sick hospitals are quite excluded because we have now,

Dr. Emil
Muensterberg

11 May 1908.

Go-operation
of Poor Law
with
voluntary
institutions.

perhaps, 6,000 beds of our own, so we do not need private hospitals. But the old people, or a great many of them, are sent to private institutions. We have some institutions with which we are in relation. When we have a good institution for deserving old women or deserving old men we allow them to go into those institutions; and we pay £1 10s. or £2 a month, for them there.

100424. Those are voluntary institutions in which you would place them?—Yes.

100425. To a large extent you are using voluntary associations in supplementation of your general administration?—Not so much; but, for instance, such new institutions as the sanatoria for consumptives, and the holiday homes for children. In the last few weeks there has been instituted a quite new organisation for crippled children; and with that institution we have agreed to send the children to them, and we pay because we have no such institutions. I have convinced myself that that is a very useful institution—where they have apprenticeship, and so on.

100426. And so you are always ready to turn to account any institution that you think may be of service to you in administering poor relief?—Yes, we are quite free in that respect; but that is, of course, an affair of the general administration; that cannot be done by the district committees, only by the Board.

100427. As a rule, are the admissions to institutions arranged by the Board and not by the district committee?—Yes; that is because it would be impossible to allow 400 district committees to send to the institution. It must be done by way of the general board; but it is not so very difficult; they report to us; we have several general rules; the cases are investigated; and then they are sent by the order of the general board.

100428. Your general board really acts as a controller and administrator in all the institutions?—Yes; we send people there to revise them; they are private institutions partly; and we send members of the Board in order to revise them.

Relief to
able-bodied
men with
families.

100429. When you have an able-bodied man with a family your practice, if he was a man of obviously good position, with a good character, and so on, would be to give him outdoor relief?—Absolutely.

100430. In those cases is there any limitation as to the continuation of the relief, or do you let it go on subject to a general control?—It is done in the same way as the other relief. If it is a really deserving man, whose willingness to work is without doubt, he is relieved several times, perhaps two or three months, without hesitation.

100431. You do not find evil results from that?—They are very good. We are quite satisfied with the results if, as I must repeatedly point out, there is a thorough investigation.

100432. Supposing you have the other class of man, not of satisfactory position, known to have applied before, and so on, and the sort of case that we should very likely offer an order for admission to the House, what do you do with that case?—If we have able-bodied men who are not deserving, who live with their families, then perhaps we give the wife and the children relief, and tell the man to go to work; if he does not, we refuse further relief, and then he must do something. If he is very undeserving, and the children are in danger of being neglected, then we ask for a judicial order so that we may take the children away, because we have no power to compel the man to give us the children. We have no other power than to decide upon relief or no relief. If we say: We refuse relief, then the case is rejected; but if the district committee becomes aware in that case that there are children in a very bad state, neglected, ill-treated, and such things, then they report it; and we try to have the children placed under our authority. For those purposes we need a judicial decision.

100433. (Mr. Nunn.) If a man is told to go to work, is work provided for him?—No.

100434. (Mr. Loch.) He is told to get work anywhere he may?—Yes.

100435. The penalty in such a case is that the children at any rate, are taken away?—Yes.

100436. What becomes of the wife?—That is a very difficult question. If we can we compel her to pay for

the children; but we have a very weak law, which is also very badly administered. It is the law that we can cause her to be compelled; but the law is very badly administered by our judges. It is just the same as I told you before; We can ask the wife or the man to pay for the children, and if we proceeded so far that he is compelled and then try to execute the order, he changes his workplace, or even he leaves the city, or he is not to be found. On paper it is a wonderful law; but in practice it is nearly useless.

100437. Practically, when it comes to this stage, you are very often left finally without a remedy against the man?—Yes.

100438. Do you find that these children are increasing in number; that you have to take charge of a larger and larger number year by year?—No, it is not so very bad.

100439. Do you find that there is much desertion of children?—Yes, very much.

100440. Irrespective of any procedure such as we have been talking about just now?—Yes.

100441. What do you do in these desertion cases? How do you hear of them; in the first instance by an application from the deserted wife?—Yes. We try to make him or her condemned, and we try to have payment from him or her; but it is very difficult to execute such an order.

100442. Practically, do you find the man has gone away leaving the wife to make the complaint simply?—Yes.

100443. He is not in the same town possibly?—As a rule they remain in Berlin, but it is very difficult to find them out, they are in another place.

100444. To turn to another point, do your statistics show that, taking the last twenty-five years, your outdoor relief has been increasing?—Not so much. In my Statement I have given some figures about the efficiency of the Elberfeld system, and you will find where there is a very thorough investigation, as happened after the reform of 1892 in Hamburg, there is a visible decrease in the number of relief cases. You may see from that, that with thorough investigation it is quite without danger to give outdoor relief.

100445. (Prebendary Russell Wakefield.) With regard to the non-tracing of people who go from one part of Berlin to another, I should have thought under your German system, the *dossier* system, it would be quite easy to trace a person who had deserted his wife?—By means of the police?

100446. Yes. You said a man might go from one part of Berlin to another. What I was rather feeling, having lived in Germany for some time, is that it is rather easier to trace people in Germany than in England?—It is easy to trace them, because we have compulsory registration of all inhabitants; it is not so very difficult to find them; but it is very difficult to keep a man up to his duty; because if we have an order for payment and he has work he leaves the place he has occupied and betakes himself to another place; so, though it is not very difficult to find him, it is very difficult to keep hold of him.

100447. (Mrs. Webb.) Do not the police notify to you that he has changed his address?—Yes.

100448. Cannot you follow him up at once?—Yes, we apply to the police; we are in continuous communication with the police that they should give us the address of such people, and that is very well managed.

100449. Is it still difficult for you, with that police information, to follow him up? No, it is not difficult.

100450. (Mr. Loch.) Still, they very often succeed in getting away without being caught?—Yes.

100451. In practice, do you find that immediate steps are taken to find them if they go away and desert? Are they, in fact, always followed up at once?—No.

100452. They are not followed up, and so they get away?—Yes; very often they remain in communication with their wives, and are only deserting on account of poor relief.

100453. Do you find that the money that is being spent on outdoor relief is increasing very largely?—No.

100454. One of the tables in the Berlin Year Book made me think that it was increasing?—It is, but not so very much, it is only a certain percentage, not in proportion to the increase in population.

100455. Not in proportion to the increase in population?—No.

100456. It is 4,600,000 marks in 1907–8, and 6,527,000 in 1905–6 under the same headings; but on the whole you think that that is nothing excessive?—No, not excessive, compared to other towns.

100457. You think it is higher relatively than in other towns, Dresden, for instance?—Certainly. In Hamburg it is much lower relatively. If we had the same figures as in Hamburg we should have to pay 1,500,000 marks less.

100458. That is due to the character of the people who are managing things in Hamburg, perhaps?—Yes; the city is smaller; the number of helpers is much greater; and they are accustomed to a more thorough investigation than in Berlin.

100459. Do you think that the time may come when the interest in this question will pass away, and the helpers become fewer and fewer?—I think it is a danger of which we become aware every day; the danger to-day is not so very great, but I feel it will become greater at a later time, with the increase of the town, when there will be the same custom as in London; that the one class goes to the west and the other remains in the east. I am afraid then that we will have to deal with this danger.

100460. In that case, which is nearer our position in London, you would have to trust more to officials to make the enquiries, would you not?—Yes. Up till now there is no case in which the enquiry is made by a public officer; but I believe there will come the time when we shall be obliged to have some paid officers in order to supplement the enquiries of our honorary people.

100461. There is a difficulty when you get a comparatively poor district in which there are few men of leisure, and you have to trust all this work to people from the poor district. I notice it was said that in some towns in those circumstances they appoint paid chairmen of committees to manage the business?—No, not up till now. Up till now in all the towns I know it is the same system without exception, it is an honorary system. In the very few towns where there are paid officers they have only to assist the honorary people; but the first enquiry, and the decision about the relief itself is in every town in the hands of the district committee merely.

100462. With regard to the one point of the government of a German State. We have here a very low franchise. Do you not, in German towns, have the three-class system?—For electoral wards?

100463. Yes?—We have.

100464. The people who have the larger property get the special option of choosing, I think, one-third of the council?—Yes.

100465. The consequence is that you have in your electoral system a very great check on what you may call popular election?—Yes.

100466. Does it not follow from that, that you have a social position in relation to all this administrative work, which is due largely to the persons who are managing it being persons of property and responsibility? Do you not think this is a very strong factor in carrying this thing through?—It is more in the smaller villages that there is the influence of the proprietors and landlords, it is stronger there than in Berlin. In Berlin there is the liberal air, and it is impossible that the interests of house-owners should be of so great an influence on the administration of the Poor Law; but we have no bad experience in this way.

100467. This would affect smaller towns, would it not, towns not of the size of Berlin, but towns of 200,000 or 300,000 inhabitants?—No, not 200,000 or 300,000, but 50,000 or 60,000, and smaller ones.

100468. With regard to the provision of employment, you make no arrangements at all in connection with the administration of the poor; you trust to what the municipality may do?—Yes. We do not undertake any work on the part of the poor administration, but perhaps we induce the town administration. I am myself a member of the town administration; so, without any formality,

I can point out in our meetings of the town council that it is a very bad time and we need some help. For instance, four weeks ago the question was discussed very passionately in the town council; and it was decided that all the work which could be done immediately, which would have been delayed a little, should be done now, so that there should be a little more employment than in regular times.

100469. Would the supply of that work all over Berlin depend on the town council, or would there be some subordinate authorities on whom it would be thrown?—On the whole of Berlin, because we have not, as you have, thirty-one vestries or parishes.

100470. Has what the town council has been able to do met the difficulty hitherto?—Not very much.

100471. It was enough to carry on with?—Yes. It is not so very much, it is more to console them a little, the same as your law for unemployed workmen; to show the people that we are inclined to do something; but it is not of such very great importance.

100472. With all your experience, are you satisfied with the definitions that are generally used in relation to relief, so that public relief must confine itself to the provision of what is absolutely necessary for the support of life? Only so far as the person's own income is insufficient for the purpose is the deficiency to be made up by relief. Is that what you may call a fairly good practical guide in what you are doing?—I think so; I think it has proved so in practice; but it depends very much on the ability of the district helpers.

100473. That is what you put before them as the line they should take?—Yes.

100474. Just to take another definition: "The pauper shall not be placed in better position through relief than the person who provides for his own support by free labour. On the other hand, relief shall be afforded in such a way that an existence worthy of a human being shall be made possible for the person in need, and that he shall not merely be prevented from starving by the grant of entirely inadequate relief." Taking that as a whole, you think that is a fairly good guide for your workers practically?—It is. It is the test of less eligibility, so that people in no way earn more by relief than by wages. On the other hand, we do not wish that a widow who cannot earn so much should be nearly starving, but that she should have a fairly good existence.

100475. Your argument is that what is done must be done humanely, in consideration of good feeling and humanity?—Yes; we recommend to our helpers that they are, if they can, to deal with widows with children very kind-heartedly; and we have in the last session of my board decided that the relief for widows with children shall be raised.

100476. With regard to voluntary contributions, do you find that the cases you are relieving at the district committees, if I may so call them, are also being assisted from voluntary sources?—Yes, they are very often.

100477. Do you think those voluntary sources are always known to you?—No, we do not know in every case; but now I can say by my efforts our district helpers and the chairmen of the committees are on most friendly relations with the private charitable associations and undertakings. I point out as often as I can that they must co-operate with the private societies.

100478. This plan is rather different from what people in London have been working upon. Here the desire has been rather more like what they are doing in Amsterdam: To create a line of charitable work parallel to the Poor Law work. I understand that in Germany you do what is being done in England unconsciously. You unite in a manner and publicly organise the unification of so much charitable relief work with so much Poor Law relief?—That is not quite so; because we deal, relatively, generously with our poor, say a widow with children, so that there is no need of very much help on the part of private charities; and our aim is that the private charity should supervise such help as is outside necessities, for instance, the apprenticeship of children, and treatment in separate homes, and such things. We have also what you have here, which your name and organisation is a model for; in Germany we have quite the same kind of charity organisation society; but I think with a more restricted practical influence.

Dr. Emil
Muensterberg
11 May 1908.

Provision for
unemployment
in
Berlin.

Test of eligi-
bility applied
to poor relief.

Co-operation
of charitable
relief work.

Dr. Emil Muensterberg 100479. (*Miss Hill.*) In enrolling these helpers how do you set them to work? You find first the people who will be your visitors, then they become members of a small committee; who teaches them?—The whole town is divided into about 400 district committees, every one of which has a chairman and eight, ten or fifteen helpers. Those chairmen and those helpers are appointed by the town councillors, and the town councillors appoint them as they will. The whole town is distributed to the town councillors, and they find out honorary people. They form little communities of citizens in a very small area, who are well acquainted with each other; and if, for instance, a man of more progressive character wishes to be appointed, it is very difficult to bring him into that district committee, because the others resist; and it is the same with the women.

100480. What I was wondering was how they learned, how they got the experience necessary to enable them to deal wisely with the cases?—They acquire experience and knowledge by inspiration.

100481. And by working side by side with those who know more than themselves?—No; I am sorry to say; we are now also in very serious discussion whether we cannot have some helpers with a kind of education. A little help is that I myself convoke all the chairmen of the town three or four times every year and give them a lecture, not a lecture in a formal sense, but I speak with them about the whole matter, and then they have free discussion. That is a little help; but as a rule they learn from each other by experience.

100482. It often seems to me that the great difficulty of what we call the Elberfeld system is the difficulty of setting people who have no experience to decide what it requires a good deal of experience to decide wisely?—That is so.

100483. Your person to whom you give four or five families is excellent if he or she knows what to do; but if they do not, unless they get advice somewhere, it seems to me it is a very difficult system to carry out well?—I do not think it is so very difficult; one must not underestimate what is the experience of life. A little dealer, for instance, has seen so many people come up; he knows the small lodgings; he knows the people who live there; they tell about each other; and in my experience, if they are a little intelligent and kind-hearted such little merchants are not the worst investigators. We have also very good experience with teachers; they have not so great an experience when they begin, but they acquire it; and they learn by the other members of the district committee. It is not so bad as it may seem.

100484. Then I suppose you trust a good deal to the fact that they only have four or five families, and that they concentrate their attention on those four or five?—Yes.

100485. Instead of scattering their sixpences and shillings all round?—Yes.

100486. And they watch those families and get to know them?—That is the true essence of the Elberfeld system.

Comparative merits of tariff against free judgment system. 100487. In your Statement you contrast what you call the tariff system, which I suppose is what we call the scale system, with a rather freer decision. You prefer the freer decision to the tariff system, I gather?—Yes, not theoretically but practically, because we have had experience. If I tell the helper: you must take into account the income of a man or his wife with all that is contributed out of the income of the grown-up children, and so on; and then you must make a bill in which there is on the one side the whole income, and on the other side what they want, and then you will give the difference as the allowance; that is in theory very good, but practically it is very bad, because we have had experience that the helper, perhaps, for the first time, when he has to deal with the case, begins with a just calculation; but if it is a permanent case he does not review it, and so he does not find out whether there is a need to increase the relief, or if there is reason to diminish it, or to abolish it; therefore I repeat, practically we have had experience, but theoretically I think the tariff system is the only just one.

100488. In those cases in which a man deserts his wife and children, and you take the children under your care, do you take them permanently, or can the man claim them back?—It depends on each case.

100489. He can claim them?—Yes.

100490. Can he take them back again?—Yes. If we see that it is a bad woman, or that the children will be demoralised, or neglected, or ill-treated, we get the decision of the judge, so that we have a judicial order, to have the power to keep them as long as we may.

100491. (*Prebendary Russell Wakefield.*) Up to what age?—The law for compulsory education gives the power until the twenty-first year. We have tutors until the twenty-first year; but the age up to which we can have a judicial order is only the eighteenth year; but once we have them we can retain them until the twenty-first year.

100492. (*Miss Hill.*) Are all your helpers men?—I am sorry to say the greater part are. I have with 4,000 male helpers only thirty females. Advances of employing women; invest torn.

100493. You can have women if you want them; you have the power of enlisting them?—It is quite the same: the helpers, whether male or female, are appointed by the councillors. I like female helpers, and if I could I should have not forty but 400, and perhaps 2,000, so absolutely satisfied are we after our experience with the female helpers; but our district committees resist immensely. They declare: "If you compel us to take women into our committees then we shall resign."

100494. I think it is very likely that the men would come less if the women were brought in?—Yes.

100495. I think it might discourage the men, which would be a pity; but I agree with you it would be well to have some women?—Certainly.

100496. (*Mr. Chandler.*) I think your Poor Law administration is conducted entirely through voluntary committees?—Yes. Admini- ration of er- man P Law.

100497. The only connection your council has with it is the appointment of the chairman?—No, the helpers are appointed by the town council. May I make this observation, it is perhaps a mistake, but we have two bodies of administration in every town. One body is the government, which goes under the name of magistrat, which consists of aldermen; and the other body is the council, which consists of 134 members elected by popular election. Those town councillors have to appoint the helpers, and if the helpers are designed for a certain district committee, then the helpers may themselves appoint their chairman, and the chairman must have the consent of the board, or my consent, the consent of the President of the Board.

100498. Are you president of the entire operations of Berlin?—Yes.

100499. Including a number of committees?—Yes, that is because in this part of our administration, which is the magistrat, and which consists of the aldermen, the aldermen have the presidency of one or other of the departments; one the sewerage; one the building; one the engineering work; and I am, for instance, in my capacity of alderman, President of the Department of Public Charities.

100500. Is that a paid office?—Yes; we are half paid and half unpaid. I was a long time unpaid; but because I could not manage for all the time to devote my whole time without pay, I have been elected a paid alderman.

100501. You hold a court three days a week and hear complaints?—No; our board meets once every month. But I personally give audience three times a week to my poor people.

100502. Do I understand you to say you gave three days a week?—Yes; but that is because I wish to do so. I am not obliged to do it. It is my own free will, in order to give a little confidence to my district committees, that they know there is someone who watches over them.

100503. Is that purely to be consulted by district committees?—No, not only that, anyone who will come; also people who wish to avoid public relief, and who wish to have counsel about it. It is a personal confidence in

the leader of the Poor Law administration, and because it is not so sharply separated; I am a member of so many private undertakings that they do not distinguish whether I act in my quality as president of the Poor Board or as representative of any charitable organisation.

100504. If a poor person felt that she or he were not being justly dealt with could they apply to you? Everyone.

100505. With regard to procuring means, is this power of calling in supplementary taxes vested in the town council?—Yes.

100506. Could they widen the basis of taxation and tax amusements?—Yes. We have only to apply to the town council for our means; but the town council has to say what percentage of the tax must be raised every year.

100507. That is quite outside the State taxes?—Yes, quite separate from State taxes, but on the basis of State taxes. The principal tax is on the basis of the State tax—*income-tax*.

100508. (*Dr. Downes*.) I am not quite clear as to the relation between the municipalities and the State Government. Has the State Government any control over the municipalities?—We are under the control for all municipal action. Our actions are under the control of the Government; and the Government can, if it will, send a member of the Government into the town and revise our papers, and such things; but as a fact no Government in Germany, so far as I know, does care about it. In fact we are quite free.

100509. Do the Government contribute in any way?—In some way, but not immediately. It is by way of the province. The provinces are similar to the Metropolitan Asylums Board, and have to provide institutions for the deaf and dumb; for the blind, for epileptics; and lunatics. The provinces, as we call them, are subsidised by the State by lump sums, not on account of the single cases; but the municipalities are without any help from the State.

100510. Is the State, when it contributes to the special institutions of the provinces represented on the management?—No; it is so very seldom that one can say it is not. It does not contribute to the single institutions; it gives the provinces a lump sum as a donation; it is a lump sum contribution.

100511. Does the Government seek to promote uniformity of regulations on principle?—No; it would be possible; but as a rule the regulation of those matters is quite left to the single municipalities.

100512. Are there any agencies which seek to promote uniformity of principle? Do you meet voluntarily with your colleagues of other municipalities to discuss the principle of relief?—Yes; we have a very strong and a very influential meeting, a little more than your Poor Law conferences, because our charitable organisations and agencies and private persons take part in it. It is the German Society for Charities and Poor Relief. I am the general secretary and vice-president of it. It has existed since 1880, and we have published more than 100 volumes. The society has had such a great influence on societies, municipalities, and governments, that one can practically say that no reform which has been realised in the last twenty years has been done without the help of the society. It is not official, it is private, but, in fact, in reality it has had an immense influence.

100513. With regard to medical relief, are there any statistics of the cost of medical relief in Berlin?—Yes; we have some in the reports of our hospitals, and also in the reports of the Poor Law Board; but they are a little unreliable. It is not very much.

100514. Is it an increasing cost for medical relief?—No, it is not; because, as the Chairman pointed out, we have now the increasing insurance, therefore a great many people are taken out of poor relief because they are on the insurance.

100515. I was going to ask you if you had anything to add as to the influence of insurance on public relief? You have told us it appears to have reduced the cost of medical relief?—Yes.

100516. Has it tended to promote thrift?—It has promoted thrift. I think we had the experience that the introduction of our insurance laws has given the population an insight into the value of thrift and saving and private insurance, which was never to be heard of before. We are very satisfied with its results.

100517. Has it promoted the establishment of mutual benefit societies?—Yes; one cannot say mutual benefit societies, it is on the lines of your trade unions. We have a great many so-called *Gewerkschaften*; just the same as trade unions; they help each other.

100518. With regard to the physicians for the poor, Machinery on whose order would the medical officer relieve a poor person?—On the order of the chairman of the committee. A poor person applies to the chairman, and he gives him a certificate which is in a very usual form, in which he puts the name; and then he goes to the medical officer, who has to give what he needs; either medical treatment, or hospital treatment or medicine, or whatever he thinks fit.

100519. What if it were a case of emergency, so that there was not time to go to the chairman?—That is very seldom. If it is a case of emergency, and he does not know the medical poor doctor, then he may apply to anyone; and we pay the strange doctor for what he has done.

100520. Would you pay to the strange doctor in any case?—Yes.

100521. Even if the person were able to pay?—In that case, no; only when it is a poor man; but the difference is that we have a rule that every man shall apply to our doctor; but in case of emergency we allow him to go to another doctor. If he has gone to another doctor, and he presents his bill, we pay it.

100522. Do you prepare lists of persons entitled to free medical treatment?—No. That is the French law. It is a riddle to me how they can prepare lists for free medical treatment. They must be corrected every day. I think it is quite impossible to know beforehand whether anyone will be in need of medical treatment.

100523. In the case of admission to hospitals, whose recommendation sends the patient to the hospital?—The medical officer's; but that is what is really a hospital, not, for instance, an old-age institution; it is a hospital in the sense of a sick hospital, an infirmary or a lunatic asylum.

100524. Have you any Poor Law hospitals for the sick?—No, we have no Poor Law hospitals. We have municipal hospitals. We have now five very large hospitals, I think, with about 4,500 beds, and they serve at the same time as poor hospitals; so that the medical officer has the right to send all his patients to those hospitals.

100525. And those hospitals, I take it, serve for all classes of people?—Yes; in our municipal hospitals we have only one class.

100526. In the ordinary voluntary hospitals at Berlin do they take paying patients?—Yes; and they are taken also in our municipal hospitals; if, for instance, anyone applies without the order of the medical officer and says he will pay, then he is taken into the hospital at his own cost.

100527. If he is a person who is able to pay, but does not pay, can they enforce payment?—Yes.

100528. How do they enforce payment?—We inquire into his condition; and then if he will not pay voluntarily we must enforce a judicial order, and issue process against him.

100529. As a process of debt?—Yes.

100530. Would he have to go to prison if he did not pay?—No.

100531. What would happen?—If he does not pay then he does not pay; it is like other civil debts.

100532. (*Mrs. Webb*.) Cannot you levy on his goods?—Yes, but with certain restrictions; we have to leave what is necessary for life; beds, and the most necessary pieces of household furniture are not subject to seizure. I may add that, as a rule, if there is any question of medical treatment in hospitals we are very lenient; if it is not very bad will, and a man in a very good position,

Dr. Emil Muensterberg
11 May 1908.
Effect of insurance on medical relief

Procedure as to repayment of medical relief.

Dr. Emil Muensterberg we pass it over, because we think it is a disaster to become ill; and he cannot be punished for having been ill.

11 May 1908. 100533. (*Dr. Downes*.) Taking a bad case of abuse, could you deprive a man of his vote, or do something of that sort?—Yes; every case of relief, including also cases of medical treatment, excludes him from his vote by itself, whether deserving or not deserving, we have no choice. It cannot be considered as a punishment from our side, but it is the law that we are to give notice to the electoral bureau, so that they cross out the name for a certain time.

Medical relief disqualification.

100534. Are you in favour of maintaining that law?—No, all in our city I mentioned before, and the greater part of the Parliament, are agreed in desiring the abolition of that influence of medical relief on the electoral vote. That is a survival of the Middle Ages, in our opinion.

Inadequacy of medical relief to class above paupers.

100535. You tell us that the poor relief administration has agreements with a large number of specialists, who are available for the service of the poor?—Yes.

100536. Would a man who is not a person receiving poor relief, a man of the free labourer class or a clerk, who has maintained himself independently of the Poor Law, have equal recourse to those specialists?—No.

100537. Has not the person who obtains poor relief rather an advantage over the man who is not receiving Poor Law relief as to that special class of medical treatment?—Every man who applies to our doctors or to the specialists must be a poor man. He must have the certificate of the chairman of his district committee, otherwise the specialist would not begin to treat him.

100538. Supposing I am a poor clerk, not so poor as to come upon poor relief or charity, but I cannot afford to pay a sufficient sum for the special advice I want, what would be my position?—I should pity you, but I could not help you. If it is impossible you must go to the chairman, and in difficult cases they do give it. For instance (and we have it not seldom), if they need an artificial leg or a foot for their children, if they are mutilated, a man of a little higher degree may come to us in order to ask for his child such things as are so very costly.

Administration of poor relief.

100539. (*Mrs. Webb*.) I understand that your committee does not manage any of the institutions to which you send people except the shelter?—Yes. It is so arranged that, besides the Poor Law Board in the proper sense, there exist several other boards, who have to deal with the several institutions. We have a board for the lunatic asylums; one for the municipal hospitals; one for the infirmaries; one for the orphanages; one for the shelters and house of correction; and the Poor Law administration has the right of disposition for all those institutions without any consent of the Board in the single cases; so that I can order that this man is to be brought into a lunatic asylum, and I do not need the consent of the President of the Board of Lunatic Asylums; but the general management administration, the technical management, is in the hands of the Board.

100540. Do you approve of the arrangement by which the institutions are managed by specialised committees?—Yes; we have had very good experience of that. Suppose that the poor board disposes of the single places, so that it has no difficulty in dealing with the single cases, then we think it is a very good arrangement, because the single boards gain a certain experience in managing the single institutions.

100541. You would be against one and the same committee managing the institutions for destitute lunatics, destitute children and destitute sick people?—Yes it depends, for instance, in a smaller community of 50,000, 60,000, or 100,000 people you may have only one committee which manages all those institutions; but in Berlin they are very big institutions. We have now to erect the fifth asylum for lunatics; we have to provide for very nearly 60,000 lunatics every year. These practical reasons recommend that the management should be confined to a single committee.

100542. One of the advantages of the large area is exactly that specialisation of management under specialised committees, is it not?—Yes.

100543. Then practically your Board manages outdoor relief, and the distribution of the persons to the institutions of the other committees?—It is not exactly so,

but nearly so; the institutions of the municipality are at our disposition without pay. We do not re-imburse them.

Receiving-house for destitute persons including other treatment.

100544. Supposing you have a destitute family which is quite homeless, is there any place to which you can send that family before you decide which institutions are suited for them?—That would be, I think, the receiving-house.

100545. Have you a receiving-house?—Theoretically no, practically yes. We have one house which is connected with our public night shelter, but in separate rooms. We have what we call a family refuge; and in this family refuge the people are received to whom at the moment we cannot give any other treatment.

100546. How long do you keep them there?—A very short time.

100547. Would you say under a week?—If we can, no more than a week. We try to deal with them very quickly. I must add that only once in the whole course of my administration we had in this family refuge more than 1,400 people at the same time. It was in a very unfavourable time, the number of small lodgings was very little, and the population had increased very much. We were surprised ourselves; we were really in a state of need and great embarrassment; but we had to take into our institution nearly 1,400 heads.

100548. How long did that last?—I do not know quite, that was an exceptional case. As a rule we have no more than perhaps seventy or eighty heads. That is nothing for the whole of Berlin.

100549. (*Mr. Bentham*.) Whilst your authority hears all applications for relief of all kinds, practically it distributes the cases to the various institutions which may be managed by other authorities?—Yes, where there is needed institutional care. As a rule we give money to the poor; but sometimes, with people who are not good housekeepers, it is also in kind, but not much.

Advice of all applications or relief through one channel.

100550. Do you think this possible at all: to have several agencies or committees for dealing with the respective applicants; say a separate authority to hear all applicants for children, a separate authority for the sick; and a separate authority for the able-bodied?—No, I cannot speak outside our experience; we think it is best to have confined in one committee the starting point, so that the poor in every case apply to the chairman of the committee, and he and his helpers have to inquire into the case; they must know whether to send them to institutions, or to deal by kind, by money, by medical treatment, and so on. They might then apply to other committees, who manage children's orphanages, and such things, but I think that it is a very great advantage that we have in one committee the first glance at the conditions of the poor.

100551. Really it means this: that all applications for public relief must come through one door?—Yes, that is quite a just expression.

100552. Then the distribution takes place afterwards according to the needs of the particular people?—Yes.

100553. There are one or two points of detail I would like to ask you about. There is one with regard to the payment. In the old cases which go on for a whole year, you say, that payment is made once a month?—Yes.

Advantage of Hamburg over Berlin system.

100554. But not always by the agency of the one helper?—Yes.

100555. What does that mean? Does it mean that some other person will pay?—Perhaps I can make myself better understood if I point out the Hamburg conditions. That is our ideal, our highest wish. There is a helper who has to deal with the single family; and he is entrusted with the care of the family in all relations. So you must imagine this helper is the friend, the trustee of the family; and the widow, for instance, comes to him and tells him: My child has fallen ill; or some such thing. He is also the payer; he has to pay in Hamburg every week; and when he pays out he becomes aware of the state of things. He speaks with the poor person, and so on. Therefore we hope very much from a helper who is the permanent helper of the same family. I am very sorry to say that I was not able to keep wholly on that system in Berlin as I did in Hamburg. In Hamburg that is so; and therefore, there is very good connection between the helper and the family.

100556. (*Prebendary Russell Wakefield.*) Is the difficulty in Berlin because the people are getting separated up into east and west?—We do not have such a great distinction between the different parts of the town as you have here. We have still in the so-called poor quarters decent people. It is not so bad as here; I have spent three hours in Whitechapel and three hours at Stepney; and we cannot compare our conditions with yours in that regard.

100557. (*Mr. Bentham.*) Is the payment always made by the helper who has dealt with the case?—Yes. I want to point out that we wish it to be made by the same helper; but we do not succeed in every case in having the same helper. We have not enough helpers to deal with the same poor continuously; but that is the case in Hamburg; therefore I prefer the system of Hamburg in this regard.

100558. You say there are only about 4,000 helpers in Berlin?—Yes.

100559. Does that mean that the helpers have more cases than they ought to have?—Yes.

100560. Or that some districts are absolutely without helpers?—They have more cases than they ought to have, according to the other system. Of course, a paid relieving officer may have 100 cases, or more, but an honorary helper, who has to exercise his profession besides, whose services to the town are merely honorary and extra work, must not have more than he can do without inconvenience.

100561. Do you have any districts without any helpers at all?—No, we have not; I am fortunate enough for that. I am afraid we shall come one day to that point that we have some districts without helpers.

100562. Would you consider it impossible for all the cases of outdoor relief in Berlin to be dealt with by private charity, and not by the rates at all?—No, I should never think that. That is an ideal.

100563. You do not think it is an ideal even to be aimed at?—No, it is an ideal which I would never be inclined to share. It is only the fault of the administration if the administration cannot manage outdoor relief.

100564. As you have no workhouse test, you rely entirely on a careful investigation of the circumstances of each case?—Yes.

100565. And thereby understand exactly whether that case is in need of relief or not?—Yes.

100566. What is there in the way of deterrent that is to prevent people from applying who might, with a little exertion, be able to provide for their own needs unless you have a workhouse test?—You refuse relief. If the committee is of opinion that he is an able man, and he might take care of himself and his family, we refuse him relief. We apply the workhouse test only in those cases in which we find there is a man with a family and wife, or a woman who needs relief, but on account of unworthiness, we will not give that relief in money or in kind. Then we offer him or her the House; but in the case of able-bodied people we do not offer the House, we simply tell them we refuse relief: We have inquired into your case, and we are of opinion that you are able to help yourself.

100567. You offer the House?—No, in all cases we do not offer the House.

100568. You offer the House in the one case because you consider it is the best form of relief for that particular party?—Yes, in that case, if we are inclined to give relief, but are doubtful whether money relief will be helpful.

100569. Then the fact that a person has no right to relief in the whole of Germany makes it possible for you to actually refuse a case?—Yes.

100570. That is the deterrent really, is it not, against people applying who really ought not to have relief?—Then they must apply to the administrative powers. Of course you have the same experience that we all have, you have good administrations and you have bad ones, and that is an arbitrary thing. We have small villages in which the poor relief is so bad that the people are really starving, and we cannot help them.

100571. You believe very strongly in the necessity for the case-papers to be well written up?—Yes.

Dr. Emil Muensterberg

100572. How do you do with regard to the change of address when a person removes from one locality to another. Is the case-paper transferred to the other helper?—Yes; in temporary relief it does not matter because he may apply every time; if he has applied in the month of April, and he also needs relief for the month of May, in every particular case he must apply to the chairman in whose district he has his residence; but if it is a case of permanent relief, we have a book in which there is printed "Address of the Chairmen"; and then the chairman who has the book in his hand writes down the name of the chairman to whose district the poor person will remove. If the poor person forgets to announce his removal or is neglectful, it is his own damage, so that we have no difficulty in this regard.

11 May 1908.

Extensive use of case-paper system.

100573. Even in temporary cases have you no difficulty?—No, because we have our papers registered very carefully, with the names, and the date of birth, the place of birth; and in the case of women, whether married or not married, the family name, and so on; so it is very easy to find out whether we have papers or not.

100574. A person may apply in one district as a first application, and would not be known there and relief might be given, whereas relief has been given in another district, and there is a case-paper?—Our chairmen are obliged to communicate with the general office. We have a certain form which they have to send by post immediately to the general office stating whether there has been relief given or not; then they receive from our general office a notice or the papers themselves, which we preserve in our office.

100575. That means that in every case practically the particulars are sent up to the central office, so that it is all centralised?—Yes, in every case we have a complete supervision.

100576. What is the object of the personal book in addition to the case-paper?—What we call the personal book is only used in permanent cases. The regular way is that: The district committees report monthly on a permanent case, and state: We have granted to this person permanent relief for half a year, or one year; this report comes into the office and there an extract of it is written into a book. This book is given back to the chairman of the district committee; so that he has in this book the most important dates of the family; and he is obliged to continue this book, and to notice when there is further permanent relief, or when there is particular relief; or when there are changes in the family; when a child has died or a new child is born; so that that personal book shall give at any moment a true picture of the state of the whole family.

100577. So that really the case-paper has all that information on it too, has it not?—The case-paper is in the general office, and the personal book is sent as duplicate. It is not quite in the same form, it is in another form; but in essence it is a duplicate. So that the chairman has in every case the picture of the family, and the most important details before his eyes.

100578. That applies really to permanent cases?—Yes, exclusively.

100579. According to these particulars there are 33,813 persons who are put down as being in receipt of permanent relief?—Yes.

100580. With regard to the loss of vote, who in Berlin decides when a person shall be struck off the register?—The district itself; it gives and it takes.

Authority for disfranchisement in Berlin.

100581. That is the head of the district committee?—Yes; that is the new step in the Elberfeld system that the decision is taken away from the Board—that not the board has to decide upon the written report, but that the chairman and his helpers, who have seen the people before their eyes, who have been in the homes, decide upon the single cases; and they have to decide whether to relieve or not; whether to cease it or not; and the whole practical administration of the case is in the hands of the district committee. But it is watched by the general board, because we have sometimes the case that a man is dead, and his relief is being paid six months later. That is very neglectful of the committee: but such cases happen in a large city.

Dr. Emil Muensterberg 100582. The councillor is the head of the district, and he is an elected person?—No, the councillor is not the head. The district committee consists of appointed helpers, the helpers appoint their chairman; and the councillor has nothing else to do but to look after the district committees, and to help to appoint people. He must find out the helpers; but once the committee appointed the councillor has to retire.

Combination of small municipal-ities. 100583. Do these municipalities ever combine for the purpose of dealing with any particular kind of case?—Yes, several of the smaller municipalities; but it is different in the various parts of Germany. We have some parts in which they are very reasonable, and unite, for instance, for erecting poor-house institutions, and such things. As I have said at the beginning of my Statement, I think that is one of the most necessary things: to compel the smaller villages to unite. It is a great mistake in our country that we have no compulsory measures to unite them.

Relief to various classes of children. 100584. With regard to the receiving home for children, I understand that there are certain children who can be boarded-out, and there are other children who belong to parents who may take their discharge, kept in the receiving home till the parents take their discharge?—Yes.

100585. Are all children kept in that receiving home except those that you have mentioned who can be boarded-out?—Yes.

100586. That is orphan children?—Yes. This which I call an orphanage is, perhaps, better described as a children's receiving house. Relief to various classes of children

100587. That is what I understood it to be?—Also, as you expressed it, going through one door, they are in the room, and now we open the door and send them to family care, to a special institution or to an orphanage; but first they are all assembled in the receiving house their case to be considered.

100588. Do you have any means of dealing with children who are rightly termed ins-and-outs, except in that orphanage?—We have a great many: for instance, crippled children, defective children, sick children, and neglected children. We have all kinds.

100589. I mean healthy children?—Yes; we can send them also to institutions; but we do not prefer that. For healthy children as a rule, if they are not bad in character, and untruthful, we prefer so absolutely the scheme of home care, family care, that there is really no exception; we send them all to families.

100590. I was meaning healthy children of parents who may be in an institution, but may take their discharge at any time. Are they all maintained in that receiving home until they take their discharge?—Yes; I think that is quite the same; I believe there is no difference.

APPENDIX TO NINTH VOLUME OF MINUTES OF EVIDENCE.

TABLE OF CONTENTS.

APPENDIX No. I.

Papers Handed in by Mr. Charles Cleveland Ellis:—

	PAGE
A.—Statement showing in respect of certain Distress Committees in Scotland the total cost of the Work executed by Unemployed Workmen, the Value of the Work done, and whether the Standard Rate or less than the Standard Rate of Wages was paid - - - - -	511
B.—Statement showing the different views of Distress Committees as to the Suitability of Applicants for Assistance under the Unemployed Workmen Act, 1905, and the Regulations thereunder - - - - -	514

APPENDIX No. II.

Papers Handed in by Mr. James Ferguson, Glasgow:—

A.—Particulars as to the numbers, ages and classes of men applying to the Glasgow Distress Committee -	517
B.—Report by the Salvation Army as to the after condition of persons emigrated by the Glasgow Distress Committee - - - - -	521
C.—Return showing the average rate of wages of men chargeable in Hospital whose wives were in receipt of Outdoor Relief with their respective occupations - - - - -	522
D.—Condition of the men when admitted to Hospital, mentioned in "C" above - - - - -	522

APPENDIX No. III.

Papers Handed in by Messrs. Watson and Crowther, Bradford:—

A.—Classification of Trades and Occupations of all Applicants on Register, November 1st, 1905, to September 12th, 1906 - - - - -	523
B.—Table showing the Average Earnings of the Wives and Children of Men who put their Names on the Unemployed Register at Bradford from November 1st, 1905, to August 31st, 1907 - - - - -	524
C.—Statement showing how many Men who Registered accepted Work offered by the Lancashire and Yorkshire Railway Company - - - - -	524
D.—Chart - - - - -	<i>Facing</i> 524
E.—Table showing the Number of Men who Registered and were not eligible for Employment during the Periods November 1st, 1905, to November 30th, 1906, and December 1st, 1906, to September 21st, 1907 - - - - -	525
F.—Return showing the Number of Men employed by the Bradford Works Department from January 1st, 1904, to December 31st, 1906 - - - - -	525
G.—Report as to the Condition of the Men emigrated to Canada by the Bradford Distress Committee - - - - -	526

APPENDIX No. IV.

Papers Handed in by Messrs. R. V. Broodbank and A. Evans Thorp:—

A.—Copy of "The Modern Rent Card," showing at a glance exactly what the Tenant pays in Rents and what in Rates - - - - -	527
B.—Letters showing the extent to which Rates influence Rents - - - - -	528

TABLE OF CONTENTS—*continued.***APPENDIX No. V.****Papers Handed in by Mr. C. G. Dye, on behalf of the Firewood Trade Association:—**

A.—List of Woodchoppers known to have become Inmates of Workhouses, etc. - - - - -	PAGE 528
B.—Report of Meeting between Representatives of the Firewood Trade Association and the Church Army -	529
C.—Memorial to the Social Department of the Church Army from the Firewood Cutters Protection Society -	529

APPENDIX No. VI.**Papers handed in by Mrs. Dunn Gardner, Chelsea:—**

A.—Chelsea Distress Committee: Information obtained from the Record Papers of 50 Recommended Applicants as to Length of Employment prior to Registration - - - - -	530
B.—Particulars as to the Cases of 50 Men who, during 1905-6, were recommended by Distress Committees in different parts of London for Employment by the Central Unemployed Body - - - - -	534
C.—Particulars as to the Cases of 50 Women who, during 1905-6, were recommended by Distress Committees in different parts of London for Employment by the Central Unemployed Body - - - - -	538
D.—Figures showing Proportion of Assisted and Non-Assisted Cases by various Distress Committees for the Year 1905-6, who again applied for Assistance in 1906-7 - - - - -	542

APPENDIX No. VII.**Paper handed in by the Rev. J. H. Anderson:—**

Form of Agreement between the Borough Councils and the Central (Unemployed) Body for London - -	543
---	-----

APPENDIX No. VIII.**Papers handed in by Mr. Arthur Newsholme, M.D., F.R.C.P., Medical Officer of Health for Brighton:—**

A.—Form used for the notification of phthisis - - - - -	545

EXPLANATORY NOTE BY MR. ELLIS.

The object of the Table was to show whether in the event of the standard rate of wages being paid the value of the work was greater than where less than the standard was paid. I am afraid that it is impossible to draw from the table any useful conclusions on this point, owing to the different classes of men and the different circumstances under which they were employed. For instance, where the town council did not wish to make a charge on the distress committee, I know that no particular effort was made to value the work. In such cases, I am inclined to think the valuation is not altogether to be depended on. Again, for certain works, the men were especially picked (*e.g.*, Drainage Works for Burgh Engineer in Edinburgh) and there was in consequence no loss on their employment. In Dalbeattie you will notice there was a profit. This may be

accounted for by the fact that the unemployed were all men previously in regular employment at the Quarries, which were shut down for several months. These men, accustomed to rough work, were quite able to give, and did give, full value when employed on relief work.

In Leith we find that the total percentage of value to total cost is 100 for all work. But very few "unemployed" men were engaged on this work, and the few that were so engaged were drafted along with the corporation's own workmen, so that it was impossible to estimate the loss, if any, on the work of (say) one "unemployed" man among perhaps twelve ordinary workmen.

It is obvious, therefore, that the value of the work does not depend on the rate of wages paid but rather on the nature of the work and the type and physical condition of the man who has to do it. A jobbing tailor, for example, if put to work with

pick and shovel is physically unable to give full value no matter what wage he is paid. A navy on the other hand, if employed on navy work, may give full value even if paid less than the standard navy wage. It seems to me, therefore, to be quite impossible to ascertain what the Commission desire unless you could pick (say) fifty men of equal physical capacity and training, divide them into two batches of twenty-five each and pay the one batch standard wages and the other less than standard. In actual practice such conditions are not, of course, met with.

With these qualifications, I send the table for what it is worth, but I do not suggest that it is of any real value for the purpose the Commission had in view. I may, however, add that, when calling for this Return, distress committees were told what the object was, so that in giving the information it may be assumed that they had that object before them.

APPENDIX No. I. (B.)

Handed in by Mr. Charles Cleveland Ellis. (Q. 89105.)

UNEMPLOYED WORKMEN ACT, 1905.

STATEMENT SHOWING THE DIFFERENT VIEWS OF DISTRESS COMMITTEES AS TO THE SUITABILITY OF APPLICANTS FOR ASSISTANCE UNDER THE ABOVE ACT AND THE REGULATIONS.

The information herewith produced has been extracted from the official record papers.

The Distress Committee of V. passed the following cases :—

1. Occasionally given to drink.
2. Was given to drink, now doing better.
3. Five of a family. Lost work owing to misconduct.
4. Occasionally had a drinking bout.
5. A good deal given to drink. Very unsatisfactory at work. Five children.
6. Given to drink. Three children, two of whom earning 10s. per week. In receipt of relief from trades council and parish council.
7. Four children. Given to drink.
8. Thirty-one years of age. Labourer. Very much given to drink, and spends most of his earnings on drink. Wife has to go out to work to eke out a living for herself and two children. Employed at relief work last year, but stayed off work, saying he had met with injury to eye. Paid off, as he frequently called at office the worse of drink.
9. Discharged for failing to attend to his work.
10. Lad, eighteen. Labourer. Single. Three and a half years in last employment. Gave up situation as he was dissatisfied with his wages. Applies to be sent to Canada.
11. Twenty-nine years of age. Married. Two children. Lazy. Frequently leaves off work. Was in employment, but lost that work for misconduct. Employed on relief work last year. Left own accord, having found work. Afterwards privately employed, but stayed off drinking and was convicted for theft and indecent exposure for which he received a term of imprisonment.
12. Twenty-eight years of age. Given to drink. Lazy.
13. Twenty-two years of age. Left work owing to dispute with his employer.
14. Forty-two years of age. Married. Grown-up family. Income of £1 6s. 6d. per week from children for board. Worse of drink when calling at office.

The Distress Committee of W. passed the following cases :—

1. Thirty-eight years of age. Shipyard labourer. Married. Eight children (ages two to nineteen). Applicant in hands of police several times.
2. Twenty-nine years of age. Riveter. Married. Five children. Applicant had drunken habits and has, on several occasions, been in hands of police. Wife of good character. Applicant's discharge note from employers does not correspond with his own statements.
3. Age, forty-nine. Riveter. Married. Six children. Wife barefooted, and both she and house dirty. Applicant not deserving of help as his money all goes in drink.
4. Thirty-eight years of age. Riveter. Married. Three children. Last employer could not get a very flattering testimonial.
5. Sixty-four years of age. Casual labourer. Two children. Addicted to drink.
6. Forty-six years of age. Stonebreaker. Married. Two children. Does not bear very good character.
7. Forty-seven years of age. Labourer. Married. Two children. House (one apartment) dirty. Applicant and wife said to be of very drunken habits. No fixed employment.
8. Fifty years of age. Riveter. Married. One child (eighteen years of age, at present idle). Addicted to drink.

9. Twenty-five years of age. Riveter. Married. One child. Applicant of drunken habits. (Several similar cases to above.)
10. Thirty-six years of age. Holder on. Married. Three children. Applicant and wife not of sober habits.
11. Forty-two years of age. Labourer. Married. Three children. Applicant is of lazy habits and seldom works. Has been very little employed during last twelve months.
12. Forty-one years of age. Labourer. Married. Five children. Takes drink and always in poverty.
13. Thirty-seven years of age. Labourer. Married. Five children. Lost an eye in former employment and got £50 compensation. Never sober till money was gone. In very poor circumstances.
14. Forty-five years of age. Labourer. Married. Three children. Applicant and wife bear bad characters and drink all that they can lay their hands on.
15. Twenty-eight years of age. Carter. Married. One child. Employed on relief work last year. Of drunken habits. Was in prison recently for throwing a lighted lamp at his wife. Very bad case.
16. Thirty-six years of age. Married. One child. Dismissed from work by his employers for theft.
17. Fifty-five years of age. Holder on. Married. One son (seventeen years of age) who has just returned from the Stranraer Reformatory. Applicant bad time-keeper and of drunken habits.
18. Forty-eight years of age. Holder on. Married. Five children. Met with accident in last employment. Received compensation at the rate of 17s. per week from September 3rd to December 23rd. He and his wife not sober.
19. Thirty-five years of age. Labourer. Married. Five children. Follows no regular employment. Is of lazy and drunken habits and is well-known to the police, having been several times before the Court. Now in prison for five days for failing to send his child to school (10—12—07). Started work, January 13th, 1908.
20. Thirty-one years of age. Carter. Married. Six children. Lost his work owing to drink. Well-known to the police and several times before the Court.
21. Thirty-two years of age. Caulker. Married. Three children. Single apartment. Irregular workman, of drunken habits. Left his wife several times.
22. Forty-two years of age. Labourer. Married. Three children. Residential qualification his only recommendation.
23. Twenty-five years of age. Labourer. Married. Left work of his own accord.
24. Twenty-eight years of age. Casual labourer. Married. Two children. Dismissed from work for bad timekeeping. Well-known to police.

The Distress Committee of X. passed the following cases :—

1. Sixty-three years of age. Labourer. Married. Two children (ages twenty and eighteen). Applicant dismissed from relief work last year owing to drink. Charged with assault and breach of the peace, and fined 21s. or fourteen days.
2. Age thirty-six. General labourer. Married. Two children. Applicant left work owing to dispute with employers. Was, however, in last employment six years.

APPENDIX No. I. (B.)—continued.

Handed in by Mr. Charles Cleveland Ellis. (Q. 89195).

The Distress Committee of Y. passed the following cases :—*

1. Forty-five years of age. Labourer. Married. Four children. Son earns 10s. per week. Employed on relief work in 1906, and continuously employed on relief work from December, 1906.
2. Sixty years of age. Widower. Eight children. Income from children £1 per week. Employed on relief work in 1906, and continuously employed on relief work from December, 1906.
3. Thirty-five years of age. Casual labourer. Married. Two children. Continuously employed from December 28th, 1906.
4. Fifty years of age. Mason. Married. Eight children. Income 5s. per week. Paid off owing to dull trade. Continuously employed from March 26th, 1906.
5. Sixty-two years of age. Married. Three children. One a domestic servant in Model Lodging House with a wage of 10s. per week. Applicant has not worked for years. Not able for a full day's work. Continuously employed on relief work from May 3rd, 1907.
6. Fifty-four years of age. Shipyard labourer. Widower, no dependants. Lives in model and has done for years. Late employers say "a fairly good workman, but bad timekeeper; twice gave him a chance, but on each occasion came back on Monday after pay under the influence of drink." Continuously employed on relief work from May 3rd, 1907.
7. Sixty-nine years of age. Widower. Four children (married). Applicant reported as too old for work, hence reason for being paid off. Shipyard caulker to trade. Given work by Town Council in 1906, but left off after a few hours. Employed on relief work since May 3rd, 1907.
8. Sixty-five years of age. Married. Two children, one a charwoman, the other a domestic servant. Applicant has no prospect of work. Good character. Continuously employed on relief work since February 1st, 1906.
9. Forty-three years of age. Married. One child. Good workman, but occasionally took a day or two to himself. Employed on relief work since May 25th, 1907.
10. Forty-eight years of age. Shipyard labourer. Married. One child, a domestic servant at 5s. per week. Applicant a riveter to trade. Had shock to nervous system. No longer able to work at trade. Insurance Company will not accept him in shipyard. Started relief work December 18th, 1907.
11. Sixty-six years of age. Shipyard labourer. Married. Five children. Only fit for light labouring work.
12. Seventeen years of age. Shipyard labourer. Single. Was in employment, but left of his own accord. Started on relief work December 18th, 1907.
13. Forty-eight years of age. Married. Four children. Epileptic. Started on relief work December 18th, 1907.
14. Twenty-six years of age. French polisher. Married. Three children. Left work of own accord. Started on relief work December 18th, 1907.
15. Thirty-four years of age. Riveter. Married. Two children. Not living at address given. Employers say "applicant not particularly good at timekeeping."
16. Fifty-three years of age. Shipyard labourer. Employed on relief work in February, 1907. Reported on November 5th, as irregular timekeeper when last on relief work. Started again December 18th, 1907.

17. Twenty-three years of age. Riveter. Married. One child. Paid off for bad timekeeping. Applicant says "owing to wife being ill."

The Distress Committee of Z rejected the following cases as being unworthy of assistance under the Act and the Regulations :—

1. April 26th, 1906. Wife in Poorhouse. Doubtful case. He in prison for theft.
2. October 16th, 1901. Wife, 4s. 6d. weekly. Husband in prison. Thirty days for assaulting her. She was also chargeable—deserted by him. Employer certified applicant as discharged in respect of intemperance.
3. Wife on parish roll at 3s. per week from February 7th 1900, till July 11th, 1900. He in prison. The investigator reported :— "They seem to be in chronic poverty. Wife drinks. I have seen her the worse for liquor on one occasion."
4. Presently in receipt of 3s. 6d. weekly.
5. Applicant admitted to parish on October 8th, 1906, suffering from injury to legs and thigh. Was assaulted by two men while the worse for drink on October 17th, 1906. Wife offered Poorhouse. She is also said to be drunken.
6. At visit I paid on Saturday evening, December 1st, 1906, wife was in bed drunk and singing. An empty whisky bottle was on the table. He explained that a friend who called had been treating them.
7. This man was not found when visited. He called at office. Investigator reported :— "He seems to be a regular sort of loafer and has been knocking about here and there for years. He admits drinking. Would not recommend that work be granted in a case like this. He has been frequently refused as able-bodied by the parish council."
8. December 8th, 1906. Applicant has been idle since July 27th, 1906, and has no prospect of getting anything to do. Was in the City Poorhouse in 1901. This man has been a few times chargeable in the Poorhouse.
9. Investigator reported :— "House very poorly furnished. He does not seem much good. Parish records show this man to have been repeatedly chargeable from 1885 till date. His wife has also been chargeable—last time on July 26th, 1906." This man was forty-six years of age, and, as the parish records show, had been chargeable for twenty-one years. This is, from the age of twenty-five years, onwards.
10. The employers in this case stated :— "This man we could not get to attend regularly, although we gave him chance after chance. His average weekly wage was 12s. We do not think he is entitled to any relief, as his people have spoiled him at home, allowing him to sit at home when he should have been at his work. Had he attended to his duties he could have been here yet."
11. The employers in this case wrote :— "We employ no fruit hawkers, but the above-named was employed here as a millworker from February 2nd to 16th of this year. He seems to be of a migratory turn of mind, and like a lot more of his kidney, too lazy to put himself about to look for work, and, when he does get a job, too inactive to keep himself warm at it. He has been employed here several times."
12. Record shows this man to be a bad character, having been in prison for assault, etc.
13. The employers here certified the cause of discharge as irregularity in attendance at work. The investigator reported :— "This man is a drunken character and the house is under the name of Shaw, as he has periodical drinking bouts, at which times he disappears. Both he and his wife are a regular pair of liars."

* Note.—The object in quoting the above cases is to show the "continuous" employment offered rather than the character of the applicants. The date when these particulars were recorded was February 3rd, 1908.

APPENDIX No. I. (B.)—continued.

Handed in by Mr. Charles Cleveland Ellis. (Q. 89105).

- 14 This case is hardly one of a deserving nature, as he has partly contributed to his present state of poverty through improvidence, etc. I am not inclined to recommend work to be granted as they seem a bad lot." ("N.B.—See Parish Record, 6—69—128, for mother in prison in September, 1892, and it is there stated she is cohabiting with McCorkle, and has an illegitimate child by him.")
15. The employers here reported:—"Was only in our employment for three months over a year ago. Do not pay any notice to him. Will not work if he can get his meat for nothing."
16. Record (Parish), 6—70—193. This man has been chargeable in Poorhouse no fewer than twenty-five times since 1893, "skin disease, gonorrhœa," etc. He has always passed himself as *single*. Last chargeable to parish council from April 27th to July 3rd, 1905. Where was he married? (Stated in application for work to be married, boy thirteen years of age.)
17. Left parish hospital on October 23rd, 1906. Consumptive. Well known to parish and Charity Organisation Society. Not suitable for work.
18. Parish Record, 3—76—44, shows he was on T. S. "Mars" for three and one-sixth years. On July 11th, 1887, became chargeable suffering from gonorrhœa and bubo. Was then nineteen and two-thirds years of age. Again chargeable (as a married man) in 1899 and was granted medical relief. Wife chargeable in 1903 (twice) with two children. Husband in desertion. He was apprehended and on March 9th, 1903, dismissed with an admonition. He became chargeable again on April 15th, 1903. In City Poorhouse certified Synovitis. On July 22nd, 1903, wife and one child chargeable in City Poorhouse. Husband in desertion. Apprehended and got sixty days imprisonment on September 24th, 1903. Self and dependents chargeable from January 8th, 1904, to January 11th, 1904, in Poorhouse. On February 5th, 1904, applied for child's admission. Withdrawn as he had got work.
19. Investigator reported:—"Still idle and wife states he has done nothing of any consequence for the last seven years. She goes out and does a little washing and makes some weeks 2s. 6d. and others from 4s. to 5s., and 5s. 6d. from girl. Applicant was in hospital last February. Been three times chargeable to parish. In Poorhouse."
20. The employer stated:—"This man left before being discharged on account of bad time-keeping, etc. Not a case to be encouraged."
- 21 "This young man is only residing with his sister. At visit they were both in their beds and seemed as if they had been drinking. He has mostly resided about models and seems a lazy, useless fellow with no dependants."
22. December 12th, 1906. The Investigator reported:—"Still idle. This man was at parish hospital last year for six weeks. Has invalid daughter confined to bed for the last three months. Record shows this man to have been often chargeable and is at present in parish hospital. At visit wife concealed this and said he had just gone out, and record shows him to have been in parish hospital since December 6th, 1906, and still in."
23. The employer stated:—"This man was employed as a joiner and was in receipt of 10d. per hour or 42s. 6d. per week. He was in our service from June, 1906, to May, 1907, but latterly he became an irregular timekeeper."
24. December 7th, 1906. Applicant apparently has never wrought with anyone. He maintains himself moving through the country selling small articles. Was in the Poorhouse on several occasions. Record shows this man to have been moving in and out of the Poorhouse since 1896 (ten years). Made from sixty to seventy applications.
25. January 4th, 1907. Applicant and his wife lodge here. Married only on December 1st last (one

month ago) and on the 14th he got ten days' imprisonment for drunkenness. Wife applied to Parish then, but doctor certified her fit for work.

26. Parish Record B53896. More or less chargeable since February, 1895. The employer remarked:—"His foreman does not speak very well of him."
27. January 22nd, 1907. "From enquiries I find this man is given to drink. He has often left house and one off to the country for work. A regular sort of tramping labourer."
28. Parish Record 62,011. Wife 10s. per week—a year prior to application for work. He is in prison for assaulting police.

The Clerk to the Distress Committee of Z. in furnishing the above particulars states:—

"I have had little time to devote to it, but enclose, for your information, a note of excerpts taken from two volumes of the Record Papers of the Distress Committee for last year. Those volumes were taken at random, and I have gone hurriedly through them, noting those points which show the absolute necessity for thorough investigation prior to granting of work. The excerpts pretty much speak for themselves, and you will easily gather therefrom that investigation without the co-operation of the parish council officials, and the opportunity of consulting the parish records, must fall far short of what is desired.

"As you are aware, the distress committee since its inception, have insisted on the most thorough investigation being made into each case, applicants, prior to being granted work, being summoned before three members of the Committee, who have submitted to them reports by: (1) the investigating officers of the result of their inquiries and visit at the residence of the applicant, with any history of the case which the records of the distress committee or the parish council may provide; and (2) the applicant's past employers, as to character, rate of wages earned, and cause of discharge.

"The enclosed notes are merely samples of a few of the cases submitted to the Committee, and there is not the slightest doubt that, without investigation, the Committee, assuming they had the work to give, would have afforded employment to hundreds of absolutely undeserving persons—persons of bad character, in no way qualified for assistance under the Act, and, in quite a number of cases, altogether ineligible as being without the required residential qualification. In the figures for some of the towns quoted in the Reports of the Local Government Board I would be astounded to learn that there were not hundreds of persons passed for work, who, on any sort of investigation at all, would have received little consideration. It almost looks as if some of the committees, fearing that an applicant might find work or change his mind, had shown an indecent haste to assure him that they would be delighted to afford him employment. It is at least, too highly probable that quite a number of persons have been passed who had not the requisite residential qualification; but, in any event, and apart altogether from the fact of whether or not those committees did not properly discharge their duties under the Act, in providing work only to those persons "temporarily out of employment from exceptional causes, over which they had no control," surely far greater harm than good is done by the indiscriminate granting of work to any persons who may apply. Among the reasons for refusal by my distress committee in 214 cases you will find such causes as: (a) Subject to fits (epileptic); (b) recently in prison or wife deserters; (c) habitual drunkards; (d) not having the residential qualification; (e) too old, referred to parish; 2nd (f) gave false information. That table alone accounts for nearly 10 per cent. of the applicants, and shows that, for very good reasons, such a percentage was refused work.

"You will find that 20·6 per cent. of the applicants had applied to the parish for relief in the last year or in previous years. Surely this is worth knowing.

APPENDIX No. I. (B.)—continued.

Handed in by Mr. Charles Cleveland Ellis. (Q. 89105).

"Many of the reasons assigned by employers for the discharge of the men are more than sufficient, and when submitted to the committee, are quite conclusive of whether or not the men should be granted work. Quite a number of employers' certificates are returned: 'Left of own accord.' This at least wants some explanation from the men.

"You will observe from the Report that a considerable proportion of the applicants failed to attend before the committee when summoned. Those absentees have very often bad parish records. Their houses are reported dirty, the people thriftless. Investigation alone is sufficient in many of those cases. The man knows it is quite a waste of time to appear before the Committee. Very frequently the man, sometimes too, his wife, are found drunk when visited.

"Then there is another advantage of the communication with the last employer. Not infrequently the

employer returns the Circular with the request that the man should call, when he (the employer) would endeavour to give him work of some kind until there is a vacancy in his own line; or the statement may be made that the man can get his old job back again.

"Now, keeping in view the foregoing information, which as you are aware, is elicited in the cases here, the figures given in the Reports of the Local Government Board, as to the percentage which was found in certain towns to be qualified under the Act, are little short of amazing.

"There is only one other point, which I omitted to state above, namely, that in cases where there is any doubt as to the residential qualification, the address of the house factor is obtained and reference made to the rent books."

GLASGOW PARISH COUNCIL.

TYPICAL CASES OF IMPROVIDENCE.

A/10274. R. H., 29 years, a plumber, certified "tuberculosis," wife 28 years, married 27/8/97, 4 children, off work 3 months, earned 34s. per week prior, in no society, rent £12 10s. per year, he admitted to Stobhill Hospital and wife placed on roll at 12s. per week.

A/9013. J. M'C., 36 years, a moulder, certified "Bright's disease," wife 32 years, married, 4 children, off work 2 months, earned 30s. to 34s. per week, in no society, rent 12s. per month, one apartment, he in Royal Infirmary, wife placed on roll at 12s. per week.

A/9901. J. C., 34 years, a furnaceman, certified "neurasthenia," wife 33 years, married 1894, 7 children, eldest in hospital, off work 12 months, earned when working 30s. per week, in no society, rent £10 10s., two apartments, he in hospital and granted 18s.

A/9952. J. C., 48 years, a mason, certified "phthisis,"

wife 47 years, married 31/12/83, 8 children, 3 working, earning 21s. per week, off work 12 months, earned 9d. per hour, in no society, rent £8 8s., two apartments, he in hospital and wife placed on roll at 10s. per week.

A/8830. A. W., 33 years, a mason, certified "rheumatism," wife 33 years, married 24/4/96, 6 children, off work 3 months, earned prior 9d. per hour, in no society, rent £9 19s. per year, he in Stobhill Hospital and wife placed on roll at 12s. per week.

A/10238. A. M'N., 36 years, a boilermaker, wife 34 years, married 17/10/90, 4 children, off work 5 weeks, earned 35s. per week, rent 17s. 1d. per month, in no sick benefit society, husband dead, funeral society £5 2s. 6d., widow placed on roll at 10s. per week.

A/10186. S. A., 34 years, single, blacksmith, sent to hospital, "itch."

APPENDIX No. II. (B.)

Handled in by Mr. James Ferguson, Glasgow (Q. 90356).

A number of the persons assisted to emigrate have departed from the country owing rent. Not only so, but they have departed leaving the factor to understand that the rent would be paid by the distress committee or by the Salvation Army. Numerous letters have been received from house factors stating that they understand that the committee is paying the rent, and asking for a remittance. Similar applications on similar grounds have been made by collectors for police and poor rates.

By special request, and for the information of the committee the following notes of the history since landing in Canada, of the persons assisted by the committee to emigrate have been transmitted by the Canadian officers of the Salvation Army, viz :—

Record No. 33a.—Sailed 20th April, 1907.

Sent to a farmer, Mr. George Julian, Vellore, P.O. Railway Station, Maple, who offered \$230'00 per year and free house and garden. Returned to Toronto and reported that he could not find the place. Obtained a situation with the Canadian Shipbuilding Company, Toronto, at \$1'50 per day, with promise of something better. A rivetter by trade. This family is above the average—two nice children. Wife tired and somewhat discouraged, but when children grow will be able to take work. Wife is a seamstress. They will get on well in this country. Loaned them an additional \$10'00. Rooming at 88, George Street, Toronto. Have asked an officer to visit them.

Record No. 30a.—Sailed 20th April, 1907.

This family was sent to Mr. R. Crookshanks, farmer, of Beamsville, and on arrival discovered that Mr. Crookshanks had been compelled to engage help elsewhere, and unfortunately did not notify us to this effect, although we make every provision in this respect. It appears that Mr. Crookshanks secured another situation for this man at \$200'00 per year, with free house and garden. This was refused, and—brought his family to Toronto, where we provided him with temporary accommodation at the "Newcomers Inn," and introduced him to the Canada Shipbuilding Company, who promised to give him a suitable situation. He is a boilermaker.

Record No. 1a.—Sailed 16th March, 1907.

Sent to farmer, Mr. John Bryant, Laurel, Ontario. Writes—"I am pleased to say that I can find no fault with my place, the people are very nice to me, and I hope everybody that comes out will be as fortunate."

Record No. 3a.—Sailed 16th March, 1907.

A situation as general labourer was procured for this man at the Gurney Foundry, Toronto, at \$1'40 to \$2'00 per day. I understand that he left this position for a better one. He is still in Toronto, and should be successful in this country.

Record No. 5a.—Sailed 6th April, 1907.

Sent to a farmer, R. M. Van Luven, of Kingston, but apparently misunderstood their directions, and applied to our representative, Adjutant Sims, of Kingston, who arranged to get him a position in the town, where work is plentiful. Our officer will render every assistance.

Record No. 10a.—Sailed 6th April, 1907.

Sent to Kingston, where suitable employment has been found by our officer in locomotive work at \$1'45 per day. Our officer writes :—"I can find work for all able-bodied men who come my way, so long as they do not require me to take them to my own home in an automobile or expect a furnished house awaiting them. I can supply work and direct to lodgings." An additional sum of \$5'00 advanced for house furnishings.

Record No. 43a.—Sailed 4th May, 1907.

At Kingston. Employed by Mr. Rankin, builder, at \$1'50 per day. Secured a boarding-house—temporary accommodation. Wants to go to Hamilton, but has been persuaded to remain where he is until he gets on his feet. Should succeed in this country.

Record No. 29a.—Sailed 20th April, 1907.

In Toronto, address 172 Spadina Avenue, working for M'Williams, contractors on William Street, at 20 cents per hour. If industrious, has opportunity of bettering his position. Gave his family financial assistance on arrival in Toronto.

Record No. 27a.—Sailed 20th April, 1907.

Working at the Canadian Shipbuilding Company, Toronto, as a rivetter. This firm has some large contracts on hand, and he should be all right here. Has rooms at 172, Spadina Avenue. Gave this family also some financial assistance.

Record No. 8a.—Sailed 30th March, 1907.

Sent to Montreal, where our representative has secured work and suitable accommodation.

Record No. 13a.—Sailed 20th April, 1907.

Sent to Mr. John Cartwright (farmer) Zimmerman, Ontario, Railway Station, Ash, Ontario, who offers \$240'00 per year with house and firing.

Record No. 16a.—Sailed 30th March, 1907.

Present address 488, Clement Avenue, Toronto. Being a mason by trade he will find plenty of work in the city at a good rate of wage, and is likely to do well.

Record No. 22a.—Sailed 13th April, 1907.

Reported at Halifax and booked through to London, Ontario, on his own responsibility. He did not ask our assistance in regard to employment. Will get further particulars of this family.

Record No. 2a.—Sailed 30th March, 1907.

This man has found employment with the Hamilton Steel and Iron Works, Hamilton, Ontario, where he can be employed all the year round, and, if a good, industrious, man will be able to make a home for his family after a little while.

Record No. 17a.—Sailed 13th April, 1907.

Reported at Halifax and booked through to Montreal on his own responsibility. He did not ask our assistance to find employment.

Record No. 28a.—Sailed 13th April, 1907.

Sent to Mr. W. Plunkett, City View, Ontario, who offered \$20'00 per month for experienced man, and \$10'00 a month for wife to do general house work. House rent and firing free.

Record No. 32a.—Sailed 20th April, 1907.

Booked through to Cape Rouche on his own responsibility.

Record No. 18a.—Sailed 13th April, 1907.

This man has found employment at his trade (stone-cutter), with Mr. G. Rice, of Bear River, N.S. Mr. Rice runs a large monumental work, and employs a number of men all the year round. The wages paid are from \$2'00 to \$2'25 per day. House rent and living are very cheap. I have no doubt if he is a good workman that he will soon be able to get a comfortable home for his family.

APPENDIX No. II. (B.)—*Continued.**Handed in by Mr. James Ferguson, Glasgow (Q. 90356).**Record No. 19a.—Sailed 20th April, 1907.*

Booked through to Oshawa, and is now working at the malleable iron works at that place.

Record No. 9a.—Sailed 30th March, 1907.

This man was sent to a butcher, James Vanstone, of Chatham, N.B., who offered \$240'00 per year, with house. As he was a butcher by trade, I have no doubt but what he will succeed.

Record No. 23a.—Sailed 13th April, 1907.

Reported at Halifax and booked through to Hamilton on his own account. In all probability he had friends there, as he did not require our assistance to obtain work.

Record No. 7a.—Sailed 6th April, 1907.

Sent to a farmer, J. F. Lusk, Heyworth, Que., who promised to pay \$20'00 per month, house and firing free, also could employ wife in her spare time.

Record No. 31a.—Sailed 20th April, 1907.

This man was sent through to Winnipeg, for Major Creighton to place. As yet we have not had a report, but it will be forwarded as soon as received.

Record No. 20a.—Sailed 20th April, 1907.

Booked to Oshawa. Is now working at the malleable iron works at Oshawa.

Record No. 6a.—Sailed 6th April, 1907.

Reported at Halifax and booked to London, Ont. Did not require our assistance, as he had friends at that place.

Having regard to the brief time which has elapsed since the emigration of the families assisted, it would scarcely be fair to venture any opinion on even the prospect of success in the majority of the cases; and the foregoing notes are only submitted as the best obtainable on very short notice.

APPENDIX No. II. (C.)

Handed in by Mr. James Ferguson, Glasgow (Q. 90476).

RETURN showing the average rate of Wages of men chargeable in Hospital whose wives were in receipt of Outdoor Relief, with their respective occupations.

AVERAGE RATE OF WAGES.

NOTE.—Of the above number, two stated they were members of a friendly society.

APPENDIX No. II. (D.)

Handed in by Mr. James Ferguson, Glasgow (Q. 90479).

The class of cases I refer to are working men and householders who, being ill, apply to the parish for assistance; some may have been a few days off work while others may have been months. All are medically examined on application, but it is only in cases where a certificate as to unfitness for work that outdoor relief is recommended.

Where the assistant inspector considers that hospital treatment is necessary it is the practice to offer the husband admission to one of our hospitals and to grant outdoor relief to his family while he remains a patient; the said offer is generally sanctioned by the relief committee. By this arrangement not only is the head of the house benefited but his family are thus allowed the full benefit of the aliment.

APPENDIX No. III. (A).

Handed in by Messrs. Watson and Crowther. (Q. 90622(2).)

APPENDIX No. III. (G.)

Handed in by Messrs. Watson and Crowther. (Q. 90798.)

A Report of the Salvation Army as to the persons emigrated was read to the Committee on February 12th, 1907, as follows—

F. B. At Collingwood, Ontario. In steady employment, yet nothing has been paid on his loan account.

T. B. This man is at present in Owen Sound, Ontario. He is rather a smart fellow, but is very shiftless, and as a consequence does not get along well. He has not yet paid anything on his loan account.

J. J. This man was sent with his family to Arn-prior. He was altogether unsatisfactory, and spent all his time in the public-houses. Finally he cleared out and left his wife behind, and she became a public charge, and made it very hard for our work in the town. She was finally deported. Our agent reports that after what he saw of him he would not trust him with five cents.

J. E. S. Sent to Chatham, Ontario. Nothing has been remitted on loan account.

J. S. Went to Montreal on his own responsibility, and we have heard nothing from him since.

F. W. Address, Pembroke, Ontario. Nothing paid on loan.

W. C. This man is in good employment with the Pembroke Lumber Company. He has professed conversion since his coming to the country and is

uniting with the Army in Pembroke. He has paid ten dollars on his loan account.

H. B. Address, Jordan, Ontario. Nothing paid on loan.

J. C. Address, Pembroke, Ontario. Nothing paid on loan.

J. H. Address, Reaboro, Ontario. Nothing paid on loan.

W. L. We sent this man to a job at Shawanegan Falls, Quebec, but after five days' work he left his work, and the company, likewise ourselves, have heard nothing from him since.

J. H. Supposed to be at Hamilton, Ontario.

W. K. This man was sent to Pembroke, Ontario, but we have learnt that he left there and was supposed to have gone to Hamilton, Ontario. We have not received anything from him on his loan account.

T. R. This man is working in the Car Works, at Cobourg, Ontario. He has had rather a hard time of it since coming to the country, suffering from poor health. He writes to say how much he regrets that up to the present he has not been able to remit anything on his loan account.

R. P. This man and family were sent to a farmer at Jordan, Ontario. We wrote them two days afterwards, but the letter was returned with a note from the farmer stating that they had never reached there. We have not been able to locate them since.

ENTERED AT STATIONERS' HALL.

THE "MODERN" RENT CARD.

Showing at a glance exactly what the Tenant pays in Rent and what in Rates.

This Rent Card is used for houses rated from £8 to £24 per annum, but for every £1 difference in the amount at which the house is rated a different coloured card is used, and a separate card is available.

Name of Tenant

Address of Property

Notice in writing of at least a week must be given to terminate tenancy, and is to be sent to :—

or handed to the collector when calling. Such Notice can only be accepted subject to due delivery of all keys, and inspection of premises by Landlord or Agent.

Agent.

The Tenants' attention is particularly directed to the form of this Rent Card, which shows separately the Rent for the premises, and the Rates payable on those premises, for it must not be overlooked that :—

The Landlord acts as collector of the Rates to obviate the Tenant being troubled by the Rate collector.

The Rent and Rates together constitute the charge for the premises.

The Rent is a standing charge and unalterable except by agreement.

Watch your Rates. Watch your Ward Member. Watch the Actions of your Council and Board of Guardians.

The House situate at

is let to Mr. on the terms for Rent and Rates as stated on the inside.

The Rates are imposed quarterly by the Borough Council, and include the demands of the Guardians, both Council and Guardians being duly elected by Burgesses, and it is to the interest of every Tenant to see that the members of the Council and Guardians carefully administer their Trust, for any rise in the Rates will be duly charged, and any fall allowed. Therefore, Tenants should see that business men, capable of careful administration, are duly elected to serve them on the Council and Guardians.

This House being rated at £8 per ann., the Local Rates will be collected with the Rent as follows :—

When Rate made amounts to	but does not exceed	The amount payable Weekly is	When Rate made amounts to	but does not exceed	The amount payable weekly is
per £ rateable value.			per £ rateable value.

10/7	...	11/1 ... 1/8	16/0	...	16/6 ... 2/6
11/1	...	11/8 ... 1/9			

The Rates levied by the Borough Council are :—

s. d. in £

Quarter ending 31st Mar. do. 30th June do. 30th Sept. do. 31st Dec.

All Tenants have it in their power to vote in order that they may be suitably represented, and should do so if they wish their rates kept within bounds.

Then act in your own interest by seeing that the Rates are kept at the lowest possible figure.

You will then secure retrenchment with steady progress in your Borough.

APPENDIX No. IV. (B).

Handed in by Messrs. R. V. Broodbank and A. Evans Thorp. (Q. 91771.)

POPLAR BOROUGH MUNICIPAL ALLIANCE.
Central Offices and Committee Rooms,
25, Bow Road, London, E.
July 6th, 1908.
MR. R. G. DUFF,
Royal Commission on the Poor Laws and Relief of
Distress, Scotland House, Westminster, S.W.
Dear Sir,—I have your favour of 3rd inst., and in reply
feel that I cannot do better than to send an original
letter from the London County Council addressed to
the inmates of the Council Buildings in this Borough.
The case is clear, and the cause is distinctly set forth,
Yours faithfully,
POPLAR BOROUGH MUNICIPAL ALLIANCE,
R. V. BROODBANK,
General Secretary

LONDON COUNTY COUNCIL HOUSING DEPARTMENT.
23, Cockspur Street, S.W.
March 9th, 1907.
COUNCIL BUILDINGS.
Sir (or Madam),—I am directed by the Housing Com-
mittee to inform you that on and after Monday, April
1st, 1907, the rent of the tenement you now occupy
will be increased from 6s. 6d. to 7s. per week.
In connection with this increase, the Committee
desire me to point out to you that since the opening of
the Buildings in 1894, the rates (which together with
taxes and water rate are paid by the Council) have in-
creased from 7s. 7½d. to 12s. in the £, while the rents
have remained as originally fixed.
This notice is sent so that, should you not be prepared
to continue your tenancy at the increased rent, you may
have sufficient time to obtain accommodation elsewhere.
In due course the Superintendent will call upon you
with a new agreement,
Your obedient Servant,
S. G. BURGESS,
Housing Manager.
MR. CHAS. SHOWELL,
2, Council Buildings.

APPENDIX No. V. (B.).

Handed in by Mr. C. G. Dye, on behalf of the Firewood Trade Association. (Q. 91854.)

19, Glyn Road, Homerton.

August 23rd, 1906.

Mr. C. Dye.

DEAR SIR,—No doubt you will be expecting to hear result of interview with Church Army. It did not exceed my expectations. Mr. Lovel, our chairman at Paddington, with myself, were appointed to attend. We did not see Colin F. Campbell, but had a lengthy conversation with Mr. Lloyd-Jones and another. As was to be expected, they talked matters over with us very pleasantly. They seem to think that the course they are pursuing in giving this work to the unemployed, etc., is quite as honourable as us looking after the interest of our members.

(1) Could we suggest any other employment to take its place?—We were not there to suggest as to what they should do.

(2) Would it meet with our approval if they, from time to time, employed all the out of work firewood cutters we sent to them?—We told them that our society members for whom we were speaking wanted to labour in their respective firms, not in a charitable institution.

What do you want us to do then?—Give up the entire thing and let the trade come back to those who have a legitimate right to it.

Said they "you are asking a big thing."

After much talk concerning the right of every man to live, the freedom of the labour market, there being no barrier to prevent one man competing against

another, etc., I said: "You must admit our grievance is a just one." Agreed.

Then I said: "We are to go back and tell our members that you cannot see your way clear to discontinue this practice, and that we must keep on agitating and seek redress from some other quarter." Then followed a discussion upon the letter I had sent to Colin F. Campbell, on his article in the *Church Times*. They thought I had used hard words, and I was able to substantiate what I had said. I had called it an un-Christlike action, and as a Christian worker I told them I meant all I said. I further said: "That for any organisation, whether Church, Salvation Army, Wesleyan, Methodist, etc., taking for their guidance the principles of Christianity, actuated in their efforts by this same spirit, to have the evils of this system pointed out to them, and then to insist upon carrying it on unrestricted, is most un-Christlike; for no Christian should help one class at the expense of another." I must tell you more when I see you. I must just tell you what Mr. Jones said when I was leaving: "You will never build your trade up by attacking these institutions, unless an Act of Parliament is passed, compelling all firewood bundles being made in factories." We are not without hope. There are other agencies that we must make use of. It might mean hard work, but we must know no failure. This is roughly written, the fact is I am very tired, but was anxious to let you know. With best regards.—Yours respectfully,

J. A. RICHARDSON.

APPENDIX No. V. (C.).

Handed in by Mr. Dye on behalf of Firewood Trade Association. (Q. 91856).

A MEMORIAL TO THE COMMITTEE, SOCIAL DEPARTMENT, CHURCH ARMY, FROM THE FIREWOOD CUTTERS PROTECTION SOCIETY.

SIRS,—We, the representatives of the Firewood Cutters Protection Society, thank you for favouring us with this opportunity of better explaining our grievance, the nature of which you have already been notified.

We, as workers, have a kindred feeling of sympathy towards the ever increasing number of unemployed, but we deeply regret that an organisation of this kind in their endeavour to help alleviate the distress among the unemployed should monopolise an industry which, apart from this encroachment, has each year to combat against some new invention in fire-lighting methods, viz., gas and slow-combustion stoves, and other patent fire lighters, taking the place of the ordinary firewood bundle.

Our contentions are:—

(1) That the Church Army and other kindred institutions, in putting the unemployed to make and sell firewood bundles, are inflicting a gross injustice upon the practical firewood cutter, who, in most cases, has followed this occupation from the days of his childhood.

(2) We say that it is wrong to assert that any one could become a woodchopper, "provided he had a chopper, he could purchase a few empty cases, chop them into firewood, and sell it. This, we contend, would not qualify a man to be called a woodchopper, as we understand the term, and if that impractical man had nothing more than that to depend upon, he would find it a very poor living. Firewood-chopping, pure and simple, is a trade that requires more skill than many who have not sufficiently studied its workings can imagine. Certainly, if it is a case of public money being utilised, the waste in production is seldom, if ever, taken into account. This, to a private employer, is an important feature.

(3) We further say that the statement set forth in the letter of Mr. Colin F. Campbell in the *Church Times* of May 11th, to the effect that he had reason to believe that no distress worth mentioning existed among the genuine firewood cutters, either shows that he had been misinformed, or that he knew very little as to the condition

of those dependent upon the trade for their livelihood. For not only during the month of May, but even in the winter, many of them were on short time, earning only 12s. or 14s. per week.

(4) It answers for itself if the Church Army employs daily between 1,000 and 1,200 men, who, for the most part, know little or nothing of woodchopping. The product of their efforts ultimately finds its way into the homes of the people, and as you cannot create consumers like you make workers, it follows that the goods of the private employer are less saleable in the market. The output has to be lessened. The willing worker is made workless through indiscreet charity doles, which help in many cases a class of people who will do very little to help themselves.

(5) As you are aware this is no new grievance. We did think that when the attendant evils of this system was pointed out to you some years ago, that you would do your best to help us by lessening the output. Instead of that, you have year by year extended your operations, but now the time has come when something must be done, some understanding come to, so that the *bona fide* wood-chopper claiming the right to live by his labour, shall not be ousted and compelled to see those dependent upon him lack the common necessities of life through no fault of his own.

We say that it is most unfair that Christian philanthropy should be so misdirected in its use. We feel certain that you have never interested yourselves in the matter sufficiently enough, that you might know the amount of suffering that your system every year is inflicting upon the genuine worker.

We venture to say that within ten years, the number of employees has decreased 50 per cent.

In closing, I would remind you that we are not asking for charitable aid, we are only asking to have restored unto us the means of earning a livelihood which has been filched from us.

APPENDIX No. VII

Handed in by the Rev. J. H. Anderson. (Q. 92404 (7b).)

Agreement between the Central (Unemployed) Body for London, hereinafter called "the Central Body," and the mayor, aldermen and councillors of the Borough of hereinafter called "the Council" made the day of 190 , whereas the Central Body is desirous of providing or contributing towards the provision of temporary work for unemployed workmen in proper cases under the Unemployed Workmen Act, 1905, and the Council is prepared to provide the work hereinafter described for such workmen upon the conditions and subject to the terms hereinafter stated. And whereas the Central Body has satisfied itself that such work has for its object a purpose of actual and substantial utility. It is agreed between the Central Body and the Council that the Council shall on or before the day of commence and continue within a reasonable time (or on or before the day of 19) carry out and complete the work following :—The Scheme for

as described in the schedule hereto. And shall employ (subject to proper superintendence and supervision by the officers or servants of the Council) persons on the list of the distress committee of the Council under the said Act and of the Central Body as being unemployed workmen proper to be assisted or provided with employment under the said Act sent by the Central Body to be so employed by the Council to do, carry out, and complete the said work exclusively of any other workmen or labourers. And that the conditions specified in Article V. of the Regulations (Organisation for Unemployed) 1905, shall form part of the terms and conditions of the employment of the said persons upon the said work. And that the Council shall take all reasonable steps and use all reasonable means to provide and insure that the restrictions, terms, and conditions contained in Condition (1) of the said Article V. are throughout such employment observed, performed and enforced. And that the surveyor for the time being to the Council (hereinafter referred to as the Surveyor) shall certify that such restrictions, terms and conditions have been so observed, performed and enforced. And that the Central Body may as occasion requires exercise the right to withhold the contribution or any part of the contribution in this Agreement agreed to be made by the Central Body to the Council on proof to the satisfaction of the Central Body that any restriction in Condition (1) of the said Article V. has not been observed. And that the Council shall from time to time afford to the said persons employed such facilities as, in the opinion of the Central Body, are reasonable to be afforded for the purpose of putting such persons in a position to obtain regular work, or other means of supporting themselves (including reasonable permission from time to time to be absent for a reasonable specified period from the said employment in order to search for regular work, or other means of supporting themselves). And it is further agreed that the Central Body shall pay to the Council

as and being the agreed difference

between the cost of the work if done under ordinary conditions and in ordinary course, and its cost under this Agreement

(Or an agreed portion of the difference).
(Or between the cost of the work under this Agreement and its value when completed to the Council).

as follows :—

such payments shall be made

State how e.g., by monthly instalments proportionate to the work done in each month upon the certificates of the surveyor to the Council, stating the amount of each such instalment, or by four equal instalments upon the certificates of the surveyor to the Council that one-fourth, one-half, three-fourths, or the whole, as the case may be, of the work has been done, or as may be agreed.

State any special conditions as to wages.

And it is further agreed

And that in case of any dispute or difficulty in respect to or arising out of this Agreement, the same shall be referred to the determination of an arbitrator to be agreed on between the Central Body and the Council, or in default of such agreement to an arbitrator to be appointed by the Local Government Board.

(Seal of the Central Body.)

(Seal or else similar signature of Council.)

N.B.—A copy of Article V. of the Regulations (Organisation for Unemployed), 1905, herein mentioned, and which forms part of this Agreement, will be found hereunder.

APPENDIX No. VII.—*continued*.*Handed in by the Rev. J. H. Anderson. (Q. 92404 (7b).)*

EXTRACT FROM THE STATUTORY RULES AND ORDERS, 1905. No. 1071.

UNEMPLOYED WORKMEN.

The Regulations (Organisation for Unemployed), 1905. Dated October 10th, 1905.

Article V.—The conditions under which a Central Body may provide or contribute towards the provision of work under the Act shall be as follows :—

(i.) Where the Central Body provide or contribute towards the provision of temporary work for any person, the Central Body shall employ or arrange for the employment of the applicant on such terms as will enable them to enforce, and they shall, as occasion requires, enforce the observance of the following restrictions, namely :—

(a) That the work shall have for its object a purpose of actual and substantial utility.

(b) That each person employed on the work shall throughout his employment be subject to effectual supervision.

(c) That each person employed on the work shall perform every task allotted to him with diligence, and shall, throughout his employment, attain a standard of efficiency such as with due regard to his ordinary calling or occupation, and his age and physical ability, may properly be required of him.

(d) That each person employed on the work shall, as far as possible, be afforded continuous occupation thereon day by day, with such absence only as may be needed to facilitate his search for regular work or other means of supporting himself.

(e) That where the Central Body provide or contribute towards the provision of temporary work necessitating, during a period or a succession of periods comprising in each case four consecutive days at the least, continuous absence from home of the person employed, and he has a wife, child, or other dependant, the Central Body shall satisfy themselves that the cost of the lodging and maintenance of the wife, child, or other dependant will be defrayed by deduction from the remuneration of the person employed, and that he has made or will make every such agreement or arrangement as may be needed to give full effect to this restriction.

(f) That where the person employed has no wife, child, or other dependant, or has a wife, child, or other dependant, but is not employed on temporary work necessitating, during a period or a succession of periods comprising in each case four consecutive days at the least, his continuous absence from home, the total remuneration of that person for any given period of continuous work shall be less than that which would under ordinary circumstances be earned by an unskilled labourer for continuous work during the same period in the place at which the work is provided; and

(g) That where the person employed has a wife, child, or other dependant, and the remuneration of that person is subject to deduction for the purpose of defraying the cost of the lodging and maintenance of the wife, child, or other dependant, the total remuneration of the said person for any given period of continuous work shall be less than that which would, under ordinary circumstances, be earned by an unskilled labourer for continuous work during the same period in the place at which the wife, child, or other dependant is lodged and maintained.

(ii.) Where the Central Body contribute towards the provision of temporary work, their contribution shall be made on terms which will enable them to exercise, and they shall, as occasion requires, exercise the right to withhold the contribution or any part of the contribution on proof to their satisfaction that any restriction mentioned in Condition (i.) has not been observed.

(iii.) Where the Central Body provide or contribute towards the provision of temporary work in any particular case, the Central Body shall cause all such facilities as, in their opinion, are reasonable to be afforded for the purpose of putting the person for whom temporary work has been provided in a position to obtain regular work or other means of supporting himself

The Central Body, when satisfied that a person for whom temporary work has been provided has neglected to make proper use of the facilities afforded for the purpose of putting him in a position to obtain regular work or other means of supporting himself, or that the person has, without reasonable excuse, neglected or refused to avail himself of an offer of regular work or of other means of supporting himself, shall put an end to the provision of temporary work for that person.

(iv.) The Central Body may, in the case of a person for whom temporary work has been provided, put an end at any time to the provision of temporary work for that person, and shall in no case continue the provision of temporary work for more than sixteen weeks in any period of twelve months, except with the consent of the Local Government Board.

(v.) The Central Body shall contribute towards the provision of temporary work in those cases only in which the work will be provided by a local authority or public body.

(vi.) In every case in which the Central Body provide or contribute towards the provision of temporary work, the provision of temporary work shall be subject to this Regulation, and the conditions specified in this Regulation shall form part of the terms and conditions of the employment of any person under the Act or these Regulations.

Coastguardsmen. Lunatics — Central Government contribute a capitation amount for maintenance of patients in Asylums.

NOTE.—Under the Heading "C" much of the Medical work and work ancillary to it is not carried out by all Sanitary Authorities.

APPENDIX No. IX.

Handel in by Mr. Sidney Webb, L.C.C. (Q. 93187.)

LONDON COUNTY COUNCIL.

INFORMATION PREPARED AT THE REQUEST OF MR. SIDNEY WEBB IN CONNECTION WITH
THE ROYAL COMMISSION ON THE POOR LAWS AND THE RELIEF OF DISTRESS, JANUARY, 1908.

NOTE.—The terms of the various items of information asked for are given in CAPITALS at
the head of each section.

BRIEF DESCRIPTION OF ALL THE DIFFERENT BRANCHES OF THE COUNCIL'S WORK
IN THE SPHERE OF INDUSTRIAL AND REFORMATORY SCHOOLS.

The schools are of four kinds, viz :—

- (a) Reformatory schools.
- (b) Ordinary industrial schools.
- (c) Truant schools.
- (d) Day industrial schools.

A.—REFORMATORY SCHOOLS.

The powers of the council with regard to these schools are acquired under Section III. of the Local Government Act of 1888, which transferred to county council the duties previously discharged by quarter sessions in connection with the establishment and maintenance of, and contributions to, reformatory and industrial schools. Youthful offenders under sixteen years of age who have been convicted of an offence punishable by penal servitude or imprisonment, may be "committed" to reformatory schools for a period of not less than three or more than five years, but they must not be detained after they reach the age of nineteen years. Unless they have been previously convicted, they must, on committal, be over twelve years of age and after detention for eighteen months they may be licensed out to employment.

The council has not found it necessary to establish reformatory schools of its own, but it has entered into agreements with the managers of twenty-eight schools, eighteen for boys and ten for girls. By these agreements the council undertakes to make a weekly contribution varying from 1s. 6d. to 4s. towards the maintenance of children sent from the County of London. In the cases of eight of these schools an out-fit grant of £2 is paid by the council on the satisfactory disposal of an inmate. The council's interest in reformatory schools has hitherto been confined to the contribution of the sum mentioned above. It is, however, proposed that the present arrangement shall be terminated and that a new Agreement shall be adopted under which the council will select the school to which each offender shall be committed and will be able to ensure that the education, training and general management are satisfactory, and that the disposals are suitable in every respect.

B.—ORDINARY INDUSTRIAL SCHOOLS
(RESIDENTIAL).

The Elementary Education Act of 1870 gave to school boards power to contribute money to industrial schools for various purposes or to establish industrial schools of their own, and these powers were, by the Act of 1903, transferred to the council. No child over the age of fourteen years can be sent to an industrial school for any offence. Children may be sent for begging, wandering, and not having any home or settled place of abode or proper guardianship or visible means of subsistence, being found destitute, frequenting the company of reputed thieves, living in brothels, stealing or being beyond parental control. Under the Elementary Education Act of 1876, children may be sent who are "found habitually wandering, or not under proper control, or in the company of rogues, vagabonds, disorderly persons or reputed criminals." They may also be sent for non-attendance at a day school, but, in London, such children are usually

sent either to a truant school or to a day industrial school. The committals terminate in all cases when the children attain the age of sixteen. Power is given to the managers to grant to a child, after detention for eighteen months, a licence to live out of the school, and they are authorised, subject to the child's consent, to apprentice him to, or dispose of him in, any trade, calling or service; or (with the approval of the Home Secretary) by emigration, and such disposals are as valid as if the managers were his parents. All children except those sent under the Elementary Education Act, 1876, remain under the supervision of the managers of the school until they attain the age of eighteen years, and power is given to the managers to revoke a licence at any time before that age is reached, and, for his own protection, to recall a child to the school for a period of not exceeding three months.

C.—TRUANT SCHOOLS.

Truant schools are not specially recognised in any enactment, but are in reality industrial schools which have been certified by the Home Secretary solely for the reception of boys "committed" under the Elementary Education Act of 1876 for non-attendance at elementary schools. The usual practice is to commit them up to the age at which they would in the ordinary course become exempt from school attendance, viz., fourteen years, but they may at any time after the expiration of one month be licensed out on condition that they attend regularly at a day school. A boy on his first admission to a truant school is usually detained for a period of about three months, and is then licensed out. If he attends regularly at a day school no further action is taken, but, in the event of his attendance becoming irregular, his licence is revoked and he is returned to the truant school for a lengthened period of detention, usually about six months, when he is again licensed out. In the event of a boy who is over thirteen years of age being admitted or re-admitted to a truant school he is detained until he reaches the age of fourteen, in order that he may benefit as much as possible from the education and training given in the truant school before becoming exempt from attendance at school. No truant school accommodation has been provided for girls, as enquiries which were made in 1894 proved that the number of girl truants was so small that no special provision of the kind was needed. The few cases of girl truants that have to be dealt with are usually "committed" to ordinary industrial schools.

D.—DAY INDUSTRIAL SCHOOLS.

These schools were authorised by the Elementary Education Act of 1876, which describes them as being schools in which industrial training, elementary education and one or more meals a day, but not lodging, are pro-

APPENDIX No. IX.—continued.

Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)

vided for the children. They are administered under an Order in Council of March 20th, 1877 and children residing within 2½ miles of the school may be admitted under an Order of Detention for any of the offences (with the exception of wandering) for which they might be sent to an ordinary industrial school or for non-attendance at an ordinary day school. If the child is under eleven years of age the period of detention may be for not more than three years, or, if the child is over that age, until he attains the age of fourteen years. Children may, in addition, be admitted under an attendance order for a period of not exceeding one year, or, as "voluntary" cases, by agreement between the managers of the school and the parent.

In all the schools mentioned above under A., B., C., (5) Children or D., the children are occupied for one half of the day in the schoolroom and the other half at training in handicraft or in some industrial occupation. Children who are very young or backward attend school full time, usually until they have passed the second standard.

NUMBER OF BOYS AND GIRLS SO DEALT WITH, THEIR DIFFERENT KINDS OR SORTS, THEIR AGES.

Numbers dealt with.—The numbers of children and young persons "committed" to residential schools throughout the country during the year 1906 were as follows:— (6) Children sent to residential schools in 1906.

	Boys.	Girls.	Total.
Reformatory schools - - - - -	1,297	171	1,468
Industrial schools - - - - -	2,877	890	3,767
Truant schools - - - - -	1,530	—	1,530
Totals - - - - -	5,704	1,061	6,765

As compared with the previous year there is an increase of 487 on the total number "committed."

1,967; a decrease of 23 on the number admitted in the year 1905.

The admissions to day industrial schools during the same year numbered: boys, 1,223; girls, 744; total,

The number of young persons and children dealt with by the London County Council during the year ended March 31st, 1907, is shown below:— (8) Children sent from London.

	Boys.	Girls.	Total.
Reformatory schools - - - - -	134	16	150
Industrial schools - - - - -	612	202	814
Truant schools - - - - -	250	—	250
Day industrial schools - - - - -	141	27	168
Totals - - - - -	1,137	245	1,382

This number shows an increase of about 100 on the total number dealt with during the previous year.

The total numbers of children dealt with by the London education authority from 1871 to March 31st, 1907, are given below:—

Industrial schools - - - - -	23,997
Truant schools - - - - -	12,051
Day industrial schools - - - - -	1,672
Total - - - - -	37,720

Inasmuch as prior to 1889 the Justices for the several counties, parts of whose area fell within the Metropolis, were the prison authorities for the present County of London it is only possible to supply the numbers of the young persons "committed" to reformatories from London since that date, viz.: boys, 2,305; girls, 321; total, 2,626.

CLASSES OF CHILDREN.

Reformatory Schools.—The young persons committed to these schools all come under one description, viz., those under sixteen years of age "who have been convicted of an offence punishable by penal servitude or imprisonment." (See Paragraph 1.)

Industrial Schools.—The children committed to these schools may be classified as follows:—

- (a) Children of dissolute parents who exercise no control over them, with the result that they are found "wandering, etc." (See Paragraph 2.), or begging, etc.
- (b) Children of vagrants who, when not tramping the country, make their homes in common lodging-houses or in single "furnished" rooms.
- (c) Children found in brothels or living with prostitutes.
- (d) Children of respectable parents who, in consequence of being out at work all day are unable to exercise efficient supervision over them.
- (e) Children of respectable parents of weak character who are unable to control them.

Truant Schools.—Children who dislike school and who absent themselves from the ordinary elementary schools, (12) Classes of children in truant schools.
Day Industrial Schools.—Speaking generally, they are for troublesome children whose homes, however poor, are fairly decent, and for children who are falling into bad or irregular habits, through the want of proper supervision. They are not suitable for the vicious or "wandering" child or for the persistent truant. (13) Day industrial schools—classes of children.
Statistics for the country generally are not available, but the following table gives an analysis of the number sent to residential schools from London during the year ended March 31st, 1907:— (14) Ages of children sent to residential schools from London.

TRUANT SCHOOLS.		
Upton House (boys) - - - - -	Urswick Road, Homerton, N.E.	150
Highbury (boys) - - - - -	Highbury Grove, N.	200
DAY INDUSTRIAL SCHOOLS.		
Drury Lane (mixed) - - - - -	Goldsmith Street, Drury Lane, W.C.	200
Brunswick Road (mixed) - - - -	East India Dock Road, Poplar, E.	150
Ponton Road (mixed) - - - - -	Ponton Road, Nine Elms Lane, S.W.	150

The following is a description of each school:—
Feltham.—This school was originally established under a special Act for the reception of boys committed from the County of Middlesex. It was afterwards certified for the reception of children committed under the Industrial Schools Act of 1866. It is chiefly used for the reception of elder boys, who are committed for personal delinquencies or for offences of a comparatively serious nature. The industrial training includes farm work, shoemaking, tailoring, band instruction, carpentry, brick-laying, seamanship, cookery, baking, etc.

Mayford.—This school is now used for the reception of boys who are committed at an early age for the offences of their parents or for venial personal faults. Boys coming within the former class are first sent to the Home for Little Boys at Clapham Park, and are removed to Mayford as places are required for smaller children, whilst boys of the second description are sent direct. The junior section is entirely under the care of women,

and complete arrangements exist for the special welfare of the little boys at all times. They are gradually advanced as they progress educationally and develop physically, until they are able to take their places among the senior boys and to commence their industrial training. The trades taught are shoemaking, tailoring, carpentry, cooking, baking, and farm work. The musical instruction is a speciality; it includes string as well as wind instruments, and the majority of the boys who leave this school enter Army bands.

Gordon House Girls' Home.—This school is reserved for the reception of girls whom it is necessary to remove at a very early age from immoral homes (brothels) or from criminal or vagrant parents. As in the cases of boys at Mayford, the education and industrial work are carefully graded. Girls are specially and thoroughly trained in all matters which will fit them for domestic service and, on leaving, excellent situations at good wages are easily obtained for them.

(17) Mayford.

(18) Gordon House.

APPENDIX No. IX.—*continued.**Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)*

Home for Little Boys.—This Home is for very young boys, whose removal from immoral homes (brothels) or vicious surroundings at an early age is imperative. The maximum age for admission is six years, but the children on admission are below that age. The Home is usually quite full, and, when it is necessary to admit a new child the oldest boy in the Home is transferred to the Mayford Industrial School, where, as already stated, the special care and attention which he has previously received are continued. The regulations provide that no boy may be retained after eight years of age, but they are usually transferred much earlier. Those boys who are old enough attend a neighbouring elementary school, and those who are too young, remain within the Home or grounds under the supervision of a nurse.

Truant Schools.—These schools are for the reception of boys who will not attend the ordinary elementary school. (See Paragraph 3). The industrial training comprises shoemaking, tailoring, carpentry, baking and laundry work. The influence exercised by the schools themselves, by the increase of the amount of the fine for non-attendance at elementary schools, and by the more stringent application of the law, has had the effect of reducing truancy to such an extent that the two schools provide ample accommodation for London cases, and the Council are also able to admit cases from outside authorities.

Day Industrial Schools.—These schools have been already described (see Paragraph 4). The occupations carried on are shoemaking, carpentry, laundry work, printing and band instruction. Owing to various circumstances, the schools have never been utilised to their full capacity, but steps are now being taken which will, it is hoped, to some extent, remedy this defect by securing the admission of a greater number of suitable "voluntary" cases.

RELATIONS BETWEEN LONDON COUNTY COUNCIL AND BOARDS OF GUARDIANS; DO THEY DEAL EVER WITH THE SAME FAMILIES (ARE ANY OF LONDON COUNTY COUNCIL FAMILIES IN RECEIPT OF ANY KIND OF POOR LAW RELIEF; IS THERE ANY INQUIRY ON THIS POINT; WOULD IT DISQUALIFY A CHILD FOR LONDON COUNTY COUNCIL INDUSTRIAL SCHOOL); IS THERE ANY CO-OPERATION?

There is no record as to whether any of the families from which children are sent to industrial schools are in receipt of Poor Law relief—no inquiry is made by the Council upon this point and the fact of such relief being granted would not disqualify a child for admission to an industrial school.

There is at present no co-operation between the Council as education authority and boards of guardians, but concerted action between those bodies would undoubtedly result in a much more efficient and economical system of working. The chairman of the special schools sub-committee of the council (Major Skinner) will, in the course of certain evidence, which he will give to the Commission, submit a statement with regard to cases of children who, having been dealt with in some form or other, by the Poor Law authorities, afterwards come before the special schools committee on being charged at a police court with an offence under the Industrial Schools Act. The list, of which a copy is attached, shows that, during a period of twelve months, 113 cases were so charged, and that in ninety-four cases it was necessary for the safety and welfare of the children to commit them to industrial schools. It must be borne in mind that this is only a partial record of the cases of such children needing care, education, and training, as there must be many who are lost sight of after being removed by their parents from the care of the guardians. Major Skinner will also submit proposals for ensuring that where children of parents of the vagrant, dissolute, or criminal habits are admitted to workhouses, casual wards, free shelters, or common lodging-houses, it shall be the duty of the police, or of the education authority,

to take steps to charge them under the Industrial Schools Acts, but that in such cases the charge for maintenance shall not be local but national. There is, however, another phase of the matter in which a change might beneficially be made.

The Departmental Committee on Poor Law Schools which reported in 1896 was of opinion that the education, training, and disposal of children by the guardians was in many respects unsatisfactory. (Education, Paragraph 151 of Report; Industrial Training, Paragraph 166; and Paragraph 195,) and recommended the establishment of a central authority for the management of these schools which, in their opinion, would result in economy and would greatly increase their efficiency.

Local education authorities are now entrusted with the work of administering the Industrial Schools Acts. In the great majority of the latter schools there has for a long time been a gradual and continued improvement, and the education is now equal to that in elementary schools. The industrial training is given by men who are selected, not only for their skill in their particular trade, but also for their ability to teach, and it is so thorough, both practically and theoretically, that the children, on leaving, can be disposed of to good situations, chosen not only on account of the initial wage the child will receive but also with regard to his advancement.

The classes of children dealt with in Poor Law and industrial schools are practically identical, and the same remark applies to the schools which, in both cases, are, in effect, "industrial schools." The fact of children being sent to one kind or to the other is largely accidental. It is true that, in the case of an industrial school, the child has to be committed by a magistrate; but this fact alone is immaterial as, in the list above referred to, it is shown that the great majority of the children were sent to industrial schools for offences directly due to their surroundings, and that, if the law permitted, they might have been dealt with in Poor Law schools. The proposal of the Departmental Committee could, therefore, be easily and advantageously carried out by combining the two classes of schools under the management of the local education authorities. The existing accommodation would allow of children being classified and distributed in a way which is now impossible, and it would enable places to be equably utilised, and thus prevent overcrowding on the one hand and vacant places on the other. Moreover, it would be possible to set apart one or more schools for cases requiring special treatment. Such a combination is also desirable upon financial grounds. The Report of the Departmental Committee states that the average annual cost per child in residential Poor Law schools varies from £40 8s. 4d. to £16 12s. 1d. This fact would point to the need for the adoption of a uniform policy in the management of these schools, which should have the effect of either reducing a maximum which is too high or of increasing a minimum which is too low.

There are a few other matters of a more administrative character, which it is desirable to mention.

Detention.—Children sent to industrial schools are committed for a definite period, viz., up to the age of sixteen, with power of recall by the managers up to the age of eighteen.* Inmates of Poor Law schools, other than orphans, can, at any time, be withdrawn by their parents. The retention of these children, in the great majority of cases, would undoubtedly be more beneficial for the child, and also, ultimately, more economical to the State. The Poor Law Act of 1899 provides for the adoption of children by the guardians, who may by resolution, under certain specified conditions, vest in themselves all the rights and powers of parents until a child reaches the age of eighteen years. It would be necessary to extend the provisions of this Act to children of tramps or vagrants, and it might be desirable to go further and make them apply to all Poor Law children, so that, before any such child could be removed from the school, consent must be given under the clause enabling the Resolution to be rescinded, or permitting a child to be either permanently or temporarily under the control of the parents or of any other relative. This power should be trans-

* It is proposed to extend this age to twenty-one.

(24) Proposal to combine industrial and Poor Law schools.

APPENDIX No. IX.—*continued.**Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)*

ferred to the local education authority as managers of the schools, in order to ensure that each case was dealt with purely from the point of view of the child's welfare. The following extract from the Report of the Departmental Committee (p. 88) is submitted in support of this suggestion :—

"Children of Dissolute Parents.—The workhouse or infirmary not unfrequently shelters the vicious and worthless parent, whose children receive their education in the school until they are of an age to earn money, when the parent discharges himself taking the children with him. The guardians, thereupon, lose all control over such children, although they have borne the entire cost of their maintenance and education, and are aware of the bad character of the parent, and the hazardous future awaiting the child."

Provision should also be made by which parents who possess means should be compelled to contribute towards the maintenance of their children, in the same way that parents now contribute towards the maintenance of children committed to industrial schools.

Licence.—The provisions of the Industrial Schools Acts as to licensing and revocation of licence should be extended, so as to apply to *all* children under detention in the schools under the foregoing proposals, as this would be necessary in order to enable managers of schools to secure permanent good results after the children have left the school.

The Report of the Vagrancy Commission recently issued calls attention to the fact that many children who are now allowed to remain under the care of vagrant parents might be satisfactorily dealt with by being sent to industrial schools. In a Bill which was afterwards introduced into Parliament it was, however, proposed that such children should be sent to Poor Law schools, but that the cost of their maintenance should be charged to the council of the county in which the school was situated. The placing of the schools under one central authority would give effect to both of these recommendations.

(24a) Controlling Government authority.

The inspection and general administration of industrial schools is entirely carried out by the Home Office. The inspection of the education in Poor Law schools has recently been undertaken by the Board of Education but the schools generally are under the supervision of the Local Government Board.

In the event of the foregoing proposals being adopted, the local education authority would be the sole authority responsible for dealing with all children within their district. It would be necessary for the whole of the work connected with the proposed joint schools to be carried out by one Government Department, and it is suggested that the most appropriate Department would be the Board of Education.

The result would be of twofold advantage, as there would then be one local authority and one Imperial authority, dealing entirely with children of all kinds.

It must be assumed that the additional cost to the education authority, which would be involved in the transference of the children, would be met by the allocation to them of the rate now collected for this work by the Poor Law authority.

DAY INDUSTRIAL SCHOOLS.

Day industrial schools; how many; their history; their present prospects; how successful?

What are the hours, the curriculum, feeding, etc.?

What payment is exacted, how fixed, by whom collected, how much actually obtained, how many prosecutions, etc.

Proposals to extend sphere of these schools.

Are they now used by Poor Law guardians; are there any Poor Law children?

Is any inquiry made whether families are getting Poor Law relief; would it disqualify?

Do you know of any boards of guardians anywhere using these schools, as a method of providing for outdoor relief of children where the mothers have to be away all day at work, or as an alternative to trusting them with adequate money relief. Would the London County Council be willing to receive such children if the boards of guardians sent them, and at what fee?

There are twenty-one day industrial schools in the (25) United Kingdom; sixteen in England (London, three), (26) history
ber day industrial scho.
cess c.

These schools were originally day feeding schools under voluntary management and were first officially recognised in the Elementary Education Act, 1876. As a result of this Act day industrial schools first began to be (27) established by English school boards in 1878 and wherever they have been maintained the general results have been decidedly good, necessarily varying with the locality and also with the policy and attitude of the local authority by whom they are administered. The children make rapid progress with their school work and industrial training, especially having regard to the unfavourable condition of mental and physical backwardness in which they are usually admitted.

Owing probably to an insufficient acquaintance with the subject, the value of the work done in day industrial schools is not generally appreciated. It is frequently contended that inasmuch as the children return each evening to their undesirable associations in the streets and to the often more objectionable surroundings in their homes, the effect of the school is not entirely neutralised is greatly diminished. For such opinions there is, *prima facie*, plausible justification. Actual experience has proved that the conclusion is not sustained. If no discrimination were exercised in the selection of cases committed to these schools, doubtless many of them would be failures. It has been stated, (see Paragraph 13.), however, that children are not sent from vicious or immoral homes, and with regard to other homes many of them wretched and comfortless through thriftless and careless habits, it has, in numerous instances, been found that the training of the child and its acquisition of habits of cleanliness, order, and regularity, have had a beneficial influence upon the home. The children, in fact, have reformed the home and improved the habits of the parents. With regard to the evil influences of the streets, it must be admitted that, whilst, on the one hand, in some cases it would be of the greatest moral advantage to remove from them all children, it must, on the other hand, be recognised that they are no worse for the day industrial child than for the elementary school child.

In London the terms of the Order in Council have been rigidly observed, and no child has been received as a "voluntary case" whose parents had not previously entered into an agreement, enforceable at law, to pay the statutory contribution of not less than 1s per week for the maintenance of such child. In Glasgow and Liverpool it has been the practice to admit children in instances of extreme poverty without any payment from the parent or guardian, and the schools have thus become, in these instances, not only schools for the reception of delinquent children committed thereto by the magistrates, but also feeding schools for necessitous children.

For various reasons, principally because of unsuitable position, the London day industrial schools have not hitherto been utilised to their full extent for committed cases, but steps have recently been taken for the admission of "voluntary" cases on the payment by the parent of the cost of the food, which it is hoped will result in many of the vacancies being occupied.

The industrial training given in the London schools (28) D is generally recognised as being exceptionally good. posals.
No difficulty is experienced in finding suitable employment either for boys or girls, as applications from tradesmen, manufacturers, and others are frequently more numerous than can be granted. The total number of children discharged from the three day industrial schools during the year ended March 31st, 1907, on the expiration of their periods of detention, was 141. From the

APPENDIX No. IX.—continued.

Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)

table given in paragraph 38 it will be seen that thirteen were disposed of to the Army one to the Mercantile Marine, twenty-five to trades, eight to domestic service, one to farm service, nine to factories, three to dock service, and the remainder were placed in various occupations which, with one or two exceptions, were of a permanent character.

Although the legal powers of the managers cease when

the children attain the age of fourteen years, the Council has recognised the necessity for keeping in close touch with them after they leave, and the superintendents not only procure situations for them, but also visit their homes and report on their subsequent career.

The following table furnishes information regarding the children who have left the schools during the last three years :—

School.	Total No. discharged.	Present Circumstances.								Particulars of those in employment.								Total.
		In regular employment.	Casual employment.	Attending Ordinary Elementary Sch'ls.	Sent to Residential Industrial Schools.	Emigrated.	Unknown.	Died.	Lapsed into Crime.	Discharged to Guardians.	Army.	Navy.	Trades.	Various employments.	Domestic Service.	Sea service.	Farming.

The ordinary school hours are from 8 a.m. to 6 p.m., but the children may be admitted at 6 a.m., and are then under the supervision of the resident officer until the general assembly at 8 a.m.

The curriculum differs in extent only from that of the ordinary residential industrial school, and consists of school-work and industrial training in equal proportions, together with the usual recreation.

The feeding comprises three meals a day, and is in conformity with a dietary table drawn up under expert medical advice and approved by the Home Office inspector. The average cost per head in London is 1s. 8d. per week.

The parental contributions in committed cases may be a sum not exceeding 2s. a week, and for voluntary cases the minimum payment per week is fixed at 1s. The parental contributions are fixed by the magistrate at the time of making the order in "committed" cases, and are collected and retained by the local authority.

A sum of £3,201 was obtained from the parents of 3,284 children in attendance at the day industrial schools throughout the country during the year 1906, giving an average of about £1 a head. The amount collected from the parents of London County Council children during the year ended March 31st, 1907 was £410 16s. 1d., or a sum of £1 18s. 7d. per head on the average number maintained.

The number of prosecutions instituted by the council for the recovery of arrears of contribution during the same period was 132.

Steps which have already been taken to extend the sphere of these schools in London are set out in Paragraph 27.

The London day industrial schools have never been used by the Poor Law guardians.

No inquiry is made in the case of children admitted to the London schools as to whether the parents are in receipt of Poor Law relief, and if it were known that such was the case the fact would not disqualify the children from admission.

Section 16 (3) of the Elementary Education Act, 1876 provides that, in the case of children "committed" by a magistrate, if the parent is unable to pay the contribution ordered, the guardians may give him sufficient relief to enable him to pay the same, or so much of it as they consider him unable to pay.

It is not known whether boards of guardians are anywhere using these schools as a means of providing outdoor relief. The adoption of the proposals (Paragraph 23) as to all industrial and Poor Law children being dealt with by the local education authority would make it possible to utilise these schools for the reception of children whose parents (or in the case of a widow or widower, the surviving parent) have to be away from home all day and where some assistance is necessary in consequence of poverty to prevent the parent from entering the work-house or from becoming the recipient of outdoor relief. The admission of the children in such cases to a day industrial school would be more satisfactory and more economical than the granting of ordinary outdoor relief, inasmuch as the child would receive three good meals a day together with education and training such as would enable it to maintain itself on leaving. The cost of food would only be about 1s. 8d. per week, of which 6d. would be received from the Treasury, leaving the net cost at 1s. 2d. It is believed that this would be found to be a most suitable and valuable method of assisting struggling parents of good character.

OPINION AS TO RESULTS UPON THE CHILDREN, ESPECIALLY AS REGARDS THEIR SELF-SUPPORT IN AFTER LIFE; AND TO WHAT THE SUCCESS IN THIS RESPECT IS ATTRIBUTED.

The practical result of the training and care received (38) Dis- by the children is demonstrated in the following table, posals dur- showing the disposals during the year ended March 31st, ing last 1907 :— year.

[The table, which also forms part of the "Replies by the London County Council to questions as to Industrial and Reformatory Schools, &c.," will be found printed in App. No. LXXIII.]

Evidence of the fact that the good results are of a (39) Re- permanent nature is furnished by the following table, sults ten which gives information extending over a period of ten years after- years respecting all children sent by the Council who disposal. have left the schools :—

[The table, which also forms part of the "Replies by the London County Council to questions as to Industrial and Reformatory Schools, &c.," will be found printed in App. No. LXXIII.]

APPENDIX No. IX.—continued.

Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)

At the end of three years, after a child has left the school, the further supervision of the managers is entirely voluntary. It is evident, therefore, that the managers and the superintendents of schools take a great personal interest in the careers of their old scholars and make every effort, either by correspondence or by personal visits, to keep in touch with them.

It will be noticed that the number of "unknown" cases increases year by year. It must not be assumed,

however, that these young persons are unsatisfactory. On the other hand many of them are, doubtless, doing well. The percentage of girls who are unknown is greater than that of boys and this is to a great extent due to the fact that they marry and do not desire that their former detention in an industrial school shall be known.

The following instances in which former inmates of industrial schools have done exceptionally well are of more than ordinary interest :—

Name of School.	Boy or Girl.	Particulars.
<i>Boys' Schools—</i>		
Ardwick Green - - - -	A	During past forty years has been engaged in mission work, has built a school and lodging home for girls, is a member of board of guardians, and a Justice of the Peace.
" - - - -	B	Secretary of Coffee Tavern Company.
" - - - -	C	Salesman in a large wholesale warehouse at —
" - - - -	D	Band sergeant in the Army.
" - - - -	E	Scholarship student, Royal College of Music
" - - - -	F	Art metal repoussé worker (foreman).
" - - - -	G	Cabinet maker : vice-president of local branch of first-class cabinet makers.
Blandford . - - - -	H	Superintendent of police, India.
" - - - -	I	Secretary of Y.M.C.A. (Army).

" - - - -	C	Nursery governess, France.
" - - - -	D	Teacher London County Council school.
" - - - -	E	Teacher in High School (Colonial appointment).

(40) Reasons for successful disposals and careers.

The success in regard to disposals and after careers may be attributed to the fact that the industrial school child is under care and training uninterruptedly from the time of his entry into the school until his final disposal and that he cannot, in the meantime, be removed

by his parents. The education and training is progressively and methodically carried on throughout his school course. The general training is systematic. The individual child is studied as to his fitness for any particular calling or occupation ; his life in the school, the

APPENDIX No. IX.—continued.

Handed in by Mr. Sidney Webb, L.C.C. (Q. 93187.)

discipline, instruction, recreation and feeding are all arranged with the sole object of making him reliant and self-supporting.

When a child reaches the age of fourteen years and nine months, a full report with regard to his educational attainments, industrial occupations, conduct, mental capacity and physical condition must be furnished to the council, together with a suggestion by the managers as to the most suitable age and manner of disposal. With this information before them the council is able to come to a decision in each case, which the managers undertake to carry out. If it is subsequently found that effect cannot be given to this decision, the case is re-submitted with an explanation and an alternative method of disposal is decided upon. From the time a child leaves the school until he reaches the age of eighteen years he is kept under observation by the managers who submit a periodical report to the council in every case.

The reasons for the success of industrial school children in after-life may be summarised as follows:—

- (1) Continuous treatment of the child in the school and the non-interference of parents.

(2) The formation of character by the general system of training and education and the preparation of the child for final disposal.

(3) The care exercised in the disposal as to the choice of suitable occupations.

(4) The supervision by the superintendent or matron and managers; the watchful eye and the helping hand during a compulsory period of three or four years after leaving the school and voluntary supervision for an indefinite time afterwards.

(5) The fact that information as to each case must be furnished to the Council from the time a child is eligible for disposal until he attains the age of eighteen years.

CERTIFIED SCHOOLS USED BY THE COUNCIL; HOW MANY; DESCRIBE AGREEMENTS AND EXPERIENCE AS TO THEM; HOW INSPECTED.

The Council has ceased to send children to those schools printed in italics.

The agreements with the reformatory schools were entered into by the council, as prison authority, before it became the local education authority. (For conditions of agreement see Paragraph 1.)

The present agreement with the managers of industrial schools was adopted in 1905. It provides for the admission of cases sent by the council on payment of sums varying according to the degree of efficiency attained by the school. The Treasury contribution is supplemented so as to make a total weekly sum of 10s. for boys schools of the highest and 8s. for those of the lowest grade. The amount in the cases of girls' schools is 1s. lower in each case. The schools are assessed annually upon reports furnished by the council's officers, who examine the children as to their education and progress and also inquire into the industrial training, food, clothing, health,

domestic arrangements, sanitary condition, etc. The council appoint a representative upon the committee of management of each school who submits an annual report, and who is also expected when necessary to inform them at other times of any matter which comes under his notice. The question of disposals is dealt with in Paragraphs 38 to 42; but it may be mentioned that in each case approved by them the council make an outfit grant of £3 and also a weekly licensing allowance for thirty-nine weeks (amounting to 52s. in all) to enable the managers efficiently to supervise the children during the critical period following their leaving the school.

The council's agreement has proved a most valuable instrument in raising the industrial schools to a high standard of efficiency.

ARE THERE POOR LAW CHILDREN IN THESE PARTICULAR SCHOOLS; HOW MANY; WHICH UNIONS DO THEY COME FROM; DO THEY DIFFER FROM THE LONDON COUNTY COUNCIL CHILDREN IN ANY WAY; IS THERE ANY OBJECTION TO MIXING POOR LAW AND LONDON COUNTY COUNCIL CHILDREN.

At some of these industrial schools there are children who have been sent by Poor Law guardians, but the council has no official information as to the number of schools receiving such children or as to the number of children who are inmates of the schools.

Speaking generally they do not differ from the children sent by education authorities. This question and also that relating to the children of both classes being dealt with in the same schools is explained fully in Paragraph 23.

CONTRIBUTIONS FROM: (a) PARENTS OR OTHER RELATIONS; (b) OTHER PERSONS; HOW MUCH ORDERED TO BE PAID AND HOW DETERMINED; BY WHOM COLLECTED; IN WHAT PROPORTION ACTUALLY RECEIVED; GIVE INSTANCES OF PROSECUTIONS; HOW MANY PROSECUTIONS?

Parental contributions towards the maintenance of children committed to reformatory or industrial schools are fixed by magistrates either at the time the child is sent away or at a later date. The maximum is fixed by the Reformatory or Industrial Schools Act respectively at 5s. a week, but it is very rare that an order for the full amount is made. The amounts are collected by the agents of the inspector of reformatory and industrial

schools and go to the relief of the Treasury contribution. From the report of the inspector of industrial schools for 1906, it appears that the sum collected amounts to £1 13s. 11d. per head in reformatory and £1 5s. 2d. per head in industrial school cases, but it is not known what proportion this bears to the amount ordered. The prosecutions are instituted by officers of the Government who alone can furnish this information.

APPENDIX No. X.
Handed in by Professor Sadler, Manchester. (Q. 93386 (36)).
 I.—TABLE SHOWING THE CONDITIONS OF ATTENDANCE AT CONTINUATION SCHOOLS IN DIFFERENT PARTS OF THE GERMAN EMPIRE.

State.	Compulsory or Voluntary.	Stipulations regarding Boys and Girls.	Age limit for Compulsory Attendance.	Minimum No. of weeks per year and of hours per week.	Remarks.
Prussia	Compulsory by local bye-law since 1874	Compulsory for boys and girls if stipulated by local bye-law	17 to 18 years as stipulated by local bye-law	40 weeks, 4-6 lessons per wk.	Attendance compulsory by local bye-law except in the provinces of Posen and West Prussia, where compulsory attendance is established by State law.
Bavaria	Compulsory by State law since 1803	Compulsory for boys and girls	Boys up to 17th year; girls up to 16th year	Boys 40 weeks of 8 hours per wk.; girls 3 hours, 2 hours per wk.	No lessons allowed after 7 p.m.
Saxony	Compulsory by State law since April 24, 1873	For boys only	Up to 17th year	1909 Law prescribes minimum 280 hrs.	Some towns have the privilege of a 2 years' compulsory attendance with a minimum of 6 hours per week for 40 weeks
Württemberg	Compulsory by State law of May 22, 1895	Compulsory for boys and girls	Boys up to 18 years; girls up to 16 years		The General Continuation Schools compulsory for boys and girls up to 16th year. Minimum number of lessons = 80 per annum. The Industrial Continuation Schools compulsory for boys till 18 years. Minimum number of hours now 180; from 1909 = 280 hours per annum. Afternoon lessons, no evening lessons.
Baden	Sunday Schools compulsory by State law since 1756; Industrial Continuation Schools since February 18, 1874	Compulsory for boys and girls	Boys up to 16 years; girls up to 15 years	42 weeks, 2 hours per wk.	Commercial Continuation Schools compulsory since 1902 at Karlsruhe. Usual number of lessons for boys and girls 3 per week. No evening lessons. Girls' compulsory Continuation Schools 1 year's attendance.
Hesse	Compulsory by State law of June 16, 1874	Compulsory for boys only	Up to 17th year (3 years)	40 weeks, 6 hours per wk.	No lessons on Sunday, Monday and Saturday. Establishment of Continuation Schools for girls left to the communities. No lessons after 7 p.m.
Saxe-Weimar	Compulsory by State law of June 24, 1874	Compulsory for boys only	Up to 16 years for General C. Schools	40 weeks, 4 hours per wk.	General Continuation Schools compulsory for 2 years; Industrial Continuation Schools compulsory for 3 years. The former compulsory by State law, the latter by local bye-law.
Saxe-Meiningen	Compulsory by State law of March 22, 1895	Compulsory for boys and girls	Up to 16th year	40 weeks, 2 hours per wk.	Rural communities winter schools only.
Saxe-Altenburg	Compulsory by local bye-law since February 12, 1889	Compulsory for boys only	Up to 16th year	2 years of 40 weeks with 6 hours per wk.	The local bye-laws date generally from 1900 and 1902.
Saxe-Coburg-Gotha	Compulsory by local bye-law since October 27, 1874	Compulsory for boys only	Up to 17th year	40 weeks of 2-6 hours per week	Since July 24, 1897, girls can be compelled to attend Continuation Schools.
Anhalt	Compulsory by local bye-law since 1874	Compulsory for boys only	Up to 16 and 17 years	4-6 hours per week, 42 wks.	There are winter schools with compulsory attendance 8 hours per week.
Brunswick	Compulsory by local bye-law, for commercial employees since 1878, for young men in industries since 1904	Compulsory for boys only	Up to 18 years	42 weeks, 6 hours per week	Most of the Industrial Schools compulsory since 1822.
Oldenburg	Compulsory by local bye-law since 1874	Compulsory for boys only	Up to 18 years	4 to 8 hours per week, 40 wks.	Most of the schools compulsory since 1897.
Mecklenburg-Schwerin	Compulsory by State law of April 18, 1905	Compulsory for boys only	Up to 18 years	No stipulation	Lessons must take place not later than 9 p.m.
Mecklenburg-Strelitz	Compulsory by local bye-law since 1873	Compulsory for boys only	Up to 17 years	42 weeks, 4-8 hours per week	Compulsory Schools mostly established since 1894.
Schwarzburg-Rudolstadt	Compulsory by local bye-law since 1875	Compulsory for boys only	Up to 16 years	42 weeks, 2-6 hours per week	The State law compels every community to have compulsory Continuation Schools.
Schwarzburg-Sondershausen	Compulsory by State law since 1874	Compulsory for boys only	Up to 18 years	42 weeks, 4 hours per week	For girls there are only sewing lessons Continuation Schools compulsory only during winter months.
Waldeck	Compulsory by State law since July 9, 1855	Compulsory for boys and girls	Boys up to 16 years; girls up to 16 years	24 weeks of 4 hrs. for boys, 2 hrs. for girls	In 1900 the State law compelled the communities to establish compulsory Continuation Schools.
Reuss, Junior Branch	Compulsory by local bye-law since 1874; by State law since 1900	Compulsory for boys only	Up to 16 years	42 weeks of 2 hours per week	Attendance at Continuation Schools is voluntary for boys, but employers are compelled by the law of June 30, 1900, to grant their employees the necessary time up to their 18th year.
Reuss, Elder Branch	Voluntary	—	—	—	
Schaumburg-Lippe	Voluntary	—	—	—	
Lippe	Compulsory by local bye-law since 1874	Compulsory for boys only	Up to 17 years	42 weeks, Winter 10 hours; Summer 2 hrs.	
Hamburg	Voluntary	—	—	—	
Lübeck	Voluntary	—	—	—	
Bremen	Compulsory since April 1st, 1908	Compulsory for boys only	Up to 18 years	40 weeks of 4-6 hours per week	The Guilds compel the apprentices to attend the Continuation Schools. Compulsory through guilds.
Alsace-Lorraine					Compulsory attendance compulsory in 1895, Mulhausen in 1883, Metz in 1890.

ANALYSIS OF LABOUR HOME CASES FOR THE PERIOD OF FOUR YEARS AND NINE MONTHS.

29,533 Orders were issued for admission to homes.
890 of these (3 per cent.) were not presented.

28,643 men were admitted to the Homes.
3,636 (14 per cent.) of these failed to pass the work test, and left within three days.
4,836 (17 per cent.) were passed to other Institutions, or were remaining in Homes at the end of the period.

20,171 passed out of the Homes, after an average stay of about eight weeks each.

GOOD CASES.

8,956 (44 per cent.) of the latter obtained situations, or were otherwise restored.

DOUBTFUL.

8,309 (41 per cent.) left to seek work after eight weeks' stay. Conduct and industry satisfactory during the period. A number of the men in this class are very excellent cases, who obtain work, and do not wish the Society to know where they are.

BAD CASES.

2,906 (15 per cent.) were dismissed, or left unsatisfactorily.

20,171 TOTAL.

Homeless and destitute men admitted into Receiving Homes or provided with food and lodgings in return for work done at Labour Tents, etc. :—

APPENDIX No. XI. (C).

Handed in by Messrs. W. F. Hamilton, K.C., and Walter Lloyd Jones. (Q. 93611) (29).

AGREEMENT.

I hereby undertake to obey cheerfully all the rules and regulations of the Church Army Labour Home, and I enter it with the determination to make an honest endeavour to live a truly Christian life. I hereby pledge myself to be a total abstainer, on no account to enter a public-house, and to attend morning and evening prayers. I agree to be satisfied with the pay allotted to me. In the event of my leaving the home without an approved situation, or without the captain's permission, or being dismissed for breaking my total abstinence pledge, or for idleness, disobedience, insubordination, or any other breach of the rules and regulations, I agree to forfeit

any monies placed to my credit, which monies shall go towards the emigration of deserving persons. I undertake to do my best, after the first month, to obtain work for myself independently of all help from the Church Army; * during the third month to be satisfied with half-pay, and during the fourth month with no pay at all in excess of board and lodging *

(Signed)

* This part of the Agreement has not been enforced for many years, and will be omitted when a new form of Agreement is prepared.

APPENDIX No. XI. (D).

Handed in by Messrs. W. F. Hamilton, K.C., and Walter Lloyd Jones. (Q. 93611) (32).

REGULATIONS OF THE CHURCH ARMY LABOUR HOME.

1. Every man on entering the home must have a bath and have his clothes thoroughly cleansed. He must take a hot bath weekly, and do his best to be neat during the time he remains in the home. Any man finding himself unclean should report himself immediately to the captain, when every facility will be afforded for strict cleanliness. He must also become a total abstainer and must not enter a public-house on any pretext whatever.

2. At 6 a.m. on weekdays and 7 a.m. on Sundays everyone is expected to rise, and all beds must be examined, turned over, and put in order, and washing and dressing ended in time for prayers at 8 a.m. Breakfast is at 8.30 a.m.; dinner at 1 p.m.; tea at 6 p.m.; prayers at 9.20 p.m. (by which time every man must be in the house) and supper at 9.30. Strict silence must be observed in the dormitories after 10, and lights will be put out at that hour, when everyone must be in bed. Every man must be at meals immediately the bell rings, and no man must begin the meal before grace is said, nor leave the table until after the thanksgiving.

3. Work is done from 6.15 a.m. to 7.45 a.m., 9 a.m. till 1 p.m., and 2 p.m. to 6 p.m. On Saturdays from 6.15 p.m. to 7.45 a.m., and from 9 a.m. to 1 p.m. Brothers will assist the orderly and cook on Sunday mornings to do what work is necessary.

4. Everyone must attend service in the parish church on Sunday mornings. Attendance at the mission hall is compulsory on the evenings of Sundays, and at least one week night either at the Mission Hall service or the week night church service. If the inmate be either Roman Catholic, or Nonconformist, he may attend his own service on Sunday mornings if the priest, minister or some person in authority signs a letter certifying each separate attendance.

5. Brothers can smoke after 6 p.m., but at no time is smoking allowed, either in the workshop or dormitories. No frivolous talk or bad language is allowed. Brothers falling sick must on no account stay in the labour home; the captain will make arrangements for sending them to the hospital.

6. Every man is expected to earn 6s. a week for his board, washing and lodging. All monies (with the exception of 1s. a week given him for pocket money)

earned over this amount will be placed to his credit in the reserve fund.

7. Any man leaving the home without an approved situation, or without the captain's permission, or being dismissed for breaking his total abstinence pledge, or for idleness, disobedience, insubordination, or any other breach of the rules and regulations will forfeit all benefits, including any monies placed to his credit.

8. No brother having left the home shall be eligible for readmission to any Church Army home for at least twelve months.

9. Any brother having previously been in a Church army labour home, and concealing the fact, will, on detection, be instantly dismissed, and be subject to the penalties in Rule 7. Unless by special arrangement no man can remain in the home for more than four months. During the first month he is not expected to go out for the purpose of seeking a situation, but during the second and subsequent months he may, in certain cases, obtain leave for the purpose; such leave, however, must be at the captain's discretion, and ought not to exceed two hours on any one day.

10. No brother can remain in the home after the first week unless he earns his board, washing and lodging.

11. No brother—as an employee of the society—is allowed to receive payment for the Church Army on account of work done by himself.

12. Every brother must distinctly understand that no purchases can be made by him on Sundays.

13. Any infringement whatever of these rules and regulations will render the brother offending liable to instant dismissal.

14. The captain appointed is in absolute command, and his regulations, together with the orders of the matron and foreman, must be carried out. All are expected to be respectful to those in authority.

15. No complaints will be considered unless made in writing, and addressed to the hon. secretary of the Social Department at headquarters.

For the Central Committee,

Hon. Social Secretary.

Particulars of Cases Helped.

Eleven married women were assisted to join husbands who were already in Canada, having emigrated at their own expense.

Of the total number emigrated, forty-one paid their own fares and 1,419 were assisted financially.

Places of settlement :—

Montreal, Quebec, and Ottawa	-	-	55
Toronto, and Western Ontario	-	-	1,065
Winnipeg and Points West to B. C.	-	-	340

Eleven conducted parties consisting off :—

Single men from London	-	-	283
Single men from Provinces	-	-	264
Families from London	-	-	96
Families from Provinces	-	-	129

Average age of single men, twenty-six years.

Average age of married men, thirty-five years.

Twenty-five cases only were assisted between the ages of forty and forty-nine. Eleven of these were single men and fourteen married.

A man and wife aged sixty-three and fifty-seven were sent to their children in Toronto.

Four hundred and twenty-three cases brought before the Selection Committee were declined for the following reasons :—

8 too young, 17 too old, 4 excessive drinkers, 3 deafness, 44 in employment, 2 foreign nationality, 345 unsatisfactory references.

In addition to the above, large numbers made personal application and were refused as unsuitable even for recommendation to the Selection Committee.

APPENDIX No. XI. (F).

*Handled in by Messrs. W. F. Hamilton, K.C., and Walter Lloyd Jones. (Q. 93611). (62).**Farm Colonies.*

The Hempstead Farm Colony.—This property was given to the Church Army in 1905, and consists of 450 acres of arable, 84 acres of pasture, and 175 acres of wood. The farms consists almost entirely of clay soil and it had been considerably neglected. It needed badly draining and about 40 acres have been drained by our colonists. The hedges and ditches were in a very bad state indeed and these have been completely trimmed and cleaned and put in a good state by the labour of the colonists under the direction of the farm bailiff.

The estate contains a large residence known as Hempstead Hall and this has been used to house the colonists sent down for training.

Cows, pigs, and poultry are kept, and 29 acres of land adjoining have been set aside for hand cultivation by the colonists.

Selected cases are sent to the colony with a view to receiving a rough training in farming before they are emigrated to Canada.

In 1906, 263 men were sent down to the farm, of whom 18 stayed less than three days; 163 of the remainder were emigrated, 10 were found employment, 5 were returned to their friends, 5 were transferred to other institutions, 19 were dismissed, and 20 left of their own accord. The majority of these had worked well whilst on the colony, but did not care for the country life and preferred to seek other work. Twenty-three remained in the colony at September 30th, 1906

In 1907, 157 men were received at the farm; 18 of whom stayed less than three days; 1 was transferred to another institution, 89 were emigrated, 7 obtained other employment, 3 were sent to friends, 14 were dismissed, 15 left to seek other work, and 10 remained in the Home on September 30th, 1907.

The men at the colony are under the charge of a Church Army officer, and the garden work is superintended by a skilled gardener. The ordinary farm work is superintended by a farm bailiff and 14 agricultural labourers who utilise the labour of the colonists as far as possible in the ordinary work of the farm, at the same time instructing the men in the work.

CHURCH ARMY.

SUGGESTIONS RELATING TO LAND COLONIES.

1. *Compulsory State Land Colonies.*

That compulsory labour colonies be established by the State for the detention and employment of vagrant, work-shy, or unemployed men of bad character.

The colonies to be divided into two classes :—

Class 1. Where confirmed vagrants and idlers of bad character shall be compelled to work for food and lodging only. The diet to be varied according to the industry of the worker; sleeping accommodation to be beds in open dormitories; comforts to be few.

Class 2.—For men of indifferent character transferred from workhouses and for first offenders, also for men who have proved themselves by industry in Class 1 to be worthy of promotion. In addition to an improved scale of diet, there should be more comforts and better means of recreation. Each man to have a separate cubicle. Each man to be credited with the amount of his earnings, based on a system of marks, and charged for his maintenance, the balance being placed to his credit without interest until he is transferred, or it may be paid to any person dependent upon him, the authorities to have full power to veto in what way his savings shall be spent.

2. *Temporary Voluntary State Colonies.*

Some of the existing workhouses in rural districts be set aside by the State, where a further test may be provided, for men who have passed through Section B in compulsory State colonies, and for men of good character who have proved their willingness to work whilst inmates of workhouses. Here the men should be credited with their earnings, and be charged for their maintenance, both on a higher scale than in Section B. The comforts to be increased and small pocket money to be allowed. After probation, a man shall be passed on to a Church Army voluntary home or colony, from whence he would pass to outside employment, or to tested and assisted emigration by the society.

3. *Church Army Voluntary Labour Homes or Colonies.*

(a) That steps be taken to certify existing labour homes and to establish other labour homes and farm colonies, where necessary.

(b) Both town homes and farm colonies should be classified as far as possible on the following lines :—

- (i) For respectable single men unable to find work.
- (ii) For first offenders, or judgment deferred cases, and for men from the State colonies.
- (iii) For married men (with families left at home) in exceptional periods of distress.

(c) An additional farm colony to be provided in Canada for proved workers qualified to become freehold farmers on land adjoining the model farm with aid and experience from the head of the colony.

(d) These institutions to be supported by :—

- (i) State grants for maintenance of men sent from the State colonies.
- (ii) State and municipal grants for persons from workhouses and casual wards.
- (iii) Proceeds of labour.
- (iv) Voluntary contributions.

All inmates to be deemed to be employees of the colonies and homes, and to be treated accordingly.

(e) Inmates of these homes to be credited with their wages in full, and be debited with a sum for maintenance, the balance to belong to the workers. The balance of weekly earnings, less charge for board, etc., to be drawn upon to the extent of 1s. per week for pocket money, or part, or the whole of the weekly balance might be remitted to dependents of the inmate. Except as aforesaid, the

balance should remain in reserve until the inmate left the institution to enter employment. If an inmate was discharged for idleness, disorderliness, or misconduct, he should forfeit any balance due to him, the same being placed to the credit of a fund for the purpose of emigrating selected cases. Any men proving idle or disorderly, or leaving the institution except to enter employment elsewhere, to be liable to be transferred to a State colony.

(f) In large towns, inmates of common lodging-houses, or other single men dependent on casual employment, might be compelled either to obtain a special work licence, or to register as a day employee of some labour home. This would prevent undue competition among this class of men for casual employment, and would still enable employers to obtain extra labour at market rates when required.

Day employees of labour homes should be credited with the amount of their earnings for whatever work they may be engaged upon, but such earnings to be liable to a deduction not exceeding 2½ per cent. towards the cost of management of the particular branch of the work.

4. *Re-organisation of Poor Law Institutions.*

(a) That there be a re-arranging and grouping of workhouses and other Poor Law institutions.

If Poor Law districts were grouped in county or even larger areas, arrangement might be made to set aside certain houses in each area, solely for the reception of the aged and infirm, and other houses be thus made available for use as compulsory or State colonies. This would save the cost of erecting new buildings for purposes of the colonies.

Sufficient land could be acquired, compulsorily if need be, to provide labour for inmates.

(b) Able-bodied inmates at present in the workhouse could be transferred to one or other of the voluntary State colonies as their character warranted.

(c) Small institutions might be set aside for the reception of women with families, unable to maintain themselves, whose husbands were inmates either of a compulsory or voluntary labour colony. Such families might be found some employment to help to earn the cost of their maintenance.

(d) Under such a re-arrangement of workhouses a considerable saving should be possible in the cost of administration, and of the maintenance of the aged and infirm, and the mentally and physically incapable. Classification and separation of the respectable from the vicious would be vital. The compulsory labour colony would entail a greater expenditure for the management and supervision, but the produce of the labour of the men and women under the changed circumstances would probably go a long way towards covering the increased cost.

5. *Classification.*

Class A.—Old folks of spotless character. Every comfort. To be paid a small bonus for any work they may be able to do. Model: Alderødshjem (Old Folks' House at Copenhagen).

Class B.—Infirmity cases.

Class C.—Mental cases.

Class D.—Thriftless by their own fault.

If able-bodied, to be transferred to labour colonies. Accommodation and diet not so good as for Class A. Model: Almendelig Hospital, Copenhagen.

6. *Management and Control.*

Labour colonies and other Poor Law institutions to be administered by a Board of Commissioners under the Local Government Board.

The cost of administration and maintenance to be defrayed by a special Poor Law tax to be collected by the Inland Revenue authorities.

DIETARY TABLES.

DIETARIES AND ACCOUNTS ORDER, 1900.

SCHEDULE "B."—FORM "A."

Parish of Poplar Borough.

At a meeting of the Board of Guardians of the Parish of Poplar Borough, held on the 12th day of June, 1907,

it was resolved, in accordance with the requirements of the Workhouse Regulation (Dietaries and Accounts) Order, 1900, that the following Dietary Tables for the Paupers of the respective Classes hereunder described, in the Branch Workhouse of this Parish, Dunton, near Laindon, Essex, be adopted for the Quarters ending Midsummer, Michaelmas, Christmas and Lady-Day:—

Classes.	Day.	Breakfast.	Lunch.	Dinner.	Tea.
1 and 1a	SUNDAY - -	13. Tea 1 pint Bread 8 ozs. Butter ½ oz.		1. Boiled Beef (cold) 4½ ozs. Bread 4 ozs. Potatoes or other Vegetables 12 ozs.	17. Cocoa 1 pint Bread 8 ozs. Butter ½ oz.
1 and 1a	MONDAY - -	7. Bread 2 ozs. Porridge 1½ pints Sugar 1 oz., or Treacle 1½ ozs.	1. Bread 4 ozs. Cheese 1½ ozs.	2. Roast Beef 4½ ozs. Bread 4 ozs. Potatoes or other Vegetables 12 ozs.	10. Milk 1 pint Bread 8 ozs.
1 and 1a	TUESDAY -	6. Milk 1 pint Porridge 1½ pints	1. Bread 4 ozs. Cheese 1½ ozs.	3. Boiled Mutton 4½ ozs. Bread 4 ozs. Potatoes or other Vegetables 12 ozs.	3. Broth 1 pint Bread 8 ozs. Cheese 2 ozs.
1 and 1a	WEDNESDAY -	7. Bread 2 ozs. Porridge 1½ pints Sugar 1 oz., or Treacle 1½ ozs.	1. Bread 4 ozs. Cheese 1½ ozs.	16. Boiled Bacon 3 ozs. Haricot Beans 12 ozs.	2. Gruel 1½ pints Bread 6 ozs.
1 and 1a	THURSDAY -	6. Milk 1 pint Porridge 1½ pints	1. Bread 4 ozs. Cheese 1½ ozs.	2. Roast Beef 4½ ozs. Bread 4 ozs. Potatoes or other Vegetables 12 ozs.	11. Rice Milk 1 pint Bread 8 ozs.
1 and 1a	FRIDAY - -	7. Bread 2 ozs. Porridge 1½ pints Sugar 1 oz., or Treacle 1½ ozs.	1. Bread 4 ozs. Cheese 1½ ozs.	7. Boiled Mutton 3½ ozs. Potatoes or other Vegetables 6 ozs. Suet pudding or dumpling 4 ozs. Bread 4 ozs.	3. Broth 1 pint Bread 8 ozs. Cheese 2 ozs.
1 and 1a	SATURDAY -	6. Milk 1 pint Porridge 1½ pints	1. Bread 4 ozs. Cheese 1½ ozs.	4. Boiled Pork 4½ ozs. Bread 4 ozs. Potatoes or other Vegetables 12 ozs.	10. Milk 1 pint Bread 8 ozs.

NOTE.—The Guardians hereby direct that for all the adult classes one-half of the allowance of bread prescribed by the list of rations shall be served in the first instance to each inmate, but each inmate shall be entitled to demand the full allowance of bread, and the total allowance of bread prescribed by the Dietary Table shall in all cases be sent into the dining hall for each class of inmates, and no portion of such total allowance shall be removed from the dining hall until after the conclusion of the meal for which it was issued, when it shall forthwith be returned into store, weighed, and duly accounted for. Salt shall be provided for all meals and for all classes. Mustard and pepper to be given as

may be requisite at dinner to adults. A sufficient supply of water and a separate mug for each inmate shall be provided at dinner for all classes. The prescribed weights of the cooked food are in all cases those of the cooked product and, except as regards fish, are to be free from bone.

I hereby certify that the requirements of the Workhouse Regulation (Dietaries and Accounts) Order, 1900, have been duly complied with.

ALFRED W. YEO, *Presiding Chairman.*

G. HERBERT LOUGH, *Clerk.*

12th June, 1907.

APPENDIX No. XIII. (B).

Handed in by Mr. J. Buteux Skeggs, Poplar (Q. 95746 (11-18).)

METROPOLITAN BOROUGH OF POPLAR.

VALUATION AND RATING COMMITTEE.

POOR RATE ASSESSMENT AND COLLECTION ACT, 1869.

Section 3 of the Act provides for the owners of houses not exceeding £20 rateable value (in London) to become liable for the rate by voluntary agreement with the rating authority, and to pay the rates whether the property is occupied or not, in consideration of an abatement not exceeding 25 per cent.

Section 4 of the Act empowers the rating authority to make an order requiring the owners of houses not exceeding £20 rateable value to be rated instead of the occupiers, allowing an abatement of 15 per cent. The owner can thereupon enter into an agreement with the rating authority to pay the rates in respect of the property whether it is occupied or not, in consideration of a further abatement not exceeding 15 per cent.

The difference between the two sections so far as the collection of rates is concerned is:—

Under Section 3 the rate must be collected from the occupier, unless the owner and the rating authority enter into a voluntary agreement whereby the owner undertakes to pay the rates in respect of the hereditament, the rateable value of which must not exceed £20, in consideration of an abatement which cannot exceed 25 per cent.

Under Section 4 the rating authority may order the owner of any dwelling house, the rateable value of which does not exceed £20, to be rated instead of the occupier, and the owner is thereupon bound under Sub-section 1 to pay the rates, less a fixed abatement of 15 per cent., but only in respect of the period the house is occupied.

Provision is made under Sub-section 2 of Section 4, whereby the owner, so rated instead of the occupier under the order of the rating authority, may undertake to pay the rates in respect of all his hereditaments which come within the section, whether occupied or not, receiving in consideration a further abatement of not exceeding 15 per cent.

The rating authority therefore has power under Section 3 to fix the assessment not exceeding £20, at which compounding may be allowed, and the abatement not exceeding 25 per cent., while under Section 4, if the order is made, all dwelling houses up to £20 rateable value are affected, and the abatement of 15 per cent. is compulsory, while the additional allowance in consideration of the covenant to pay whether occupied or not may be at any percentage not exceeding 15.

Upon the passing of the Act in 1869 the Vestry of each of the parishes of Poplar, Bromley, and Bow adopted Section 4, and rated the owners of all dwelling houses up to a rateable value of £20 instead of the tenants, and allowed the maximum allowance of 15 per cent. under Sub-section 1 and of 15 per cent. under Sub-section 2, and this practice continued in force until 1901, when the Council as the successors of the Vestries, on the 6th June, 1901, passed the following resolution:—

“That the Council give six months’ notice to terminate the agreements with the owners of rateable hereditaments to which Section 4 of the Poor Rate Assessment and Collection Act applies.”

And on 26th September, 1901, the following resolution:—

“That on the expiration of the six months’ notice already agreed to be given by the Council to the owners who have entered into agreements under the Act, such owners on entering into new agreements pursuant to Sub-section 2 of Section 4 of the Act, be allowed in addition to the 15 per cent. under Sub-section 1 of Section 4 of the Act, a further abatement of 10 per cent., making the total abatement or allowance to such owners 25 per cent.”

The total rateable value of the hereditaments at £20 and under which are now rated to owners under Section 4 of the Act is £254,017, and represents about 20,000 houses and tenements.

APPENDIX No. XIV.

Handed in by Mr. Henry Hamilton Watts. (Q. 96028.)

LONDON AND INDIA DOCKS COMPANY.

Memorandum of Engagement of.....
as Permanent Labourer dated this.....day of
.....190.....

Dismissal.—A permanent labourer is subject to summary dismissal for disobedience to orders or other misconduct.

[I accept this engagement on the above conditions, and subject to the general regulations of the Company for the time being.]

Signed.....

Signed by the Secretary of the Dock Company.

A similar form with the exception of the part in brackets is retained by the Labourer.

Engagement.—Terminable on either side at seven days' notice from any pay-day.

Wages.—24s. per week of six days of eight working hours, between 6 a.m. and 6 p.m.; overtime pay at current rates.

Leave.—Three days annually in addition to general holidays.

Pension.—Without deduction from wages, according to scale (see over), to any permanent labourer if incapacitated for work by circumstances beyond his own control after at least 15 years' service. The right to pension after 15 years' service is only forfeited by the labourer's resignation or by the termination of his engagement on account of disobedience to orders or other misconduct. Service under this agreement to count for pension as from the.....1.....

APPENDIX No. XV.

Handed in by Mr. R. A. Bray. (Q. 96456)

I was asked whether I could furnish figures showing the number of children in London in the two kinds of Industrial Schools, and whether I could explain the reason why the Day Industrial Schools are not full.

The following are the figures for London from 1900 onward:—

	Truant Schools (Residential).	Day Industrial.
1900	- 645	- 155
1901	- 601	- 145
1902	- 580	- 164
1903	- 424	- 268
1904	- 377	- 136
1905	- 289	- 128
1906	- 230	- 143
1907	- 250	- 146

The accommodation in the three London Day Industrial Schools is 500.

The reason in the falling off of numbers in both cases may be attributed in a large degree to the Act of 1900, which raised the fine for irregular attendance from 5s. to 20s. This Act proved very beneficial in improving the attendance; parents who did not mind a fine of 5s. were frightened by the prospect of a 20s. fine. There was, therefore, in their cases no need to resort to the 1866 Acts.

It must be borne in mind that not all cases of truancy can be dealt with in Day Industrial Schools. Where home conditions are very unsatisfactory they are of little or no use, and the children must be taken away. Day Industrial Schools are best suited for the negligent rather than for the criminal parent. The former are those most likely to be deterred by the prospects of a heavy fine. The first Day Industrial School was not opened until 1896.

R. A. BRAY.

APPENDIX No. XVII.

Handed in by Mr. E. J. Urwick. (Q. 96989.)

COUNTRY WORK SCHEME.

It was found by some of the Country Holiday Fund workers that occasionally boys, on leaving school at fourteen, wished for country work, and a country correspondent in Devon—Miss B. Hingeston-Randolph, Ringmore Rectory, Kingsbridge, South Devon—discovered that it was possible to place them on small farms in that county and North Cornwall. The farmers are prosperous,

they always work themselves, and they often prefer their boys to “live in”; further, the supply of country boys is not equal to the demand. London boys receive board, lodging, clothes, and 6d. a week pocket money for the first six months; after that regular wages are paid. (See attached “terms” signed by farmers in each case.)

Results of the scheme, so far, have been as follows:—

	Placed.		Still in country.		Returned.		Remarks.
	Boys.	Girls.	Boys.	Girls.	Boys.	Girls.	
In 1905 -	1*	-	1	-	-	-	*This boy had two places, wages rising to 2/6 per week. He remained two years, then, through the influence of most unsatisfactory and bad relations, returned to London. He found his home life unbearable and after a few months returned to the country, and now has a place as “Parson’s man” at £12 per annum. He is not yet 17.
In 1906 -	12	2	7	1	5	1	
In 1907 -	29	3	21	2	8	1	
Total -	42	5	29	3	13	2	

APPENDIX No. XVII.—*continued.**Handed in by Mr. E. J. Urwick. (Q. 96389.)*

The "returned" are accounted for as follows:—

2 boys were from a mentally defective school (sent as an experiment), and could not manage the work.

1 boy had bad sight and is now in a blind school.

1 boy was consumptive, sent after open-air treatment; was unable to work and went back to hospital.

3 boys and 2 girls had to be returned on account of bad conduct.

3 boys did not like the work.

1 boy stayed $1\frac{7}{12}$ years and did well, but returned to London through the influence of an unsatisfactory father.

2 boys were unsuitably placed.

Miss B. Hingeston-Randolph has formed a small country committee and acts as hon. secretary. She finds "visitors" for the boys and visits them herself; where advisable, she moves them to different situations and generally settles any difficulty. Most are on farms, but one is apprenticed to a blacksmith, and a few, who proved unsuitable for farm work, are "house and garden boys" or pages.

Boys have been sent by Skilled Employment Committees, Industrial and Poor Law Schools, Charity Organisation Society Committees, Children's Country Holiday Fund workers, and clergy. Their ages have varied from fourteen to seventeen; the younger ones do best; they are more amenable to discipline and more willing to learn. Elder boys also, naturally, object to getting no wages, and yet they are worth very little to the farmer to begin with.

Mischievous, rather troublesome boys do well; delicate, under-fed boys improve wonderfully. Really bad boys and those having physical disease or serious physical defect are not suitable.

The Devon openings are still plentiful, and it seems likely that others can be found where it is the custom for farm lads to "live in," provided some lady or gentleman can be found willing to give the personal care and supervision necessary. One or two districts have already been thought of, where such country hon. secretaries are available.

The cost of sending each boy is from £2 to £3 for fare and outfit (*see list*). As the money is a great difficulty in many suitable cases, it is proposed to raise a small fund for assisting them and also for country expenses (postage, travelling, boarding boys between situations, etc.). Therefore a preliminary committee has been formed in London, which, by kind permission of the Children's Country Holiday Fund, meets at their offices, 18, Buckingham Street, Strand, W.C., where information can be obtained. The hon. secretary at present is Miss Iles, East Clevedon Vicarage, Somerset, to whom applications must be sent. (It is not proposed to develop the scheme as regards girls.)

N.B.—It is too early yet to say what will become of the boys. Some seem likely to remain as agricultural labourers; others think of emigration.

Several boys have asked that their brothers may be placed. Several have been home by cheap trips for holidays and returned to the country.

From January 1st, 1908, to March 23rd, 1908, seven boys have been placed, making the total now in the country thirty-six boys and three girls.

A. M. ILES,

Hon. Secretary.

East Clevedon Vicarage, Somerset.

March 23rd, 1908.

FORM III.—COUNTRY WORK.

Terms.

1. That the farmer provide the boy with lodging, washing, clothes and board for the first six months, and pay him from 6d. a week pocket money.

2. That at the end of six months the farmer pay a regular weekly wage; if under 2s. 6d. the clothes must still be provided in part, repairs and small purchases coming out of wages. If over 2s. 6d., the boy to buy his own clothes under supervision.

3. That the boy shall not have free use of his money, but be induced to save and have a banking account.

4. That the boy be sent to some place of worship at least once a Sunday.

5. A clear month's notice, if necessary, to be given by the farmer, and information of this to be sent immediately to Miss B. Hingeston-Randolph. Failing this, the notice to be void.

If the farmer sends the boy back to London without giving the notice and information as above, he will be responsible for the fare and other expenses.

6. That the boy be provided with the comforts of a home and be treated with care and consideration as one of the family.

Signed.

FORM IV.—COUNTRY WORK.

*Outfit.**For Sunday:—*

- 1 Good suit.
- 1 White shirt front.
- 1 Tie.
- 1 Cap.
- 1 Pair of boots.

For Work:—

- 1 Cap (old)
- 1 Pair corduroy trousers.
- 1 Corduroy waistcoat.
- 1 Coat (any thick, strong coat).
- 1 Pair leather gaiters.
- 1 Pair strong hob-nailed boots.
- 1 Strong suit in good repair (may be old) to change to.
- 3 Strong shirts.
- 3 Pair of socks.

It is also desirable to have an overcoat.

APPENDIX No. XVIII. (C.).

Handed in by Mr. Archibald Campbell. (Q. 97222.)

THE DISTRESS COMMITTEE FOR THE CITY OF EDINBURGH.

CONDITIONS OF LABOUR AT MURIELSTON ESTATE.

Group I.—Of Men resident on the Estate.

(a) That the maximum working hours be nine hours per day, with six hours on Saturdays, equal to fifty-one hours per week.

(b) That the minimum wage be 2½d. per hour for time worked, with board and lodgings.

(c) That the wages of married men may be paid direct to their wives as may be arranged.

(d) That married men be paid, in addition to 2½d. per hour for time worked, 1s. per week for each child under ten years of age, and 6d. per week per child, between ten and fourteen years of age; but that this special allowance in no case exceed 4s. per week.

(e) That married men be allowed to go home once per week, and an allowance of 1s. 6d. be given in lieu of their board, counting from after dinner on Saturday to breakfast time on Monday.

(f) That the wages of unmarried men may be retained in the hands of the clerk until the men leave the service, unless advances made for necessary clothing, and that at the sight of the manager.

(g) That 6d. per week to account be given as pocket money to each workman who desires it.

Group II.—Of Men travelling daily to and from the Estate.

(a) The maximum working hours are nine hours per day, with six hours on Saturday, equal to fifty-one hours per week.

(b) The minimum wage is 3d. per hour for time worked, with 4d. per day in lieu of dinner.

(c) Married men are paid, in addition to 3d. per hour for time worked, 1s. per week for each child under ten years of age, and 6d. per week for each child between ten and fourteen years of age; but this special allowance in no case exceeds 4s. per week per family.

(d) The wages of married men may be paid direct to their wives, as may be arranged.

Note.—The train fare, which amounts to 4s. per week, is paid by the Committee without any deduction from wages payable in Group II.

APPENDIX No. XIX.

Handed in by Mrs. Ogilvie Gordon. (Q 97301 (37).)

DRAFT OF "EDUCATION COMMITTEE" MANAGEMENT OF AN EDUCATIONAL INFORMATION AND EMPLOYMENT BUREAU.

THE BUREAU COMMITTEE.

Joint Committee to be formed—

- (1) of members of their own body, appointed by the Education Committee;
- (2) Representatives from other local public Boards, the Chamber of Commerce, Trades Council, associations of social workers, etc., as felt to be desirable in the interests of the Bureau. The larger Committee might be called at stated times, say quarterly or half-yearly, while a small office Committee might conduct necessary business in the intervals.

The formation of a fairly representative Executive Committee will help to prevent any overlapping of the work, and will enable the Committee to turn for support and co-operation to different local agencies. One result of the Bureau should be to give shape and definiteness to much of the work undertaken by local voluntary associations.

MAIN OBJECTS OF THE BUREAU COMMITTEE.

- (1) To lead all boys and girls who are physically fit towards some employment likely to bring them a livelihood, and to prove congenial to them.
- (2) To foster a fuller co-operation between the schools and the workshops.

OFFICE.

To be placed in the premises of the Education Committee, and recognised as a department of the local educational authority, carrying on a public function as an immediate aid to effective working of the day schools, and evening continuation and technical classes.

Employers, on payment of a suitable fee, would be at liberty to apply to the office for the names of out-going scholars able and willing to undertake the class of work offered. This fee might be paid on single applications, or, if preferred, in the form of an annual subscription.

STAFF.

For a small area, probably only some very slight addition to the office staff would be necessary. The following suggestions, as for a staff in a Bureau to serve a town of say 200,000 to 400,000 inhabitants, will suffice to indicate the nature of the duties for which provision has to be made. For the larger cities, branches might have to be located in or near the schools of different industrial districts. Where there is already an official Director of Education, or of the continuation and technical classes, the Bureau work would come under his department, some additional assistance being given.

I.—DIRECTOR OF BUREAU.

Salary; would recommend that it be much the same as that of a headmaster in one of the public elementary schools in the same locality.

The Director of Bureau is to be supplied by the head teachers of schools with a filled-in printed form

referring to each out-going scholar, stating the particular standard of education attained by the pupil before leaving school, and the habits of punctuality and attendance.

DUTIES.

- (1) To interview and advise the boys and girls, and their parents or guardians if possible, both with regard to further educational courses for the boys and girls, and the most suitable occupations; the regulation interviews to be given during the last three months of the boys' or girls' compulsory attendance at school; subsequent interviews at set office hours.
- (2) To prepare any leaflets, pamphlets, or tabulated and simply arranged matter giving information to the scholars about maintenance grants and other facilities for continuation work.
- (3) To keep in touch with the general requirements of employers in the city and district, and revise from time to time the statistics about employment as used for reference material by the Bureau.
- (4) To give assistance in the preparation of the syllabus for the evening schools, more especially in planning the courses of instruction in technical and commercial subjects; and to render all possible service towards the effective working of the continuation and technical classes.
- (5) To endeavour to formulate definite systems in the various trades whereby employers render it more possible for their employees to attend evening classes, allowing, say, two evenings a week of two hours each for such attendance, in so far as they undertake not to demand "overtime" work from apprentices on class evenings, or possibly arranging for afternoon classes.
- (6) To send reports to employers when desired as to the progress and attendance of the employees at classes.
- (7) To keep a record of a lad or girl during the period of apprenticeship, or up to the age of, say, 19 years.
- (8) To refer individual youths or girls to the care of voluntary helpers or Committees, and to report persistent cases of idleness and non-employment to municipal, social, or other organisations.
- (9) To draw up an annual confidential report for the Committee.

II.—CORRESPONDENCE CLERK AND TREASURER FOR EMPLOYMENT DEPARTMENT.

Salary, say between £80 and £140, according to the amount of work involved and the experience desired.

OTHER EXPENSES.

Travelling and car expenses of Director; note-paper; typewriting materials; printing expenses—e.g., forms for head teachers, pamphlets, circulars, etc.

No office rent is here calculated, as it is assumed that in almost all cases room could be arranged within the Education Committee premises.

APPENDIX No. XX. (A.).

Handed in by the Rev. P. S. G. Propert, M.A., Fulham. (Q. 98549.)

TO THE RT. HON. LORD GEORGE HAMILTON, CHAIRMAN, AND THE OTHER MEMBERS OF THE ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS.

STATEMENT *RE* THE POOR LAW IN ENGLAND AND WALES SUBMITTED BY THE SPECIAL POOR LAW COMMITTEE OF THE BRITISH CONSTITUTION ASSOCIATION.

1. We are of opinion that the present Poor Law system requires reform, not in its principles, but in its administration. Its unsatisfactory position is due to a departure from the sound economic principles upon which it is based. The desire for administrative improvement having recently manifested itself, this tendency could be utilised for bringing about the desired results without recourse to revolutionary legislation.

2. The reception of applications for relief must always be local, and we submit that the authority which, in the first instance, receives such applications and determines what form Poor Law relief shall take, is necessarily the most important body in the whole range of Poor Law administration. The proper administration of the Poor Law requires much special knowledge, close attention to details, and a great expenditure of time on the part of its administrators. We are, therefore, of opinion that the Poor Law authorities should, as at present, be *ad hoc*.

3. We are of opinion that the local authority should be elected by those who contribute the funds to be administered, and that the democratic principle of election should be preserved, but in conjunction with effective safeguards enforced by a non-elected central authority. Any disadvantages accruing from a popular electoral system might be minimised

(a) By the authoritative publication of a clear statement of the law, in other words a simple and intelligible abstract or *précis* of the Acts, rules and regulations in force.

(b) By more frequent inspections on behalf of the central authority by inspectors trained in the details of administration and having a knowledge both of the law and the economic principles which underlie it.

(c) By the decisions of the auditors being upheld by the central authority when they are found to be in accordance with the law. The constant remission of illegal expenditure has a demoralising effect upon the auditors as well as upon the guardians and their officials.

(d) By enforcing responsibility on all who have sanctioned an illegal expenditure by vote or

otherwise, and not merely on those signing the cheque.

(e) By the appointment of relieving officers who have previously passed an examination, both written and oral, by some qualified authority upon the work and duties of the office.

4. We suggest that boards of guardians might be strengthened by giving to the county councils and other statutory authorities within the Poor Law area the right to appoint representatives as guardians. We further suggest that boards of guardians should be continuous, a proportion only of the members retiring at each election.

5. Closer relationship between the official administration of the Poor Law and local charitable bodies is desirable and should be encouraged, and might be brought about through central registries, which should be located in the offices of the guardians (*vide* Mr. Goschen's circular, 1869).

6. We submit that the wisdom of the recommendations of the Royal Commission of 1832 has been abundantly proved by subsequent experience, hence we are encouraged in the belief that a strict adherence to the principles there laid down would eventually lead to economic freedom. We therefore urge that all amendments in the Poor Law should be actuated by the ideal of a State in which pauperism shall have ceased to exist, and in which every citizen shall have attained emancipation from that dependence which is a relic of the feudal times in which the Poor Law was established.

APPENDIX No. XX. (B.).

Handed in by the Rev. P. S. G. Propert, Fulham. (Q. 98600.)

With regard to Question 93300, I beg to refer you to Reply 93555, where the figures asked for are given in detail. I should like to add the following explanatory note.

LUNACY.

The largest sum is recovered in respect of these cases. The guardians have no option as to their reception but orders are made upon the relatives, and where there is ability to pay the guardians recover the costs. A smaller total sum now appears to be received as the London County Council now transfers all cases in a position to pay to the "private class" (not private patients). When the transfer is complete the county council becomes the collector and not the guardians.

INDOOR POOR.

The sum recovered for these cases is made up chiefly from those admitted to the infirmary. Those admitted to the infirmary as a rule belong to a higher class than those

admitted to the workhouse. Our policy is so well known in the parish that those who are legally liable and are able to pay prefer to prevent their relatives entering the workhouse. Our policy, therefore, tends to restrict admissions both to the infirmary and the workhouse.

OUTDOOR RELIEF.

The same argument holds good. Applications are not made to the guardians where there are relatives liable and able to support. I have heard people say: "There is no advantage in paying through the guardians so I may as well pay my parents direct." The guardians encourage as far as possible direct contributions and so reduce their relief list.

OTHER EXPENSES.

These are made up chiefly of examination fees in lunacy cases. Wherever possible the guardians recover these.

APPENDIX No. XXI. (A).

Handed in by the Board of Trade. (Q. 98827).

[Memoranda prepared at the Board of Trade for the Royal Commission on the Poor Laws and Relief of Distress.]

METHOD OF COMPILATION OF BOARD OF TRADE'S PERCENTAGES OF UNEMPLOYED AND THE EXTENT TO WHICH THEY MAY BE TAKEN AS A MEASURE OF UNEMPLOYMENT.

STATISTICS RELATING TO THE UNITED KINGDOM

A.—STATISTICS NOW OBTAINED BY THE DEPARTMENT.

The foundation of the figures is the returns collected by the Department every month which are summarised in the *Board of Trade Labour Gazette*. Constant efforts are made to extend and improve the information, and a comparison of the current *Gazette* with those issued five or ten years ago will show that considerable changes have been made, to which it is not necessary to refer in detail.

At the present time returns relating to the state of employment are received from employers' associations, from individual employers and companies, from trade unions, and from correspondents. A few returns are also received from labour bureaux.

With regard to the correspondents just mentioned, it may be explained that in certain industries there are trade correspondents, each dealing with the whole of one trade, who furnish the Department with reports and statistics based on returns supplied to them by employers and their associations. These trade correspondents are connected with important organisations of employers, and the industries covered are the iron and steel, building, cotton, and boot and shoe trades. In the case of agricultural labour, information is received from correspondents in various parts of the country, most of whom are landowners, farmers or members of local governing bodies. In addition there are local correspondents who furnish reports and statistics relating to the various industries carried on in their respective districts. Most of the local correspondents are connected with trade unions. They obtain their information chiefly from workpeople or their organisations.

The information obtained from the various sources, as will be seen from the articles on employment published in the *Gazette*, is by no means exclusively of a statistical character. The form of the statistical information given varies greatly in the different trades, the variation being due to the difference in the methods adopted in the various trades for adjusting output to demand; a difference which necessitates a corresponding variation in the method of exhibiting the activity of the trade—the ultimate object of the statistics in all cases.

STATISTICS OBTAINED FROM EMPLOYERS.

In the coal-mining industry the Department obtains from employers statistics of the weekly number of days on which the pits are at work. These returns, which now cover over 610,000 workpeople, or about 70 per cent. of the total number of persons employed in coal-mining, are summarised in Table D.

In the iron-mining industry similar statistics are obtained (*see* Table E.)

In the pig-iron industry, the Department obtains returns showing the number of furnaces in blast; and in the tin-plate trade the number of mills in operation. The statistical results are in these cases principally useful for comparisons over *short* periods, during which changes in such matters as the average output of a blast furnace or a sheet mill may be neglected with comparative safety. As, however, the average output of a blast furnace in the United Kingdom is now two-and-a-half times what it was thirty years ago, it is obvious that a mere comparison of the number of furnaces in blast over a period of this length would not give a true view of the changes in activity in this trade.

With regard to iron and steel works, the Department obtains from employers returns of the number of shifts worked, and the number of workpeople employed, in the various departments. From these returns the aggregate number of shifts worked can be calculated; and these figures give the best indication of the fluctuation in the total volume of employment.

APPENDIX No. XXI. (A).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

In the following Table the statistical results for the coal trade and for the iron and steel trades mentioned above are presented in the form of "Index Numbers." The level of employment in 1900, as indicated by days worked by coal mines, furnaces in blast, etc., is represented by 100, and the level in other years by percentages thereof:—

PERCENTAGE CHANGES IN THE LEVEL OF EMPLOYMENT IN CERTAIN BRANCHES OF THE COAL, IRON, AND STEEL TRADES IN THE UNDERMENTIONED YEARS (1900 = 100).

Year.	Coal Mining.	Iron and Steel.					Coal, Iron, and Steel Trades
		Iron Mining.	Pig Iron Manufacture.	Iron and Steel Works.	Tin Plate & Steel Sheet Works.	(Mean of 4 preceding Columns).	
1897 - -	93·8	101·9	94·5	94·2*	84·1	93·7	93·75
1898 - -	96·0	101·8	93·8	95·4	83·9	93·7	94·85
1899 - -	99·8	101·9	102·0	101·3	99·2	101·1	100·45
1900 - -	100·0	100·0	100·0	100·0	100·0	100·0	100·00
1901 - -	93·6	98·8	83·4	96·2	89·3	91·9	92·75
1902 - -	95·4	101·6	86·4	93·7	103·6	96·3	95·85
1903 - -	93·1	101·2	86·6	91·5	96·6	94·0	93·55
1904 - -	92·7	102·5	81·1	91·1	100·3	93·8	93·25
1905 - -	92·0	102·1	85·6	98·8	110·9	99·4	95·70
1906 - -	96·2	102·3	92·4	105·7	109·6	102·5	99·35
1907 - -	100·7	102·8	97·3	107·6	115·9	105·9	103·36

In another class of returns obtained from employers, information is supplied as to the number of workpeople employed, and their total earnings in one week, generally the last week, of each month. The industries for which such returns are obtained are the cotton, woollen and worsted, flax, jute, lace, hosiery, silk, boot and shoe, and glass trades. They are also obtained from bespoke tailoring firms in London, and from shirt and collar manufacturers in various parts of the country.

Returns of this kind, when covering a sufficiently large proportion of the trade, are of great value in indicating fluctuations in the volume of employment, since the figures showing the total wages paid take account of short time. The figures are, however, affected by changes in rates of wages as well as by fluctuations in employment, so that they are not very suitable for comparisons over a long period. These monthly returns of earnings have only been collected by the Department for a short time,† and it has therefore not been thought necessary to present the figures in this memorandum.

In the case of a few trades the returns obtained from employers furnish only the total number employed. The most important of these is dock and riverside labour in London, as to which returns are obtained from all the docks and from the principal wharves.

STATISTICS OBTAINED FROM TRADE UNIONS.

In most of the remaining trades as to which the Department obtains information respecting the state of employment, the statistics are of an entirely different kind. They are based on returns obtained not from employers but from trade unions, and they relate not to the numbers employed at certain works but to the number of members of the unions out of work so far as recorded. The number of members thus recorded is obtained by the Department from either: (1) the printed monthly reports of the larger trade unions, such as the Amalgamated Society of Engineers, the Boiler Makers' and Iron and Steel Ship-builders' Union, the Associated Shipwrights' Society, the Amalgamated Society of Carpenters and Joiners, etc., etc.; or (2) returns sent in by the smaller unions or by the secretaries of branches of unions giving the number of members unemployed and in receipt of benefit, and also the number unemployed but not in receipt of benefit, at the end of each month. From the returns the percentage of trade union members unemployed is calcu-

* Figures estimated on partial data.

† They were first published for the boot and shoe trade in the *Gazette* for March 1904, and for other trades at various subsequent dates.

APPENDIX No. XXI. (A).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

ated, the fluctuations of which reflect changes in the state of employment. The trades in which these statistics are most useful are the engineering, ship-building, metal, printing, bookbinding, woodworking, and building trades; but in the case of the last-named they are available for two important sections only, viz., carpenters and joiners, and plumbers; while for bricklayers, masons, plasterers, etc., accurate figures cannot in general be obtained. In many other trades there are unions furnishing similar returns which are not of such importance as tests of the state of employment, owing to the existence of other statistics or to the relative unimportance of the unions; but these are all put with the returns in the industries just named for the purpose of calculating a general percentage. This percentage will be found at the beginning of the article on the state of the labour market, which always appears on the first page of the *Gazette*. As will be seen, the percentage is now based on a net* membership of over 600,000.

These returns from trade unions are made possible by the fact that all the unions from which returns are received make weekly payments of varying amounts to their out-of-work members, and are therefore bound to keep an accurate record of the persons entitled to this "unemployed benefit." So long as the conditions of this benefit undergo no great change, the percentage of members returned as unemployed reflects the fluctuations in total unemployment. Certain qualifications, however, as to the absolute correctness of these figures have to be made. In the first place there is a qualifying period of unemployment, varying in different unions from two to six days, which must be passed before the member becomes entitled to benefit. Secondly, there is generally a maximum period after the expiration of which the member ceases to be eligible for benefit; and in times of prolonged slackness it is not uncommon for a considerable number of members to have thus "run out of benefit." In most unions, however, a record is kept of those members who have run through their benefit.† This record is kept by the unions for two reasons (1) because a certain number of weeks, or a certain number of weeks of *employment*, must elapse before the member again becomes eligible for unemployed benefit if thrown out of work; some such provision as this is almost universal; (2) because many unions excuse all or part of the contributions of members out of work and not on benefit. In many unions a "vacant book" is signed by the out-of-work members, whether on benefit or not. In nearly every case, therefore, the unions are able to say how many persons who have run out of benefit are still unemployed, and in that event the figures are included by the Department with those "on benefit."

Further, there are some members who may, on account of age or infirmity, experience more than the average difficulty in obtaining and keeping employment, and who consequently are often in receipt of unemployed benefit, when their allowance is virtually in the nature of a sick or superannuation allowance. Such persons would, of course, be included in the returns; but how far they may properly be termed "unemployed" depends on the definition of that rather vague word. The number of such persons, however, is comparatively small, and their case is being met by the increasing number of men granted superannuation pay by the unions. It is to be noted that in all cases the number of *superannuated* members is deducted from the total membership. In some unions also, certain classes of members do not contribute for, and are consequently not entitled to, unemployed relief. Such members, called variously "trade members," "trade protection members," etc., are of course excluded from the total membership on which the percentage is based, unless the unions are able to return also the number of such members who are out of work.

* *i.e.*, excluding superannuated members, members abroad, etc.

† The most important union in which the number of members who have "run out of" their unemployed benefit has not hitherto been obtainable is that of the Amalgamated Society of Carpenters and Joiners, which until recently gave only the number of members receiving unemployed benefit. In this case the benefit lasts twenty-six weeks.

In the case of the Amalgamated Society of Engineers, the unemployed benefit is paid for fifty-two weeks in the case of members of twelve months' standing, and for eighty weeks in the case of members of five years' standing, while in the case of members of ten years' standing the benefit is continuous. Consequently the number of full members unemployed and not on benefit in this union is negligible.

APPENDIX No. XXI. (A).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

MAIN PURPOSE OF THE STATISTICS

It will be seen from the preceding account that the statistical methods adopted by the Department to indicate the state of the labour market vary in the different trades. In all cases, however, the main purpose of the figures is to show tendencies and afford comparisons between one period and another, rather than to furnish quantitative measures of employment or unemployment. In the nature of the case there is no such thing as an absolute standard of universal employment; all that can be attempted is to show a lowering of the percentage of unemployment, or an increase in the volume of employment, in "good" years; and an increase of unemployment, or a decrease of employment, in "bad" years; "good" and "bad" being merely relative to one another, or to a year arbitrarily chosen, or to the average of a given period.

B.—THE DEPARTMENT'S STATISTICS AS A MEASURE OF GENERAL UNEMPLOYMENT.

The general percentage of members of trade unions returned to the Department as unemployed is so often taken as being applicable to the whole working population that the cautions necessary in using this percentage must be referred to in some detail. In the first place the majority of persons covered by the returns are in trades in which probably the liability to fluctuations is above the average of skilled occupations as a whole. The total membership of the unions in the various trade groups is summarised below:—

MAY, 1908.

Industry.	No. of Unions.	Membership of Unions making Returns.
Building - - - - -	6	56,386
Coal Mining - - - - -	2	128,226
Iron and Steel - - - - -	1	15,534
Shipbuilding - - - - -	6	46,267
Engineering - - - - -	24	154,355
Miscellaneous Metal - - - - -	18	16,455
Textiles - - - - -	82	97,896
Clothing - - - - -	4	8,994
Printing and Bookbinding - - - - -	26	56,189
Paper - - - - -	5	2,462
Woodworking and Furnishing - - - - -	62	34,960
Leather (excluding boot and shoe) - - - - -	18	3,568
Glass - - - - -	10	4,239
Tobacco - - - - -	4	2,082
Total - - - - -	268	627,613

These figures are, of course, not at all in the proportion of the totals working at the various trades, and it sometimes happens in slack times, when the percentage unemployed in the engineering and shipbuilding group becomes high, that the over-representation of this group causes the general percentage to be considerably higher than it would be if obtained by "weighting" the percentages for the various trades according to the relative numbers employed.

There is, however, no reason to suppose that the figure which would be obtained by assigning to the percentages for each trade group weights proportional to the numbers employed in the group would be a better index than that now published, since it must be borne in mind that the returns may be more representative of the total workpeople in a given trade in one trade union than in another. Thus in the building trade group, bricklayers, masons, and painters—the classes most affected by seasonal fluctuations—are not represented at all, so that there is a possibility of an error in applying a percentage derived almost entirely from carpenters and joiners and plumbers to all branches of these trades.

Apart from the question of the numbers included in each group, it is to be noted that some groups are not represented at all in these trade union figures, *e.g.*, agriculture,

APPENDIX No. XXI. (A).—Continued.

Handed in by the Board of Trade. (Q. 98827).

railway service, and domestic service. These occupations employ large numbers of persons, and are comparatively stable industries to which an unemployed percentage derived from fluctuating trades cannot be applied.

While such people as railway employees and employees of local authorities have more constant employment than many of the classes of workpeople covered by the returns, other classes who are unrepresented in the returns, such as the casual labourer and navvy, possibly suffer from a greater amount of unemployment than those included in the percentage.

Again, the statistics are based on returns from what may be roughly termed the skilled unions. The proportion of unskilled workers who are members of trade unions is much lower than in the case of skilled workmen and unions that do enrol unskilled labourers do not as a rule keep any record of the number of their members out of work. But many of the unskilled workers are helpers or labourers to the skilled men, and what affects one class must sooner or later affect the other; so that although the percentages derived from skilled workers may not be exactly applicable to unskilled, they may probably be used as an index of employment in both classes.

A further question arises as to how far a percentage of unemployed trade union members may be applied to non-unionists. On the one hand, the proportion of unemployed among unionists may be *lower* than among non-members: (1) Because the unions help their members to obtain employment; and (2) because some unions may contain more efficient men. As to this latter point, however, it is difficult to say whether the general standard of efficiency is higher in the unions as a whole than outside them; doubtless different results would be shown in different trades. On the other hand, as tending to make the percentage of unemployed *higher* among trade unionists than among non-unionists, we have the facts: (1) That the non-unionist may accept work at less than the "standard" rate, which the unionist cannot take; (2) that in some unions there are a number of men who through age, infirmity, or other causes can seldom obtain employment at the full rate, and so are almost continually on the books, thus swelling the percentage of unemployed members; and further (3) that in some few cases there may be a number of exceptionally efficient men in practically constant employment who do not belong to the union.

* The figures in the Table show, for each period, the number of days per week on which iron ore was got and drawn at mines and openworks included in the returns received. The monthly returns relate to periods of four complete weeks and not to calendar months.

† The figures in the Table show, for each period, the average number of days per week on which coal was hewn and wound at collieries included in the returns received. The monthly returns relate to periods of four complete weeks and not to calendar months.

APPENDIX No. XXI. (B).

Handed in by the Board of Trade. (Q. 98827.)

CYCLICAL TRADE DEPRESSIONS.

The course of trade observed over a considerable term of years shows a continual though irregular alternation of periods of activity and depression, longer fluctuations to be distinguished from the shorter and fairly regular seasonal fluctuations which recur within the course of a single year. These long-term depressions are termed cyclical because, though irregular in their duration and intensity, they exhibit a marked tendency to recur at intervals of a few years, following each period of great activity. They are general in character affecting simultaneously, or approximately so, the whole body of industries, extractive, manufacturing, transport, commercial, financial, though, as will appear from comparison, the intensity of depressions is greater in some groups of industry than in others.

There are various indices of these cyclical depressions, some having reference to the volume and value of trade in general, or of certain fundamental and indicative trades, such as the coal and iron and the carrying trades, others relating to the consumption of certain standard articles, or to such direct testimony of the condition of the people as the statistics of pauperism afford.

The best available measure of cyclical depressions, however, is afforded by the statistics of the variations of employment of labour. We shall, therefore, set out this evidence in some detail, correlating with it such evidence of general trade depression as is contained in the statistics of the general movements of prices, and reserving for briefer separate statement in appendices some further evidence from the study of the condition of particular industries.

Depressions of Employment.

The chief evidence of the condition of employment during recent years is contained in the monthly reports made to the Labour Department of the Board of Trade by official correspondents and by trade unions, and the only figures available for the direct measurement of employment (save in the coal, iron and steel trades) are based upon the trade union records.

From 1888 onwards we have the monthly returns made to the Department by trade unions of their members out of work or on unemployed benefit. For the purposes of the "Second Series of Memoranda on British and Foreign Trade and Industry" [Cd. 2337] the figures were carried back for as long a period as possible prior to 1888 by means of an analysis of the books and other records of trade unions. In the case of some of the unions it was possible to ascertain directly the monthly percentage unemployed over the whole period, in the case of others it was necessary to calculate this percentage from the particulars of the total expenditure on unemployed benefit taken in connection with the weekly rate of such benefit. In certain cases both methods were available, and a comparison of the results showed that with proper care they led to practically identical results.*

Composition of the General Index Figure of Employment.

The percentage of "unemployment" which appears monthly on the first page of the *Board of Trade Labour Gazette*, and which forms the basis of the annual percentage, is itself based upon returns of the number of members of certain unions out of work. The number of members thus recorded is obtained by the Department from either:

- (1) The printed monthly reports of the larger trade unions, such as the Amalgamated Society of Engineers, the Boilermakers' and Iron and Steel Shipbuilders' Union, the Associated Shipwrights' Society, the Amalgamated Society of Carpenters and Joiners, etc., etc.; or
- (2) Returns sent in by the smaller unions or by the secretaries of branches of unions giving

* See Cd. 2337, p. 97, for the unions whose percentage is calculated respectively by these two methods.

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

the number of members unemployed and in receipt of benefit, and also the number unemployed but not in receipt of benefit, at the end of each month. From these returns the percentage of trade unionists unemployed is calculated, the fluctuations of which reflect changes in the state of employment. The trades in which these statistics are most useful are the engineering, shipbuilding, metal, printing, bookbinding, woodworking and building trades; but in the case of the last named they are available for two important sections only, viz., carpenters and joiners and plumbers; while for bricklayers, masons, plasterers, etc., accurate figures cannot be obtained. In many other trades there are unions furnishing similar returns which are not of such importance as tests of the state of employment, owing to the existence of other statistics or to the relative unimportance of the unions; but these are all put with the returns in the industries just named for the purpose of calculating a general percentage.

The basis of the general percentage has been growing gradually stronger since the regular reports of unions to the Board of Trade began in 1888, both by an increase in the number and variety of reporting unions and by an increase in the proportion of the total working population represented in the returns. In 1893 the basis of the return was considerably widened by the inclusion of additional unions. Since 1893 the figures have been fairly comparable, though further extensions of their basis have taken place, the number of members included at the end of 1893 being 360,000, at the end of 1903, 560,000, at the end of 1907, 644,000.

The following Table shows the number and membership of the various groups of unions reporting to the Labour Department at the end of December, 1894, and at the end of December, 1907, respectively:—

Industry.	December.			
	1894.		1907.	
	No. of Unions.	Membership.	No. of Unions.	Membership.
Building - - - - -	3	55,267	6	64,145
Coal Mining - - - - -	2	68,030	2	120,234

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

This general percentage is here described as “uncorrected.” A correction of some importance in its bearing on the comparative intensity of the fluctuations is necessitated by the dominant position in the statistics taken by the engineering, shipbuilding, and metal trades. A comparison between this and the other principal groups whose percentages are recorded shows that the fluctuations of employment are more violent in this group and the depressions in bad periods far deeper. Now if a weight disproportionate to the actual amount of the employment afforded by the engineering, shipbuilding and metal group, as compared with the labour market as a whole, is given in the basis of the general percentage, it is evident that this excess tends to be represented in an excess of fluctuations in the general figure. If, moreover, a constant relation is not maintained throughout the entire series of years between the weight of this group and that of the aggregate of the other groups, this changed relation will involve false impressions regarding the relative stability of employment during different periods.

Now, in point of fact, both these defects are present.

The proportion of the total membership of the recorded returns accounted for by the engineering, shipbuilding and metal groups in 1860-70 was about three-quarters, in 1870-80 about three-fifths, in 1880-90 rather under three-fifths, while since 1890 it has remained at about two-fifths. How far these proportions, always exceeding far the real importance of this group in the aggregate employment of the labour market, affect the value of the general average as an index of trade depressions throughout the whole period, remains for later consideration.

The effect of the change in the relative importance of this group has been of course to exaggerate the fluctuations of general employment in the earlier years of the series as compared with the later, and thus to give the impression that employment is recently more stable and regular than in the earlier years when the statistics were dominated by the more fluctuating group.

To avoid this cause of error a corrected series of percentages has been calculated giving the same weight throughout the period to the engineering, shipbuilding and metal group. This has been done by taking the simple arithmetic mean of the figures for this group and for the aggregate of all the other groups in the return, thus assigning a constant weight to this group of one-half of the total throughout the period, instead of a changing weight fluctuating from three-quarters to two-fifths.

The following Table gives the annual general averages thus corrected :—

COMPUTED AVERAGE PERCENTAGE OF MEMBERS OF TRADE UNIONS RETURNED AS OUT OF WORK
AT THE END OF EACH MONTH IN THE YEARS 1860-1907.

Year.	Percentage Unemployed.	Year.	Percentage Unemployed.	Year.	Percentage Unemployed.
1860	1.85	1876	3.40	1892	6.20
1861	3.70	1877	4.40	1893	7.70
1862	6.05	1878	6.25	1894	7.70
1863	4.70	1879	10.70	1895	6.05
1864	1.90	1880	5.25	1896	3.50
1865	1.80	1881	3.55	1897	3.65
1866	2.65	1882	2.35	1898	3.15
1867	6.30	1883	2.60	1899	2.40
1868	6.75	1884	7.15	1900	2.85
1869	5.95	1885	8.55	1901	3.80
1870	3.75	1886	9.55	1902	4.60
1871	1.65	1887	7.15	1903	5.30
1872	0.95	1888	4.15	1904	6.80
1873	1.15	1889	2.05	1905	5.60
1874	1.60	1890	2.10	1906	4.10
1875	2.20	1891	3.40	1907	43.0

APPENDIX No. XXI. (B).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The corrections in this Table, it appears, though abating the intensity of the depressions as recorded in the "uncorrected" figures, do not materially alter the shape of the depressions. The years 1868, 1879, 1886 and 1904 still mark the bottom of a dip; only in the case of 1894 is a notable alteration made. Here the effect of correction is to place 1894 on the same low level with 1893.

As a further check upon this method, a series of percentages has also been calculated, based on the combined returns of the sixteen trade unions for which continuous figures are available since 1873.

These percentages closely confirm those given above and are presented in the following Table, which also gives in a final column the proportions of employment measured from 1900 as the standard year.

INDEX NUMBER OF EMPLOYMENT.

From 1873–1907 based on continuous Returns from 16 Unions.*

Year.	Membership.	Percentage Unemployed.	Percentage not returned as Unemployed.	Index Number (1900=100).
1873	115,215	1.2	98.8	101.3
1874	123,250	1.7	98.3	100.8
1875	126,398	2.5	97.5	100.0
1876	130,302	3.8	96.2	98.7
1877	131,849	4.9	95.1	97.5
1878	129,941	6.9	93.1	95.5
1879	121,704	11.7	88.3	90.6
1880	123,234	5.6	94.4	96.8
1881	129,309	3.6	96.4	98.9
1882	139,496	2.3	97.7	100.2
1883	148,686	2.6	97.4	99.9
1884	154,938	7.9	92.1	94.5
1885	156,589	9.7	90.3	92.6
1886	155,718	10.5	89.5	91.8
1887	152,108	7.9	92.1	94.5
1888	154,274	4.8	95.2	97.6
1889	173,155	2.0	98.0	100.5
1890	196,249	2.1	97.9	100.4
1891	209,562	3.4	96.6	99.1
1892	213,953	5.9	94.1	96.5
1893	224,912	7.9	92.1	94.5
1894	229,098	8.2	91.8	94.2
1895	236,957	6.6	93.4	95.8
1896	251,550	3.5	96.5	99.0
1897	242,484	3.6	96.4	98.9
1898	261,662	2.6	97.4	99.9
1899	279,306	2.1	97.9	100.4
1900	289,827	2.5	97.5	100.0
1901	292,584	3.5	96.5	99.0
1902	300,399	4.8	95.2	97.6
1903	306,785	5.4	94.6	97.0
1904	283,751	7.4	92.6	95.0
1905	284,260	6.4	93.6	96.0
1906	289,497	4.3	95.7	98.2
1907	295,120	4.9	95.1	97.5

* The 16 unions included in the Table are the following :—

Amalgamated Society of Engineers.
 Steam Engine Makers' Society.
 United Society of Boiler Makers and Iron and Steel Ship Builders.
 Friendly Society of Ironfounders of England, Ireland, and Wales.
 Associated Iron Moulders of Scotland.
 Associated Blacksmiths' Society.
 Amalgamated Society of Carpenters and Joiners.
 United Kingdom Society of Coach Makers.
 Amalgamated Society of Millsawyers, &c.
 Alliance Cabinet Makers, now National Amalgamated Furnishing Trades Association.
 London Society of Compositors.
 Typographical Association.
 London Consolidated Society of Journeymen Bookbinders.
 Vellum Account Bookbinders' Trade Society.
 Northumberland Miners' Mutual Confident Association.
 Bradford and District Power Loom Overlookers' Society.

APPENDIX No. XXI. (B).—Continued.)

Handed in by the Board of Trade. (Q. 98827.)

The following Table gives the employment index number for each year from 1860-1906 (based upon the records of all available unions) and the decennial averages.

INDEX NUMBER OF EMPLOYMENT, 1860-1907.
(1900=100.)

Year.	Index Number.	Year.	Index Number.	Year.	Index Number.	Year.	Index Number.	Year.	Index Number.
1860	101·0	1870	99·1	1880	97·5	1890	100·8	1900	100·0
1861	99·1	1871	101·2	1881	99·3	1891	99·4	1901	99·0
1862	96·7	1872	102·0	1882	100·5	1892	96·6	1902	98·2
1863	98·1	1873	101·7	1883	100·3	1893	95·0	1903	97·5
1864	100·9	1874	101·3	1884	95·6	1894	95·0	1904	95·9
1865	101·1	1875	100·7	1885	94·1	1895	96·7	1905	97·1
1866	100·2	1876	99·4	1886	93·1	1896	99·3	1906	98·7
1867	96·4	1877	98·4	1887	95·6	1897	99·2	1907	98·5
1868	96·0	1878	96·5	1888	98·7	1898	99·7		
1869	96·8	1879	91·9	1889	100·8	1899	100·5		
Mean.	98·6	Mean.	99·2	Mean.	97·6	Mean.	98·2	Mean.	98·1

The figures may be summarised as follows :—

Mean of 40 years,
1860-1899.

Decennial average	1860-69	-	-	98·6
"	"	1870-79	-	99·2
"	"	1880-89	-	97·6
"	"	1890-99	-	98·2

98·4

Standard year	1900	-	-	-	100·0
	1901	-	-	-	99·0
	1902	-	-	-	98·2
	1903	-	-	-	97·5
	1904	-	-	-	95·9
	1905	-	-	-	97·1
	1906	-	-	-	98·7
	1907	-	-	-	98·5

Mean of 8 years,
1900-1907.

98·1

From these Tables of corrected averages the following facts seem to be established :—

(1) The proportion of unemployment differs very slightly in the different decades, as compared with the differences in good and bad years within each decade.

(2) No regularity of the length of intervals between depressions is apparent, the interval preceding the depression of 1879 being nearly twice as long as that preceding the depression of 1868, while subsequently two intervals of seven years between the depressions of 1879, 1886 and 1893 are followed by one of eleven years preceding 1904. Nor can it be concluded that a longer interval of comparative prosperity is followed by a deeper depression, for though this occurred in the case of 1879 it did not occur in 1904.

(3) The several periods of acutest depression differ widely in duration as well as in maximum intensity, the prolonged depression of 1867-69 contrasting sharply with the pointed crisis of 1879.

(4) Of the four successive decades the lowest average of unemployment is that of 1879, which included the years of abnormal inflation following the Franco-German War; the highest average is that of the next decade, 1880-89, which included 1886, the year of unemployed riots.

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827*

(5) The longest spell of high trade prosperity, 1871–75, is followed by the worst recorded year of unemployment, 1879. This year also serves as a central crisis of greatest depression during the period under survey, the preceding depressions appearing to lead up to it by some sensible though irregular gradation, those following it decreasing in violence.

Comparison of General Table with Group Tables.

Two objects may be served by comparing the general Table (corrected or uncorrected) of unemployment with the Tables on pp. 16–18 for the several recorded trades and groups of trades; first, to ascertain how far a “general” depression is really “general,” in the sense of indicating a simultaneous depression in all or most recorded trades as distinct from a depression in a few trades of dominant statistical weight; secondly, to ascertain by examination of the figures in each trade how far it reflects or harmonises with the general state of trade, or how far it retains a separate fluctuation of its own.

The important part played by the figures of the engineering, shipbuilding, and metal trades in the general average has been already pointed out. The wider fluctuations in this than in other recorded groups serve not only in the uncorrected but in the corrected general percentage to give an exaggerated appearance of fluctuation to the aggregate regarded as an index of the general labour market.

The dominance of this group expresses itself in the fact that every year of deepest depression of employment from 1851 is also a year of deepest depression for this group of trades, a statement which is not applicable to any other principal group.

A comparison of the figures for the engineering, etc. group with that of the several other groups in relation to the general figure, not merely for the earlier years of depression, 1858, 1868, 1879, when this group weighed heaviest, but even in the more recent depressions of 1886, 1893–4 and 1904, shows the continuous effect of this statistical preponderance. Had this group been absent, the general depressions in each of these cases would have been expressed in far lower percentages, as the following comparative Table shows:—

UNEMPLOYMENT.

PERCENTAGE FOR ALL UNIONS EXCEPT ENGINEERING, SHIPBUILDING AND METAL TRADE UNIONS.

Year.	Percentage Unemployed.	Year.	Percentage Unemployed.	
	A.		A.	B.
1856 - - - - -	1·6	1882 - - -	2·4	...

1879 - - - - -	6·1	1905 - - -	...	4·7
1880 - - - - -	3·8	1906 - - -	...	4·1
1881 - - - - -	3·3	1907 - - -	...	3·6

NOTE.—The percentages in Column B are derived from returns of the numbers unemployed at the end of the month. Those in Column A are partly computed from expenditure on unemployed benefit.

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

Not only does the aggregate of other unions exhibit a lower average of unemployment over a period of years and a much smaller fluctuation than the engineering, shipbuilding and metal trades, but in recent years the booms and depressions in the two groups do not show so close a coincidence in time as in former decades.

But though the tendency of the size of the engineering and shipbuilding and metal trades has been both to emphasise the depressions and to determine the precise year of deepest depression, it is clear from closer investigation that the general figures for the aggregate of the other groups and for each separate group accord both in direction and in time.

If we take the depressions centering in 1868 as the first for which sufficient data for comparison exist, though the woodworking and the group entitled "other trades" alone exhibit the depth of depression in that year, the building and printing groups not exhibiting the maximum of unemployment until 1870, these latter in 1868 already exhibit definite signs of weakness. In the great depression of 1879 each group showed a low level of employment, though the actual percentage unemployed for "other trades" was not a large one. The same is true of 1886, the next centre of depression. In the depression of 1893, though each group again visibly shared in the decline, printing, woodworking and building showed a larger percentage of unemployment for 1894, and building was worst in 1895, when the general percentage indicates distinct recovery. Similarly with the 1904 depression, both the building and printing groups reach their lowest figure in the following year. On the whole, "woodworking and furnishing" and "other trades" (including textiles, clothing, paper, leather, glass, tobacco) follow most closely in time the general fluctuations, building and printing lagging somewhat behind in the development of their depressions.

UNEMPLOYMENT IN THE SEVERAL GROUPS.

Engineering, Shipbuilding, and Metals.

Closer investigation of the several groups which contribute to the general percentages shows in some instances a wide disproportion in the intensity of depression among the constituent trade unions of a group.

This is forcibly illustrated in the case of the engineering, shipbuilding, and metal trades. From 1851 to 1871 three unions chiefly contributed to the group percentages, the "Amalgamated Engineers," the "Iron Founders," the "Iron Moulders," from 1871 to 1906, the "Boiler Makers and Iron and Steel Shipbuilders" also contributed to this group figure. During the entire period 1851 to 1906 the figure for the "Amalgamated Engineers" has (save for a few years of exceptionally full employment) been far below that of the two or three other unions, and has seldom exceeded the general percentage for all trades. The heavy weight exercised by this group in the percentage of unemployment during years of depression is entirely attributable to the other unions. The statistical Table for this group (*see* Table A.) establishes this fact, which may here be indicated more concisely by the following percentages for the six years of deepest depression.

Year.	General Percentage for all Unions.	General Percentage for Unions in Engineering, Shipbuilding and Metals.	Percentage for Principal Unions.			
			Amalgamated Engineers.	Iron Founders.	Iron Moulders.	Boiler Makers and Iron and Steel Shipbuilders.
1858	11·9	12·2	10·2	16·6	12·9	—
1868	7·9	10·0	7·9	18·6	13·3	—
1879	11·4	15·3	10·6	23·3	23·3	9·5
1886	10·2	13·5	7·6	14·6	34·2	21·6
1893	7·5	11·4	8·3	10·8	20·8	17·0
1904	6·5	8·4	6·2	11·7	14·9	14·0

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

From the full Table it is clear that the prolonged and intense periods of depression for the Iron Founders and Moulders (especially the latter), and in more recent decades for the Boiler Makers and Iron and Steel Shipbuilders, have exercised a great influence not merely on the group percentage but on the general percentage for all trades. It may also be noted that the addition of the Boiler Makers and Iron and Steel Shipbuilders to the internal composition of this group, by reducing the relative importance of the more stable factor, the Amalgamated Engineers, goes some way to offsetting the steadying influence imparted to the general percentage by the reduced preponderance of the group in the basis for the general figures. The growing importance of the shipbuilding trades is thus illustrated in a greater instability of employment for the group. This influence is not, however, uniform in its operation. Although during the two depressions centering respectively in 1886 and 1893 the high figure for the Iron Moulders and the Boiler Makers and Iron and Steel Shipbuilders contributed materially to the high figure for the group, in the 1879 depression the Boiler Makers, etc., exhibited less unemployment even than the Amalgamated Engineers, while during the period 1900–2, when employment was good for the group and for trade in general the Iron Moulders showed a high percentage of unemployment.

Building Trades.

The building trades are represented in the unemployment percentage only by unions of the carpenters and joiners and plumbers. Though there is a possibility of error in regarding a percentage derived almost entirely from carpenters, joiners, and plumbers as applicable to the entire trade, this possibility affects cyclical impressions far less than seasonal. It seems tolerably certain that the cyclical fluctuations of employment for bricklayers, masons, house painters, plasterers, etc., will accord closely with the percentages for carpenters and joiners, though their seasonal fluctuations may differ.

The building trades, as thus represented, show a degree of steadiness of employment considerably greater than that given in the general percentage for all trades, though less than the general percentage excluding the engineering, shipbuilding, and metal trades. Although in 1879 and 1886 their deepest depression coincides with the general depression, in the other critical depressions of 1868, 1893, and 1904, the worst depression for the building trades appears in the year or two years following.

Woodworking and Furnishing.

The woodworking and furnishing group, whose percentage is based upon returns from a wider variety of unions, the principal being the United Coachmakers, Furnishing Trades Association, and Amalgamated Mill Sawyers, follows more closely the fluctuations of general trade in direction and time, though exhibiting especially in later years a greater degree of steadiness than that of general trade. The deepest depressions are in 1879 and 1904; the long period between these dates exhibits a regularity in percentage of unemployment considerably greater than that of the building trades and greater than that of general trade, excluding the engineering trades, etc.

This statement applies, moreover, to each of the constituent trades in this group, especially during the last twenty years, the Furnishing Trades Association and the Amalgamated Mill Sawyers showing on the whole the lowest uniform level of unemployment.

Printing and Bookbinding.

The general percentage for this group, mainly composed of returns from the "London Compositors," "Typographical Association," and "London Bookbinders," shows slighter fluctuations and less intense depressions than the general trade percentage or even the percentage excluding engineering, etc. This may be illustrated from the percentages in years of deepest depression which for this group generally accord with the general movement, with a tendency, however, in the later period to a year's delay.

Year.	General Percentage for all Unions.	General Percentage excluding Engineering, etc.	Printing and Book- binding Trades.
1858	11·9	2·5	2·5
1868	7·9	3·5	2·5
1879	11·4	6·1	4·0
1886	10·2	5·6	2·6
1893	7·5	4·0	4·1
1904	6·5	5·2	4·7

APPENDIX No. XXI. (B).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

But while the Table for this group (*see* Table C.) shows more than usual capacity to resist depressions, it also shows, especially in the two last decades, a considerable normal amount of unemployment even in the best years. What is even more significant is the increase of the unemployed percentage as expressed in decennial averages since 1880, as is shown by the following Table :—

AVERAGE PERCENTAGE UNEMPLOYMENT PER DECENNIUM IN PRINTING AND BOOKBINDING TRADES.									
1860-9	-	-	-	2.5	1890-9	-	-	-	4.1
1870-9	-	-	-	2.37	1900-7	-	-	-	4.6
1880-9	-	-	-	2.49					

The group Table indicates that for the decade 1880-9 this advance in average of unemployment was mainly due to the large though tolerably regular amount of unemployment in the London Compositors. But since 1890 the Typographical Association (whose figures in the preceding decennial period were extremely low) and the London Bookbinders appear to be responsible for the further increase, the former exhibiting a high regular figure for every year since 1893.

These percentages for the several groups contributing to the general percentage and for the constituent factors in the several groups present so close an agreement in the direction of their fluctuations and in the periodicity of depression, though not in the intensity, as to justify us in regarding them as sound indices for the general course of the trades which they represent.

STATISTICS OF EMPLOYMENT IN MINING, ETC.

It is convenient to make reference here to certain statistics furnishing a more or less direct measure of quantity of employment which are supplied to the Labour Department by employers in the mining, iron and steel, and tin trades. In coal-mining, where output is adapted to periods of activity and slackness by working a greater or smaller number of days in preference to the increase or decrease of the labour staff, it is possible to record the fluctuations by obtaining from employers statistics of the weekly number of days on which the pits are at work. The following statistics apply to the last twelve years.

COAL MINING.

Average number of days worked per week in each of the years 1895-1907.

Year.	Mean number of days worked by coal mines.	Percentage of days worked in 1900.	Year.	Mean number of days worked by coal mines.	Percentage of days worked in 1900.
	Per week.			Per week.	
1895	4.74	86.7	1902	5.22	95.4
1896	4.92	89.9	1903	5.09	93.1
1897	5.13	93.8	1904	5.07	92.7
1898	5.25	96.0	1905	5.03	92.0
1899	5.46	99.8	1906	5.26	96.2
1900	5.47	100.0	1907	5.51	100.7
1901	5.12	93.6			

The number given as “days worked” is the number of days (allowance being made for short days) on which coal was hewn and wound at the collieries included in the Returns.

Though the percentage of days worked in coal mines during recent years corresponds pretty closely with the general course of unemployment based on trade union returns, the same is not the case with iron mining, where the figures indicate a fluctuation slighter in extent and different in time, the lowest percentage falling in 1901, a year of large though declining employment in general trade, the highest percentage in 1904, a year of depression in general trade.

APPENDIX No. XXI. (B).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

IRON MINING 1896-1907.

Year.	Mean number of days worked by such mines.	Percentage of days worked in 1900.	Year.	Mean number of days worked by such mines.	Percentage of days worked in 1900.
1896	5.72	101.2	1902	5.74	101.6
1897	5.76	101.9	1903	5.72	101.2
1898	5.75	101.8	1904	5.79	102.5
1899	5.76	101.9	1905	5.77	102.1
1900	5.65	100.0	1906	5.78	102.3
1901	5.58	98.8	1907	5.81	102.8

The state of employment in the pig iron industry is expressed in a return to the Home Office of the average number of furnaces in blast and the average output per furnace.

These figures are, for earlier years, of very unequal value, owing to technical improvements increasing the output per furnace. During the last few years, however, no material increase in such output has taken place, so that the following figures expressing the average number of such furnaces in blast as percentages of the total for 1900 may be taken as a sound indication of the condition of employment.

PERCENTAGES OF FURNACES IN BLAST COMPARED WITH 1900.

Year.	Percentage.	Year.	Percentage.	Year.	Percentage.
1897	94.5	1901	83.4	1905	85.6
1898	93.8	1902	86.4	1906	91.3
1899	102.0	1903	86.6		
1900	100.0	1904	81.1		

These percentages, it will be seen, conform very closely to the general fluctuation expressed in the general percentage of unemployment. The same is true of the recent percentages of shifts worked in iron and steel works, 1898-1907 :—

Year.	Average Number of Shifts worked per man, per week.	Percentage of Shifts worked in 1900.	Year.	Average Number of Shifts worked per man, per week.	Percentage of Shifts worked in 1900.
1898 - - -	5.54	95.4	1903 - - -	5.37	91.5
1899 - - -	5.56	101.3	1904 - - -	5.40	99.6
1900 - - -	5.42	100.0	1905 - - -	5.51	101.7
1901 - - -	5.33	96.2	1906 - - -	5.57	102.8
1902 - - -	5.32	93.7	1907 - - -	5.58	103.0

The tinplate trade, though subject to special causes of fluctuation, conforms in general to the recent movements in the mining and metal trades, and in general trade.

PERCENTAGE OF TIN PLATE AND STEEL SHEET MILLS WORKING COMPARED WITH 1900.

Year.	Per Cent.	Year.	Per Cent.	Year.	Per Cent.
1896	82.8	1900	100.0	1904	100.3
1897	84.1	1901	89.3	1905	110.9
1898	83.9	1902	103.6	1906	109.6
1899	99.2	1903	96.6	1907	115.9

APPENDIX No. XXI. (B).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)**Wholesale Prices as an Index of Cyclical Depression.*

Since a fall of general prices is a usual accompaniment of cyclical depression in trade, it is worth while to test the validity of our statistics of unemployment regarded as indices of depression by ascertaining how far they correspond to downward movements of prices.

For this purpose we append a Table containing the general index number for wholesale prices adopted by the Board of Trade, based on the standard of 1900, and set beside it for comparison the index number of employment, based upon returns for all available unions.

The index number for wholesale prices is based upon the percentages of forty-five principal articles weighted by their estimated consumption (as explained in Appendix II. of the "Report on Wholesale and Retail Prices in the United Kingdom in 1904, with Statistical Tables for a Series of Years" [321]) and is brought up to 1906 in the "Eleventh Abstract of Labour Statistics," p. 78 :—

Year.	Index Number of Wholesale Prices for 45 Articles.	Index Number of Employment.	Year.	Index Number of Wholesale Prices for 45 Articles.	Index Number of Employment.
1871	136·0	101·2	1889	104·0	100·8
1872	145·8	102·0	1890	104·0	100·8
1873	152·7	101·7	1891	107·4	99·4
1874	148·1	101·3	1892	101·8	96·6
1875	141·4	100·7	1893	100·0	95·0
1876	138·0	99·4	1894	94·2	95·0
1877	141·6	98·4	1895	91·0	96·7
1878	132·6	96·5	1896	88·2	99·3
1879	126·6	91·9	1897	90·1	99·2
1880	129·6	97·5	1898	93·2	99·7
1881	127·3	99·3	1899	92·3	100·5
1882	128·4	100·5	1900	100·0	100·0
1883	126·8	100·3	1901	96·9	99·0
1884	114·7	95·6	1902	96·5	98·2
1885	107·7	94·1	1903	96·9	97·5
1886	101·6	93·1	1904	98·3	95·9
1887	99·6	95·6	1905	97·6	97·1
1888	102·7	98·7	1906	100·5	98·7
			1907	105·7	98·5

In regarding the index number of wholesale prices as a measure of trade depression, allowance must be made for the more or less constant operation of other economic forces which, whether operative through improvements of the arts of transport and of extraction upon cost of production and so on prices, or through forces which find expression through the medium of exchange, have worked during the past third of a century in the direction of lower wholesale prices. If we are to find in price movements a corroboration of the evidence presented by statistics of employment, it is in an acceleration of this normal tendency that we shall expect to find it. Such an acceleration is clearly visible, at any rate in three of the four periods of definite depression which have occurred during the decades under survey. Though years 1879, 1886, and 1893 are not the years of the sharpest drop in prices, in each case they are in a triennial period which marks such a drop; the period 1877 to 1879, 1885 to 1887, and 1892 to 1894, the opening of a long continued fall of prices.

A reference to the several groups into which the forty-five articles forming the basis of the index figures have been classified bears out this general conformity of the depression of wholesale prices to that of employment. (*See Table E. for Table from Abstract.*) In the case of "coal and metals," textiles and corn, the correspondence is even closer than in the General Index figure.

APPENDIX No. XXI. (B).—*Continued.*

Handed in by the Board of Trade. (Q. 98827.)

TABLE D.

EMPLOYMENT IN COAL, IRON, AND STEEL TRADES.

I.—COAL MINING—1895—1907.

NUMBER of PERSONS EMPLOYED and AVERAGE NUMBER of DAYS WORKED per WEEK by COAL MINES in each of the Years 1895–1907.

Years.	Number of Persons employed in and about Coal Mines.	Mean Number of Persons employed in Coal Mines respecting which Employment Returns were received.	Mean number of Days worked* per Week by Coal Mines.	Percentage of Days worked in 1900.
1895 - - - - -	681,700	248,417	4·74	86·7
1896 - - - - -	678,690	350,894	4·92	89·9
1897 - - - - -	681,531	418,022	5·13	93·8
1898 - - - - -	693,661	401,004	5·25	96·0
1899 - - - - -	715,205	418,304	5·46	99·8
1900 - - - - -	766,901	459,162	5·47	100·0
1901 - - - - -	792,648	476,913	5·12	93·6
1902 - - - - -	810,787	488,079	5·22	95·4
1903 - - - - -	828,968	494,675	5·09	93·1
1904 - - - - -	833,629	528,379	5·07	92·7
1905 - - - - -	843,418	548,943	5·03	92·0
1906 - - - - -	867,152	584,879	5·26	96·2
1907 - - - - -	925,000 (est.)	612,404	5·51	100·7

* The number given as “days worked” is the number of days (allowance being made in all the calculations for short days) on which coal was hewn and wound at the collieries included in the returns received. It is not necessarily implied that all the persons employed at these collieries worked the whole number of days.

II.—IRON MINING—1896–1907.

NUMBER of PERSONS EMPLOYED and MEAN NUMBER of DAYS WORKED per WEEK by IRON MINES in each of the Years 1896–1907.

Years.	Mean Number of Workpeople employed at Mines covered by the Returns.	Mean Number of Days worked per Week by such Mines.	Percentage of Days worked in 1900.
1896 - - - - -	15,658	5·72	101·2
1897 - - - - -	16,873	5·76	101·9
1898 - - - - -	17,349	5·75	101·8
1899 - - - - -	17,133	5·76	101·9
1900 - - - - -	16,830	5·65	100·0
1901 - - - - -	15,329	5·58	98·8
1902 - - - - -	15,529	5·74	101·6
1903 - - - - -	15,800	5·72	101·2
1904 - - - - -	15,422	5·79	102·5
1905 - - - - -	15,363	5·77	102·1
1906 - - - - -	16,147	5·78	102·3
1907 - - - - -	16,352	5·81	102·8

APPENDIX No. XXI. (C).

Handed in by the Board of Trade. (Q. 98827)

THE GROWTH OF TRADE UNIONS WITH PARTICULAR REFERENCE TO THE PAYMENT OF UNEMPLOYED BENEFIT.

The purpose of this Memorandum is to set out, so far as the information is available, the facts as to the development of Trade Unions during the period 1892-1906 inclusive, and as to the extent to which the unions have paid benefits, in whatever form, to their unemployed members.

Table I. shows the number of trade unions known to the Labour Department of the Board of Trade to be in existence at the end of each of the fifteen years from 1892 to 1906 inclusive, and their total membership. From that Table it will be seen that whilst the aggregate membership reached, in 1906, by far the highest point yet recorded, the number of separate unions was at its maximum a decade earlier, in 1896, and that since then there has been a nearly continuous yearly decline. This diminution in the number of unions is due in part to amalgamations and the tendency for smaller unions to be absorbed by larger ones in the same trade ; thus in the three years 1902-4 there were 50 cases of such amalgamation or absorption. The total membership of the unions has, in spite of fluctuations, shown a steady upward movement, the increase between 1892 and 1906 having been 39·2 per cent. The membership of many unions varies with trade conditions, with its activity or depression, and to this cause the fluctuations in total membership are mainly due ; it will be seen from the Table that the years of declining employment, 1902-1904, witnessed a falling-off in trade union membership, as had been the case a decade earlier ; and that this was followed by a slight recovery in 1905, when employment began to improve, followed by a very rapid advance in 1906.

TABLE I.
GROWTH OF TRADE UNIONS, 1892-1906.

Year.	No of Unions at end of year.	Aggregate Membership at end of year.	Year.	No. of Unions at end of Year.	Aggregate Membership at end of Year.
1892	1,195	1,513,647	1900	1,251	1,951,198
1893	1,229	1,497,949	1901	1,246	1,932,164
1894	1,270	1,472,128	1902	1,213	1,948,688
1895	1,292	1,438,889	1903	1,196	1,926,080
1896	1,306	1,526,395	1904	1,164	1,888,289
1897	1,298	1,648,904	1905	1,152	1,913,199
1898	1,267	1,683,768	1906	1,161	2,106,283
1899	1,262	1,844,114			

Of the 1,161 unions in existence at the end of 1906, 747 (with a membership of 1,456,977, or 69 per cent. of the total trade union membership), paid one or more forms of unemployed benefit in the course of that year ; in the remaining 414 unions, with 649,306 members, no such benefits were paid, so that rather more than two-thirds of the organised workmen were in unions which gave some kind of help to their unemployed members. This help takes various forms ; in addition to the ordinary

APPENDIX No. XXI. (C).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

weekly benefit or "Donation," there are payments to members travelling in search of work, fares to situations, payments on account of cessations of work due to fires, failures of firms, temporary stoppages and breakdowns of machinery, emigration grants (in a few instances), and special grants in times of excessive slackness (usually in the case of unions which do not pay unemployed benefit as a regular thing). The benefits given regularly by unions may be divided into three main groups:—

- (a) **TRAVELLING BENEFITS ONLY.**—These are allowances at the rate of so much per day, with in some cases an additional mileage rate, to members travelling in search of work. Most of the unemployed benefit paid by Bricklayers', Masons', Plasterers', and Builders' Labourers' unions is travelling benefit only; but outside the Building Trades the total amount paid as travelling benefit only (so far as it is distinguishable) was in 1906 about £250 in 20 unions.
- (b) **UNEMPLOYED BENEFIT ONLY.**—Where systematic (*i.e.*, where not given in the form of only occasional grants) this consists of fixed payments for a number of weeks—both amounts and time varying in the different unions. In some cases the benefit is given whatever the cause of unemployment; in others it appears to be given only when unemployment is due to certain specified causes (*e.g.*, in some of the textile unions, to fires, failure of firms, breakdowns of machinery, etc.). Where unemployed benefit is given only in the form of special grants a ballot of members is sometimes required before such grants can be made.
- (c) **UNEMPLOYED AND TRAVELLING BENEFITS.**—In a number of unions both the above forms of benefit are given.

Some illustrations of these various forms of benefit may be given here:—

- (a) **TRAVELLING BENEFIT ONLY.**—The Operative Bricklayers' Society pays 1s. 6d. a day for not more than eight weeks in a half year; the Operative Stonemasons' Union of England, Ireland and Wales give 9d. per day for distances under 10 miles (Sundays 1s. 6d.), 1s. 6d. per day for 10 miles and under 20 miles, and 1d. for every additional three miles, and members are entitled to 98 days relief in each year.
- (b) **UNEMPLOYED BENEFIT ONLY.**—The Amalgamated Society of Dyers pays 8s. per week for the first 10 weeks, and 5s. per week for the second 10 weeks in any one year. The Amalgamated Brassworkers give to full members of one year's standing, 10s. per week for the first 13 weeks, and 7s. per week for a second period of 13 weeks. The Amalgamated Union of Cabinetmakers gives 12s. for four, six, or eight weeks (according to member's age at admission to Union) with 1s. per week for each child registered (not exceeding four) under 13; members of six months and under 12 months' standing get 6s., and 6d. per child, according to the above scale; when a member has received the benefit for four, six, or eight weeks he is not again entitled to benefit till he has worked and paid contributions for 26 weeks.* The Amalgamated Society of Engineers has a sliding scale—its members of over 10 years' standing receive 10s. per week for 14 weeks, 7s. for 30 weeks, and thereafter 6s. so long as unemployed; the rates are the same for other sections of full members, but the number of weeks is reduced. Machinist section

* This union allows 6d. per night for a bed to members "on travel."

APPENDIX No. XXI. (C).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

members get 10s. for 10 weeks, 5s. for 12 weeks, and 2s. 6d. for 14 weeks; while "Trade Members" receive 10s. for 14 weeks, 7s. for 16 weeks, and 5s. for 24 weeks. The Blackburn and District Weavers Association pays to members unemployed owing to fires, failures, breakdowns, and stoppages of machinery, depression in trade, etc., 3s., 7s., 10s., or 16s. a week, according to scale of contributions (3d., 4d., 5d., 6d. or 7d. per week) for a period of six weeks. The Cleveland Miners and Quarrymen's Union is a union in which grants to unemployed members may be given if authorised by a ballot.

- (c) UNEMPLOYED AND TRAVELLING BENEFITS.—The Typographical Association, in addition to ordinary unemployed benefits of 8s. a week for five, six, or seven weeks in each quarter (according to length of membership), gives 1s. 8d. a day travelling allowance, with maxima of £4 to £5 12s. per annum; but a member may not receive both benefits at the same time.

The next Table (II.) shows the number of unions in each trade group which paid or did not pay some form of unemployed benefit in 1906, and their membership.

TABLE II.

Trade.	Unions paying one or more forms of Unemployed Benefit in 1906.		Unions paying no Unemployed Benefit in 1906.	
	No.	Membership.	No.	Membership.
Building - - - - -	53	175,434	43	20,902

Clothing - - - - -	20	55,095	17	4,419
Transport - - - - -	9	115,391	49	73,570
Printing, etc. - - - - -	36	63,472	5	979
Woodworking and Furnishing - - -	90	41,849	8	480
Miscellaneous - - - - -	123	89,045	70	34,501
General Labour - - - - -	6	63,991	12	42,843
Employees of Public Authorities - -	2	860	68	85,481
Total - - - - -	747	1,456,977	414	649,306

From the standpoint of this memorandum the unions of employees of public authorities can be put aside, since the nature of their occupations is obviously such as to cause them to be little, if at all, affected by the forces which ordinarily bring about unemployment. With this exception, the only one of the above trade-groups in which the majority of the organised workmen are in unions which pay no unemployed benefit is mining and quarrying, and it is well known that among the miners slackness of work is met systematically by short time, and not by a reduction in the numbers employed. In regard to the trade-group "Transport," it may be noted that, of the total of 101,584 railway servants who were members of unions at the end of 1906, 98,165 belonged to unions which paid some form of unemployed benefit; whereas, of the 87,377 workers included under the heading of "Carmen, Seamen, Dock Labourers, etc.," only a small proportion (17,226) were members of such unions. A more detailed classification of the unions will be found in Table VIII. of this Memorandum.

APPENDIX No. XXI. (C).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

Table III. shows the amount expended by each group of unions on unemployed benefits during 1906.*

TABLE III.

Trade.	Number of Unions paying Unemployed Benefits in 1906.	Amount Expended in + Unemployed Benefits in 1906.
		£
Building - - - - -	53	127,909
Mining and Quarrying - - - - -	40	36,566
Metal, Engineering and Shipbuilding - - - - -	164	181,480
Textile - - - - -	204	37,365
Clothing - - - - -	20	5,277
Transport - - - - -	9	4,533
Printing, etc. - - - - -	36	50,789
Woodworking and Furnishing - - - - -	90	29,586
Miscellaneous - - - - -	123	38,000
General Labour - - - - -	6	2,223
Employees of Public Authorities - - - - -	2	50
Total - - - - -	747	513,778

Detailed statistics over the whole period of fifteen years, 1892-1906, are available only for a hundred “principal” unions, which include the chief unions of each of the above trade-groups, and form, therefore, a representative selection; their membership was in 1906, 60 per cent. of the total membership of all Trade Unions. But inasmuch as they include most of the largest and best-organised and developed unions, it is natural that their share of the total expenditure on unemployed benefits should be much greater; in 1906, out of a total of £513,778 spent in unemployed benefits, the hundred principal unions expended £421,292 or 82 per cent. Actually 81 of them made such payments, which gives an average of about £5,200 per union. The remaining £92,486 was paid by 666 unions, or an average of £139 each.

These hundred principal trade unions may be divided for the present purpose into three groups—(a) unions which paid unemployed benefits in every year throughout the period 1892-1906; (b) unions which paid unemployed benefits in some years only; (c) unions which did not pay unemployed benefits in any of the

* In the case of some unimportant unions, where exact figures could not be obtained, an estimate has been made of the amount expended.

Westminster, S.W.
4th September, 1908.

Dear Mr. Wilson Fox,

I have been looking into your most interesting Memorandum as to the Growth of Trades Unions with particular reference to the payment of Unemployed Benefit. On page 2, you classify the benefits under three classes, viz.: (a), (b), and (c). Under (b), you talk about the systematic (Unemployed Benefit), that is, regular fixed payments for a certain number of fixed weeks. Can you give us any idea of what number of men belonging to Trades Unions have a right to this systematic benefit, as contrasted with the partial travelling or occasional grants, etc.?

The point is rather an interesting one, and Lord George Hamilton would be much obliged if you could give us roughly, any figures or estimate on the subject.

I am,
Yours faithfully,
R. G. DUFF, Secretary.

A. Wilson Fox, Esq.,
Board of Trade,
Whitehall Gardens, S.W.

7, Whitehall Gardens,
London, S.W.
16th September, 1908.

Dear Mr. Duff,

In reply to your inquiry of 4th September as to the number of members belonging to trade unions which pay a “systematic” unemployed benefit, I have to inform you that in the hundred principal unions having a membership of 1,273,995 in 1906, 69 with a membership of 991,190 pay a regular weekly allowance, 7 (with 71,345 members) pay travelling benefit only and 10 (with 74,298 members) make occasional grants, etc., the remaining fourteen unions with a membership of 137,162 give no assistance to their unemployed members. As regards the other Trade Unions, it is known that 661 unions with a membership of 320,144 pay some form of unemployed benefit, and that the remaining 400 unions with a membership of 512,144 do not pay this benefit in any form.

Yours truly,
ARTHUR WILSON FOX.

R. G. Duff, Esq.,
Royal Commission on the Poor Laws and Relief of Distress,
Scotland House,

APPENDIX No. XXI. (C).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

years. In the first group there are 70 unions, with 948,275 members in 1906; the second group consists in the main of unions in which the payment of unemployed benefits is not a regular institution, but which make grants under special circumstances. This group contains 16 unions, with 188,558 members in 1906. The third group contains 14 unions, with 137,162 members in 1906. Roughly speaking, the three groups represent respectively (a) unions of skilled workpeople who are able to pay weekly subscriptions large enough to cover insurance against unemployment; (b) unions of miners and other workers whose need of assistance on account of unemployment is occasional only (depression in trade being in general met in the mining industry by short time); (c) unions of unskilled workers whose wages are, as a rule, too small to enable them to make a sufficient contribution to the cost of unemployment relief. Table IV. shows the total membership of each of these groups for each of the years 1892-1906.

TABLE IV.

Year.	Membership of Unions which paid one or more forms of Unemployed Benefit <i>every</i> year. (70 Unions).	Membership of Unions which paid one or more forms of Unemployed Benefit in <i>some</i> years only. (16 Unions).	Membership of Unions which paid no Unemployed Benefits in any year. (14 Unions).

Percentage of Increase 1892-1906	43·2	32·8	22·9

From this Table it appears (i) that the percentage of the total members of the 100 principal trade unions who were included in the 70 unions which have paid some form of unemployed benefit throughout the whole period was in 1892 72·3 per cent., and in 1906 74·4 per cent.; (ii) that the rate of increase during the period has been greatest in the case of such unions and least in the case of the unions which have paid no unemployed benefits during the period. It will be observed, moreover, that excepting 1898, the membership of the 70 unions has increased yearly, whereas that of the other two groups has fluctuated with the condition of trade—a phenomenon which was to be expected since these latter are unable to offer so great an incentive to their members to remain in the unions during a period of depression.

The next Table shows the total amounts paid in each of the 15 years by those unions which paid some form of unemployed benefit every year, and by the unions which paid such benefits in some years only, together with the amount per head of membership in each case. Information is not available as to the total number of members who actually received such unemployed benefits in any year.

* The amount per member in the case of the sixteen Unions which paid unemployed benefits in *some* years only is based on the membership of those Unions which paid the benefit during the particular year.

The total number of unions paying one or more forms of unemployed benefit in any one year during the period under review ranged from 74 (in 1894 and 1896) to 81 in 1906. The number of members of such unions has, in spite of some fluctuations, shown a gradual upward tendency, and has increased from 681,865 in 1892 to 1,054,878 in 1906. Full details as to the number of unions in each of the chief trade groups which paid such benefit in each of the fifteen years, their membership, the total amount paid, and the sum per head of total membership, are given in Table IX.

It is not possible to give the total number of trade unionists who have been assisted for long or short periods during any year by means of the unemployed benefits paid by their unions. If, however, we take the total amount paid by the 100 principal trade unions in these benefits in 1904, when the expenditure was greater than in any other year during the period, we find that the sum disbursed (£652,471) was sufficient to pay 36,000 workpeople, or nearly 4 per cent. of the total membership of the unions paying the benefits, a weekly sum of 7s. each during the entire year. The number relieved was, of course, very much greater than 36,000, as few, if any, of the workpeople would be out of employment for a year, and fewer still would receive the benefit for that period. The number of dependants on those assisted must also be taken into account when any estimate is made of the importance of this benefit with reference to the relief of distress.

Any consideration of the help given by trade unions to their unemployed members would be very incomplete without reference to two other forms of assistance—(a) Sickness and accident benefits, and (b) Superannuation benefits.

- (a) SICKNESS AND ACCIDENT BENEFITS.—The most important part of this expenditure consists of weekly payments, but a number of unions (chiefly in the engineering, shipbuilding, building, and cotton spinning trades) pay also a lump sum as a bonus to members totally or partially disabled by accident. The amounts paid under the second head vary considerably, the maximum in the event of total disablement being £100, and the minimum payments being as low as £10. Some unions pay nothing beyond grants to hospitals. Table VI., given below, shows the amount expended for the years 1892-1906 by those of the 100 principal unions which paid one or more forms of the above benefits, together

APPENDIX No. XXI. (C)—Continued.

Handed in by the Board of Trade. (Q. 98827),

with the number and membership of the unions. From this Table it will be seen that after some fluctuations the total amount so expended steadily increased between 1896 and 1906. The amount spent per head of membership rose in the latter period from 6s. 3d. to an average of 8s. 4d. The sum expended in 1906 was sufficient to pay 20,000 work-people, or 2 per cent. of the total membership—a weekly sum of 8s. throughout the year. Here, again, of course, the number actually relieved on account of sickness or accident was very much greater.

1899	71	859,500	287,505	6 8					

(b) SUPERANNUATION BENEFIT.—This is paid by a comparatively small number of the 100 principal unions, chiefly those in the engineering, shipbuilding, building and printing trades; but these included in 1906, 633,000 members, or about one-half of the total membership of the 100 principal unions. Few of the miners', and none of the weavers' and labourers' unions pay this form of benefit; but in the case of the miners it is given by the Miners' Permanent Relief Societies. The weekly amounts range from 2s. to 12s., the majority ranging from 5s. to 10s. In some cases the benefit is given only when incapacity (more or less complete) accompanies old age. Table VII. gives the number of principal unions paying such benefits, their membership, and the amount expended on superannuation, for each of the years 1892-1906, and the number of members receiving the benefit at the end of each year. It will be seen that there has been a steady increase in the numbers receiving the benefit, the number in receipt of superannuation relief at the end of 1906 being nearly treble the number in 1892 and almost exactly double the number in 1896. The average weekly amount received by the 15,000 recipients in 1906 was 8s.

SUMMARY.

It appears, then, that some two-thirds of the organised industrial workers of the United Kingdom are members of unions which give some form of assistance to their members when out of employment, either by a regular system of benefits or by occasional grants; that of the 100 principal unions a large proportion, with about four-fifths of the total membership of the 100, give sickness and accident benefits, and that a much smaller number of unions, but with about one-half of the same total membership, give superannuation benefit also. The amount expended by the unions under these last two heads is steadily rising, but the expenditure on ordinary unemployed benefits naturally fluctuates with the condition of trade and the labour market. In the absence of complete information as to the number of members who receive aid in these ways, it is practically impossible to measure the exact extent to which such assistance, considerable as it is in the aggregate, is really effective in relieving the distress consequent upon unemployment arising from slackness of trade, sickness and old age. Inasmuch as the assistance is given mainly by unions of highly skilled and well-paid workers, it is evident that it does little to help the class of more or less unskilled workers. Finally, the unions giving such relief are, for the reasons already indicated, usually in those trades in which their steady growth is to be expected from other causes besides the attraction of unemployed benefits; and therefore any attempt to estimate the effect of the existence of such benefits on the growth of the unions would probably lead to fallacious results.

APPENDICES.

APPENDIX No. XXI. (C).

Handed in by the Board of Trade. (Q. 98827.)

ADDENDUM.

CORRESPONDENCE WITH BOARD OF TRADE AS TO NUMBERS
OF WORKMEN NOT BELONGING TO TRADES UNIONS IN
CERTAIN TRADES.ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS,
SCOTLAND HOUSE,

VICTORIA EMBANKMENT,

WESTMINSTER, S.W.

11th November, 1908.

SIR,

Lord George Hamilton desires me to ask whether the Board of Trade would be good enough to furnish the above Commission with an estimate of the number of workmen belonging to trades and industries for which trade unions exist, but who have not yet joined those unions. The Commission do not desire anything more than a very approximate estimate.

I am, Sir,

Your obedient servant,

(signed) R. G. DUFF, *Secretary*.

The Comptroller General,
(Commercial Department),
Board of Trade,
Whitehall, S.W.

BOARD OF TRADE,

(COMMERCIAL DEPARTMENT),

7, WHITEHALL GARDENS,

LONDON, S.W.

16th November, 1908.

SIR,

In compliance with the request contained in your letter of the 11th November, I have pleasure in forwarding to you herewith, for the information of Lord George Hamilton, a memorandum dealing with the proportion of trade unionists to the total industrial population.

I am to add that the subject is a very difficult one, and that the proportions stated must be regarded as only roughly approximate.

I am, Sir,

Your obedient Servant,

ARTHUR WILSON FOX.

The Secretary,
Royal Commission on the Poor Laws and Relief of Distress,
Scotland House, S.W.

PROPORTION OF TRADE UNIONISTS TO INDUSTRIAL POPULATION.

GENERAL.

No exact comparison can be made between the number of trade unionists and the total numbers employed in each trade, the difficulty arising in the estimate of the number of the working population that might properly be included in the total for this purpose.

The total number of trade unionists in the Kingdom is ascertained by the Department with a very near approach to completeness. The proportion of the industrial population belonging to the classes eligible for membership in trade unions cannot, however, be precisely determined*. Nor is it easy from the return of the last Census (1901) to fix with certainty the number of persons engaged in various industrial occupations; nor, again, is the increase in the numbers of those engaged in such occupations since that Census exactly known.

A rough estimate has however been made from the sources available, showing a total of over 8,000,000 males and 1,400,000 females (excluding domestic and other servants) of twenty years of age and upwards in the United Kingdom belonging, in September, 1908, to the classes from which trade unionists are drawn. Of these totals the number of male trade unionists (2,200,000) and of female trade unionists (200,000) at the end of 1907 are about 27 and 14 per cent. respectively. In the case of the cotton trade, however, where the majority of the female trade unionists are employed, some of the members are not adults. On the other hand, as regards the percentage of male trade unionists to the industrial population, if agricultural workers, seamen, and fishermen are excluded, the percentage rises from 27 to 31. Some slight allowance must also be made for the difference in dates between the estimate of the total industrial population and the ascertained number of trade unionists. On the whole it appears that the proportion of men of the classes in question who belong to trade unions is roughly *one in four* or (omitting agriculture, seafaring and fishing) *three in ten*; while in the case of women the proportion is about *one in eight*.

PARTICULAR TRADES.

Mining and Quarrying.—For the mining and quarrying industries the Home Office returns show a total of 986,000 males over 16 years of age engaged in this group of trades in 1907. The returns made to the Labour Department show that the membership of mining and quarrying trade unions was 703,000, union members thus forming over 70 per cent. of the whole. For trades other than mining and quarrying the percentage of male trade unionists to industrial male population would thus be not more than about 20.

Other Trades.—It is estimated that for the following trades the proportions of trade unionists are as stated, but the figures are very rough and must be taken with considerable caution :—

Building Trades	-	-	-	-	-	1 in 5
Metal, Engineering and Shipbuilding	-	-	-	-	-	1 in 4
Textile Trades—						
Males	-	-	-	-	-	1 in 2
Females	-	-	-	-	-	1 in 3
Clothing Trades—						
Males	-	-	-	-	-	1 in 5
Females	-	-	-	-	-	1 in 100
Railway Servants	-	-	-	-	-	1 in 4

It should be added that these proportions would, of course, vary in different districts and in the various sections of each trade.

* Many workpeople are disqualified from becoming members of unions by reasons of age, bodily infirmity, want of skill, &c., and the older and richer unions paying sick and superannuation benefits are naturally not anxious to recruit their members indiscriminately.

APPENDIX No. XXI. (D).

Handed in by the Board of Trade. (Q. 98827).

I. STATISTICS OF SEASONAL INDUSTRIES AND INDUSTRIES CARRIED ON BY CASUAL LABOUR.

II. STATISTICS OF NUMBERS EMPLOYED BY RAILWAY COMPANIES, GAS, WATER AND TRAMWAY COMPANIES AND UNDERTAKINGS.

The following Memorandum treats of the subjects specified above, so far as any information on these subjects is available. The statistics as to men employed by dock, gas, and tramway companies at different seasons of the year are given in their place in the account of seasonal fluctuations. No statistics are available for employment by the railway companies at different seasons of the year, but Table XIII., at the close of the Memorandum, gives the numbers employed in certain years.

As will be seen from the Tables, one main result of the inquiries made is to show that seasonal fluctuation is a very general if not universal phenomenon. No information is available as to the number of individual employees whose employment is irregular. The casual fluctuations of employment in London Dock and Wharf Labour are, however, dealt with specially, with a view to showing (a) how far the numbers employed daily diverge from the average for each month or year, (b) how far the busy and slack times of different employers coincide—in what may be called a seasonal movement—or are independent so that opposite fluctuations neutralise one another. These figures show only to what extent it is theoretically possible for men by moving from one employer to another to get a fair continuity of work. They do not show at all how much or how little movement actually takes place.

The information available for tracing the course of seasonal fluctuations of employment in various industries is of three main types :—

I. Reports by Trade Unions of the number and proportion of their members unemployed at the end of each month.

II. Reports by Employers as to the average number of days or of shifts worked per week in each month or in the last week of each month, in coal and iron mines and iron and steel works.

III. Reports by Employers as to the actual number of persons employed or paid wages by them daily or in the last week of each month.

I.—PROPORTION OF MEMBERS OF TRADE UNIONS UNEMPLOYED.

Statistics of the first type are now available for a considerable number of years, and for a good many different industries. It may be assumed that the effect of cyclical fluctuations of trade can be eliminated, and that of accidental variations reduced to a minimum, by taking average for each month over a period of years. In Table I. this has been done for seventeen separate industries or groups of industries, the period in every case but two being the ten years 1897 to 1906 inclusive. This period coincides fairly well with that of the last trade cycle, and may be presumed, therefore, to contain a fair proportion of good and bad years respectively. For Mill-sawyers only seven years—1900–1906, and for the Clothing Trades only eight years—1899–1906—of records are available. The subsidiary Table II. shows the Printing and Book-binding, and the Hat-making groups subdivided for shorter periods.

In each group the first column gives the average percentage unemployed at the end of each month. The movements of this percentage indicate the seasonal fluctuation of the trade, the percentage being low in busy seasons and being high in

APPENDIX No. XXI. (D).—*Continued.*

Handed in by the Board of Trade. (Q. 98827.)

slack ones. An average may, however, be a compromise between opposite extremes without fairly representing either. It is therefore important to see how closely the movements of the average percentage for a period of years are reflected in the movements of the actual percentage in each separate year. This is the object of the other columns in the Table. In Coachbuilding, for instance, the average percentage in the first column falls steadily in the first five months of the year, and rises steadily in the last six. The other columns show that this movement is repeated in every year of the ten taken separately. It is a seasonal fluctuation of a very pronounced character. So in Printing, both the decrease in the average between June and July and the increase between July and August are repeated in each separate year of the period. Where the movement of the average is reflected in all, or the great majority of the separate years in the period, it is evidence of an indisputable seasonal fluctuation; where, on the other hand, the separate years are evenly, or nearly evenly, divided, between increase and decrease, there can clearly be no seasonal fluctuation, or only one so weak as to be constantly overridden by accidents, or the larger cyclical movement of trade. At the foot of the Table is given the number of persons covered by the returns for each group in June, 1906.

These returns show in the first place a good many spring and summer trades. Of these Building, which is no doubt fairly represented by the Carpenters and Joiners, is the most obvious. During spring employment improves rapidly and receives a fresh impetus in July; from the end of August it falls off quite steadily till the end of the year. Furnishing follows the same general course with a busy time more concentrated in the spring and Coachbuilding with one in June and July. In Coopering the season comes somewhat later and is carried on with only slightly diminished briskness till the end of the year. Brushmaking and Hatmaking have each a second season in the autumn. In Clothing the worst time is in October and November; every subsequent month shows improvement to the late spring. Leatherworkers and Millsawyers, though also busiest in spring and summer and slacking off to the winter, have not such well-marked seasons. They approximate to the metal trades which, while undoubtedly affected by seasons, are often far more violently affected by cyclical and other causes.

The returns show, in the second place, certain trades whose general tendency is directly the contrary of that outlined above. They may be regarded as winter trades. Steel smelting, while somewhat irregular, has undoubtedly its slackest times in June and July.

In the third place certain trades have to be mentioned with very characteristic fluctuations, which are apparently more dependent on social habits than on climatic conditions. Printers are always busiest at the end of November, grow slack as soon as Christmas is past, grow busy again in February and March, and slack again from April to June, always recover a little in July, and then fall into a dead season during the summer holidays. Paper makers, as might be expected, follow the same course, though not so regularly. Tobacco workers also are busiest in November, and stand idle in July and August. Bookbinders, as will be seen from the subsidiary Table, agree with Printers in being busiest in November, but have a slack season more or less throughout the late spring and summer.

II.—DAYS OR SHIFTS WORKED PER WEEK.

Statistics of this type also are available in certain industries for a considerable period of years.

Table III. shows the average number of days per week on which coal was hewn and wound at collieries included in the returns received. The figures for each month represent the mean of the ten years 1897–1906, and the agreement or disagreement of the figures for each separate year with that for all years taken together is shown as in the case of the Trade Union unemployed percentages. The statistics are given for the United Kingdom and for each district separately. In a subsidiary Table (IV.) the general figures are divided in another way — according to the class of coal principally worked, the averaging period being November 1905 to October 1907.

It will be seen that there is in coal mining a definite seasonal fluctuation. December is busiest; employment falls off in January to recover in February and March, after which it falls off in April, and, though recovering in May, becomes slack again throughout June, July and August. With September there is in all cases a recovery. The separate districts show only minor differences from the general result, though in South Wales and Durham December is relatively less busy and the summer slackness less marked. As might be expected, house coal shows the greatest summer and winter fluctuation and coking coal the least.

* Average for 9 years only.

APPENDIX No. XXI. (D).—Continued.

Handed in by the Board of Trade. (Q. 98827).

Table V. gives for other industries figures similar to those given for coal mines. Iron mining shows definite though limited seasonal fluctuations. The last four months of the year and May are busy times ; January, April, and June-August are times of comparative slackness.

For iron and steel works the figures relate to shifts not to days worked, and only to the last week of each month. The three months June-August and January are marked out as periods of comparative slackness.

The Tinplate industry, as is indicated by the number of mills at work has apparently a similar fluctuation.

TABLE V.—DAYS WORKED in Iron Mines, Shifts Worked in Iron and Steel Works, and number of Tinplate and Sheet Mills Working.

Month.	Iron Mines (1897-1906).					Iron and Steel Works (1898-1906).					Tinplate and Steel Sheet Mills (1897-1906).

III.—ACTUAL NUMBERS EMPLOYED IN CERTAIN INDUSTRIES.

Except for dock labour these cannot be given for any considerable period, and such figures as are available must therefore be taken with some caution as indications of seasonal fluctuation.

Table VI. shows the comparative numbers employed at the end of each month from October, 1906, to September, 1907, by employers making returns in certain industries, the average for the whole period being taken = 100.

In regard to Building it may be noticed that the statistics obtained from employers and those obtained from trade unions are in general agreement as to the period of the seasonal fluctuation shown. The range of the fluctuations shown by the employers' returns is however considerably greater than that shown by the Trade Union returns. Whether this in any way reflects a difference in the class of men covered or is simply due to the forms of returns is uncertain. A further point of interest is that the range of fluctuation appears to be slightly greater for skilled than for unskilled men.

The Clothing Trades here represented are quite different from those covered by the Trade Union returns in Table I. Some of them show, as might be expected, extreme fluctuation in dependence upon social habits.

APPENDIX No. XXI. (D).—Continued.

Handed in by the Board of Trade. (Q. 98827)

TABLE VI.—PERCENTAGE PROPORTION of the Numbers Employed in the undermentioned Trades at the end of each Month, from October, 1906, to September, 1907.

APPENDIX No. XXI. (D).—*Continued.**Handed in by the Board of Trade. (Q. 98827)*

Gasworks show a marked fluctuation, the winter maximum (December) being not far short of 20 per cent. in excess of the minimum (June). Tramways, on the other hand, show a steady, though much smaller, fluctuation, taking exactly the opposite course of a rise in summer and a fall in winter. In regard to waterworks it is hardly possible to base any very certain conclusions on the figures at present available.

In the following Table some more detailed figures are given with regard to dock labour in London, showing the amount of fluctuations from year to year in the numbers employed.

TABLE VIII.—DAILY AVERAGE NUMBER of Labourers employed at London Docks and 108 Wharves in each of the Years 1897–1906.

Year.	Dock Companies.				Ship-owners.	108 Wharves.	Total (4) + (5) + (6)
	London and India.	Millwall.	Surrey Commercial.	Total (1) + (2) + (3)			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
1897 - - -	4,644	855	1,729	7,228	2,316	5,761	15,305
1898 - - -	3,867	839	1,653	6,359	2,399	5,975	14,733
1899 - - -	3,772	839	1,691	6,302	2,640	5,968	14,910
1900 - - -	4,094	923	2,023	7,040	2,452	6,043	15,535

1904 - - -	2,812	713	1,569	5,094	2,130	5,688	12,912
1905 - - -	2,643	661	1,561	4,865	2,008	5,627	12,500
1906* - - -	2,703	710	1,523	4,936	1,982	5,574	12,492

* The figures for 1906 differ from those shown in Tables VII. and XI., as they have been adjusted to make them exactly comparable with the figures for 1897–1905.

CASUAL FLUCTUATIONS OF EMPLOYMENT IN LONDON DOCK AND WHARF LABOUR.

Tables IX. to XII. are intended to throw light on the extent of what may be called casual fluctuations other than those of a strictly seasonal character in the numbers employed at the London docks and wharves.

Table IX. shows for each month of the year 1906 the maximum number of men employed on any one day by each of the five main groups of employers from whom returns are received, and in the port as a whole, together with the date in the month on which that maximum was reached. The “months” are periods of four (or five) weeks, not calendar months.

Table X. shows for each month of the year 1906 the average number employed daily by each of the five main groups of employers and in the port as a whole.

Table XI. shows for each month of the year 1906 the sum of the maximum and of the minimum numbers employed in that month by each of the 115 wharves making returns, as compared with the maximum for the whole set of wharves on any one day and the minimum on any one day.

Table XII. shows for each month of the year 1906 the sum of the maximum and of the minimum numbers employed in that month by each of the 15 shipowners or contractors making returns in the Royal Albert and Victoria Docks as compared with the maximum for the whole set of shipowners and contractors in those docks on any one day and the minimum on any one day.

Throughout Tilbury Dock is excluded, as also are stevedores and men employed upon export work.

These Tables make it possible to go beyond the strictly seasonal fluctuations and indicate the character and extent of casual fluctuations in two ways :

1. By comparing for any one period the average number employed daily throughout that period with the maximum number required on the busiest days of that period.

APPENDIX No. XXI. (D).—*Continued.**Handed in by the Board of Trade. (Q. 98827)*

2. By comparing the fluctuations in the aggregate employment of a number of firms with the separate fluctuations of each firm, showing how far these latter correspond and how far they counteract one another.

The first of these comparisons may be made for each of certain groups of riverside employers and for all the groups together by means of Tables IX. and X.

Taking the year 1906 as a whole the maximum number employed at all the docks and wharves on the busiest day is 14,482 or 121·3 per cent. of the average number (11,935) employed daily throughout the year. The same thing may be put in another way by saying that if the working week be put at six days the total number of days work available was equivalent to 4·95 days a week throughout the year for each of the maximum number required on the busiest day. This, however, combines the effects of seasonal (monthly) fluctuation, with casual (daily) fluctuation within the monthly period. If each month be taken separately so as to show the casual fluctuation within it alone, the maximum number required on the busiest day of the month is 104·5 per cent. of the average required in April, and 111·8 per cent. in September. Or, putting the matter otherwise, the amount of work available throughout April is equivalent to 5·74 days per week for each of the maximum number required in that month, while the corresponding figure for September is 5·37. As April and September are the months of steadiest and most irregular employment respectively, the others all lying between those extremes, it will be seen that the amount of daily fluctuation within each month is much the same throughout the year.

Similar comparisons may be made taking each of the main employing groups separately. The London and India Docks, for instance, show a proportion of maximum to average number varying from 115·8 per cent. in April to 138·3 per cent. in November. The wharves have relatively steadier employment, the proportion of maximum to average number required ranging from 104·2 per cent. in January to 109·5 per cent. in September.

The second comparison is best made by comparing the sum of the separate maxima of many different business within a group with the maximum on any one day for the group as a whole. In 1906, for instance, the highest number employed on any one day in the year at all the docks and wharves making returns was 14,482, on November 20th. But this was not necessarily the busiest day for each of the five main groups into which the employers are divided. The London and India Docks were busiest on November 30th, with 4,020 men; the Millwall Docks on November 16th, with 1,182; the Surrey Commercial, on November 20th, with 1,760; the Shipowners, on April 3rd, with 3,195; the wharves on September 14th, with 6,650. The sum of these separate maxima is 16,807, or 17 per cent. above the maximum of the whole port on the one busiest day. If each month be taken separately a similar though less marked result is apparent, the sum of the maxima exceeding the maximum for the whole port by amounts ranging from 6 per cent. in August to 13 per cent. in November and April. It will be noticed that only rarely do the busiest days of any two groups for any month coincide.

Each of the five big groups is, however, itself composed of many separate businesses or employing centres. How far do the fluctuations at each of these centres within a group coincide and how far do they neutralise one another? Tables XI. and XII. show the effect of splitting up into their component parts two of the groups, viz., the wharves and the shipowners in the Royal Albert and Victoria Docks. The second and third columns in each case give the maximum and minimum numbers employed on any one day of the month by the group as a whole. The fourth and fifth columns give the sums of the maxima and of the minima recorded for the separate businesses within each group during the month. The sixth column gives the average numbers employed in the group as a whole. The main interest of the tables lies in the comparison of the second and the fourth columns. The separate maxima fall generally on different days for different businesses so that their sum considerably exceeds the largest number at work on one and the same day in the group as a whole. For the 115 wharves the sum of the maxima exceeds the maximum for the whole group by numbers varying from 242 or 4 per cent. in July to 1,085 or 16 per cent. in November. The average difference is 632 or 9·7 per cent. In the case of the shipowners the excess is still greater, ranging from 974 or 27 per cent. in May to 2,216 or 74 per cent. in January and averaging 1,695 or 56 per cent.

APPENDIX No. XXI. (D).—*Continued.*

Handed in by the Board of Trade. (Q. 98827.)

CONCLUSIONS.

(1.) Seasonal fluctuation is found to a more or less marked degree in nearly every industry.

(2.) The seasonal fluctuations of different industries are by no means simultaneous.

Both these points are illustrated by Table XIV., which forms a calendar of busy and slack times in various trades. Only those trades are taken for which it is possible to take an average over a sufficient period of years to eliminate chance variations. The bracketed figures give the unemployed percentages, the other figures are from the sources named above. It will be seen that the busiest seasons of the twenty-three industrial groups entered in the Table are distributed over eleven of the twelve months in the year, the only month unrepresented being July. The slackest seasons of the said groups are distributed over ten months, the only months which escape being April and May. The greatest number of busy seasons is to be found in May, but November is also strongly represented. The greatest number of slack seasons is shown by the Table in December, but this is a result to be taken with a little caution. The unemployed percentage being made up at the end of the month is liable to be affected unduly by the Christmas holidays. It does not necessarily represent the conditions throughout the month. Of the groups shown in the Table as having their maximum unemployment in December, carpenters and joiners, engineers, millsawyers and coachbuilders have their next slackest time in January ; hat makers and leather workers in November ; brushmakers in August.

(3.) The importance of seasonal fluctuation varies greatly as between different trades. The seasons on the whole are least marked and least regular in industries connected with the manufacture and use of metals—engineering, shipbuilding, miscellaneous metal trades, iron and steel working, tin plate and steel sheet milling. Seasonal fluctuation is not so much absent here as liable to be overridden by other movements, in particular cyclical fluctuation. In other trades—printing, building, furnishing, clothing, and at gasworks, tramways and the London Docks—seasonal fluctuation is a prominent and regular phenomenon.

APPENDIX No. XXI. (D).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

TABLE XIV.—SHOWING the Slackest and Busiest Months in the Year in Certain Industries.

Month.	Busiest Season.	Slackest Season.
January - - -	London Docks. 15,236 employed daily -	Furnishing (7·88) Iron Mining 5·46 days per week.
February - - -	Paper making (2·74) - - -	Plumbers (7·26).
March - - -	Steel Smelting (2·71), Textiles - - -	Coopers.
April - - -	Brushmaking (2·42), Furnishing (2·38)	
May - - -	Engineering (3·59), Shipbuilding (5·94), Hat making (2·51), Leather (4·23), Coachbuilding (1·64), Clothing (1·19)	
June - - -	Millsawyers (3·63) - - -	London Docks, 13,560 employed daily. Coal Mining 4·93 days per week.
July - - -	—	Steel Smelting (5·28). Iron and Steel Works, 5·35 shifts per week, Tinplates, 361 mills.
August - - -	Carpenters and Joiners (2·87), Coopers -	Printing and Bookbinding (5·69), Paper- making (3·64), Tobacco (9·41).
September - - -	Plumbers (5·92), Iron Mining 5·02 days per week	Metals, Various (2·51), Textiles.
October - - -	Iron and Steel Works 5·49 shifts per week	Clothing (3·01)
November - - -	Metals Various (2·06), Printing and Bookbinding (2·82), Tobacco (3·15), Tinplates 390 mills	Shipbuilding (9·86).
December - - -	Coal Mining, 5·46 days per week - - -	Carpenters and Joiners (5·93), Engi- neering (5·33), Hatmaking (4·65), Leather (5·81), Millsawyers (5·17), Coachbuilding (5·84), Brushmaking (12·14).

NOTE.—The figures in brackets after the trade represent the mean percentage unemployed in Trade Unions.

[APPENDIX No. XXI. (E).]

Handed in by the Board of Trade. (Q. 98827.)

ESTIMATE OF NUMBERS OF WAGE-EARNERS GROUPED ACCORDING TO
WAGES EARNED (DISTINGUISHING BETWEEN MALE AND FEMALE,
JUVENILE AND ADULT), AND AN ACCOUNT OF THE MOVEMENTS IN
THE WAGES IN CERTAIN GROUPS OF INDUSTRIES AND IN THE COST
OF LIVING OVER A PERIOD OF TWENTY YEARS.

CHIEF SOURCES OF INFORMATION.

No body of information is available enabling the Board of Trade to estimate the number of wage-earners working at various wage-levels, or to measure directly the general movements of wages during recent years. The only census of wages yet taken in this country was in 1886, and even this was necessarily very incomplete, being confined mainly to chief manufacturing and other organised industries, and being based wholly upon voluntary returns.

A more extended inquiry by the Board into the earnings of the manual labour classes has been in progress for some time and when the results have been published more complete information will be available as to the earnings and economic position of the workpeople than has hitherto been the case.

Since 1893 changes in rates of wages have been officially recorded so far as reported to the Board of Trade, but for those trades in which the rates of pay are of an individual rather than a collective character the information is necessarily not complete. Besides the changes in the rates of wages, there are changes in the relative numbers employed in the various occupations and trades, and on this point evidence afforded by the censuses enables some conclusions to be reached upon the general trend of wage movements.

In the principal trades the Board of Trade receives from trade unions or employers' associations information regarding standard rates of wages for the several classes of labour employed. Where time-rates are paid, the standard rate is given for a normal week, or it can be readily computed, but where piece-rates are used it is not always possible to connect the piece-rate with a normal week's earnings.

The numbers actually employed at the various time or piece wages are not always reported, but estimates are given of the numbers believed to be affected by the various changes. During the last three years the monthly publication in the Board of Trade Labour Gazette of the aggregate wages paid and the number of workers employed by a number of textile firms and boot and shoe manufacturers affords for these industries the beginnings of a direct wage-measurement.

The census of wages of 1886, however, the classified results of which are given in the General Report on the Wages of the Manual Labour Classes in the United Kingdom [C. 6889 of 1893], deserves mention here as containing the largest volume of direct evidence on wages, and several Tables taken from the Report will be found in Appendices to this Memorandum.

COMPUTATION OF WAGE-MOVEMENTS AFTER 1886.

While the Board possess no later figures exactly comparable with those resulting from the enquiry of 1886, the records given by the successive censuses of the number engaged in various occupations when combined with the records of changes in rates of wages in these or related occupations throw some light upon the general tendency of wages in large sections of the working classes.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

With regard to the proportion of employment afforded by certain industries, the following table, compiled from the population census of 1901, shows the total number and the rate per 10,000 of the population in the undermentioned classes of occupations:—

CLASS.	TOTAL.			Rate per 10,000 of Total Population.		
	1881.	1891.	1901.	1881.	1891.	1901.
General or Local Government of the Country - - - - -	145,560	192,396	253,865	42	51	61
Defence of the Country (excluding Army, Royal Navy, and Marines abroad) -	146,177	165,354	203,993	42	44	49
Professional Occupations and their Subordinate Services - - - - -	515,469	617,472	733,582	148	164	177
Domestic Offices or Services (excluding Domestic or Out-door Service) - -	2,022,102	2,238,746	2,199,517	580	593	531
Commercial Occupations - - - - -	386,101	504,143	712,165	117	134	172
Conveyance of Men, Goods, and Messages (excluding Merchant Seamen abroad) -	951,179	1,194,691	1,497,629	273	317	361
Agriculture - - - - -	2,574,031	2,420,926	2,262,454	738	642	546
Fishing - - - - -	71,956	65,642	61,925	21	18	15
In and about, and dealing in the Products of Mines and Quarries - - - - -	618,629	760,730	943,880	177	202	228
Metals, Machines, Implements and Conveyances - - - - -	978,102	1,145,386	1,475,410	280	304	356
Precious Metals, Jewels, Watches, Instruments and Games (including Electricity Supply) - - - - -	84,745	104,463	168,344	24	28	41
Building and Works of Construction -	926,135	955,573	1,335,820	265	253	322
Wood, Furniture, Fittings and Decorations - - - - -	218,645	242,887	307,632	63	64	74
Brick, Cement, Pottery and Glass - -	138,775	152,123	189,856	40	40	46
Chemicals, Oil, Grease, Soap, &c. - -	82,060	107,119	149,675	24	28	36
Skins, Leather, Hair, and Feathers -	94,088	105,068	117,866	27	28	28
Paper, Prints, Books, and Stationery -	195,983	266,870	334,261	56	71	81
Textile Fabrics - - - - -	1,430,785	1,519,861	1,462,001	410	403	353
Workers and Dealers in Dress - - -	1,228,397	1,354,836	1,395,795	352	359	337
Food, Tobacco, Drink and Lodging -	877,827	1,113,441	1,301,076	252	295	314
Gas, Water, and Sanitary Service - -	29,679	47,285	78,686	9	13	19
Other General and Undefined Workers and Dealers - - - - -	1,181,359	1,269,887	1,075,414	339	337	259
	14,897,884	16,554,899	18,261,146	4,271	4,385	4,405

The census figures show that during the period 1881–1901 a large increase has taken place in the proportion of employment afforded by the building, mining, iron and steel trades among the great industries, and by chemicals and paper among those of secondary importance, while the textile and leather trades show, particularly in the decade 1891–1901, a large decline.

APPENDIX No. XXI. (E).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The bearing of these changes in the relative numbers employed in various trades upon the question of movements in the general level of wages will be seen by turning to the Index Numbers below, showing the general course of wages in the United Kingdom, which measure the wage-movements of some principal groups during the period 1877–1907.

CHANGES IN RATES OF WAGES.

GENERAL COURSE OF WAGES IN THE UNITED KINGDOM, 1877–1907.

NOTE.—In the following Table the wages at the end of 1900 are represented as 100. Years in which wages were higher or lower than in 1900 are represented by percentages correspondingly above or below 1900.

End of Year.	BUILDING TRADES (Bricklayers, Carpenters & Joiners, and Masons). (Mean of 74 Rates.)	COAL MINING (Hewers). (Weighted Percentage changes in Principal Districts.)	ENGINEERING (Fitters, Turners, Iron-founders & Pattern Makers.) (Mean of 36 Rates.)	TEXTILE (Cotton Spinners, and Weavers, and Linen and Jute Operatives.)	AGRICULTURE (Ordinary Labourers). (Mean of 115 Rates.)	Unweighted Mean of preceding Groups of Trades.	
						Including Agriculture.	Excluding Agriculture.

By comparing this table of changes in wages with the table of changes in the number occupied in varied industries it will be perceived that those groups of industries (building, mining, engineering) which among the great industries show a large increase in the proportion of employment they afford, also show in general a rise of wages considerably exceeding the rise in the textile trades and in agriculture, industries which afford a diminishing proportion of employment. If the year 1877 be taken as the starting point it will be seen that the rise in the level of wages during the last thirty years has been greater in those groups of industry which show an increase in the proportion of employment.

To this register of changes in wages in principal industries may be added the following table, stating the average earnings for the rapidly growing class of railway servants, now about 500,000 in number, during the ten years 1897–1906.

* Base year. † Estimated.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827).

WEEKLY EARNINGS OF RAILWAY SERVANTS.

1906	391,661	25 11½	46,407	23 4¼	19,874	19 9½	457,942	25 5¼

* The workpeople included in the Table are those employed in the coaching, goods, locomotive, and engineers' departments of the railway companies. The numbers given relate to those employed in the first week in December, except in 1903, when the figures relate to those employed in the second week in December. The twenty-seven companies included employ over 90 per cent. of the total number of railway servants.

Since 1904 monthly statistics as to the wages paid in certain industries have been published in the Board of Trade Labour Gazette and the following Table compares the average weekly amount earned per employee in the years 1904–7 with that earned in one week in October 1886 according to the census of wages taken in 1886* :—

	1886.	1904.	1905.	1906.	1907.
	s. d.	s. d.	s. d.	s. d.	s. d.
Cotton Manufacture - -	15 2	17 7	18 10	19 2	19 5
Woollen „ - -	15 6	17 5	18 2	18 0	18 2

Boot and Shoe „ - -	18 4	18 0	18 11	19 1	19 2

In comparing the figures for 1886 with those for the years 1904–7 due regard must be had to possible changes between the two periods, in the proportion of men, lads, women and girls employed in the trades. The apparent absence of change for instance of the weekly earnings in the hosiery and boot and shoe industries is most probably due to the increased proportion of female workers included in the Returns in these two industries.

The Board of Trade also receives information as to changes in the wages of individual workers in a number of the principal industries.

The following is a Summary of such changes for the period 1897–1907.

* The 1886 figures represent the wages for a full ordinary week; those for each of the years 1904–7 the mean of the earnings in twelve ordinary weeks when some of the workpeople were probably employed less than full time and others more than full time. The two sets of figures are thus not strictly comparable, but the difference between them is believed to be slight.

APPENDIX No. XXI. (E).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

In some respects these reports of actual changes in wages form a better index of the actual condition of the several trades in relation to aggregate earnings than the percentages in the table "General Course of Wages." For while a comparison of the period 1897-1906 in the two tables shows in each case a steady considerable improvement of general trade up to the year 1900, followed by a decided decline down to 1904, and a distinct recovery beginning in 1905, the nature of the changes and probably their extent and date are more accurately indicated (at any rate in those trades which report fully) by the figures of increase or decrease of wages. For the percentages in the "General Course of Wages" are formed by taking the mean of standard rates, which are apt to reflect somewhat tardily the actual changes in wages of trades as a whole. On the other hand the table of changes in wages tends to fix attention too exclusively on the comparatively small fraction of persons employed whose wages undergo these changes, ignoring the great mass whose wages remain stable.

This difference between the two tables is of course more noticeable in some groups than in others. Comparing, for example, the changes in wages in the building trades with the percentages given in the Table on p. 658, it is found that in the latter the standard rate of 1900 is accurately maintained during the whole period 1900-1906, whereas in the former the increases of wages, reaching a high figure in the period 1897-1900, begin to fall off in 1901 and to pass from increases into decreases after 1903. There can be no question that this latter record is a truer register of the actual changes though for the reasons given above, it tends to give an exaggerated impression of them.

The table of changes in wages of public employees seems to indicate that the general upward tendency of wages in these employments is not appreciably affected by the general conditions of the outside labour market.

Tables of changes in rates of wages during recent years for carpenters, bricklayers, labourers, coal hewers, fitters, iron founders, compositors, cotton operatives, flax and jute trade, agricultural labourers, seamen (furnished in Appendix XIX of Cd. 1761), will be found in Table C, brought up to the beginning of 1908. †

WAGE MOVEMENTS IN AGRICULTURAL LABOUR.

The statistics of wages in agriculture are deserving of some special attention. While the percentages given in the Table on p. 3 indicate that during the whole period thus taken under survey, 1874-1906, the rise in the rate of wages of agricultural labour has fully kept pace with that of the aggregate of the other groups, the distribution of this rise over the period is abnormal.

The level of wages between 1874 and 1897 shows comparatively slight fluctuations and no general tendency to rise, the most marked feature being a depression in the later eighties. After 1897 a steady considerable rise is indicated until 1901, the subsequent years maintaining the higher level reached in that year.

The accuracy of these conclusions is corroborated by the separate computation from returns of agricultural labourers' wages in England and Wales, and in Ireland, presented in the Returns of "Wages and Earnings of Agricultural Labourers" to the Board of Trade, and brought up to date in the 11th Abstract of Labour Statistics, p. 67.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98327).

The local diversity in rates of wages is more marked in agriculture than in any other large department of industry, except in certain of the building trades. The average money wages for ordinary agricultural labourers, based on returns from 128 farms in England and Wales, reached their highest point, 15s. 0½d., in 1906, and represents the mean of differences as wide as 20s. for Durham and 11s. 11d. for Dorset [see Table on p. 664]. The greater part of the difference appears to be due to the relative proximity of remunerative employment in other occupations with expanding labour markets, chiefly large manufacturing or commercial centres, and the great coal fields.

This is seen clearly in the following Table from which it appears that the group of northern counties yields a money wage much higher than that of any other group, that the industrial midlands come next, and that the rural counties of the east and south show the lowest rates of all. To some small extent, however, the lower wages of the east and south are counterbalanced by allowances in kind which are frequently larger than in the districts where higher money wages are paid.

* The Returns received from Scotland were insufficient for computation of satisfactory averages. These Returns, however, will be found in the Report on Wages, Earnings, and Conditions of Employment of Agricultural Labourers, Cd. 2376 of 1905.

† The Cash Wages are exclusive of extra payments for piecework, hay and corn harvests, overtime, etc., and also of the value of allowances in kind.

Mr. Bowley comments on the figures as follows :—

"The wage statistics for 1886 are from the Board of Trade Returns, and include all classes of labour; the figures for other years are obtained from the 1886 basis by estimating the rates of increase.

"The average weekly rates of wages in the above groups together are, when we make allowances, for the change of numbers employed :—1881, 21s. 6d. ; 1891, 23s. 6d. ; 1901, 27s. 6d., an increase of 29 per cent. ; but if the proportion of people in 1881 had remained unchanged throughout the period, the figures would be : 1881, 21s. 6d. ; 1891, 23s. ; 1901, 25s., an increase of 16 per cent. only."

"This conclusion is supported by such wage-statistics as we have for other industries."

MOVEMENT IN WOMEN'S WAGES.

The body of statistical evidence relating to changes in the money and real wages of women and of children is smaller than that relating to men's wages ; a small number of distinctively female occupations came within the scope of the wages census of 1886, and a far smaller proportion of women and of children find employment in industries for which returns of wages or changes in wages are made to the Board of Trade.

The following table [from Cd. 6889, p. 474] gives the average rate of money wages per head for adult women in certain trades at the time of the 1886 census.

	Average Wages.			Average Wages.

* The numbers are for England and Wales. The wages would apply for the most part to Scotland also.
† Mean of recognised Trade Union time-rates ‡ Factory workers only.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827).

The figures for domestic service indicate a decline of proportionate employment in an occupation the real wages of which even in 1886 must have been much above the average, and which have certainly shown a considerable rise in the last twenty years. The decline in the textile trades, so far as it relates to factory work, must also appreciably affect the general average of women's wages. On the other hand there has been a large increase in the number of females employed in the comparatively well-paid professional occupations (teaching, &c.).

EFFECT OF CHANGES OF PRICES UPON WAGES.

Though movements of wholesale prices do not furnish so precise an indication of the variations of the purchasing power of wages as in the case of retail prices of certain commodities, the relation between the two is close enough to demand recognition. In endeavouring to ascertain the recent changes in the purchasing power of money wages the estimated changes in wholesale prices may first be considered.

INDEX NUMBERS OF WHOLESALE PRICES, 1871-1907.

1900=100.

NOTE.—These Index Numbers have been obtained by weighting the percentages for the 45 articles used in accordance with the estimated value of the quantities consumed.

1905	97.6	71.3	106.7	104.3	98.2	103.6	101.2	91.1
1906	100.5	78.3	121.1	102.2	101.5	90.4	100.5	95.6
1907	105.8	86.9	127.3	109.0	104.7	94.4	105.2	99.7

Though the abnormal elevation of prices in the early seventies gives an exaggerated impression of the fall in the index numbers of this table, the decline, as measured from the period of depression which succeeded, *i.e.*, 1878, etc., is seen to be very considerable, a decline visible in each of the four groups with the exception of coal and metals. The

* Base year.

APPENDIX No. XXI. (E).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

fall, rapid and almost continuous to 1887, afterwards ceased ; and though some fluctuation took place, the general level did not greatly alter during the period 1888–1903. Since then a steady rise seems to have set in.

In order to trace the effect of these changes in wholesale prices upon the purchasing power of wages, inquiry must be made as to how far the commodities referred to are consumed in retail quantities by the working classes, and to what extent the movements in retail prices compare with those in wholesale prices.

No general index number of retail prices is available, and recourse must be had to the statistics of such prices in special localities and for special classes of commodities given in the Return of Wholesale and Retail Prices in the United Kingdom in 1902 (321 of 1903) brought up to date in the Eleventh Abstract of Labour Statistics. (Cd. 3690 p. 88).

The following estimate of percentage fluctuations of retail food prices for London is based upon certain selected articles in common use, weighted according to the ascertained part they played in the budget of a number of households.

PERCENTAGE VARIATIONS OF RETAIL PRICES OF FOOD IN LONDON, 1877–1906.

NOTE.—The figures for the several articles are based on prices given in Report on Wholesale and Retail Prices (H.C. 321 of 1903) and from more recent supplementary information. The figures in the last column relate to all the articles in the preceding columns. They are extracted from the Memoranda on British and Foreign Trade and Industry (Cd. 1761 of 1903), supplemented by more recent information.

To eliminate accidental variations in particular years, the Index Numbers have been reduced to averages for the quinquennial periods, of which 1880, 1885, 1890, 1895 and 1900 are the middle years. The result is as follows :—

Period.	Index Number.
Average of quinquennial period of which middle year is 1880	139·7
" " " " " " " " " " " " 1885	119·8
" " " " " " " " " " " " 1890	107·4
" " " " " " " " " " " " 1895	97·3
" " " " " " " " " " " " 1900	101·8

* Base year.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827).

In the tables upon "Consumption and Cost of Food in Workmen's Families in Urban Districts of the United Kingdom," in the Second Series of Memoranda, entitled "British and Foreign Trade and Industry" [Cd. 2337], the amount and proportions of expenditure upon the several items of food are given for groups of families in the several urban districts of England.

The following general table will be of service as indicating the proportionate part played by expenditure on food at the several levels of income :—

AVERAGE WEEKLY COST AND QUANTITY OF CERTAIN ARTICLES OF FOOD CONSUMED BY
URBAN WORKMEN'S FAMILIES IN 1904.

Limits of Weekly Income	Under 25s.	25s. and under 30s.	30s. and under 35s.	35s. and under 40s.	40s. and above.	All Incomes.

† Not including intoxicating drinks and tobacco.

APPENDIX No. XXI. (E).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

It will be seen that whilst for the incomes below 30s. two-thirds of the total income is spent on food, in the case of incomes of 40s. and above, about 57 per cent. is so spent.

The amount spent on bread and flour together does not show much variation in the different ranges of income, except in the case of incomes above £2 where the family income is augmented to a greater extent than in the other groups by the earnings of children and in which the children included are older.

In the case of incomes below 25s. the expenditure on bread and flour forms about 21 per cent. of the total spent on food ; for incomes between 35s. and 40s. the proportion is 15·0 per cent. The quantity of bread and flour purchased varies from 28½ to 37¾ lbs. per week, the average being 32 lbs. The average cost is 3s. 7d.

The average expenditure on meat and fish of all kinds is seen from the Table to be 6s. 4¾d. per week. In London the expenditure on meat and fish is somewhat above the average, *i.e.*, 6s. 11¼d. per week.

The expenditure on meat, bacon and fish is seen from the Table to vary fairly in proportion to the income, in this respect contrasting with the almost stationary expenditure on bread.

Weekly Income.	Percentage of Income spent on Meat, Bacon, and Fish
Under 25s. - - - - -	18·0
25s. and under 30s. - - - - -	18·1
30s. „ „ 35s. - - - - -	18·7
35s. „ „ 40s. - - - - -	17·6
40s. „ over - - - - -	16·4

Turning to other articles of consumption it is found that fresh milk accounts for 8d. a week in the families with incomes below 25s., but the expenditure on fresh milk rises rapidly with the income. The average expenditure for all families is 1s. 3¼d.

Exclusive of the group of highest incomes, where supplementary wage-earners are most numerous, the average amount spent on cheese varies from 4¾d. to 6d. a week, the quantity consumed being about ¾ lb. per week.

Butter accounts for 1s. 2d. in the group of incomes below 25s., the average quantity being just over a pound. In the next group (incomes between 25s. and 30s.) the cost rises to 1s. 7d. and the average quantity consumed to 1½ lbs. For incomes between 30s. and 35s. the cost averages 1s. 10¼d. and the quantity rather less than 1¾ lbs.

The amount spent on potatoes shows little variation, ranging from 8¾d. in the lowest groups to 1s. 1¾d. in the highest group. From 14 to nearly 20 lbs. is the quantity consumed.

Currants and raisins account for 1½d. in incomes below 25s., rising to 3¾d. in the highest group, the average for all incomes being 2¾d.

Rice, tapioca and oatmeal account for an expenditure of from 4½d. to 7d. a week, a considerable portion of this amount being accounted for by the expenditure on oatmeal in Scotland which amounts on an average to 8¼d. per week.

In the case of incomes below 25s. tea accounts for 9¼d. a week, the average amount consumed being rather less than ½ lb. In families with incomes above 25s. the average expenditure varies from 11¼d. to 1s. 5d. and between ½ and ¾ lb. is consumed. The expenditure on coffee and cocoa is small, varying from 2d. to 5½d. per week.

Rather more than 3¾ lbs. of sugar are consumed at a cost of 8d. in the case of incomes below 25s., while for incomes between 25s. and 40s. the quantity ranges from over 4½ to nearly 5¼ lbs., and the cost from 10d. to 11¼d. In incomes of 40s. and over, about 6¾ lbs. are consumed at a cost of 1s. 3d. per week.

On p. 7 of the same series of Memoranda a table is given showing the average prices paid by families with various incomes. As might be expected, those families whose incomes are lowest, not only consume less of the various articles, but also have to be content with a lower quality of food. Thus, families with less than 25s. pay 1d. per lb. less than the

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827).

average for butcher's meat and for bacon the difference is even greater. For cheese the average price paid by all the families included in the returns exceeds that paid by the lowest group by $\frac{3}{4}$ d. per lb. ; for tea, by over 3d. ; and for sugar by nearly one farthing. These differences of price, however, by no means represent the whole difference of quality, since the poorest consumers buy in the smallest quantities and generally at the least advantage.

The fullest general account of the influence of retail prices upon wages is given in the following General Summary dealing with the effects of changes of prices in food, rent, clothing, fuel and lighting for workmen in London and large towns.

CHANGES IN THE COST OF LIVING OF THE WORKING CLASSES IN LARGE TOWNS.

A.—STATEMENT showing CHANGES in COST of the under-mentioned Items of WORKMEN'S EXPENDITURE in LONDON and large Towns in Great Britain in a series of averages for quinquennial periods. (Cost in the year 1900 = 100.)

Period.	Food.	Rent.*	Clothing.	Fuel and Light.
Average of Quinquennial Period of which middle Year is 1880 - -	139·7	86·6	108·5†	77·3
" " 1885 - -	119·8	90·1	102·9	74·1
" " 1890 - -	107·4	89·9	101·2	76·5
" " 1895 - -	97·3	96·3	98·8	74·8
" " 1900 - -	101·8	100·0	98·7	86·0

In order to combine the above results so as to show the estimated change in the total cost of living to the working classes so far as indicated by changes in these four principal items to each item must be attributed its appropriate "weight" or relative degree of importance.

After consideration of the available statistics of working-class expenditure, the following proportionate "weights" have been adopted :—

Food - - - - -	7
Rent - - - - -	2
Clothing - - - - -	2
Fuel and light - - - - -	1
Total expenditure on the above objects - - - - -	<u>12</u>

It is to be understood that these weights are only approximate, and are not intended to represent exactly the proportional expenditure of the working classes on each of the above items.

If the figures in Table A. are weighted in the above proportions, the following final "Index Numbers" are obtained :—

B.—STATEMENT SHOWING ESTIMATED CHANGES IN COST OF LIVING OF THE WORKING CLASSES, BASED ON COST OF FOOD, RENT, CLOTHING, FUEL, AND LIGHT, IN A SERIES OF AVERAGES FOR QUINQUENNIAL PERIODS. (COST IN THE YEAR 1900 = 100.)

Period.	Index Number of Cost of Living.
Average of quinquennial period of which middle year is 1880 - - - - -	120·5
" " 1885 - - - - -	108·2
" " 1890 - - - - -	100·9
" " 1895 - - - - -	95·5
" " 1900 - - - - -	99·7

These figures show that in the twenty-year period 1880–1900 the cost of living of the working classes, as shown by the price they have to pay for the four principal items of necessary expenditure, has fallen, so that roughly 100 shillings in 1900 would do the work of 120 at the beginning of the period. In the first fifteen years of the period the fall was somewhat greater, but since that time there has been a rise of about 4 per cent.

* The figures for rent apply to the years 1880, 1885, 1890, 1895 and 1900 respectively. Figure for the year 1881 (the first for which figures are available).

APPENDIX No. XXI. (E).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

Much the greatest decline has been in the cost of food, which has fallen about twice as much proportionately as the total cost of living. The price of clothing has also declined, but at a much slower rate, while the cost of fuel and light has somewhat increased, and rents have risen considerably.

SUMMARY OF EVIDENCE.

Reviewing the evidence available for estimating the level of wages in various years, it is found that no direct measure exists of the proportions of wage-earners at the various rates of wages, and that no records exist of the actual average weekly earnings of any considerable body of wage-earners, except in the earnings inquiry now being carried out by the Board of Trade, the results of which are not at present available. Such evidence as is available relates to rates of piece wages or time wages for workers in important industries, and to the number of workers employed in these industries. The general results of records in several trades, covering some thirty years, and of comparative statistics based upon the census of wages of 1886, are that in all these groups of industries, allowing for trade cycles, a general tendency of wages to rise is perceptible through the last thirty years. Further, it would appear that the number of persons employed in those trades in which the advance has, on the whole, been the greatest, has increased more rapidly than the occupied population as a whole.

Though a rise in rates of wages does not necessarily imply a corresponding rise of average weekly or yearly earnings, since it might be accompanied by shorter hours or a larger quantity of unemployment, there is no evidence that the actual shortening of hours, which has taken place, entails a reduction of earnings at all commensurate with the rise of rates of wages, or that the average amount of unemployment is increasing.

The rise of nominal wages has been accompanied by such a fall of wholesale and of retail prices as implies a rise of "real" wages, or wages as measured in commodities, considerably greater than the rise of money wages. The fall of prices does not, however, benefit the various grades of wage-earners in direct ratio to their wages. Rent and certain other necessary elements of expenditure, such as fuel, which have risen in amount for the large majority of workers, play a relatively larger part in the budget of the lower grades of workers, reducing to that extent the gain from the general fall of prices. The poorest classes whose retail purchases are made in very small quantities, also gain least from the lower prices of other commodities than housing and fuel.

Although, except in agriculture, no exact measurement of recent movements in actual earnings expressed in money or in commodities is possible, there is ample evidence for concluding that every grade of skilled or unskilled male labour, in regular employment, enjoys a higher income than in 1886 when the census of wages was taken, and that upon the whole this rise has been steady and of general application.

It is mainly as regards labour in organised industries, and especially skilled workers, that any exact data with regard to wages are available. While there is reason to believe that unskilled and even casual labour is generally remunerated at a higher rate than formerly, it is possible that the large mass of casual time labour is not making any substantial advance in weekly or yearly earnings.

Of women's employment and wages it is even more difficult to speak with any confidence than of men's, because of the much smaller proportionate part they take in the large staple industries respecting which reliable statistics are available. Domestic service, still by far the largest occupation of women wage-earners, certainly has afforded a general rise of wages to the 39 per cent. of women who in 1901 were engaged in this work, while the increased proportion of women in the public services, and probably in the lower branches of the professions and of commerce, indicates an increase of wage-earning power and a wider choice of occupation. Though the proportion engaged in the textile trades and in dressmaking shows a falling off, the absolute amount of this employment remains very large; and the tendency of wages in the factories and large workshops which have absorbed a greater proportion of these trades, has been upwards, though probably the advance has not been so large as in the case of the more skilled and better organised male industries.

Handed in by the Board of Trade. (Q. 98827).

TABLE B—(continued.)

NUMBER AND PERCENTAGE OF PERSONS EMPLOYED AT VARIOUS RATES OF WAGES.

SUMMARY of preceding Tables.

	Half-timers	Under 10s.	Of 10s. and under 15s.	Of 15s. and under 20s.	Of 20s. and under 25s.	Of 25s. and under 30s.	Of 30s. and under 35s.	Of 35s. and under 40s.	Above 40s.	Total.	Average Rate of Wages.*
MEN.											
Total numbers - - -	—	498	8,456	76,392	119,402	86,137	41,121	15,120	8,712	355,838	24s. 9d.
Proportions of total numbers paid at different rates :—	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	
Mean of percentages given in Table No. 1.	—	0·1	3·9	25·7	30·3	20·5	11·4	4·8	3·3	100·0	24s. 5d.
Percentage of aggregate numbers dealt with.	—	0·1	2·4	21·5	33·6	24·2	11·6	4·2	2·4	100·0	24s. 9d.
LADS AND BOYS.											
Total Numbers - - -	9,581	39,861	26,059	4,655	97	—	—	—	—	80,253	9s. 2d.
Proportions of total numbers paid at different rates :—	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	
Mean of percentages given in Table No. 2	4·1	59·8	30·8	5·2	0·1	—	—	—	—	100·0	9s. 5d.
Percentage of aggregate numbers dealt with.	11·9	49·7	32·5	5·8	0·1	—	—	—	—	100·0	9s. 2d.
WOMEN.											
Total Numbers - - -	—	39,235	75,646	27,969	8,215	198	—	—	—	151,263	12s. 11d.
Proportions of total numbers paid at different rates :—	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	
Mean of percentages given in Table No. 3.	—	47·8	43·0	7·7	1·4	0·1	—	—	—	100·0	11s. 1d.
Percentage of aggregate numbers dealt with.	—	26·0	50·0	18·5	5·4	0·1	—	—	—	100·0	12s. 11d.
GIRLS.											
Total Numbers - - -	13,238	30,500	4,321	698	15	—	—	—	—	48,772	6s. 5d.
Proportions of total numbers paid at different rates :—	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	
Mean of percentages given in Table No. 4.	10·4	84·7	4·7	0·2	—	—	—	—	—	100·0	6s. 9d.
Percentage of aggregate numbers dealt with.	27·2	62·5	8·9	1·4	—	—	—	—	—	100·0	6s. 5d.

* These rates are based on the figures in the preceding columns, the mean rate in each group being taken for the purpose of the calculation. In the case of Men, the group under 10s. has been taken at 8s. 7d., and that above 40s. at 45s. 1d. For Women, the group under 10s. has been taken at 8s. 5d., and that above 25s. at 26s. 3d. The group under 10s. has been taken at 7s. 6d. for Lads and Boys, and at 6s. 11d. for Girls. Half-timers have been taken at 2s. 11d. for Boys and at 2s. 8d. for Girls.

APPENDIX No. XXI. (E).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

TABLE C.—COURSE OF MONEY WAGES IN THE UNITED KINGDOM FOR CERTAIN SPECIFIED TRADES.

CARPENTERS, 1872–1908.

HOURLY RATES of WAGES of CARPENTERS in the under-mentioned TOWNS as RECOGNISED by TRADE UNIONS.

Year (at 1st January).	London.	Manchester.	Birmi'ham.	Newcastle.	Belfast.	Glasgow.

* In September, 1882, mechanics' wages were advanced 5 per cent., but no alteration was made in the wages of other workpeople.

† This reduction affected the wages of piece-workers and mechanics only; the mill hands on set wages were not reduced.

‡ This advance was to the spinning mill workers, including reelers and winders, and did not affect weaving factory workers and mechanics.

§ This advance affected the wages of jute spinners and preparers only.

APPENDIX No. XXI. (F).

Handed in by the Board of Trade. (Q. 98827.)

EMIGRATION FROM THE UNITED KINGDOM, 1887-1906.

In considering the subject of emigration from the United Kingdom, it is necessary to bear in mind that no accurate information is available in Great Britain* as to the number of *emigrants*, properly so called, *i.e.*, persons of British origin leaving the country to settle abroad. The annual "Emigration" Reports published by the Board of Trade deal solely with the *movement of passengers* into and from the United Kingdom. They are based on the passenger lists returned by shipping companies under Sections 311 and 336 of the Merchant Shipping Act, 1894, which do not require any statement as to the passenger's intention to settle abroad or otherwise, but only his name, sex, age, nationality, conjugal condition, and occupation, the number of his ticket, and the port of his embarkation and debarkation.

The following Table summarises the passenger movement, inward and outward, between the United Kingdom and countries out of Europe :—

Year.	Outward.			Inward.			Balance Outward.		
	British and Irish.	Foreigners.	Total.†	British and Irish.	Foreigners.	Total.†	British and Irish.	Foreigners.	Total.†
1887	281,487	108,572	396,494	85,475	32,008	119,013	196,012	76,564	277,481
1888	279,928	113,230	398,494	94,133	33,895	128,879	185,795	79,335	269,615
1889	253,795	83,466	342,641	103,070	43,122	147,398	150,725	40,344	195,243
1890	218,116	94,515	315,980	109,470	44,663	155,910	108,646	49,852	160,070
1891	218,507	112,275	334,543	103,037	47,197	151,369	115,470	65,078	183,174
1892	210,042	107,351	321,397	97,780	44,673	143,747	112,262	62,678	177,650
1893	208,814	95,123	307,633	102,119	37,634	141,054	106,695	57,489	166,579
1894	156,030	67,032	226,827	118,309	66,129	185,799	37,721	903	41,028
1895	185,181	82,818	271,772	109,418	64,803	175,674	75,763	18,015	96,098
1896	161,925	76,015	241,952	101,742	56,509	159,913	60,183	19,506	82,039
1897	146,460	62,932	213,280	95,221	57,994	155,114	51,239	4,938	58,166
1898	140,644	60,551	205,171	91,248	46,362	139,346	49,396	14,189	65,825
1899	146,362	90,020	240,696	100,246	59,576	162,111	46,116	30,444	78,585
1900	168,825	124,722	298,561	97,637	74,681	175,747	71,188	50,041	122,814
1901	171,715	124,354	302,575	99,699	60,736	165,018	72,016	63,618	137,557
1902	205,662	174,291	386,779	104,115	62,159	170,874	101,547	112,132	215,905
1903	259,950	181,539	449,006	112,914	82,390	199,685	147,036	99,149	249,321
1904	271,435	174,354	453,877	144,581	92,172	241,896	126,854	82,182	211,981
1905	262,077	188,422	459,662	122,712	77,908	205,193	139,365	110,514	254,469
1906	325,137	229,142	557,737	130,466	95,264	230,165	194,671	133,878	327,572

It will be evident that, if we may assume that the number of passengers travelling on business or for pleasure, and not with the intention of settling abroad, is approximately the same in each direction, the "balance outward," or excess of out-going over in-coming passengers, may be taken as roughly representing the number of actual *emigrants*. Using "emigrants," then, in the sense of the "balance outward" of passengers, we find the emigration from this country to consist of two main streams :—(i) the British and Irish emigrants, and (ii) foreign emigrants. Taking first the foreign emigrants, we notice that their numbers during the last twenty years have varied enormously, from less than

* Ireland has an entirely separate set of emigration statistics, in addition to the Board of Trade statistics which relate to the United Kingdom as a whole. These separate Irish statistics show the number of passengers leaving Irish ports (including a small number going to England or Scotland), and declaring their intention of settling abroad.

† Including passengers whose nationality was not distinguished.

APPENDIX No. XXI. (F).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

1,000 in 1894 to over 100,000 in each of the years 1902, 1905 and 1906. In one year (1902) they actually exceeded the British and Irish emigrants in number. For the first twelve years of the period under review they rarely numbered one half of the native emigrants, but from 1899 onwards they have increased largely both in numbers and in proportion to the native emigrants. These foreign emigrants are mostly transmigrants; many of them being Norwegians, Swedes, and Finns, who enter the country at Hull, and cross to Liverpool, whence they re-embark immediately to the United States or Canada. Thus these foreign emigrants hardly concern this country at all as a social problem; they are only important as a valuable source of income to our shipping companies.

We may now turn to the emigrants of British and Irish origin—using the word “emigrants,” as before, in the sense of the excess of out-going over in-coming passengers. It will be seen that the number of British and Irish emigrants has risen almost continuously from 38,000 in 1894 (the minimum during the twenty years under consideration) to 195,000 in 1906. The years 1887–9 and 1903–5 were also years of high emigration, the total for 1887 exceeding even the high figure attained in 1906; while the other years mentioned show totals varying from 127,000 to 186,000. The entire period from 1894 to 1901, on the other hand, was a period of low emigration, the balance outwards never exceeding 76,000. The following Table shows the distribution of these emigrants, by countries of destination:—

BRITISH AND IRISH EMIGRANTS (BALANCE OUTWARD OF BRITISH AND IRISH PASSENGERS).

YEAR.	To British North America.	To Australia and New Zealand.	To Cape Colony and Natal	To Other British Possessions. *	Total to British Posses- sions. *	To United States.	To Other Foreign Countries	Total to Foreign Countries. *	TOTAL to all Countries

The outstanding features of this Table are the rapid increase in emigration to Canada during the last few years, and the comparative decline in emigration to Australia and New Zealand, and to the United States, as compared with Canada. The decline in emigration to Australia and New Zealand, indeed, becomes even more remarkable if the table be carried back a few more years. Thus, in 1883 the number of emigrants to Australia

* The figures given under these headings are exact for the years 1894 to 1906, but are only approximately correct as regards the earlier years, being based on the assumption that the outward balance of passengers to “All other places out of Europe” was entirely accounted for by places within the British Empire. As regards this assumption, it is to be noted that the great bulk of the balance is accounted for by the British East Indies.

† Balance *inwards*.

APPENDIX No. XXI. (F).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

and New Zealand was no less than 64,000, as compared with only 37,000 to Canada ; and emigration to Australia and New Zealand exceeded 30,000 in each of the years 1882-6. Emigration to the United States reached its maximum in the years 1881-3, with an average of nearly 150,000, as compared with an average of 30,000 to Canada ; whereas in 1905-6 the number of emigrants to Canada actually exceeded the number to the United States.

It should be mentioned, however, that the "destinations" of passengers relate solely to the ports at which they disembark, and not necessarily to the actual country of final destination. Thus it is known, from returns voluntarily furnished by the shipping companies, that 1,903 British and 8,924 foreign passengers who contracted to land at Canadian ports in 1906 were intending to proceed to the United States ; and that 3,945 British and 1,925 foreign passengers who contracted to land in the United States were proceeding to Canada. These voluntary returns cannot be regarded as affording an exhaustive account of such indirect emigration ; but, so far as they go, they suggest that the number of British and Irish passengers to Canada may be somewhat greater than that shown in the table, and the number to the United States somewhat less.

The following Table shows separately the number of English, Scottish, and Irish emigrants (*i.e.*, "balance outward" of passengers), respectively, from the year 1895 onwards, that being the first year for which the particulars can be given :—

Year.	Nationality.	To United States.	To British North America.	To Australia and New Zealand.	To Cape Colony and Natal.	To other countries.	TOTAL to all countries.

* Balance inwards.

APPENDIX No. XXI. (F).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The number of English emigrants has fluctuated between 17,700 and 129,100 during the twelve years shown in the table, and the number of Scottish emigrants between 4,100 and 34,400, while the number of Irish emigrants has only fluctuated between 16,100 and 31,200. Irish emigration is directed almost exclusively to the United States; there has indeed been a certain increase in the Irish emigration to Canada during the last four years, but it is still less than one-eighth of the emigration to the United States. In the case of English and Scottish emigrants, on the other hand, the number emigrating to Canada, which was 23 per cent. of the number emigrating to the United States in 1901, rose to 44½ per cent. in 1902, 101 per cent. in 1903, 82 per cent. in 1904, 169 per cent. in 1905, and 152 per cent. in 1906. Other peculiarities of Irish emigration are that the number of females in most years exceeds the number of males (in the last twelve years the number of males was greater than the number of females in 1905 and 1906 only); and that the proportion of children among the Irish emigrants is abnormally low. These facts are illustrated by the following Table:—

Year.	Nationality.	ADULTS.			Children.	Proportion of Children to Total.
		Males.	Females.	Proportion of Females to Males.		
				Per cent.		Per cent.
1895	English - - -	24,927	14,217	57.0	4,150	9.6

	Irish - - -	16,128	12,940	80.2	2,123	6.8

Broadly speaking, it may be said that the years 1895-9, which were years of low emigration, show a high proportion of females to males and a low proportion of children to adults; while the years of high emigration (1902-6) show a low proportion of females to males and a high proportion of children. This suggests that the causes that affect the volume of emigration mainly affect the *adult male* section of the people: in low emigration years such persons emigrate in small numbers, and take few children with

APPENDIX No. XXI. (F).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

them ; in high emigration years they emigrate in large numbers, and frequently take their families with them. The relatively greater regularity in *female* emigration may possibly be due to the fact that a considerable proportion of the female emigrants are women going out to join their friends already settled abroad.* This class of emigrants would, presumably, be less affected by the ordinary causes that check or promote emigration than the male emigrants.

The low proportion of children among the Irish emigrants is no doubt due to the fact (shown in the Irish Emigration Statistics†) that the great majority of Irish emigrants are unmarried men and women between the ages of fifteen and twenty-five years. It will be noticed, however, that the table given above shows a tendency on the part of Irish emigration, during the last two years, to approximate to English and Scottish emigration, both as regards the proportion of females to males and as regards the proportion of children to adults.

The information with regard to the *occupations* of the emigrants is very incomplete. As published in the Board of Trade's Emigration Reports it relates to passengers generally, and not to emigrants proper ; and in the case of a large number of these passengers the occupation is not stated. The following is a summary of the information regarding the occupations of British and Irish adult out-going passengers given in the Report for 1906 :—

Sex and Occupation.	To British North America.	To United States.	TOTAL to all Countries.
MALES.			
Agricultural - - - - -	12,031	10,868	25,473
Commercial and Professional - - -	3,031	9,044	17,612
Skilled Trades - - - - -	10,200	22,870	39,285
Labourers - - - - -	32,080	17,843	50,844
Miscellaneous, or not stated - - -	7,894	14,252	40,717
Total, Males - - -	65,236	74,877	173,931
FEMALES.			
Domestic and other service - - - -	6,698	14,486	22,617
Other occupations - - - - -	22,722	38,556	82,522
Total, Females - - -	29,420	53,042	105,139

It will be seen that, out of 174,000 adult male passengers, 51,000 were labourers, 39,000 skilled tradesmen, 25,000 farmers, etc., and 18,000 commercial and professional men. Taking the two principal destinations—Canada and the United States—it appears that 49 per cent. of the out-going passengers to Canada were labourers, 18 per cent. farmers, etc., and 16 per cent. skilled tradesmen ; to the United States, 31 per cent. skilled tradesmen, 24 per cent. labourers, 15 per cent. farmers, and 12 per cent. commercial or professional men.

So far as regards Irish emigrants, somewhat more satisfactory particulars are available from the Irish Emigration Statistics,† which give the following numbers of emigrants belonging to each of the principal occupations in 1906 :—

MALES.		FEMALES.	
Professional men, etc. - - -	62	Teachers, etc. - - -	287
Farmers - - - - -	2,950	Dressmakers and other trades - - -	436
Clerks, shop assistants, etc. - - -	1,690	Servants - - - - -	9,914
Artisans and shopkeepers - - -	1,913	Others - - - - -	5,638
Labourers - - - - -	10,444		
Others - - - - -	2,584	Total, Females - - -	16,275
Total, Males - - -	19,643		

It will be seen that 53 per cent. of the male emigrants are described as “ labourers ” and 61 per cent. of the female emigrants as “ servants.” In former years the proportion of “ labourers ” and “ servants ” respectively has generally been even greater than this.

* In this connection it is interesting to note that, according to the Irish Emigration statistics, upwards of 35 per cent. of the Irish emigrants to the United States in 1905 and 1906 had had their passages paid for in America.

† The Irish Emigration Statistics show the number of passengers leaving Irish ports (including a small number going to England or Scotland), and declaring their intention of settling abroad. The figures, therefore, differ from those on pp 3 and 4, which merely show the “ balance outwards ” of Irish passengers.

APPENDIX No. XXI. (G).

Handed in by the Board of Trade. (Q. 98827.)

ALIEN IMMIGRATION.

Statistics of alien immigration are now collected under the Aliens Act, 1905, which came into force on January 1st, 1906. These statistics differ so materially from those previously collected that they cannot be used for comparative purposes with the earlier statistics ; they will be found analysed in an annex to this Memorandum.

The statistics available for earlier years are very unsatisfactory. They fall under two heads : (1) the Census Returns and (2) the Board of Trade statistics. It will be convenient to discuss the latter first.

1.—BOARD OF TRADE STATISTICS.

The Board of Trade statistics have only been collected since 1890 (except for one or two ports). They embody information obtained in two distinct ways :—

(a) Voluntary returns have been obtained from the railway companies, and from the principal shipping companies trading with Continental ports, showing the gross total number of passengers, British and foreign, conveyed between the United Kingdom and European ports. These returns do not distinguish nationality, sex, age, occupation or any other particulars. Assuming that the numbers of *British* in-coming and out-going passengers included in this total were about equal in both directions, it would appear that the “balance inwards” of passengers from the Continent, (*i.e.*, the excess of in-coming over out-going passengers) may be taken to represent, roughly, the number of *foreign* immigrants, including transmigrants passing through the country on their way to the United States or other non-European countries. The number of these transmigrants, however, is known to be large. In order, therefore, to arrive at an estimate of the true immigration of aliens for settlement in this country, the number of foreign *emigrants* (*i.e.*, the “balance outwards” of foreigners to non-European countries) was deducted from the “balance inwards” of *all* passengers from the Continent. The net balance was assumed to represent the actual addition to the alien population of this country in each year. The results of this calculation are shown below :—

Year.	Balance <i>Inwards</i> of <i>All</i> Passengers from the Continent.	Balance <i>Outwards</i> of <i>Foreign</i> Passengers to non-European Countries.	Estimated Net Balance Inwards of Foreigners. *
1891 - - - -	86,442	65,078	21,364
1892 - - - -	84,167	62,678	21,489
1893 - - - -	73,280	57,489	15,791
1894 - - - -	13,012	903	12,109
1895 - - - -	28,503	18,015	10,488
1896 - - - -	38,956	19,506	19,450
1897 - - - -	17,850	4,938	12,912
1898 - - - -	29,897	14,189	15,708
1899 - - - -	56,660	30,444	26,216
1900 - - - -	79,433	50,041	29,392
1901 - - - -	88,712	63,618	25,094
1902 - - - -	137,313	112,132	25,181
1903 - - - -	114,540	99,149	15,391
1904 - - - -	84,389	82,182	2,207
1905 - - - -	107,733	110,514	2,781†
1906 - - - -	134,199	133,878	321

It will be seen that the estimated number of foreign immigrants varied, in the thirteen years 1891–1903, between 10,500 in 1895 and 29,400 in 1900. The figures, so far as they go, appear to show a cyclical variation corresponding to the alternating periods of good and bad trade ; immigration being low, for example, in 1894 and 1895, which were years of bad trade, and high in 1899–1902, which were years of good trade. There was a drop to 2,000 in 1904, and to 300 in 1906 ; while in 1905 the net result of the movement of foreigners seems to have been a slight reduction of the alien population.

* These balances are subject to a deduction for a certain proportion of foreign seamen, who arrived as passengers and left as members of crews of out-going ships, and were thus counted inwards but not outwards.
 † Net balance *outwards*.

APPENDIX No. XXI. (G).—Continued.

Handed in by the Board of Trade. (Q. 98827).

The check to alien immigration in 1904–1906 may possibly be due partly to bad trade, partly to the deterrent effect of the publication of the Alien Immigration Commission's Report in 1903, followed by the passing of the new Aliens Act in 1905.

Attention is drawn in the footnote to the fact that some allowance must be made for foreign seamen coming to British ports to ship as crews of out-going vessels. These seamen are included in the returns among the in-coming passengers, but not, of course, among the out-going passengers. This question will be further discussed in Section (b) below.

It should also be noted that these voluntary returns do not in all cases include the total number of *children* among the passengers. Hence the number both of inward and of outward passengers, and consequently the "balance inwards" of foreigners would appear to be somewhat understated; but it is quite impossible to estimate the extent of this error.

(b) *The Alien Returns.*—These Returns were received under the Registration of Aliens Act, 1836, which required the masters of all ships arriving from foreign ports to furnish a statement of the number of aliens on board, specifying their names, rank, occupation, and description. Such lists were received from 29 ports, viz.:—London (excluding Queenborough); Harwich, the Channel ports (Dover, Folkestone, Newhaven, and Southampton); the Humber and North-East Coast ports (Hull, Goole, and Grimsby, Middlesbrough, West Hartlepool, Sunderland, Newcastle, North and South Shields, and Blyth); the Scottish East Coast ports (Leith, Granton, Grangemouth, Kirkcaldy, and Aberdeen); and from Liverpool, Glasgow and Greenock, Belfast and Dublin, Bristol, Cardiff, and Newport.

The Returns from the Channel ports (Dover, Newhaven, etc.) only showed steerage or deck passengers, and those who after landing proceeded by train as third class passengers.

The following Table summarises the information contained in the Alien Lists :—

Year.	TOTAL Number of Aliens included in the Alien Lists.	NUMBER OF ALIENS			Number of Aliens <i>ascertained</i> to have proceeded to other Countries, though not so described in the Alien Lists.	Net number of Aliens other than Seamen <i>not known</i> to have proceeded to other Countries.
		Described in the Alien Lists as <i>en route</i> to other Countries.	Described in the Alien Lists as Seamen.	Not described in the Alien Lists as <i>en route</i> to other Countries, or as Seamen.		
1891	136,772	98,705	9,797	28,270	No information.	28,270
1892	126,287	93,801	10,349	22,137	"	22,137
1893	120,334	79,518	9,760	31,056	420	30,636
1894	74,015	35,512	9,821	28,682	2,166	26,516
1895	85,059	44,637	9,894	30,528	2,074	28,454
1896	85,945	40,036	10,461	35,448	2,961	32,487
1897	81,834	32,221	10,762	38,851	2,676	36,175
1898	85,261	32,177	12,299	40,785	2,336	38,449
1899	114,193	49,947	13,362	50,884	2,889	47,995
1900	149,137	71,682	14,950	62,505	3,972	58,533
1901	149,750	79,140	15,146	55,464	3,879	51,585
1902	200,011	118,478	15,062	66,471	7,983	58,488
1903	207,191	124,591	13,432	69,168	9,739	59,429
1904	194,986	99,278	12,863	82,845	7,697	75,148
1905	196,587	108,408	13,793	74,386	8,440	65,946

With reference to this Table it is to be observed that the distinction between "aliens stated to be *en route* to other countries," and "aliens not stated to be *en route* to other countries," has reference to an arrangement made by the Board of Trade with the shipping companies which carry a large number of transmigrants to America, in accordance with which such companies were permitted to give the *total number* of such transmigrants only, without the usual particulars as to nationality, age, sex, occupation, etc. The arrangement was practically confined to ports on the Humber and on the North-East Coast, where large numbers of Swedish and Norwegian transmigrants land; all aliens (with insignificant exceptions) entering at London or at the Channel ports being classed as "not stated to be *en route*."

APPENDIX No. XXI. (G).—Continued.

Handed in by the Board of Trade. (Q. 98827).

Seamen are distinguished in the Table on the ground that they can hardly be regarded as immigrants in the ordinary sense, since most of them presumably join a ship in this country.

The Returns for 1906, collected under the new Aliens Act, show that no less than 8,121 alien seamen out of a total of 11,165 who entered in that year, were actually under contract to join ships in British waters. It is believed that a considerable proportion of these alien seamen are men sent to man ships newly built for foreigners, or sold foreign off the British register.

The heading "*aliens ascertained to have proceeded to other countries*" includes a small number whose names were traced in the passenger lists of out-going passengers to non-European countries; and a larger number, principally at the Port of London, who were ascertained, by personal inquiry of the Customs officer who boards the immigrant ships, to be actually intending to proceed to other countries, though not described in the alien lists as "*en route to other countries.*"

With reference to the residue of aliens not described as *en route*, it is to be observed that the number is subject to deduction, not only for seamen, but also for:—

- (1) Persons travelling on business or for pleasure, and not intending to stay in the country.
- (2) Persons emigrated or repatriated shortly after their arrival by charitable agencies.
- (3) Persons who are *en route*, although not stated to be so.

As regards "persons travelling on business, etc.," it is to be observed that statistics of the number of *out-going* aliens to the Continent have only been collected since the middle of the year 1906 (under the new Aliens Act), and then only at the Channel ports. It is understood that fuller information will be given in future Reports.

As regards "persons emigrated or repatriated, etc.," it appears that the number of "cases" (many "cases" representing several persons) emigrated or repatriated by two agencies in London alone averaged nearly 1,300 a year during the years 1895–1902. In 1906, the (London) Jewish Board of Guardians, one of the above-mentioned agencies, emigrated or repatriated 1,189 "cases," consisting of about 2,500 individuals; while another Jewish charitable agency in London emigrated or repatriated 1,416 persons in the same year.

The following Table shows the nationality of the aliens (other than seamen) not stated in the lists Alien to be *en route* to other countries in each year:—

Year.	Russians and Poles.	Norwegians Swedes, and Danes.	Germans.	French.	Italians.	Other Nationalities. †	TOTAL of all Nationalities.
1891*	12,607	4,647	5,817	1,453*	734*	3,012*	28,270*
1892*	7,538	4,367	5,765	910*	783*	2,774*	22,137*
1893	8,194	4,631	7,075	4,399	2,377	4,380	31,056
1894	7,482	4,174	6,229	4,077	2,452	4,268	28,682
1895	10,204	3,700	5,665	3,849	2,738	4,372	30,528
1896	12,773	4,437	5,557	3,948	3,448	5,285	35,448
1897	14,775	4,617	5,496	4,477	4,061	5,425	38,851
1898	15,248	4,775	5,886	4,367	4,224	6,285	40,785
1899	20,266	5,695	5,926	4,861	5,553	8,583	50,884
1900	25,633	5,796	5,799	4,821	7,707	12,749	62,505
1901	20,914	4,725	6,730	5,816	7,185	10,094	55,464
1902	28,511	5,028	6,965	6,637	7,734	11,596	66,471
1903	30,046	4,702	7,502	6,495	7,045	13,378	69,168
1904	46,095	4,827	7,084	6,564	6,300	11,975	82,845
1905	37,922	4,925	6,932	6,261	6,055	12,291	74,386

* Excluding immigrants at Newhaven and Southampton in 1891, and at Newhaven in 1892.

† Principally Dutch, Austrians and Hungarians, and Roumanians. The number of Dutch was 937 in 1893 and 4,787 in 1905; Austrians and Hungarians, 1,003 in 1893, 4,005 in 1903, and 2,262 in 1905.

APPENDIX No. XXI. (G).—Continued.

Handed in by the Board of Trade. (Q. 98827).

About half of these immigrants arrived at the Port of London. Taking an average of the years 1903–5 the proportion of the various nationalities who arrived in London was :—Russians and Poles, 77 per cent. ; Germans, 50 per cent. ; Dutch, 86 per cent. ; Austrians and Hungarians, 57 per cent. The French and the Italians mostly entered through Newhaven ; and the Norwegians, Swedes, and Danes, mostly at the Tyne ports or at London.

II.—CENSUS REPORTS.

Before proceeding to examine the Census Returns, it may be well to mention that very special efforts were made at the time of the Census of 1901 to ascertain the number of aliens ; so that it is possible that the increases shown over previous censuses may be partly due to increased vigilance, and not entirely to the actual influx of alien immigrants.

It should also be mentioned that the children of aliens, born in this country, are counted as British, and not as aliens.

The following Table shows the alien population recorded at the Censuses of 1881, 1891, and 1901 :—

	Census of 1881.	Census of 1891.	Census of 1901.	Increase in 1901, as compared with 1881.	
				Total.	Per Cent.
TOTAL for United Kingdom -	135,640	219,523	286,925	151,285	112
Number in—					
London - - - -	60,252	95,053	135,377	75,125	125
(Stepney alone)- -	(15,998)	(32,284)	(54,310)	(38,312)	(239)
Manchester - - -	2,805	8,941	11,737	8,932	318
Liverpool - - -	6,858	7,402	8,974	2,116	31
Leeds - - - -	2,134	5,927	7,426	5,292	248

The percentage of aliens to the whole population in 1901 was 0·69 per cent. But, as will be seen from the above Table, the alien population is very much localised. Thus, the alien population of London as a whole is 3·0 per cent. ; but it varies in the different boroughs from 0·6 per cent. in Camberwell to 18·2 per cent. in Stepney ; and it rises to 28·8 and 31·8 per cent. respectively in the St. George's and Whitechapel districts of Stepney.

The following Table shows the nationalities of the aliens at the Census of 1901 :—

Nationality.	TOTAL in United Kingdom.	London.	Stepney.
Russians and Russian Poles - - -	95,245	53,537	42,032
Germans - - - - -	53,402	27,427	3,576
Americans - - - - -	29,180	6,244	392
Italians - - - - -	24,684	10,889	256
French - - - - -	22,406	11,264	257
Scandinavians - - -	17,762	3,688	478
Austrians - - - - -	10,130	6,189	3,009
Other foreign nationalities - - -	34,116	16,139	4,310
Total aliens - - -	286,925	135,377	54,310

It will be seen that, of the total alien population of the United Kingdom at the Census of 1901, the Russians and Russian Poles accounted for 33 per cent. ; the Germans for 19 per cent. ; and the Italians for 8 per cent. Of the several nationalities, the Russians and Poles were the most localised, 56 per cent. of the total Russian and Polish population in the country being in London, and no less than 44 per cent. of the total, or 78 per cent. of those resident in London, being in the borough of Stepney alone. London had also rather more than half the Germans, French, and Austrians, and 44 per cent. of the Italians

APPENDIX No. XXI. (G).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

resident in the whole country; but aliens of these nationalities were more evenly distributed over the various parts of London, the Italians (for example) being mostly in Holborn and in Westminster, and the French in Marylebone, St. Pancras, and Westminster; while the Germans were numerous in all the boroughs, except Deptford and Woolwich, which had very few aliens of any nationality.

The principal occupations of the aliens enumerated in the United Kingdom at the Census of 1901 were as follows:—

Tailors	-	-	-	25,698	Clerks	-	-	-	5,771
Seamen	-	-	-	19,695	Hawkers, etc.	-	-	-	5,372
Domestic servants	-	-	-	18,913	Teachers	-	-	-	4,998
Bakers, etc.	-	-	-	6,334	Cabinet-makers	-	-	-	4,815
Waiters	-	-	-	6,073	Boot and shoemakers	-	-	-	4,770
Musicians, etc.	-	-	-	6,040					

The number of children under ten years of age was 20,993; while 80,907 (15,912 males, and 64,995 females) were of no stated occupation. Excluding these two classes, the number of occupied aliens was 185,025, of whom tailors were 14 per cent.; domestic servants and waiters, 13½ per cent.; and seamen, 11 per cent.

ANNEX.

ALIEN IMMIGRATION STATISTICS FOR 1906.

Since January 1st, 1906, statistics of alien immigration have been collected under the Aliens Act, 1905. This Act, and the orders issued under the Act by the Home Office, require returns as to all alien passengers landed from the Continent. Alien passengers are subject to inspection, with the following exceptions:—

(1) Alien passengers arriving on “non-immigrant” ships, *i.e.*, ships carrying not more than twenty alien steerage passengers [not more than twelve such passengers, up to and including March 9th, 1906];

(2) Cabin passengers;

(3) Exempted second-class passengers, *i.e.*, alien second-class passengers carried by certain shipping companies (principally those engaged in the Channel service), which have given bond not to allow undesirable immigrants from among these passengers to land;

(4) Transmigrants, *i.e.*, passengers holding prepaid through tickets to a destination outside the United Kingdom, in respect of whom the shipping companies which bring them to or carry them from the country have given security that they will not remain in the country except for purposes of transit; or, if rejected in their country of destination, will not re-enter the United Kingdom.

The total number of alien passengers who arrived at ports in the United Kingdom from the Continent during the year 1906 was 465,500; but of these 137,692 were cabin passengers, 93,707 were exempted second-class passengers, and 169,788 were transmigrants.

Of the transmigrants, 74,638 (or 44 per cent.) entered at Hull, and sailed again from Liverpool; while another 63,802 (or 38 per cent.) entered at other ports and left from Liverpool. The great majority of the transmigrants were Russians (including Finns and Poles) or Norwegians, Swedes, and Danes.

APPENDIX No. XXI. (G).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

Out of the 64,313 steerage passengers who did not belong to any of the three above-mentioned classes, 25,786 fell under the following heads :—

7,991 were found to be proceeding to a destination outside the United Kingdom, though they did not hold prepaid through tickets, and were not therefore technically “transmigrants.”

6,138 held return tickets to a foreign country.

11,165 were seamen : 8,121 of these were actually under contract to join ships in British waters.

492 were refused leave to land.

As regards the remainder (38,527), nothing is known as to their intentions or movements after arrival in this country ; their nationalities were as follows :—

Russians and Poles	-	-	12,832	Germans -	-	-	-	3,186
French -	-	-	-	10,116	Norwegians, Swedes and Danes	1,295		
Italians -	-	-	-	5,360	Other nationalities -	-	-	5,738

Of this residue of 38,527 alien immigrants, the arrivals in London numbered 10,289, including 7,626 Russians and Poles.

The total number of persons who were refused leave to land by the immigration officers was 935, of whom 733 were refused on account of want of means, etc., and 202 on medical grounds. 796 of these rejected persons appealed, 442 successfully and 354 unsuccessfully. The total number finally rejected was therefore 493, of whom 360 were rejected on account of want of means, etc., and 133 on medical grounds. Of the persons finally rejected 262 were Russians or Poles, 63 Italians, and 54 French.

Transmigrants are liable to be rejected by the shipping companies at the ports of departure in the United Kingdom ; and the companies are under obligation not to allow those so rejected to remain in the United Kingdom. There were 1,432 persons so rejected, and they all left the country. Besides these, 995 other transmigrants were rejected at ports outside the United Kingdom, and re-entered the country *en route* to the Continent. All but thirty-five of these were traced out of the country.

During the year, 448 aliens resident in the country were “recommended for expulsion” on being convicted of various crimes ; and eight others, though not actually convicted, became liable to expulsion for various reasons. Expulsion orders were made in the case of 293 persons, the great majority of whom were convicted in London.

APPENDIX No. XXI. (H).

Handed in by the Board of Trade. (Q. 98827).

ON THE EXTENT TO WHICH FEMALE AND JUVENILE LABOUR HAS
DISPLACED ADULT LABOUR IN THE LAST TWENTY YEARS.

GENERAL CONDITIONS.

Taking the occupied classes as a whole and comparing male and female employment the Reports of the last three Censuses indicate that women are obtaining a smaller, not a larger, proportion of the aggregate employment.

The following Table shows the percentage proportion of males and females over ten years of age returned as occupied and unoccupied in the Censuses of 1881, 1891, and 1901.

	Males.			Females.		
	1881.	1891.	1901.	1881.	1891.	1901.
Occupied -	83·2	83·1	83·7	34·1	34·4	31·6
Without specified occupations or unoccupied -	16·8	16·9	16·3	65·9	65·6	68·4

It has, however, to be borne in mind that the greater part of the decreased proportion of occupied females has occurred in domestic service. In 1881 and 1901, daughters and other female relatives of the head of the family who were described as assisting in household duties were classified as unoccupied, whereas in the Census of 1891 these were reckoned as in domestic service. Excluding, therefore, on this account the numbers employed in domestic service, we find that the percentage of women occupied in occupations other than domestic indoor service, was 21·5 in 1901, as compared with 22·3 per cent. in 1891. Those in domestic service amount to 12·1 in 1891, and 10·1 per cent. in 1901.

The proportion of males over ten years of age occupied was 832, 831, and 837 per 1,000 males in 1881, 1891 and 1901 respectively, as compared with 340, 344 and 316 per 1,000 females in the same three periods.

Certain percentages worked out from Factory and Workshop Returns from the Report to the British Association in 1903 on Women's Labour (p. 17) indicate, however, that women, though taking a diminishing proportion of aggregate employment, take an increasing percentage of the employment in textile and non-textile factories.

The following Table presents these figures :—

PERCENTAGES THAT NUMBER OF FEMALES OVER 14 YEARS OLD FORM OF TOTAL NUMBER OF
MALES AND FEMALES OVER 14 YEARS EMPLOYED IN FACTORIES.

—	1890.	1895.	1896.	1897.	1898-9.	1901.	1904.
Textile Factories -	58·9	60·1	60·0	60·6	61·0	63·5	63·0
Non-Textile - -	—	17·2	17·2	17·5	17·4	19·4	20·5

APPENDIX No. XXI. (H).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

The reduction of the proportion of children to older persons employed in factories will be shown later. In almost every trade which has been separately examined the decrease of children below fifteen is considerable, and in the case of male children generally as great as in the case of female.

Upon the general question of the proportionate employment of children, young persons and adults, respectively, light is thrown by the following Table relating to textile factories.

NUMBER OF PERSONS EMPLOYED IN TEXTILE FACTORIES, 1895-1904.

	Half-timers.			Full-timers.					
	Children under 14 years.			Under 18 years.			Over 18 years.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1895 -	25,525	30,100	55,625	83,086	157,992	238,078	303,270	478,778	782,048
1896 -	24,302	28,954	53,256	82,383	153,862	236,245	306,156	482,030	788,186
1897 -	22,074	26,963	49,037	78,719	152,583	231,302	296,058	475,167	771,225
1898 -	20,451	24,796	45,247	76,335	151,604	227,939	290,797	472,587	763,384
1901 -	16,898	19,613	36,511	71,707	148,888	220,595	290,606	881,641	772,247
1904 -	14,568	17,176	31,744	70,965	137,038	208,003	297,302	489,329	786,631

When allowance is made for the recent considerable increase of employment of children, accompanied by an increase of adult employment (due principally to the very great activity in the cotton trade), the testimony of these figures to the decline of child-labour is notable. While in the period they cover, 1895-1904, the number of adult operatives remains stationary, the number of half-timers has declined by more than two-fifths, a decline equally applicable to male and female children. The employment of young persons under twenty-five years also shows a not inconsiderable, though a less regular, decline.

The following Table, presents the proportion of females at different age-periods engaged in all occupations. The figures of the 1891 Census are omitted, as in that year by including as occupied considerable numbers of women not so classed in other Censuses, they misrepresent to some extent the measurement of tendencies.

FEMALES OCCUPIED PER 1,000 LIVING OVER 10 YEARS OF AGE.

Age.	1871.	1881.	1901.
10 to 15	212	151	121
15 „ 25	612	621	611
25 „ 45	315	290	271
45 „ 65	293	261	212
65 and over	259	183	132
All occupied	366	340	316

The decline in the proportion of children and of aged women employed in industry during thirty years is seen to be very large. Hardly less noteworthy is the decline of employment between the ages of forty-five and sixty-five during the same period, especially the latter years of that period. The proportion of employed remains most constant in the case of young women (largely unmarried) between the ages of fifteen and twenty-five, and declines but slowly for women between twenty-five and forty-five, the latter decline representing, perhaps, the growing tendency for married women among the better paid and better educated working classes to occupy themselves exclusively with domestic duties.

APPENDIX No. XXI. (H).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The following Table, based on Table 35 of the General Report of the Census of 1901 (pp. 270–281), shows the proportion of the population, male and female, engaged in the principal groups of occupations in England and Wales according to each of the last three Censuses.

PROPORTION PER MILLION OF MALE POPULATION AND PER MILLION OF FEMALE POPULATION AGED TEN YEARS AND UPWARDS FOR ENGLAND AND WALES.

The figures relating to the aggregate of occupied persons, which indicate a slight diminution in the proportion of women described as occupied, accompanied by a slight increase in the proportion of men, does not bear out the suggestion that there is any general tendency for women to displace men in the labour market. This reduction in the proportion of occupied women is more than accounted for by the reduction of employment in textiles and dress and in domestic service, the three largest occupations of women, and the greatly reduced employment in agriculture, which has now become an almost exclusively male occupation.

It will be seen that women are making the largest actual and relative advance in commercial, professional, and public employments and in the chemical and food industries, in each of which groups their rate of increase exceeds that of men, and among manufactures in the paper, book-binding, chemical, food, metal, and leather classes.

There is only one group (skins, leather, etc.), in which an increase in the proportion of women employed has been accompanied by a decline in the proportion of men. In every other group where women show an increase, men likewise show an increase, and where there is a considerable decline of male, there is also a decline of female employment. This, of course, does not exclude the possibility of important displacements of male by female labour within the several groups.

In order to test more closely the question of whether there has been such displacement, we may here insert a Table based on the Census Returns for 1891 and 1901 which shows the proportions of women and girls employed in each year in England and Wales in those trades within the larger groups which employ a considerable quantity of female labour.

* The figures for Domestic Service are overstated in 1891 owing to the inclusion in that year only of relatives assisting in household work.

† Including farmers' daughters or relatives assisting in work of the farm not included in 1881 and 1891.

APPENDIX No. XXI. (H).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

PROPORTION OF WOMEN AND GIRLS EMPLOYED IN CERTAIN OCCUPATIONS IN 1901 AND 1891.

* An actual decrease in numbers as well as a relative one.

† Including dealers.

|| Excluding farmers' daughters or other relatives assisting in the work of the farm (so returned) and in other respects bringing the Census Returns of 1891 and 1901 into line with each other as far as possible.

¶ In 1891 the English and Scotch Census Returns included daughters and other female relatives of the head of a family described as assisting in household duties as in domestic service. In 1901 it was decided to revert to the method of 1881 when these persons were classified among the unoccupied. The figures for 1891 and 1901 are, therefore, in no way comparable, the great decline being partly due to change in classification. Compared with 1881 the decline in domestic service per 10,000 females of 10 years and upwards in 1901 was 222 in England and Wales, 106 in Scotland, and 216 in Ireland.

Taking this Table as a starting point for an examination of the competition between men and women, we must premise that it excludes, as outside competition, most of the largest manual industries in which men engage. Agriculture, mining and fishing employ no appreciable quantity of female labour, while the building, transport and the staple metal and machine-making trades are virtually male preserves, as indeed are the industries classed in the Census as "Wood," and "Gas and water."

About four-fifths of the occupied male population are engaged in these and other employments where women do not enter at all, or where they are a negligible factor as regards possible competition. Only one-fifth of the males are engaged in trades where women enter to the extent of 1 per cent. of the whole number of occupied females. But the real area of competition is further reduced when we recognise that in several of these

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

occupations in which both women and men engage, the male is either an insignificant quantity, or is definitely severed from competition by specialisation of function within the occupation.

In the largest female occupation, domestic service, where men are also engaged to some considerable extent, the margin of actual competition or possible displacement is not very great, being confined to a comparatively small amount of the indoor service. All grades of millinery and dressmaking are almost exclusively women's work. The same holds of washing, even under new mechanical conditions, while charring, and sick nursing, &c., in which women find a large increase of employment, are not subject to sex competition. The only large occupations in this Table in which there might be a *prima facie* case for supposing the existence of any considerable competition, between men and women, and any consequent displacement of the former by the latter, are the textile trades, tailoring, and a few other "dress" trades, shoe-making, teaching, commerce, and certain large retail trades.

THE TEXTILE TRADES.

The following Table compiled from the Census Reports shows the total numbers, male and female, engaged in the chief textile trades in England and Wales in 1881, 1891, and 1901, respectively.

Year.	Males.	Females.	Total.	Year.	Ma'es.	Females.	Total.
	Cotton.				Silk.		
1881	185,410	302,367	487,777	1881	18,709	41,886	60,595
1891	213,231	332,784	546,015	1891	16,235	32,562	48,797
1901	196,898	332,233	529,131	1901	10,380	24,467	34,847
	Wool and Worsted.				Lace.		
1881	97,638	124,733	222,371	1881	11,359	32,785	44,144
1891	107,237	135,097	242,334	1891	13,030	21,716	34,746
1901	87,671	122,069	209,740	1901	12,632	23,807	36,439
	Linen.				Hosiery.		
1881	4,212	7,853	12,065	1881	18,862	21,510	40,372
1891	2,574	5,592	8,166	1891	18,200	30,887	49,087
1901	1,146	3,317	4,493	1901	13,893	34,481	48,374

The General Table, p. 699, shows that in the textile class, as a whole, the proportionate decline for women was about the same as that for men in the period 1881–1901. We now see that as regards actual numbers employed, the increases or decreases in the several trades included in the group, except hosiery, affect male and female labour in much the same degree.

Taking cotton, the largest trade, first, the increase of employment between 1881 and 1891, and the decrease between 1891 and 1901 are seen to affect both males and females. The general figures for the trade indicate no tendency for female to displace male labour.

The same close correspondence is found in wool and worsted, where 1891 shows an advance of similar proportion for male and female employment as compared with 1881, while 1901 marks a similar decline.

The similarity in direction and proportion of change in the other trades is not less noteworthy, and is equally discernible in the trades where the proportionate change of employment is small, as in cotton and wool, or where it has been very great, as in linen and silk. In each trade female employment appears to vary concurrently with male and to a similar extent. There is no evidence of sex displacement.

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

“ The persons employed in the manufacture of hosiery, who, between 1881 and 1891, had increased by 21·6 per cent., declined from 49,087 to 48,374, or 1·5 per cent., during the past decennium. Taking the sexes separately, there was a falling-off of no less than 23·7 per cent. among the males, while the females advanced 11·6 per cent. The probable explanation of these changes may be stated as follows :—Males were formerly employed in the manufacture of hosiery by hand frames, and females in the finishing processes. The hand frames are now becoming obsolete, being superseded by steam-driven automatic machinery, which not only requires fewer hands, but has gradually led to the substitution of females for males. Females employed in the finishing processes have not, however, been similarly displaced by labour-saving machinery. In 1901 the industry gave employment to 34,481 females as against 13,893 males, or a proportion of 713 females in every 1,000 persons employed ; the corresponding proportions at the four Censuses from 1861 to 1891 had been 468, 468, 533, and 629 in 1,000 respectively.

Of the total of 48,374 persons engaged in hosiery manufacture in 1901, not less than 79 per cent. were returned from the counties of Leicester and Nottingham. The numbers enumerated at the last three Censuses in these and some other counties in which the industry is carried on were as follows ” :—*

Registration County.	1881.			1891.			1901.		
	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.
Leicestershire - - -	21,594	9,388	12,206	25,176	9,259	15,917	25,543	7,442	18,101
Nottinghamshire - -	14,155	7,917	6,238	15,377	7,222	8,155	12,912	5,003	7,909
Derbyshire - - - -	2,275	1,187	1,088	2,138	914	1,224	2,716	748	1,968

Yorkshire—W. Riding - -	128	22	106	1,108	168	940	1,233	106	1,127

* General Report of the Census, 1901, p. 121.

“ The number of persons engaged in lace manufacture increased from 34,746 in 1891 to 36,439 in 1901, or 4·9 per cent., which is remarkable considering that the industry, which had employed 61,726 persons in 1851, had shown decline at every successive Census. Between 1881 and 1891 the falling-off was 21·3 per cent., and the opinion was advanced in the Census Report for 1891 that, whilst this decline was presumably due in part to the increased importation of foreign lace, the chief cause was the increasing supersession of pillow-made or bone lace by bobbin net, first made by hand machines, but more recently by water power or steam power.

In the counties of Nottingham and Derby, where lace is principally made by machinery, there has been an increase at each Census since 1871, while in the counties of Bedford, Buckingham and Northampton, the seats of hand-made lace, where the industry is practically limited to females, the numbers have continuously fallen from 23,450 in 1861 to 2,350 in 1901. During the inter-censal period, 1881–1891, the numerical increase in the counties where lace is manufactured by machinery did not nearly counterbalance the great decrease in the counties where it is hand made ; during the period 1891–1901, however, the increase in the former counties was numerically greater than the decrease in the latter. This may be seen from the following Table, which gives the numbers at the last three Censuses in each of the counties mentioned, and in Devonshire and Somersetshire, where the lace is now mainly machine-made.”

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

"Coincidentally with the decline of hand-made lace, the proportion of females in 1,000 persons engaged in lace-making declined progressively from 829 in the year 1861 to 625 in 1891, it, however, rose during the latest decennial period to 653, owing, apparently, to the substitution of female for male workers in the county of Nottingham and in some other counties." *

A somewhat more detailed Table relating to the last decade, compiled from the Annual Reports of the Chief Inspectors of Factories and Workshops for 1896, 1897, 1899, 1900, 1903 and 1906 shows that the tendency of male and female textile employment to vary directly and proportionately continues.

During the period here under survey all the textile trades, except hosiery and lace, show some actual decline in total employment, and in each instance, except in the elastic, cocoanut fibre, and horse-hair trades, both men and women share in this decline, the drop for women being generally slightly less than for men. In this last-mentioned group and hosiery alone are signs of substitution visible.

JUVENILE LABOUR IN THE TEXTILE TRADES.

Thus far we have not discriminated adults and juveniles in the statistics of male and female employment. But the following Table compiled from the Census figures presents the changes in textile employments according to ages as well as sex.

* General Report of the Census, 1901, p. 121.

Handed in by the Board of Trade. (Q. 98827.)

TABLE SHOWING THE PROPORTION OF THE POPULATION OF AND ABOVE TEN YEARS ENGAGED IN THE TEXTILE TRADES, EXCLUDING LACE AND SILK TRADES, IN ENGLAND AND WALES AT CERTAIN AGE PERIODS, PER 10,000 AT EACH AGE.

* An actual decrease in numbers as well as a relative one.

This Table shows in the first place a reduction in employment both of children and young persons far greater than that of adult labour, and this both among males and females.

It is also observable that the decline in the proportion of young men under twenty-five is greater on the whole than that in the proportion of girls and young women employed in the trades. This no doubt arises from the fact that young men in the textile districts have in larger numbers a freer choice of residence and work than young women.

The fullest evidence of the large diminution of employment of children and young persons in the textile trades, is however, furnished by the Reports of Factory Inspectors, from which the following Table is compiled :—

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

It will be seen that between 1895 and 1904 the number of half-timers has decreased in every branch, and the number of full-timers under eighteen years in every branch except lace, and that in branches in which the total number employed has declined the proportionate decline has been greater among young persons and much greater among half-timers.

This relative and absolute reduction of employment of half-timers and young persons which is traceable to 1904, appears, however, to have met a temporary check. The great expansion of trade, especially in the cotton trade of Lancashire and Scotland, leading to an increased demand for labour of both sexes and all ages, resulted in an increased employment of half-timers and of young persons, especially the latter. The considerable dimensions of this change in the years 1905 and 1906 are indicated in the following Table (Annual Report of the Chief Inspector of Factories and Workshops, 1907, Cd. 3586, p. ix.), to which the summary figures for 1905 and 1904 have been added for comparison.

United Kingdom - -	42,613	+ 1,453	80,579	+ 6,523	267,677	+ 21,315	390,869	+ 29,291
United Kingdom 1905 - -	41,160	+ 1,740	74,056	+ 2,252	246,362	+ 24,396	361,578	+ 28,388
Kingdom 1904 - -	39,420	— 3,354	71,804	— 5,572	221,966	— 17,159	333,190	— 26,085

The statistics in this Table, refer to employment in all factories, non-textile, as well as textile, but though some proportion of the recent increase may be attributable to employment in non-textile factories, so far as half-timers are concerned the total number employed in these is extremely small, amounting in 1901 to 5,033 as compared with 36,511 employed in textile factories. There is every reason to believe that the increase of employment of half-timers and young persons is mainly due to the great development of the cotton and woollen industries which has taken place during the last two years.

TAILORING, DRESSMAKING, ETC.

If we take the larger group of dressmaking trades, including tailoring, dressmaking, millinery, shirt and needlework trades, we find that, though female labour still remains the vastly preponderating element, this group of occupations is so far from showing a tendency for female labour to displace male that the net result of movements in recent years has been rather in the opposite direction.

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The following Table compiled from the Reports of the Census seems to establish these conclusions :—

TAILORING, DRESSMAKING, MILLINERY, SHIRT AND NEEDLEWORK TRADES.
ENGLAND AND WALES.

Age Period.	Proportion employed per 10,000 Males in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.	Age Period.	Proportion employed per 10,000 Females in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.

Total Number	154,696	+ 22,900	Total Number	611,889	+ 25,479

* An actual decrease in numbers as well as a relative one.

This Table is instructive not only in its bearing upon the distribution of occupation between the sexes, but in relation to the ages of the workers. The proportionate decline of employment of children below fifteen years is somewhat more marked among boys than girls. The period between fifteen and forty-five is that during which a positive increase in the proportion of males is found, and in the same period the decline is proportionately smallest in the case of females. There was, however, an increase in numbers among women. This indicates that a larger demand is taking place for adult workers in the prime of life, a normal result of the stress of modern factory life, in which elderly workers become relatively less valuable with every improvement of mechanical processes.

There can be little doubt that this change in the relative importance of this group of occupations for male and female industry is chiefly attributable to the encroachments of the factory system upon domestic and small workshop industries. A considerable proportion, however, of the increase in the number of male workers at tailoring is accounted for by the increased number of European foreigners in the trade. To some extent this relative decline of the occupation of women may also be imputed to higher male wages operating to diminish the urgency for women undertaking wage work.

If, however, out of this group we turn to the particular set of trades classed as tailoring, we find that women are taking an increasing proportion of those employed in the trades. The following Table, compiled from the Censuses of 1881, 1891, and 1901, makes this fact evident. At the same time the number of males in the trade increased from 1891 to 1901.

1881	1891	1901	1881	1891	1901
51,360	84,091	111,282	164	228	280

That women in this industry are displacing men, in the sense that they form a larger proportion of the workers in the tailoring trades, is shown by the following Table (from

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

“A Note on the Distribution of Women in Occupations,” by Miss B. L. Hutchins, Journal of the Statistical Society, September, 1904, p. 483):—

TAILORS.

	Females per 100 males occupied.	Number under 15 years of age per 100 females occupied.	Number aged 15 and under 20 per 100 females occupied.	Number aged 20 and under 25 per 100 females occupied.
1881 - -	49·21	3·06	20·95	18·40
1891 - -	74·66	5·75	27·73	20·00
1901*- -	98·41	5·40	29·73	22·71

* In 1901 clothiers' outfitters and dealers are omitted ; these were included in 1881 and 1891. In 1901 mantlemakers were included under tailoring ; to a great extent men who made mantles returned themselves as tailors or ladies' tailors and this change increased the proportion of women in the group, and diminished it in the dressmaking group.

The increased proportion of women to men, and of young women to older women is concomitant with the passage of a large portion of the tailoring trade from a domestic and workshop industry into a factory industry, and is probably due in some measure to this change.

THE BOOT AND SHOE TRADE.

The boot and shoe trade also shows an increasing proportion of female to male labour during the last two decades.

The following Table makes this evident :—

---	Per 10,000 occupied over 10 years.			
	1881.	1891.	1901.	Increase or Decrease 1881-1901.
Females - - - - -	36	40	40	+ 4
Males - - - - -	202	191	163	- 39

Here is the case of a distinctively male industry in which women are obtaining a relatively stronger hold. This is doubtless due in the main to an increasing division of labour in the factories which have displaced the workshops, and which furnish certain lighter processes suitable for women, which were formerly done as part of the general work of male shoe-makers. Certain lighter branches of this trade, *e.g.*, slipper-making, are now passing entirely into female hands. The increase of this factory work here also appears favourable to the increased proportionate employment of young girls and young women, as the following Table signifies :—

BOOTS AND SHOES (INCLUDING DEALERS).

-----	Total employed per 10,000 Females Living.			
	1871	1881	1891	1901
Over 10 years - - - - -	30	36	40	40
From 10 to 15 - - - - -	18	17	28	26
" 15 " 25 - - - - -	51	67	83	90
" 25 " 45 - - - - -	26	33	33	30
" 45 " 65 - - - - -	22	22	17	15
Above 65 - - - - -	18	12	9	7

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The closer analysis of the figures of the 1891 and 1901 Censuses reinforces these conclusions :—

ENGLAND AND WALES.

Age Period.	Proportion per 10,000 Males employed in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.	Age Period.	Proportion per 10,000 Females employed in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.
Males. YEARS.			Female. YEARS.		
10 to 15	42	— 16*	10 to 15	26	— 2*
15 „ 25	166	— 35*	15 „ 25	90	+ 7
25 „ 45	152	— 17	25 „ 45	30	— 3
45 „ 65	201	— 55*	45 „ 65	15	— 2
65 and over	206	— 39*	65 and over	7	— 2*
10 and over.	163	— 28*	10 and over	40	— —
Total Number	198,304	— 4,344	Total Number	52,839	+ 6,698

* An actual decrease in numbers as well as a relative one.

The increased employment of young women between fifteen and twenty-five is largely the result of recent rapid growth in the number of machines for manufacturing uppers which women can work, and young women are naturally introduced into these processes. The rapid decline of boys below fifteen, and even between fifteen and twenty-five, is attributable to new and rigorous restrictions on apprenticeship under the factory system, which have greatly reduced the number and the proportion of boys entering the industry.

RETAIL TRADE.

Over so large a proportion of industry it has hitherto been impossible for the Census to distinguish dealer from maker that it is not feasible to present any estimate of the relative employment of males and females over retail distribution, so as to indicate whether any displacement of male by female labour takes place. But in two large retail trades grocers and drapers, statistics are available, and may be presented in the following form :—

	Per 10,000 occupied over 10 Years.		
	1881.	1891.	1901.
Grocers—Males	111	128	127
„ Females	26	40	36
Drapers—Males	58	57	55
„ Females	29	40	52

In both classes women are seen to be increasing in numbers more rapidly than men. The grocery trade remains predominantly male, and some of the females included under this heading are in a manufacturing branch (cocoa and chocolate making), but in the drapery trade women have made a rapid gain, the proportion per million women occupied having nearly doubled since 1881. In drapery there is a strong *prima facie* case for interpreting the change as a displacement of young men by women workers.

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The fuller analysis of the last two Censuses for the drapery trade runs as follows :—

ENGLAND AND WALES.

Age.	Proportion per 10,000 Males employed in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.	Age.	Proportion per 10,000 Females employed in 1901.	Increase or Decrease per 10,000 at each Age Period on 1891.
Males. YEARS.			Females. YEARS.		
10 to 15	9	— 2*	10 to 15	11	+ 3
15 „ 25	81	— 13*	15 „ 25	124	+ 33
25 „ 45	64	—	25 „ 45	42	+ 7
45 „ 65	47	+ 2	45 „ 65	20	+ 1
65 and over	22	+ 3	65 and over	9	—
10 and over	55	— 2	10 and over	52	+ 12
Total Number	67,220	+ 6,549	Total Number	68,437	+ 22,090

* An actual decrease in numbers as well as a relative one.

The most conspicuous feature in this Table is, of course, the large increase in the proportion of young women and the considerable decrease in the proportion of young men. It also deserves attention that while the number of boys in the trade is declining, the number of young girls below fifteen is increasing at a considerable rate.

COMMERCE.

That an increasing number of women are employed in commerce, chiefly as clerks, typewriters, etc., is well known. The statistics of the commercial class in recent Censuses show that the percentage increase of employment for women is far greater than for men.

The following Table shows the numbers engaged in commercial occupations per 10,000 of the population at each of the last three Censuses :—

PROPORTION PER 10,000 OF POPULATION OVER TEN YEARS ENGAGED IN COMMERCIAL OCCUPATIONS.

—	1881.	1891.	1901.
Male - - - - -	331·12	373·43	437·34
Female - - - - -	8·48	18·17	45·45

In 1881 less than 1 per cent. of the females occupied were commercial clerks. In 1891, however, the proportion had risen to 1·6 per cent., and in 1901 to 4·2 per cent. by far the largest increase of any great class of female occupation.

It is probable, however, that women are not to any appreciable extent displacing men in these employments, for an analysis of the comparative statistics of commercial and business clerks in 1891 and 1901 shows that the number of men so employed is rapidly increasing, and that their proportionate advance compared with population is faster than that of women.]

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

ENGLAND AND WALES.—Business and Commercial Clerks.

Age Period.	Proportion per 10,000 Males employed in 1901.	Increase or Decrease per 10,000 at each age period on 1891.	Age Period.	Proportion per 10,000 Females employed in 1901.	Increase or Decrease per 10,000 at each age period on 1891.
Males.			Females.		
10 to 15	59	+ 7	10 to 15	8	+ 5
15 „ 25	461	+ 59	15 „ 25	113	+ 75
25 „ 45	267	+ 36	25 „ 45	33	+ 18
45 „ 65	148	+ 27	45 „ 65	5	+ 2
65 and over	59	+ 10	65 and over	1	+ 1
10 and over	254	+ 37	10 and over	42	+ 26
Total Number	307,889	+ 78,519	Total Number	55,784	+ 37,925

The chief difference seen in male and female employment here is the rapid increase of female employment between fifteen and twenty-five, whereas the increase of male employment is spread more evenly over the whole period fifteen to sixty-five. This implies the recent entrance of large numbers of young women into occupations which are new, *e.g.*, typewriting, or which formerly were virtually confined to males. It should, however, be recognised that the normal for males would be to have kept pace with the increase in population, as there is naturally little room for expansion among males with only 17 per cent. unoccupied compared with females who have 66 per cent. unoccupied.

PROFESSIONS.

The general statistics of this class of occupation given in the Censuses do not indicate the nature of the change in occupations of women. The proportion of women engaged in so-called “professions” has, since 1881, grown a good deal more rapidly than that of men.

PROPORTION PER MILLION OF THE MALE AND THE FEMALE POPULATION RESPECTIVELY ENGAGED IN PROFESSIONS.

	1881.	1891.	1901.
Male - - - - -	24,781	25,035	25,681
Female - - - - -	18,778	21,175	22,339

The large number of women and the rate of their increase are both explained by the rapid development of the subordinate services, especially teaching, acting, music, and sick nursing.

The two branches in which women form a large proportion of the entire sub-class and in which they show the largest absolute and relative advance are teaching and the medical services. The General Report of the Census for 1901 summarises in the following terms the changes during the decade 1891–1901 :—

“The number of schoolmasters and mistresses, teachers, professors and lecturers, employed in education of all grades, exclusive of teachers of music, who are classed with musicians in Sub-order 7 of this Order, was 230,345, and of these 171,670, or 74·5 per cent. were females. In 1891 the number of teachers, professors, etc., had been 195,021, of whom 144,393, or 74·0 per cent., were females. Accordingly in the ten years the male teachers increased by 15·9 per cent., and the female teachers by 18·9 per cent. The total increase in both sexes together was 18·1 per cent.; in the previous intercensal period the rate of increase had not exceeded 15·5 per cent.

According to the returns of the Board of Education there were 36,207 male and 113,597 female teachers in Elementary Day Schools in 1901, the male teachers having increased since 1891 by 15·1 per cent., and the females by no less than 50·5 per cent.; and whereas there were 240 females to 100 male teachers in the earlier year, the ratio had increased to 314 to 100 in 1901.”*

* Cd. 2174, p. 93.

APPENDIX No. XXI. (H).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

The detailed age and sex analysis for the decade 1891–1901 runs as follows :—

ENGLAND AND WALES.—TEACHERS.

Age Period.	Proportion per 10,000 Males employed in 1901.	Increase or Decrease (per 10,000 at each age period) on 1891.	Age Period.	Proportion per 10,000 Females employed in 1901.	Increase or Decrease (per 10,000 at each age period) on 1891.
Males.			Females.		
10 to 15	5	– 5	10 to 15	24	– 13
15 „ 25	55	– 7	15 „ 25	260	+ 15
25 „ 45	69	+ 3	25 „ 45	141	+ 4
45 „ 65	42	+ 5	45 „ 65	52	– 1
65 and over	10	– 2	65 and over	11	– 5
10 and over	48	...	10 and over	130	+ 4
Total Number	58,675	+ 8,047	Total Number	171,670	+ 27,277

Whereas the great increase of women teachers must to some extent be regarded as a substitute of female workers for men, the same cannot be said of the growth of female employment in the medical services, chiefly as sick nurses, midwives or invalid attendants. The proportion of women engaged in these occupations increased between 1891 and 1901 from forty-six per 10,000 to fifty-one, the rate of increase of numbers thus occupied being no less than 26·8 per cent. for the decade.

DOMESTIC SERVICE.

In dealing with this, by far the largest of the wage-earning occupations of women, we have already (p. 1) seen that the tendency is for domestic service to employ a smaller proportion of women, and a larger proportion (though the total number is small) of men.

Though it can hardly be claimed that any direct competition or displacement of one sex by another takes place in this class, the reduced proportion of female employment deserves attention. In measuring this and other changes relating to age distribution, it is, however, necessary to ignore the 1891 Census (in which large numbers of female relatives assisting in household work were for once included in this class), and to make our comparison between 1881 and 1901.

The following account of this change is given in the General Report of the 1901 Census. [Cd. 2174, p. 95] :—

“ In the period of twenty years between 1881 and 1901, we find that female domestic indoor servants increased by only 8·2 per cent., while the entire population advanced 25·2 per cent. It is noteworthy that the increase was limited to women aged twenty years and upwards, among whom it amounted to 23·5 per cent. in the twenty years, while among girls under the age of twenty years there was a decrease during the same period equal to 12·3 per cent. The following Table shows the age distribution of female domestic servants in 1881 and 1901, and also the rates of increase or decrease at each age-group.

Ages.	1881.		1901.		Increase (+) or Decrease (–) per cent. in 20 years.
	Number.	Proportion per 1,000.	Number.	Proportion per 1,000.	
Under 15 - - -	98,190	79·8	64,802	48·7	– 34·0
15 and under 20 - -	430,177	349·7	398,630	299·6	– 7·3
20 and under 25 - -	301,474	245·0	351,242	263·9	+ 16·5
25 and under 45 - -	295,302	240·0	392,973	295·3	+ 33·1
45 and under 65 - -	88,506	71·9	106,186	79·8	+ 20·0
Over 65 - - -	16,757	13·6	16,950	12·7	+ 1·2
Total - - -	1,230,406	1,000·0	1,330,783	1,000·0	+ 8·2

APPENDIX No. XXI. (H).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

There can be no doubt that the administration of the Education Acts in recent years, by raising the "school age," has tended greatly to limit the domestic employment of girls below the age of fifteen years; but this cannot have caused the reduction between fifteen and twenty years, of age. The decrease of 7·3 per cent. in the number of Domestic Servants at ages between 15 and 20 years, notwithstanding an increase of 28·1 per cent. in the number of females living at these ages, suggests the conclusion that young women are preferring other employments."

The more detailed analysis of this change in relation to the age of female domestic service is given in the following Table :—

PROPORTION OF FEMALES OCCUPIED IN DOMESTIC SERVICE PER 10,000 LIVING OVER TEN YEARS.

Ages.	1881.	1901.	Increase or Decrease.
10 to 15	702	388	— 314
15 „ 25	2,933	2,281	— 652
25 „ 45	845	813	— 32
45 „ 65	453	418	— 35
65 and over	257	198	— 59
10 and over	1,231	1,009	— 222

Here, as in many occupations, we find a large reduction proportionately of employment at the lowest and the highest age periods.

SUMMARY OF RESULTS.

There is no body of evidence to support the view that in any considerable trade or process women or juveniles are displacing adult males in the sense that they are being more largely employed to do work identical with that formerly done by men. There is, however, evidence to show that certain mechanical and other changes, lightening or otherwise facilitating certain processes, have tended to place them more largely in the hands of women or young persons. To such changes is doubtless due the larger proportion of employment of women in textile factories, especially in such an industry as hosiery, where direct and considerable substitution of women for men has lately been achieved through the instrumentality of improved machinery. Certain similar improvements of machinery in the clothing factories and in the shoe trade have similarly enabled women to do what was for a time men's work.

But the total amount of such substitution does not appear to be very great. In most cases where women's employment grows faster than men's, or where the decline of employment for men is faster than that for women, the stronger position of women is due to the increased division of labour which has found place for women in new separate processes, or to the creation of new industrial processes suited to women's labour, or else to the more rapid development of certain sorts of work in which women were already engaged.

Improved education of women has assisted them to find a larger occupation in commercial and certain professional employments, especially in teaching and in nursing, and the great expansion of the commercial occupations has furnished large new fields of female work.

It should also be borne in mind that even when women are employed where men used to be employed this is largely due to the men going into more highly paid industries. Mining, machine-making, and building have of late years attracted an abnormal number of men and boys.

APPENDIX No. XXI. (I).

Handed in by the Board of Trade. (Q. 18827.)

STATISTICS OF LABOUR BUREAUX FOR 20 YEARS OR SO LONG AS AVAILABLE, DISTINGUISHING BETWEEN THOSE MANAGED BY DISTRESS COMMITTEES UNDER THE UNEMPLOYED WORKMEN ACT AND THOSE NOT SO MANAGED.

I—LABOUR BUREAUX PRIOR TO UNEMPLOYED WORKMEN ACT, 1905.

In the Table below (Table A.) every public labour bureau or registry is included for which the Labour Department has returns for any single complete year prior to the coming into force of the Unemployed Workmen Act, 1905. In the case of bureaux existing before 1894, such as Ipswich and Chelsea, the statistics have, so far as possible, been completed from the Reports of the Labour Commission and other sources. Employment given by the municipality itself, or in the case of the Salvation Army Bureau by the Salvation Army, has been so far as possible excluded. The extent of this excluded employment wherever it reaches any considerable volume is indicated in the notes as to the individual exchanges.

TABLE A.—LABOUR BUREAUX IN EXISTENCE PRIOR TO UNEMPLOYED WORKMEN ACT.
SITUATIONS FILLED WITH PRIVATE EMPLOYERS.

Bracketed figures represent incomplete years.

* No return for November, 1907.

Returns for less than one complete year prior to the end of 1905 have been received also from the following bureaux :—

- Reading : October to November, 1897 ; June, 1906, to date.
- Southampton : November, 1903 to May, 1904.
- Manchester : January to April, 1904 ; June, 1905, to date.
- Wigan : June, 1904 ; March, 1907.
- Leith : January to August, 1905.
- Eastbourne : February, 1905, to April, 1906.
- Dudley : April, 1905, to date.
- Newcastle : January, 1905, to date.
- Shoreditch : March, 1903.
- Fulham : October, 1904.
- Poplar : October, 1905 to July, 1906.
- Lewisham : November, 1905 to July, 1906.

APPENDIX No. XXI. (I).—Continued.

*Handed in by the Board of Trade. (Q. 98827.)**Notes as to Special Bureaux.*

Plymouth.—The figures relate to men (with a few lads and boys) only. Prior to 1900, a few situations were filled with the local authority ; since that year none. The number of situations filled has been 95 per cent. of those offered, during the last five years. At the end of 1905 the registry was taken over by the Distress Committee under the Unemployed Workmen Act, and during the winter months, both in 1905–6, and 1906–7, appears to be amalgamated with the register of the Distress Committee. During the summer months when the Distress Committee register is closed the labour registry is opened as a separate institution, its returns appearing in the Report of the Distress Committee.

The figures given, from returns made to the Labour Department, are different from those appearing in the Report of the Assistant-Commissioner of the Poor Law Commission. (Appendix, p. 395).*

Liverpool.—During the twelve years, 1894 to 1905, the bureau also filled 437 situations under the local authority. At the end of 1905, it was taken over by the Distress Committee which maintained (1905–6), only a single register both for bureau and unemployed registration, and found situations for about eighty applicants from this register with private employers.

Salford.—During the five years 1894–8, the bureau also filled 362 situations under the local authority. No records are to hand since 1898, till the opening of a bureau by the Distress Committee which in the fifteen months, June, 1906 to August, 1907, has filled 100 situations.

Glasgow.—During the ten years 1897 to 1906, the bureau also filled 741 situations under the local authority. The bulk of the situations found are for women and girls—1,602 out of a total of 1,910 in the twelve months, September 1st, 1904, to August 31st, 1905—very largely as domestic servants or charwomen. The bureau has apparently not been taken over by the Distress Committee.

Coventry.—The number of workpeople applying, the total number of situations offered (including those under the municipality) and the number and percentage of those filled has been as follows :—

	Workpeople Applying.	Situations Offered.	Situations Filled.	Percentage Filled of Situations Offered.
1905.	1,837	963	915	95·0
1906.	2,328	1,072	974	90·9
1907.	2,198	915	817	89·3

London Labour Bureaux.

The London Government Act, 1899, made a breach in the history of all the bureaux maintained by the London vestries, and it was held necessary in 1902 to pass the Labour Bureaux (London) Act to confirm the legality of expenditure on the maintenance of such institutions by the newly created borough councils. The Hackney bureau disappeared altogether. The bureau at Islington was not revived till November, 1904.

The institution of the London Unemployed Fund at the end of 1904, and the passage of the Unemployed Workmen Act, 1905, made a fresh breach, most of the existing bureaux being used for the registration of applicants for employment-relief, or at least having their officials diverted from the labour bureau work to the relief work. Finsbury forms almost the only exception to this rule.

The decision of the Central (Unemployed) Body for London in March, 1906, to establish a connected system of employment exchanges, led to the taking over by that body of all the then existing labour bureaux except that at Westminster, and to a consequent reorganisation which makes continuity of statistical records impossible.

* Cd. 4795, 1909.

APPENDIX No. XXI. (I).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

Battersea.—During the twelve years 1894 to 1905 the bureau filled also 801 situations under the local authority. Since January, 1906, no returns have been received, and the bureau is not mentioned by the Central (Unemployed) Body for London as one of those in existence in the middle of 1906.

Chelsea.—No returns are to hand after 1894. In December, 1904, a labour bureau was opened by the borough council in connection with the London Unemployed Fund, and was continued till taken over by the Central (Unemployed) Body.

Hackney, Islington, St. Pancras.—These bureaux served mainly or largely to supply men to the local authority, the numbers supplied being as follows :—

	Hackney.	Islington.	St. Pancras.
1894	—	728	90
1895	—	1,146	1,324
1896	2,054	1,429	768
1897	982	1,248	309
1898	1,173	1,258	117
1899	1,258	1,177	113
1900	995	1,210	543

Egham.—This appears to have been the first labour bureau started in this country preceding that at Ipswich by a few months. It was closed in 1894 on the passing of the Local Government Act. The figures given below are taken from the annual reports of the registry :—

	Applications.	Situations found.	Separate Applicants for whom found.
1888, Oct. 1st—1889, Sept. 30th	280	224	201
1889, Oct. 1st—1890, Sept. 30th	287	224	205
1890, Oct. 1st—1891, Sept. 30th	289	244	214
1891, Oct. 1st—1892, Dec. 31st	382	289	223
1893, Jan. 1st—1893, Dec. 31st	278	182	137
1894, Jan. 1st—1894, Dec. 31st	219	123	102

Salvation Army.—The figures in the table do not include situations under the Salvation Army itself, of which a large number are filled through the bureau, viz. :—

1898	-	-	-	-	2,656	1903	-	-	-	-	1,456
1899	-	-	-	-	2,386	1904	-	-	-	-	1,703
1900	-	-	-	-	2,762	1905	-	-	-	-	1,562
1901	-	-	-	-	2,621	1906	-	-	-	-	3,236
1902	-	-	-	-	2,075	1907	-	-	-	-	2,986

Returns are also available from March, 1895, to December, 1897, but do not always distinguish situations under the Salvation Army from those under private employers.

The bureau appears to deal only with men and boys.

Of the situations found during 1907, 51 per cent. are described as temporary, and 49 per cent. as permanent.

II.—LABOUR EXCHANGES AND EMPLOYMENT REGISTERS UNDER THE UNEMPLOYED WORKMEN ACT.

A.—Provincial Distress Committees in England and Wales.

In the return as to the proceedings of distress committees in England and Wales up to March 31st, 1906, prepared by the Local Government Board, it is stated that nineteen (out of a total of eighty-nine distress committees outside London) established labour exchanges or employment registers, while thirteen more took over existing exchanges.

APPENDIX No. XXI. (I).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

No clear general distinction, however, appears to be drawn between the establishing, assisting, or taking over of labour exchanges or employment registers under Section 1, Sub-section 4, of the Unemployed Workmen Act, 1905, and the registration of applicants for assistance under Section 1, Sub-section 2. Apparently, some of the labour exchanges or employment registers referred to in this return are no more than temporary distress registers. From the detailed notices in the return mentioned, and from the reports of separate distress committees, the following summary has been drawn up of proceedings during the first year of working.

The following distress committees (13) established labour exchanges, employment registers, or labour bureaux :—

Barrow-in-Furness	-	-	-	Closed in spring.
Bolton	-	-	-	Successful.
Grimsby	-	-	-	Closed in spring.
Leicester	-	-	-	
Hanley	-	-	-	Sixty-four men placed up to March.
Stockport	-	-	-	
Sunderland	-	-	-	Little success.
Tynemouth	-	-	-	" "
Walsall	-	-	-	" "
Warrington	-	-	-	Separate registration for labour exchange purposes. Some success.
West Ham	-	-	-	
Smethwick	-	-	-	Little success.
King's Norton	-	-	-	No success.
Northfleet	-	-	-	Labour exchange only. All the thirty-eight applicants placed.

It will be seen that only three of the distress committees speak of their work as successful, while in only two is it clear that the labour exchange was kept distinct from registration for distress purposes.

The following distress committees (12) took over labour bureaux, labour exchanges, or employment registers :—

Birkenhead	-	-	-	-	-	
Burnley	-	-	-	-	No success	
Dudley	-	-	-	-	Satisfactory	
Liverpool	-	-	-	-	No success	
Manchester	-	-	-	-	-	Taken over from corporation or council.
Newcastle	-	-	-	-	-	
Plymouth	-	-	-	-	-	
Southampton	-	-	-	-	-	
Wigan	-	-	-	-	-	
Kettering	-	-	-	-	-	
Kingston-upon-Hull	-	200 placed	-	-	-	Taken over from joint committee of council and guardians.
York	-	-	-	-	No response by employers.	Taken over from "Citizens' Association."

In no case is it clear that the labour exchange was in any way distinct from the distress register. In one or two cases, at least—Plymouth and Liverpool—the effect appears to have been to put an end to the previously separate existence of the labour exchange.

The following distress committees (19) appear to have used their distress register also for exchange purposes, communicating with employers by advertisement, public notice, or circular :—

Blackburn.	Newport.
Bournemouth.	Oldham.
Brighton.	West Bromwich.
Bristol.	Cheltenham.
Bury.	East Ham.
Cardiff.	Scarborough.
Derby.	Stockton-on-Tees.
Great Yarmouth.	Leyton.
Halifax.	Wallasey.
Middlesbrough.	

In ten cases comment is made on the failure of these efforts.

APPENDIX No. XXI. (I).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

Three distress committees—Birmingham, Nottingham, and Bradford—reported that the establishment of a labour exchange was under consideration in June, 1906. In the first two cases, at least, an exchange has been since established.

One distress committee—Croydon—reported that the exchange previously maintained by the corporation without being taken over by the distress committee was being worked in conjunction with it.

The following notes are taken from the Distress Committee Reports :—

Nottingham.—Labour Bureau, opened May 14th, 1906, as a separate department, the distress register being closed. In November, 1906, the distress register was re-opened and men were given the choice of being entered either on the labour bureau register (for ordinary employment) or on the distress register (for direct assistance under the Unemployed Workmen Act), *but not on both*. From May to November, 1906, 440 males and 21 females—461 persons registered at the labour bureau. From November, 1906, to March, 1907, 153 males and 17 females—170 persons registered at the labour bureau, while 236 registered for direct assistance under the Unemployed Workmen Act. From May 14th, 1906, to March 31st, 1907, 104 employers made application for 155 work-people (144 males and 11 females), and permanent work was obtained for 109 males and 11 females—of whom, so far as could be ascertained, 87 per cent. turned out well and remained at work.

Birmingham.—A labour bureau, quite distinct from the distress register, was opened in July, 1906. From that date to end of May, 1907, 2,909 persons registered, of whom 374 remained on the register at the close of the period. Ninety-two employers applied for men, and 107 men were placed in situations.

Newcastle-on-Tyne.—Labour bureau apparently identical for employment relief and exchange purposes. In the six months, October, 1906 to March, 1907, there were placed with private employers, 281 men, 17 lads, 103 women, and 46 girls ; making a total of 447 persons.

B.—Distress Committees in Scotland.

According to the Report by the Local Government Board for Scotland as to the proceedings of distress committees in Scotland up to May 15th, 1906, the only distress committee which till then had established a labour exchange quite apart from the office at which applications for relief work were received was the Edinburgh Committee. In Glasgow the labour exchange continued under the corporation.

The numbers of applications for workmen received by the various committees up to that date were as follows :—

Aberdeen	-	-	-	-	-	87
Edinburgh	-	-	-	-	-	259
Glasgow	-	-	-	-	-	2 (i.e., excluding the Corporation's labour exchange.)
Govan	-	-	-	-	-	2
Greenock	-	-	-	-	-	1
Inverness	-	-	-	-	-	1
Leith	-	-	-	-	-	8
Total	-	-	-	-	-	360

In Dalbeattie, Dumfries, Kilmarnock, Paisley, Partick, and Pollokshaws no applications were received from employers. In Dundee no record was kept, but the number is stated to have been very small.

C.—Central (Unemployed) Body for London.

In pursuance of a resolution passed in March, 1906, the Central (Unemployed) Body for London has established a system of twenty-five local exchanges connected by a central exchange and covering the area of London County, with the exception of Westminster, in which a separate bureau is still maintained by the City Council. This system is “under

APPENDIX No. XXI. (I.)—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

the direct control of the Central Body as a branch of its work, in offices, staff, and management altogether distinct from, and additional to the organisation of Metropolitan distress committees for the selection of unemployed applicants for relief work." The main results of the working of the system from the beginning in September, 1906, to the present time are given in Tables B (i), (ii), and (iii). The returns do not distinguish situations under local authorities from those under private employers, but it is stated that except in one instance—Islington—the number of the former is insignificant.

III.—RECENT STATISTICS OF BUREAUX OR EXCHANGES REPORTING TO LABOUR DEPARTMENT.

The Labour Department receives and publishes monthly returns from :—

(1) Twenty-five employment exchanges affiliated to the Central Employment Exchange and under the control of the Central (Unemployed) Body for London—Tables B (i), (ii), and (iii).

(2) Nineteen labour exchanges maintained by distress committees outside the county of London.—Table C.

(3) Four labour bureaux or exchanges maintained by municipalities and one maintained by a voluntary body—the Salvation Army. One of the four municipal bureaux is stated to be worked in conjunction with the distress committee.—Table D.

Returns have also been received, but are no longer received, from bureaux or exchanges at Wigan, Northfleet, Bristol, and Smethwick.

B.—EMPLOYMENT EXCHANGES UNDER CENTRAL UNEMPLOYED BODY.

(i) NUMBER OF SITUATIONS FILLED IN 1907.

APPENDIX No. XXI. (J)

Handed in by the Board of Trade. (Q. 98827).

COUNTRY-BORN MEN IN LARGE TOWNS.

The following memorandum is based on an endeavour to obtain information with regard to the following points :—

A. *Persons in Distressed Circumstances.*

- (1) The proportion of persons in distressed circumstances who are town born that is, born in London or in a large provincial town.
- (2) The proportion born in country districts, that is, the proportion born in rural districts or in small towns.
- (3) The proportion who have worked as farm labourers at some time in their lives.

B. *Persons in Regular Employment.*

The class of employment in which country-born men are engaged in London and certain large provincial towns.

The sources from which particulars were obtained are, as regards A :—

The Salvation Army shelters, soup kitchens, and labour homes,
The Church Army homes, depots, and King's labour tents,
Distress committees formed under the Unemployed Workmen Act,
Rowton Houses,
Dock labourers,

and as regards B :—

Local authorities and other large employers of labour.

The information obtained relates to some 14,000 men unemployed or in irregular or casual employment in London and certain provincial towns, and to 19,500 men in regular employment in London and 22,500 in regular employment in the provinces.

A. *Persons in Distressed Circumstances.*

Taking first the figures obtained in London as regards men out of work, or in irregular or casual employment, the proportion of town-born and country-born men is given in Table A. In Table B information of a similar character is given for certain provincial towns. These particulars relate to February–April, 1906, with the exception of those for the Rowton Houses, which were taken for the Census of 1901.

TABLE A.

LONDON.

Source of Statistics.	Number of Men questioned.	Percentage of Town-born Men.	Percentage of Country-born Men.
		Per cent.	Per cent.
Salvation Army and Church Army Homes, shelters, and soup kitchens. (a)	4,168	86	14
Salvation Army and Church Army homes and shelters. (b)	455	89	11
Distress committees (Stepney, West Ham, and Bethnal Green). (c)	6,352	88	12
Rowton Houses (Newington and King's Cross). (d)	1,258	93	7
Dock labourers. (e)	465	86	14
Labourers and others in irregular employment at Poplar and Isle of Dogs. (f)	81	91	9

(a) Investigated by Salvation Army and Church Army officers.

(b) Investigated by two special investigators.

(c) Investigated by secretary or member of committee. The percentage of country-born men was by far the highest in West Ham, where of 4,703 men 15 per cent. were country-born.

(d) These particulars as to place of birth were obtained for the Census of 1901.

(e) Investigated by an official of a Dock Labourers' Trade Union.

(f) Investigated by a correspondent.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*TABLE B.
PROVINCIAL TOWNS.

Source of Information.	Number of Men.	Percentage of Town-born Men.	Percentage of Country-born Men.

Newcastle Distress Committee - - - - -	224	94	6

With reference to the figures in Tables A and B, it will be seen that the proportion of country-born men varies from 6 to 14 per cent. If, however, the comparatively small number of cases reported on by the Newcastle Distress Committee be omitted, and also the men in Rowton Houses (who include a large proportion of London residents engaged in fixed occupations), the range is from 9 to 14 per cent. These figures, which refer to 14,000 men, certainly support the view that there is not a large proportion of country-born men among those who are unemployed, or only partially employed, in London and large Provincial towns. The dock labourers, who require strength and stamina, are likely to include a relatively high proportion of country-born men, and this probably accounts for a much higher percentage at West Ham (15 per cent.) than at Bethnal Green and Stepney of country-born men who applied to Distress Committees, as a number of dock labourers live in West Ham.

It should be observed that the figures for men in the institutions of the Salvation Army and Church Army cannot be entirely relied on, as the men there sometimes have an object in giving the impression that they are natives of other districts. To the shelters are attracted numerous tramps in the winter, who have no connection whatever with London, and who in warmer weather wander all over the country living as best they can. Moreover, London is frequently the resort of those who have got into trouble in other parts of England, and no doubt a certain proportion of such men come from rural districts, swelling the dregs of London's population, and adding to the difficulties of dealing with the question of the temporary unemployment of the resident population there.

With regard to the trades of the men in irregular work, in answer to the question, "What do you regard as your proper trade?" of about 5,000 men in the shelters and homes of the Salvation Army and Church Army in London and the provinces, 25 per cent. stated that they were general labourers, 13 per cent. building trade workers, and another 13 per cent. stated that they were in the engineering and metal trades; 19 per cent. stated that they had served in the regular army. Of 465 dock labourers in London, 32 per cent. described themselves as general labourers, 12 per cent. as carmen or stablemen, 6 per cent. as being in the building trades, and 8 per cent. as in the engineering and metal trades.

Two other facts in regard to this class may be noted:

(i) According to the statements made by about 5,000 men in the Salvation Army and Church Army homes and shelters, about 44 per cent. of them were under 35 years of age; and of the men born in the country who came to shelters and homes in London and the provinces, 40 per cent. were under 35 years of age.

(ii) Out of nearly 2,000 men in the shelters questioned as to the reasons for leaving their last permanent employment, 9 per cent. confessed that it was due to drink or "their own fault," and 16 per cent. ascribed it to illness or injury. The figures are very incomplete, as many naturally would not disclose the causes and events which reduced them to want, but the figures as given suggest that in the case of at least one quarter of the number it is very doubtful if they would be suited to any regular employment.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

The following Table gives the percentages of men who had worked on farms among those who were in irregular or casual work or out of employment in February–April, 1906 :—

TABLE C.

Source of Statistics.	Number of Men questioned.	Percentage of Men who had worked on Farms.
LONDON.	Per cent.	Per cent.
Salvation Army and Church homes and shelters (a) - - - -	455	11
Distress Committees in Stepney, West Ham,* Bethnal Green, Hampstead, St. Pancras, Paddington, Marylebone, Hammersmith, Bermondsey (b).	5,172	4
Dock Labourers (c) - - - - -	465	11
Labourers and others in irregular employment in Poplar and the Isle of Dogs (d).	81	11
PROVINCES.		
Newcastle-on-Tyne Distress Committee (b) - - - - -	224	3

* The number of men who were questioned for this purpose at West Ham was 717.

- (a) Investigated by two special investigators.
- (b) Investigated by secretary or member of Committee.
- (c) Investigated by an official of a Dock Labourers' Trade Union.
- (d) Investigated by a correspondent.

It will be seen from this Table that among this class of men the proportion of those who had been farm labourers is not large. In the Church Army and Salvation Army Institutions, and among dock labourers, the proportion is 11 per cent. The proportion among men who applied for relief to Distress Committees in London is much smaller (4 per cent.).

In addition to the figures given in Table C, the Church Army and the Salvation Army officers obtained, from about 5,000 men in their shelters and homes, information as to whether they had been accustomed to farm work. But the information sent is unreliable, and contrary to what officers of great experience in those organisations know to be the case. The proportion from these sources, according to the replies of about 4,000 men in London, is 17 per cent.; and of about 1,000 men in provincial towns is 20 per cent. In both cases this percentage of men accustomed to farm work is larger than that of those country born, which suggests that the figures as regards farm work are untrustworthy. The large percentages are probably due to some extent to the fact that a number of men, upon being asked, when they come to a soup kitchen or shelter, if they have ever worked as a farm labourer, reply in the affirmative, because they think that possibly it is the intention to offer them some work in the country. Again, numerous men say that they have worked on a farm if they have simply gone hay-making or "hopping" in the summer, or done a little casual potato lifting when on tramp in the country. Although the officers and superintendents of the Salvation Army and Church Army were asked to exclude such men, it was probably often impossible to question them sufficiently on this point, particularly at soup kitchens and shelters. Further, to get at the real truth, in many cases would require a skilled investigator, with a knowledge of agriculture. On the other hand the particulars referring to the Salvation Army and Church Army, which are actually included in Table C, were obtained by two investigators who took great pains to interrogate each man closely on this particular matter, and it will be seen that the figures are smaller than those just mentioned.

The figures in Table C certainly show that a comparatively small proportion of men among the London unemployed have a knowledge of farm work. If it had been possible to ascertain from each man the extent of his knowledge, the length of time he had served on a farm, and the number of years since he had been a farm labourer, the sum total of agricultural knowledge would probably amount to comparatively little. As illustrations of this it may be of interest to give some particulars of cases, furnished by the Paddington Distress Committee and by investigators at Church Army and Salvation Army Homes.

Out of 298 applicants to the Paddington Distress Committee, the following 14 (4·7 per cent.) had some knowledge of farm work :—

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

1. A stoker, aged 43, had worked on land and understands steam plough and machinery.
2. General labourer, aged 24, was at farm work when a boy.
3. Carman, aged 24, was at farm work when a boy.
4. Labourer, aged 28, was a farm labourer for five years.
5. Carman, aged 29, was at farm work when young.
6. Labourer, aged 36, was hedging and ditching in the country several years ago.
7. Gardener, aged 37, was at farm work when young.
8. Labourer, aged 38, was at farm work before 1887, afterwards in the Army.
9. Labourer, aged 38, was at farm work when young.
10. Labourer, aged 45, was at farm work and driving some years ago.
11. Labourer, aged 49, was at farm work until 12 years ago.
12. Labourer, aged 49, was brought up on a farm and did farm work until 1885.
13. Labourer, aged 50, was at farm work when young.
14. Blind maker, aged 54, was at farm work and garden work when young.

The following examples of men with some knowledge of farm work are taken from notes made by investigators at Church Army and Salvation Army Homes :—

Labourer, aged 45, born in Liverpool, was 12 years in the Regular Army and afterwards worked as a farm labourer at Sittingbourne for 7 years, left this employment 7 years ago.

Asylum Attendant, aged 30, born in rural district in County Dublin. Lived on his father's farm till 23 years old. Understands general farm work, and particularly cattle.

Cattleman, aged 46, born in a rural district in Nottinghamshire. Till 30 years old worked as cattleman in Notts. Also understands sheep and pigs.

Miner, aged 41, born in a rural district in Herefordshire, did general work on a farm for 3 years in Herefordshire up to two years ago.

Horsekeeper, aged 51, born at Dawlish, was a horse and cattleman on a farm in Herefordshire for 11 years (left in 1905). Was in the Army Service Corps 12 years (23 years ago).

Carman, aged 28, born at Leeds, worked for 18 months on a farm when 13–14 years of age.

Painter, aged 35, born at Marazion (Cornwall), 20 years ago worked for 1 year on a farm.

Gardener, aged 47, born at Newbury, worked among horses, cows, poultry, &c., 10 years ago; was in the Army Service Corps till 1890.

Storekeeper, aged 50, born at Sheering, Harlow, Essex, lived on father's farm till 30 years of age. Understands horses and stock.

Farm Carter, aged 20, born at Tunbridge Wells, was horseman on a farm for $2\frac{1}{2}$ years. Left in October, 1905.

The experience in Birmingham appears to be much the same as in London. Mr. T. Tillyard, writing in the "Economic Journal" in December, 1905, with reference to the work in connection with the unemployed in that city, says :—

"There is only one other fact which I want to mention, and that is the fate of the country immigrant. To all intents and purposes he was not among the recipients of relief. Very soon after the starting of the fund we had some applications from farmers for labourers with some experience of country life and country work. They would have been content with anyone born in the country and brought up to farm labour during boyhood and youth. Town-bred men they did not want. These offers of employment were sent round to the district secretaries, who were very keen on getting men to work. We filled up three situations, but could not fill up a fourth. Besides the three men actually sent, I interviewed two others, who were country-bred and out of work, but who preferred to stay in Birmingham, as they thought their children would have a better chance here than in the country. Five men out of 7,000 is a negligible quantity. . . . But evidently the country immigrant is a respectable thrifty citizen who does not come on relief funds."

In the appendix some details are given of a number of individual cases of irregular work or unemployment, and its causes.

B. *Persons in Regular Employment.*

Turning now to the evidence relating to those in regular employment, the following Tables (D. and E.) give particulars as to the proportion of town-born and country-born men employed by certain large employers of labour in London and the Provinces respectively, and also the percentage of those who have (to whatever extent) worked on farms.

* In some cases the employers questioned all their workmen, but in others they took a number of men forming a representative sample.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

Of the total number (19,496) of men employed in London in the occupations set out in Table D, 8,957, or 46 per cent., were country-born, and 4,201, or 22 per cent., were accustomed to farm work. Of the 22,569 men in the provinces (Table E), 9,217, or 41 per cent., were country-born, and 5,848, or 26 per cent., were accustomed to farm work.

In London, out of 5,657 policemen in the "Inner Divisions," 66 per cent. are country-born and 25 per cent. have been accustomed to farm work.

Four large London breweries have the following percentage of their men who have been farm labourers: 23, 31, 35, and 37. In two of these cases the proportion of country-born men is about 50 per cent., and in another case 65.

Out of 4,952 men employed by the South Metropolitan Gas Company, one-fourth have been farm labourers.

A well-known company which does a very large general business in and around London, and also a very large contractor, have former farm labourers in their employ to the extent of 24 per cent. A large railway company has 18 per cent. of goods porters at the London terminus who were farm labourers and 47 per cent. of the stablemen. Two other large railway companies have 27 and 20 per cent., respectively, of former farm labourers among men in their London stations.

Turning to the provinces and the occupations set out in Table E, 91 per cent. of a representative section of the Glasgow police are country-born and 47 per cent. have worked on farms.

Taking 12,558 workpeople employed by sixteen large municipal corporations in England, 37 per cent. were country-born and 22 per cent. have been farm labourers. In Wales 41 per cent. of 346 workpeople employed by the Corporation of Cardiff were country-born, and 21 per cent. have been farm labourers, while in Scotland, out of 6,999 employees of the Glasgow and Dundee Corporations, 47 per cent. were country-born, and 36 per cent. were formerly employed on farms.

Of the Midland Railway men employed at Derby, out of 600 men, 49 per cent. were born in rural districts, and 22 per cent. have been farm labourers. These men are employed in the following departments: goods, coaching, locomotive, engineer's, carriage, and wagon.

According to information given by a number of employers, most of the men who come to London from rural districts do so while under twenty-five years of age, and they usually secure their situations beforehand. The manager of a large business in London, where 60 per cent. out of nearly 500 men are country-born, states that he prefers men from the country to Londoners, as they are more steady and reliable. A similar statement was made by a responsible official at one of the London railway termini.

The following Table, showing the districts where the men employed by the South Metropolitan Gas Company were born, is perhaps of sufficient interest to be inserted here. Taking those born in country districts, it will be seen that the numbers decrease as the distance from London increases. This, however, is probably due in part to absorption by other large towns in the Midlands, the North, and South Wales. The proportion of men from rural districts in Rings 1 and 2 (37 per cent. of the total number of employees who were born in England and Wales) is very large.

APPENDIX No. XXI. (J).—*Continued.*

Handed in by the Board of Trade. (Q. 98827.)

TABLE showing the DISTRICTS in which the MEN in the EMPLOYMENT of the SOUTH METROPOLITAN GAS COMPANY were born.

Conclusions.

The investigations which have thus been summarised appear to justify the following conclusions:—

(i) The greater part of the poverty and distress prevalent in London and the large provincial towns is amongst the town-bred part of the population, and not among the country-bred.

(ii) The countrymen who migrate to large towns are, in the main, physically strong and of good character, and frequently move to the towns to fill definite positions which have been secured beforehand.

(iii) Such men generally obtain good employment, especially in outdoor trades, which resemble somewhat those to which they have been accustomed in the country, and in situations requiring special steadiness and reliability.

(iv) That country immigrants do not, to any considerable extent, directly swell the ranks of those who are more or less in a chronic state of unemployment in the large towns. The unemployed of this class are, in the main, town-bred, and recruited from those who have sunk to the bottom of the social scale.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

NOTES ON INTERVIEWS IN SALVATION ARMY SHELTERS AND SOUP KITCHENS DURING FEBRUARY AND MARCH, 1906.

No. 1.

Aged 25. Married. A carpenter, who understands blacksmith's work. Was driving an electric car in Manchester. Came to London two years ago. Has had no regular work since last August, except for two weeks. Recently broke up his home. His wife is now in service in Whitechapel.

No. 2.

Aged 28. Is a labourer. Irish. Unmarried. Born in Dublin. Father a labourer. Was at Paddington Station four years as porter. Then went to East End, and was employed in a butter factory. Left there two weeks ago, and has had no work since. Sleeps anywhere he can, one night in, and three nights out.

No. 3.

Aged 30. Unmarried. Father was a waiter in London. Was a clerk originally, afterwards was in the kitchen of a large London restaurant; also time-keeper in a large hotel; also ledger clerk with a company. He has been out of work for 12 months. Used to drink a bit. Says he does not do so now. Is living from hand to mouth. To-night is his first night out. His sister helps him sometimes.

No. 4.

Aged 31. Born in Ipswich. Father a nurseryman. Widower with three children, one child with his mother, another with his brother, a third he pays for, but has no money to do so now. Has been to London 14 years. Is a carpenter by trade. Been out of work from three weeks before Christmas. Has pawned his tools, and is living from hand to mouth. Has slept out on several nights lately.

No. 5.

Aged 29. Came from Bradford. Is a mason. Unmarried. Was in the Royal Engineers for five years, and has a very good discharge April, 1905. Since has worked as bricklayer at Salisbury Plain on new barracks. Then came to London and worked as labourer for London County Council up to two weeks before Christmas. Has had no work since, and has lived on savings. Has now spent all.

No. 6.

Aged 61. Born in Surrey. Father a cooper. Has been at sea all his life in fishing boats, trading vessels, liners, and all sorts of ships. (Produces discharges.) Came from Grimsby two weeks before Christmas, and has been living on a few shillings he had saved, now he has nothing. Came to Salvation Army to-night for the first time. Hopes he may get some work on a boat this summer, but fears that he is getting old.

No. 7.

Aged 25. Came from Sheffield. Unmarried. Father alive, who works at a silversmith's. Was an improver in tin trade. Came to London 18 months ago on account of slack trade, and got a job looking after a trap. His employer sold his business. He then got ill, and went to hospital for a month. Since he came out, a few weeks ago, has had no work, and has walked about since Sunday morning (four days). Is very thinly clad.

No. 8.

Aged 31 years. Born at Brighton. Unmarried. Father a cab proprietor. When a lad he helped his father, who died 16 years ago. Has since been in London selling toys and flowers in the street. Things have been bad lately, and he is now entirely out of funds. Is on the look-out for work, but has no trade.

No. 9.

Aged 20. Came from Hampstead, where his parents lived with their family of three girls and three boys. Is in the Militia, and when serving last summer his parents deserted their home and children, and have not been seen since. The Barnardo Homes sent a sister to Canada, and they have two sisters, one about two years old, and a brother in their homes in England now. One brother has gone to sea. Up to August last worked on tube railway construction, since then has done nothing, and has slept anywhere—outdoors or in vans. Tried for the Army, but was rejected on account of bad teeth. Would like to go to Canada.

No. 10.

Aged 26. Unmarried. Came from a large town in the Midlands. Father was manager of gas works. Was a clerk in Sheffield. Been in London four years, during which time he had work for three years as bookkeeper and dispatch clerk. For the last year has only had irregular work, and very little since last August.

No. 11.

Aged 22. Unmarried. Born at Dulwich. Father was a clerk. Does not know where his father and mother are. Has not seen them for five years. Is a carpenter. Out of work for last three months. Has had several nights out in the streets lately.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

No. 12.

Aged 27. Unmarried. Came from Edinburgh six years ago. Was in a draper's shop there. Has been in two shops in London. Out of work since February 1905. "Got the sack" owing to slack trade. Clothes so shabby it is difficult to get work. Has slept out for several nights lately. Is ready to do anything.

No. 13.

Aged 55. Born in a town in Berkshire. Father a gardener. Was in police 1880-2, in a country town, and says that he resigned. Has since worked as a general labourer, and at gas works. Married in 1871, wife dead. Had four boys. They all left him ten years ago. Youngest was five years old. Admits that he drank. After this he lived in London, and has worked in the building trade, as a labourer, and at bill-posting and as a "sandwich man." Has often been a "sandwich man" during the last four years. Always goes "hopping" in Kent in the summer. Has slept in Salvation Army shelters ever since he came back from "hopping" last summer.

No. 14.

Aged about 60. Born in a small country town. Father a publican. His relations were small farmers. Lived on a farm up to twelve years of age with his grandfather. After that lived in a country town, and was apprenticed to a plumber and painter. For seven years after his father died he managed the public house. He had a bit of money left him and then went into the coal business and this failed. He then had a serious illness, and then worked at his trade in different towns all over the country. He has now been in London two years trying to work at his trade. Has been very unfortunate, doing nothing for months. It is not easy to get work owing to his age. Three months ago he went on the tramp for work, and got as far as Devonshire. He had to go to a casual ward there for the first time. Last week he was living in a lodging in Westminster. Never was at the Salvation Army shelter before to-day, but has no more money. He walked about all last night, getting a sit down where he could.

No. 15.

Aged 45. Single. A grocer. Born in London. Brought up near London. Was apprenticed to a Co-operative Society near London for six years. Afterwards worked at a good many other Co-operative Societies in different parts of the country. Had a good deal of ill-health for some time, and subsequently got work on a railway, getting employed as a signaller later on. Was in the service six years. Resigned owing to a row about the signals. Then went back to his trade. Afterwards went to another railway. Was there 12 months, but left owing to night-work. Then went to another railway in London. Was there six months, but left on account of illness. This was three years ago, and he has had no regular work since. Has done bill delivering, and board carrying. Is sleeping at Salvation Army shelters some nights and walking about other nights.

No. 16.

Aged 64. Born in London. Sells oils and whipcord to cabmen. Was a bandsman in the Grenadier Guards for 12 years, beginning at 15 years of age. Was also in a Navy band and was on several Men-of-War. Has done a lot of Militia training as a bandsman. Has been selling in the street for three years. Has been lodging with Salvation Army for a month.

No. 17.

Aged 58. Born in Jersey. Was at school in France. About 23 years of age came to London. Got a situation in an hotel in the West End of London. From 23 years of age up to last October was in regular work at hotels and with good families. Says that he saved £200, but was swindled out of it by a person to whom he gave it for investment. During the last two weeks has walked about the streets for seven nights, on four of these nights went to Salvation Army soup kitchen. Has had to pawn most of his clothes, so it will be very difficult to get a place as waiter. Is ready to do anything.

No. 18.

Aged 54. Father was a miller in the West of England. Lived there until he was 17. Was educated in a Grammar School in the country. Came to London at 17 years of age. Was Assistant Master at two private schools in London up to 21 years of age. Then returned home, being unwell, owing to his working too hard trying to matriculate. The doctor advised an outdoor life, so he travelled for a brewery for four and a half years in the country. Then he travelled for a wine and spirit merchant in a large town for 20 years. Then he took to gambling, and got wrong with his accounts, and ended by being discharged. He was then making £300 a year, salary and commission, and his home was sold up. He was married and had a daughter. Both wife and daughter are living now. He came from the country to London in January last, thinking he might get work from a relative who is connected with the building trade, but they cannot employ him as he knows nothing of the trade. He had £3 when he came to London, but this is all gone now. When he first came up he slept in a coffee-house, then in Rowton House, and he has been sleeping at the Salvation Army for the last four nights. Says that he has no one to thank but himself for the plight he is in. Thinks it hard that he should be punished all his life for what he did.

No. 19.

Aged 46. Unmarried. Came from a large town in the Midlands. Father was a tallow chandler. Was apprenticed to the drapery trade. After that was a well-to-do draper's assistant. Was in a seaside town for 10 years in the same place. Afterwards was in London in the same capacity. Three years ago went for a week on the "bust," and lost his place in consequence. Says he has been very heavily punished for this, as

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

he has been doing nothing ever since. For a short time he was odd porter at a London hospital. Has superintended men giving bills away in the street, and jobs of that sort. Has nearly come to the end of the chapter with a few coppers. He says that it looks like his becoming a tramp, though he longs to be a respectable man, and really wants a chance and some work. He adds, "I have only made one silly blunder; it is very hard. I shall gradually get more untidily dressed and sink. I have very nearly lost my pluck and sometimes I want to get out of it all."

No. 20

Aged 34. Born in Scotland. Was in the Gordon Highlanders at 18 years of age. Served in the Tirah Campaign; also in South Africa—was at Belmont, Graspan, Modder River, Magersfontein, Paardeburg, and Diamond Hill. Went into Pretoria with Lord Roberts and afterwards was with Sir Ian Hamilton. Left the army in 1902 with a good discharge. Has been doing casual work in the London Docks. Is at present doing some work with the Salvation Army. Would like to go to Canada.

No. 21.

Aged 32. Was in the Coldstream Guards. Was 3 years in South Africa and fought under Lord Methuen. Left the army in 1903. Good discharge. Was uniform man at a London hotel. Was head porter at a hotel near London. Then worked in Windsor Park as a labourer. Understands engines. Is married. His wife is matron at an institution in Yorkshire. His boy of 11 years of age is with his wife's parents. His own father was an engine driver on the Great Northern. Is now employed by Salvation Army looking after engines. Is anxious to find some employment and get his home together. Would be willing to go to Canada.

No. 22.

Aged 30 years. Born in Somers Town. Remembers no parents. Can remember being taken to the police station at 6 years old for stealing. When a small boy lodged with an old man and woman who had three or four other boys and girls there. They kept a place for drinking and gambling, and enticed people in. The children were kept there to pick the people's pockets. About 12 years of age he was brought before the magistrate at Clerkenwell for stealing and sent to a reformatory. At 16 he came out and he was got a situation at shoemaking. After two months he ran away and got back to Somers Town, where he found his old chums. From the age of 16 up to the time of the King's Coronation he was in and out of jail. He thinks that he was never out of jail more than a month at a time. When he was 18, he got 12 months for stealing a watch. A few weeks after he had come out of prison for this, he got 18 months for housebreaking. At the Queen's Diamond Jubilee he got 5 years for stealing, and assaulting the police. The judge said that if he came before him again he should have the "cat." The first 9 months of this sentence he spent at Wormwood Scrubs, the rest of the time he was at Dartmoor. Then he went on the tramp in the country and had several convictions for begging. The last time he was in St. Albans jail. When he came out he went up to London for the King's Coronation to see what he could "pick up." He got drunk, had most of his clothes stolen, and found himself in Hyde Park. A gentleman told him that he would give him in charge unless he would go down to the Salvation Army, and he went there. He is now working for them in a shelter.

No. 23.

Aged 50. Born in London. Unmarried. Was a horse-keeper and so was his father. When about 26 years of age "got the sack for speaking a bit sharply." Did not keep his time properly, and once or twice got drunk. Ever since then has been a sandwich man and bill distributor, takes 6s. or 7s. a week full time. Has been in the union a few times, but would rather walk about than go there as he has to do stone-breaking. Last time he was there he got into trouble as he refused to do the work. Cannot get a place as he has no character.

No. 24.

Aged 47. Born in London. Unmarried. Father was a clerk. Learnt building all round. Has had two businesses of his own, employing six or seven men, painting, decorating, glazing, &c. Had no capital and lost his business twice and then had to go as a journeyman. For the last five years, owing to depression in the building trade, his work has been very irregular. Is in very low water. Had nothing to eat all day. Borrowed 2*d.* for a bed.

No. 25.

Aged 21. Unmarried. Born in Poplar. Father did odd work at the docks. Father died five years ago and mother three years. Has a sister 23 years of age somewhere in Berkshire in service. After leaving school went to some works near London where they make telegraph plant and was there 4½ years; then went to some work at Greenwich, and after 15 months left there owing to slackness of trade. Then he worked on the Rotherhithe tunnel for four months; then on the new tramway from Lewisham to Catford. Since then has done a few days' work at the docks.

To-day in the morning he helped a coal man unload in the Strand and got 2*d.*; in the afternoon he went over Waterloo Bridge and met a man selling coke and he helped him and got 4*d.* "To-night I have paid 2*d.* for my bed, 2*d.* for my supper, and I have 2*d.* left. This is my life now." He has come to the Salvation Army Shelter for the last six weeks, except three nights he slept out.

No. 26.

Aged 56. Widower. Born in Ayrshire. Has two sons both engineers in Glasgow. Has not seen them for some time. His daughter, aged 19, is living with his sister. Father was an engineman in Scotland. Went into the Navy at 16, and remained there till 30. Then worked for a telegraph company as a wireman, and for the General Post Office up to two years ago. Says he was paid off when they reduced the staff as he was one of the older men.

He now delivers bills, addresses envelopes, carries boards. Earned 3s. last week, and can only just exist on that. Says his clothes are too bad to enable him to get a job.

APPENDIX No. XXI. (J).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

No. 27.

Aged 36. Born at New Cross. Unmarried. After leaving school was boy porter at hotels. Up to eight months ago was plate cleaner at a large hotel near Trafalgar Square. Got discharged from there, owing to "going on the bust" for a few days. "Have only done a few odd days there since, but hope to get back when the season begins. Am walking about now doing nothing. I have had a lesson walking about all night. It is cruel perishing at night, enough to make you wish you were dead. Jolly sorry I didn't look after my place better. My sister helps me sometimes; she is married and you can't go there too often."

No. 28.

Aged 30. Unmarried. Born in London. Father is fruiterer and greengrocer. Helped his father till 24. Then went to sea as a ship's steward. Left an American liner because he "made a fool of himself and got the sack" (in 1902). Then went to the Docks in Southampton. Was laid up nearly all 1903 in Southampton Infirmary. Has been in London 15 months "knocking about." Last summer for three months was gruelling horses for the Road Car Company. Since then has been distributing bills or any odd jobs.

No. 29.

Aged 52. Born in Salford. Widower, one daughter, aged 20, alive. Father was lithographer and printer. Served his time in the North as a packing case maker. Worked with the same firm till 30. Then worked at his trade in a Lancashire town for six years. After that did labouring work in Birmingham and London up to 1900. Then worked at Newhaven and at Southampton Docks till 1903. Was in the Southampton Infirmary a long time, and then worked at the Docks there again till last August when he came to London. Has since then been carrying boards and delivering bills. Health is very bad.

No. 30.

Aged 55. Widower. Born at Knightsbridge Barracks; father and grandfather were in the 2nd Life Guards. When he was seven years of age his father died. His mother went to Lancashire and he worked in the mills from 8 to 11. His mother returned to London and married again. For 18 months he was then errand boy at a shop. Then went as indoor boy in a house near Eaton Square for 3½ years. Then went as servant to a peer, and remained there till 1868, when his employer died. He stayed on with his late employer's brother who succeeded to the title. This employer died in 1873, but he remained as valet to his son who succeeded to the title. His late employer left him £500. In 1875 he set up a confectionery business with his wife, who had been cook in his last place. He lost his money in this business. He then was butler to a Cabinet Minister, and subsequently was glass butler to the Lord Lieutenant of Ireland, after that was butler to a lady in London up to 1901, when she died. Then lived on the little money he saved, and has been carrying boards ever since.

APPENDIX No. XXI. (K).

Handed in by the Board of Trade. (Q. 98827).

INSURANCE AGAINST UNEMPLOYMENT IN FOREIGN COUNTRIES.

I.—INTRODUCTION AND SUMMARY OF CONCLUSIONS.

The defining characteristics of “insurance” in a commercial sense are the following :—

1. That in return for premiums paid the persons insured obtain a legal right to compensatory payments on the occurrence of specified misfortunes—fire, burglary, shipwreck or the like.

2. That the premiums paid by the whole body of the insured should be so adjusted as to cover the payments out, together with administrative expenses and undertaker's profits.

It does not appear that anything in the nature of insurance against unemployment, in this full commercial sense of the word, is to be found in any country. One or other, if not both, of the defining characteristics is lacking. The systems of unemployed benefit or out-of-work pay organised by trade unions are self-supporting in the sense that all payments out to members are covered by their payments into a common fund. But the payments in are as a rule neither specifically allocated as premiums to the purpose of this insurance nor actuarially adjusted to meet its claims (being capable of indefinite expansion in the form of extraordinary levies), and the payments out are not the subject of a legal claim. In the two leading cases—the United Kingdom and the German Empire—a legally enforceable right of unemployed members of a trades union to out-of-work pay is expressly excluded: in the United Kingdom by Section 4 of the Trade Union Act, 1871; in the German Empire by the regulations of the trade unions themselves, framed specifically to avoid the laws governing insurance companies. On the other hand schemes of direct municipal insurance of the unemployed as found in operation at Berne and Cologne, though they may give a legal claim to the insured person, are in no case self-supporting. The premiums paid by the insured have to be supplemented by grants from public funds or by voluntary donations. Finally, the so-called “Ghent system” of public subventions to trade unions or other thrift associations paying allowances to their unemployed members implies a direct abandonment of the attempt at insurance upon commercial lines.

The word “insurance” must therefore, in regard to unemployment, be taken in a looser sense as implying any system for providing compensation or allowances to unemployed workpeople, in which :

1. The payment out of such allowances is conditional upon the previous payment in of specified contributions on the part of the insured—whether such contributions are actuarially adequate or not.

2. The allowance is definite and claimable as of moral if not legal right, without any diminution of self-esteem.

The various schemes and proposals described below, as all falling within this looser definition, are of five main types.

(A) Trade Union Unemployed Benefit on a self-supporting basis (United Kingdom, Germany, and, to a smaller extent, almost all other industrial countries).

(B) Direct Voluntary Insurance of individuals by a municipal Fund (Berne), by a private Fund (Leipzig), or by a private Fund with municipal support (Cologne, Basle, Bologna to 1901, Venice).

(C) Direct Compulsory Insurance of individuals by a municipal Fund (St. Gall).

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

(D) Subventions to Trade Unions or other associations making allowances to their unemployed members. The subvention may come from voluntary sources (Milan) or public sources, which may be either national (Denmark, France) or local (Ghent, Antwerp, Strassburg, Dijon, Limoges, and other French towns), or both in combination (Norway).

(E) Subventions in Aid of Individual Saving (Ghent, Bologna; since 1901, La Rochelle). This perhaps is even further outside the strict conception of insurance than the other four types, as it does not involve sharing of risks between a number of persons. The payments made by the workpeople are not of the nature of irrecoverable premiums, but are deposits withdrawable during unemployment, with a bonus from the municipality or state.

The first of these types—trade union unemployed benefit—is dealt with below only in outline. Schemes falling within the other four classes are described as they occur in each of the countries concerned. The general points of most importance arising out of this description are the following:—

1. The tendency of schemes for direct voluntary insurance against unemployment (Class B) to remain on a small scale and to attract or retain only the “bad risks” (*i.e.*, persons very likely to become unemployed) so that the expenditure cannot be met out of the premiums. The membership in 1906-7 of the Cologne Fund was 1,155 (11th year of working); of that at Berne 614 (14th year); of that at Basle 457 (6th year). The percentage of this membership becoming unemployed was 84·8 in Cologne, and 42 in Berne. The proportion of premiums paid to allowances received by the insured has been on an average 50 per cent. in Cologne, 23 per cent. in Berne, 40 per cent. in Basle. In each of these towns the great majority of the insured are builder’s operatives and labourers, and the Fund provides in effect a regular municipal or voluntary subsidy to meet recurrent seasonal depression. The same tendency to accumulate bad risks is observed in schemes of Class E for encouraging by means of a subvention individual saving against times of unemployment. The Leipzig Fund alone, during the first year of its existence and for a membership of 143 shows an excess of premium income above expenditure.

2. The great differences of the risk of unemployment as between different occupations and the consequent necessity of discriminating between them in any general scheme in respect of either the premiums charged or the allowances payable, unless it is desired to throw upon the regular trades a very large part of the burden of irregularity in other trades. All insurance involves the principle of solidarity, *i.e.*, payment by the more capable or more fortunate for the disproportionate loss of employment on the part of those who are less capable or less fortunate. Yet the principle of solidarity clearly cannot be carried successfully beyond the point up to which it is supported by the sentiment of solidarity. The attempt to carry it too far leads to open revolt against compulsory schemes as at St. Gall, and abstention from voluntary schemes as at Cologne and Berne.

3. The growing popularity of the plan of subsidising trade unions or other associations which make provision against unemployment (Class D). This, the so-called “Ghent System,” has since its institution in Ghent in 1901, spread to all the principal Belgian towns. In France (1905), Norway (1906), and Denmark (1907), it has been adopted by the State. It is applied by many of the French towns in making grants to unemployed funds. In Germany it has been adopted by the municipality of Strassburg (1906), and has come into the region of practical politics in Munich (1905) and elsewhere. In Italy it has been applied by the Società Umanitaria of Milan (1905). In Switzerland it has been adopted after the failure of direct compulsory insurance in St. Gall (1905) and is now proposed in Basle (1907). Its introduction has undoubtedly in certain cases at least been accompanied by a great development of unemployed benefits on the part of trade unions anxious to participate. On the other hand:—

(a) It is not clear that the system of trade union unemployed benefits has anywhere, through the stimulus of public subventions, been extended to classes of workmen other than those already making this provision on a

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

self-supporting basis in the United Kingdom. The great bulk of those claiming the public subvention are drawn from highly skilled and organised trades—such as printing, cigar making, diamond working. The unskilled and semi-skilled occupations—in which the bulk of distress through unemployment is found in the United Kingdom—do not appear as yet to be touched by the Ghent system anywhere. In Strassburg the hope of reaching these classes in this way is expressly abandoned and annual relief works are contemplated as the only resource for the seasonal labourers.

(b) The success of the system has been practically confined to giving a new activity to organisations (trade unions) already in existence. The supplementary provision made at Ghent and elsewhere for unorganised workmen has been either a total failure or a not altogether gratifying success. At Strassburg and in most of the French towns it has been deliberately left out, and the benefits of the municipal subvention have been absolutely confined to men in trade unions, in spite of the objections raised on social and political grounds to thus forcing workmen to join such associations.

The Report of the Ghent Insurance Fund for 1904-5 draws a contrast between systems of direct individual insurance and systems of public subvention to provident associations, very much to the advantage of the latter, as involving a larger proportion of self-help. The percentage of unemployed allowances met by public or voluntary grants as opposed to members' contributions is given at 62·6 for Berne (1903), 56 at Basle (1903-4), 55·6 at Cologne (1905), 70 at Bologna (1900), 75 at Dijon (1901), 92 at Liège (1904)—all these being schemes of direct insurance. Under the Ghent system the corresponding proportions are 34 at Ghent (1901-5), 34 at Antwerp (1902-4), 32 at Louvain (1904), 33 at Malines (1904), and 27 at Milan (1905). The two systems, however, deal in practice with absolutely different classes of workmen. The funds at Cologne, Berne and Basle, while all expressly excluding the lowest class of casual labourer, do provide for the class next above him—the unorganised seasonal labourer in building and similar occupations. The subventions at Ghent, Antwerp, Milan and elsewhere, are almost wholly confined to trades skilled and well-organised in most countries. Moreover, the proportion of self-help to public assistance in the Ghent system is not a result of practical working, but a percentage fixed arbitrarily beforehand and can be made as high or as low as desired by a change of rules.

4. The almost universal emphasis laid upon the importance of attaching to any scheme of insurance against unemployment some definite machinery for putting the insured in touch with such employment as offers, and for so protecting the fund against avoidable claims. In Cologne and Berne the Insurance Fund and the public Labour Exchange are practically amalgamated. In Strassburg, Milan and Antwerp receipt of subvention by an unemployed person under the "Ghent system" is conditional upon his registration at the Labour Exchange; in Ghent itself the necessity of this rule is formally recognised in the last Report of the Fund. The State subvention to unemployed benefits in France can only be claimed by unions having an organised method of finding employment for their members. The Norwegian law providing for such subventions was passed in direct connection with another law providing for the general establishment of labour registries. In St. Gall the law authorising compulsory insurance expressly required the connection of every insurance fund with at least one labour exchange. The Danish law does not formally mention registries or exchanges but contemplates the notification of work by the committees of insurance funds to unemployed persons, and lays upon the latter the obligation of accepting such work.

To sum up: Insurance is on the one hand the purchase of indemnity partial or complete against specified risks, on the other hand the formation out of the purchase money (premiums) of a common fund from which indemnities are paid. Where for each of a number of persons a particular risk, here that of unemployment, is substantially equal, insurance against it may develop among them voluntarily and for its own sake on a self-supporting basis. Where the risks for the different individuals are not substantially equal, or are not felt to be so, the development of voluntary

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

insurance will be checked by the unwillingness of those less exposed to risk to join the others in purchasing indemnity on equal terms. In regard to unemployment, inequalities of risk are very marked both as between different trades and as between individuals in the same trade. It therefore becomes necessary either—

1. To adjust the inequality of risks by a corresponding differentiation of premiums (or of allowances), or
2. To re-inforce the simple motive of insurance—purchase of indemnity—by some other motive so as to cause the inequality of risk to be less regarded.

The first method, that of differentiating or grading premiums, appears best suited to adjust inequalities between different trades. It is implicit in the organisation of unemployed benefits by trade unions since this provides a completely separate insurance fund in each trade. It has not been applied in any of the general or municipal schemes hitherto put into practice except that at Leipzig, which is on a very small scale. Failure to differentiate between trades was one of the principal reasons of revolt against compulsory insurance in St. Gall. The voluntary schemes at Cologne, Berne and Basle treating all trades alike, have become practically confined to a single trade—building—subject to a high risk of unemployment; others hold aloof. In Cologne and Berne this result is no doubt due also to the limitation of relief to the winter months; in Basle there is no such limitation.

The second method—that of re-inforcing the motive of insurance by some other motive—may take several forms. First, the fresh motive may be the desire to protect a standard wage by keeping unemployed competitors from absolute want. It is this that to a large extent maintains the system of unemployed benefits in trade unions. The more capable and more regular workmen are willing to pay for benefits which are used to a disproportionate extent by the less capable and less regular, because only by doing so can they keep the latter from cutting rates of wages. Second, the fresh motive may be provided by a bonus on insurance contributed from some outside source. This in effect is applied in the various schemes of direct voluntary insurance involving a heavy contribution from the municipality (Cologne, Berne, Basle), or from private donors (Leipzig), or both. The men less exposed to risk may feel that they lose by being compelled to pay the same premiums as those more exposed to it, yet be willing to contribute in order to secure the benefits of the municipal or charitable subscription. In practice it has to be admitted that this second form of re-inforcing motive has not shown itself to be very powerful. The schemes at Cologne, Berne and Basle remain confined not only to a special trade but to a small fraction of that trade. The men almost certain to be unemployed winter after winter insure readily; the more regular building operatives hold aloof with the rest. Third, the two motives just mentioned may be introduced in combination. This is the essence of the Ghent system of public subventions to trade unions. Insurance is thus encouraged both by the trade union motive—of protecting the standard rate—and by the prospect of a bonus from without. Pressure to join a trade union is—at a price—converted by the municipality into pressure to insure against unemployment. Fourth, the possibility of an entirely new motive—the desire to be assisted or receive preference in the search for employment—is coming to be applied in Germany. The Labour Exchange and the Insurance Fund at Cologne are worked in the closest possible connection with one another and men insured in the latter receive special consideration—at least in respect to municipal work—from the former. In Berlin the strong position of the Labour Exchange of the Brewers' Association enables it to charge a small registration fee to all applicants, thus forming a fund which is used for the relief of distressed individuals. A definite scheme for the development of this plan into an organised system of insurance resting upon the practical control of the labour market by the Exchange has been proposed, but not yet put into practice. The importance of an efficient Labour Exchange in another relation to schemes of insurance against unemployment, viz., as affording a test of the reality and involuntary character of unemployment, has been already noticed.

Whether these methods or any others will be able so far to overcome the technical difficulties of unemployed insurance—marked inequalities of risk—as to

APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade. (Q. 98827).

make it generally applicable to all grades of workpeople can only be determined by much more experience than is at present available.

II.—TRADE UNION UNEMPLOYED AND TRAVELLING BENEFITS.

No attempt can be made to describe these in detail for all countries, nor is any general comparison easy. The following table gives certain comparative figures for foreign countries on the authority of the International Report of the Trade Union Movement in 1905, published by the General Committee of German Trade Unions, together with figures for the United Kingdom in 1906 prepared from the reports of all Trade Unions. The notes following give figures from other sources for certain countries.

It will be seen that the United Kingdom is first in respect of total expenditure upon unemployment; Germany in respect of the numbers in unions providing unemployed or travelling benefit; Denmark in the proportion of organised workers to the whole population.

TRADE UNION ORGANISATIONS IN 1905

---	Number of Trade Unionists.	Being (approximately) per cent. of Industrial Workers.	Number as to whom information has been received.	Per cent. of Total.	Expenditure on unemployment in 1905.	Expenditure per head of those as to whom information has been received.
United Kingdom (1906)	2,106,283	*	2,106,283	100·0	£ 513,778	s. d. 4 11
Germany - - -	1,822,343	24	1,726,932	94·8	146,072	1 8
Austria - - -	323,099	13	311,937	96·6	34,916	2 3
Denmark - - -	92,627	49	86,503	93·4	23,573	5 5
Sweden - - -	117,935	25	114,535	97·1	6,252	1 1
Norway - - -	18,600	5	16,887	90·8	2,964	3 6
Hungary - - -	71,173	16	71,173	100·0	8,442	2 4

* The percentage of industrial workers in the United Kingdom who are organised is given by the International Report of the Trade Union Movement in 1905 as 26.

United Kingdom.—The membership of Trade Unions giving unemployed or travelling benefit in 1906 was 1,456,977, or 69·0 per cent. of the membership of all trade unions.

Germany.—The payment of unemployed benefits has been greatly extended of recent years among the German Trade Unions. Of the "Free," or social democratic unions, only eight paid unemployed benefit in 1890. In 1900 the number had risen to 20 and the expenditure on this benefit (*i.e.*, exclusive of travelling) was £25,054. In 1906, a year of great prosperity, the number was 43, out of a total of 66 unions, and the expenditure £132,665. In the same year the total number of trade unionists was 2,215,165 (1,819,930 in 1905). In the three main groups of unions—Free, Hirsch-Duncker and Christian—containing between them 2,055,333, or 92·8 per cent. of the total membership, 1,883,109, or 91·6 per cent. belonged to unions giving either unemployed or travelling benefit. The total

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

expenditure of these three groups on these benefits in 1906 was £182,625, or 1s. 9d. per head of their membership, and 1s. 11d. per head of the membership in unions giving these benefits.

As compared with the United Kingdom Germany shows a much later development of the system of trade union benefit (especially since 1900), which has now, however, covered a larger proportion of the whole industrial field. On the other hand the benefits paid are as a rule lower, last for shorter periods, and are claimable only after a longer membership than is the case in the United Kingdom.

In comparing the total expenditure in the two countries it should be remembered that the year 1906 was in the United Kingdom a year of great depression in the building trade, which contributed 30 per cent. of the total expenditure, while both 1905 and 1906 were years of extreme prosperity in Germany, involving a relatively small expenditure.

Austria.—Trade Unionism in Austria has increased very rapidly of recent years from 189,121 in 1904 to 323,099 in 1905 and 448,270 in 1906. The expenditure on unemployed and travelling benefit has also increased, though not so rapidly, from £28,295 in 1904 to £35,503 in 1905 and £43,709 in 1906, the amount spent on these benefits per member of the unions being, therefore, 3s. 0d. in 1904, 2s. 2d. in 1905, and 1s. 11d. in 1906. No figures appear to be available as to the proportion of the total membership which is in unions giving these benefits. The expenditure is exclusive of certain payments in cases of distress amounting to £5,887 in 1905 and £13,018 in 1906.

Denmark.—The proportion of trade unionists to industrial employees is higher in Denmark than in any other country. Of 61 unions, with a membership of 62,849, for which returns were to hand in 1902-3, 48, with a membership of 40,863 (being 65 per cent. of the whole) paid £21,645 for unemployed and travelling benefits in 1902, and 42, with a membership of 38,104, paid £19,438 in 1903.

Sweden.—At the end of 1903, out of unions with a membership of 91,279, unions with a membership of 26,500, being 29 per cent. of all unionists and 10 per cent. of all industrial employees, paid unemployed or travelling benefit.

France.—Trade Union unemployed benefit is but little developed in France. According to an official inquiry made in 1902 there were then in existence 310 Funds, with a membership of 30,297, making provision against unemployment; 162 of these belonging to the Printers' Trade Union. This was only 5 per cent. of the organised workpeople and 0.6 per cent. of all workpeople. Of these 310 Funds, 285, with a membership of 28,209, made returns, showing an expenditure on unemployed benefits of £7,558, or 5s. 4d. per head of members in these Funds.

Switzerland.—The number of Trade Unionists at the end of 1902 was 51,291. Of these 8,441, or 16.5 per cent., were known to be in unions giving unemployed benefit, and 16,891, or 32.9 per cent., in unions giving either unemployed or travelling benefits.

III.—OTHER FORMS OF UNEMPLOYED INSURANCE.

I.—GERMANY.

(a) *Cologne: Direct Voluntary Insurance.*—The “City of Cologne Unemployed Insurance Fund” was founded in 1896 in pursuance of a resolution of the Town Council in 1894. Ultimate control rests with the General Meeting of patrons, subscribers and representatives of the insured, held annually between April 1 and July 1. The Executive Committee consists of 12 representatives of the insured and 12 honorary members (subscribers) elected at the General Meeting. In addition the *Oberbürgermeister* or his representative and the President of the Labour Exchange are *ex officio* members of the Executive and of the General Meeting. There is also a Committee of the Insured to deal with details of administration, *e.g.*, the decision of doubtful claims.

APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

Insurance is voluntary, against winter unemployment only, and confined to males of 18 and over, resident in Cologne for at least a year. Persons without a recognised occupation and casual labourers (*Gelegenheitsarbeiter*) are excluded. Insurance is for each winter separately, the business year running from April 1 and contributions extending over 34 weeks.

The contributions (premiums) to be paid by the insured are, in the case of unskilled men, 4½d. weekly for 34 weeks, making a total of 12s. 0½d.; in the case of skilled men 5½d. a week for 34 weeks, making a total of 15s. 7d. Proposals for insurance have to be made by the first Sunday of June in each year, with payment of contributions reckoning always from April 1. A workman four weeks in arrears with his contributions forfeits all claim upon the fund.

The contributions were originally fixed at 3d. a week for all classes, and have been successively raised in 1901, 1903, and 1905 to their present point.

The benefits offered by the fund are 2s. a day for the first 20 days, and 1s. a day for a further 28 days of unemployment not due to personal fault between December 1 and March 1, making a maximum of £3 8s. No allowance is paid for the first three days (including Sundays) after the insured person first notifies himself as unemployed (the "waiting time"). Men claiming or receiving an allowance must report themselves twice daily at the office of the fund (which is also the office or next to the office of the Municipal Labour Exchange) and are bound, under penalty of forfeiting all claim on the fund to accept any employment offered them there, provided it corresponds fairly with their occupation and their usual earnings, and provided that it is not employment vacated through a trade dispute. No payments are made in respect of Sundays and holidays. Persons who during each of two successive winters have drawn three-quarters or more of the maximum may in the third winter draw only £2 14s., viz., 2s. a day for the first 20 days, and 1s. a day for a further 14 days. This rule is (apparently) a new one introduced in 1905, since it is not mentioned in the Annual Reports before then. Thirty-six persons fell under it in 1905-6 and 22 in 1906-7.

The annual income of the fund is derived from the following sources :—

1. Weekly contributions of insured amounting in 1906-7 to £860*, or 37 per cent. of total income.
2. Grant from municipality (since 1902-3) amounting in 1906-7 to £1,000, or 43 per cent. of the total income.
3. Voluntary subscriptions amounting in 1906-7 to £128, or 5½ per cent. of the total income. This item has shown a steady decrease since the first year of the fund both actually and in relation to other items.
4. Interest of £318, or 14 per cent. of the total income, on capital accumulated mainly at the start and now amounting to over £6,900.

The solvency of the fund is guaranteed by a rule forbidding the entering into any new insurance contracts so soon as the maximum possible claims on those already made amount to two-thirds of the whole fund. This rule had to be put in operation in the years of depression 1901-2 and 1902-3.

The accompanying table gives the principal statistics of the working of the fund from the beginning to the present time :—

* In both this figure and the corresponding figures in the Table on page 9, no account is taken of contributions returned; the figures thus differ somewhat from those in the original sources.

APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade: (Q. 98827.)

The following further details apply to the last two years 1905-6 (a very mild winter) and 1906-7 :—

AGES OF INSURED.

—	18-20	21-30	31-40	41-50	51-60	61-70
1905-6 - - - - -	57	561	514	276	165	37
1906-7 - - - - -	38	376	423	239	152	27

NUMBER OF PERSONS DRAWING ALLOWANCE.

—	1s. to £1.	Between £1 and £2.	Between £2 and £3.	Over £3 to maximum of £3 8s.	Total.
1905-6 - - - - -	510	219	165	65	959
1906-7 - - - - -	163	212	420	160	955

NUMBER OF PERSONS RECEIVING TEMPORARY WORK.

—	1 to 15 days.	16 to 30 days.	31 to 45 days.	Over 45 days.	Total.
1905-6 - - - - -	123	213	481	85	902
1906-7 - - - - -	251	363	181	11	806

The average amount drawn in allowances by those drawing anything was 24s. 8d. in 1905-6, and 41s. 11d. in 1906-7.

In summing up the main features of this fund special attention may be called to two points which are also those emphasised in the Report of the Imperial Statistical Office :—

1. The great advantage to the fund of its close connection with an effective Labour Exchange.

The offices of the two institutions are contiguous. The officials are in part the same, and the treasurer of the fund is also President of the Labour Exchange Committee. In the resolution of the Town Council of 1894, it is contemplated that preference should be given at the Exchange to men insured against unemployment. Inquiries as to the cause and reality of unemployment are regarded as comparatively unimportant, because the Exchange is constantly able to put applicants to the test by offering them a situation. In general, 90 per cent. of the claimants on the fund receive temporary employment through the agency of the Exchange, the number of days work so provided amounting in the past four years to 132,000 as compared with 100,000 days of allowance paid. It should be noted that according to a Report of the Imperial Statistical Office on Relief Works in German Towns, men insured in this fund have a preference on the relief works instituted by the Municipality of Cologne. Some of the employment provided is therefore presumably employment on relief works.

2. The very large percentage of the insured who actually become unemployed and the consequent failure of the fund to be self-supporting in spite of increased premiums, and the exclusion of the lowest class of casuals.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The fund is used almost exclusively by men in the building trade; bricklayers, carpenters, plasterers, painters, etc., making up the 70 per cent. who are reckoned as skilled, while the 30 per cent. unskilled are largely day labourers and navvies. From information supplied by the management of the Municipal Sick Insurance Fund, the superintendent of the Labour Exchange reckons that there are about 2,000 such workmen in Cologne, who naturally expect to be out every winter, and of whom three-quarters, 1,500—1,600 now normally insure against unemployment. It is noteworthy that the very mild winter of 1905-6, during which a much larger proportion than usual drew no benefit at all was followed by a great decrease in the number offering to insure in the following year. In the current year the numbers are up to the normal 1,500 or 1,600 again.

The Report of the Statistical Office concludes therefore that the fund is to be regarded less as an insurance than as a relief institution for the benefit of a particular class of workmen. The last Annual Report of the Fund, on the other hand, argues against the view that it is a "relief" institution, on the ground that the claimants have a legal right to the benefits.

(b) Leipzig Direct Voluntary Insurance.

This has been in operation since March, 1905, under the management of a voluntary association as at Cologne, but without municipal support and without any connection with the Labour Exchange.

Insurance is voluntary and confined to men between the ages of 16 and 60 who have been resident in Leipzig for a year. Members of the fund are divided into four classes, according to the degree of irregularity in their occupations, the weekly contributions being respectively $3\frac{1}{2}$ d., $4\frac{3}{4}$ d., 6d., and $7\frac{1}{4}$ d. The benefits are the same for all classes, viz., 1s. $2\frac{1}{2}$ d. per day for a maximum of 42 days, and are payable for involuntary unemployment whenever occurring. No member is entitled to benefit till he has paid at least 42 weekly contributions.

The first report of the fund covers the year May, 1905, to April 30, 1906. At the end of that period the membership of the fund was 143 and the amount of the fund (which, as in Cologne, was started with a good many voluntary subscriptions) was £898. During the year 13 members became unemployed for altogether 285 days, in respect of which £11 9s. 6d. was paid out in allowances. The weekly contributions received amounted to £33 1s. 1d., showing an excess of £21 11s. 7d. over the benefits paid. The year was one of exceptional industrial activity.

(c) Strassburg Municipal Subvention to Trade Unions.

In Strassburg the "Ghent system" of municipal subventions in aid of allowances paid to their unemployed members by industrial organisations has been in force since the beginning of 1907. The main features of the scheme as set out in the resolution starting it are as follows :

1. The municipal subvention is paid only to persons in receipt of an unemployed allowance from a trade organisation of employees to which they belong, is to be 50 per cent. of the amount of such allowance at any time and is not to exceed 1s. per day. It is not paid in respect of unemployment resulting or continuing as a consequence of strikes, lock-outs, sickness, accident, etc., or to persons who have been less than a year resident in Strassburg.

2. The subvention is paid through the organisation (trade union), i.e., the union pays in advance to the unemployed workman and recovers from the municipality.

3. The subvention is conditional upon daily appearance at the Municipal Labour Exchange, and ceases so soon as suitable work can be offered to the applicant in his trade.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

4. Disputes are referred to a committee chosen from the Labour Exchange Committee.

5. Trade organisations desiring the benefits of the subvention have to submit a copy of their statutes and the rules governing their unemployed benefit funds, and have to keep these distinct from funds for other purposes.

No provision is made for men not belonging to any trade union. From the report of the Reference Committee, upon whose recommendation the scheme was adopted, it appears to have been generally admitted that the scheme would not touch either the great mass of unskilled men or the building operatives—for whom, therefore, annual relief works are contemplated.

For 1907, the first year of working, £250 was voted by the Municipality. All the 20 trade unions, paying unemployed benefit to their members became formally affiliated, but only twelve made practical use of the Fund. The operations during the first year are summarised in the following table :—

Trade.	Unions participating.	Individuals drawing Municipal Subvention.	Days for which Municipal Subvention was paid.	Amount paid by Municipality.	Amount paid by Unions.
Printing and Bookbinding - -	4	48	1047	£ 46	£ 200
Building and Woodworking - -	5	63	983	31	114
Metal Trades - - - -	2	40	510	16	65
Tobacco Workers - - - -	1	2	78	1	4
	12	153	2618	94	383

The daily subvention per head varied from 3 $\frac{3}{4}$ d. (tobacco workers) to just under 1s. (compositors), averaging 9d. 21 of the 153 individuals became unemployed twice or oftener, so that the total number of cases of unemployment dealt with by the fund was 264.

It will be seen that the amount which the municipality was actually required to spend was less than half the credit of £250 originally voted, and less than a quarter of the sum paid out by the unions themselves. As the municipal subvention is fixed at 50 per cent. of the union benefit, this last result can only be accounted for by the payment of union benefits in many cases where no municipal subvention was drawn or could be drawn. Many unionists were excluded by the rule requiring a year's continuous residence in the city. Others failed to comply with the rule requiring daily registration at the Municipal Labour Exchange. This latter rule was rigidly enforced with a view both to preventing men from drawing on the fund while still in employment, and to getting them off the fund at the earliest possible opportunity. Of the 264 cases of unemployment 124, or 41 per cent., were ended by the finding of a suitable situation through the Labour Exchange. Claimants on the fund, if belonging to a skilled trade, were not compelled to accept work except in their trade or at less than the recognised rates of pay where these had been fixed by agreement between employers and employed; that is to say, they did not forfeit their claim on the fund by refusing such situations. Others who were not regarded as skilled operatives (e.g. printers' labourers and female tobacco workers) were allowed to refuse work outside their usual occupations only during a limited period, and if they remained unemployed for any length of time were compelled, under pain of losing their subvention, to take suitable work of other kinds.

These and other administrative problems have so far been dealt with successfully as they arose. The actual scale of the operations has remained small. The actual membership of the trade unions participating rose by 200 during the year, but according to the unanimous opinion of the trade union leaders this result cannot be in

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

any way attributed to the offer of the municipal subvention. On the other hand it was suggested by the leaders of some of the most important unions that the subvention would probably have an effect in preventing those who had once joined from leaving the unions.

The same sum of £250 has been voted by the municipality for the continuance of the scheme during 1908.

2.—SWITZERLAND.

(a) *Berne—Direct Voluntary Insurance by Municipality.*

A Municipal Fund for Insurance against Unemployment has been in existence in Berne since 1893. A proposal made on behalf of the trade union of builders' labourers that the municipality should grant a subvention to its funds for insurance against unemployment was rejected on the ground that the municipality would thus be putting pressure on men to join the union. As an alternative it was decided to establish a general fund by which workpeople might insure against unemployment directly and individually.

By the original constitution (Resolution of January 13, 1893, taking effect April 1, 1893) the contribution to the fund was fixed at 3 $\frac{3}{4}$ d. monthly, the daily allowance to members becoming unemployed at 9 $\frac{1}{2}$ d. for single men, and 1s. 2 $\frac{1}{2}$ d. for men with families dependent upon them. The allowance could, however, be claimed only by those who had paid their contributions for at least six months, and was not to be payable for the first week of unemployment. No allowance could be claimed in respect of unemployment due to personal fault, strikes or wages disputes, or by men refusing work offered them without good cause. The administration of the Fund was entrusted to a committee of seven: two appointed by employers subscribing to the Fund, two by the Trades Council at Berne, and the remainder by the Town Council. Under bye-laws made by the committee the payment of allowances was limited to the months December, January and February, and to a maximum of sixty days in all. The municipality undertook to make up any deficit in the finances of the Fund up to £200. The benefits of the Fund were confined to natives of Switzerland. The administrative year for the Fund was from April 1 to March 31.

The original constitution and bye-laws of the Fund were amended in important particulars in 1895, 1897 and 1900. In 1895 the contributions were raised to 4 $\frac{3}{4}$ d. monthly, and the daily allowance to unemployed members to 1s. 2 $\frac{1}{2}$ d. for men without, and 1s. 7 $\frac{1}{4}$ d. for men with dependants. The duration of the allowance was increased to 70 days, and it was made payable also during March. The exclusion of aliens from the benefits of the Fund was abolished, and in place of a guarantee up to £200 the municipality made an actual subvention of £280. An important administrative change was also introduced, the insurance fund and the municipal Labour Exchange being amalgamated under the control of a committee to consist henceforth of three employees, three employers and three nominees of the Town Council.

In 1897 with the object of excluding idlers the claim to an allowance was made conditional upon the claimants having worked six months at least during the preceding year, and stricter measures were passed with regard to members in arrears with their contributions.

In 1900 the monthly contribution was raised to its present figure of 6 $\frac{3}{4}$ d., the period of membership necessary before a claim could be made to eight instead of six months, and the municipal subvention to £480. Persons above 60 and persons incapable of earning were excluded from the scope of the Fund. Municipal employees were insured compulsorily. This compulsion lasted only till 1903, and its repeal was followed by the immediate dropping out from insurance of practically all the municipal employees.

The later years of the fund as compared with the earlier years show a smaller percentage of unemployment among the members, and an increase in the contributions of the insured relatively to both the total income and the expenditure upon allowances.

The following Table gives particulars of the working of the fund from its foundation:—

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)**(b) Basle.—Direct Voluntary Insurance.**Proposals for Municipal Subvention to Trade Unions.*

In 1894 a law for compulsory municipal insurance against unemployment was brought forward in the Great Council of the Canton at Basle, and referred to a Committee which reported, accepting the principle but recommending alterations, in 1896. The Report of this Committee was in 1897 referred to another Committee, which proposed further amendments. As amended the law was finally passed by the Great Council at the end of 1899. Recourse to a referendum was thereupon demanded and obtained by the opponents of the measure—the demand being signed by the requisite thousand citizens. As a result the law was in February, 1900, rejected by a large majority, 5,458 votes being cast against and 1,119 for it, in a total voting population of just over 16,000. The opposition to the measure appears to have been largely that of the trade unionists. Its defeat was followed in 1901 by the foundation of the Unemployed Insurance Fund of the Labour Federation.

The Unemployed Fund established by the Labour Federation of Basle is like the funds at Berne and Cologne in depending upon municipal and voluntary grants in addition to the contributions of the insured members but unlike them in being managed wholly by workmen. It commenced operations on April 15, 1901, and is apparently still in existence, though threatened with dissolution.

The objects of the Fund as stated in the constitution were, amongst other things (i) to provide allowances to unemployed members; (ii) to protect the wages of those who remained in employment against being driven down in times of depression. The Fund was to be derived from the following sources:—

1. Monthly contributions of insured members. These were graded according to the wages earned in three classes as follows:—

Average daily Earnings.	Monthly Contribution.
Not more than 3s. 2½d.	3¾d., raised to 4¾d. in 1906
Above 3s. 2½d. but not more than 4s. ...	4¾d., raised to 5¾d. in 1906
Above 4s.	5¾d., raised to 6¾d. in 1906

These contributions were to be paid by the purchase and insertion of special stamps in membership books provided for that purpose. Members three months in arrear were to be fined 9½d.

2. Subventions from the Canton of Basle. This was at first £40, but was raised to £80 in 1903-4 and subsequent years.

3. Voluntary subscriptions and donations from honorary members and others. These included till 1904 a grant of £40 from a local Co-operative Association. The grants from trade unions contemplated in the original constitution do not appear to have been made.

Membership of the Fund was at first open to any person both resident and working in Basle. In 1904 it was found necessary to exclude casual labourers by a rule that no unemployed member should be entitled to an allowance except upon proof that he had been in employment for at least four months out of the last six. No allowance could be claimed during the first six months of membership. The amount of the allowances was left by the constitution to be fixed by the Committee of the Fund in connection with a Committee of the unemployed. The allowances were first fixed at 9½d. daily (including Sundays), with higher rates for those who had been members a year or two years without coming upon the Fund. This distinction however appears never to have been put into effect in practice. At the end of the first year of working (April, 1902), the allowance was fixed at 1s. 0½d. in all cases, and remained at this till the last year of working, 1906-7, when it was raised to 1s. 2½d. The contributions were raised at the same time. The maximum period during which the allowance could be

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827)*

paid was 42 days. The allowance did not become payable immediately on the occurrence of unemployment. The original constitution fixed a "waiting time" of a fortnight after a member first reported himself unemployed during which he could claim no allowance, with the provision that if he obtained temporary work meanwhile his waiting time should be increased by one day for every two days of such work. In 1902 the waiting time was reduced to 10 days, and in 1904 to seven days, with the further provision that an unemployed member obtaining temporary employment of four weeks should at the close of it be liable to a waiting time of four days. The full period of seven days was to be applicable again only after three months of employment.

The management of the Fund was entrusted to a committee of 11, appointed by the Labour Federation and the unions whose members belonged to the Fund. The committee was increased to 15 at the end of the first year (April, 1902), and was reconstituted in 1904, but not so as to alter its purely trade union character. In addition to its general duty of administration it had in case of financial difficulties to summon an extraordinary meeting of all members, who might impose a general levy.

The following table presents the operations of the Fund during the six years 1901-7. It shows (a) a small and decreasing percentage of the expenditure being met out of members' contributions; (b) a rising percentage of the total membership of the Fund claiming the allowance.

UNEMPLOYED INSURANCE IN BASLE.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

A very large and increasing proportion of the membership was drawn from the building trade, the numbers placed under this heading being as follows :—

	Members engaged in Building Trades.	Percentage of total membership of Fund.	Percentage of all Allowances paid; drawn by Building Trades.
		Per cent.	Per cent.
1901-2 - - - - -	394	45	76
1902-3 - - - - -	566	48	71
1903-4 - - - - -	287	57	85
1904-5 - - - - -	295	74	(?)

In 1905-6, when 41 per cent. of all the insured members drew unemployed allowances the percentages for the various occupations were as follows :—

	Percentage of those insured drawing allowance.	Average number of days' allowance drawn by each man.
	Per cent.	
Builders' Labourers - - - - -	52	25·5
Stone-Masons - - - - -	65	22·4
Bricklayers and Masons - - - - -	67	28·5
Painters - - - - -	52	31·2
Carpenters - - - - -	49	13·2
All other occupations - - - - -	15	21·6

During the first two years, membership of the Fund increased and a substantial balance was accumulated. But even in the second year the Committee had to complain that a very large number of the members failed to fulfil their small obligations to the Fund, and in the third year the membership dropped by more than 50 per cent. mainly through this cause. During the following years the membership fluctuated, fresh adhesions being balanced by resignations or the striking off of those more than six months in arrears with their contributions. In 1904-5, 274 members were struck off in this way; in 1905-6, 79 were struck off, and 14 resigned as against 190 new enrolments; in 1906-7, 204 were struck off, and 16 resigned as against 179 new enrolments.

There was a tendency for the "good" risks (*i.e.*, the men in regular trades) to abandon the Fund, and for the "bad" risks (*i.e.*, the building operatives and others subject to recurrent unemployment) to remain. Great difficulty, moreover, was experienced in securing the regular payment of contributions. The expenditure of the Fund rose steadily after 1903-4, the contributions from honorary members fell off, and the reserves became gradually exhausted. After 1905-6, when a lock-out in the building trade threw a special burden on the Fund, the contributions and the daily allowances were raised, but by the end of the year 1906-7 the Committee saw no way out of its difficulties save to ask the Cantonal Government to take over the Fund altogether. It could not be carried on without increased resources, while it was thought that an increase of the contributions would lead to a further decline in membership.

The Labour Federation's Unemployed Fund has therefore, in spite of a satisfactory start and public support, not proved itself capable of continuous existence. The other measure taken by the public authorities since the rejection of the Com-

[APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

pulsory Insurance Law in 1900, viz., the establishment of a permanent committee for the relief of the unemployed apart from the Poor Law, has equally failed to secure approval. In a Report presented to the Great Council in the present year the disadvantages of this special unemployed relief (viz., encouragement of permanent reliance upon it by the weakest elements in the population and discouragement of efforts at insurance) are stated far to outweigh its advantages, and the proposal is made to replace this relief by a system of municipal insurance or assisted thrift. The idea of compulsory insurance is absolutely abandoned. The system proposed falls into two parts (a) the granting of municipal subventions to trade and other organisations according to the Ghent plan; (b) the establishment of a Municipal Insurance Fund open to those outside these organisations. As this proposal is the latest made to the present time its principal features may be summarised:—

Membership of the Fund is to be open to all employable wage-earners between the ages of 17 and 60 employed in Basle for the past three months at least and not already members of an association receiving municipal subvention under the other branch of the system. The members are to pay such monthly contributions, not less than $4\frac{3}{4}$ d., nor more than $11\frac{1}{2}$ d., as may be fixed by the Cantonal Government. In fixing these contributions the authorities will be free to classify according to the occupation, wages, and family conditions of the insured, and in the case of persons not coming upon the Fund during a long period to reduce the contributions even below the limit of $4\frac{3}{4}$ d. monthly. Insured members of the Fund becoming unemployed otherwise than through their own fault will have a preference for any employment for which they are suited both at the public Labour Exchange and under other public authorities. Failing such employment they will, provided they have been members and have fulfilled their obligations to the Fund during the past six months be entitled to an allowance according to a scale to be fixed by the Cantonal Executive, provided that the Executive shall be free to take into account the occupation, wages and family conditions of the insured, and that the normal daily allowance shall not be less than $9\frac{1}{2}$ d. nor more than 2s., and shall not be payable for more than 48 working days in any one year. The claim to preference for employment and to an allowance is not to apply where the insured has left his employment voluntarily, except with good reasons; where the insured has been discharged on account of behaviour justifying immediate dismissal; where the unemployment is the result of a strike, during the continuance of the strike, or of accident or illness, during the continuance of the incapacity; where the insured without good reasons refuses a situation offered him. The Executive is to make orders regulating the assistance to be given to unemployed members to migrate to employment in another district, and the obligation of members without dependants to accept such employment if offered to them. The Committee of the Fund is to consist of eleven members, six, including the Chairman, being appointed by the Executive and five elected by the insured. The Canton is to bear the costs of administration and make up any difference between the expenditure on allowances and the receipts from insured members or other sources.

*(c) St. Gall.—Direct Compulsory Insurance.**Municipal Subvention to Trade Union.*

On May 19, 1894, the Great Council of the Canton St. Gall passed a law empowering local authorities either singly or in combination to introduce compulsory insurance against unemployment. The main provisions of this law are as follows:—

Membership of the Insurance Fund established in any district was to be obligatory upon all men working for wages in the district unless either their average daily earnings exceeded 4s. a day or they were already members of an association affording unemployed benefits at least equal to those of the Fund. Men with earnings above 4s. might join voluntarily. Either the obligation or the right of membership might be extended to women by the local authority, which might make further regulations as to the Fund subject to the following conditions:—

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

1. The Fund to be managed by a committee of not less than five containing adequate representation of the insured members.

2. The weekly contributions payable by the members not to exceed 3d.

3. Unemployed allowances to be paid only to able-bodied persons who had lost work otherwise than through their own fault; to whom employment in their own trade, suited to their capacities and at the current rate of wages could not be offered; and who had paid contributions continuously for at least six months or (in the case of a foreigner) such period not less than six months, as might be fixed by the local authority.

4. The unemployed allowance not to be less than 9½d. a day, nor to last for more than 60 working days in a year, nor to be payable in respect of the first unemployment within three months unless this lasted at least five days.

5. Every Insurance Fund to be connected with at least one Labour Exchange.

The expenditure of the Fund was to be met out of (a) the regular contributions of the insured members, (b) donations, legacies, &c., (c) grants by local authorities up to 1s. 7d. per member per year in addition to costs of administration, (d) grants by the Cantonal Government, (e) grants, if made, by the Federal Government. Workmen under obligation to be insured but failing to pay their contributions might on proof of their ability to pay be fined up to £1 or imprisoned in default up to five days. The Cantonal Government was also empowered to make grants in aid of voluntary associations providing unemployed benefit to their members.

After proposals for joint action between the three neighbouring districts of St. Gall, Tablat and Straubenzell had fallen through, the law was put in force by the municipality of St. Gall alone. A Fund for compulsory insurance was established there and commenced operations on July 1, 1895. The following regulations were adopted :—

The Committee of the Fund consisted of nine persons, two being members of the Municipal Council and seven insured members of the Fund, of whom four were appointed by the Labour Federation from amongst trade unionists, and three were non-union, one being appointed by the Labour Federation and two by the Municipal Council, with special regard to otherwise unrepresented occupations. The detailed administration, *e.g.*, registration of the insured, collection of contributions, calculation and payment of allowances was undertaken free of cost by the municipality, and was in fact carried out by the chief of the Poor Law Department.

Apprentices and minors earning less than 1s. 7d. daily were excluded from the insurance Fund. For the purposes of weekly contributions and allowances the members of the Fund were divided into three classes, according to their own statements of their wages, as follows:

Average Daily Earnings.	Weekly Contribution.	Unemployed Allowances per day
2s. 4¾d. or less - - - -	1½d.	1s. 5¼d.
Over 2s. 4¾d. up to 3s. 2½d. - -	2d.	1s. 8¼d.
Over 3s. 2½d. up to 4s. - - -	3d.	1s. 11d.

No member could claim allowance for more than 60 days in a year, nor till he had been a member for six months (in the case of foreigners, 12 months). Contributions were to be paid by the purchase and insertion of special stamps in books provided for the purpose, and were to be excused during

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

the time when an unemployed allowance was actually being received, as well as during sickness or incapacity due to an accident for which no compensation was payable. The claim to an allowance was to be forfeited if the member had become unemployed exclusively through his own gross fault, had ceased work through a strike or refused, without sufficient ground, employment offered him. At times of depression the Committee were empowered to reduce the payments to single men, and if notwithstanding this and the receipt of full subventions from the Municipality and Canton the Fund proved insufficient, they might reduce the allowances in the higher classes and at need in all classes. The Fund was to come to an end after two years unless renewed by resolution of the Municipal Council.

The Fund thus established came into operation on July 1, 1895, but the first unemployed allowances were not payable till six months later, viz., January 1, 1896. The experience acquired in the administration of the Fund was such as to lead to its closing at the earliest possible opportunity, viz., at the end of its second year of working (June 30, 1897). By that time it had involved the Canton of St. Gall in an expenditure of £240, and the municipality in one of £885 in addition to the cost of administration, yet it closed with a deficit of £181, which had to be met by the Police Fund. In the first year of working (July 1, 1895—June 30, 1896) the premiums paid amounted to £867 and the allowances to £940, though in the first six months of that period no allowances were payable at all, and even in the second six months foreigners were excluded. In the second year of working (July 1, 1896—June 30, 1897), the premiums paid were £628 and the allowances £1,535. In explaining the failure of the scheme it is possible to point to grave faults both in its constitution and in the spirit in which it was administered.

First, the means of securing registration and payment of contributions on the part of the workmen proved quite inadequate. On the opening of the Fund workmen were by public notice invited to register themselves in accordance with the law. Their response was very slow and reluctant. In the first six months no less than 155 persons were fined for not registering themselves after repeated warnings, yet in spite of this pressure, at the end of the first year of working, 350 persons still remained unregistered though liable to register. Even of those who did register a very large proportion were constantly in arrears with contributions. Of 4,220 persons registered in the first year of working 1185 lapsed through various reasons, including non-payment of contributions. In December 1895 (*i.e.*, six months from the beginning) 1,100 insured persons owed contributions amounting to £120, in April 1896 1,300 owed £160, in June 1896 1,991 or two-thirds of the whole membership were in arrear. "Summonses to pay" remarks the first Report "have been issued in thousands; legal proceedings are only in part successful; there are everywhere people who from year's end to year's end never come near the Fund and from whom it is impossible to recover the cost of legal proceedings. . . . The visiting of the workmen in their homes is far more efficacious than masses of letters of warning." To some extent this delay in paying contributions was encouraged by laxity in the decisions on claims for allowances. These decisions were made by a sub-committee composed entirely of workmen, and prepared to favour in every way claims for allowances. The provision of the law that receipt of an allowance should be conditional upon six months unbroken payment of contributions was simply disregarded. "Had it been construed strictly not 20 of all the unemployed would have had a claim." It was even allowed that persons who had paid no contributions at all should on becoming unemployed pay them in the shape of deductions of 1s. 7d. a month from the allowance granted them. Moreover of those who did register a quite unexpectedly large proportion fell, according to their own statements, into the lower wage classes with lower contributions. On the introduction of the Fund it had been estimated that 20 per cent. of the insured would be in the lowest class (up to 2s. 4 $\frac{3}{4}$ d. daily) 60 per cent. in the second (up to 3s. 2 $\frac{1}{2}$ d. daily), and 20 per cent. in the first. The actual proportions were 68.6 per cent. in the lowest, 27.9 per cent. in the second, and 3.5 per cent. in the first class.

Second, no sufficient control was exercised over the payment of allowances. No inquiry was made into the causes of unemployment. No efficient labour exchange was established in connection with the Fund; this requirement of the law was thought to be met by throwing upon the officers of the Fund as a subsidiary duty the work of

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98872.)*

an exchange. Practically nothing was done, The insured workmen took up the position that they were entitled to refuse work offered them outside the city, and to stay at home, drawing their allowances. When demands for navvies and labourers were received from employers the two parties seldom came to terms as to wages and conditions of labour. "Many of the unemployed took every precaution to steer clear of employment so long as they had not drawn the maximum allowance from the Fund."

Third, the absence of any discrimination between occupations of different degrees of irregularity involved a large number of good workmen constantly paying contributions, though they had no chance of being unemployed, for the benefit of others who were certain to be unemployed for a large part of every year. On the opening of the Fund several classes of workmen were excused from registration : compositors because already insured by their trade union ; messengers and commissionaires because "it would be impossible to determine the facts as to either their unemployment or their earnings"; postal, telegraph, and railway employees because "those persons are as a rule never discharged except through their own gross misbehaviour, and in such a case would have no claim on the Fund." These last two exemptions, however reasonable in themselves, were clearly illegal. Their admission emphasises one of the principal characteristics of compulsory insurance against unemployment : that it inevitably means forced payments by the more regular workmen for the less regular. In St. Gall, of the 103 occupations in which insurance was made compulsory only 36 yielded any unemployed in the first year and only 50 in the second.

In the following table certain occupations (navvies, builders and general labourers, bricklayers, painters, carpenters, wood and stone carvers, packers and porters and gardeners) of a distinctively seasonal character are contrasted with all other occupations.

1895-6.

—	Number registered.	Percentage of all registrations.	Number unemployed.	Percentage of all unemployed.	Percentage unemployed of number registered.
Seasonal occupations -	1,537	36·9	342	79·0	22·3
All other occupations -	2,626	63·1	91	21·0	3·5
All occupations -	4,163	100	433	100	10·4

In other words, occupations with just over one-third of the total membership of the Fund supplied four-fifths of the total unemployed. It was found, moreover, that the classes of workmen making most use of the Fund were also the worst about paying their contributions. According to the Report of the second year's working : "In the second as in the first year a large number of men drew the full maximum of unemployed pay and then at once left St. Gall. More than one-half of the men who drew unemployed pay this year were men who had drawn such pay in the preceding year. If the scheme had continued, those men would have formed the regular *clientèle* of the Fund. The worst men in regard to the payment of premiums, with a few exceptions, drew unemployed pay again this year. Many of them never paid their premiums at all until they had actually become unemployed and then they paid in four, five, six, or even more monthly premiums in arrear, all in one lump sum, in order to be able to draw unemployed pay."

The movement for the establishment of the Fund had originally come from the ranks of the organised workmen. The request for its abolition came from the same quarter. The best workmen felt that the principle of solidarity was being carried too far when they were compelled to go on paying premiums higher in proportion to their earnings than those of the unskilled men to provide for a danger to which the unskilled and irregular workmen were almost alone exposed. They also objected to the fact that the scheme did not include compulsory contributions from employers.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.*

Since the closing of the St. Gall Fund no attempt has been made to put in force the compulsory provisions of the law of 1894, though in 1905 use was made by the St. Gall municipality of the power to contribute to trade union benefit funds by a grant of £22 to the Compositors' Union. Yet the total failure of the only practical attempt at compulsory insurance (at St. Gall) can hardly under the circumstances be regarded as itself a conclusive argument against further attempts conducted with more judgment, and in particular with a different means of compulsion (acting rather through the employer than the workmen), an adequate and stringently applied test of unemployment (depending upon connection with an efficient labour exchange), and some form of discrimination between occupations with differing degrees of irregularity.

3.—BELGIUM.

(a) Ghent.—Municipal Subventions to Trade Unions and in Aid of Saving.

There has been established in Ghent since 1901 a Special Municipal Fund for the purpose of promoting and assisting insurance against unemployment. Introduced experimentally the system was made permanent in February 1904 by a resolution under which it is applied not only to Ghent itself but to its suburbs, comprising a total population of 187,589. The accounts and expenditure in respect of each of these suburban municipalities are kept absolutely distinct. The constitution of the Fund may be given summarily as follows :—

The Fund is composed of subventions voted annually by the several municipalities and payable on January 1 with interest at 3 per cent. on arrears. It is administered by a Committee of ten persons appointed by the Municipal Council of Ghent (three must be members of the Council and five must be members of trade unions affiliated to the Fund) together with one person appointed by each of the suburban municipalities. The Mayor of Ghent, or an Alderman nominated by him, has the right to preside and to give a casting vote. The Fund, which may be increased by donations, collections, etc., can be used only to aid the efforts of workpeople to make adequate provision against unemployment, and may be so used in two ways: (1) By supplementing the allowances paid by trade unions to their unemployed members; (2) by supplementing savings made to meet unemployment. The sums paid to supplement trade union unemployed allowances bear a definite proportion, settled monthly by the Committee, to such allowances, subject to the limitation that the subsidy shall not be more than 100 per cent. of the allowance, nor more than 9½d. a day, nor paid to any one person for more than 60 days in a year. The Committee may, however, with the consent of the municipalities concerned, use balances from previous years and other moneys specially voted for that purpose in order to continue the municipal subsidy to persons remaining unemployed after they have exhausted the full amount of benefit allowed by their unions. The continued subsidy is to be equal to the original subsidy in daily amount, but may not last for more than half the number of days for which the trade union benefit has lasted. Subsidy may not be paid in respect of strikes, lock-outs, or their consequences, nor in respect of sickness or infirmity. Associations of workpeople and employees wishing to be affiliated to the Fund, *i.e.*, to obtain its benefits for their members have to communicate their statutes and rules, annual balance sheet, and monthly statements of membership and sums paid out as unemployed benefit; to submit all books and documents relating to these payments to examination by an auditor appointed by the Committee; and to fulfil such further conditions as may be presented by the Committee. Workpeople and other employees who are not members of any trade union affiliated to the Fund may share in its benefits in two ways, either directly by making in a special savings bank individual deposits which, if withdrawn during unemployment and subject to the conditions laid down by the Committee, will be supplemented in the same way and to the same extent as the unemployed benefits paid by trade unions, or indirectly as members of thrift associations affiliated to this side of the Fund, and making deposits on behalf of their members. Any unemployed person refusing work notified to him by the Committee is excluded from the benefits of the Fund. To carry out this regulation the Committee is directed to put itself into the closest possible relation with other institutions dealing with unemployment.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The following table compiled from the Report of the Fund for 1904 and 1905, gives the main features of the work as a whole :—

Year.	Number of Associations affiliated.	Membership.	Total paid to Unemployed.	Paid by Associations.	Paid by Municipality.	Percentage paid by		Special Payments to Men run Out of Benefit.
						Associations.	Municipality.	
1	2	3	4	5	6	7	8	9
1901*	26	12,985	£ 965	£ 715	£ 250	74·8	25·2	—
1902	30	12,239	2,295	1,648	647	71·8	28·2	—
1903	34	12,245	2,179	1,420	759	62·1	37·9	113
1904	35	11,995	2,622	1,688	934	62·7	37·3	98
1905	33	11,736	2,147	1,423	724	66·3	33·7	86

* Five months.

NOTE.—The percentages in columns 7, 8, do not agree absolutely with the totals in columns 4, 5, 6. The sums in column 9, paid by the municipality on a special account to men remaining unemployed after drawing the full benefit allowed by the union, are not included in the totals of columns 4 and 6, and for 1905 at least are not included in calculating the percentages.

The work of the Fund falls into two absolutely distinct sections: on the one hand the supplementing of trade union benefit; on the other hand the supplementing of savings made to meet unemployment. The first of these is much the more important, accounting for £611 out of £724, over 80 per cent. of the total subventions. It alone is indicated in speaking of "The Ghent System" in other parts of this memorandum.

(1.) *Supplements to Trade Union Unemployed Benefit.*

The municipal subsidy in these cases is paid by the union when paying its own unemployed benefit to its members and is then recovered by it from the committee of the Fund.

Twenty-eight trade unions are recorded as participating in the Fund during 1905 to the extent of £611. Seven unions receiving 37 per cent. of this amount were in the textile trades; three receiving 16 per cent. in the metal trades; three receiving 13 per cent. in woodworking; four receiving 17 per cent. in building (carpenters, painters and masons). The 11 remaining unions receiving 17 per cent. included unions in printing, shoemaking, baking. Unskilled labour is unrepresented.

The proposal to introduce municipal subventions to trade unions paying unemployed benefit was undoubtedly accompanied by a great development of the practice of providing such benefits. In 1897 22 unions out of 43 in Ghent made some sort of provision for their unemployed members, mostly on a very small scale. In 1901 the number of such unions had risen to 28 and the character of the provision made had also developed greatly. The total expenditure of the Ghent unions on unemployed benefit was £600 in 1898, £1,000 in 1900, £1,720 in 1901, and £1,648 in 1902. On the other hand there has, since 1901, during the first five years of the actual operations of the Fund, been no increase in the total expenditure of unions on this purpose, and there has actually been a decrease in the number of unionists. How far this is to be attributed to exceptional or temporary causes—*e.g.*, trade depression—remains for the present uncertain.

No information is contained in the Report cited as to the amounts paid to individuals. The proportion which the municipal subsidy is to bear to the union benefit is fixed for each month by the committee, which in doing so generally distinguishes between unemployment due to slackness and that due to breakdowns, fires, etc., as also between adults and youthful workers. In 1904, for instance, the proportion during January, February and December was 100 per cent. for adult males unemployed through slackness, and 40 per cent. for all other cases, subject to a

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

maximum limit of 7½d. a day; during the remaining nine months it was 60 per cent. for adult males unemployed through slackness and 40 per cent. for all other cases. In 1901 the largest unemployed benefit paid by any Ghent trade union was 9s. 7d. weekly for 30 days (*Association Socialiste des Employés*), on which the full subsidy in 1904 would have been 3s. 7d., making a total of about 13s. 2d. a week for five weeks. This, however, was quite an exceptional benefit. The commonest amount was 4s. 9d. a week, which with the municipal subsidy would in case of an adult male have been made up to 8s. 5d. a week in three months of the year and 7s. a week in the remainder.

(2) *Encouragement of Savings to meet Unemployment.*

This side of the Fund, designed to provide for unorganised workmen and to disarm the criticism that the Fund forced men into trade unions, was at first a complete failure. In the first year 13 persons made deposits in accordance with the rules and one drew municipal subsidy to the extent of 5s. 7d. With the permanent organisation of the Fund in 1904, a change was brought about by the admission, not only of individual depositors, but of special thrift associations (distinct from trade unions). In 1904, two such associations having made deposits withdrew on behalf of their unemployed members £132, plus municipal subsidies to the extent of £98. In 1905, three such associations withdrew deposits to the extent of £165, with municipal subsidies amounting to £105. In the same year 12 individual depositors withdrew £13 with £8 as municipal subsidy.

While welcoming this development the Report for 1904-5 points out that such provision can hardly be called insurance against unemployment. The workpeople individually or through an association pay in during the busy season deposits which they withdraw when unemployed, with interest at 50 or 75 per cent.; should they by any chance not become unemployed during the slack season they do not lose their deposits but can withdraw them intact at any time. Whether the workpeople participate formally as individuals or as members of special funds their action remains essentially individual. They run no risks; there is no solidarity between them. The process encouraged by the fund is not that of insurance but of individual saving, and the saving is largely that of persons with an extremely high chance of becoming unemployed. In 1905 the 300 depositors under the scheme for encouraging saving involved the Fund in an expenditure on subventions of £113, or 7s. 6d. per head, while the 11,000 members insured in trade unions involved an expenditure on subventions of £697 (including £86 paid after the expiry of the union benefit), or 1s. 3d. per head. The committee recommend that the rule compelling them to supplement individual savings in the same proportion as trade union benefits be rescinded by the Municipal Council and free hand given them to fix the proportions in the two cases independently. This change has been made in establishing a similar fund in Brussels.

During the years 1904-5 two principal questions have occupied the attention of the Committee:—

1. The treatment of men not wholly unemployed but placed on short time.
2. The method of checking or testing the fact of unemployment.

With regard to the first it was decided that the adding up of hours missed on successive days so as to count as a whole day of unemployment entitling to benefit was not as a general rule legitimate. With regard to the second, it was resolved as an immediate step that every person receiving the subsidy should register daily in a book in the office of his union. A further proposal was made that men in receipt of subsidy should register daily at the public Labour Exchange. Decision was postponed pending the reorganisation of that institution, a matter to which the Committee "attach the greatest possible importance," considering that "the Labour Exchange forms an indispensable complement of their own organisation." The members of trade unions, it is stated in another part of the Report, are to a large extent controlled and prevented from misusing the Fund by the public opinion of their fellows. The individuals participating in the Fund directly are not, pending the proper organisation of the Exchange, effectively controlled at all.

APPENDIX No. XXI. (K). —*Continued.**Handed in by the Board of Trade. (Q. 98827.)**(b) Antwerp.—Municipal Subvention to Trade Unions and in Aid of Saving.*

In Antwerp a scheme closely modelled on that at Ghent has been in operation since 1902. The statistics for the years 1902-4 are as follows :—

Year	No. of Associations participating.	Membership.	Total paid to Unemployed.	Paid by Associations.	Paid by Municipality.
1902 - -	14	2,862	£ 563	£ 352	£ 211
1903 - -	23	6,776	1,113	762	351
1904 - -	26	7,563	1,688	1,118	570
Total (three years) - - -			3,364	2,232	1,132

The system has thus during three years meant an expenditure by the municipality of about £1,132 (33·6 per cent. of the whole), as against £2,232 (66·4 per cent. of the whole) by the unions.

Of the total subvention of £570 during 1904, £278 or 49 per cent. was taken by a single union of 650 members—the cigarmakers, £90 or 16 per cent. by the diamond-workers with 3,400 members, and £31 or 5 per cent. by a union of office employees with 1,450 members. The building trade is represented by 222 workmen, divided between five unions, and labour, in a narrow sense, only by 48 dockworkers, who yet drew as much as £43 or 8 per cent. of the total subvention.

Since April 1904 daily registration at the municipal Labour Exchange has been a condition of drawing the subsidy. This rule was thought necessary because, according to the organ of the Belgian Labour Department, “it was discovered that many workmen did not even know the way to the Labour Exchange, and that the unemployed fund was in many cases paying allowances to men unemployed at the very time that the Labour Exchange was vainly seeking for workmen in their trade.

(c) Belgian Towns and Provinces.—Municipal Subvention to Trade Unions and in Aid of Saving.

The example of Ghent has now been followed in many other Belgian towns, and also by some of the provincial authorities. Everywhere the general results have been closely similar to those in Ghent—considerable use of the municipal subvention by trade unionists, but partial or complete failure of the provision for unorganised workmen. A summary of these activities is given in the Journal of the Belgian Labour Department for November, 1907.

In 1906 fourteen separate municipal funds were in active working, expending money in one or more of the five following ways. The total sums spent in 1906 are set out under each head :—

1. Supplement to benefits paid by trade unions to their unemployed members. £1,867.

2. Aid to individual savings made to provide against unemployment. £1 10s. 0d.

3. Aid to collective savings made to provide against unemployment. £102 (at Ghent only).

4. Grants to unemployed individuals without previous saving. £91. (This is simply a form of public relief of distress).

5. Lump sum grants to trade unions providing unemployed benefits. Apparently none in 1906. Liege spent £40 in each of the years 1903, 1904, 1905.

APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade. (Q. 98827).

The total amount paid out in direct assistance in 1906 was thus £2,062. The cost of administration was £302.

It will be seen that only the first of these five methods was applied on any large scale. Its growth during the past six years is indicated in the following table:—

SUBVENTIONS TO UNEMPLOYED TRADE UNIONISTS.

Year.	No. of Funds.	No. of Trade Unions affiliated.	Individuals drawing Subvention.	Days for which Subvention was drawn.	Amount paid by Municipalities.	Amount paid by Trade Unions.
1901	2	26	2,089	6,676	£ 250	£ 716
1902	6	98	3,211	32,219	1,167	2,611
1903	9	129	2,835	39,891	1,461	2,685
1904	11	128	2,825	50,604	1,854	3,246
1905	14	131	3,400	55,734	1,420	2,655
1906	14	229	5,019	71,969	1,867	3,589

In 1901 of the sum paid to the unemployed trade unionists, 74 per cent. was provided by the unions and 26 per cent. by the municipalities. In 1906 the proportions were 66 per cent. and 34 per cent.

Of the total of 71,969 days for which subventions were drawn by trade unionists in 1906, Ghent accounted for 32,462 and Antwerp for 24,962, together nearly 80 per cent. of the whole. The numbers for the principal remaining funds were:—Brussels, 3,412; Malines, 1,636; Alost, 1,272; Berchem, 1,232; Molenbeek, 1,108; Louvain, 1,023. None of the remaining towns represent more than 1,000 days.

The principal industrial groups between which these days were distributed are indicated in the following table:—

1906.

Industry.	No. of Unions.	Individuals drawing Subvention.	Days for which Subvention was drawn.
Textiles - - - - -	19	1,543	13,725
Building and Construction - - -	32	683	10,981
Tobacco - - - - -	13	553	9,462
Woodworking and Furnishing - -	44	425	7,789
Metal Trades - - - - -	28	631	7,941
Artistic Trades - - - - -	15	440	7,523
Printing - - - - -	30	291	5,930
Others - - - - -	48	453	8,618
	229	5,019	71,969

The activities of the provincial authorities have been far more limited. In the Province of Antwerp £60 was voted in each of the years 1905 and 1906 for grants to assist the establishment of unemployed insurance funds by trade unions. In Hainaut in 1906 £120 was voted to meet the initial cost of establishing such funds, and £280

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

to be distributed in subventions to trade unionists according to the Ghent model. Of this latter sum less than £40 was actually spent. In Eastern Flanders a sum of £160 and in Liege one of £120 were voted in 1906 for lump sum grants to trade unions and other associations making provision against unemployment.

4. FRANCE.

(a) State Subvention to Trade Unions and other Associations.

In April, 1905, the French Government set aside in their Budget for the ensuing financial year £4,400 to subsidise the funds of societies assisting their members during unemployment. The conditions of participation in this subsidy were subsequently announced by Presidential Decree (September 9, 1905).

The classes of funds eligible for participation are :—

1. Those whose membership amounts to at least 100 engaged in the same or kindred occupations.

2. Local funds with a membership of at least 50 engaged in the same or kindred occupations, provided these are already subsidised by the communal authority concerned. (*Amended Dec. 31, 1906. See below.*)

3. In communes of less than 20,000 inhabitants (*amended Dec. 31, 1906. See below*) funds with a membership of at least 50, whether engaged in kindred occupations or not, provided that these are already subsidised by the communal authority.

4. Funds organised by a federation of societies for the purpose of paying travelling benefit and supported by lump sum contributions of the federated societies provided the resources of those societies are themselves derived from the contributions of individual members.

The conditions of participation are :—

1. The fund must have been in operation at least six months, must have an organised system of gratuitously assisting its members to find employment, and must furnish a copy of its bye-laws and rules to the Ministry of Commerce.

2. These bye-laws and rules must include the following (amongst other) provisions : that a member may belong to one fund only for each kind of benefit ; that no member shall have the right to benefit till he has belonged to the fund for at least six months ; that every unemployed member shall sign a register at the office of the fund at least three times a week during working hours, and shall accept such work in his own trade as may be found for him by the fund.

The extent of participation is not to exceed 16 per cent. of the total benefit paid by the fund in accordance with its rules during the half-year ; but in the case of funds operating in at least three different departments and having a paying membership of at least 1,000 this maximum may be increased by one-half, *i.e.*, to 24 per cent.

The operations of this scheme during the first year (1905) were very small. Only £1,107, or just over a quarter of the sum voted, was actually expended.

During the first six months of 1905—the application of the subventions appears to have been dated back to cover benefits paid out since the beginning of the year—71 associations applied for the State subvention, of which 35 were found eligible for it and received grants totalling £539. During the second six months 77 associations applied and 37 received grants, making a total of £568.

Of the total of £1,107, £61 was granted to associations assisted during one-half of the year only, £6 to local travelling funds, £11 to funds not confined to one

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

trade, and £1,029 to 22 funds confined to one trade, and assisted in both halves of the year. The following table gives further details as to these trade associations :—

	Printing and bookbinding.	Metal.	Leather and skins.	Pottery.	Commerce and Transport.	Other.	Total.
Average membership.	11,347	7,537	1,362	850	1,760	1,197	24,053
Members unemployed during the year.	2,490	804	642	588	91	651	5,266
Days for which benefit was paid by fun's.	33,155	11,323	18,894	9,197	3,359	7,258	83,186
Total amount paid to unemployed.	£ 3,360	£ 681	£ 1,043	£ 508	£ 232	£ 244	£ 6,068
Amount received by funds as subvention from the State.	685	110	94	69	35	36	1,029

The £36 distributed to other trades includes £24 paid in textile and clothing trades, £7 in agriculture and fishing, £4 in building, woodworking, and construction.

Of the total expenditure on the unemployed only £4,931 could, according to the prescribed conditions, be taken into account in calculating the subventions. The amount of the latter was then 21 per cent. of the sum so taken into account and 17 per cent. of the total expenditure.

It will be seen that the average amount paid per day of unemployment was 1s. 5½d., and the percentage of members becoming unemployed during the year varied from 5 in commerce and transport, under 11 in metals, to nearly 70 in pottery, with an average of 22. Of the total subventions shown in the table, 67 per cent. was taken by four funds in the printing and bookbinding trades, and over 10 per cent. by three in the metal trades.

During the second year (1906) the same sum, £4,400, was voted in the Budget By a Presidential Decree of April 20, 1906. that of September 9, 1905. was amended so as to allow the payment of the subvention with less delay. By a further Presidential Decree of December 31, 1906, apparently having retrospective action in regard to benefits paid out by funds during the twelve months preceding, the conditions of participation were amended in the following amongst other particulars :—

1. Local funds with a membership of at least 50 engaged in the same or kindred occupations may receive the State Subvention if they are already subsidised either by the communal or the departmental authority.

2. In communes of less than 50,000 inhabitants, funds with a membership of at least 50, whether engaged in kindred occupations or not, may participate, provided they are already subsidised by the Communal authority.

3. The minimum State Subvention payable in a half-year was fixed at 8s. (10 francs), and no fund could participate which did not itself pay out at least 24s. (30 francs) in the six months.

The operations of this year (1906) were as follow :—

During the first six months 74 associations applied to participate in the State Subvention. Of these, two did not have to pay out any unemployed benefits, 25 did not furnish the information required, one gave false information, and one refused to submit its accounts to audit. The remaining 45 associations received subventions amounting to £703.

During the second six months 85 associations applied to participate. Of these, five were inoperative, two did not have to pay out any unemployed benefits, 16 did

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade (Q. 98827)*

not provide the necessary information, five did not fulfil the conditions, one paid out less than 24s. in the period, and one gave false information. The remaining 55 associations received subventions amounting to £997.

Of the total of £1,700, £93 was granted to associations assisted during one half of the year only, £15 to local travelling funds, £19 to associations not confined to one trade, and £1,573 to 27 associations confined to one trade and assisted in both halves of the year. The following table gives further details as to these 27 associations :—

	Printing and Book- binding.	Metal.	Leather and Skins.	Pottery.	Com- merce and trans- port.	Other.	Total.
Average membership -	13,810	7,203	733	937	9,575	1,631	33,889
Members unemployed during the year-	4,288	1,722	208	267	207	615	7,307
Days for which benefit was paid by funds.	56,930	13,383	4,460	4,026	5,586	6,462	90,847
	£	£	£	£	£	£	£
Total amount paid to unemployed -	5,391	944	586	238	479	242	7,880
Amount received back by funds as sub- vention from the State.	1,195	203	43	31	63	38	1,573

The £38 distributed in other trades includes £24 in the textile and clothing trades, £5 in building and woodworking, £9 in works of construction.

Of the total expenditure on the unemployed only £7,064 could, according to the prescribed conditions, be taken into account in calculating the subventions. The amount of the latter was thus 22 per cent. of the sum taken into account and 20 per cent. of the total expenditure.

The average amount paid per day of unemployment was 1s. 8 $\frac{3}{4}$ d. The percentage of members becoming unemployed during the year was lowest in commerce and transport (2), and highest in printing (31) and other trades (38). The average number of days for which each of the unemployed received benefit was lowest in metals (8), and highest in commerce and transport (27), with an average of 12. Of the total amount of the subventions shown in the table 76 per cent. was taken by three funds in the printing trade, and another 13 per cent. by five funds in the metal trades.

Comparison of the two years in respect of the associations confined to one trade and assisted in both halves of the year shows that the increase in membership is mainly accounted for in the occupations connected with commerce and transport, which yield a comparatively small proportion of unemployed. Metals, leather and skins show a decrease. The increase in the total subventions paid is almost wholly accounted for by the printing trade alone. The total number of days for which benefit was paid shows an increase.

Comparison of the two years in respect of all the operations of the scheme shows that the number of funds assisted has risen from 47 to 64; the total membership has risen 16 per cent. from 33,682 to 39,053; the number of unemployed drawing benefit 55 per cent., from 6,645 to 10,322; the number of days for which benefit was paid 19 per cent., from 90,700 to 107,667; the total benefits paid by affiliated funds 30 per cent., from £6,709 to £8,740; and the State subvention 53 per cent., from £1,108 to £1,700.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)**(b) Subventions to Trade Unions and Other Associations by Local Authorities.*

Even before the introduction of the State subvention described above it was already fairly common for local authorities (communal or departmental) to make grants to funds paying unemployed benefit. This was done for the first time by Dijon and Limoges in 1897, the number of funds assisted being 32, and the sum spent £343. One other commune followed the example in 1898, and one department in 1903. In 1904 the number of local authorities making such grants rose to 11, and in the last three years the development has been as follows :—

—	1905.	1906.	1907.
No. of local authorities voting sums for unemployed subvention - -	18	30	32
No. of local authorities paying subvention - - - -	17	[27]	.
No. of funds assisted - - - -	112	[94]	
Amount voted by local authorities -	£ 2,222	£ 2,742	£ 2,776
Amount actually paid by local authorities - - - -	1,444	[1,378]	

The bracketed figures for 1906 are exclusive of Dijon, for which figures are not yet available.

In the year 1907, 32 local authorities voted £2,776 for subventions to unemployed funds, while 3 more (including Paris) made a provisional allocation for the purpose. Of the 32 authorities first mentioned, 11 communes, voting £2,508, or 90 per cent. of the whole, did and 21 (4 departments and 17 communes), voting £268, or 10 per cent. of the whole did not formulate conditions upon which the subvention may be made.

Where any conditions are laid down at all, the principal points dealt with are as follows :—

(a) Separation of funds. All the municipalities having a standing order with regard to subventions insist upon a separation of the unemployed fund from the general fund of the trade union or other association concerned.

(b) Causes of unemployment, etc. Unemployment must be involuntary, and conditions that subvention should not be payable in case of strikes, sickness or accident are common. At Lyons, those unemployed have to register at the public labour exchange ; and at La Rochelle the committee in charge of the subvention puts them in touch with public or private registries. In nearly all cases the obligation is expressly laid upon the workpeople unemployed of accepting suitable work offered them through their union except when the wages are inadequate.

(c) Method of subvention. The method is in most cases (including now Limoges, Reims, Amiens) that of the "Ghent system," strictly so-called *i.e.*, that of augmenting the benefits paid out by associations to their unemployed members. Forty-six per cent of all the sums voted in 1907 were voted for distribution on this principle, which is growing in popularity. The supplementary scheme introduced at Ghent for the unorganised workmen, *i.e.*, the paying of a bonus on individual savings, is not repeated in any French town except La Rochelle. In three towns (Lyons, Cherbourg, Dijon) the subvention to each association is based, not as in the Ghent system upon the unemployed benefits paid out, but upon the total number of members or their contributions, and is simply a lump sum contribution to its unemployed fund.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

Though the local authorities having standing orders or conditions for the payment of subventions are only a minority (11 out of 32 of all the authorities making subventions they naturally include the most important ones. The largest sums voted are at Lyons, £1,000; Limoges, £720; Reims, £320; and Dijon, £200.

Of the 112 funds assisted in 1905, 100 were assisted, subject to conditions. These 100 funds included a membership of 11,488, and drew subventions to the amount of £1,301. The trades most strongly represented were:—Printing with 1,296 members in 16 funds drawing £283; pottery with 2,228 members in 11 funds drawing £244; metals with 896 members in 11 funds drawing £127; and building with 675 members in 15 funds drawing £118.

5.—ITALY.

(a) Milan—Subvention to Trade Unions.

Since 1905, an unemployed fund has been established by a voluntary Association the “*Società Umanitaria*,” in Milan. Its object is to supplement the benefits paid by associations of workmen to their unemployed members, *i.e.*, it is an application of the Ghent system with a private association in the place of the municipality. No attempt is made to provide for the unorganised workmen.

Subventions from the fund are paid only to persons receiving unemployed benefit from trade unions affiliated to the fund. The amount of the subvention is fixed at 50 per cent. of the benefit paid by the trade union, provided that the subvention shall not exceed 4 $\frac{3}{4}$ d. a day, shall not be paid at all when the trade union benefit alone exceeds 1s. 2 $\frac{1}{2}$ d., and shall not be paid for more than 60 days in any one year. Subventions are payable only in cases of involuntary unemployment resulting from seasonal slackness of trade, fluctuations in the demand for a supply of labour, industrial crises, or other dislocations independent of the will of the workman (*e.g.*, breakages and fires). Workmen in receipt of a benefit and belonging to the fund must register at the Labour Exchange (maintained by the *Società Umanitaria*), and lose their claim to subvention if they refuse a situation offered through the Exchange. The subventions are paid out together with the unemployed benefits in advance by the affiliated trade unions and then recovered by them from the Fund at the end of each month.

The Fund is managed by a Committee, composed of the President of the *Società Umanitaria* as Chairman and another representative of the *Società Umanitaria*, two representatives of the affiliated trade unions (in whose election each union has one vote for every 100 members entitled to unemployed benefits), one representative of the Co-operative Societies contributing to the Fund, and one of all other associations contributing not less than £200. The members of the Committee are appointed for one year, but are eligible for re-election. The powers of the Committee include lowering the subventions in case of financial difficulties, decision of disputed claims, and sanctioning the regulations of the affiliated trade unions with regard to payment of benefits. The costs of administration are borne by the *Società Umanitaria*.

The accompanying table shows the working of the Fund to the end of 1906. At the commencement in July, 1905, there were affiliated to the Fund 27 associations with a membership of 6,449; in December, 1905, the number was 33, with a membership of 8,363; and on December 31st, 1906, 36, with a membership of 8,913. Of the 37 associations affiliated to the Fund during 1906 (one made no returns of membership, and is not included in the previous statement), only 24 drew subventions from the Fund. The number of persons in respect of whom subvention was paid in 1906 was 588, the average number of days for each being 23·5, and the average amount received by each being £1 8s. 6d., of which £1 0s. 7d. was borne by the unions and 7s. 11d. by the Fund. The average daily allowance was therefore 1s. 2 $\frac{1}{2}$ d. : *i.e.*, 10 $\frac{1}{2}$ d., or 72·2 per cent., from the union, and 4d., or 27·8 per cent., from the Fund.

APPENDIX No. XXI. (K).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

Apparently the Fund did not itself receive contributions except from the Società Umanitaria, so that the whole of the £233 expended in subventions came from the general funds of the Società.

SUBVENTION TO UNEMPLOYED BENEFITS IN MILAN 1905-6.

	1905 (second half).	1906 (first half).	1906 (second half).	1906 Total.
Members assisted by fund - - - - -	469	277	311	588
Days of unemployment for which allowance was paid by unions.	—	4,443	9,413	13,856
Days of unemployment for which subvention was paid by fund.	12,317	4,033	8,209	12,242
Amount paid by unions to all members unemployed.	£ —	£ 187	£ 458	£ 645
Amount paid by unions to members receiving subvention from fund.	575	178	427	605
Subventions paid by fund - - - - -	226	76	157	233
Total paid to members receiving subvention -	801	254	584	838

The great bulk of the £233 expended in subventions during 1906 was paid to workmen in the printing trade, as is shown by the following statement:—

Union.	Membership, December, 1906.	Amount of Subvention.	Being Percentage of all Subventions.
Compositors - - - - -	1,300	£ s. d. 84 17 9	36·4
Printers - - - - -	1,029	72 4 11	31·0
Lithographers - - - - -	500	21 12 0	9·3
Typographic Institute - -	300	6 10 6	2·8
	3,129	£185 5 2	79·5

These four unions therefore with 35 per cent. of the total membership of the affiliated unions absorbed 80 per cent. of all the subventions paid. No other union received as much as £10 subvention in the year.

(b) *Bologna.—Direct Voluntary Insurance, changed later into Encouragement of Savings.*

In 1896 the Savings Bank at Bologna established a fund for provision against involuntary want of employment. Membership was open to persons of either sex over 14 years of age, born and resident in the province of Bologna and occupied as bricklayers and masons, joiners, smiths, colour washers, marble workers, plumbers, glaziers, or plasterers. Each member had within a specified time to pay either in a lump sum or by instalments 4s., or if a minor 2s. 4 $\frac{3}{4}$ d. In return for this he could draw a daily allowance of 9 $\frac{1}{2}$ d., or if a minor 5 $\frac{3}{4}$ d., for not more than 40 days while unemployed. A member claiming an allowance had to produce a certificate signed either by his employer or by four workmen still employed in the same trade, to the effect that he had lost his employment without personal fault. In addition to the members' contributions the fund included the interest on a sum of £8,000 voted by the bank. Persons becoming unemployed after the fund thus provided was exhausted had their deposits returned with interest. The heirs of persons dying without coming on the fund were similarly entitled to receive the deposits with interest.

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The system as thus established was one of insurance. The contributions of all members became a common fund upon which the unemployed members might draw. The operation of the fund while it retained this character was very small. In the first year 27 workmen (including 22 bricklayers) paid in £4 15s. and drew out £26 8s. In the second year several changes were made. Members of seasonal trades (bricklayers and masons, colour washers and plasterers) were excluded from the fund; many other trades (shoemakers, hat makers, leather workers, bakers, etc.) were admitted. The claim to an allowance was made conditional upon a year's membership of the fund and a year's employment under one employer, periods afterwards reduced to one month and six months respectively. The scheme remained however almost entirely inoperative. The workmen could not be induced to risk the loss of their premium (*i.e.*, if they did not become unemployed). Attempts at deception were innumerable.

In 1901 the character of the fund was changed altogether. The payments of the members instead of being treated as insurance premiums were treated as their own savings to be paid out to them when unemployed, with interest and with a share of the interest on the sum of £8,000. The scheme became therefore simply one of assistance to a specified form of thrift. The members ran no risk of not profiting by their contributions; the only rule was that they could not draw their savings out again except in times of unemployment, or at a rate exceeding 1s. 2½d. a day. From the new scheme women and persons under 18 were excluded, and in 1903 persons under 21 or over 65. Seasonal workers were admitted. On deposits above £3 4s. no bonus was to be paid. Considerable and growing use was made of the fund. At the end of 1903 there were 691 members with deposits amounting to £1,261 and enjoying the interest of £14,250 voted by the bank. The Reports of the fund abound in complaints of attempted deception, of simulated unemployment, of simulated thrift (since men would borrow money to make deposits), and of collusion between employers and employed with regard to the certificates of unemployment. The Bologna scheme is now similar to the provision for unorganised workmen at Ghent, except that at Bologna deposits once made cannot be withdrawn at all except during unemployment. At Ghent deposits can be withdrawn at any time, but are only augmented by the municipal subvention if withdrawn during unemployment.

(c) Venice.—Direct Voluntary Insurance.

In 1901 an Association for the Assistance of Unemployed Workmen was founded in Venice by private persons but with financial support from the municipality. Workmen were originally required to subscribe 3¾d. a month, but in 1904-5 this was raised to 9½d., the allowance payable during unemployment being raised at the same time to 1s. 2½d. daily. No limit was fixed to the time for which allowances were payable. In 1902-3, of 445 workmen registered 215 received allowances amounting altogether to £399. In 1903-4, out of 452 members 329 received allowances amounting to £688. The workmen's contributions only met a very small proportion of the expenditure. In addition to these the association received grants of £400 from the Municipality of Venice, £40 from the Province, and about £80 in subscriptions from honorary members, in addition to the interest on a capital sum of £1,200 set aside by the municipality some years before for the assistance of the unemployed.

In a report of the association itself this insurance scheme is described as a complete failure, and the necessity of re-consideration and thoroughgoing amendment is recognised.

6.—NORWAY

State and Municipal Subvention to Trade Unions and other Associations.

By the laws passed on June 12th, 1906, provision was made first for the establishment of free public labour registries in all such towns and communes as should be determined by Royal Decree; second, for refunding one-fourth of the amount paid as unemployed benefit to its members by any unemployed insurance fund complying

APPENDIX No. XXI. (K).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

with certain prescribed conditions. Two-thirds of the amount so refunded by the State is to be recovered by it from the local authorities of the places in which the recipients of unemployed benefit last resided for a period of six consecutive months within the previous five years.

The principal conditions for receipt of the State grant by any fund are as follows :

No member is to receive benefit unless he has belonged to the fund for the previous six months at least, and has paid his subscriptions for twenty-six weeks.

The benefit paid must not begin till the member has been unemployed at least three days, must not exceed half the average daily earnings in the trade concerned, and must not be paid for more than ninety days in any twelve months.

An unemployed member must accept the offer of any employment deemed suitable for him by the Committee of his fund. Persons belonging to one such fund may not draw benefit from another. Persons unemployed through strikes, lockouts, sickness or infirmity may not draw benefit.

This law came into effect on October 1st, 1906, and unless renewed will expire on December 31st, 1911.

7.—DENMARK.

State Subvention to Trade Unions and Other Associations.

By a law of April 9, 1907, the Danish Government is to make an annual grant to "recognised" funds established for the purpose of affording assistance to their members when out of work.

In order to become "recognised," a fund must have at least 50 members, must confine its membership to workpeople between the ages of 18 and 60, and must furnish lists of members showing ages, occupations, etc., and also whether those occupations are seasonal or not. Associations of workpeople belonging to one or more trades who have combined to insure themselves against unemployment may become recognised.

The total grant is to be one-third of the premiums paid by members of recognised funds up to a maximum of £13,900 in one year, and is to be divided between the funds in proportion to the premiums paid into them.

The benefits granted by recognised funds—whether in travelling expenses, house rent, food or money—are not to be less than 6½d., and not more than 2s. 3d. a day, nor more than two-thirds of the current local earnings in the trade concerned. Persons unemployed through strikes, lock-outs, sickness, incapacity, or having lost their work through drunkenness or bad conduct, or being in receipt of poor relief, or declining work offered them by the committee of their fund are ineligible for benefit.

A special officer called the Inspector of Unemployment is to be appointed, to whom application for a share in the annual grant must be made. The new law is to come in force three months after promulgation, and to be subject to revision in 1912.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)***LABOUR COLONIES ON THE CONTINENT.**

It is the purpose of this Memorandum to describe the organisation of the Continental Labour Colonies, the lines upon which they are conducted, the extent of their operations, the class of people with which they individually deal, and, in so far as *data* are available, the success of the Colonies in procuring permanent work for the unemployed.

In the preparation of the Memorandum, use has been made of the two Reports on "Agencies and Methods for dealing with the Unemployed in Foreign Countries," published by the Board of Trade in 1893 (C. 7182) and 1904 (Cd. 2304), the latter by Mr. D. F. Schloss; the Annual Reports and other publications of the Colonies; the Official Reports on Prussian and Belgian Houses of Correction, and recent volumes of "Der Wanderer," the organ of the German "Herbergsverein" (Travellers' Homes Association); and finally the results of visits paid to several of the Colonies have been incorporated.

GERMANY.

The leading characteristics of the German Labour Colonies are:—

- (1) They are free Colonies established and mainly supported by philanthropic societies, and are in no way subject to State, municipal, or any other form of public control.
- (2) They deal in the main with the vagrant population.
- (3) Shelter in return for work is offered temporarily only, but it is expected that colonists will remain at least two months, and in practice that term is often exceeded.

The first Colony was founded in 1882 by Pastor von Bodelschwingh, of Bielefeld, who is still at the head of a large network of philanthropic agencies located near that Westphalian town. He chose a site on the heath a few miles from Bielefeld, and called the Colony Wilhelmsdorf. The institution at once attracted great attention, and "Labour Colony Associations" were formed in various parts of the country. Six Colonies were opened in 1883, and ten during the three following years. To-day there are thirty-three Colonies in Germany, twenty-one being in Prussia (distributed in eleven provinces), two in Bavaria, two in Saxony, two in Wurtemberg, and one each in Oldenburg, Baden, Hesse, Thuringia, the Palatinate, and Hamburg. In addition, there is an affiliated Colony in England, intended for Germans in distress in this country. The whole of the thirty-three Colonies have accommodation for 4,482 persons, and the aggregate number of admissions to the end of December, 1906, was 179,311, of which 9,113 fell to the year 1906. All the Colonies except three are farm Colonies; those of Berlin, Hamburg, and Magdeburg are conducted on industrial lines.

Each of the Colonies is governed by the provincial or other association which is responsible for its maintenance. There is, however, a Central Board for the whole country, formed of representatives of the local associations, known as the "Central Board of the German Labour Colonies," whose functions are in the main consultative, and which meets once a year.

The objects of the Colonies have been explained as follows by the Central Board:—

- (1) The Colonies are institutions of Christian charity, in which anyone who has suffered inward or outward [moral or material] shipwreck, or who stands in danger of so suffering, may be received and raised again. Colonists have no legal claim to the benefits of the institution.
- (2) All able-bodied men, who are willing to work, are admitted without distinction of character or religion so long as there is room.
- (3) Dipsomaniacs are not admitted, or, if admitted, may be expelled.
- (4) The special aim of the Colonies is to secure the permanent moral elevation of the colonists.
- (5) The house regulations of the Colonies are the same throughout.
- (6) Board and lodging must not be in excess of the strictest requirements.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

(7) The scale of pay (board, lodging, and payment in cash or clothes, etc.), must be lower than the daily wages prevailing in the locality.

(8) Dismissal is the only form of punishment. [This involves, however, the forfeiture of the colonist's accumulated earnings, if any.]

(9) Colonists expelled for bad behaviour shall not be admitted into another Colony without the consent of the Colony which discharged them.

While these are the general principles followed by the Labour Colony Associations, each local association is free to introduce such modifications as it thinks desirable. Thus the Hamburg Colony does not profess to admit persons, not being citizens of the Free State or having their settlement therein, who have not worked at least twelve months in the town, unless they are discharged prisoners, in which case no condition applies. The same Colony also gives special consideration to men discharged as cured from the lunatic asylum, and male cripples of Hamburg who are capable of being trained to work. In general, the association declines "on principle" to admit "all those men for whose maintenance the State of Hamburg is not responsible, and refers these to their communes of settlement or to the Colony of their own home."

The sources of revenue are the subscriptions and donations of members of the Labour Colony Associations, grants in many cases from provincial, district, and municipal authorities, church and house-to-house collections, miscellaneous gifts, and finally the proceeds of the colonists' labour.

The following is a statement of the provision made by the whole of the Colonies, with the number of persons admitted, refused admission, and discharged, during the years 1895 to 1906 :—

	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
Number of Colonies in existence at beginning of year.	26	28	29	29	31	32	32	34	34	34	33	34
Number of persons for whom accommodation existed in Colonies at end of year.	3,179	3,265	3,253	3,390	3,500	3,660	3,632	4,011	3,978	4,143	4,256	4,482
Number of persons admitted to Colonies in year.	7,869	7,646	7,191	7,333	7,244	7,494	8,823	10,046	10,307	9,819	10,009	9,113
Number of persons refused admission to Colonies in year.	3,521	3,096	1,325	1,181	1,158	1,384	3,342	3,476	2,793	2,481	2,172	1,417
Number of persons who left Colonies in year.	7,832	7,806	7,172	7,583	7,065	7,228	8,487	9,756	10,338	9,891	10,055	9,408
Number of persons remaining in Colonies at end of year.	3,024	2,918	2,937	2,804	2,982	3,258	3,594	3,999	3,968	3,897	3,835	3,590
Number of Days of Work performed by colonists in year.	Not stated.	631,477	604,102	655,012	633,983	677,782	786,569	899,114	939,276	887,695	Not stated.	826,931

AGE OF THE COLONISTS.

The ages of the persons admitted to the Colonies during the years 1895 to 1906 are shown in the following table :—

Age.	Number of persons admitted to Colonies whose Age was as shown in the preceding column.											
	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
Under 15 years - -	516	3	1	0	1	3	2	2	1	1	—	—
15 and under 17 years -		53	47	38	22	8	28	26	33	27	25	15
17 " " 21 " -		540	410	402	323	324	450	536	567	500	486	421
21 " " 31 " -		1,809	1,500	1,361	1,396	1,297	1,288	1,545	2,078	2,081	1,848	1,838
31 " " 51 " -		4,177	4,187	3,809	3,996	3,993	4,156	4,527	5,192	5,263	5,194	4,798
51 " " 61 " -	311	1,056	1,138	1,252	1,197	1,293	1,373	1,777	1,760	1,843	1,765	1,864
61 " " 71 " -		225	284	278	284	325	431	426	474	453	493	505
71 and over - -		—	27	26	31	17	43	26	26	21	39	35
Age not ascertained -	—	—	—	—	—	—	20	—	19	—	—	—
Total - - -	7,869	7,646	7,191	7,333	7,244	7,494	8,823	10,046	10,307	9,819	10,009	9,113

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

It will be seen that a majority of the persons admitted are between the ages of thirty-one and fifty-one years, but that the number aged fifty-one or more is considerable. Of the colonists admitted in 1906, 52·7 per cent. were between thirty-one and fifty-one years old, and 25·9 per cent. above fifty years old; in 1905, the percentages were 52·6 and 23·9 respectively, and in 1904, 52·9 and 22·9.

MARRIED AND SINGLE COLONISTS.

The conjugal position of the colonists is shown in the following table :—

Conjugal condition.	Number of persons admitted whose conjugal position was as shown in the preceding column.											
	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
Unmarried - - -	6,195	6,027	5,580	5,624	5,554	5,720	6,749	7,688	7,949	7,580	7,683	6,898
Married - - -	463	364	337	347	354	312	380	476	482	437	455	368
Separated - - -	386	392	431	451	432	473	575	609	606	607	652	620
Widowed - - -	651	691	662	716	703	789	855	978	944	891	891	901
Divorced - - -	174	172	181	195	201	200	244	295	307	304	328	326
Not stated - - -	—	—	—	—	—	—	20	—	19	—	—	—
Total - - -	7,869	7,646	7,191	7,333	7,244	7,494	8,823	10,046	10,307	9,819	10,009	9,113

So far as the Colony authorities can ascertain, therefore, the great bulk of the men admitted every year are unmarried. The percentage of single men in 1906 was 75·7 per cent. of the whole, in 1905, 76·8 per cent., and in 1904, 77·2 per cent.

PAST OCCUPATIONS OF THE COLONISTS.

The following is a classification of the colonists according to their past occupations :—

Occupation.	Number of persons admitted whose previous trade or occupation was as shown in the first column.											
	1895.	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
"Workmen" (trade not distinguished).		2,434	2,219	2,210	2,173	2,212	2,740	3,138	2,911	2,826	3,246	2,772
Building trades - -		655	664	659	579	637	768	834	918	799	801	804
Metal and engineering -		632	571	609	588	685	934	1,070	997	918	847	760
Mining - - -		37	28	48	53	49	72	98	69	85	67	42
Textile - - -		187	170	203	194	209	280	211	219	247	210	202
Clothing and cleaning -		579	487	587	517	421	471	504	504	504	530	497

* It is not possible to tabulate here the classification according to occupations of the 7,869 colonists admitted in 1895.

It is an interesting question how far the colonists belong to the class whose unemployment is due to one or other of many causes which do not imply actual culpability.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The rules of the Central Board, far from discriminating, provide for the admission of all necessitous men who have "suffered inward or outward shipwreck," provided they are able-bodied, and the reports of the various Colonies show that such inmates form the great majority. Not only so, but a large proportion of the men who enter the farm Colonies are vagrants and work-shirkers, who have loafed their manhood away and whose last desire, in seeking admission, is to be reformed.

The great difference between the town and the country Colony lies in the fact that the former does not harbour the habitual tramp, though unskilled labourers form the majority of its colonists.

Herr A. F. Schlunk, Director of the Berlin Industrial Colony, writes :—

"Our colonists have been for the most part townsmen, rarely countrymen. This could at once be perceived from their appearance. Starvation and rags were but seldom in evidence. Whether it can be said that our people were also morally superior to the men received in the country Colonies is another question. Certain it is that it has been our constant task to combat untruthfulness, drunkenness, and other vices, and also laziness. All sorts and conditions of men have been represented in the Colony. The majority of the inmates were casual labourers, or unskilled labourers in factories, but we have also had tradesmen, waiters, artisans, clerks, university men, and professional men."

It is impossible to say what proportion of the colonists classified as belonging to skilled trades actually followed their occupation at a recent date. The fact that the men who enter the Colonies are for the most part social wrecks, and that more than one half of those admitted every year have been in a Colony before—often several if not many times—would seem to justify the assumption that most of the colonists described as above are no longer fit or able to follow their trades, so that the dividing line between them and the unskilled labourer is a more or less imaginary one. There is also general agreement that the majority of the colonists classified simply as "workmen" belonged to the unskilled class. It would appear, therefore, that in the main the Colonies are fed from the ranks of the inefficient and incapables.

There is no clear evidence that efficient workmen displaced in times of industrial depression make use of the Colonies to any appreciable extent. It is significant, for example, that there is a marked constancy in the small number of miners admitted, and that the proportion of colonists described as belonging to the metal and engineering trades was only 1·5 per cent. less in the years 1905 and 1906, which were years of special activity in these trades, than in the years of depression 1900 and 1901 (8·4 against 9·9 per cent.).

On this subject the Director of the Hamburg Industrial Colony writes :—

"Our colonists are almost wholly second and fourth-rate men who can no longer keep abreast of the demands made upon labour outside. Only a very small percentage come to the Colony owing to the unfavourable condition of the labour market—in times of economic depression, perhaps 10 to 15 per cent."

So, too, the Director of the Berlin Colony, which is likewise industrial, and is recruited specially from the urban labouring class, says :—

"My experience would almost justify me in saying that our typical colonist is lower than the typical agricultural colonist, because the excrescence of the entire nation concentrates in the large towns. Such people only stay a few days in a Colony, then go, for the work and stern discipline are uncongenial to them. In intelligence, however, the urban colonists are perhaps superior to the rural."

LENGTH OF STAY.

There is no hard and fast rule as to the period of sojourn in the Colonies, for though every endeavour is made to restrict the stay to from two to four months, great latitude is allowed to the directors, according to the pressure of new applicants, the season of the year, the work to be done, and the individual circumstances of the colonists. In practice it is found that a considerable proportion of the colonists leave within the first two months, but the majority of these either go without permission, or are discharged for misconduct, idleness, or other causes of complaint. The proportion that remain for a longer period is indicated by the following table. A certain proportion of those given in the table as

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

having been less than two months in the Colonies at the end of the year, no doubt prolong their stay to more than two months.

Duration.	Number of persons remaining in the Colonies at the end of each year,* whose stay in the Colonies had then extended to the period stated in the first column.										
	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.

* The figures are not given for 1895.

Regarding the colonists who are shown as remaining longer than a year, it should be stated that most of these are steady, responsible men who have made themselves useful as foremen and trainers of the inexperienced new arrivals, and many are virtually permanent employees, in receipt of moderate wages in addition to board and lodging.

The friends of the Labour Colonies are not insensible to the inadequacy of a short term of residence in these institutions, and admit that there would be far greater hope of producing a lasting impression upon inveterate idlers, if it were possible to retain them for a much longer time. Thus a speaker at the 1904 meeting of the Central Board of Labour Colonies said :—

“According to the regulations prevailing in our Colonies, the length of time for which the inmates are required to bind themselves to stay in a Colony, even in the case of men who apply for admission on five, six, or more successive occasions, is only three to four months. Of this fact advantage has been taken by many colonists. These men obtain admission at the beginning of winter, and as soon as the song of the lark is heard again in the land, start on the tramp once more, with joy in their hearts, with a good suit of clothes on their backs, with stomachs renovated, and with the money they have earned in the Colony in their pockets, leaving the Colony authorities, who are anxiously thinking how they are to get their sowing done at once, and later on get in as big a harvest as may be, with nothing but a lot of cripples remaining in the institution. In the autumn and when winter is drawing near, these swallows then fly back to their old nests; and of course the Colony cannot be so cruel as to refuse admission to these men who come with profound professions of repentance and of disgust with all evil ways of life. Accordingly the men are re-admitted, only to play the same old game again next spring.

“Really, we have been a patient lot of people! For twenty years we have put up with this state of things, and this though, so far as the great bulk of the colonists were concerned, we never saw any material improvement take place in the character of these people. Indeed, many of the directors and committees managing Colonies always considered, nay still consider, that no fault is to be found with this state of things, because, so they tell us, it cannot be altered, and our colonists, at any rate the majority of them, according to their opinion, remain, whatever one does, just the same as before. If all this be granted, then such a state of things would justify the present arrangements, under which the agreements with our colonists are for a stay of from three to four months. But since years of ample experience have taught us that it is impossible for a stay of three or four months in a Labour Colony to effect an alteration in or cure a man who has led a life of vice for years, sometimes for very many years, we ought, if we want to do any real work, to alter the regulations of our Colonies. There is no reason why our recidivist colonists should not be bound in the first instance to a stay of twelve instead of three months; and then if such a man, after the expiration of his twelve months' period, leaves the Colony and comes back again in a dilapidated and miserable condition, nothing prevents our binding him to a stay in the Colony of two years duration.” *

The principal obstacles in the way of any large extension of the period of detention are :—

- (1) It might unduly emphasise the idea of coercion, whereas the Colonies now lay stress upon their philanthropic and voluntary basis.
- (2) The unwillingness of the men themselves would probably prove insuperable; and
- (3) The inadequacy of the accommodation.

The last obstacle is, for the present, sufficiently deterrent. Already the capacity of most of the Colonies is taxed to the full, and if the period of stay were even doubled, it would involve a largely increased number of rejections or the extension and multiplication of the existing Colonies at great cost.

Other reasons - -	*721		289	207	226	196	336	453	465	531	543	448
Total - - -	3,521	3,096	1,325	1,181	1,158	1,384	3,342	3,476	2,793	2,481	2,172	1,417

* In the figures for 1895, the "too young," "too old," and "unfit for work," and "on black list" are included in the "other reasons" group.

It would appear that a large proportion of the refusals to receive applicants into the Colonies have been due to reasons wholly unconnected with their merit or demerit. Of the applicants refused admission because of "lack of room" in the years 1904, 1905, and 1906, viz., 958, 858, and 365 respectively, the largest number fell in each year to January, viz., 167, 163, and 99, respectively. The applicants refused admission because on the "black list" are men who have seriously misconducted themselves in one of the Colonies, but this list, though regularly exchanged between the Colonies, would appear to be somewhat indulgently applied.

SEASONAL PRESSURE OF ADMISSIONS.

One of the practical difficulties by which all the agricultural Colonies are faced lies in the fact that the greatest number of admissions invariably fall to the winter months, when outdoor work is least abundant, while on the other hand some of the Colonies experience a dearth of labour when it is most needed, as at harvest time. As a rule, nearly twice as many men are admitted in November as in the months of spring and summer. The following table shows the maximum and minimum monthly admissions, and the monthly average for the past seven years:—

Year.	Maximum Admissions.		Minimum Admissions.		Monthly Average for the Year.
	No.	Month.	No.	Month.	
1900 - - - -	1,039	November	436	February	625
1901 - - - -	1,151	"	537	"	735
1902 - - - -	1,124	"	654	"	837
1903 - - - -	1,253	"	733	April	859
1904 - - - -	1,202	"	674	March	818
1905 - - - -	1,141	"	693	July	834
1906 - - - -	1,062	"	575	June	759

It has not been found that the work of the Colonies has any influence upon the rates of wages of free labour. In the first place the number of the colonists is not large enough, and the produce sent into the open market is, to some extent, of a non-competitive character, as in the case of peat, faggots, &c.; moreover, such competition as the Colonies offer is at best the competition of very inferior labour, for which there is little demand outside. Finally, the Colonies produce in the main for their own consumption, and this is especially the case with farm produce, comparatively little of which can be spared for the market. Such competition as exists is that offered by the industrial departments, yet even here it is held to be insignificant.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

RE-ADMISSIONS TO COLONIES.

The proportion of admissions of persons who have previously been inmates of the same or other Colonies is very large. The recidivists in 1906 numbered 5,785 out of a total of 9,113 admissions, being 63·5 per cent. of the whole ; in 1905 they were 5,896 out of 10,009, or 58·9 per cent. ; and in 1904 they were 5,745, out of 9,819, equal to 58·5 per cent. It will be seen from the following table, covering eleven years, that a large number have been admitted four, five, and six times, and even oftener :—

Repeated Admission.	Number of persons admitted to Colonies who had been admitted to a Colony on the number of previous occasions shown in the first column.										
	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.

Total	-	-	-	-	-	-	-	-	-	5,713

Every effort is made to procure work for colonists who conduct themselves satisfactorily, but it would appear that only in a small minority of cases is there clear evidence that such colonists go direct to situations. Of 57,935 persons who passed through the Colonies during the six years 1901 to 1906, 5,794, or 10·0 per cent., went to situations found by themselves; and 4,977, or 8·6 per cent., to situations found for them; while 32,676, or 56·4 per cent., were discharged at their own desire; 1,889, or 3·3 per cent., rejoined their families; 1,719, or 3·0 per cent., left without notice (“disappeared secretly”) often taking good clothes with them; and 6,714, or 11·6 per cent., were discharged for bad conduct, laziness, or refusal to work.

AGRICULTURAL *versus* INDUSTRIAL COLONIES.

For each of the two types of Colonies, agricultural and industrial, peculiar merits are claimed. It is an advantage of the rural Colony that work of some kinds can be found at most times for all classes of men who are willing and physically capable, while employment in an industrial Colony always requires a certain degree of intelligence and adaptability. The Director of the Berlin Colony writes :—

“We can only admit a small number of unskilled labourers here, because we carry on industry almost exclusively, and such men, especially if up in years, can be taught with difficulty.”

This is doubtless the reason why the town Colonies are compelled to curtail the period of sojourn more rigorously than the rural Colonies, as is shown by the fact that during 1906 there were 3·2 admissions for every “place” provided in the three Colonies of the former kind, against 1·9 admissions to every “place” provided by the Colonies of the latter kind.

The general experience would appear to be that employment on the spot in industrial work is most expedient for the urban labourer, and that the rural Colony specially meets the case of the roaming population which does not make the towns a final objective. The Director of the Berlin Colony writes :—

“The townsman will not go on to the land, and is less adaptable than the rural labourer to agricultural work, just as the rural labourer can be less usefully employed in industrial work.”

The Director of the Hamburg Colony comes to the same conclusion. He writes :—

“Our experience here is that industrial employment is to be preferred for a town Colony.”

The foregoing general observations may be supplemented by a brief description of typical agricultural and industrial Colonies.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

THE WILHELMSDORF AGRICULTURAL COLONY.

There is essential similarity between agricultural Colonies in general, whether in Germany, Switzerland, Belgium, or Holland, and to describe one is to describe all. One Colony has more arable land than another, one may give special prominence to grazing, but mixed farming is common to all, and outdoor work is the almost exclusive source of employment during more than half the year.

These Colonies have invariably been established on unreclaimed land, generally in the midst of heath or moor, which does not, however, necessarily imply in Germany bleak, elevated land such as is in England used for sheep pasturage or given over to game. Estates of this kind have been acquired, both on the ground of policy and of expense. Not only do they ensure the desirable seclusion, but land already under cultivation would have been prohibitive in cost, and would not have offered employment of the kind desired.

Such a Colony is Wilhelmsdorf, the parent Colony in Germany. Its entire area is about 1,500 acres, of which 300 acres are cropped, the remainder being pasturage, plantations, and still unreclaimed land. The following observations refer to this Colony particularly, though they apply with slight modification to the farm Colonies generally.

The number of persons in the Wilhelmsdorf Colony at the beginning of the financial year 1906-7 (April 1st) was 150, the new admissions of the year were 437, and the discharges numbered 429, leaving 158 colonists on March 31st, 1907.

An applicant for admission is first asked to produce his travelling pass or other satisfactory papers of "legitimation," and if without he is enjoined to procure a travelling pass by working at a Relief Station or a Police Station Workyard, and then return, as he may do, in two or three days. On being admitted into the Colony the newcomer is duly acquainted with the regulations, and is required to sign his acceptance of the same, and especially to pledge himself to remain for a minimum term, and to comply with the orders of all his superiors. The Colonies possess no legal powers of detention, however, and if a colonist becomes dissatisfied with his life of industry after a few days' or weeks' trial, and "secretly disappears," as the official phrase runs, no attempt is made to find him; he is simply entered on the "black list" in view of a possible re-appearance later.

If, as is usually the case, the man arrives ill-fed, he is at once given nutritious food, and for several days he is put to light labour. In due time he is placed in a gang of workers, and so falls into the normal life of the Colony.

Although the colonists are not conceded any legal claim to wages, a small payment is generally made to them after several weeks by way of encouragement and of help when the time of discharge arrives. There is no uniform scale, the director—generally known as "House Father" (*Hausvater*)—having a free hand in the matter, but the usual recompense is 2½d. or 3d. per day. These earnings are placed to every man's credit, and out of them he may purchase cheap clothing and luxuries (like tobacco), while the balance is paid to him or to some responsible person on his behalf when he leaves the Colony. The wages received by 127 colonists at Wilhelmsdorf in July, 1904, were as follows:—Four bricklayers, engaged on the erection of an additional dormitory, 9d. per day; seven stable men, one painter, and one shoemaker, 6d.; three stable men, and one tailor, 3½d.; and sixty-two other men, 3d.; forty-eight colonists received no payment.

Occasionally a substantial sum has accumulated by the time a colonist leaves, but more usually the wages afford little margin beyond the cost of clothing and tobacco, and it frequently happens that colonists "secretly disappear" as soon as they have obtained a new outfit, leaving the Colony in debt. This is one of the risks which, in the absence of powers of detention, the Colonies are compelled to run, yet the aggregate loss caused in this way is insignificant when compared with the total expenditure which is not covered by the proceeds of the colonists' labour.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The day is divided differently according to the seasons. The following is the timetable observed at Wilhelmsdorf:—

						Winter.	Late Spring.	Summer.
						a.m.	a.m.	a.m.
Rising, week-days	-	-	-	-	-	5.0 to 5.30	4.30	4. 0
„ Sundays	-	-	-	-	-	6.0 to 6.30	6. 0	6. 0
First breakfast	-	-	-	-	-	5.20 to 5.50	4.50	4.20
Morning Service	-	-	-	-	-	5.40 to 6.10	5.10	4.40
Second breakfast	-	-	-	-	-	9.0	8.30	8.30
Dinner	-	-	-	-	-	noon	noon	noon
						p.m.	p.m.	p.m.
Afternoon meal (carried to the fields)	-	-	-	-	-	—	3.30	3.30
Supper	-	-	-	-	-	5.50	7. 0	8. 0

The following is the usual menu, though there are modifications according to the season of the year:—

First breakfast	-	-	-	Coffee, black bread, beet jelly.
Second breakfast	-	-	-	Lard or butter or cheese, black bread.
Dinner	-	-	-	Vegetables with potatoes, pig's fat three times a week.
Afternoon meal	-	-	-	Coffee, bread and lard.
Supper	-	-	-	Milk (or rice, or peas), soup, potatoes, herring occasionally.

The colonists are put to whatever farm work may require doing—digging, manure spreading, potato sowing, hoeing, harvest work, lifting of root crops, ditching, road-making, and the general work of the farmyard and byre. It is obvious, however, that much of the labour is very inefficient, and that such a Colony as this cannot be conducted on the ordinary methods.

“The men who come to the Colony arrive in a weak condition, which prevents them from working hard, and, in addition, men with the necessary knowledge of the work are not forthcoming in sufficient numbers. For instance, when the writer visited the Colony just before harvest time in 1904, he was told that there were then in the Colony only five men who could do reaping. It is stated that, if the labour available were of the ordinary type, the farm of Wilhelmsdorf could be worked by twenty-five men. It must be remembered, however, that in this case much of the work now done by the colonists—building, etc.—would be done by contract, and by the employment of outside labour, while some of it—road-making, etc.—would probably not be done at all, or not done in connection with the working of the farm.” *

The live stock at Wilhelmsdorf in 1905 comprised 10 horses and 6 oxen for draught purposes, 48 milk cows, 27 young cows, 130 pigs, 120 hens, 14 ducks, and a large number of pigeons. There were no sheep.

Every agricultural Colony endeavours, as far as possible, to be self-supporting, so far as the supply of food goes, and as a rule all the meat, milk, butter, and vegetables consumed by the colonists are produced on the farm; the corn grown is sold in the sheaf, but while rye flour for bread is bought, it is as a rule baked in the Colony bakehouse.

The principal source of revenue is the sale of surplus farm stock and produce.

The winter months are an anxious time for a “house father” concerned about the financial aspect of Colony life and management, for the colonists are then most numerous, and the work available is most limited. So long as the weather continues open the men are kept at work on the land, but when the ground is locked by frost or snow, indoor occupations of various kinds have to be found for the majority of the colonists, and here the “house father's” resource is taxed to the utmost.

It will readily be understood that the success of a Farm Colony from the economic standpoint depends in a great measure upon good management, and in their directors or “house fathers” the German Colonies have been very fortunate. The director is invariably a man experienced in agriculture and the keeping of accounts, and he is necessarily an able administrator and disciplinarian. The general work of domestic management falls upon his wife. While responsible for the efficient and orderly conduct of the

* “Report on Agencies and Methods,” etc., (Cd. 2304, of 1904), p. 31.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

Colony in all its departments, the director has the assistance of a sufficiency of skilled men as foremen, and upon these falls the immediate surveillance of the colonists, whether in the fields or, in winter months, in the workshops.

At an early date in the history of the Labour Colony movement, Pastor von Bodelschwingh recognised that efficient management was the great secret of success. Hence he established at Bielefeld a Deacons' Home for the training of directors and other workers, with the result that at the head of most of the Colonies are men who have been specially prepared for their duties, and who are thoroughly imbued with the philanthropic spirit which underlies the Colony movement, and in full sympathy with its moral as well as its economic ends.

To the ability, tact, decision, and knowledge of human nature possessed by the "house-fathers" must chiefly be attributed the orderly and harmonious working of the Colonies. Serious contumacy occurs but seldom, and the knowledge that the penalty for disorder is instant dismissal—since the relationship between Colony and colonist is voluntary on both sides—is, on the whole, sufficient to restrain the most undisciplined characters. This is the more remarkable when it is remembered that a large majority of the colonists have been in prison. Of the colonists at Friedrichsville, in the Province of Brandenburg, at a certain date 84 per cent. had been imprisoned, 13·5 per cent. of these from six to ten times, and 6·6 per cent. from eleven to fifteen times.

That the financial value of the colonists' work is not greater can hardly create surprise when it is remembered of what poor material these men are made, the inexperience of farm work peculiar to most of them, the dislike of work of every kind peculiar to nearly all, and the fact that most of the Colonies have necessarily to support far more mouths than the land itself can possibly feed or employ remuneratively.

It is impossible to ascertain precisely the cost of the Wilhelmsdorf colonists, inasmuch as this institution is part of a system of philanthropic agencies working hand in hand, including a branch Colony at Freistatt for able-bodied men, and two homes for inebriates. In the Report for the financial year 1905-6 it is stated that the receipts of the affiliated Wilhelmsdorf agencies amounted to £2,750, exclusive of the proceeds of the colonists' labour, £1,018 being contributed by public authorities and £1,284 consisting of subscriptions, donations, and collections. There was a deficiency for the year of £1,049 on all the Wilhelmsdorf institutions, and the Colony itself was reported to have incurred expenditure of £1,279 beyond the proceeds of its labour, apart from its share of general administrative charges. It is not clear, however, how far the deficit was caused by capital expenditure. The Report states :—

"The Labour Colonies will never be able to do without subsidies. The human material with which they have to deal consists for the most part of labour of fourth-rate efficiency, though it should be remembered that by employing these half-incapables, whom no employer will take into his service, our Colonies relieve the public funds of heavy Poor Law burdens."

It is a somewhat sinister fact that the Wilhelmsdorf institutions have during recent years sunk ever deeper in debt, though the assets in real estate, at their "book value," are shown in the last balance-sheet to cover the liabilities, in amount £69,708. Pastor von Bodelschwingh writes :—

"To our distress we are unable to conceal the fact that our debts have again increased considerably. The Government at Minden rightly warn us that we must devise means of avoiding further debt. We do not see how it can be done, however, without harm to the people of the province and especially to the most necessitous among their number, the unemployed, the cripples, the aged, and the poor abandoned inebriates."

THE BERLIN INDUSTRIAL COLONY.

Of the three Industrial or Town Labour Colonies in Germany, that at Berlin is the oldest (1883), though not the largest, having accommodation for 142 persons, while that at Magdeburg (1888) accommodates 120, and that at Hamburg (1891) 170. From its establishment to June 30th, 1907, the Berlin Colony had admitted 12,462 persons, the Magdeburg Colony 7,131, and the Hamburg Colony 6,025.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.*

The Industrial Colonies are intended to afford immediate and temporary work to the urban unemployed, and the class of people admitted by them is different from that found in the rural Colonies, whose visitors generally arrive at the Colony gates at the end of a long round of tramping. As far as possible, employments are followed which do not offer injurious competition to private enterprise.

At the Berlin Colony three kinds of employment are in operation :—

(1) The more skilled men are set to trades and occupations on the premises, such as plain joinery, the making of brushes, brooms, mats, straw ropes and bottle cases, letter writing, envelope addressing, etc., while the inferior men are put to fuel-cutting.

(2) The labour of the colonists is farmed to outside employers, who provide materials and in some cases tools, the colonists working, however, on the premises.

(3) A good deal of casual work is done outside, such as snow sweeping, ice carrying, unloading barges on the river, carting sand, etc.

In addition, a large number of men are always engaged upon work for the Colony itself. Of the three paid forms of employment the first is principally encouraged, while the plan of sending men out to work is not willingly resorted to, since in the absence of strict control the men are exposed to temptation, and the otherwise beneficial influence of Colony life is sacrificed. During the year 1906, the majority (sixty-six) of the colonists were employed in the joiners' workshop, in the making of kitchen furniture and boxes; thirty were employed in brush and broom making; twenty in making straw ropes and bottle cases; and others in cutting wood for fuel. The largest number of colonists at one time, in that year, was 142, the smallest 81, and the daily average 111.

Several years ago the Director of the Berlin Industrial Colony, Herr A. F. Schlunk, wrote the history of this institution, and some of his observations may be quoted here :—

"Although it was originally intended to admit into the Colony only those who were sent by members of the Association, and for whom at least a small contribution would therefore be paid, yet, as things have turned out, only very few are now sent by members, while the great majority ask for admission of their own accord or because they have been recommended to do so by someone who has left the Colony. In addition to persons who are in actual want, many other individuals come merely because they are out of work and expect to obtain employment from us, just the same as they might from ordinary employers. These men have rarely remained for the full period for which they had bound themselves to stay at the Colony, because the comforts and conveniences provided and the scale of pay in force in the Colony do not satisfy them.

"The institution is certainly not intended for such people, nor for the sick who wish to be nursed back to health, nor for idlers, who are quite willing to do their share of eating and sleeping but wish to do as little work as possible. Again, what is called 'light work' is seldom available for colonists except to a very limited extent. The people to whom the Association is pleased to open the doors of its institution are those who are in good health, but are really in need of help, and are willing to work, irrespective of whether they do or not belong to Berlin and its environs, or whether they are Germans or foreigners, Protestants or Roman Catholics, Jews or heathens; they are all welcome so long as there is room and work for them. Where on account of want of room or work a selection has to be made from among the applicants for admission, those who are sent by members of the Association and those belonging to the neighbourhood are given preference,

"Admission to the Colony takes place up to 4 p.m. on every day except Sundays and festivals, and also except Saturdays and the days immediately preceding festivals.

"Everyone admitted is required at once to cleanse his person; and his clothes are disinfected by steam. He must report himself in person to the police. Those whose relatives are unable to contribute towards the cost of their maintenance in the institution are kept free of charge; but for those whose relatives possess some means, a monthly contribution of 15s. towards the cost of their maintenance is required. Under special circumstances the amount of this contribution can be reduced. Unfortunately, the request for payment of this contribution is generally ignored. Even families which are grateful and happy at seeing their black sheep join our flock, to be kept from straying and put in the way of leading a good and industrious life, refrain from contributing towards the upkeep of the institution; while others, to whom we do not have occasion to render such direct service, are ready and willing to give us support whenever requested. This should not be the case. However, nobody is ever refused admittance or discharged because payment for his maintenance is not forthcoming."

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The order of the day observed in the Berlin Colony is as follows :—

5.45 a.m.	-	-	-	Bell rings as a signal for getting up, washing, and bed-making.
6.15 a.m.	-	-	-	First breakfast, consisting of bread with coffee or soup. Short religious service, conducted by the chaplain.
7.0 a.m.	-	-	-	Work begins.
9.0 a.m.	-	-	-	Breakfast, consisting of bread with dripping or margarine.
9.15 a.m.	-	-	-	Work resumed.
2.0 a.m.	-	-	-	An hour for dinner, which consists of meat and vegetables.
1.0 p.m.	-	-	-	Work resumed.
4.0 p.m.	-	-	-	An interval for coffee, with bread and dripping.
4.15 p.m.	-	-	-	Work resumed.
6.50 p.m.	-	-	-	Work ceases.
7.0 p.m.	-	-	-	Supper, consisting of soup and bread, or potatoes and herrings, with coffee and bread.
				Interval for recreation and smoking.
9.0 p.m.	-	-	-	Prayers and bed.
9.30 p.m.	-	-	-	Lights out.

On Saturday afternoon work ceases at six o'clock, so as to give time for mending clothes, cleaning boots, etc., and on Sunday and festivals the colonists rise an hour later. On Sunday service is held in the Chapel, but Roman Catholics are allowed to go to a church of their own in the neighbourhood. In the afternoon many of the colonists go out on leave, while the others amuse themselves with music and games, and occasionally dramatic performances.

It is the practice of the Berlin Colony to keep a debit and credit account for each colonist. In the first place, the fixed charge of 5s. 3d. per week is made for board and lodging, and against this minimum wages of 6s. per week are paid from the commencement of his stay in the Colony. With ability and diligence, however, a colonist can earn as much as 10s. and even 12s. weekly if on time-work, and on piece-work considerably more. The gross earnings of the whole of the colonists during 1906 amounted to £2,142, equal to 7s. 10d. per head per week. After deduction of the cost of board, etc., there remained to be placed to the colonists' credit about 2s. 2d. per head per week.

There are further deductions on account of insurance, clothing, and extras, and the balance to a man's credit is allowed to accumulate until his departure. Provided he leaves under creditable circumstances the sum due is then handed over to him, or to a friend, or a portion may, with his consent, be expended in the purchase of tools, though it often happens that the money is unwisely used. Should he, on the other hand, be expelled for misconduct or leave the Colony before the expiration of the term stipulated, his accumulated earnings are forfeited. The sums paid to departing colonists vary greatly according to the length of stay and the skill and thrift of the workman, but it is stated that, as a rule, a man is able after six months' residence to accumulate from £2 to £3, though as much as £7 and £7 10s. is paid in individual cases.

The men admitted into the Berlin Colony have for the most part followed trades and handicrafts, sixty of which are enumerated in the classification for 1906, when the trade groups most largely represented were :—joiners, forty-three; fitters, thirty-two; painters, twenty-one; tailors, twelve; and bakers, ten. In addition, fifty-eight men were described simply as "workmen," most of them probably being unskilled labourers, and fifty-seven as having been engaged in business or as book-keepers.

Of 390 men admitted in 1906 only sixty were born in Berlin; of 366 admitted in 1905, forty-seven; of 383 admitted in 1904, sixty-four. By way of comparison it may be stated that of 421 men admitted into the Hamburg Colony in 1906 only 76 were born in Hamburg, and of 394 admitted in 1905 only 85 were born there.

When the Colony was established no definite duration of stay was imposed, but the colonists were allowed to come and go as they would. Absence of system was found, however, to be as injurious to discipline as to the work of the Colony, for whatever commissions might be in hand there was no guarantee that the men engaged upon them would

APPENDIX No. XXI. (I).—*Continued.**Handed in by the Board of Trade. (Q. 93827)*

complete their tasks. A minimum term was, therefore, imposed, and gradually this was extended where longer discipline seemed desirable.

"Since it was found," writes Herr Schlunk, "that four to six weeks are often necessary to teach a man a new trade, and because it was our duty to accustom the men, as much as practicable, to habits of discipline, order, industry, regularity and sobriety, so as to make their stay in the Colony of lasting benefit, we found ourselves induced some years ago to make a rule that every man admitted for the first time should agree to stay for at least three months and to give eight days' notice before leaving, which he would only be allowed to do on one or two specified days in each week. If a man could give satisfactory evidence of being able to obtain work and wages outside, he would be allowed to leave before the expiration of the three months. But, on the other hand, the period of obligatory stay in the Colony would be extended, according to circumstances, to six, nine or more months for those who had already repeatedly visited our own or other Labour Colonies, and had kept on coming back without having received any apparent benefit from their stay. Unfortunately, the number of men of this class has been by no means small. We possess no power to exercise any compulsion to make the men obey the rules as to length of stay or the other regulations in force in the institution. Those who are unwilling to remain, or who decline to comply with the regulations, quit the Colony; but if men act in this manner, or are guilty of other misbehaviour, they do not receive any money whatever on leaving. As an additional disciplinary measure, to meet the case of gross misconduct, besides discharge from the institution without payment of wages, recourse is had to the system of entering a man's name in a punishment book or black list. A copy of this list is sent to all Labour Colonies throughout Germany, and a man whose name appears in this list is not allowed to enter our own or any other Colony for a period of five years. However, a man who repents and begs forgiveness can be struck off the list by the Colony which put him on it, and this not infrequently happens."

The majority of the colonists now remain from one to four months, but as great efforts are made to carry on the workshops as profitably as possible, useful men are often encouraged to stay a longer time. The following table shows the length of time the colonists discharged during the past four years had remained :—

DURATION OF STAY IN COLONY.

Length of stay when discharged.	Number of colonists who had been in the Colony for the periods mentioned in the first column.			
	1903.	1904.	1905.	1906.
Under 1 month - - - - -	115	107	98	109
Over 1 and under 2 months - - - - -	134	75	54	60
" 2 " 4 " - - - - -	111	97	94	} 166
" 4 " 6 " - - - - -	71	54	57

" 16 " 20 " - - - - -	1	1	5	
Over twenty months - - - - -	—	2	3	
Total - - - - -	480	384	370	389

If inquiry be made into the efficiency of the Berlin Industrial Colony as a means of relieving the genuine unemployed workmen of normal ability, filling regular callings, and only temporarily "down on their luck," the published data, when examined, yield discouraging results. In the first place a heavy percentage of the colonists have at one time or another suffered imprisonment, often repeatedly; further, many have to be summarily expelled every year on account of bad behaviour and laziness; and finally a large number of the colonists admitted in any given year are "ins-and-outs."

Writing in 1903, Herr Schlunk said :—

"The executive committee has never attempted to deny that the great majority of the inmates of the Colony have themselves to thank for the wretched position in which they find themselves. Many of them have either never learned a regular trade of any kind or else have no desire to work and no capacity for work, are drunkards, idlers by profession, quarrelsome fellows, and devoid of all earnest purpose."

He adds :—

"The task of drawing the line between the men of good character and industrious habits, and the men of evil disposition and idle habits, has not only to be performed prior to admission into the institution, but frequently goes on afterwards. It is absolutely necessary that, happen what may, habits of discipline, industry, sobriety, and good behaviour shall be maintained; and if quiet reasoning is of no avail, disciplinary measures must inevitably be resorted to. On the whole, it has turned out to be easier to enforce compliance with the regulations than is generally supposed to be the case, especially among the older people; the lads are more troublesome. It may be added that the adoption in serious cases of measures of rigid discipline unavoidable under the circumstances, and also the refusal of admission to applicants rejected at times when no room can be found or no work can be provided for them, are among the most painful of the various duties which have to be performed by the Colony authorities."

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827).

Of colonists admitted in recent years the following acknowledged having been imprisoned :—1906, 267 out of 390 ; 1905, 222 out of 366 ; 1904, 227 out of 383 ; 1903, 266 out of 421 ; 1903, 296 out of 513 ; and 1902, 320 out of 586.

The circumstances under which the colonists have departed during the same years are shown in the following table. It will be seen that the expulsions for bad conduct and laziness numbered 138 in 1906, equal to 35·5 per cent. of all discharges :—

CIRCUMSTANCES ATTENDING DISCHARGE OF COLONISTS

Circumstances of Discharge.	Number of persons who left the Colony under the circumstances stated in the first column.					
	1901.	1902.	1903.	1904.	1905.	1906.
Discharged at own desire - - - - -	167	193	135	116	78	80
Found work through the Colony - - - - -	48	17	38	35	32	23
Found work themselves - - - - -	71	69	86	67	76	57
Rejoined their families - - - - -	16	16	19	5	14	11
Discharged as incapable of work - - - - -	6	7	15	5	9	9
Laziness and refusal to work - - - - -	59	35	66	21	42	104
Bad behaviour and intemperance - - - - -	101	93	54	56	27	34
Sickness - - - - -	22	14	9	15	13	8
At request of authorities - - - - -	27	17	19	11	16	18
Left without notice - - - - -	51	35	26	53	62	44
Died - - - - -	2	1	1	—	1	1
Other reasons - - - - -	40	1	12	—	—	—
Total - - - - -	610	498	480	384	370	389

NUMBER OF COLONISTS READMITTED.

In the following table the colonists admitted during the years 1901 to 1906 are classified according to the number of times they had previously been in Labour Colonies :—

	1901.	1902.	1903.	1904.	1905.	1906.
Never previously admitted to a Colony - -	402	309	226	194	219	212
Previously admitted - - - - -	184	204	195	189	147	178
On one occasion - - - - -	103	108	113	92	70	84
„ two occasions - - - - -	38	50	41	46	38	40
„ three „ - - - - -	19	19	18	31	18	20
„ four „ - - - - -	8	7	11	7	6	11
„ five „ - - - - -	6	8	8	6	7	6
„ six „ - - - - -	4	7	3	2	3	5
„ more than six occasions - - - - -	6	5	1	5	5	12

The only statistical evidence of success—and even here the evidence is to some extent inferential—is that afforded by the numbers of colonists who go out to situations obtained either by themselves or by the Colony authorities for them. The numbers have been as follows during the past six years :—1901, 119 ; 1902, 86 ; 1903, 124 ; 1904, 102 ; 1905, 108 ; 1906, 80.

A Labour Registry has always been conducted in connection with the Berlin Labour Colony, though Herr Schlunk admits that it has never succeeded as much as was hoped.

“ In the first place,” he writes, “ most of the colonists, including those of the better class, are ashamed of having sunk so low as to have been forced to take refuge in a Colony ; they therefore conceal or deny the fact. Consequently, so long as they are still in the Colony, they are unwilling to look for work outside, and prefer not to obtain employment through the agency of the institution. On the other hand, the public as a rule does not look with a very favourable eye upon men who have been inmates of the Colony, but ranks those men—unfortunately, not without reason—with the inmates of tramp wards.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

"As a matter of fact, we receive very few inquiries for workmen, and when we do they are usually for artisans or agricultural labourers. Either there are no men of these classes in the Colony, or if we have such men, we cannot recommend them to an employer. We have often been at pains to persuade our people to seek for work on the land instead of in the town. This attempt has met only a temporary and quite partial degree of success. Our factory operatives do not want to go into the country, and indeed are in some cases unsuited to take up such work as is required in the country. Lately, many persons who have recognised this fact have declared that they had decided not to employ workmen from the towns. Therefore, willing as the institution is to promote the success of its labour registry, it is prevented from doing so by force of circumstances. In any case it is the business of our registry to make the interests of our own colonists its first and foremost consideration, and we are therefore rarely in a position to procure employment for men who are out of work and have been sent to us merely in order that we may get situations for them."

The gross expenditure on the Berlin Colony in 1906, without allowing for the produce of the colonists' labour, was £11,437, and the income being £11,520, a balance of £83 remained. The earnings of the Colony in various ways amounted to £8,533.

THE JEWISH COLONY IN BERLIN.

At Weissensee, near Berlin, there is an Industrial Colony for Jewish labourers only, but it is not connected with the National Labour Colony Association. It is largely used by immigrants from Russia and Austria. During the five years of its existence ending with December, 1906, it had received 1,922 persons, 535 falling to the year 1906. Of 529 men who left the Colony during that year, 91 went into situations obtained for them by the Colony authorities, 110 went to work found by themselves, 206 returned to their families, 41 went abroad, 14 were discharged owing to sickness, 40 were discharged at their own wish, and only 10 were expelled for bad behaviour. The great majority of the men were foreigners, principally Galicians, Russians, and Austro-Hungarians. Here, too, wages are paid, and in 1906 they averaged 8½d. per day, against only 5d. in 1905, the increase being attributed to "the expansion of industry, but also to an increased love of work."

"HOME" COLONIES.

One other species of Labour Colony which has been established in Germany may be mentioned. This is the Home Colony, the object of which is to provide a more or less permanent abode for men of regular habits. Such men are allotted separate dwellings with land, which they are expected to cultivate.

There are two Colonies of this kind, the oldest that of Friedrichs-Wilhelmsdorf, near Bremenhaven, established in 1886, and accommodating thirty-seven colonists, and that of Schäferhof, near Pinneberg, in Holstein, with accommodation for 100 colonists, established in 1888 as a branch of the Hamburg Industrial Colony.

The objects of these Home Colonies were thus explained by a member of the Hamburg Labour Colony Association at the annual meeting of the Central Labour Colony Board held in Berlin in November, 1903:—

"On November 1st of that year, out of ninety-seven home-colonists (at Schäferhof) there were forty-seven who had returned to that colony for the second time, and all of them have, without ado, agreed to a two years' contract. As we have ascertained by experience that 90 per cent. of our colonists are permanently unfit to lead a life of self-dependence, respectability, and honesty, it is clear that if, knowing all this, we permit these men, after a short stay, to take to the road again with all its dangers, then our conduct in so doing is unkind to a still greater degree than thoughtless almsgiving. If we really wish to be kind to our colonists, we must bind them by contract to stay with us for as long as possible, and we must manage our Labour Colonies in such a manner that these men shall find their stay in the Colony pleasant, and that although the contract by which they have bound themselves be for a long period. We shall then succeed in stopping, to a material extent, the circulation of our colonists through the Labour Colonies, the almshouses, the houses of correction, and the prisons, which, if only we could secure the adoption of the necessary measures for providing a general check system as between all the Colonies, would, in many cases, be altogether put an end to. The restless and roving itinerant would then learn to value the advantages to be derived from a settled mode of life.

"If our system be reorganised on this new basis, the Labour Colonies will not lose but gain by the change; indeed, so far as concerns certain branches of industry, the advantage which would ensue to a Colony by such a change is quite self-evident. Whereas up till now the Colonies have had a constant succession of inmates, who, on account of their want of strength and skill, have been hardly able to do as much as one-half or one-quarter of a man's work, we have in our permanently settled inmates at our home Colony at Schäferhof got together a set of workmen who have, so far, done really wonderfully good work. Our home colonists, who now number 100, not only do all the agricultural work on the Schäferhof estate of over 875 acres, but also, even in the first four years, when there were many fewer colonists, helped us to build a big cow-house to accommodate beasts, a colonists' house with cubicles for sixty men, and a splendid greenhouse, which last indeed, they built entirely themselves. Besides this they have, in the same period, put 113 acres of heath

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

and moorland into cultivation, and have macadamized a length of 2,040 yards of field roads, which they carried out in an altogether satisfactory manner, and for which they broke up about 400 cubic yards of stone. In the last two years they have planted out and tended 7,854,500 saplings for other people, and 83,000 oak, fir, apple, and pear tree saplings for the Colony. We, the Executive Committee and officials of Schäferhof, give our home colonists unstinted and unqualified praise for industry, capability, and good conduct ; and we desire nothing more ardently than to be placed in such a position as would enable us to employ 500 home colonists at Schäferhof instead of 100 as at present, because we know that, in the surroundings of the Home Colony, not only would these men do a fair day's work, but they would receive from us a remuneration for their work the amount of which would increase as time went on." *

It would not appear, however, that the Home Colonies have, to the extent hoped, attracted permanent settlers. From its establishment until June 30th, 1907, the Friedrichs-Wilhelmsdorf Colony had admitted 1,503 colonists, and 1,479 had left, while the Schäferhof Colony had admitted 1,646, and had discharged 1,558, showing in each case almost as regular a circulation of labour as in the case of the normal Farm Colonies.

During the year 1906, 150 persons were admitted to the Schäferhof Colony and 143 were discharged. Of the latter, nine went to situations, eighteen were discharged at their own wish ; forty-five were expelled for breach of contract ; six for bad conduct ; one on the demand of the police ; twenty were discharged on account of sickness, or died in the Colony ; while the remaining thirty-nine left because the stipulated period of their stay had expired. Of the 104 remaining on December 31st, thirty had been in the Colony a year and upwards, but fifty had been less than six months.

THE GERMAN PENAL WORKHOUSES.

Germany has a large number of Penal Workhouses intended for the reception of mendicants, vagrants, and other persons of irregular life. Most of these institutions are situated in the open country, and agricultural work generally finds employment for a portion of their inmates, but here their resemblance to the free Labour Colonies ends. These Workhouses are, in fact, supplementary to the prisons, and the persons committed to them must already have served a sentence for one of several indictable offences. The Imperial Penal Code (Sections 361 and 362) defines these offenders as follows :—

"Whoever wanders about as a vagabond.

"Whoever begs or causes children to beg or neglects to restrain from begging such persons as are under his control and oversight and belong to his household.

"Whoever is so addicted to gambling, drunkenness, or idleness that he falls into such a condition as to be compelled to seek public help himself or for those for whose maintenance he is responsible.

"Any female who is placed under police control owing to professional immorality when she acts contrary to the police regulations issued in the interest of health, public order, and public decency, or who, without being under such control, is guilty of professional immorality.

"Any person who, while in receipt of public relief, refuses out of sloth to do such work suited to his strength as the authorities may offer him.

"Any person who, after losing his past lodging, fails to procure another within the time allotted to him by the competent authority and who cannot prove that in spite of his best endeavours he has been unable to do so."

It is provided that such persons, and, by an amendment of the law dated June 25th, 1900, procurers and *souteneurs*, shall be put to work suited to their capacity either within prisons or outside, and that, *after the period of their incarceration has expired*, they may be handed over to the State police authority, which may sentence them to be further detained for any period up to two years in a Workhouse, or to be employed under police control upon useful public works for a like time. Should a person be sentenced to detention in a Workhouse for a term less than the maximum, that term may be prolonged to the full two years should the Director report unfavourably upon his conduct.

Institutions of this kind exist in all parts of Germany, and while the majority are intended to serve for complete States or provinces several are municipal, as at Berlin and Dresden. Prussia has twenty-four of these Workhouses. In some of them provision is made for the reception of a certain number of persons for whose maintenance the Poor Law authorities are responsible, also for young people in respect of whom those authorities have assumed the rights and duties of guardians.

On April 1st, 1903, there were in the whole of the twenty-four Prussian Workhouses 8,833 men and 1,131 women, together 9,964 persons ; there entered during the administrative year 1903-4, 9,218 men and 1,145 women, together 10,363 persons ; and there were discharged during the year 9,070 men and 1,209 women, together 10,278 persons ; leaving

* "Der Wanderer," March, 1904, pp. 87, 88.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

detained, on March 31st, 1904, 8,981 men and 1,067 women, together 10,048 persons. The aggregate period of detention was for men 3,225,613 days, giving a daily average of 8,813 male inmates, and for women 393,237 days, giving a daily average of 1,074 female inmates, or 9,887 inmates of both sexes. The offences for which 8,803 male and 1,121 female inmates were committed to the Workhouses were as follows :—

	Males.	Females
Vagabondage - - - - -	326	50
Begging - - - - -	5,983	79
Begging and vagrancy together - -	1,059	51
Sloth - - - - -	93	6
Professional immorality - - -	179	851
Laziness - - - - -	12	2
Homelessness - - - - -	1,151	82
	8,803	1,121

It appears that of the 8,803 male offenders above enumerated 7,574, or 85·7 per cent., had been detained in a Workhouse before, 2,430 of them more than three times ; of the 1,121 female offenders, 753 had been detained in a Workhouse before, 173 more than three times.

The ages of the offenders were as follows :—

	Males.	Females.	Totals.
Under 18 years - - - - -	36	2	38
18 to 21 „ - - - - -	269	162	431
21 „ 25 „ - - - - -	312	165	477
25 „ 30 „ - - - - -	712	184	896
30 „ 40 „ - - - - -	2,187	271	2,458
40 „ 50 „ - - - - -	2,723	222	2,945
50 „ 60 „ - - - - -	1,994	97	2,091
60 „ 70 „ - - - - -	533	15	548
70 years and upwards - - -	37	3	40
Totals - - - - -	8,803	1,121	9,924

The initial periods of commitment were as follows :—

	Males.	Females.	Totals.
Three months or less - - - - -	27	2	29
Over three months to six months - -	2,857	457	3,314
Over six months and under two years -	3,997	522	4,519
Two years - - - - -	1,920	140	2,060
Totals - - - - -	8,801	1,121	9,922

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

A typical Workhouse of this kind is that of Rummelsburg, which serves for the city of Berlin, and is combined with a large hospital and infirmary to which helpless and indigent persons of an inferior class are sent. It has accommodation for some 2,000 persons, and during the administrative year 1905–6 1,888 persons were admitted by judicial order, viz., 1,710 males and 178 females, for the following offences :—

	Males.	Females.	Totals.
Vagabondage - - - -	6	—	6
Begging - - - - -	815	8	823
Professional immorality - -	—	139	139
Homelessness - - - - -	823	31	854
<i>Souteneurs</i> - - - - -	66	—	66
Totals - - - - -	1,710	178	1,888

Of the male offenders thirty were classified as belonging to agriculture, etc., 825 to industry, mining, or the building trades, 171 to commercial occupations, and 660 were simply described as “labourers” or “day labourers.”

At the close of the year 1,841 male and 123 female inmates remained in the Workhouse.

A large proportion of the able-bodied men are employed upon the city irrigation works; others follow workshop occupations, such as tailoring, shoe-making, clogging, wood-working, basket and brush making, lock-smithry, tinning, straw-plaiting, book-binding, etc.; wood-cutting is done by the less skilled men; and old men are put to light employments like coffee-bean and feather sorting. Most of the women not engaged in housework are employed in sewing and washing for municipal institutions, like the hospitals, shelters for the homeless, the cattle market and abattoir, etc. The order of the day is as follows :—Between 5 a.m. to 5.45 a.m. all inmates must rise and dress; 6 a.m., first breakfast; 6.15 a.m. to 9 a.m., work; 9 a.m. to 9.30 a.m., second breakfast; 9.30 to 12 noon, work; 12 noon to 1.30 p.m., dinner and rest; 1.30 p.m. to 5 p.m., work; 5 p.m. to 5.30 p.m., tea; 5.30 p.m., to 6.45 p.m., work; 6.45 p.m. to 7 p.m., preparation for bed; and at 7 p.m. all retire. Work ceases at 4 p.m. on Saturdays and the evenings preceding festivals.

The discipline imposed is represented as severe but salutary. One of the rules which the inmates are required to observe runs as follows :—

“The inmates shall live together in peace and quiet, none interrupting another in his work, but rather by industry, order, and decent moral behaviour encouraging each other to reformation of life and setting each other a good example. Conversation upon past misdemeanours may under no circumstances take place; nor may one inmate reproach another with any crime which he may have committed during his career.”

Every endeavour is made to encourage discharged prisoners to live regular lives, and a Prisoners’ Aid Society of the English type works hand in hand with the authorities to this end.

The entire cost of the Rummelsburg Workhouse during the administrative year 1905–6 was £40,655, of which £11,212 was covered by receipts, leaving £29,443 as a charge upon the rates of Berlin.

SWITZERLAND.

Two Labour Colonies of the German type have been established in Switzerland by philanthropic societies. They are Tannenhof, near Witzwyl, in the canton of Neuchâtel, dating from 1889, and Herdern, near Frauenfeld, in the canton of Thurgau, dating from 1895. Both Colonies receive yearly grants from cantonal and municipal bodies, but the bulk of their revenue is derived from the sale of produce, the farming of labour, subscriptions and donations, and church and other collections. The Colonies are agricultural in character, Tannenhof having an area of 160 acres, for the most part

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827).*

cultivable land, and accommodating fifty inmates, and Herdern having an area of over 218 acres, and capable of accommodating 100 inmates when fully equipped. Between the years 1901 and 1905, the Tannenhof Colony passed through a crisis; it was found impossible to provide a sufficiency of remunerative work in winter; deficits accumulated; and at one time the idea was entertained of disposing of the estate. The working of the Colony was, however, reorganised in 1904, with the result that its fortunes have again taken a favourable turn.

According to the statistics of the Berne Labour Colony Association, the Tannenhof Colony is intended to "offer a temporary home, by the carrying on of a farm, to unemployed men seeking work, and to discharged convicts of the Berne penitentiaries, where in return for shelter, food, and wages they will be required to perform agricultural work until they find permanent occupation elsewhere." In practice, however, all comers are received, especially in summer, when work is plentiful and labourers are few. On entering, every colonist is required to sign a contract, by which he binds himself to remain at least two months (at Herdern it is only four weeks), and if his work and conduct are satisfactory he is paid at the rate of 50 centimes (4·8d.) per day. After deductions for clothing, tobacco, and other extras supplied the accumulated earnings are paid on discharge, and, whenever possible, a colonist is persuaded to remain until he has earned the cost of a decent outfit of clothes and the necessary tools of his trade, so as to facilitate his search for work.

The day's routine at Tannenhof is as follows:—At 4.0 a.m. in summer (May to October) and at 5.0 a.m. in winter (though at 3.0 a.m. in May and harvest time) the colonists rise, and, after prayers work begins. At 6 o'clock in summer and 7 o'clock in winter comes breakfast. Work then continues to 9.0 a.m., when there is an interval of ten minutes for refreshment. Dinner is from 12.0 noon to 12.30 p.m., and from 1.0 p.m. to 4.0 p.m. there is work, when another interval of ten minutes takes place for refreshment, followed by work again until 7.0 or 8.0 p.m., according to the season. Supper and prayers then end the day. The dietary is plain but ample in quantity. Bread without stint may be eaten at every meal, and milk is supplied freely; there are two vegetables with soup for dinner all the year round; and twice a week there is fresh meat.

Great stress is laid, as in the German Colonies, upon the preservation of a religious atmosphere. Scripture reading precedes the principal meals, there is evening prayer, on Sunday the colonists attend neighbouring churches, and local clergymen pay frequent visits.

The bulk of the colonists are engaged in farm work, according to their capacity, but the less robust are employed in tailoring, shoe-making, and the hawking of peat and fuel in the adjacent town of Neuchâtel. All the needful joinery and smith's work is done on the premises; so is the baking; and the woolelip keeps the Colony supplied with stockings. The weak part of the economy of the Colony lies in the fact that when farm work is most pressing labour is deficient, and when there is least to do outside a rush of colonists sets in. On one occasion the director found himself during three months of summer left with but eleven colonists, only one of whom knew anything about agriculture. The report for 1906 states that in August the number of colonists fell to thirteen, so that the harvest work could only be done by the help of Polish labourers lent by a neighbouring landowner.

On the other hand, the Colony is full in the winter months, and for the more remunerative employment of the men who then seek admission, several simple handicrafts, like basket-making, straw-plaiting, and wood-working, have been introduced.

In 1905 a good deal of drainage work was done on the moor by the colonists of Tannenhof for cantonal and communal authorities, and excavation work was done for private persons.

Of the two Colonies, Tannenhof would appear to be specially frequented by the rural class of unemployed, Herdern by labourers from the towns. Of 136 persons admitted to the Tannenhof Colony in 1905, forty-one were agricultural labourers, twenty-five were unskilled labourers, and the majority of the remainder had followed handicrafts or trades, fourteen being watch and clockmakers. Of 148 admitted in 1906, sixty-two were agricultural labourers, four were unskilled labourers, twenty-nine were watch and clockmakers, ten shoemakers, and the remainder followed miscellaneous skilled occupations.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827).

“Tannenhof is more and more used as a temporary place of sojourn for seasonal workers—vineyard and harvestmen,” says the report for 1905. “They come in November and December and go in the middle of March. About the middle of May they return again, and in the middle of June they go to the harvest work. Such colonists have a certainty of work at a certain period and they do not need situations. Watch and clockmakers and artisans stay longer. For the most part they are men who have only half-learned their trade and cannot live by it further. Here they have an opportunity of learning agricultural work thoroughly.”

Of the 152 colonists newly admitted to the Herdern Colony in 1905, twenty-two were specially described as agricultural labourers, and twenty others as unskilled labourers (day labourers, etc.); while of 141 admitted in 1906, nineteen had followed agriculture, and twenty-four others were unskilled labourers.

The following classification of the colonists according to age shows that middle-aged and elderly men form a larger proportion than in the German Colonies :—

Age at Admission.	Tannenhof.		Herdern.	
	1905.	1906.	1905.	1906.
Under 20 years - -	1	0	11	4
20 to 30 „ - -	9	11	33	27
30 „ 40 „ - -	21	21	33	26
40 „ 50 „ - -	36	31	29	26
50 „ 60 „ - -	34	54	32	38
60 „ 70 „ - -	33	28	13	17
Over 70 „ - -	2	3	1	3
Total - -	136	148	152	141

It will be seen that of an aggregate of 577 persons admitted in two years, those above the age of fifty years numbered 258, equal to 44·7 per cent. of the whole, comparing with 24·9 per cent. in the case of the German Colonies during the same period.

A considerable proportion of the colonists have suffered imprisonment; at Tannenhof the discharged prisoners form about one-half of the whole. Insubordination occurs at times, but the general conduct of the colonists is good. The severest penalty for misdemeanour is expulsion, and it was applied in fourteen cases at Herdern in 1906, against eleven in 1905, and six in 1904. The director reports, however, that “It is often gratifying to notice how, after a few days, people who have followed disorderly lives readily conform to the rules of the Colony.” Many of the colonists are recidivists, and with these the authorities deal leniently if their previous records have been fairly satisfactory. Re-admission is, however, refused when the applicant has been expelled for bad behaviour.

The great majority of the colonists remain between two and three months. Should a man leave before the time stipulated at his entrance he forfeits his earnings. The average stay at Tannenhof in 1905 and 1906 was sixty-one days; and at Herdern, it was 103 days in 1906, and ninety-seven days in 1905.

Every endeavour is made to procure work for colonists of reliable character, but it would appear that the efforts of the men are more successful in this respect than those of the Colony authorities. The following colonists discharged from Herdern during the five years named went direct to situations :—

Year.	Number of Colonists who went to Situations.				
	Total Number discharged.	Found by the Colony Authorities.	Found by themselves.	Total.	Percentage of all discharged.
1906 - -	141	8	45	53	37·6
1905 - -	154	24	42	66	42·9
1904 - -	167	13	59	72	43·1
1902 - -	222	31	55	86	37·7
1901 - -	203	23	31	54	26·6

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The cost of the colonists at Tannenhof in 1905 was about 10½d. per head per day and in 1906, 10¾d. per day. The entire revenue in 1906 was £1,400, and the expenditure £1,300, leaving a balance to the good of £100. Of the revenue, £202 came from private subscriptions and donations, and £170 was contributed by the canton and town of Berne. The cost at Herdern in 1906 was 1s. 1¼d. per head per day, and in 1905, 1s. 2d. The revenue in 1906 amounted to £2,604, and the year ended with a credit balance of £46. Of the receipts, £940 came from subscriptions and donations, £420 being from cantonal governments.

In addition to the Free Labour Colonies there are in Switzerland a number of forced labour institutions, carried on by the cantons and municipalities in conjunction, for the detention of mendicants, loafers, dissolute and disorderly persons, and persons who seek to evade their responsibilities to those for whose maintenance they are legally liable. Their internal economy does not greatly differ from that of the German Penal Workhouses, though more attention is given to agricultural work. The Kühlewyl Poorhouse, belonging to the town of Berne, is notable as being a Workhouse of the English pattern with compulsory powers of detention. It has a counterpart in Germany in the Dresden Workhouse, which likewise combines Poor Law functions with systematic discipline on semi-penal lines.

HOLLAND.

The Labour Colonies in Holland are of two kinds—Penal Colonies, now managed by the State, for the reception of offenders of certain classes, and Free Colonies, of the agricultural type, offering more or less permanent homes to families and single men. The first of these two classes of Colonies will be passed over briefly.

The establishment of both kinds of Colonies was the work of the Dutch Society of Beneficence (*Maatschappij van Weldadigheid*) which, founded in 1818 at Frederiksoord, has still its chief centre there. The Society originally carried on disciplinary Beggar Colonies as well as Free Colonies, in which agricultural families were permanently settled, but the Beggar Colonies were taken over by the Government in 1859, since when the Society has worked on purely philanthropic lines.

The State has now three Penal Colonies, two for men at Veenhuizen and Hoorn, and one for women at Leiden. Agriculture, forestry, and gardening, with carpentering, masonry, smith's work, boot-making, tailoring, and weaving, are the principal sources of employment. The prisoners enjoy a certain measure of liberty, and wages are paid, the unexpended balance being handed over on discharge.

The two Labour Colonies conducted by the Dutch Society of Beneficence are at Frederiksoord and Willemsoord, and two classes of colonists are admitted:—

(1) Free farmers, who are encouraged to remain permanently on small oldlands provided for them on easy terms; and

(2) Free labourers, who work on the home farms of the Colony and who, if married, live in separate cottages, and, with such members of their families as can work, are paid wages at a rate lower than that for outside labour.

The principle of permanent settlement has been in operation so long that the Colonies may be regarded as small independent communities.

An analysis of the records of fifty families of free farmers and labourers made in 1893, and represented as being typical of the whole body of colonists, gave the following result:—

Number of cases in which <i>both</i> parents had been	
born in the Colonies	11, or 22 per cent.
Number of cases in which <i>one</i> parent had been	
born in <i>one</i> of the Colonies	23, or 46 per cent.
Total number of children in fifty families	265
Number of children born to colonists prior to entry	
into Colony	28, or 10·6 per cent.
Number of children born to colonists in Colony	237, or 89·4 per cent.
Number of children per family	5·3
Number of colonists without children	1

APPENDIX No. XXI. (L).—*Continued**Handed in by the Board of Trade. (Q. 93827).*

Many residents are said to have been born, grown to maturity, married, brought up families, and died in the Colonies.

It would appear that the colonists are in general taken from grades of the labouring class superior to those which furnish the German Colonies with the bulk of their inmates. The majority of the colonists both of Fredericksoord and Willemsoord are, indeed, unskilled labourers gathered from the unemployed of the cities, Amsterdam, Rotterdam, and The Hague, but if they are drawn from the ranks of surplus labour they are to some extent the cream of this labour, and do not belong to the shiftless residuum.

Writing in 1893, Professor Mavor said :—

“The labourers are admitted on the recommendation of charitable associations in the cities. If they are infirm or incapable of work, the society which recommends their admission is expected to pay a subsidy to the Colony to help to maintain them. There are a few vacancies for labourers every year. Each labourer's family is housed in a separate cottage with a garden, and those of the family who are capable of labour work upon the Colony farm, receiving wages at the rate of 40 cts. per day in winter, and 60 cts. in summer (8d. and 1s. respectively). The labourer rarely earns sufficient to support himself and his family until after he has been in the Colony for two years. After he has been there for five or six years, if there is a vacancy, and if his conduct has been good, he may be promoted to the second class, that of free farmers (*vrijboeren*)

“The free farmers are peasants cultivating small holdings upon what is practically a life tenure. They pay rent to the Colony, and receive stock and seed on credit from it. If the free farmer misconducts himself, he may be degraded to the position of a colonist, or he may be dismissed. Should a free farmer die, his widow is permitted to retain the holding, if she can cultivate it herself, or if there is a member of the family who can do so he may be admitted into the Colony for the purpose of cultivating the holding and supporting the widow. The holdings of free farmers are also occasionally inherited by their daughters, who marry sons of colonists, who are thus permitted to take up the succession of the farm and so to avoid the rule of expulsion at maturity. While this is the practice in certain cases, the free farmers have no judicial right to their holdings, and may be expelled without compensation for improvements. A free farm consists of $2\frac{1}{2}$ hectares ($6\frac{1}{4}$ acres). For this the free farmer pays an annual rent of from 35 florins to 75 florins (£2 18s. 4d. to £6 5s. 0d.). The rent is payable in January.”*

It is usual to supply a free farmer on entering his holding with a cow valued at £10 and rye sown in land to the value of £4 3s. 4d., and he is expected to repay the debt at the rate of 12s. 6d. per annum.

The free farmers have also in some cases several milch sheep, and they generally fatten four or five pigs. Their other principal produce is potatoes, of which from an average farm from 100 to 200 hectolitres (or 275 to 550 Imperial bushels) are sold each season. Butter, to a small extent, is also marketed by the free farmers.

Loans are made to the free farmer in case of need. Some of the earlier loans have proved irrecoverable, but for many years the Society has protected itself by lending only on security of the farmers' farm stock. Various Poor Law authorities and Charitable Societies board pauper and orphan children with the colonists, who are allowed to retain the whole of the maintenance money.

At the Willemsoord Colony that portion of the estate which is not divided into small holdings, worked by the free farmers, is worked by the labourers, assisted by the free farmers, in so far as they can spare the time, but no agricultural labourers are employed on ordinary wages. The hours of work on the home farms are as follows :—

Summer—

4 a.m. to 6 a.m.
9 a.m. to 12 noon.
1.30 p.m. to 4 p.m.
4.30 p.m. to 6 p.m.

In addition to agricultural, horticultural, and forest work, and turf-cutting, various trades and handicrafts are carried on, including joinery and carpentry, basket-making, blacksmithy, mat-making, tailoring, masonry, and brick-making.

It is characteristic of these Colonies that the efforts of their conductors are specially directed towards the young. It is said that the adult colonist is “invariably regarded as a hopeless case.” Hence the Society of Beneficence looks for results in the rising generation. No stress is laid upon the creation of a distinctive religious atmosphere, as is the case of

* “Report on Agencies and Methods,” etc. (C.—7182 of 1893), pp. 310, 311.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827).

the German and Swiss Colonies, but the careful education of the children is insisted on. Elementary schools are maintained at the expense of the State, and attendance at day or evening school is compulsory. In addition, the Willemsoord Colony has :—

“Established a school of horticulture and schools for needlework, drawing, and advanced courses of elementary education. Boys are trained in various handicrafts (as carpenters and joiners, painters, and blacksmiths). After being trained in the Colony schools, children are sent to situations, which they are said to obtain easily.” *

The following is a statement of the population of these Free Colonies and its movement during the years 1889 to 1906 :—

Year.	Total Population.	Number of Births.	New Families.	Number of Deaths.	Young Persons who left Colonies, having obtained Employment.	Labourers who became Free Farmers.	Number of Free Farmers' Families.	Number of Labourers' Families.	Number of Boarders (orphans and children of Pauper parents).
1889	1,791	33	5	32	64	5	206	83	153
1890	1,830	35	7	23	50	6	209	87	132
1891	1,813	29	10	22	61	2	212	87	164
1892	1,863	45	8	16	65	2	214	91	198
1893	1,826	35	3	24	27	1	199	85	165
1894	1,763	28	—	26	37	1	190	83	176
1895	1,705	28	2	25	26	—	171	90	170
1896	1,616	33	1	45	33	—	170	91	174
1897	1,525	24	1	18	49	—	159	77	149
1898	1,504	19	4	13	40	—	158	78	137
1899	1,497	11	2	14	53	—	155	78	167
1900	1,489	10	—	9	36	—	151	78	197
1901	1,471	16	1	14	42	—	149	78	198
1902	1,460	11	—	8	32	—	148	77	224
1903	1,453	13	2	11	36	2	149	73	244
1904	1,463	11	—	13	22	3	147	74	278
1905	1,445	11	—	15	33	—	134	66	297
1906	1,380	6	2	24	49	—	133	64	289

The significant fact is brought to light by these figures that the number of free farmers and labourers has for some years gradually declined, yet few labourers have been raised to the *status* of a free farmer. A certain number of persons leave the Colonies every year for situations, but the majority of these are probably members of the families settled there. Finally, there would appear to be an increasing readiness to take foster-children.

Mr. Schloss' report on the Colonies, published in 1904, summarised their work in the following words :—

“A small number of men, mostly drawn from the ranks of the unskilled, have been taken away from the towns and established on the land. A few privileged agriculturists have been enabled to practise their occupation practically free from financial worries, none of whom display the slightest desire to exchange their protected position in the Colony for an independent life outside its limits. The attempt to raise labourers into the superior position of free farmers appears to meet with failure. A certain number of children have received a good education in the Colonies, and a small number of young persons (thirty-two in 1902, or one-half as many as in 1899) have, after being trained in the Colonies, been started in the world to earn their living in independence if possible. On the whole, it can scarcely be said that the Dutch Free Labour Colonies, regarded as agencies for dealing with unemployed workmen, exhibit any conspicuous appearance of substantial success.” †

So far as a calculation is possible the cost to the Dutch public of the Colonies is about 30s. annually for each colonist, man, woman, and child, without taking account of interest on capital expended.

* “Report on Agencies and Methods,” etc. (C.—2304 of 1904), p. 228.

APPENDIX No. XXI. (L).—Continued

Handed in by the Board of Trade. (Q. 98827).

FRANCE.

The only Labour Colony tried in France was that of La Chalmelle, established in 1892 and discontinued in 1905 owing to the heavy cost of maintenance. The Colony was founded by the Municipality of Paris for the reception of unemployed persons who had drifted from the country to the Metropolis and eventually had found their way to the public Night Refuges (*asiles de nuit*). The rules of the Colony stipulated that inmates should be “selected from workmen having some knowledge of agriculture.” The colonists were thus picked men, and hence men of a superior type to those who enter the German and Swiss Colonies, which discriminate but little between the applicants for admission. The underlying purpose of La Chalmelle was to send back to rural life such of the unemployed seeking help as had in earlier years followed agricultural occupations. One part of the scheme was the eventual settlement in the Colony of married men with their families in separate cottages, each with garden ground.

Of the Paris Night Refuges for men which sent to La Chalmelle its colonists it is sufficient to say that they offer a temporary home, in return for work, to needy applicants, and for the most part correspond to the Night Shelters of London and Berlin. The largest of the Refuges (the *Asile Nicolas Flamel*), is a workshop as well as a retreat. The more skilled of its inmates are employed at joinery, blacksmithing, painting, tailoring, bookbinding and other work for municipal institutions, while the less capable are engaged in the making of resinous faggots for the public service. It has accommodation for 212 persons, and as many as 10,000 pass through it in the course of a year. There are also Refuges for women, who are principally engaged in sewing, mending, and laundry work, for public and philanthropic institutions.

The Colony of La Chalmelle was purely agricultural in character and consisted of a farm of 367½ acres, for the most part poor land, situated in the Forêt de Traconne, about fifty miles from Paris. The buildings comprised a main block containing offices, linen-room, kitchen, dining-room, dormitories, library and recreation-room, blacksmith’s shop, and carpenter’s shop; three houses adjacent, used for the accommodation of the employees; a bakehouse; an agricultural shed; a building for preparing food for cattle, with a loft for fine straw; a generating shop for electric lighting; a wash-house, and a house for isolating patients suffering from contagious diseases, with a bath-room. There was accommodation for fifty-five men at one time.

The past occupations of the colonists admitted during the years 1892 to 1899 were as follows :—

Year.	Connected with Agriculture.	From other Occupations
1892 	38	23
1893 	35	31
1894 	73	14
1895 	69	31
1896 	73	29
1897 	101	6
1898 	64	24
1899 	62	27

These figures show that of a total of 700 persons who entered the Colony during eight years 515, or 73·6 per cent., had been connected with agriculture.

It would appear that the principle of selection applied also to the age of the colonists. Old men were not taken, and of 700 admissions between 1892 and 1899 only nine were above the age of fifty years. Of 143 men admitted for the first time in 1900–1, thirty-four were between twenty-five and thirty years old, thirty-nine between thirty and thirty-five years, twenty-four between thirty-five and forty years, and forty-six between forty and forty-five years.

Nominal wages of 50 centimes (4·8d.) per day were paid, but out of their earnings the colonists were expected to buy their own clothes, with the exception of a suit supplied to them on admission.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827.)

There was no fixed limit of stay, though as the Colony was regarded as a half-way house to settled employment the majority did not remain longer than two months. Thus 820 of the 850 persons admitted between 1892 and 1899 stayed for the following periods:—

Length of stay in Colony.	Number of Admissions.
Less than two months - - - - -	436
Two and less than four months - - - - -	249
Four and less than six months - - - - -	71
Six and less than eight months - - - - -	28
Eight months and less than one year - - - - -	26
More than one year - - - - -	10
Total - - - - -	820

Most of those who stayed longer than four months were said to be men who wished to learn their work more thoroughly, or men who had no aptitude whatever for agricultural labour.

The percentage of those who left the Colony in order to take up situations was high, far higher, indeed, than is the case with the German Labour Colonies, though in favour of La Chalmelle was the fact that its colonists were sifted men who had for the most part followed agriculture before, and were encouraged to return to that employment. During the years 1892 to 1899, 820 colonists were dealt with as follows :—

	Per cent.
Obtained situations - - - - -	59·9
Left of their own accord - - - - -	33·0
Went to hospital - - - - -	1·9
Left for military service - - - - -	0·5
Died - - - - -	0·2
Expelled - - - - -	4·5

At the same time there was a considerable proportion of re-admissions. Of 700 colonists who entered between the years 1892 and 1899, 150, or 21·4 per cent., had been admitted before, and after having gone to situations had, for various unexplained reasons, returned to the Colony.

Year.	Number of Persons who entered the Colonies for the first time.	Number of Persons who, after finding situations, subsequently returned to the Colony.
1892 - - - - -	61	—
1893 - - - - -	66	63
1894 - - - - -	87	20
1895 - - - - -	100	11
1896 - - - - -	102	16
1897 - - - - -	107	14
1898 - - - - -	88	14
1899 - - - - -	89	12
1900 - - - - -	143	31

In order to facilitate the permanent employment of the inmates a list of the available men, with a statement of their capacity and the wages required, was sent every month to the principal Agricultural Syndicates of the department (Marne) in which La Chalmelle was situated. Where necessary, the travelling expenses of departing colonists were found, and clothes given to them.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98327)*

When the Colony was established its founders predicted that in a short time it might be expected to be self-supporting. No such good fortune was, however, experienced. On the contrary, as the number of colonists increased, the expense to the municipality likewise became greater, and it was the continued insolvency of the Colony which led to its abandonment.

BELGIUM.

All the Labour Colonies which exist in Belgium save one are penal in character, and on their present basis are indeed intended to carry out the Law of November 27th, 1891 (operative since January 4th, 1892), for the repression of vagrancy and mendicity.

This law required the Government to organise correctional institutions to be known as :—

- (a) Beggars' Depôts (*dépôts de mendicité*);
- (b) Houses of Refuge (*maisons de refuge*); and
- (c) Reformatory Schools (*écoles agricoles et maisons spéciales de réforme*).

The institutions (a) and (b) are substantially Labour Colonies in character, with the difference, nevertheless, that they are judicial institutions. The principal Beggars' Depôt is at Merxplas, near Antwerp, and the principal House of Refuge is at Wortel, but at Bruges there are institutions of both types for women.

The Beggars' Depôt is a home of correction pure and simple. It is intended for the reception on magisterial order of "persons not suffering from incapacity, who, instead of providing themselves with the means of existence by labour, abuse the charity of the public by habitual mendicancy, those persons who, through laziness or drunken or immoral habits, pass their lives in vagrancy, and those who live on the earnings of vice (*souteneurs de filles publiques*)."

Detention is for not less than two nor more than seven years, except in the case of vagrants or beggars sentenced by a Criminal Court to confinement in such a Depôt after expiration of a term of imprisonment, and here detention may be from one to seven years.

The House of Refuge, on the other hand, is intended for the reception of :—

- (a) Persons handed over to the Government for seclusion in such a place by a judicial authority; and
- (b) Persons whose seclusion shall be asked for by a Communal Authority, though, if over eighteen years of age, such persons must enter voluntarily.

In general, the inmates are "persons who may be discovered to be in a condition of vagrancy, or may be found begging, but who in other respects do not come within the categories of persons whom the law directs the magistrates to send to be confined in a Beggars' Depôt. In short, the type of man for whom internment in a House of Refuge is provided by the law is the man who has no work to do, but who would be willing to work if he could secure employment."* The maximum term of confinement in a House of Refuge, except with the consent of the person concerned, is twelve months, and on discharge every person receives a certificate, with a note of good conduct, should his behaviour have been satisfactory.

The Minister of Justice may order the immediate release of any person detained either in a Beggars' Depôt or a House of Refuge, although the term for which he was ordered by the Court to be detained may not have expired, should he be of opinion that further confinement would be useless.

The cost of persons sent to a Beggars' Depôt or a House of Refuge by order of a judicial authority is borne in equal shares by the State, the Province, and the Commune in which the person confined has his settlement; only in the case of persons suffering from incapacity does the entire cost fall on the Settlement Commune. Where seclusion in a House of Refuge is at the request of a Communal Authority, this authority bears likewise the total cost. Under certain circumstances the cost of maintenance can be recovered from the person concerned, or those legally liable for his support.

* "Report on Agencies and Methods," etc. (Cd. 2304 of 1904), p. 198.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827).

The Beggars' Depôts follow a mixed economy of agriculture and industry, and "so far as possible every effort is made to employ the inmates each in his own trade."

Both in the Depôts and the Refuges small wages are paid, the accumulated earnings being handed to an inmate on his departure, partly in money and partly in the form of clothing and tools.

The following have been the admissions to these institutions during the years 18 1904 :—

ADMISSIONS TO BEGGARS' DEPOTS.

ADMISSIONS TO HOUSES OF REFUGE.

Year.	Number of Admissions.			Mean Number of Inmates.	Year.	Number of Admissions.			Mean Number of Inmates.
	Male.	Female.	Total.			Male.	Female.	Total.	
1892 - -	6,147	666	6,813	3,564	1892 - -	6,139	775	6,914	2,043
1893 - -	3,482	352	3,834	4,324	1893 - -	4,411	942	5,353	2,145
1894 - -	4,141	393	4,534	4,193	1894 - -	4,593	519	5,112	2,902
1895 - -	3,722	333	4,055	4,529	1895 - -	4,559	414	4,973	2,766

1904 - -	4,615	275	4,890	5,132	1904 - -	3,546	221	3,767	1,620

The only Free Labour Colony in Belgium corresponding at all to the German Colonies already described is a small Colony (*Colonie ouvrière libre*) at Haeren, near Brussels, established and maintained by a philanthropic society, subsidised by the municipality of Brussels, known as "Oeuvre de l'assistance par le travail pour hommes." Three agencies of assistance are conducted by the society, a Labour Exchange (*Bourse du travail*), established in 1889, a House of Work (*Maison du travail*), with a branch for women, established in 1893, and the Haeren Labour Colony, which dates from 1896. The reason for the establishment of the Colony was (to quote the words of a recent Report) the fact that "not one of the Government's Labour Colonies—Merxplas, Hoogstraeten, and Wortel—can claim the title of a Free Colony." In contrast to these penal institutions, the Haeren Colony is a temporary home, conducted on a benevolent basis, to which unemployed persons are able to resort voluntarily.

It is important to note that the three institutions of the "Oeuvre de l'assistance par le travail" work hand in hand. Unemployed persons for whom the Labour Exchange is unable to find situations are referred to the House of Work. The system adopted has been thus described :—

"Every solvent person, who asks for them, receives from the institution a book of 100 tickets, each of which entitles the holder to receive 20 centimes (about 2d.) in exchange for one hour's work. When an unemployed workman is given one or more tickets, he goes to the House of Labour and is there employed for as many hours as he presents tickets, the performance of an amount of work not falling below a fixed minimum being insisted on. The institution pays the men at the end of each day, and at the end of the month collects the amounts paid on the tickets from the persons who gave the tickets to the men."*

The Home of Work is not a lodging-house. Most of the applicants for help receive work, but live in their own homes. Those without homes are, if willing, sent to the Labour Colony. Other colonists are sent by the subscribers to the society, by magistrates, and by the police authorities; hence a considerable proportion consist of discharged prisoners.

The Colony was begun as an agricultural Colony, and for a few years farm work, nursery gardening, and the cultivation of vegetables for home consumption provided employment for a large proportion of the colonists, but wood-cutting for fuel is now at least equally important as a source of revenue, and agriculture is gradually taking a subordinate place.

* "Revue du Travail," February, 1896, p. 156.

APPENDIX No. XXI. (L).—Continued.

Handed in by the Board of Trade. (Q. 98827).

A small payment is made to the colonists, but it is regarded as a premium to encourage industry, and not as wages. The amount is left entirely to the discretion of the director.

From the establishment of the Colony in 1896 to the end of the financial year 1905-1906, 3,435 colonists had been admitted.

The admissions and discharges during the past six years have been as follows :—

Year.	Admitted.	Discharged.
1900-1901 - - -	322	324
1901-1902 - - -	261	259
1902-1903 - - -	197	204
1903-1904 - - -	193	193
1904-1905 - - -	175	174
1905-1906 - - -	148	146

Of the men admitted in the year 1905-6 only seven followed agriculture or horticulture, twenty were described as unskilled labourers and without occupations, and the majority of the remainder had been engaged in trades and handicrafts. Formerly a considerable number of foreigners—chiefly labourers from France—were admitted, but of late years very few. The following table shows the ages of the colonists admitted during the past six years :—

Age.	1900-1.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
Under 20 years - - -	19	5	5	4	—	3
20 to 30 years - - -	70	50	34	39	30	19
30 to 40 „ - - -	73	75	42	53	36	30
40 to 50 „ - - -	89	74	59	44	55	45
50 to 60 „ - - -	58	48	47	48	41	36
Over 60 „ - - -	13	9	10	5	13	15
Totals - - -	322	261	197	193	175	148

The majority of the men admitted are therefore between thirty and fifty years of age.

Their conjugal condition was as shown below :—

Condition.	1900-1.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
Single - - -	216	168	127	116	114	95
Widowers - - -	34	21	24	22	16	14
Married - - -	58	64	37	48	36	36
Divorced - - -	8	7	7	4	8	1
Separated - - -	6	1	2	3	1	2
Totals - - -	322	261	197	193	175	148

With the decrease of admissions the average duration of stay has increased, but it is still much below the period usual, and indeed insisted on, in the German Colonies. In the year 1905-6 it was 43½ days ; in the year 1904-5, 38 days ; 1903-4, 32½ days ; 1902-3, 34 days ; 1901-2, 28 days ; and 1900-01, 32½ days.

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

The number of recidivists has also steadily increased during the past five years, as the following table shows :—

Admitted.	1900-1.	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.
For the first time - - -	267	195	127	126	97	83
„ second time - - -	37	39	38	40	38	31
„ third time - - -	12	20	13	12	13	10
More than three times - -	6	7	19	15	27	24
Totals - - -	322	261	197	193	175	148

Thus, while the percentage of recidivists in the financial year 1900-01 was 17·1, in the following years it was 25·3, 35·5, 34·7, 44·6, and 43·9, respectively.

The great majority of the colonists at Haeren have been convicted for crime or misdemeanour. Of those admitted in the year 1905-6 only 21 per cent. had not been punished, and 60 per cent. had been detained in Beggars' Depôts or Houses of Refuge. Nevertheless, the conduct of the colonists is reported to be uniformly good.

No statistics have been kept as to the number of colonists for whom situations have been obtained, though many of them are said to find work in the country.

The balance-sheet of the Colony for the financial year 1905-6 showed receipts of £1,200, of which £459 came from the sale of faggots, £153 from agricultural produce, and £562 from subscriptions and donations. The expenditure amounted to £1,224, including subsidy to the Bourse du Travail of £47, and there was a deficit on the year of £25.

When the Haeren Colony was opened, the promoters took care to warn its friends that it would be impossible to count on such results as had been obtained in Germany, since there was not the same opportunity in Belgium of settling upon large unreclaimed tracts of land, and counting upon a long and undisturbed tenure. This prediction has proved correct, for the land originally enclosed by the Colony has been gradually encroached upon, owing to public works, roads, and buildings, so that in 1906 most of the farm land and garden, which the colonists had in the course of ten years brought to a high degree of cultivation, had been appropriated, and there remained to the Colony "only a scrap of about 150 ares (about $3\frac{3}{4}$ acres) hardly large enough to produce the vegetables necessary for the Colony. We can therefore no longer speak either of an agricultural or a horticultural Colony, and our institution is becoming simply a philanthropic House of Work, differing from that in the Rue de l'Allée Verte (Brussels) in that we lodge and feed our *protégés*, while the latter institution gives them work in return for wages." As a result of this development, the Colony has been re-organised, and the character of its inmates has changed. The idea is to send to Haeren for the future all suitable able-bodied applicants for work who seek help at the Brussels House of Work and especially those who, when left to their own devices, fall into slothful and irregular ways, yet who are capable of sustained, if not intense, work if subject to supervision.

SUMMARY AND CONCLUSIONS.

THE DIFFERENT TYPES OF COLONIES.

Summarising the account which has been given above of the Labour Colonies (variously named) now in operation in Continental countries, several distinct types need to be distinguished :—

(a) *The Free Labour Colonies of Germany, Switzerland, and Belgium.*—Of these thirty-six in the aggregate, thirty-three are farm Colonies established in the open country,

APPENDIX No. XXI. (L).—*Continued.**Handed in by the Board of Trade. (Q. 98827.)*

generally in the midst of moorland, while three are industrial and town Colonies. All are philanthropic in character and as a rule they lay great stress upon religious influences. They are carried on by associations, whose funds are, as a rule, supplemented by voluntary grants from public bodies (Provincial, District, and Municipal). The Colonies only offer temporary shelter to their frequenters. The farm Colonies are intended primarily to offer an alternative to vagrancy, and tramps and ex-prisoners form the bulk of their inmates. No powers of detention are possessed by the Colony authorities. Handicrafts and indoor work are subsidiary to agricultural employments in all the farm Colonies. The town Colonies are mainly recruited from urban populations, and trades and miscellaneous manual occupations are followed.

(b) *The Free Labour Colonies of Holland*, agricultural in character, which are intended to offer more or less permanent homes for their two classes of *habitués* :—

(1) Farmers settled with their families upon small holdings, which it is their business to cultivate ; and

(2) Labourers, who work on the home farms and with their families live in separate cottages.

Here, no serious hope of influencing the adult colonists would appear to be entertained ; efforts are rather directed towards the training of the young, who are educated in the State schools, and when old enough are put to situations. These Colonies likewise are supported by private philanthropy, helped by public grants.

(c) *The now defunct Free Farm Colony of La Chalmelle in France*, whose residents were recruited from the Paris Municipal Shelters, and were for the most part “ selected from amongst workmen having some knowledge of agriculture.” This was a municipal institution, and its object was to offer to respectable men of agricultural upbringing a chance of returning to rural life and work.

(d) There are, finally, the Penal Workhouses of Germany and Switzerland and the Forced Labour Colonies of Belgium and Holland, which are intended for the detention of habitual mendicants, vagrants, and people of irregular life. In the case of the Belgian Colonies voluntary admission is provided for, but the number of those who enter of their free-will is reported to be steadily decreasing, and it forms an insignificant proportion of the whole. These institutions all form part of the judicial systems of the several countries to which they relate, and are strictly penal in character, in which respect they have nothing in common with the Labour Colonies which exist for the sake of the unemployed.

CONCLUSIONS.

The following conclusions seem to be justified by a consideration of the work of the Continental Labour Colonies from all sides :—

1. The Free Colonies do not in general receive the genuine unemployed, *i.e.*, those who are out of work against their will. The great majority of their frequenters are the shiftless loafers who, in the severer seasons of the year or times of special distress, seek the shelter they offer, rather than expose themselves to continued want or run the risk of entering the Penal Workhouse.

2. So long as there is little or no discrimination in the admission of colonists, which is the case in Germany and Switzerland, the lower elements of society are bound to take possession.

3. But so long as the vagrant and loafer predominate in the Colonies, the self-respecting workman who has temporarily fallen on evil days will not enter except under great pressure. Nor is his daily contact with such people socially desirable.

APPENDIX No. XXI. (L).—*Continued.*

Handed in by the Board of Trade. (Q. 98827.)

4. It is held that for the unemployed of the towns, the industrial Colonies are more suitable than farm Colonies, and conversely that the agricultural labourer can be more advantageously employed in the country than retained in a town Colony. The Colony of La Chalmelle, maintained by the Municipality of Paris, was for this reason specially reserved for men of agricultural antecedents.

5. The effect of the discipline of the Colonies upon many of their inmates is good, but doubt must be entertained as to its permanency owing to the brief period of sojourn.

6. Recognising this, many Continental advocates of Labour Colonies contend that the usual period of stay, which is less than four months, should in the case of recidivists be prolonged to from twelve months to two years, according to individual circumstances.

7. In order to carry out this policy of special treatment it would seem that two types of Colonies would be needed :—

(a) Colonies for short term men, who would be able to take their discharge at any time ; and

(b) Colonies in which detention would be prolonged.

Colonies of the latter type would obviously correspond to some extent to the Beggar Dépôts of Belgium and the Penal Workhouses of Germany and Switzerland, and would be reserved for the confirmed vagrants and loafers who now overrun most Continental Labour Colonies.

A DUTCH CHARITY ORGANISATION SOCIETY.*

“LIEFDADIGHEID NAAR VERMOGEN” AT AMSTERDAM.

The principle of the Dutch Poor Law gives the first place in all philanthropic work to the churches and private charity. This principle is laid down in Sections 20 and 21 of the law (June 28, 1854), running as follows :—

Section 20. The relief of the poor is left to the charity of the ecclesiastical and private institutions, subject to the regulations of this Act.

Section 21. No public administration is entitled to give any relief to the poor, unless it has, as much as possible, evidence that they cannot receive the same from ecclesiastical or private charitable institutions, and then only in the case of absolute emergency.

The aim of this legislation obviously was no other than to relieve the public services as much as possible from charitable relief, and to lay it all in the hands of the church and of private charities.

Unfortunately, this aim is not attained; the percentage of the total costs of charitable relief being as follows :—

	The State.	The Churches.	Private.
1857.	40·4 per cent.	50·4 per cent.	9·5 per cent.
1890.	42·8 „	44·7 „	12·5 „

It is not my present object to explain the working of the law, nor to deal with the general subject of charitable relief as it presents itself at the present time.

But, in pointing out these two percentages, I only wish to state that a share in the increase of philanthropic work in the Netherlands falls to the credit both of the State and of the private institutions.

Generally speaking, there is a tendency to increase the work of the private (non-ecclesiastical) institutions, which are prepared to give their support and relief without regard to church or creed.

I am also very happy to state that there has been during the last 10 or 15 years an awakening of the public mind on the subject of a better basis for charitable work, which having been for the last half-century almost in the hands of the different churches, working without co-operation and mutual understanding, was very far below the standard of real, well-planned, and sensible poor relief. In these last 10 or 15 years much has been done in the way of improvement and re-organisation, especially in the way of co-operation between different charities, mutual understanding, and union; also in the way of reforming legislation and preparing a more efficient and sensible Poor Law. An inquiry was made by private effort as to the number of different charitable institutions existing in the country, and it might be of some interest to give the result. At the end of 1898 there existed in Holland :—

Outdoor Relief.	Institutions.
State charities (i.e., municipal institutions) - - - -	1,198
Charities of 40 different churches - - - -	3,057
Private charities - - - -	1,041

Indoor Relief.	Institutions.
Old people - - - -	710
Orphanages - - - -	360
Destitute and fallen women and children - - - -	69
Hospitals - - - -	712
General Relief.	
Employment - - - -	223
Special cases - - - -	72
Foreigners - - - -	24
Total - - - -	7,476

In most of the larger cities of the country, private institutions, not attached to any church, but giving support and relief to the deserving poor without regard to creed, have been established in recent years, and one of the first places where such an institution was founded was the capital of Holland, Amsterdam. In 1871 was established the society called “Liefdadigheid Naar Vermogen,” a name expressing the idea that the society will give as much relief as its means will allow.

This institution has now existed 35 years, and works on the following lines :—

- (1) No relief is given without previous inquiry.
- (2) Constant intercourse between the society and the relieved.
- (3) Employment, gratuitous loans, and assistance towards self-support are preferable to gifts of money.
- (4) District-visiting by voluntary visitors, under adequate guidance, is preferable to professional visiting.
- (5) Co-operation and union between all charities is of paramount importance in all charitable work.

The society started work on a small scale, but succeeded in securing the sympathy of the citizens gradually, so that it is now the leading private institution of the town. The figures for 1905 are not yet published, but I may be allowed to quote the figures of the year before (1904). The society spent (gross figures) :

- £3,000 to 390 families in weekly relief.
- £2,200 to 552 families in temporary relief.
- £2,400 to 852 families in temporary relief for the account of different givers.
- £3,500 to 515 families in gratuitous loans.

These are the main figures. Moreover, it spent nearly £800 in placing destitute children in safe homes, and found employment in 275 cases for different men and women.

The total income of the society in 1904 was about £22,000.

The gratuitous loans are given on the security of one or two sureties for the purpose of small trade. A loan can never exceed £16 13s. 4d. (= 200fl.), and must be repaid in weekly instalments as a rule. At every repayment a certain small amount must also be paid

* Reprinted from the “Charity Organisation Review” for August, 1906, by kind permission of the publishers.

APPENDIX No. XXII. (A).—*Continued.**Handed in by Mr. J. F. L. Blankenberg, Amsterdam. (Q. 100020 (I.)*

into the savings bank, so that when the loan is repaid a certain sum stands to the credit of the borrower.

The total amount of loans outstanding at the end of 1904 was £4,000, divided into 833 loans, which originally amounted to £6,500.

The amount due to the credit of the borrowers in the Post Office Savings Bank was £1,400. I think this a very efficient system, securing independence in the future to people who have been dependent upon loans.

In the year 1892 the society adopted the Elberfeld system as the basis of its operations. The town is divided into 34 districts, each district being ruled by a district committee, under the presidency of a district president, and including a certain number of district visitors, acting as volunteers.

I think very highly of the Elberfeld system, because it avoids the evil of red tape and officialism, because it brings the poor into immediate contact with those who desire to help them. By this system the help is really brought from man to man (as Dr. Munsterberg calls it, quite appropriately), and I think there is no other system imaginable under which the evil of giving relief wholesale is so adequately checked.

Of course, the whole machinery of the system is laid down in a set of regulations and rules, and I am happy to be able to give some extracts from them for the use of the readers of this "Review." I earnestly recommend the study of this system to every worker on the field of charity, not because it is adopted by the above-named society, but because it seems to me to be the only sensible and adequate solution of the difficult problem of giving relief where large numbers are concerned.

J. F. L. BLANKENBERG.

Amsterdam, February 12, 1906.

Extracts from Rules.

2. The society will give no assistance of any kind without previous investigation.

3. The assistance given may be:

- (a) Advice and support in the proper management of a business or household.
- (b) Assistance to obtain employment for those members of a needy family who are not too old or infirm and are not likely to be successful in obtaining it themselves.
- (c) Gratuitous loans up to an amount of 200fl. at the most, advanced in preference to small shopkeepers or when it will cause an improvement in a temporarily unfavourable position.
- (d) Donations in one sum or by instalments up to an amount of 25fl. at the most, in the course of one year to parties requiring temporary and immediate assistance, and who will not be able to pay back any money.
- (e) Continuous monetary support up to an unlimited amount and without fixing any period of continuance to aged persons, invalids, cripples, and such as for other valid reasons cannot or not sufficiently provide for their own maintenance. This support, unless in exceptional cases, will as a rule tally with the amount which the family has weekly to pay for rent and insurances.
- (f) Temporary monetary support to those who, for want of means, have to wait for the assistance mentioned in (e).
- (g) Contributions to the nursing expenses in institutions for children, cripples, aged persons, and others, to the expenses of schooling, and for other similar purposes. These contributions will be allowed on the advice of the District Committees by the Board only, which will then communicate directly with the re-

spective societies regarding the matter. As a rule, the annual contribution for one family will not exceed 50fl.

If during the winter there should be enough money on hand, or a sufficient provision of food, clothing, or covering, gratuitously received, should be available, the Board will inform the chairmen of the District Committees accordingly, in order to allow winter donations to those families for whom it is especially required.

4. The assistance mentioned in (c) is not to be combined with such as is mentioned in (e) or (f).

5. Assistance of the institution will be refused to those persons:—

- (a) Who are not residents of Amsterdam.
- (b) Who, after investigation, appear to be able with better management to get on without any assistance.
- (c) Who incur needless expenses.
- (d) Who are able to obtain the required assistance from the parish or from private parties, or who can find shelter in a charitable institution.
- (e) Who are addicted to liquor.
- (f) Who purposely conceal facts necessary for coming to a fair estimate of their situation.
- (g) Who in any way try to deceive the institution so as to obtain its assistance.
- (h) Who wilfully and without special reasons leave their work, and consequently lose their earnings.
- (i) Who, albeit able, and having been advised, are still wanting in measures to provide for themselves.

29. The district chairmen are responsible for the proper observance of the regulations and the various instructions, each as far as his own district is concerned. Supported by the devotion of the district visitors, and sincerely alive to the true significance of a sensible charity, they will, notwithstanding the great difference of persons and conditions, endeavour to maintain as much uniformity as possible in the treatment of the various cases.

They will have to guard, as a first duty, against the assistance of the institution degenerating into an unhealthy sentimental charity which breeds poverty instead of lessening it. They must judge every case critically, always aiming at raising the families concerned out of the state of moral decadence to which they have generally fallen.

Taking into account the weaknesses and faults of the poor, natural to them as to all persons, the chairmen have yet to see to it that every form of assistance rendered shall be conducive to the development of the powers possessed by the families, so that gradually they may be able to provide for their own maintenance.

45. The district visitors have to inquire into the moral and material condition of the families in their charge. They examine:—

- (a) Of how many members the family consists.
- (b) If each of them contributes to the expenses of the household according to his share and power.
- (c) What are their united receipts and expenses.
- (d) As to whether and to what extent others contribute to the expenses of the household.
- (e) What are the antecedents and the character of the family.
- (f) What is the present condition of the family.
- (g) What is the cause of the threatening or existing poverty.

APPENDIX No. XXII. (A).—*Continued.**Handed in by Mr. J. F. L. Blankenberg, Amsterdam. (Q. 100020 (I).)*

- (h) Whether the family can or does receive assistance from other parties.
- (i) By what means effective assistance might be given.
- (j) What is wanted in the clothing, feeding, housing, and bedding of the family or in the schooling of the children.

46. The district visitors have to avoid most carefully all that might hurt the families visited in their religious or political opinions. Any interference or influence in this respect is not allowed. The question as to which church they belong is only put in order to be able to find out whether or no they receive any support from their parish.

47. The district visitors have, above all, to consider that their work does not consist so much in supporting the poor as in giving them counsel and advice, so as to prevent them requiring material assistance; and should support be given, to do this in a form and direction which will put the poor in the way to help themselves afterwards.

It is of the utmost importance to point out to the poor the desirability of their membership of an institution to provide for sickness and funeral expenses, of their insuring furniture and merchandise against fire, and in general of their taking all measures of foresight, economy, and morality.

The district visitors will assist in the fulfilling of these social obligations of the families.

They, moreover, point out to the families, wherever there is cause to do so, the indispensability of cleanliness, neatness, honesty, and good management; to

the parents their duty of giving a good education to the children and enforcing their attendance at school; to the children their obligations towards their parents, monetary as well as other ones.

In this way they will endeavour by their influence to raise the families in their charge to a higher level of moral development, which may also be conducive to a material improvement of their circumstances.

48. The investigation must be as complete and thorough as possible. All information given by the members of a family has to be thoroughly investigated, and as many persons as possible have to be interrogated about the family. It is of much importance that the amount of the wages should be asked the employers. It is furthermore of the utmost importance that the families shall never be informed of any unfavourable information obtained of them.

56. If a district visitor at a first visit to a needy family should find that there is nothing to eat, or that the case for some other reason is an extremely hard one, in which delay would be dangerous, he will be allowed to anticipate the decision of the district committee and to give at once a small monetary supply. This may not exceed the sum of 2.50fl.; it will in any case be reimbursed to the visitor, and will be deducted from the supply to be granted thereafter.

57. A district visitor is not allowed to give any special donation to a family in his charge without mentioning this in his report.

58. Monetary support is handed by the district visitors at the houses of the assisted personally.

APPENDIX No. XXII. (B).

Handed in by Mr. J. F. L. Blankenberg, Amsterdam (Q. 100123).

In my statement I gave under Section 22 the percentages of the relation between public, churches, and private charity, as regards the total cost of poor relief.

Having been asked by the Chairman to give also the percentages as to the number of persons assisted, I have pleasure in quoting them, as follows :—

Year.	Public.	Churches.	Private.
1854	44.58	53.58	1.84
1857	44.47	53.43	2.10
1869	40.80	56.90	2.30
1890	37.05	58.13	4.82
1896	38.64	56.33	5.03
1900	35.43	57.38	9.19
1903	35.43	54.68	9.89

APPENDIX No. XXII. (C).

*Handed in by Mr. J. F. L. Blankenberg, Amsterdam. (Q. 100212).**Clubs in case of Sickness.*

The larger part of the poor population are members of such clubs. No statistics are available of the number of people belonging to them, or upon the financial results. But I am glad to be able to give a short *exposé* of the essence of a report, published only a week ago by the "Association of Medical Men in the Netherlands." This association appointed a committee, consisting of five of their members, to investigate as to the number of these clubs, their organisation and results, and to propose such reforms as the committee might judge to be in the interest of the members.

The report, a large volume, contains the most interesting details, but for the present purpose the following quotations will be sufficient.

There are three different groups of clubs :—

A. Clubs the management of which is entirely gratuitous.

B. Clubs established by one medical man.

C. Clubs under the management of a paid administration.

The first group (A) contains 312 clubs.

The second group (B) contains 210 clubs.

The third group (C) contains 74 clubs.

Clubs belonging to groups A and C secure to their members medical, surgical and obstetric relief, also medicaments, against payment of a weekly fee.

Clubs belonging to group B are, so to say, private enterprises of a single doctor in rural localities. He

[APPENDIX No. XXII. (C).—*Continued.*]*Handed in by Mr. J. F. L. Blankenberg, Amsterdam. (Q. 100212.)*

receives a fixed weekly fee from each member and gives in return his attendance wherever required. The doctor is the club.

Generally speaking, all these clubs have the same principles, rules, and regulations.

Before entering a club, the member must declare that he is healthy and not suffering from any illness. Sometimes a person not enjoying perfect health can be admitted against an increased fee, and with the restriction that no relief will be given to him until a certain period shall have elapsed after his admittance.

No members are admitted under the age of 16 or 18 and above 65.

The average fee charged to members amounts to 2d. per week for adults, and $\frac{1}{2}$ d. per week for children; more

than 5 children are not charged for, so that on the average the weekly charge for a family amounts to 6d. or 7d.

Some clubs charge lower rates in winter-time, but with the condition that these rates will be higher in the summer. If members do not pay their weekly terms in time, they are generally fined.

Philanthropic societies often pay the fees for poor families, so securing them proper medical attendance in case of illness.

There is a strong feeling in the country that the organisation and control of these clubs need thorough reform, and the Report referred to confirms such conclusions.

But I presume that for the present purpose these conclusions are not of interest.

APPENDIX No. XXII. (D).

Handed in by Mr. J. F. L. Blankenberg, Amsterdam. (Q. 100298.)

The number of assisted poor, quoted in Section 33 of my statement, relates to outdoor relief. Having been asked to give also the number of assisted poor, by *indoor relief*, the following figures have been extracted from the Government official statistics:—

Year.	Number.	Old people.	Invalids.	Children.
1887	28,911 from which	13,585	2,224	13,102
1892	30,449 " "	13,782	2,338	14,329
1896	31,260 " "	14,496	2,614	14,150
1901	24,050 " "	11,774	2,133	10,022
1902	25,782 " "	12,828	2,190	10,764
1903	25,724 " "	12,678	2,233	10,813

In giving these figures, I must repeat my remarks (*see* Section 32 of my statement) as to the deficiency of these statistical figures. It would be misleading to form conclusions upon them.

PART I.—COMPOUNDING AND ASSESSMENT.

APPENDIX No. XXIII.

REPLIES by Mr. J. T. BAKER, Senior Rate Collector for the Metropolitan Borough of Islington.

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—In reference to your first question, it has lately been the rule in Islington not to grant commission to owners under the Poor Rate Assessment and Collection Act or otherwise. Formerly it was the custom to allow it to a limited extent under Section 3 of the Act, but the loss on the general collection of the rate being so small, it was considered to be unadvisable to continue the practice. The ceasing to give commission has resulted in a large saving, and consequently a benefit to the ratepayers generally.

Question II.—Is direct payment by occupiers (a) possible, and (b) advisable? If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—Since commissions have ceased to be granted we have collected the rates direct from the occupiers, with very little loss; our quarterly statement for Michaelmas last shows a loss of only 8s. 4½d. per £100, and sometimes it is less; it has been as low as 4s. 7d. per £100.

When the commission was abolished,* in the greater number of cases the owners continued to pay the rates, receiving allowances only for empty property. We have in Islington proved the possibility of collecting direct from the occupiers of small property, and the advisability of doing so is found to be the saving effected, amounting to a considerable sum. I do not think it would be advisable to recur generally to the former practice, but only to grant commission in a few cases where the loss from empties is abnormally high.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—No doubt the increase of rates tends to raise the rent of houses where the owners have agreed to pay the rates, but I think this is governed more by the demand for houses. At the present time, owing to the number of empty houses in Islington, the tendency is for the rents to go down.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—My position renders it undesirable that I should take any active part in local politics, so that I am not well able to give an opinion; but I should think that the direct payment of the rate creates an interest in local affairs, and tends to a more economic administration than would be the case if the owners paid. In those cases where the owners pay the rate voluntarily, the fact that the tenants are liable and therefore receive the demands, which have printed on them the purposes for which the rate is levied, gives them an interest in local government, and perhaps prevents support being given to extravagant schemes.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answers V. and VI.—I have had no experience of a weekly collection of rates, and I do not think it at all desirable. It would lead to a greater loss than our present system of collection in advance; it would be difficult to enforce where the weekly instalments were not regularly paid, and the collection would be more expensive. It would, of course, be possible, but would require a much larger staff than the present

one. It would be difficult to fix the limit of rateable value where the collection should be weekly. If it were fixed for houses rated at £20 and under, the value to which the provisions of the Poor Rate Assessment and Collection Act apply, then it would be open to the objection of dealing differently with the same class of tenant, for there are as many working people, speaking of my own district, living in houses rated above that sum as there are in houses of that amount.

In Islington we have 46,795 assessments and thirteen rate collectors, each collecting the rates from 3,000 to 4,500 assessments. The work of making the demands, attendance at our offices to receive the rates, the attendances at the various committee meetings, and taking measures for the enforcement of the rates, fully takes up the whole time of the quarter. To collect weekly would require a very much larger staff, and the expense of the collection in Islington would certainly be greatly in excess of the amount of commission now paid to owners. Quoting again from the Michaelmas statement, no commission at all was paid to owners for that quarter; but during the last quarter a limited number of agreements with owners have been made, the amount of commission paid being trifling compared to the outlay which would be required for a weekly collection.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—The system of compounding has no effect on the rating of the houses; they are rated in accordance with the scale that applies to weekly rents, such scale being fixed at a conference of the various Valuation and Assessment Committees in conjunction with the representatives of the King's Tax Authorities and the London County Council prior to each quinquennial re-assessment.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answers VIII and IX.—I do not think that any allowance to occupiers for prompt payment—which would be rather difficult to define—would much alter the existing state of things. My experience, extending over 38 years, is that the greater number of ratepayers pay fairly promptly, that is, before the end of the second month of the quarter; and there are others—a smaller proportion, but usually the same people—who are summoned quarter after quarter. Though the rates are payable at the beginning of the quarter, and in advance, the greater proportion is paid during and towards the end of the second month, leaving three months between each payment; so I do not think it presses more hardly than would a weekly collection. Experience shows that the more thrifty lay aside a weekly sum for the payment of the rate, while others meet it by means of their lodgers' rents and a part of two weeks' earnings prior to payment of the rate.

Generally, I attach great importance to the fact that the rate in Islington is due and made payable at the beginning of each quarter, and collected within the quarter. This system has now been for many years in force, and has been the means of collecting the rate with much less loss than formerly, and with less hardship to the poorer ratepayers. Before this system was adopted it was a common thing for goods to be taken under the Distress Warrants, while now it is quite exceptional. The number of cases in which the rate has to be recovered by means of the bailiff has been considerably reduced in consequence of the more prompt collection.

* Although the commissions to owners were abolished and the liability fell upon the occupiers, the rates being demanded and collected from them, it was found in many cases that an understanding had been come to between the owner and occupier for the payment of the rate by the owner.

This is merely an understanding between owner and occupier and in no way affects the liability of the occupier to the Borough Council.

APPENDIX No. XXIV.

REPLIES by Miss CONSTANCE R. BARILETT (Chelmsford) to questions submitted to her by the Commission.

COMPOSITION BY OWNERS FOR PAYMENT OF RATES.

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—In the district with which I have had to do, owners, as a rule, compound for the payment of rates in all property let to the working classes on weekly or monthly tenancies. There are a few exceptions, among those owners who wish to educate their tenants in local government and expenditure.

Question II.—Is direct payment by occupiers (a) possible, and (b) advisable?

If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—Direct payment by occupiers is both possible and advisable.

(a) In the district above mentioned it has worked well for many years among some of the thrifty occupiers of cottages, whose appreciation of their tenements induces them to overcome the difficulty of quarterly payments. It is not easy to work among the very poor or thriftless, whose custom is to spend each week's income as it comes. The plan of direct payment being exceptional, tenants who object to it have only to move to another house, and, owing to slackness in collecting debts, the unprincipled can usually escape payment of the quarter's rates by doing so. This moving of tenants and loss of rates would be avoided if the system were general. The success of the experiment among occupiers of the more popular houses—many of them quite poor—goes to show that the more generally it was adopted, the more practicable direct payment would become.

(b) It is advisable, as creating a more intelligent interest in local government, and tending to economy in administration.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—Variations in the rates do affect rents where composition is the rule, but not in such a way as to be intelligible by indirect ratepayers. Rents are fixed on such a scale as to allow for existing rates or with some margin for their probable rise. When rates continue to rise rents are eventually raised in proportion, but only once in several years, so that the relation of the rise in rents to that in rates does not appear to the occupier, who usually supposes that the increase all goes to the owner.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—The effect of direct payment of rates by occupiers on the interest they take in local government can be noticed at once, and is very marked. Until they receive the claims of the councils and guardians they have not realised what public work is being done nor what it costs, and have supposed they make no contribution to the so-called "free" undertakings. Finding that they share the expense stimulates them to take a share in responsibility—in an intelligent use of their votes and in following the action of their governing bodies. Learning that they have a right to demand that the work should be well and economically done, they begin to criticise extravagance and slackness, and to take action themselves in matters that concern them, e.g., in reporting to the authorities when the cleansing of the back streets in which they live is neglected, or when dustbins are left too long unemptied. They also begin to consider whether schemes which substitute various forms of rate aid for the independence of the working classes are for their ultimate advantage or not.

The attitude of occupiers of small property towards local government when they do not pay the rates directly is often one of ignorance and indifference, or on the other hand of favouring the party which appears to promise most in the working class interest, without real information as to methods or cost, or knowledge of the incidence of rates. Local elections are made matters of party politics, the men who take an interest in politics voting on party lines, without considering on their merits the questions of local government that are at issue, or the capacity of the candidates to deal with them.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—I have had some experience of weekly collection of rates from occupiers by owners, both in cases where they were direct ratepayers and where they were not. In the former case, on occupiers first being made direct ratepayers, the weekly proportion of the rate was collected with the rent, and given back to them when due to be paid. This plan was useful at first in accustoming them to put by the necessary amount weekly, but among the more thrifty it became unnecessary after a time. In the latter case the owners, while still compounding and collecting the rates, kept a separate account of rent and rates in the tenants' books, the former being a fixed amount, the latter varying with the half-yearly rate. This plan has lately been adopted in other districts, and is useful as showing the tenant what proportion of his payments goes to the owner and what to local expenditure. Both these plans are possible only when the landlords are willing to incur the extra trouble involved, for the sake of educating the tenant. I have not heard of any weekly collection by the local authorities. In the better class houses occupied by the thrifty, or better to do, a quarterly collection should be sufficient.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answer VI.—Assuming a weekly collection by the rate-collectors, it is a question whether the cost would be greater than the allowance now made for compounding, this allowance having been much reduced of late. A much larger staff of collectors would seem to be necessary; but taking the allowance at 12 to 15 per cent., it would not appear that salaries would necessarily exceed this amount. By weekly collections at regular times bad debts would be avoided, and also the necessity and the expense of repeated calls and summonses, very usual with quarterly collections. As in collecting rents, when the people know that payment is expected regularly at stated times, and will eventually be enforced, a second demand seldom has to be made.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—The system of compounding in itself has no necessary effect upon the value for rating purposes of the property compounded for, assessments being defined by law, irrespective of direct or indirect payment of rates. But weekly tenancies being more expensive than others to keep in repair, and liable to more loss and unlets, are usually assessed lower than others, in accordance with a scale published by the London County Council. This reduced scale, though adopted by most local bodies, is not obligatory by law, and unfortunately some borough councils, being opposed to the abolition of compounding, have raised the assessments of property where the tenants have been made direct ratepayers, thus adding to the amount of their rates, while no value has been added to the property.

APPENDIX No. XXIV.—Continued.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—In the event of occupiers paying their rates direct, an allowance made to those paying quarterly in advance might be an encouragement to prompt payment, and if given only to those who pay on the first demand, might save some trouble and expense in second demands and summonses. It would, however, hardly be necessary if direct payment became the rule instead of the exception. In the case of those paying weekly, the incentive to regular payment would not be necessary, though an allowance to those who paid punctually throughout the quarter or half year might be found helpful. It would seem fair that those who caused unnecessary trouble and expense in collection, should by this plan pay at a slightly higher rate than others.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answer IX.—The practice of demanding payment of rates considerably in advance, is a great inconvenience and sometimes a hardship on occupiers, when first becoming direct rate-payers. They are not prepared to pay the whole quarter's rates on first entering a house, as they are called upon to do, and they often do not understand that in the event of leaving before the end of a quarter, the balance will be repaid to them

on their claiming it from the local authorities. Here, again, if direct payment became the rule, the difficulty would be diminished. All would then know the amounts and dates of payments, and have the opportunity of preparing to meet them; while at the same time the need for payment so long in advance might decrease in so far as its purpose may be to avoid bad debts.

On the whole, though there would be perhaps considerable initial difficulty in abolishing compounding, it would appear to be practicable. It would also be likely to stimulate the interest of voters, and to tend to efficiency and economy in administration, through an increased sense of responsibility and a more accurate knowledge of the incidence of rates.

Fear may be entertained by some, that this measure would lead to too great a reaction in favour of economy. Or, again, it may be thought that the result would eventually be to cause a demand for such a reform of local taxation, by graduated rates or other means, as would relieve the working classes of their present share in local expenditure. But whether or not these are ends to be desired, there seems to be little to justify the present system, under which a considerable proportion of those who possess votes, remain so indifferent as to neglect to use them, or so ignorant of the issues involved, as by their votes to increase expenditure, which they would be the first to condemn if they realised how much of it must sooner or later be repaid by themselves.

APPENDIX No. XXV.

**STATEMENT OF EVIDENCE AS TO COMPOUNDING BY MR. GEORGE WILLIAM CLARKE,
BARRISTER, TOWN CLERK OF STEPNEY.**

1. I submit a brief statement of my experience and views upon the subject of composition by owners for payment of rates.

2. At the outset, I should like to remind the Commission that since the passing of the Poor Rate Exemption Act of 1840 (3 and 4 Vic. c. 89), a temporary Act continued in operation from time to time by Expiring Laws Continuance Acts—the person *prima facie* rateable to the relief of the poor and to rates required to be collected and enforced in the same manner as the poor rate, is the occupier (beneficial and exclusive) of rateable hereditaments. The principal exceptions to this rule and in which the “owner” becomes liable in place of, or side by side with, the occupier, are the following:—

- (a) Tithe rent charge and advertising stations—which have no application to the point submitted to me.
- (b) Under agreement pursuant to Section 3 of the Poor Rate Assessment and Collection Act, 1869—within specified limits of rateable value—whether the hereditaments include a dwelling house or not. The occupier still remains liable under this section, but a collateral liability is, by virtue of the agreement, imposed upon the owner.
- (c) Where “owners” of *all* rateable hereditaments which *include* a dwelling-house—within specified limits of rateable value—are by order rated *instead* of the occupier (Section 4 (1). This liability extends during the period of occupation only, unless under Section 4 (2) the owner agrees, in return for a deducted commission, to pay the rates whether the dwelling house be occupied or not. Although owners are so rated the goods and chattels of the occupier are still, under certain conditions, liable to be distrained and sold (Section 12).

3. I pause for a moment to remind the Commission that under Section 1 of the Poor Rate Assessment and Collection Act, 1869, an occupier of a hereditament let for a term not exceeding three months is enabled to deduct the rates demanded of him from the rent due to his landlord. No rateable liability is directly imposed upon the *owner* in this instance, the occupier being the person made liable to pay to the rating authority.

4. From the date of the passing of the Representation of the People Act, 1867, until the decision of the Divisional Court (Lord Alverstone, C.J. and A. T. Lawrence, J.) in the case of *Davis v. Wallis* (1908) (2 K.B. 134), considerable doubt existed upon the point whether, in respect of “tenement” houses “wholly let out in apartments or lodgings not separately rated,” situate in a Parliamentary borough and coming within the words of exception embodied in Section 7 of the Act mentioned, owners were required to be rated instead of occupiers. From the terms of the Court's decision in *Stamper v. Sunderland Overseers* (1868) (L.R., 3 C.P., 388; 37 L.J.M.C., 137; 18 L.T., 682; 16 W.R., 1063; 32 J.P., 439), it was in some quarters concluded that owners were legally rateable in respect of such houses and such opinion was acted upon, but the Divisional Court has now expressed the view that the Act of 1867 is a *franchise* Act and not a *rating* Statute and that “it only deals with rating as incidental to the qualification for the franchise.” Moreover, the Court expressed the opinion that in order to legally rate owners instead of occupiers, a rating authority must now do so under, and make the allowances prescribed by, the sections of the Poor Rate Assessment and Collection Act, 1869, to which reference has been made above.

5. Turning to the question of compounding under the Act of 1869, I should distinctly emphasise that compounding is most advisable in a borough like Stepney, having regard to its convenience, and because it un-

APPENDIX No. XXV.—*Continued.*

doubtedly saves the ratepayers from loss. In some boroughs—such, for instance, as Islington, where for about seven years I held the position of chief assistant to the vestry clerk (afterwards the Town Clerk)—compounding, having regard to the respectability and position in life of the bulk of the inhabitants, can be well dispensed with to the benefit of the general body of ratepayers and the saving of the commission. In Stepney, however, having regard to the itinerant wanderings and “hand-to-mouth” habits of a large proportion of the population (nearly 300,000), to attempt to dispense with it and to look to the occupiers for payment would mean considerable financial loss to the rating authority. Again, for a rate collector to enter certain of the courts in this borough for the purposes of his collection is a matter attended with no small degree of danger, which is avoided if payment is obtained from the owner of the houses therein. Again, as indicated above, tenants in this class of property are continually shifting and the attendance of the collector at each house for rate-col-

lecting purposes would have to be not less frequent than once or twice a week.

6. I think compounding should be allowed, where necessary, under agreement as contemplated by Section 3, for it enables the rating authorities to pick and choose. If well advised, they would not allow compounding where rates are collectable from the occupiers without difficulty, and at an expense less than what would be allowed in commission. It follows that I do not advocate compounding under Section 4 where the owners of *all* rateable hereditaments, which include a dwelling house coming within the compounding limit, must be rated instead of the occupier.

7. Where approved, a compounding allowance of 20 per cent. is made to owners in this borough on a rateable value in the case of each hereditament not exceeding £15. This allowance represents a loss in collection of about £3,700 per quarter, or about 2½ per cent. of the total amount of rate to be accounted for each quarter, which approximates £170,000.

APPENDIX No. XXVI.

REPLIES by Mr. WALTER POTTER, Chief Collector for the Borough of Brighton, to Questions submitted to him by the Commission.

1. When appointed collector I felt the great necessity, in order to make a successful collection, of assisting the poorer ratepayers by a system of deposit. This I found acted beneficially to the Corporation as well as the payee; but, unfortunately, one of the receiving clerks embezzling some of these deposits, the custom was ordered to cease, after being in practice nearly forty years. This I greatly regret, believing it the right way to assist the poorer class of ratepayers. I know it has saved much that would otherwise have been lost.

2. While acting as collector, my experience has been that a weekly tenant, not under composition, getting into arrears of rent, the landlord, although agreeing to pay rates, has refused to do so, although but a week or two in arrear, with the result that proceedings to recover from tenant terminated in the bailiff's return—no effects. The landlord, ascertaining this, has refused to pay proportion even upon rent received, and has possibly re-arranged rental. This, though within my knowledge at the time, I cannot now prove. But the tenant, if staying on, seldom again paid rates, preferring to run the risk of proceedings as before, until the arrears of rent procured tenant notice to quit, or left the premises to evade payment.

3. In making landlords or agents responsible for the payment of rates under composition, care would necessarily have to be taken that the collectors obtained tenant's name for the purpose of registration on voters' list. This is done under the system we have in our rate books, a special column being provided for owner's or agent's name.

4. I would respectfully suggest that the compound system be retained on £14 or not less than £12 rateable value, and compulsory on owners or agents.

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—Yes, optional to owners; allowance one-quarter of Poor, District, and Library rates, but not on Water.

Question II.—Is direct payment by occupiers (a) possible and (b) advisable?

Answer II.—(a) Possible. (b) Not advisable, for reason that this class of ratepayers, in my opinion, do not till late in the rate understand their responsibility.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—I should think it does, but could not prove it.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—My experience in this is that the poorer class of ratepayers fail to consider the outlay on the town generally as beneficial, except where it touches their own particular locality. If they do not directly pay rates, they are aware their rental includes such charges, and many who do pay their rates resent by protest when paying.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—Had no experience as to weekly collection. From my appointment in 1868 I started a system of deposit, for the purpose of meeting the charge, to save the town loss, and ratepayers costs. It worked well, in my opinion, but such deposit business has been ordered to cease. But 10s. on account is at times accepted, receipt given, and entered direct to the rate account in the rate book.

The deposits mentioned I retained till completed, then paid in.

Very frequently the depositor removed after paying in for some time. If not traced, such cash received was paid into the account, and remainder written off.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answer VI.—I should say yes, as it would require a specially appointed collector, and then very doubtful if it would be successful.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—I do not quite grasp this question, but believe the answer is “No.” I submitted this question to the parochial valuer, whose reply is: “The system of compounding for rates does not have any effect whatever in estimating the value of property for rating purposes. The gross rental is based on its present value, and, whether the rates are compounded for or not, is not taken into consideration.”

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—Occupiers of houses of compound value, not compounded for, by payment of rate before the end of second month of date of rate, might be allowed rebate, not exceeding amount of composition.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answer IX.—Our practice here is two rates in the year, combining Poor Rate, District, and Library Rates, also water charges, receivable by two quarterly payments. I therefore consider the charges do not unduly press upon the ratepayers. Still they could be assisted, as stated in reply to No. 5.

APPENDIX No. XXVII.

REPLIES from Mr. SAMUEL COLLIER POTTS, Treasurer for the Borough of Huddersfield, to Questions submitted to him by the Commission.

My views are formed upon 35 years' experience in connection with the collection of borough rates and administration of the Finance Department of the Borough of Huddersfield during that period.

The Huddersfield Corporation Act of 1871 empowers the Corporation to lay a borough rate for all their purposes, and by Section 342 gives the Corporation the option of rating the owner instead of the occupier where the rateable value of the property does not exceed the sum of six pounds.

The sections are as follow:—

Section 336.—Power to levy Borough Rate.

"In case the Borough Fund is at any time insufficient to pay the expenses payable thereout, the Council shall from time to time, annually or oftener, as and when they think fit, estimate as correctly as may be the amount in addition to the Borough Fund, which will be sufficient to pay those expenses, and shall raise the same by means of a rate called the Borough Rate; and accordingly such a rate the Corporation shall, annually or oftener, as and when they think fit, make, assess, and levy on the occupiers of all such kinds of property as by the laws in force for the time being are assessable to any rate for the relief of the poor according to the net annual value of such property; and the Corporation may levy any such rate either in one sum or payment or by such number of instalments of such amounts, and to be paid at such times, as they shall from time to time fix and determine at the time of making such rate, and in the case of a rate payable by instalments, the demand note shall, in addition to other requisite particulars, state the times appointed for payment of such instalments; and all the powers and remedies of the Corporation for the recovery of rates shall extend and apply to each instalment as fully as if the same were a separate rate."

Section 342.—Power to Rate Owner.

"The owner instead of the occupier of the property may from time to time, at the option of the Corporation, be rated in the following cases, namely:—

- (1) Where the rateable value of the property rated does not exceed the sum of £6.
- (2) Where buildings are let in separate apartments.
- (3) Where the rents become payable or are collected at any shorter period than quarterly.
- (4) Where the property rated is a mill, manufactory, machine shop, or other work wherein or in any part whereof steam power is supplied by the owner.

And where the owner is so rated he shall be entitled to a deduction of 10 per centum on the amount of the rates when paid by him."

The foregoing provisions have been amended by the Huddersfield Water Works and Improvement Act, 1876, s. 120.

The following is a copy of the Section:—

RECOVERY OF RATES AND RENTS.

Section 120.—"With respect to the provisions of Section 342 (power to rate owner instead of occupier in cases described) of the Improvement Act of 1871, the following provisions shall have effect—that is to say,

The owner of any property rated in the borough rate instead of the occupier thereof shall not be entitled to the reduction of 10 per cent., unless he pay the rate within one calendar month after the same shall have been demanded.

Where an owner pays any rate to the Corporation the occupier shall repay to him the amount thereof, unless it shall have been agreed between them that the owner is to pay such rate, and such amount, if not so paid on demand, may be recovered as arrears of rent could be recovered, from the occupier by the owner.

The owner of a mill, manufactory, machine shop, or other work, who supplied steam power thereto, or to any part thereof, shall for all purposes of rating under the Improvement Act

of 1871, be deemed the occupier thereof, and shall not, except the Corporation specially so order, be deemed to be the owner thereof within the meaning or effect of Section 342."

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—The rating of owners of property in respect of items of a rateable value of £6 and under has been in operation in this Borough since the passing of the Local Act of 1871, previously referred to, and has facilitated the collection of the Borough rates to a very considerable extent. In fact, I am not only strongly in favour of its continuance, but I am of opinion that if the amount of £6, which forms the limit at present, were increased to £8, it would bring into operation a large number of assessments on back-to-back houses where the rates are paid by the land lord, and where the tenants prefer the more gradual payment of local taxation through the medium of the rent, and would be beneficial to all parties, and of great assistance in the collection of the rates.

Question II.—Is direct payment by occupiers (a) possible and (b) advisable?

If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—Direct payment by occupiers is, of course, possible, as the Corporation have the option of rating the owner, but I do not think it advisable owing to the difficulty of the collection of the amounts, and where proceedings have to be taken for the recovery thereof, with the attendant costs, a certain amount of resentment is bound to ensue, both against the authority and its officials. I think it is desirable to take advantage of the easiest possible method both of payment by the occupier and collection by the authority, and in respect of small assessments, where the occupiers are of the poorer class, and the rent usually paid weekly, this medium seems to me to be the best and most agreeable for both sides.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—The variations in the rates are no doubt adjusted in the rents between landlord and tenant from time to time where the composition is in operation.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—I do not think the direct payment of rates by the small occupiers would make much, if any, difference in their interest in local government. There are so many other matters affecting the health and convenience of residents and voters of much greater importance than the rates, which promote interest in the work of the Council, and I expect and believe this will increase rather than diminish in the future.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—I have no experience of a weekly collection of rates from occupiers. A very large increase in the collecting staff would be required to carry it out, and I do not think it would be appreciated by our ratepayers.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answer VI.—The cost would, I think, be greater.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—I do not think the system of compounding has any material effect upon the rateable value.

APPENDIX No. XXVII.—*Continued.*

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—We tried for one year, 1896-7, as an experiment, a system of discounts for early payment of Borough rates, but it was not a success, and beyond the allowance to owners, I am not in favour of any further development in that direction.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answer IX.—The Borough rate here is levied annually, and ample time is allowed for payment, varying from three to six months after the demand notes are delivered. The delivery of these demand notes is made about the same time in each year, so that the ratepayers know when to expect their accounts. Payments on account are always accepted and welcomed, so that I do not see that there can be any hardship on occupiers paying direct or on any other ratepayers so far as the period allowed for payment is concerned.

APPENDIX No. XXVIII.

REPLIES from Mr. EDMUND SHERIFF, Rating Superintendent for the Borough of St. Marylebone, to Questions submitted to him by the Commission.

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—This borough adopts the permissive section (Section 3) of the Poor Rate Assessment and Collection Act, 1869, Cap. 41. It is generally taken advantage of by the owners, the amount of the allowance being 15 per cent. There is an increasing tendency on the part of the latter, however, to terminate the agreements on the ground of the inadequacy of the percentage to cover their losses. See also answer to No. 6.

Question II.—Is direct payment by occupiers (a) possible and (b) advisable?

If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—Direct payment by occupiers (a) is, of course, possible, (b) but, in my opinion, most inadvisable from a financial standpoint. See also answer to No. 6.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—The owners in this borough, with the exception of those of quite a few large blocks of industrial dwellings, made especially attractive to the tenant, are complaining that they cannot increase rents to correspond with the steady and continued rise in the rates, there being no demand for their empty rooms. An increase of 1d. in the £ on rates for the highest valued tenancy of the class under discussion—viz., £20, equals 1s. 8d. for the half year, or 77 of a 1d. (virtually three farthings) per week—does not lend itself to an ad valorem increase of rent. For example, rooms at 9s. 6d. per week would be raised to meet a 1d. increase of rates to 9s. 9d. or 10s. I have never heard of rents at, say, 9s. 7d. or 9s. 8d.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—I have been brought into contact with the class of ratepayers whose rates are paid for them for some twenty years in the course of the work of registration of voters, and at the polling stations. I have been struck with the apathy shown by these as to both their political and local privileges. To a certain extent the same indifference (but as to their local interests only) is noticeable in the upper classes, who pay their own rates, and who are, by reason of the amount involved, deeply concerned in economical local administration, but in the case of the poorer class, the subject of this question, I am of opinion that their improvident habits would induce them to disregard additions so trifling as a penny per week. Undoubtedly there is evidence of a slight improvement in their attitude towards local government, but I am convinced that the end to be attained must be the result of

further education, and that the expensive collection of trifling amounts of rates per week from the tenants would not expedite it.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—A direct weekly collection of rates is quite possible. I have had no experience of such, but in the next answer quote the information I have obtained from a rent collector with a large business, and from the facts so obtained, and for other reasons set forth in the next answer (No. 6), deem the suggestion from a financial point of view quite impracticable.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answer VI.—To reply to this question I have obtained information from a house agent who collects about 2,000 weekly rents. For this purpose he keeps two men for outdoor work, and three girls for the clerical work. It is the practice in the case of the collector of rents from block of flats, for one tenant, usually the caretaker, to receive the rent of the whole ten or twelve occupiers and hand them to the collector; this enables the latter to collect a larger number than a rate collector who must call on each individual tenant. Again, rent collectors merely initial the rent book. In the case of rates separate printed receipts must be given, and note taken of tenants leaving and efforts made to recover arrears at their new addresses if known. I think, therefore, instead of the two collectors sufficient for the rent collection, four collectors would be needed at a cost of £7 to £8 per week. In the case of rent not nearly the writing would be required as is necessary for rate books and the preparation of receipts, and it must not be overlooked that where the landlord's collector has only to take a broker with him to recover arrears, all the cumbrous procedure connected with the preparation of summonses, distress warrants, and committals has to be done by the Town Hall indoor staff, where the cheap labour of girls is not possible. At least four men would be required at, say, £7 per week. Total for eight men, say, £15 per week, or £390 for half year. In addition there is to be added the item of printing, 2,000 by 26, equals 52,000 receipts, some 4,000 or 5,000 demand notes and other official forms, the half yearly cost of collection would be considerably over £400. I have taken an average block of 12 compounded lettings, the rates for the half year at 3s. 6d. being £27 16s. 6d.; this would be for 2,000 lettings, approximately, £4,637. The allowance thereon of 15 per cent. is £695, to include all "empties."

As I mentioned in Answer No. 1, some of the owners have given notice of their intention to withdraw from agreement with the Council on account of their losses exceeding the 15 per cent. allowed. One firm of agents placed their books at our disposal and proved that the "empties" and losses were 21 per cent. of the total collection. If this figure is applied to the £4,637 the borough in collecting the rates weekly would lose £927 in losses and empties during the half year,

APPENDIX No. XXVIII.—*Continued.*

The result of the preceding estimates is as under :—

Under Agreement with Owner. Rates for 2,000 Assessments.	Estimate of Cost for the half year if Collected from Tenants weekly. Rates for 2,000 Assessments.	
Rates for the half year : £4,637.	Rates : £4,637.	
	Cost :—	
	Four collectors for £8 weekly	- £ 208
	Four clerks for £7 weekly	- 182
	Estimate cost of printing, say	- 20
		410 equal 8·8 per cent. of the rates (£4,637).
	Empties and loss average 20 per cent. on £4,637	- 927 equal 20·0 per cent. of the rates (£4,637).
Cost 15 per cent., £695		1,337 equal 28·8 per cent. of the rates (£4,637).

The number of assessments rated under Section 3 in this borough is 4,148.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—No. The effect is upon the payment of rates upon a value already ascertained and fixed. At the Quinquennial Revision of Assessments, or at the initial assessment of the premises when brought into assessment, no regard is had to the existing or to the possible subsequent agreement with the owner, and I am quite sure that few, if any, owners manipulate their rents to bring their rateable values within the scope of Sections 3 and 4 of the Act. This may be so in boroughs where Section 4 of the Act is in operation, although I do not see that compounding can affect the value in this case.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

Answer VIII.—As rates are due and payable in

advance, no allowance should be made to ratepayers for doing what they are required to do. If it is suggested that the concession might attract earlier payment, the rate of interest possible would be so small as to induce but few in addition to those who already pay promptly after application to respond. Further, gradually diminishing periods of interest as payments were received would have to be calculated as time extended towards a certain period in the half-year's collection when allowance ceased. The clerical cost of working this out would have to be considered.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

Answer IX.—In this borough notice is given to compounding owners that the middle of the half-year, viz., 31st December and 30th June, are the dates by which the rates must be paid, or the allowance (under the agreement) will be forfeited. Generally also, throughout the borough, pressure is put on occupiers paying direct on or soon after the same date. Thus there is no irregularity of treatment.

APPENDIX No. XXIX.

REPLIES by Mr. C. WILLIAM TAGG, Town Clerk for the Borough of Camberwell, to Questions submitted to him by the Commission.

Question I.—Is composition by owners for the payment of rates the rule in your district?

Answer I.—The Camberwell Borough Council compound with owners of properties under Section 3 of the Poor Rate Assessment and Collection Act, 1869, and the number of assessments which are subject to a compounding agreement is about 12,783, out of a total of 44,000 assessments.

Question II.—Is direct payment by occupiers (a) possible and (b) advisable?

If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—Direct payment by occupiers is of course possible, but certainly not advisable in cases where weekly premises have been let to poor tenants. It has been found, when circumstances have required it in these cases, most difficult to collect the rates. The poor get the habit of paying rents weekly, and it is very exceptional to find those who are able to save up enough money to pay a month's or a quarter's rates. What happens now is that the landlord collects the rates weekly with his rent.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—I have known cases where rents have been increased in consequence of an increase in the rate, and this applies to small properties

whether compounded or not. I do not think, however, that I can point to any reduction in weekly rentals in consequence of a reduction in the rate.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—I cannot trace that the direct payment of rates by occupiers tends to make them take more interest in local government than where an indirect payment is made. The occupiers of small properties do not apparently take much interest in local government from the amount of rates point of view, but rather from trades union rate of wages and other factors that appeal direct to the working man. He also appreciates the Parks and Public Gardens, Public Baths, Libraries, and Housing Reform.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

Answers V. and VI.—I have no experience of a weekly collection of rates from occupiers, and think it is not possible without an immense staff of collectors and

APPENDIX No. XXIX.—*Continued.*

accountant clerks; and I am of opinion that the present system of making an allowance to owners (chiefly 10 per cent. in this borough, but regulated by the class of tenants and property) is preferable. Indeed in a borough such as this, with a population which is constantly shifting, it would be most inadvisable to endeavour to carry out a weekly collection system.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

Answer VII.—No.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

*Answer VIII.—*I am against such a proposal, which appears on the surface to be an attractive one, but which really means that to those who are able to afford to pay their rates at once a discount would be given which would have to be added to the amount

of rate to be raised, and the proportion of the discount added to the charges of the poorest ratepayer. The local authority have to raise a certain amount of money, and when a discount is given, the penny in the pound produces that amount less.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

*Answer IX.—*Rates, though demanded, are not collected considerably in advance; in practice the collection is taking place actually when the money collected is being spent and precepts have to be met. The occupier is certainly not prejudiced, but the landlord paying rates for weekly tenants may be, to a certain extent, because—after he has paid the rates—there is generally a few more weeks' rent to collect to the end of a quarter, and local authorities have often to make allowances afterwards for empty premises for which he has paid rates. The landlord also in some cases loses rent by non-payment, for which he has paid the rates.

APPENDIX No. XXX.

REPLIES by Mr. WILLIAM WADE, Chief Cashier and Manager of the Rates Department of the City of Leeds, to Questions submitted to him by the Commission.

So far as I know, little real knowledge is available as to the effect of direct rating, which is only to a small degree known in practice, but I do not doubt that direct rating would act as a check on extravagance.

In Leeds the payment of rates by landlords is increasingly common, and it would be exceedingly difficult to enforce direct payment by occupiers unless the intervention of the landlords were made a punishable offence.

Question I.—Is composition by owners for the payment of rates the rule in your district?

*Answer I.—*Yes; over 26 per cent. of the assessments in Leeds are subject to compulsory compounding, and over 45 per cent., in addition, are paid by the owners under voluntarily agreement. These figures refer to the Consolidated and Highway Rates only, and which have a present compounding limit of £6. The Poor Rate compounding limit of £8 would show different proportions in each of the four Unions contained in the City limits.

Question II.—Is direct payment by occupiers (a) possible, and (b) advisable? If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—(a) Yes, provided that all property owners act in concert and in favour of direct rating. Such harmonious action is, however, scarcely possible, and therefore legal coercion of both owners and occupiers would be requisite to produce direct rating. (b) Yes, if it were made penal for the landlords to intervene.

Question III.—Do variations in the rates affect rents where composition is the rule?

*Answer III.—*No. There may, of course, be exceptional cases.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*No. We deal with the owners of compounded property and not with the tenants, and so

have no opportunity for acquiring reliable knowledge on the matter.

Question V.—Have you any experience of a weekly collection of rates from occupiers? Would such be possible?

Answer V.—(a) Yes, to a small extent, as we have occasionally arranged to accept weekly instalments of rates from tenants whose landlords have failed to meet their voluntary obligations. (b) Yes, but probably at a higher average annual cost than the present compounding allowance.

Question VI.—Assuming a weekly collection, would the cost be greater than the allowance now made for compounding?

*Answer VI.—*In times of depression the cost would probably be greater, but when trade is good and property well let, there might be some gain to the local authority in direct rating, but hardly in a weekly collection, unless the rent agents, at small cost for their services, could be appointed subsidiary rate collectors for the estates they administer.

Question VII.—Has the system of compounding any effect upon the value for rating purposes of the property compounded for?

*Answer VII.—*No, none whatever.

Question VIII.—In the event of occupiers paying their rates direct, should an allowance be given for payment in advance?

*Answer VIII.—*An allowance for payment in advance would probably be beneficial, in that it would reduce leakage and cost of collection and produce some revenue from bank interest. It is quite conceivable, therefore, that there might be some ultimate gain in allowing a reasonable discount on early payments.

Question IX.—Does the practice of demanding payment of rates considerably in advance tell unduly on occupiers paying direct?

*Answer IX.—*Not if payment is accepted about the same date each year (say October to December, for a rate covering April to March following).

APPENDIX No. XXXI.

STATEMENT OF EVIDENCE BY MR. WILLIAM ALFRED WILLIAMS, HACKNEY.

1. He is Town Clerk of the Metropolitan Borough of Hackney.

2. The Council of that Borough, like other metropolitan borough councils, are the Overseers of the Parish, which is coterminous with the Borough, but owing to the Poor Law Union not being wholly within the Borough his Council do not appoint the Assessment Committee, which is still appointed by the Board of Guardians. (London Government Act, 1899, Section 13.)

3. This state of things has given rise to considerable inconvenience and difficulty, and he is of opinion that these difficulties can only be overcome by his Council being empowered to appoint the Assessment Committee.

4. In illustration of the disadvantages of the state of things existing in his Borough in regard to assessment matters, he would mention the following points :

5. Owing to the Assessment Committee being appointed by the Board of Guardians instead of by the Borough Council, a longer time elapses between the making and confirmation of the Valuation Lists. When an assessment is made or altered the procedure is as follows :—

6. The Council, through the proper Committee, with the assistance of their rating surveyor, who is a permanent official, and of the rate collectors, who have an intimate knowledge of the district, considers the circumstances and fixes the assessment. If the ratepayer is dissatisfied he is given an opportunity of attending, at a later date, before the Committee, who hear and decide upon his objection. The new assessments are thereupon entered in a Provisional Valuation List and sent to the Assessment Committee, to whom the ratepayer can appeal (Valuation [Metropolis] Act, 1869, Section 47). After considering objections, the Provisional Valuation List is approved by the Assessment Committee and returned to the Council, and the necessary alterations are then made in the Rate Book. The time that elapses between the first consideration of the assessment and the settlement by the Assessment Committee is usually three months, and is sometimes longer. If the Assessment Committee were appointed by the Council, in many cases one appeal would be saved, and the period between the making and confirmation of the Valuation List would in all cases be reduced.

7. During the year ended 5th April, 1907, his Council considered 1,543 applications for a revision of assessment, and reduced 1,189 of them. The Assessment Committee during the same period heard 152 objections against the Council's decisions and confirmed the Council's figures in only 39 cases.

8. The Assessment Committee consists of 12 members, who are all members of, and are appointed by, the Board of Guardians (Union Assessment Committee Act, 1862, Section 2), and some of them represent and are resident in the adjoining Parish of Stoke Newington, and are not so conversant with local affairs as those members who reside in and represent the Parish of Hackney.

9. The members of the Board of Guardians are elected to administer the Poor Law, and their control of rating matters is, as far as London is concerned, at the present time an anomaly.

10. At the time of the passing of the Union Assessment Committee Acts, the overseers consisted of individuals who were appointed for the various parishes in the Union by the Justices of the Peace (Poor Relief Act, 1601, Section 1), and the Guardians were at that time almost the only elected body to whom the appointment of the Assessment Committee could be given.

11. By the London Government Act, 1899, Section 11, the Borough Councils became the overseers for their respective Boroughs and the personal overseer was abolished.

12. If the Council appointed the Assessment Committee a large proportion of the expenses now chargeable to the rates would be saved, as the staff employed by the Borough Council would be at the disposal of the Assessment Committee.

13. The cost to the individual ratepayer is also greater under the present system on account of his having to appear before two separate bodies (the Survey and Valuation Committee of the Borough Council and the Assessment Committee of the Guardians). In many cases, owing to the intricacies of the law of rating, he is obliged to be professionally represented before both bodies.

14. One of the greatest difficulties which has been experienced under the present assessments is the different manner in which the Borough Council and the Assessment Committee interpret the decisions that have been given by the superior Courts as to the circumstances which justify a revision of the assessments during the quinquennium. In many cases, during the last five years, assessments have been reduced by the Borough Council, but restored to their original figure by the Assessment Committee, owing to their different interpretation of the law. (See *Ellis v. the Camberwell Vestry*, 1900 A.C. 510.)

15. If the Assessment Committee were appointed by the Borough Council, the principles which they laid down would be followed throughout the proceedings, with the result of the saving of much time and expense, and the ratepayer would not be perplexed and harassed by having his assessment reduced and afterwards raised again, owing to the conflict between the two authorities.

16. The greater number of the metropolitan borough councils appoint the Assessment Committee for their own borough.

17. The Boards of Guardians appointing Assessment Committees in the metropolis are as under :—

UNION.	BOROUGH.
Wandsworth	{ Battersea. Wandsworth.
Hackney	{ Hackney. Stoke Newington.
Holborn	{ Finsbury. Holborn (part of).
Lewisham	{ Lewisham. Woolwich (part of).
Woolwich	{ Woolwich (part of). Greenwich (part of).
Greenwich	{ Greenwich (part of). Deptford.

A map is submitted showing the boundaries in these areas.*

18. The City of London Guardians formerly appointed the Assessment Committee in the City, but, by the City of London (Union of Parishes) Act, 1907, the power of appointing the Assessment Committee was conferred upon the City Corporation.

19. In the cases of Wandsworth and Hackney the Union is coterminous with the combined area of two boroughs, the Wandsworth Union including Battersea, and the Hackney Union including Stoke Newington.

20. In other cases the matter is complicated by the overlapping of areas. For instance, the Holborn Union consists of part of the Borough of Holborn and the whole of the Borough of Finsbury, the remaining part of the Borough of Holborn comprising the St. Giles and St. George's Union.

21. The Lewisham Union comprises the whole of the Borough of Lewisham and part of the Borough of Woolwich. The Woolwich Union comprises the remaining part of the Borough of Woolwich not included

* Not reproduced.

APPENDIX No. XXXI.—*Continued.*

in the Lewisham Union, and part of the Borough of Greenwich. The Greenwich Union comprises the remaining part of the borough not included in the Woolwich Union and the whole of the Borough of Deptford. In the case of Holborn, the matter is further complicated by the fact that the Borough Council, under the existing law, appoints the Assessment Committee for that part of the borough which is situate in the St. Giles and St. George's Union, while the Holborn Board of Guardians appoints the Assessment Committee for the area comprising the remainder of the borough and the Borough of Finsbury.

22. In January, 1906, his council convened a meeting of representatives of such metropolitan borough councils as did not appoint Assessment Committees to discuss the position.

23. The following councils were represented at the

conference:—Deptford, Finsbury, Greenwich, Hackney, Holborn, Lewisham, and Wandsworth.

24. The Councils of Battersea, Stoke Newington and Woolwich, which were in favour of the suggested amendment of the law, were not represented on the ground that the matter would be dealt with by the Valuation Bill, which was then about to be introduced by the Government.

25. As a result of this conference, which was held at the Town Hall, Hackney, on the 7th February, 1906, it was unanimously resolved:—

“That in the opinion of this Conference the appointment of Assessment Committees by certain of the Metropolitan Boards of Guardians is an anomaly which should be removed at the earliest possible date, and that each Metropolitan Borough Council should appoint the Assessment Committee for the whole of the borough.”

APPENDIX No. XXXII.

**STATEMENT OF EVIDENCE AS TO COMPOUNDING BY MR. EDWARD H. BALDEN, AGENT
AT BIRMINGHAM TO THE RT. HON. LORD CALTHORPE.**

1. I do not know that I can add anything which will assist your Commission, as on the estate controlled from here there is no small house property but what is still held on building lease, and as I act only for the ground landlord I possess no information as to the terms under which the houses referred to are let.

2. There are, however, many real cottages of which the letting devolves on me, and for such I am never short of applicants. Some of our cottage tenancies are of 20, 30, 40, and more years' standing, and the old-fashioned weekly rents still remain, in spite of necessary repairs of an extensive character inseparable from old cottages.

3. The rates and water rents are paid by the landlord, and I have only two cottages which do not come within the figure allowed for compounding for rates, and in our case, where voids are unknown, the landlord obtains a small advantage from the compound.

4. The direct payment of rates by occupiers, in

urban and suburban districts, whose tenancies are only weekly, may be possible, but their collection would entail an enormous amount of additional trouble and expense, owing to the very great number of removals which are continually going on amongst weekly tenants of ordinary small house property.

5. I hold the view that a person who occupies a house at a weekly rent much prefers to know that all liability is met when the rent is paid. A direct payment of rates would not increase the interest taken in local affairs.

6. A variation in rates does not affect weekly tenancies on this estate, but the reverse may be the case where small owners are entirely dependent on their rents, and the rates variation is upward.

7. In more than 25 years' experience on various properties I have always paid the rates on small house property, as representing the owners.

APPENDIX No. XXXIII.

**REPLIES by Mr. F. B. CROUCH, Secretary to the Peabody Donation Fund,
to Questions submitted to him by the Commission.**

I beg, first, to reply as concisely as possible to the four points put to me, especially with the view to studying the convenience of the Commissioners, and, secondly, to deal in a memorandum of greater length with assessments upon low-rented dwellings, and the direct payment of rates by occupiers, considerations, in my opinion, bearing vitally upon the question of the relief of distress.

The Peabody Trust is a self-supporting charity, with accumulated funds of over £1,500,000, earning 2½ per cent. net at the end of the year 1906. It then provided 5,469 separate dwellings of 12,328 rooms, besides bathrooms, laundries and lavatories. The average population was 19,737, and the average weekly earnings per family £1 1s. 9d., the rent per room being 2s. 3½d., including rates and free use of water, laundries, sculleries, and bathrooms. Out of the 5,500 tenants under the Trust, there are over 1,000 whose weekly earnings do not exceed 15s.

The Governors allow the tenants the full amount of the compounding commission granted by the rating authorities—a practice which, to the best of my belief, is specifically adopted by no other institution.

I would also point out that the cost incurred in the repairing and keeping in order of the various yards and roadways, and of the lighting of the Peabody properties, is borne by the Trust, thus contributing in a great degree towards the relief of the rates.

Further particulars can be obtained from the enclosed copy of my Governors' report, on the last page of which appear the separate apportionments, according to the number of rooms, of the rates per week to each tenement, no additional charge beyond the actual rent and rates being made upon the tenants.

I will now proceed to deal with the four points laid before me. I understand that the Commission would not wish me to confine myself to these points.

APPENDIX No. XXXIII.—*Continued.*

If I did, it would be impossible to do justice to the main consideration—the housing of the poor—which question, presumably, comes well within the scope of the Commission's investigation, and in respect of which my Governors have of late years taken exceptional steps as regards the method of payment of the rates.

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments; (2) other tenements of small value, or do the occupiers pay them? Has the local authority ordered that the poor rate on such property must be paid by the owner?

Answer I.—In the estates of the Peabody Trust the Governors have now reverted to paying the rates on all the tenements except in the case of two groups of buildings, where the occupiers have paid them direct to the local authorities since the year 1902, on account of an insufficient compounding allowance being offered by the borough councils. These two estates comprise 366 tenements only (776 rooms), the remainder of the Trust property consisting, at the end of 1906, of 5,103 tenements (11,552 rooms).

Only one local authority has ordered the poor rate (extending to the other rates) to be paid by the owners (the Peabody Governors). This order, however, affected six groups of buildings out of a total of nineteen. (For general information, see "Times" article, *Appendix No. XXXIII. (A)*).

Question II.—Is the direct payment of rates by the occupier (a) possible; and (b) desirable? If in your opinion it is impossible, would you kindly say on what grounds?

Answer II.—The direct payment of the rates by the occupier is possible, as already pointed out, and, in my opinion, desirable as being by far the best means of bringing home to his mind the cost of local administration. It is, however, naturally irksome to tenants, who only earn a few shillings a week, to make quarterly payments upon exorbitant assessments, and who are, in addition, deprived of the benefit of any compounding allowance.

If monthly rate collections were established, the system of composition entirely abolished, and a greatly reduced scale of assessments upon low-rented dwellings, in common justice, substituted, then, in my opinion, the direct payment of the rates upon compulsory lines would be wholly desirable.

These are the suggestions roughly dealt with, but to

the best of my ability, in the very limited time at my disposal, in the accompanying memorandum, to which I earnestly beg to draw the Commissioners' patient attention. (*See Appendix No. XXXIII. (B).*)

I may here explain that the Peabody Trust has been able to enforce direct payment of rates on the part of the tenants largely owing to the lowness of the rents charged. Where owners exact full rents, the occupiers leave the buildings rather than submit to the annoyance of saving up and paying direct to the rate collector. Were it to be enacted that all occupiers shall pay rates direct to the local authorities, such general exodus would, of course, be impossible.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—Variations in the rates affect the total weekly charges in the case of the Peabody Trust, unless the variation is small enough to be dealt with at the time by means of special rate collections, as set forth in *Appendix No. XXXIII. (C)*. Every quinquennial valuation renders necessary a revision of these total weekly charges.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—The most striking instance in connection with the Peabody Trust of the effect of the direct payment of rates by occupiers on the interest they take in local government is that of the action of the 433 tenants of one of the Peabody estates in the year 1903, when they all voted in favour, and procured the return, of the six candidates who pledged themselves to attempt to obtain an acceptable compounding allowance from the borough council in order to admit of a reversion to the payment of rates with their rents.

A further interesting account of the action of the tenants of certain other estates is contained in my report to the Governors. (*See Appendix No. XXXIII. (D).*)

Unfortunately, no sooner have the tenants been allowed to revert to the payment of rates with their rents than they have entirely relapsed into their previous state of indifference. Although the separation of the amounts appertaining to rents and rates both in notices and rent receipts is decidedly a step in the right direction, up to the present it has made little or no difference in the interest taken by the tenants in local government matters.

APPENDIX No. XXXIII. (A).

Handed in by Mr. F. B. Crouch, Secretary to the Peabody Donation Fund.

PEABODY DONATION FUND.

THE HOUSING QUESTION AND LOCAL RATES

Copy of an Article appearing in "The Times" of April 2nd, 1902

The governors of the Peabody Donation Fund have just carried out an important scheme for the housing of London workers of the poorer class. Instead of contenting themselves with raising blocks of tenements in some already densely populated districts of London proper, they have acquired an area 20 acres in extent at Herne Hill; and on a portion of this land, representing about 8 acres altogether, they have constructed in four groups, and at a total cost of £70,000, twelve blocks of artisans' dwellings, of which three are now ready for occupation. There is room on the 8 acres for a total of forty-eight blocks, but only the twelve in question have been erected at present. The dwellings are in Rosendale Road, Norwood Road, within two minutes'

walk of Brockwell Park; and alike in the completeness of their internal arrangements, in the open situation in which they stand, in their immediate proximity to so attractive a playground, and in their thoroughly suburban character in general, they constitute the most noticeable development yet brought about in the beneficent labours of the Peabody Fund governors. The new departure is the more noteworthy because of the suggestion it offers for a solution of the problem as to how London workers can be housed in healthy surroundings on sites to be secured at a comparatively low price, and still be within easy reach of London itself. Thus from Herne Hill to the City or to Victoria there is an excellent service of early morning workmen's trains, the journey to either

APPENDIX No. XXXIII. (A).—*Continued.*

point can be made within about twenty-five minutes from the time the workman leaves his dwelling, while the charge for a workman's return ticket is only twopence. The governors of the fund, who comprise the Duke of Devonshire (chairman), the United States Ambassador, Lord Ashcombe, Lord Revelstoke, Mr. W. H. Long, M.P., Mr. E. A. Hambro, Mr. J. P. Morgan, jun., and Mr. Victor Cavendish, M.P., have thus afforded to London toilers advantages which can hardly fail to meet with appreciation; and the outcome of their efforts will doubtless be watched with interest by all who are concerned in the housing problem.

Each of the twelve blocks consist of nineteen tenements—three of one room each, eleven of two rooms each, and five of three rooms each, a total of forty rooms per block. A single-room tenement is available for husband and wife and one child under five years; a two-room tenement for husband, wife, and four children under twelve; and a three-room tenement for husband, wife, and six children under twelve. On this basis the twelve blocks can accommodate 1,380 persons, without overcrowding; while the whole forty-eight blocks which could be put on the 8 acres (allowing a space 60 feet between the various groups of buildings) would lodge 5,520. Any boy or girl over twelve, or any adult relative living with tenants, is regarded as equivalent to two young children. The occupations most largely represented in the Peabody dwellings are those of labourers, porters, charwomen, and needlewomen. Unless in exceptional circumstances no tenants are accepted whose earnings exceed 30s. a week, the actual average being 22s.

The accommodation provided at Herne Hill is excellent of its kind. The rooms are large for this class of building, they are well lighted, without even a single exception, and there are good arrangements for securing ventilation. Each of the two-room and three-room tenements has not only a cooking-range or kitchen, with boiler and oven, but is also supplied with a good-sized gas-stove, which may be used or not as the tenant pleases, the gas being obtained by means of a penny-in-the-slot meter fixed against the wall. The single rooms have the cooking range without the gas stove, but a gas pipe is fixed so that the tenant may easily make his own arrangements for cooking by gas if he so desires. Every tenement, too, is provided with cupboards, meat safe, coal bunker, and gas fittings. On the top floor of each block there is a commodious laundry and drying room.

The rents charged for the new dwellings are: for one room, 2s. 9d. per week; for two rooms, 5s. 3d. per week; for three rooms, 6s. 6d. per week. But these various sums do not include the rates, which will have to be paid by the tenants themselves; and thereby hangs a tale of considerable public interest. Till quite recently the owners of blocks of workmen's dwellings in London paid the rates in a lump sum, charging them to the tenants in the rents and being allowed, as a rule, from 20 to 25 per cent. off for the trouble and cost they saved to the authorities. Thus at Blackfriars Road the Peabody Trust, a few years ago, had a discount of 25 per cent., empty rooms being paid for as well as those that were occupied. This allowance was afterwards reduced to 15 per cent., and the governors submitted; but they declined to accept a further reduction to 12½ per cent. The desire of the local authorities in the country generally to make the rates as productive as possible is only natural in view of the steady increase of local expenditure; but the attitude taken in Southwark and in the other districts concerned by owners of block dwellings was that, owing to the increased cost of building and the decreased margin for making any profit at all, short of an undesirable increase in the rents, they could not agree to any further reduction of the compounding allowance. How the position of affairs was effected by the greater cost of building construction, owing to the larger sums paid for wages and materials, can be well illustrated by the case of certain of the Peabody buildings. The Whitecross Street dwellings, opened in 1883, cost £187 per tenement, or £84 per room; the Stamford Street dwellings (new), opened in 1889, cost £226 per tenement, or £119 per room, while the Herne Hill group, just completed, have cost £290 per tenement, or £138 per room. From a purely business standpoint, perhaps, this increased cost of

construction should have been met by the imposition of higher rents; but the Peabody Fund governors have been reluctant to adopt this course; and so it comes about that, while at the end of last year they had provided for the artisan and labouring poor of London 11,439 rooms, besides bath-rooms, laundries, etc., and were lodging a total population of over 19,000 persons, their profit for the year was only 2·44 per cent., this being the lowest on record. The return for 1900 was 2·80 per cent. That a certain profit should be secured from the working of the fund is an undeniable obligation on the governors, for in the second trust deed, that of 1869, it is stated:—

"The operation of the fund is intended to be progressive in its usefulness. It will act more powerfully in future generations than in the present. It is intended to endure for ever; and it is the ardent hope and trust of the said George Peabody that within a century the annual receipts from rents for buildings of the improved class hereby authorised may present such a return that there may not be a poor labouring man in London of good character who could not obtain comfortable and healthful lodgings for himself and his family at a cost within his means."

In view of the increased cost of construction and the steady advance in local rates, and seeing that the "return" from which the founder had expected so much was falling so low, the governors of the Peabody Fund found themselves in a position sufficiently serious even without any reduction of the allowance made to them for compounding the rates. In this connection one may recall the fact that thirty-seven years ago the Peabody trustees (as they were then called) said in their first Report:—

"The trustees cannot conclude this sketch of their proceedings without expressing their regret on discovering one obstacle to their usefulness interposed by the large amounts levied on their buildings for poor rate, inhabited house duty, income-tax, and general assessments for sewers and drainage. Looking to the fact that the fund they administer operates to the repression of the rates for the poor in proportion to the number whom it saves from becoming chargeable to the public, it seems to present a reasonable ground for exemption; but as the levy is made conformably to law, they are content to express a hope that the legislature may be induced to take the subject into consideration with a view to the early application of a remedy."

In 1865, when these remarks were made, the proportionate burden of rates and taxes was far less heavy than it is at present. Since that date the legislature has granted to the owners of charitable dwellings for artisans, such as those of the Peabody Fund, a complete exemption from the income-tax; and it has conceded an exemption from the inhabited house duty in the case of all artisans' dwellings the rental of which does not exceed 7s. 6d. per week. But notwithstanding these concessions by the State, the increased cost of building construction and repairs and the increased burden of the local rates have combined to bring about a much more serious position than that complained of in 1865. No further proposal for the purchase of land can at present be entertained by the Peabody governors; and, if rents should be raised to meet the greater expenditure, the difficulty of housing "the poorer poor" will become still more acute. While, too, as already shown, a certain amount of relief has been obtained from the Imperial Government, there has been little or none from the local authorities. On the contrary, not only has there been a substantial increase in the rates themselves, so that the gross rates on the whole estate of the Peabody Trust now amount to over £12,000 a year, but, as is illustrated by the reduction of the compounding allowances in various parishes, local authorities have sought to get out of artisans' dwellings every penny they could extract. They have also, through their by-laws or their officials, imposed refinements of building regulations and of sanitary conditions which have tended to make the buildings much more costly to erect than they ought to be if the rents are to be kept low; while the local authorities often handicap more or less the efforts of the various trusts, funds, or companies by themselves

APPENDIX No. XXXIII (A).—*Continued.*

erecting municipal dwellings, which, however, cost more to build than those put up by private enterprise, and cannot be let at the same rents. The following table—based on the calculation that the rates are in each case

included in the rents—is especially instructive as showing the comparative weekly rentals and the comparative areas of rooms in trust dwellings and municipal dwellings respectively :—

	Areas in square feet.		Weekly rents.		
	Living rooms.	Bedrooms.	One room.	Two rooms.	Three rooms.

The action of the Southwark Borough Council in reducing the compounding allowances from 15 to 12½ per cent. led to a revolt on the part of owners alike of block-dwellings and of small-house property, and they decided to leave the council to collect the rates direct from the tenants. This policy had, in fact, already been decided on in the case of the Peabody buildings in Islington, where the borough council had declined to allow more than 10 per cent. The Peabody governors reduced the rents of their tenants by the amount, as near as possible, that the latter would have to pay to the rate collector; but, as the tenants had to pay in full, they paid a little more than the governors had done under the operation of the 15 per cent. reduction which had been allowed to them for compounding. Thus in the case of the Blackfriars Road buildings the 15 per cent. made a difference of £2 3s. 11d. per week, which has now to be made up jointly by 367 tenants. The new arrangement was regarded with much disfavour by the tenants, many of whom strongly objected to the idea of having to put by so much a week for the rate collector when he called at the end of the quarter, and declared that they would rather go back to the old system even if they paid more. In the case, too, of certain properties belonging to private owners there were complaints that the rents had not been reduced in anything like a fair proportion to the amount of the rates to be paid by the tenants, and that the landlords in question were working the new system to their own advantage. So strong was the feeling excited on the matter that it led to the formation in Southwark of a "Tenants' Protection League."

But, however distasteful the change was to the tenants, the results must have been much more unpleasant for the local authorities. In the case of the Peabody buildings in the borough of Southwark, for instance, the rate collectors have now to call at over 600 tenements once a quarter (without counting the clerical and other work involved) to collect the rates from that number of occupants, instead of merely receiving a cheque from the governors of the fund for the full amount due. This in itself means increased cost of collection, as well as the additional trouble involved, while losses are sustained besides, as many of the tenants are getting into the habit of moving out just before quarter day without leaving their new address behind them for the rate collector. Even when they do not disappear in this fashion a goodly number get behind in their payments, and summonses for the non-payment of rates have been issued by the thousand. Theoretically, the increased cost of collecting the rates should have been more than met by the fact that the 15 per cent. off was no longer allowed by the local authorities; but it is believed that practically the result has been very different.

In all these circumstances it is not surprising that the Southwark Borough Council should have offered to revert to the former system of allowing the landlords 15 per cent. if they will compound for the rates, "empties" to be paid for in addition to the tenements that are occupied. By this time, however, the occupants of the Peabody Buildings affected by the new arrangements had been required to sign agreements by which they undertook to pay the rates to the local authorities, and not to deduct the amount from the rent. Certain owners who had not made such agreements with their tenants found themselves in a dilemma, and accepted the offer of the authorities. But, after all the trouble gone to in

the making of special agreements with so many tenants, and in view of the further trouble involved in reverting to the former system, and, more especially, in view of the present financial position of artisans' dwellings, the Peabody Trust has resolved to decline the offer, unless, in addition to the 15 per cent., an allowance is also made to them for empties, as contemplated by the Assessed Rates Act. This allowance would be equal to probably another 2½ per cent.; and the governors say, in effect, that in existing circumstances this is the least they can accept. The Southwark authorities have not seen their way to accept the terms suggested; and consequently the tenants are being left to pay their own rates—a fact which they will lament all the more, inasmuch as the local rates have just been increased from 6s. 4d. to 7s. in the £. In Bermondsey, where the rates are being raised from 8s. 8d. to 9s. 4d. in the £, the Peabody tenants will be required, after the present quarter, to sign agreements undertaking to settle with the rate collector themselves. In Westminster, where the Peabody Trust have six groups of buildings, accommodating 1,836 tenants, the rates are going up 4½d. in the £; and there, again, the Peabody governors will require their tenants to pay the rates, the rents being in each case reduced on the principle already stated. It may be added that, if the local authorities should take legal action to compel the landlords concerned to compound for the rates, they would have to concede the same conditions as those now asked for by the Trust, which therefore claims that it is acting strictly within its legal rights as well as in accordance with the necessities of its position.

Meanwhile, the same policy of leaving the tenants to pay the rates, and making them sign agreements undertaking so to do, is being followed in the case of the Herne Hill dwellings, inasmuch as the Trust was not satisfied with the arrangements proposed by the Lambeth Borough Council. It is hoped in some quarters that the policy in question will be persisted in, and that it may even become general, at least for a time, because of the objection it would give to the working-class community as to the nature of rates and the way they are being constantly increased by local authorities—too often because of the provision by them of all sorts of municipal luxuries in the special interests of the "people," or because of adventure into all kinds of municipal trading. The inconvenience which may be caused to individuals is regretted; but it is argued that where the rates are paid through the rents, the working classes fail to realise the true bearing of local expenditure, while, if a landlord should increase the rents to cover the increased demands, it is he who gets the discredit, and there is a disposition to think he is putting more money in his own pocket although he may be doing no more than protecting himself against loss. Apart, therefore, from any question as to the precise nature of the allowances that should be made for compounding, there is an idea that it would serve a useful purpose to allow artisan voters, who are too often so ready to support all kinds of "progressive" schemes, regardless of cost, to settle direct with the rate collector, and so learn more clearly what the bearing of increased and still increasing local taxation really means.

In regard to their Noel Park estate, at Wood-green, N., occupied by 1,400 cottage tenants, the Artizans', Labourers' and General Dwellings Company (Limited), who had already increased the rents 1s. a week on account

APPENDIX No. XXXIII (A).—*Continued.*

of the heavy rates, have received notification from the local board of the district that the compounding allowance which they hitherto made would not be continued, and that the company must pay the full rating. The company have replied to this by leaving the tenants to pay the rates themselves, the rents being reduced proportionately. In announcing this fact at the last meeting of the company, Sir Richard Farrant said:—

“I do not think that the company will be injured by the change, but I am sorry to say that some of the tenants will a little, because the new rate, without the compounding allowance, will be a little more than the rate which has been payable in the past. On the other hand, it will have this advantage. The tenants on our estate have hitherto paid their rent to our rent collector, and have never seen any tax collector. The consequence is that they have ceased to take any interest whatever in public affairs. They do not care who represents them, what the rates are, or anything at all about the details of local administration. I think the result at Noel Park of the tenants’ being called upon to pay their rates will be to make them keenly alive to the necessity of economy and of choosing the right representatives.”

Another speaker, Mr. F. Ashmead, a director of the Victoria Dwellings Association (which also is making its tenants pay the rates), said he had been closely connected with parish affairs, and had seen how the votes were given in favour of tradesmen or employers who might benefit the people by giving them an increase of wages. “They do not,” he added, “think in the slightest degree about the increase in the rates and taxes.” Still another speaker, the Rev. Sidney Bott, said:—

“It is essential that the people should feel the effect of rates. Here you have large estates, consisting of 2,000 or 3,000 tenants, who are entirely unaffected by a change in the rates. It is true that they have felt it just now in this rise, but practically they only feel it by their rents being raised. Therefore, I think we must not be too slow in trying to get rid of compounding. A man must be led personally to feel the pinch of increased rates. He will feel then a greater interest in municipal work, and he will be able to look upon it, not simply as a matter of what is desirable to spend, but how it should be spent in the best way.”

It may be added that at Marylebone, where there are very large blocks of artisans’ dwellings, the local authorities are reducing the compounding from 20 to 15 per cent.

APPENDIX No. XXXIII (B).

Handed in by Mr. F. B. Crouch, Secretary to the Peabody Donation Fund.

PEABODY DONATION FUND.

THE SECRETARY’S ADDITIONAL MEMORANDUM REGARDING ASSESSMENTS UPON LOW-RENTED DWELLINGS, AND THE DIRECT PAYMENT OF RATES BY OCCUPIERS.

The assessments on all Metropolitan dwellings are based on Section 4 of the Valuation Act, 1869, reading as follows:—

“(1) The term ‘gross value’ means the annual rent which a tenant might reasonably be expected, taking one year with another, to pay for an hereditament, if the tenant undertook to pay all usual tenant’s rates and taxes and tithe commutation charge, if any, and if the landlord undertook to bear the cost of the repairs and insurance, and the other expenses, if any, necessary to maintain the hereditament in a state to command that rent.

(2) The term ‘rateable value’ means the gross value after deducting therefrom the probable annual average cost of the repairs, insurance, and other expenses aforesaid.”

Roughly interpreted, the gross value is taken to be the annual rent, presumably at ‘market value’ excluding the gross annual rates; the rateable value being ascertained by deducting from the gross value all the other annual expenses, namely, repairs, insurance and sundries.

Schedule 3 of the Act, p. 28, provides various examples of hereditaments with the deductions that may be allowed from the gross in order to arrive at the rateable values.

Having for a basis these two definitions, together with the schedule just referred to, most of the London local authorities have agreed upon a scale of uniform assessments, the latest of which is contained in a pamphlet issued by the London County Council, entitled “Assessment Conference, 1904,” the assessments on the total weekly charges, *i.e.*, rent including rates, appearing under a heading styled “Table A” (p. 4).

I will now take, in illustration, the actual case of a widow, residing by herself in a one-room tenement under my governors. She is seventy-two years old, and has lived in the buildings for sixteen years, during which time she has never been in arrear of rent. Her income amounts

to the pitiful sum of 6s. a week, allowed her by her sons, with an occasional 6d. from time to time when she looks after their children, who live away from the buildings. She resides in one of the estates where the governors pay the whole of the rates each quarter to the local authorities under a compounding commission, and receive through the superintendent the apportionments of the rates, less the compounding allowance, each week from the tenants with their rents, according to the number of rooms in the tenement. These apportionments are kept separate both in the rent receipts and in the statements issued to the superintendent for the general information of the tenants.

This widow’s weekly *fixed* rent is 2s. and her present apportionment of rates 4d., making a total charge of 2s. 4d. a week. Were she not allowed her share of the compounding commission she would have to pay on her actual assessment 6d. a week in respect of her rates, making the total charge 2s. 6d. instead of 2s. 4d.

The factors at the very outset creep in that militate greatly against a favourable assessment of the widow’s one-room tenement. In the first place, Table A commencing with a total weekly charge of 1s. does not thenceforward supply the assessment of any subsequent charge, under an advance of 6d. This is to say that assessments are only provided for total weekly charges of 1s., 1s. 6d., 2s., 2s. 6d., etc., etc., all including rates. Secondly, any fractional part of a pound sterling in the gross and rateable values is ignored.

Then, in a more hidden fashion, come the wildly irregular allowances in respect of “contingency” balances, a matter briefly touched upon in Footnote 1 (next page of this Memorandum) explaining the methods of assessment, from which “contingency” benefit the widow’s tenement is entirely excluded.

To complete the tale of grievances against the demands of the local authorities, they furthermore wholly exclude her from any benefit in respect of the mysterious word “service,” as explained in Footnote 2, which favour

APPENDIX No. XXXIII (B).—Continued.

is lavishly allowed in the case of residents of better-class "flats."

There is yet another complaint regarding the onerous assessment of this poverty-stricken woman's tenement, which lies at the door of the legislature itself. I refer to the allowance in respect of the deduction from the gross assessment of a tenement in order to arrive at the rateable value. For reasons mentioned in Footnote 2 (*see below*) the whole of the annual cost of repairs, insurance and sundries were intended to be allowed for, whereas by the actual interpretation of the Act by various decisions of the Hight Court, the utterly inadequate maximum of 25 per cent. only can be granted.

I will now place side by side :—

- (a) The present method of calculating the gross and rateable values of the widow's tenement, in which case the 2s. 6d. assessments are adopted as being the nearest provided in the table to the total weekly charge of 2s. 4d.
- (b) A more precise approximation based upon the original intentions of the legislature, as well as upon a favourable disposition on the part of the local authorities—a frame of mind that for many years past appears to have been almost non-existent.

(a) Present method.				(b) More reasonable method.			
Rates being taken at 6s. 6d. in the £.							
52 weeks at 2s. 6d.	-	-	£ s. d. 6 10 0	52 weeks at 2s. 4d.	-	-	£ s. d. 6 1 4
<i>Less.</i>				<i>Less.</i>			
Rates at 6s. 6d. on £4	-	1 6 0		Rates at 6s. 6d. on £2	-	0 13 0	
Water rate at 5 per cent. on £4	-	0 4 0		Water rate at 5 per cent. on £2	-	0 2 0	
		-----	1 10 0			-----	0 15 0
			5 0 0				5 6 4
Contingency Balance	-		Nil.	Contingency balance (15·4 per cent.)	-	-	0 16 4
			(<i>see</i>				
Gross Value	-	-	5 0 0 foot- note 1)	Gross value	-	-	4 10 0
Deduction of 20 per cent. only in lieu of 25 per cent. maximum	-		1 0 0 (<i>see</i> foot- note 2)	Caretaking and lighting at 3d. a week	-	0 13 0	
				Repairs, insurance, and sundries (£18,845, 12,328 rooms)	-	1 10 7 2 3 7	
				Rateable Value	-	-	2 6 5
				Say £2 0 0			
				or £2 10 0 (excessive)			
Rateable value	-	-	4 0 0				

It would thus appear that the demand for rates upon this poor widow's one-room tenement is twice, or nearly twice, as much as it ought to be. In other words, were she responsible for her rates direct to the local authorities, the poundage since the last quinquennial valuation having increased from 6s. 6d. to 7s., she would have to pay 28s. a year (£4 at 7s.) instead of 14s. (£2 at 7s.), or at the most 17s. 6d. (£2 10s. at 7s.). To contend that a saving of 14s. a year is an insignificant trifle to a woman whose income is 6s. a week would be ridiculous.

So far, then, from the local authorities coming to the widow's assistance by relieving her, either wholly or in part, from what, strictly speaking, might be considered the proportionate amount of her liability in respect the rates, she is forced to drudge for the community by bearing a double burden upon her back.

I may here remark that the Imperial authorities many years ago exempted the Trust from the payment of income-tax and inhabited house duty.

Footnote 1.—This "contingency balance" is supposed to represent an allowance on account of the value of an *annual* rent being less than the sum of the fifty-two weekly rents, the additional weekly expenses being taken into consideration. Its principal use is to reduce the assessment to a round number of pounds sterling in the gross value. To quote the words at the bottom of the "contingency balance" table (pp. 24 and 25 of the London County Council pamphlet, "Assessment Conference, 1904"), the result is "to show great irregularity in the proportion of contingency balance allowed in the scale, especially in respect of the low-rented properties." Nothing at all is allowed by the authorities on the widow's tenement, whereas 16·7 per cent. is deducted from a 3s. weekly charge, and elsewhere in the table appears a deduction of 20·9 per cent.

Considering that preference is given to the poorest applicants in the case of the Peabody Trust, and not to those who can better afford to pay their rents regularly, one might have supposed that the "contingency balance" in the present instance ought to have shown as high a percentage as any in the table.

Footnote 2.—The local authorities in some instances, but nowhere in the case of the Peabody Trust, allow a deduction of from 3d. to 6d. a week per tenement to be made in order to arrive either at the gross or rateable value. This charge is in respect of "the expense of caretaker, dust-removal, cleaning, lighting and watching the common staircase and yard of the artisans' dwellings" (p. 21, "Assessment Confer-

ence, 1904"), a service contributing in a great degree towards the relief of the rates. Deductions for this purpose of "service" are freely allowed in the case of "flats"—not so, however, as regards the widow's assessment.

The remaining expenses actually incurred in the case of the Peabody Trust, namely, repairs, insurance, and sundries, accord with those contained in the definition of "rateable value" in the Act. Together with the charge for "service" they amount to £2 3s. 7d., or 48·4 per cent. of the gross value of my approximation (£4 10s.). I may here remark that the expenses incurred by the Peabody Trust are necessarily much higher in proportion to the rents than is the case in regard to any commercial undertaking, partly on account of the lower rentals themselves, and partly because of the excellent state of repair, sanitary and otherwise, in which the governors feel bound to keep the buildings.

All that is actually allowed off the gross value of £5 shown by the local authorities is 20 per cent., or £1. Very briefly explained, the reason of so inadequate an allowance being made in the case of blocks of artisans' dwellings lies in the adverse interpretation of the law by various decisions of the High Court. It might well have been imagined and, doubtless, the legislature intended that block buildings would have come under the definition of "*houses or buildings let out in separate tenements*" appearing at the end of the third schedule of the Valuation Act, in which case the whole of the expenses might have been deducted from the gross in order to arrive at the rateable value.

APPENDIX No. XXXIII. (B).—Continued.

In view of the fact, moreover, that every man earning under £160 a year is entirely exempt from the payment of income-tax, it is most difficult to understand why, as regards the rates, the veriest pauper, so long as he is not actually in the workhouse, should be called upon to contribute very much more than his full share.

In order to contrast the present oppressive assessments on low rentals with those on a more reasonable basis, I beg to append a short illustrative table worked out in accordance with the method (b) of calculating the annual

values of the tenement under consideration, commencing with a total weekly charge (rent and rates) of 1s., with regular increments of 3d., instead of 6d., up to 2s. 6d., and taking into account even amounts of 10s.—not pounds sterling merely—in the gross and rateable values. The expenses of the widow's one-room tenement, £2 3s. 7d. are graduated from £1 in the case of the 1s. weekly charge up to £2 10s. in respect of the 2s. 6d. tenement. On the right side of the table appear the present assessments as shown in Table A of the Conference Book, rates being at 7s. in the £.

Total weekly charge (rent and rates).	Total amount per annum.	Reasonable basis.		Present basis (Table A).	
		Gross value.	Rateable value.	Gross value.	Rateable value.
s. d.	£ s. d.	£	£	£	£
1 0	2 12 0	2	1	2	2
1 3	3 5 0	2½	1½	—	—
1 6	3 18 0	3	1½	3	3
1 9	4 11 0	3½	2	—	—
2 0	5 4 0	4	2	4	3
2 3	5 17 0	4½	2 to 2½	—	—
2 6	6 10 0	5	2½	5	4

The "contingency balances" made use of in the calculations of the corrected assessments are moderate compared with many of the percentages shown in the table appearing on p. 24 of the Conference Book, and only vary from 5·6 per cent. up to 11 per cent.

It might be imagined that the assessments shown under "Table A" of the Conference Book are already so onerous in themselves that a further increase would have been out of the question. The action of certain borough councils at the last quinquennial valuation in dealing afresh with the rents of those of the Peabody tenants who were paying their rates quarterly to the rate collector shows

to what further lengths the local authorities can go in their endeavours to get out of artisans' dwellings every penny they can extract. They simply placed the tenants in the same category as that of quarterly or yearly householders, and arrived at the annual gross values of the weekly rentals by multiplying the latter by fifty-two, without any deduction whatever.

The following example: (1) shows the assessments on a 2s. 3d. weekly rent before the tenant paid his rates direct to the local authorities; and example (2) the assessments afterwards:—

Weekly amount of rent.	Weekly amount of rates.	Total weekly charge.	Gross value.	Rateable value.
s. d.		s. d.		
(1) 2 3	6d.	2 9	£5	£4
(2) 2 3	Tenant paying rates to local authorities.		£6	£5

In this way the authorities actually managed to increase the total previous assessments by over 21 per cent., although, owing mainly to the vigorous action of the tenants themselves, these exorbitant charges were later on reduced by about 10 per cent.

In reference to the direct payment of the rates to the local authorities by the occupiers, it is manifest that, as previously pointed out, an enactment would be required that no landlord be allowed to pay the rates on a tenant's behalf, thus necessitating the repeal of the whole of the Poor Rate Assessment and Collection Act, 1869.

Then if, in place of the system of compounding that at present serves, more or less, towards lightening the burden of the rates upon the poor, a greatly reduced scale of assessments upon low-rented properties were established, the direct payment of the rates by the occupiers would be greatly facilitated, especially if the collections were made monthly instead of quarterly. To do away with compounding allowances without any "*quid pro quo*" in their stead, as certain borough councils have recently attempted, would be, of course, the height of injustice, and nothing less than the imposition of a further drain upon the pockets of the poor for the relief of the community.

I would emphasise the importance of such assessments being based upon actual rents, as otherwise the efforts of philanthropic institutions on behalf of the poor are liable to be penalised if the rents charged are considered to be under "market value." (See definition of "gross value.")

That such a method of rate collection, especially under the favourable conditions just suggested, could be carried out by the local authorities with success and certainly at no very great additional expense to that incurred under the present compounding system is, I think, sufficiently proved by the results shown in the case

of the Peabody Trust. During the period when the majority of the tenants were paying their rates direct the local authorities were not slow in declaring that the cost of collection, together with the loss occasioned by bad debts and vacant tenements, by no means reached the amount of the compounding commission previously allowed. Dealing particularly with the two estates previously referred to in my letter, I would point to the fact that the tenants, 366 in all, have paid their rates direct for over five years and are still so paying them, an experience, to the best of my belief, absolutely unique as regards occupiers of such low-rented dwellings. If, then, in the case of tenants, whose weekly wages only average 20s. for the head of each family, direct quarterly payment of the rates under the present oppressive assessments can be enforced for so long a time at a lower cost to the borough councils than the 15 per cent. compounding commission formerly granted, how much more easily could this direct payment be carried out where wages are higher, assessments are reduced, and monthly, in place of quarterly collections are established. Any extra expense entailed by monthly collections would very possibly be more than counter-balanced in the long run by a healthier influence on the part of the ratepayers in regard to municipal expenditure. These poor people, moreover, would tend to become better citizens, not merely by taking a greater interest in local affairs, but by being made to put by their money for the rates. A great deal of mistaken sentimentality has been indulged in with reference to the hardship involved in "saving up" for the purpose just mentioned, whereas this practice has served, in reality, towards the cultivation of thrift, whilst causing the authorities themselves to show more and more inclination to deal leniently with deserving cases of arrears of rates.

APPENDIX No. XXXIII (C)

Handed in by Mr. F. B. Crouch, Secretary to the Peabody Donation Fund.

PEABODY DONATION FUND

64, Queen Street, E.C.
November 14th, 1907.

INCREASE IN THE RATES.

The rates on the Peabody Buildings, Southwark Street, for the half-year ending March 31st, 1908, amount to 3s. 6d. in the £, or 7s. in the £ for the year, being an increase at the rate of 6d. in the £ per annum upon the amount at present paid in rates by the tenants each week, corresponding yearly to 6s. 6d. in the £ on the assessments less 15 per cent.

The difference of 3d. for the half-year will be collected in three instalments on Mondays, December 9th, 1907, January 6th, and February 3rd, 1908, at the rate of 3d., 6d., 9d., and 1s. on the one, two, three, and four rooms respectively.

On each of these days the additional amount to be paid by you will be.....

As heretofore the tenants derive the benefit of the compounding allowance made to the governors.

Your tenancy can only be continued after Monday, November 25th, on condition that you pay the charge required to meet the amount of the rates in the manner above set forth; and the continuance of your tenancy after November 25th will be treated by the governors as an acceptance on your part of this condition.

F. B. CROUCH,
Secretary.

Peabody Buildings, Southwark Street, S.E.

APPENDIX No. XXXIII (D).

Handed in by Mr. F. B. Crouch, Secretary to the Peabody Donation Fund.

PEABODY DONATION FUND.

CONCERNING FINSBURY ASSESSMENTS.

Points advocating the lowering of Assessments or the increasing of the compounding allowance.

Present interview is at the request of the Town Clerk and purely in the interests of the tenants, the Peabody Trust not benefitting in any way whatever.

The combined assessments of the Whitecross Street and Clerkenwell Buildings were raised from £7,961 in 1900, to £9,654 in 1905, being equivalent to an increase of over 21 per cent.

Statistics have been forwarded to the Town Clerk with a view of showing the heavy extra expenses borne by the Trust as compared with other housing institutions.

No additional charge beyond the actual rent is paid by the tenants.

The Peabody Trust is not a commercial undertaking. All the profits (about 2½ per cent. per annum) are devoted to the extension of the objects of the Trust, the services of the governors being purely honorary.

Preference is given to applicants of small means, or possessing large families. The average weekly wages of the 5,000 tenants is £1 1s. 10d. Out of this number there are over 1,000 tenants whose wages reach a maximum of 15s. each, many of them being in receipt of 10s. a week only.

The Peabody governors allow the tenants the full amount of the compounding commission granted by the rating authorities. The method of carrying out this arrangement is fully described in the enclosed *pro forma* copy of notice, which is so worded that its accuracy can at any time be readily checked.

This consideration in itself should be sufficient for the local authorities to make an exception in the case of the Peabody Trust of granting an increased compounding commission, no other institution making such an allowance to the tenants.

THE SECRETARY'S SPECIAL REPORT CONCERNING THE FINSBURY ASSESSMENTS. (WHITECROSS STREET AND CLERKENWELL BUILDINGS—1,171 TENEMENTS IN ALL.)

In reference to a return to the system of weekly payment of the rates with their rents on the part of the tenants of the above-mentioned buildings, the governors on December 5th, 1905, approved of the secretary's letter to the representative of the tenants stating that the Trust would be willing to enter into a compounding agreement with the Finsbury Borough Council at 15 per cent., subject to a reduction upon the part of the local authorities to the previous scale of assessments.

The Finsbury town clerk had previously assured the assessment surveyor, who represented the Peabody

Trust, that it was hopeless to expect the council to grant a compounding allowance of 15 per cent. and impossible to reduce assessments when once fixed.

The tenants, however, bestirred themselves, procured the active assistance of their Parliamentary representative, Mr. J. A. Baker, and of the Rev. J. Ash Parsons, with the result that the borough council eventually expressed their willingness to allow a compounding discount of 15 per cent. provided that the Peabody governors paid the rates instead of the tenants.

The secretary of the Peabody Trust was unable to

APPENDIX No. XXXIII. (D).—*Continued.*

accept these terms unless, in addition, a reduction to the previous assessments was granted.

After several interviews with deputations from the tenants, Mr. Baker, M.P., the town clerk and certain of the borough councillors, the secretary and Mr. Langston, the assessment surveyor, yesterday attended a meeting of the valuation committee and agreed, subject to the approval of the governors, to revert to the direct payment of the rates provided the council reduced the present assessments by fully 10 per cent. in addition to the compounding allowance of 15 per cent. already granted.

A copy of the statement dealing with the various points bearing upon the question is enclosed. (Not printed.)

Although the full conditions laid down by the governors are unobtainable, the borough council have met them more than half way, and the concessions made are greater than the secretary originally expected.

The agreement with the valuation committee was arrived at upon the understanding that the secretary would, if possible, obtain forthwith the approval of the governors in order to permit of arrangements being

made whereby the tenants would be relieved of the liability of paying rates direct after September 30th.

For this purpose it will be sufficient if any three of the governors will signify their approval of the provisional agreement within a week's time, the matter to be reported at the next board meeting. The enclosed envelope, addressed to the secretary, contains a form of approval for the governors' separate signatures.

Should the secretary not receive the necessary three forms duly signed by the 21st inst., he will have to intimate to the Finsbury town clerk that the provisional agreement arrived at with the valuation committee must be subject to the approval of the governors at their next board-meeting, and that the tenants must continue paying the rates direct to the council pending the governors' sanction.

Preparations are being made by the secretary for the issue of the formal notices to the tenants regarding the additional weekly rate charges to their rents after the 30th inst., so that no time may be lost in the event of the governors forthwith notifying their approval.

64, Queen Street, E.C.

September 13th, 1906.

APPENDIX No. XXXIV.

REPLIES by MAJOR DANCE (late R.E.), Agent to the Marquess of Northampton, to Questions submitted to him by the Commission.

So far as my experience goes it would appear that tenants of small property, tenements, etc., who do not pay rates take very little interest in Local Government affairs, and the fact that they seldom record their votes in Borough Council elections is proving, I think, my opinion.

On the other hand, I think they are generally found "loud in their expressions of approval" of any extravagant proposals which may appear to give employment to large numbers of hands irrespective of whether or not such undertakings are for the future benefit of the locality.

Answering the questions contained in the leaflet attached to your letter, I beg to state that my experience is:—

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments, (2) other tenements of small value, or do the occupiers pay them? Has the Local Authority ordered that the Poor Rate on such property must be paid by the owner?

*Answer I.—*The owners pay the rates of all small property or tenements, although the Local Authorities do not order this method.

Question II.—Is the direct payment of rates by the occupier (a) possible, and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds?

*Answer II.—*The direct payment of rates by the occupiers of such property would, I think, be impossible, as they pay their rents weekly, and unless the

rent collector is careful to demand payment on Saturday or Monday morning it is found difficult to get full payment afterwards, and the fact that they often move from one tenement or small house to another in the course of two or three months, would render the recovery of portions of rates quite impossible.

Question III.—Do variations in the rates affect rents where composition is the rule?

*Answer III.—*As far as these Estates are concerned the variation of rates have not affected the rents except where it is manifest that by oversight the rents have not been adequate or the assessments are considered excessive.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*I venture to think that the recent changes from Progressives to Moderates in the administration of local affairs, as shown by the late elections in the County of London, indicate that the small ratepayers are finding the pinch of the boot compels them now to take some interest in local affairs and meetings very recently held by these small ratepayers appear proof that they are becoming indignant owing to the fact that the Moderates do not appear to have effected any considerable reduction in local expenditure in spite of their loud promises to do so at the last elections.

APPENDIX No. XXXV.

**REPLIES by Mr. F. HAYWARD FIELD to Questions submitted to him
by the Commission.**

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments; (2) other tenements of small value, or do the occupiers pay them? Has the local authority ordered that the poor rate on such property must be paid by the owner?

Answer I.—(a) In the case of allotments let directly to the occupiers, the rates are paid by the landlords. *(b)* With regard to the payment of rates on cottages, it is the uniform custom upon estates with which I am acquainted, where small tenements are let direct by the owners, for the owners to compound and pay the rates; but this arrangement has been a mutual one, and in no case has the Local Authority "ordered that the poor rate must be paid by the owner."

Question II.—Is the direct payment of rates by the occupier (a) possible; and (b) desirable? If, in your opinion it is impossible, would you kindly say on what grounds?

*Answer II.—*The direct payment of the rates by the occupier is possible, but how far desirable is a matter of opinion.

Question III.—Do variations in the rates affect rents where composition is the rule?

*Answer III.—*The variation in the rates does not, as a rule, affect the rents in the case of composition.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*As a rule, my experience is that the interest taken in local government by most small occupiers is very little affected, whether the rates are paid directly by the tenant, or included in the rent and paid by the landlord, especially in the case of the lettings to agricultural labourers and the purely rural occupiers. With regard to the question generally, I am inclined to think that for the cottager and allotment tenant, the composition may be most convenient, as he then knows exactly what inclusive rent he has to pay, and the set time for payment, whereas, in the event of his paying the rates, no matter how small, he is never certain what the amount may be, or when he will have to meet it.

APPENDIX No. XXXVI.

**REPLIES by Mr. H. L. FIFE, Agent to the Right Hon. Lord Barnard, to questions
submitted to him by the Commission.**

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments, (2) other tenements of small value, or do the occupiers pay them? Has the local authority ordered that the Poor Rate on such property must be paid by the owner?

*Answer I.—*On the estates with which I am acquainted the owner does pay rates on allotments, and in the majority of cases, especially in the north of England, does not pay rates on other tenancies of small value.

The local authorities have not ordered that the Poor Rate on such property must be paid by the owners.

Question II.—Is the direct payment of rates by the occupier (a) possible, and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds.

*Answer II.—*The direct payment of rates by the occupiers are :—(a) possible, and (b) in my opinion desirable.

Question III.—Do variations in the rates affect rents where composition is the rule?

*Answer III.—*Variations in the rates where composition is the rule, do not affect rents.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*I can trace the effect of the direct payment of rates by occupiers in the interest they take in local government.

The attitude taken by occupiers of small properties towards local government where they do not pay the rates directly is very slight.

Generally, the result of my experience is against the advisability of compounding for local rates; and that where this system is in force, occupiers of small properties take even less interest in local government, and are apt to give even more support to extravagant proposals and forms of administration than where this is not the case.

APPENDIX No. XXXVII.

STATEMENT AS TO COMPOUNDING BY MR. ARTHUR MOORE, SECRETARY TO THE IMPROVED INDUSTRIAL DWELLINGS COMPANY, LIMITED.

1. In all the property owned by this company the rates are, or will shortly be, paid by the owner, under Section 3 or Section 4 of the Poor Rate Assessment and Collection Act, 1869.

2. During the past ten years, I have had to deal with the question of the practicability of the direct payment of rates by the tenant in various parts of the Metropolis. The first instance was where the Borough Council of Southwark offered us a compounding allowance less than the 15 per cent. mentioned in the Act, and which my Board declined to accept. The consequence was that the rents were reduced, and agreements entered into by the tenants by which they undertook to pay the rates. The whole of the weekly-property owners in the borough united to resist the reduction, and nearly all of them stood firm in refusing to pay the rates for less than 15 per cent. The Borough Council had very great difficulty in getting the rates from the tenants, and, after endeavouring for twelve months, they were compelled to enter into compounding agreements under Section 3, giving us an allowance of 15 per cent., we paying whether the tenements were occupied or not.

3. The next experience was in the City of Westminster, where the Council endeavoured to induce the owners to accept an allowance of 12½ per cent. This was refused, and, notwithstanding the fact that the class of tenant in Westminster was about as good a class as you could find in London, after six months they made an order on the owners under Section 4, allowing a further 1 per cent., the owner paying whether the premises were occupied or not.

4. Some six years ago the Borough of Islington tried the bold policy of abolishing compounding altogether, and declined to allow any commission, except on the poorest class of property. The result was that the tenants moved out in large numbers rather than pay the rates, and the loss by empties steadily rose at the various buildings until the percentage was from 20 to 36. It being obviously no longer an economical arrangement for anybody concerned, an agreement has been entered into with the Islington Borough Council under Section 3 of the Poor Rate Assessment and Collection Act, with an allowance of 15 per cent. from Lady Day next.

5. It is undoubtedly desirable that the rates should be paid by the occupier, but whether it is possible

or not is a difficult question. I think that before it can be possible it must firstly be universal for all classes of property, and secondly, in the case of weekly or monthly tenants, the rates must be collected weekly or monthly. It is almost impossible for the working man to save up the money for the quarter, and on a weekly tenancy he considers it a great injustice to have to pay rates in advance. Unless the practice is universal the tenant will immediately leave the premises where he has to pay his rates, for a house where he pays one lump sum for all outgoings.

6. Variation in the rate does not immediately affect the tenant where composition is in force, the landlord generally waiting until the rates have increased by an appreciable amount per week before he increases his rent, as it is very awkward and inconvenient, where you have a large amount of property to manage, to break into fractions of threepence in matters of rent collection.

7. So far as weekly tenants are concerned, I do not think that the direct payment of rates has any material effect on the tenants as regards the interest they take in local affairs, unless in force universally. So constantly will they change houses that the majority of the tenants never get a twelve months' qualification, and, therefore, whatever interest they take in local affairs is of little or no consequence, because they have no voice at the polls, and I was informed that the political agents at Islington considered that the tenants of our buildings were practically a negligible quantity.

8. While the direct payment of the rates was in force at Islington a very large number of tenants went on paying their weekly rent until the summonses were issued for rates, when they went away, owing practically a quarter's rates. This was done deliberately with a view to avoid their liabilities, and to my mind it must have had a very bad moral effect on the people.

9. At Islington we are showing upon the rent receipt the proportion of the rent which is appropriated to local rates, and it is possible that this may have the effect of educating the people to a certain extent, although as the amount they pay to us does not increase when the rate goes up a few pence in the £, they do not feel the burden of increased taxation.

APPENDIX No. XXXVIII.

REPLIES by Mr. E. J. MOSTYN, Agent at Arundel to His Grace The Duke of Norfolk, to questions submitted to him by the Commission.

Question I.—On the estates with which you are acquainted does the owner pay the rates on (1) allotments, (2) other tenements of small value, or do the occupiers pay them? Has the Local Authority ordered that the Poor Rate on such property must be paid by the owner?

Answer I.—(1) Owner pays rates on allotments.

(2) Owner generally pays rates on cottages, but in the town of Arundel, as cottages become vacant, the new tenants have to pay rates.

The Local Authority have not put in force section 4, Poor Rate Assessment and Collection Act, 1869, but agreements generally have been entered into with the Local Authority under Section 3.

On small agricultural holdings tenants pay all rates. The cottages on nearly all the large agricul-

tural holdings are let direct to the tenant of the land, who is liable to pay rates on them.

Question II.—Is the direct payment of rates by the occupier (a) possible, and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—(a) Yes. (b) Yes.

Question III.—Do variations in the rates affect rents where composition is the rule?

*Answer III.—*No.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

*Answer IV.—*It is very difficult to trace any effect

APPENDIX No. XXXVIII.—*Continued.*

of the direct payment of rates by occupiers in the interest they take in local government.

The only instance that has come prominently before my notice has been in the town of Arundel. About the year 1895 a large outlay was made by the town council in a new system of drainage and water supply which very materially raised the rating on about 160 cottages in the town owned by His Grace the Duke of Norfolk, and nearly all occupied by artisans and others employed on his estate, and on which the rates were then paid by the occupiers. The Duke of Norfolk, to relieve his cottage tenants

of this large increase in rating, agreed to pay all the rates, but added to the rents the approximate amount of rates paid by occupiers previous to the increased rating coming into force.

Previous to the increased rating coming into force, there was a very flourishing Ratepayers' Association in the town, composed principally of cottage tenants, who took a deep interest in all matters connected with local government. This association has now ceased to exist, and I attribute this, in a great measure, as due to the lack of interest shown by the occupiers of cottages since the rates were paid by owner.

APPENDIX No. XXXIX.

REPLIES by Mr. ROWLAND E. PROTHERO, Agent-in-Chief to his Grace the Duke of Bedford, to Questions submitted to him by the Commission.

1. I forward the following statement as to the Duke of Bedford's estates in London and the country.

2. As to the London estate, the Duke has no tenants of the class to which I imagine the questions refer. His tenants are all persons occupying houses of a certain rental, who always as a matter of practice pay their own rates.

3. As regard the country. The estates are :

- (i.) The Woburn Estates (Beds and Bucks).
- (ii.) The Tavistock Estates (Devon, Cornwall, and Dorset).
- (iii.) The Thorney Estates (Cambridgeshire, Northamptonshire, Huntingdon, and Lincolnshire).

4. The replies from the three Stewards of these estates (Mr. C. P. Hall, Mr. Rundle, and Mr. Forrest) to each of the four questions are given below :—

Question I.—On the estates with which you are acquainted does the owner pay the rates on (1) allotments or (2) other tenements of small value, or do the occupiers pay them? Has the Local Authority ordered that the Poor Rate on such property must be paid by the owner?

I.—Woburn Estates.

Answer I.—(1) The owner pays the rates on all garden allotments. (2) The cottage property is situated in 26 parishes. In 13 parishes the Local Authorities have required the owners to pay the rates; in 13 they have rescinded their order, and the rates are now paid by the occupiers.

II.—Tavistock Estates.

(1) The owner pays the rates on garden allotments. (2) By arrangement with the Local Authorities the rates on cottages are paid by the occupiers. None of the Local Authorities, except one in Cornwall, have ordered these rates to be paid by the owner. Rates on tenement houses (except in one parish) are paid by the owner, as it is difficult to divide the rateable value.

III.—Thorney Estates.

(1) The owner pays the rates upon garden allotments. (2) The occupiers pay on cottages and other tenements. The Local Authority has not ordered the owner to pay.

Question II.—Is the direct payment of rates by the occupier (a) possible and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds?

I.—Woburn Estates.

Answer II.—The payment of rates by the occupier is considered by Mr. Hall to be not only possible, but most desirable. Every occupier of a hereditament, without exception, should be legally liable for the rates. The small loss incurred through removals, and the increased cost of collection, would be compensated for by the saving of the 25 per cent. to 30 per cent. rebate allowed to compounding owners, and by the increased economy which may reasonably be expected to follow the greater interest taken by the occupiers. In urban districts the rates might be collected more frequently to avoid loss from migratory tenants.

II.—Tavistock Estates.

The payment of rates by the occupier appears to Mr. Rundle most desirable, and quite possible, except in the case of garden allotments let at less than 10s. a year.

III.—Thorney Estates.

Mr. Forrest thinks the payment of rates by the occupier of cottage property quite possible.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—On all three estates the answer is that variations in the rates do not affect rents.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

I.—Woburn Estates.

Answer IV.—The direct payment of rates in several cases has materially increased the interest taken by the occupiers in local government, especially in the expenditure of all public money. As a rule, in parishes where the occupiers do not pay the rates, no interest is taken in local government.

II.—Tavistock Estates.

Except in a few instances, the rates have been so long paid by the occupiers, that it is difficult to estimate the exact result; but in certain urban districts additional interest in local government is undoubtedly taken by the small occupiers, who pay their own rates.

III.—Thorney Estates.

Little interest is taken in public affairs by small occupiers.

APPENDIX No. XL

REPLIES by MESSRS. RAWLENCE and SQUAREY, Land Agents, Salisbury, and 15, Great George Street, Westminster, to questions submitted to them by the Commission.

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments; (2) other tenements of small value, or do the occupiers pay them? Has the local authority ordered that the poor rate on such property must be paid by the owner?

Answer I.—On the estates under our management, and generally on those with which we are acquainted, the rates on allotments and on cottages are invariably paid by the owner, the rates on cottages being compounded for.

It is desirable that we should state that in purely agricultural districts, and in small country towns where the landlord of an adjoining estate is the owner of most of the cottages and allotments, the rents of cottages are invariably very moderate, and bear no commercial relation to the cost of construction. Their rents range from 9d. to 2s. per week, including rates, and generally including good gardens of 10 to 20 perches.

The only repairs undertaken by the occupiers are the renewal of the broken glass in windows.

Where the rates are compounded for, and the repairs carried out by the landlord, it is obvious that the net income is a scarcely appreciable quantity.

We know of instances in which a moiety or other proportion of the actual amount of rates is repaid to the landlord by the tenant, so as to let the latter feel that he is contributing to the local expenditure, and consequently interested in its reasonable application.

The payment of rates on allotments by the landlord is invariable, and the collection would be an undue tax on the patience and ability of the collector.

The gross rent paid by the tenants includes tithe rent charge, rates, land tax, and repairs to gates and fences.

We know of no instance in which the local authority has compelled the owner to compound for rates; but on the other hand we have had a case where the overseers declined to enter into a compounding agreement, and in that case we insisted upon the rates being collected from the occupiers.

Question II.—Is the direct payment of rates by the occupier (a) possible; and (b) desirable? If, in your opinion it is impossible, would you kindly say on what grounds?

Answer II.—We are of opinion that the payment of rates by the occupier of cottages is possible, but inconvenient and disagreeable. In the case of allotments, with their frequent change of occupation, it seems to be undesirable.

As an illustration, a tenant of 20 perches of land pays a rent of 5s. per annum—40s. per acre.

The proportion of rates at 4s. in the £ on a rateable value of, say, 30s. per acre per annum as agricultural land would be 3½d. on 20 perches. This collected twice a year, would give a demand of 1½d. on each allotment, and would be collectable from 20 to 50 tenants, according to the size of the allotment field. The increased cost of collection would probably absorb the whole sum.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—The variations in amount of rates is too small to affect the gross amount on which the compounding is based.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—A few of the more intelligent of the class affected by the compounding system or the direct personal burden of rates when they are paid by the tenant quite appreciate that under ordinary commercial conditions they contribute to the rates in the shape of increased rent, whether under the compound system or otherwise. But the greater number do not trouble themselves in these directions.

The above remarks apply to agricultural districts with which we are concerned, and where the landowners have hitherto shown no desire to deal on the strict commercial conditions which are applied by owners of tenements erected by small capitalists. In these cases the rental of cottages of less durable and comfortable construction, and affording less accommodation, and generally with smaller gardens, is from 70 to 100 per cent. higher than of those of which we have taken cognisance, and we have observed that when the supply of and demand for cottages admits the smaller capitalists will seize the occasion of an increase in the rates to increase the rents, often largely to his advantage.

It is fair to add that the occupants of this type of cottage are of an inferior class, and the landlord suffers largely from losses of rent, dilapidations and voids, tending to a persistent demand for the higher rent to cover his losses.

APPENDIX No. XLI.

REPLIES by Mr. THOMAS WILKINSON, Secretary to the East End Dwellings Company, Ltd., to Questions submitted to him by the Commission.

Question I.—On the estates with which you are acquainted does the owner pay the rates on (1) allotments, (2) other tenements of small value, or do the occupiers pay them? Has the Local Authority ordered that the Poor Rate on such property must be paid by the owner?

Answer I.—With the exception of some recently erected cottages in Bethnal Green the company's estates consist of block buildings in London, and practically all their property is let on weekly tenancies. In all cases the rates are paid by the company, which in most cases has compounding agreements with the local

authorities, who make a fixed rebate in consideration of the rates being paid whether the property is occupied or not. This allowance varies in the different boroughs, but is usually about 15 per cent. of the total rate. In one borough (Islington) where the council refuses to compound deductions for empty tenements have to be adjusted between the company and the rate collector each quarter.

Question II.—Is the direct payment of rates by the occupier (a) possible, and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds?

APPENDIX No. XLI.—*Continued.*

Answer II.—In the opinion of my directors the direct payment of rates in London by weekly tenants, however desirable for the reasons mentioned in your circular, is beset with difficulties which seem practically insuperable. Such tenants find it difficult and irksome to lay by a small sum each week so as to meet the demand of the rate collector once a quarter. In this connection I may mention that when the company's dwellings in the borough of Islington were first opened the weekly rents were arranged so as to include the rates, but when it was found that the Borough Council would not rate the owners and allow a composition this system was altered, and the weekly payments to the company reduced, while the local authority was left to collect the rates direct from the occupiers. This system was continued for some months, but proved very unpopular with the tenants, many of whom left the buildings in consequence; while applicants refused to take rooms in the buildings unless the rates were included in the weekly rent. In the end the directors felt compelled to revert to the original plan of including the rates in the rent.

This plan saves trouble and expense to the collecting authority, is much more acceptable to the tenants, and on the whole more convenient to the owner, and the question is whether these considerations do or do not outweigh the possible advantage to be derived from insisting on direct payment of rates by the occupiers,

and so making them less careless as regards increase of rates. In any case, if direct payment of rates is to be resumed, it should, in the opinion of my directors, be made compulsory by statute, so that no landlord should be able to take advantage of others by undertaking to include the rates in the weekly payment. They think also that if the change were made, more frequent collection of the rate would be found to be necessary.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—Variations in the rates do not automatically affect the weekly payments where composition is the rule, but as the rates increase owners, undoubtedly, from time to time endeavour to raise the rents. Whether they succeed in this or not depends a good deal on the intensity of the demand for accommodation in the district where the houses are situated.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—The company has no evidence to offer on this point.

APPENDIX No. XLII.

REPLIES by Mr. J. M. WOOD, Agent to the Earl of Leicester, to Questions submitted to him by the Commission.

Question I.—On the estates with which you are acquainted, does the owner pay the rates on (1) allotments, (2) other tenements of small value, or do the occupiers pay them? Has the local authority ordered that the poor rate on such property must be paid by the owner?

Answer I.—(1) The owners do not pay rates on allotments. (2) The owners pay on all tenements of under £8 rateable value, and the local authorities have ordered that the owners shall pay on all of under £8 rateable value.

Question II.—Is the direct payment of rates by the occupier (a) possible and (b) desirable? If, in your opinion, it is impossible, would you kindly say on what grounds?

Answer II.—(a) The payment of rates by occupiers is possible, (b) and desirable, though the collection would be difficult.

Question III.—Do variations in the rates affect rents where composition is the rule?

Answer III.—Variations in rates do not affect rents.

Question IV.—Can you trace any effect of the direct payment of rates by occupiers on the interest they take in local government; and what attitude do the occupiers of small properties take towards local government when they do not pay the rates directly?

Answer IV.—In my experience the Parish Councils in most agricultural districts are very largely composed of non-ratepayers, whose actions are not always controlled by that proper sense of responsibility to those who are affected. Further, the large ratepayers, by being often in the minority, lose interest and cease to act, while the smaller ratepayers do not seem willing to devote their time to attending meetings at the end of a day's work.

As to payment of rates by cottagers and small occupiers of under £8 rateable value, it is very questionable whether the 15 to 30 per cent. usually allowed on composition would cover the additional cost of collection from individuals, the loss on excusals on plea of poverty and default.

In many agricultural villages a proportion of the population is "floating," consequently considerable expense and difficulty would be incurred in tracing individuals who had left the district, and some provision would be necessary for the apportionment of rates to meet weekly tenancies.

PART II.—MEDICAL ASSISTANCE.

APPENDIX No. XLIII.

STATEMENT OF EVIDENCE AS TO THE MEDICAL ASSISTANCE OF THE POOR, BY MR. WILLIAM BUTLER, M.B., D.P.H., MEDICAL OFFICER OF HEALTH, WILLESDEN; LATE MEDICAL SUPERINTENDENT ISOLATION HOSPITAL, WILLESDEN; FELLOW OF THE ROYAL SANITARY INSTITUTE AND OF THE SOCIETY OF MEDICAL OFFICERS OF HEALTH; PAST PRESIDENT HOME COUNTIES BRANCH, SOCIETY OF MEDICAL OFFICERS OF HEALTH; PAST PRESIDENT WILLESDEN AND DISTRICT MEDICAL SOCIETY; PREVIOUSLY FOR TEN YEARS ENGAGED IN GENERAL PRACTICE.

1. What I should first like to do is to lay before the Commission some facts bearing upon the question of the proportion of cases of illness unattended by any medical practitioner.

2. While engaged in general practice I formed the opinion that such cases must be numerous, judging from the proportion of cases to which I was called to see for the first time patients who were moribund, in order that I might be in a position to sign their death certificates.

3. The avowed reason for calling in a medical practitioner in many of these cases was that the parents might be saved trouble with the coroner, a contingency more dreaded than the failure through inability to pay the fees of the medical attendant.

4. The number of uncertified deaths is a measure in some degree of the cases of illness allowed to proceed to a fatal termination without medical aid having been sought. But quite obviously these returns can give but small indication of the amount of non-fatal illness which goes untreated.

5. During the last three years I have had an opportunity of investigating this question incidentally in the course of inquiries into cases of communicable disease occurring among scholars attending public elementary
- schools in Willesden. Altogether 8,494 such cases, exclusive of those notified under the Statute, have come to knowledge and been inquired into during this period. The details are set out in the accompanying table, from which it will be observed that of these 8,494 cases, 3,689 were being attended by medical practitioners, leaving 4,805 cases which were found to be untreated. Of all it may be said that it was highly desirable, and of some that it was imperative, that their care should have been undertaken by a medical practitioner.

6. The 56 per cent. of cases unattended by a medical man were for a variety of excuses "left to nature," or made the victims of such experiments in domestic medicine as are illustrated in the use of ink for the cure of ringworm.

7. But practically without exception the cost was the deterrent from seeking skilled advice either because, as in the majority of the cases it could not be afforded, or that the urgency of the need did not appear commensurate with the expense entailed.

8. In order to judge of the serious character of some of the diseases thus left untreated I have shown in one column of the table the number of deaths from the diseases in question occurring in Willesden during the corresponding three years among children under fifteen years of age.
9. TABLE SHOWING THE NUMBER OF CASES INVESTIGATED OF THE RESPECTIVE DISEASES NAMED, THE NUMBER OF THESE CASES ATTENDED BY A MEDICAL PRACTITIONER, AND THE TOTAL NUMBER OF DEATHS OF CHILDREN UNDER FIFTEEN YEARS OF AGE DYING FROM THESE DISEASES DURING THE THREE YEARS ENDING 1906.

Diseases.	No. of Cases.	Cases attended by Medical Practitioner.	Deaths under 15 years of age.	Percentage of cases attended by Medical Practitioner.
Measles - - - - -	2,734	1,417	118	51·7 per cent.
Whooping cough - - - - -	1,629	841	102	51·5 " "
Chicken pox - - - - -	732	359	—	49·0 " "
Mumps - - - - -	848	242	—	28·5 " "
Tuberculosis - - - - -	32	28	155	87·5 " "
Influenza - - - - -	51	23	6	45·0 " "
Ringworm - - - - -	959	364	—	37·9 " "
Ophthalmia - - - - -	140	38	—	27·1 " "
Other diseases - - - - -	1,369	377	—	27·5 " "
	8,494	3,689	381	43·4 " "

10. The 381 deaths do not represent all which should properly be ascribed to these diseases. When measles and whooping cough prevail, deaths from diseases of the respiratory system greatly increase. This is due to the fact that their respiratory complications such as bronchitis and pneumonia are the primary occasion of seeking medical advice—too late to save life or even to diagnose the disease which they complicate.

11. Many of the diseases investigated do not endanger life. Ringworm, scabies, impetigo, ophthalmia are examples. But apart from their contagious character they show for practical purposes no natural tendency to cure. They must be treated if the children are to recover and avoid the loss, it may be, of years of school time. They are, moreover, particularly prevalent among the class of people too poor to afford a private medical atten-
- dant, yet resentful of incurring the social disabilities which attach should they avail themselves of the services of the Poor Law medical officer.

12. Although I am not able to express, as a statistical result, the proportion of other diseases which go untreated, I have no doubt, judging from my experience while engaged in general practice, that a similar proportion would be discovered on investigation. I know that in the later stages of chronic affections such as cancer, phthisis, organic diseases of the nervous system, etc., there is much suffering unrelieved by the skill and care which medicine can afford, because of the resources of the patient having been exhausted during a prolonged and enforced lack of employment and of a deep-rooted repugnance to seek Poor Law relief even of the qualified character of medical attendance.

APPENDIX No. XLIII.—*Continued.*

Cost of medical assistance falls unduly on medical attendant.

13. There is, moreover—I am speaking within my knowledge—an immense amount of gratuitous medical attendance largely charitable, but partly unavoidable, which is a serious draught on the resources of the struggling practitioner. It is a burden which should be borne by the community; it is disabling to the inadequately-paid rank and file of the profession on whom the whole brunt of this work falls.

14. I am of opinion that the existing provision for the medical assistance of the poor is unsatisfactory, whether it take the form of cheap private practice, contract practice by means of competitive clubs or Poor Law medical relief.

15. I have shown how in my district, in spite of all these agencies and of the proximity of the district to the London hospitals, the greater proportion of the diseases I have been able to investigate go without any medical relief whatever.

16. There is one class of disease, however, of which I am able to report satisfactorily—that of the notifiable infectious diseases. None of these coming to knowledge remain untreated, none are permitted to continue a menace to the health of the community. Over 70 per cent. of them are removed to the district council's hospital for infectious diseases and there treated throughout the whole period of infectiousness. The remainder are able and do provide proper medical and nursing attendance and proper accommodation. A certain proportion of cases of notifiable disease do not come to knowledge because no medical man has been consulted at the time of illness. When on occasion these are discovered it is usually alleged that the illness was not very severe and the parents did not want to incur the expense of calling in a doctor for an illness which did not appear dangerous to life, notwithstanding that the question of the possibility of infectiousness might have arisen. Not infrequently a "chemist" has been consulted in such cases; in all they are glad to avail themselves of any provided medical attendance for the purposes of diagnosis. But of course before this could have been offered the disease has been spread and only brought to light as a result. It is obvious that in such cases the unfettered provision of medical assistance would aid largely in preventing the spread of disease. And it is to be noted in this connection that it is just these undiscovered cases which are largely accountable for the continued prevalence of the diseases in question.

17. An experiment has been made during the past twelve months of extending the provision of medical aid made by the local authority to other diseases than those notifiable under the Infectious Diseases Notification Act. Cases of ringworm, impetigo, scabies, and ophthalmia too poor to go to a private practitioner, unwilling to avail themselves of the Poor Law medical service, have been treated as out-patients at the council's isolation hospital. Over 200 such cases were treated during the year—not a large number, but sufficient to show that the bulk of such cases would avail themselves of medical provision made by the local authority. There is a residue, it is right to say, past redemption, whom it would be right to punish if opportunity for treatment were afforded and indifferently declined. The cases are analogous to those of parents who refuse to send their children to school.

18. I can see no reason why this practice should not be extended so as to include all classes of disease, by placing under the administrative control of the local sanitary authority all medical officers at present holding appointments under the boards of guardians.

19. One of the chief objections to the provision for medical assistance of the poor being placed under the control of boards of guardians is, as I have indicated, that it is prohibitive of a large number of people getting necessary medical attendance.

20. There is another—perhaps even more important—objection, and that is that the subtle taint of pauperism is instilled as an immediate result of resort to this form of relief.

21. The Commission probably have before them facts showing that medical relief in a large proportion of cases is antecedent to other forms of pauper relief.

22. It is undesirable that the alternative to permitting disease to proceed without medical assistance should in so large a proportion of cases be a resort to relief which not only stigmatises socially but insidiously undermines character, and by weakening the consciousness of self-reliance paves the way for a degenerate pauperism.

23. No such shock to character is sustained when resort is had to provisions of the nature of a national insurance such as those provided by a local sanitary or educational authority. The Poor Law medical officers (and the Poor Law infirmaries, so far as they are used for patients not otherwise paupers) should, therefore, I am of opinion, be transferred from the Poor Law to the health authority.

24. No statutory disabilities should attach to persons applying for the services of such officers, and I am convinced that with the abolition of the vexatious inquiries of the relieving officer all social disabilities would disappear with the transference.

25. I think it desirable that such medical officers should devote the whole of their time to the duties of the office, that they should be adequately remunerated, and that they should be placed definitely on the staff of the Public Health Departments of the Local Authorities.

26. To a Public Health Service so organised should be entrusted the administration of the Vaccination Acts, the medical attendance during sickness of all who choose to apply, the medical assistance of midwives in those cases of labour where there is a statutory obligation to apply for qualified medical assistance and no statutory provision to pay for it.

27. To such a service also would naturally fall the medical inspection, and where necessary the treatment of scholars attending public elementary schools, a large field of work which there appears good ground for believing will shortly require to be embraced by the local authorities. The co-ordination of the work should rest with the medical officer of health, in whom should be vested the necessary authority. He would under existing conditions be responsible to his council and to the Local Government Board. It hardly needs emphasising that there should be one local and one central authority for all matters relating to the public health. It is obvious that conflict and overlapping of authority can only by this means be avoided.

28. The opinions I have formed are based on my experience both as a medical officer of health and previously as a general practitioner, of the large amount of preventable illness, suffering and economic loss which necessarily exist under the provisions now in vogue. Preventive medicine is inevitably curative also, and I find that my efforts to check the spread of disease are continually thwarted by the fact that at present there are no available agencies which actually undertake the care and cure of existing maladies. Only in the limited field of the notifiable diseases does there exist the machinery capable of dealing with the whole problem.

29. But the notifiable diseases form but a small part, and, owing to the success which has attended the effort, to-day a relatively insignificant part of the whole field of preventable disease and death.

30. Let the methods of which we now have the fruition be applied universally, and there is good prospect of a like shrinkage in the whole field. Diseases spread not alone by infection and contagion. The habits and practices of people are responsible in even greater measure for the continuance of diseases. These cannot be combated by the popular panacea of a bottle of medicine. In this demand for a tangible nostrum lies one of the greatest obstacles to true hygienic progress. The great mass of people will not take the trouble to live the healthy life while they are obsessed with the idea that disease is to be treated only when its grosser results demand medication. It is at this stage only, if at all, that they seek the aid of medicine and then what alone they are willing to pay for, if they do pay, is the specific which they imagine it is within the skill of some doctor or other to supply. While this is the greatest demand made on the services of the medical man, while its legitimate satisfaction is the easiest manner in which to earn and secure fees, and while the fuller exercise of medical knowledge is attended with loss, it is too much to expect that the public will receive the best of which medicine is capable. But such a change as is required is not possible under the existing conditions of medical practice. It is of importance in the interest of the patient and of the public that the practitioner should not depend directly upon the will or the ability of the patient to requite him for his services.

Existing provision by local health authority.

Experimental extension of this provision.

Question of transfer of Poor Law medical officers to local health authority.

APPENDIX No. XLIV.

STATEMENT OF EVIDENCE AS TO THE MEDICAL ASSISTANCE OF THE POOR, BY SIDNEY DAVIES, M.A. (HONOURS), M.D., OXON.; M.R.C.S., ENG.; L.S.A.; D.P.H., CAMBS.; MEDICAL OFFICER OF HEALTH, BOROUGH OF WOOLWICH; FELLOW OF THE SOCIETY OF MEDICAL OFFICERS OF HEALTH, AND ROYAL SANITARY INST.; MEMBER OF BRITISH MEDICAL ASSOCIATION; LATE MEDICAL OFFICER OF WOOLWICH AND PLUMSTEAD COTTAGE HOSPITAL; MEDICAL OFFICER, WEST KENT DISPENSARY; PRINCIPAL MEDICAL OFFICER, EGYPTIAN POLICE; MEDICAL OFFICER OF HEALTH, EZBEKIEH DISTRICT, CAIRO; FORMERLY HOUSE-SURGEON, TRAINING HOSPITAL, TOTTENHAM; RESIDENT CLINICAL ASST., CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, AND EAST LONDON CHILDREN'S HOSPITAL; AUTHOR OF "VENTILATION OF SEWERS," 1894; ANNUAL REPORTS ON HEALTH OF WOOLWICH; "CAUSES OF THE INCREASE OF DIPHTHERIA IN URBAN DISTRICTS" (*BRIT. MED. JOURNAL*); "THE SOURCE OF INFECTION IN TUBERCULOSIS" (*PUBLIC HEALTH*); "AN EPIDEMIC OF ENTERIC FEVER" (*PUBLIC HEALTH*), ETC.; FOR THREE YEARS GUARDIAN OF THE POOR, WOOLWICH UNION, AND CHAIRMAN OF THE WOOLWICH BRANCH, CHARITY ORGANISATION SOCIETY.

I.—EXISTING AGENCIES.

The following are the existing agencies for medically assisting the poor of Woolwich with medicine, advice, or in other ways:—

A.—Sanitary Authority.

(1) *Fever Hospitals of the Metropolitan Asylums Board.*—The operation of these is just the same as in the rest of the County of London, and need not, therefore, be described. During 1906, 78 per cent. of notified scarlet fever cases, 67 per cent. of diphtheria cases, and twenty-eight out of forty-one enteric fever cases were removed to one of these hospitals. In 1905, 81 per cent. scarlet fever, and 80 per cent. diphtheria cases were removed. These institutions would more properly come under Poor Law institutions, but they are so closely connected with the local sanitary authority, and with the working of the Public Health (London) Act that it is difficult to disassociate them from these. It is a curious anomaly that the Metropolitan Asylums Board should be mainly composed of Poor Law guardians, although its principal work is that of assisting the sanitary authority to carry out the Public Health (London) Act. All classes in the borough make use of the fever hospitals, the middle-class less so than the working-class, but it is by no means unusual for the professional and well-to-do classes to send their children to these hospitals.

(2) *Metropolitan Asylums Board Fever Ambulances.*—Nothing need be said as to the use of these for removal to the fever hospitals. As regards their use in other ways, e.g., for removing an infectious case from one house to another, this is very seldom called for in this borough.

(3) *Sanatorium Treatment for Consumption.*—The Council of the Borough of Woolwich alone of the London sanitary authorities has provided sanatorium treatment for cases of phthisis. This has been done by retaining seven beds at Maitland Cottage Sanatorium, Peppard Common, under the powers given by Sec. 75, Public Health (London) Act. The primary object of treatment is the education of consumptives in the open-air treatment and in the means of preventing themselves from being infective to others. Three beds are kept for this purpose, in which the duration of stay is limited to one month. The other four beds, however, are kept for further treatment for a period not exceeding five months, for such patients whose progress gives grounds for thinking that they will be permanently cured by prolonged treatment. The results of treatment have been so far extremely satisfactory. Only such persons are sent to the council's beds at the Peppard Common Sanatorium who are unable to pay the charges of maintenance at a sanatorium.

(4) *A Health Shelter* has been provided according to the requirement of Sec. 60 (4), Public Health (London) Act. It is very rarely required for the purposes of this section as it is almost always possible to disinfect rooms without keeping the occupants out of them during the night. It has, however, been found useful for isolating small-pox contacts.

(5) *The Discovery of the Bacillus of Diphtheria and its*

Treatment by Anti-toxin has led to a certain kind of medical attention and treatment being given by officers of the sanitary authority. Cases are frequently swabbed by the medical officer of health to discover whether they are suffering from diphtheria, or, without having any symptoms, are acting as carriers of the disease. Anti-toxin is also kept in the department for the convenience of medical men, to avoid the delay which would be involved in obtaining it from the usual dealers. The amount spent is usually repaid. On certain occasions, e.g., when the fever hospitals cannot immediately admit cases of diphtheria, the Council has authorised the supply free.

The medical officer of health is frequently called upon by local medical practitioners to help in the diagnosis of diseases which may possibly be of an infectious nature. Further, school teachers not infrequently send or bring children whom they suspect are suffering from infectious disease, and whose parents are unable or unwilling to incur the expense of medical attendance. No doubt also the fact that the medical officer of health administers the agencies for notification, isolation, and disinfection encourages belief that he is a suitable person for diagnosing the existence of infectious disease. The majority of those whose throats are swabbed are children attending the elementary schools in the district.

(6) *Disinfectants* are supplied by the Public Health Department, as provided for in the Public Health (London) Act. These are sometimes used for personal application, e.g., to the throat.

(7) *Two Female Sanitary Inspectors* have been appointed by the Council, one of whom acts as a health visitor and devotes a considerable portion of her time to visiting infants recently born, advising as to the proper mode of feeding them, and as to their care in other ways. The female inspector only goes to the homes of the working-classes, and chooses specially those of the poorer working-classes.

(8) *An Infants' Milk Depot* has been provided under powers given by a special local Act for supplying humanised, sterilised, or pasteurised milk for infants. The milk is supplied to infants under two years of age only, the great majority of those having it being under one year. The charges made vary from 1s. 6d. to 2s. 6d. a week, with 4d. a week for delivery; these have been fixed to closely approximate to the average cost of feeding an infant on cows' milk as supplied by the ordinary dealers. At the present time 120 infants are being fed weekly; a large number of these were in failing health when they began to take the milk. The great majority of the persons using the milk belong to the working classes, and none of them could have afforded the usual charges for humanised milk.

(9) *A Bath for Cleansing Persons infected with vermin* has been provided under the Cleansing of Persons Act. This is situated adjoining the disinfecting station where the clothes of such persons are disinfected. This is used by an average of seven persons a week. The persons using it are chiefly men from the common lodging-houses and children sent by teachers of County Council schools.

APPENDIX No. XLIV.—*Continued.**B.—The Poor Law.*

The Borough of Woolwich consists of three parishes, Woolwich, Plumstead, and Eltham. Woolwich and Plumstead are in the district of the Woolwich Poor Law Union; Eltham in that of Lewisham Union. This divided authority involves obvious inconveniences. The great majority of the poorer classes live in the parishes of Woolwich and Plumstead, and therefore come under Woolwich Union. The Guardians of this Union have in recent years greatly restricted the granting of outdoor relief, and as it has been found that the giving of medical orders often leads to application for other forms of relief, there has been a tendency to restrict, as far as possible, granting such orders. Further reference will be made to this subject under (IV), but it may be here said that my experience shows that as a rule there is very considerable unwillingness on the part of the working-classes to apply for an order for medical treatment on the ground that they lose caste, lose their vote, and become paupers. It is not generally known that by having medical relief the franchise is not lost. It is probable that the relieving officers, in their endeavour to diminish outdoor relief, do not concern themselves to make known the fact that the legislature has drawn this distinction between medical and other forms of relief.

The Woolwich Poor Law Infirmary is a large, well-equipped institution, with two able and devoted medical officers and a well-organised nursing staff. It receives all cases of illness and extreme infirmity from the workhouse and Children's Homes, Goldie Leigh, as well as receiving outdoor relief patients or other persons recommended by Poor Law medical officers. Its utility, however, is not confined to these classes, for frequently persons of all positions in life, who have suffered from accidents or acute illnesses are admitted as an emergency, the medical officer not feeling justified in sending away an urgent case which is brought to the infirmary door.

There is no general hospital within several miles of this institution, and consequently it has for accidents and emergencies taken the place of a voluntary hospital to some extent. A charge for maintenance is recovered from non-pauper patients or their chargeable relatives.

A large number of cases of consumption are also treated within its wards, though, owing to a laudable and instinctive dislike of so-called pauperism on the part of the patients, and owing to the fear of encouraging pauperism on the part of the authorities, many cases are not admitted who require institutional treatment and are unable to get it in any other way. I refer to cases of advanced consumption who cannot be properly isolated at home and are consequently a source of infection to their families.

The Infirmary, as regards nursing, diet, and in other ways probably compares favourably with a general hospital. It does not, however, offer the advantages of a staff of consulting physicians and surgeons; however skilled one or two medical men may be as general practitioners their patients do not recognise that they are getting the best treatment that a staff of experts can afford. It must be allowed that patients who have been treated in it are as a rule much less appreciative of benefits received than those who have been in a general hospital. This may partially be due to the fact that their admission was more or less involuntary, whereas usually with general hospitals the patients enter willingly. The writer, however, cannot resist the conclusion that the Infirmary does not escape to some extent the atmosphere of repression, inelasticity, and lack of sympathetic adaptation to individual requirements which so often characterises the workhouse and other Poor Law institutions.

The poor of the parish of Eltham are treated in the Lewisham Infirmary. My acquaintance with the working of this institution is small but, so far as it goes, what has been said of the Woolwich Infirmary applies to this also.

C.—Voluntary Effort, etc.

The following institutions have been provided by voluntary effort:—

(1) The Cottage Hospital, Woolwich, containing twelve beds supported by voluntary contributions and by a charge of 5s. per inmate per week. The letter system is in force, letters being granted to contributors. There is a staff of one West End consulting surgeon and four visiting medical officers who practise in the borough.

There is no resident medical officer. Owing to its small size, and its situation near the top of Shooters' Hill, this hospital is of very limited utility. No out-patients are seen. Considerable enlargement is contemplated.

(2) Eltham and Mottingham Cottage Hospital.—This hospital contains twenty-two beds, the average number occupied in 1906 being 14.5. A minimum weekly charge of 3s. 6d. for adults and 2s. 6d. for children under ten is made. Patients are admitted on the recommendation of a subscriber, but there are no letters. There is a staff of six honorary medical officers resident in the neighbourhood, and six honorary consulting physicians and surgeons. There is no resident medical officer. The class of persons admitted is generally the working and lower-middle classes. This hospital very well supplies the district of Eltham. Out-patients are not seen habitually.

(3) A small hospital has recently been established within the Royal Arsenal, mainly for the treatment of accidents occurring to Arsenal employees. A few medical cases are also treated. There are twenty beds. The hospital is nursed by Army Nursing Sisters and male orderlies. A charge for subsistence is made, varying according to the conditions of service—some free, some 1s. per day, and others 2s. per day.

(4) There are also the Herbert Hospital, Auxiliary Hospital, and the Military Families Hospital, but as these are exclusively for the use of soldiers and their families it is not necessary to describe them.

(5) A Home for mothers and babies has been established, the first object being the training of midwives. There are twelve beds for confinements. A staff of three certificated midwives and trained nurses lives in the hospital and are assisted by four pupil midwives who have had a year's training in nursing. They also attend women in their own homes and nurse the mother and child during the following week, visiting them at least once daily. In-patients pay 7s. a week, and 5s. is charged for out-patients.

(6) The Provident Dispensary for Woolwich, Plumstead, and Charlton, was founded in 1894 and there are now over 3,000 members, whose payments amounted in 1907 to £678. Membership is limited to persons whose wages do not exceed 30s. or £2 a week, according to the size of the family. There is a staff of thirteen medical men. In 1905 90 per cent. of the expenditure was met by members' payments and the other 10 per cent. by charitable subscriptions. Persons are only admitted as members when they are in good health, and there is no satisfactory provision for treating persons applying when ill if they are not members.

(7) Clubs.—There are in Woolwich, as in other places, numerous medical clubs, some in connection with Friendly Societies and others organised by private medical men. These are mainly confined to men and boys. An attempt was made to start female medical clubs, but in view of the recognised fact that the usual subscriptions for men (3s. to 4s. a year) was totally inadequate, and that medical men had frequently taken such clubs on at an inadequate subscription in the hope of attending the men's families at ordinary fees, the medical men in the district combined to refuse to accept any female medical club unless the subscription was at least 8s. per annum. Probably this amount is not in itself prohibitive but it appears to be so to working women when compared with the usual subscription for men. Consequently very little progress has been made in this direction.

(8) *Woolwich, Plumstead, and Charlton, District Nursing Association.*—This association provides trained nurses for nursing the sick in their own homes. The rule is to nurse every applicant who is unable to afford the usual fees for engaging the whole time of a trained nurse. This probably means that all except the upper and upper-middle classes can avail themselves of the services of a nurse when ill. The staff consists of seven nurses. 812 cases were visited during 1905, and 16,000 visits paid to them. The association does not provide for the nursing of infectious cases, consequently many such cases as measles and whooping-cough can neither be removed to hospital nor receive skilled assistance in their own homes. There is no charge but a very wide basis of small subscriptions.

(9) *Invalid Children's Aid Association.*—This association has, among other objects, that of organising medical assistance for cripple and invalid children. It works

APPENDIX No. XLIV.—*Continued.*

in co-operation with the Voluntary Hospitals, Nursing Association, Provident Dispensary, Children's Country Holiday Fund, medical officer of health, and other institutions, and admirably performs the work it undertakes.

(10) *Non-infectious Ambulance*.—It having been observed by a medical man in the district that persons suffering from accidents and serious illnesses were frequently conveyed to hospital in a cab in such a way as to seriously prejudice their chance of recovery, it occurred to him that a remedy for this state of things would be simply to enable a cab proprietor to use an ambulance instead of a cab whenever a conveyance was asked for for such purpose. Accordingly the amount necessary to provide an ambulance was raised by a few voluntary contributions. The ambulance was put under trustees and lent to a cab-proprietor, who maintains it in good order and lets it out at ordinary cab fares whenever required. This plan has been found to work satisfactorily. The ambulance is used on an average twice a week.

(11) *The Woolwich Branch of the Charity Organisation Society*, organises medical assistance to cases which on enquiry are decided to be of a satisfactory nature. Its object is co-operation and acting as a connecting link between medical and other forms of relief. From the medical point of view it is found of most assistance in organising hospital and convalescent treatment. During 1907 hospital-treatment was arranged for twenty applicants, surgical appliances for thirteen, and convalescent aid for twenty-five.

(12) In addition to the above agencies, which are situated in the Borough, there are the large London hospitals, general and special, and the various convalescent homes and sanatoria in different parts of the country which are used to a large extent by the inhabitants of the Borough. In 1905, there were seventy-three deaths of inhabitants of the Borough in the general and special London hospitals situated outside the Borough. Twenty-five of these occurred in Guy's Hospital. If we allow one death in ten this makes a total of 730 in-patients treated. There are no means of knowing the number of out-patients, but I don't think it would be an exaggerated statement to say they are five times the number of in-patients. These patients are by no means confined to the poor; I have known a retired builder, a retired publican, and indeed persons in most classes of society represented in the Borough, who have gone for treatment to the out-patient department. There is no doubt as to the great extent to which these departments are abused, not only from the financial point of view, but from the medical, which is of more importance. From this Borough it is at least half-an-hour's ride to the nearest large general hospital; and a large proportion of the passengers by train at a certain part of the day consist of hospital out-patients. These patients are sometimes found on reaching the hospital to be suffering from infectious diseases, such as diphtheria, and every year the railway train is suspected to be the source of infection of several cases. Many of these persons are suffering from slight illness which could be easily and much more satisfactorily treated by local medical men. Others, on the other hand, are in such a condition of bodily health that they are unfit to bear the fatigue of the railway journey and the long waiting involved by visiting the out-patient department. I have known cases of consumption whose death was obviously hastened by such visits. If these departments were used as consultation departments, where patients specially recommended by local medical men were sent for an opinion or for special treatment, they would be of the greatest advantage, but it is questionable whether as at present conducted they do not do more harm than good. The Hospital Saturday Fund is, I am informed, taking steps in this direction as far as concerns letters issued by the fund.

II.—ADAPTATION, OVERLAPPING AND CO-OPERATION.

It will be seen from the above enumeration, which is by no means exhaustive, that there are a large number of agencies for the medical assistance of the poor; but although there is much co-operation there are many gaps, and a certain amount of overlapping. The gaps will be referred to under No. 3. Overlapping is most striking with regard to voluntary hospitals and sanatoriums. These splendidly furnished institutions are like so many well-equipped armies attacking a common enemy, but

without any co-ordination. Some parts of the enemy's force consequently are slain two or three times over, or, to put the case as it more often happens, the enemy—disease—which is often invulnerable to the present known remedies, is hit over and over again in one part without being slain, while other parts of his hostile forces receive no attention.

As an instance of an enemy slain twice over the following suffices. A young woman was sent to one of the Council's beds at the Peppard Common Sanatorium and returned after two months on the high road to recovery. She remained at home for a few weeks after discharge and continued to improve in all essential respects. She was well fed, lived in a country district—Eltham—and was under conditions admirably suited to complete her recovery. As, however, she still suffered from some slight symptoms, she took it into her head to go up to one of the London consumption hospitals and was there admitted, the physician of course being unaware of what had been done, and was being done, for her case. She thus occupied a bed, if anything to her own disadvantage, which might have been used with advantage for another patient, solely from the want of co-operation between the hospital and the sanitary authority.

In other instances the invulnerable enemy, disease, is wastefully shot at by independent units of the friendly force. It is notorious that some patients, having been discharged from one institution as incurable, manage to go to one, two, or three more before they finally succumb. They would not be admitted probably if information was obtained of their former treatment.

It is most important that the limited accommodation for consumptive patients in hospitals and sanatoria should be husbanded and only used for the most suitable cases. This can only be done by some system of co-ordination, and there is at present an utter absence of this.

Want of co-operation between the voluntary hospitals and private medical men is notorious and need not further be referred to.

The nurses of the District Nursing Association, as has been stated, attend a very large proportion of the population. To a great extent they have lived down the opposition which all new undertakings undergo. It is still, however, true that many patients who need it do not have the benefit of their attention, partly because they are overlooked, and partly because some medical men neglect to avail themselves of the nurses' services. This is a state of things which will probably be remedied as medical men pay more attention to the hygienic treatment of disease.

The Provident Dispensary makes a special point of securing the co-operation of other voluntary agencies in the treatment of the members, and it is probable that most members sufficiently ill to require a nurse enjoy her services.

III.—INSUFFICIENCY OF MEDICAL PROVISION.

The growth of the use of fever hospitals in the past twenty years is very striking. These were intended first only for persons chargeable to the Poor Law Guardians. When, however, medical officers of health pointed out that infectious cases were equally dangerous to the public whether they were paupers or not, it was found necessary to admit all, independent of status. The cost of maintenance was at first recovered from the patient's friends through the Guardians, but this also deterred persons from entering the hospitals, and consequently they were made free. It was certainly anticipated by medical authorities in former years that the general use of hospital isolation would to a large extent cause the disappearance of scarlet fever and diphtheria. This unfortunately has not been the case. What has occurred, however, is a very considerable fall in the case mortality of these diseases, so that the number of deaths attributed to them are very much fewer than twenty years ago. This satisfactory result may be partially attributed to the increase of hospital isolation. On the other hand there are many medical officers of health who consider that hospital isolation has now gone too far, and that many cases which might with advantage be isolated in their own homes are unnecessarily removed to the hospital. One chief reason of their removal is to avoid the expense of medical treatment at home, for it is a curious anomaly that although medical treatment of infectious diseases may be pro-

APPENDIX No. XLIV.—*Continued.*

vided at the public expense if maintenance in an institution is also provided, there is no free public provision for medical treatment at the patients' own homes, although this would only be a very small expense compared with the cost of maintenance in an institution. Hospital isolation means much longer isolation than home treatment and often the contraction of a secondary infection. It is, therefore, to be regretted that there should be such a premium placed on hospital isolation.

Anti-toxin has been supplied free by some sanitary authorities for use at the patients' homes for the treatment of diphtheria, but it is doubtful whether there is satisfactory legal sanction for this being done, although the results of immediate treatment are so satisfactory, and free provision of anti-toxin the only means of ensuring immediate treatment. Here again it is anomalous if anti-toxin may be supplied at the public expense in an institution but not outside.

It is not among the statutory duties of a medical officer of health to see cases of illness and help in their diagnosis. As he is, however, usually an expert in the diagnosis of infectious disease, and it is essentially important, in order to obtain speedy notification and isolation, he can hardly refuse to perform this duty on request. It is at the same time true that, if called upon to the extent which is perhaps desirable, it would make very large inroads on his time and necessitate considerable medical assistance.

These instances show a want of due co-ordination between home-treatment and institution-treatment in certain diseases. It further happens that on discharge from fever hospitals patients frequently require some medical supervision, mainly for the sake of insuring that they are not still infectious to others. There are no means of providing this at the public expense, and the majority of the inhabitants of this Borough only think of obtaining private advice if the individual patient urgently requires medical treatment for his own sake.

Medical treatment at the commencement of an infectious illness is even of more importance than in its further course, mainly for the purpose of early diagnosis to ensure speedy isolation and proper treatment. As the early symptoms of most infectious diseases are not urgent, working-class people postpone calling in medical assistance for several days unless, and until, the rash—as in scarlet fever and measles—acts as a danger signal. In this way measles is never detected at once, and diphtheria and enteric fever are frequently missed for several days; scarlet fever is also missed if the rash escapes notice as is frequently the case. The results are not usually serious as regards the personal treatment, except in the case of diphtheria, in which disease one day's delay in treatment may make all the difference between recovery and death of the patient. In all the diseases mentioned, failure to obtain medical assistance, and consequently diagnosis of the disease, commonly leads to the spread of infection in the family, with the result that two or three cases occur instead of one.

Consumption or tuberculosis of the lungs, is another disease in which it is particularly important that there should be easy means of obtaining early medical advice and treatment. Owing often to the want of this the disease is allowed to go beyond the possibility of recovery. It must be allowed, however, that medical men frequently, for fear of alarming the patient, do not inform him or his friends that he is suffering from phthisis, even when they detect the disease. And it is also the case that the working-man is commonly in such a position that, even when his disease is early diagnosed and he is informed of it, he is obliged to continue his work, and support his family, and cannot afford to go away to a sanatorium. Blindly, or with his eyes open, he goes on at his work until increasing weakness forces him to give it up. There can be no doubt that if there was easily available medical assistance, which looked on the prevention of disease as its main object, and a relief system which regarded the prevention of destitution as its chief end, most cases of phthisis would be early detected, and proper treatment applied and health restored.

While on the subject of phthisis, another way in which the public health suffers from want of co-operation of the Poor Law may be mentioned. When a working-man has this disease to such an extent as to be unable to work, he commonly becomes destitute and chargeable to the guardians, and is usually admitted to the Poor Law infirmary. It is most desirable that this should be the

case, both for his own sake and to prevent the infection of his family. If, however, his wife becomes ill the family is usually not destitute and she is not chargeable to the guardians. She is, however, often in a worse state than her husband would be; the home is neglected, and the children run a very great risk of being infected by her. The guardians may, and frequently do admit her and recover part of the expense from the husband. Her admission, however, depends to a large extent on the individual bias of the relieving officer, and it frequently occurs that some of the cases which it is most desirable should be removed from their homes are left there.

Veneral Disease.—There is insufficient medical provision for the treatment of syphilis and gonorrhoea and its neglect is a cause of much suffering and incapacity of the individual and his wife, mortality and disease of his offspring. Sick-clubs and provident dispensaries either definitely or by implication exclude treatment of such cases. My experience shews that many deaths of infants attributed to such causes as "wasting" are really due to inherited syphilis.*

The poor mainly suffer, however, from their poverty, either when out of work or from lowness of wages, making them *unable to afford medical assistance*. If they are dishonest they run up a bill with the doctor and never pay it. A large proportion will never be provident and join a provident dispensary unless compelled to do so. Consequently nearly all the cases suffering from loss of work, and the majority of those whose earnings are less than 30s. a week, are usually unable to obtain medical assistance. It is desirable that no-one's health should suffer through these causes, and the legislature not only provided Poor Law medical officers but drew a distinction between the receipt of medical assistance and of ordinary relief, with regard to the franchise. Whatever is the working of the law on the matter there is no doubt that in this district the distinction drawn by the law is not publicly recognised. It is generally supposed that a person who accepts *Poor Law relief loses caste as well as his vote*. In an instance that occurred recently I had the greatest difficulty in persuading a man who had been out of work for twelve months, living with his family in two rooms, and whose personal appearance corresponded with his circumstances, that it would not be beneath his dignity to apply for medical relief. Probably as long as medical relief is only granted on an order obtained from the same officer who with grudging hand gives an order for ordinary relief, the respectable poor will be as unwilling to apply for the former as for the latter. (To such an extent does this feeling prevail that it is a recognised fact that the acceptance of a Poor Law appointment by a medical man to a certain extent prejudices his practice in the public estimation, i.e., the working-classes are afraid of having a doctor who is a Poor Law medical officer lest their neighbours should suspect they are having Poor Law medical relief.) For such persons there is practically no charitable provision in this district. Coroners' inquests are frequently held in which poverty is given as the reason for there having been no medical assistance for the deceased, and the coroner frequently tells the friends of the deceased person that they should have obtained the services of the Poor Law medical officer, but there is no evidence of his advice being followed.

With respect to those who are out of work it is questionable whether the provision of medical assistance would be of much value if other assistance were not also given, and there can be no doubt that much ill-health, especially consumption, is due to the fact that not only medical treatment but means of nutrition are lacking in families whose wage-earner is out of work and unwilling to accept such assistance as the Guardians may offer. A large number of cases of phthisis recently enquired into have been men, or the children of men, who have for many months been out of work, and having no medical assistance.

There is one point which, though not solely concerning the poor, should be provided for in any well-organised medical service. This is *provision for emergency calls*, whether by day or by night. Immediate medical attendance for acute or sudden illnesses is frequently wanted, and considerable delay is experienced before any medical assistance can be obtained, owing to some doctors being out and others being unwilling or unable to attend. In a large town there should be one medical man always on

* There is also insufficient provision for the treatment of women leading an immoral life.

APPENDIX No. XLIV.—*Continued.*

duty at fixed hours to attend to such sudden calls, as is the case in many continental cities. The duty could be arranged by a local medical association to be taken in rotation by medical practitioners; but a payment should be made and a centre organised by the Sanitary Authority. The services would be chiefly required by those unable to pay ordinary fees; the cost should be recovered from those able to pay. Failing volunteers, the duty would fall on the medical officer of the Sanitary Authority referred to further on.

IV.—REMEDIES.

(a) *Causes of illness.*—Before considering the best remedies for the deficiencies in medical assistance of the poor which have been pointed out, it is desirable to summarize what are the causes of illness in the poor. These depend partly upon matters such as housing, unhealthiness of occupations, insufficient wages, insufficiency and irregularity of employment, and inherited or acquired debility or infirmity of mind or body, over which the individual has no control. Of these, insufficiency and irregularity of work, and incompetency for sustained and difficult labour are far-and-away the most important in this borough. It is not within the scope of the present statement to deal with irregularities of employment, but some of the remedies hereafter suggested would certainly diminish incapacity of mind and body. Much illness results from bad habits as regards diet, dirt, and deteriorated atmosphere of houses, and much more from intemperance. Nothing is more difficult than to fix responsibility, but for the most part it may be said that the period of childhood, and the diet, regimen, and habits inculcated in that period, are what mainly determine the individual's future physical well-being. He is not responsible for this period, though his after habits, *e.g.*, intemperance, may be mainly due to the determining influence of early training. Remedial assistance should aim at supplying the deficiencies in the training of this period by friendly advice and by sympathetic health visitors.

(b) *System of General Poor Relief.*—It is necessary also to roughly indicate what the writer considers the ideal which should be aimed at in re-organising general relief. At present, from the point of view of charity and Poor Law, there are various classes of poor, *e.g.* :—

(1) The respectable provident poor who provide for themselves in most circumstances.

(2) The respectable improvident poor who only provide for themselves as long as things go well, and are those who suffer most when things go wrong;

(3) The poor who are not altogether averse or unable to work, but who only support themselves, usually to a limited extent, and otherwise depend on charity or the Poor Law.

(4) Those who will not work unless they are compelled.

The writer's ideal is to divide these into only two classes, those who will work, and those who won't work, and have habits, like drunkenness, which incapacitate them for work. For the latter there should be legislation enabling them to be sent to and detained in some form of labour colony. The former, as far as they require assistance, should be assisted by such agencies as old-age pensions almshouses, and some system, acting on the lines of the Elberfeld system, which would combine outdoor relief with exhaustive but sympathetic enquiry and individual assistance. The number of helpers, partly paid and partly unpaid, should be sufficient to find out immediately need occurred, and legal powers possessed sufficient to deal with it before it became acute. This would be best worked by a distress committee of each borough council, assisted by sub-committees in each ward. In this way workhouses would only be wanted as penal colonies (*i.e.*, educational labour establishments to which inmates were committed for fixed periods), and perhaps be best under the police or a special department of the Home Office; the present Poor Law Children's Homes would come under the Educational Authority, and all medical relief would come under the existing Sanitary Authorities. In view of the fact that the legislature has already recognised that it is to the interest of the country that no obstacle should be put in the way of persons needing medical relief, and that it is to the interest of all to preserve the health of each, there is no reason why the medical relief of paupers should be separately organised from general hygienic and medical

institutions: and there is no reason why, where it was called for, Poor Law infirmaries should not be used as general hospitals, although it would be found probably usually convenient to keep them for the cases which at present mainly occupy them, *viz.*, chronic diseases, infirmities of old age, and incurable phthisis. All these infirmaries, fever hospitals, lunatic asylums, and other similar public institutions should be under a Hospital Committee of the London County Council. This Committee should also have control over the voluntary hospitals, *e.g.*, it should have the power to veto any proposal to build new hospitals or to extend existing hospitals unless certain conditions were complied with; and it would doubtless have the power to send to any voluntary hospital such suitable cases as were recommended by the local distress committee, and to pay the same hospital for them if desired.

Each voluntary hospital might nominate one or more of its governing body to act on the Central Hospitals' Committee, or *vice versa*, the Hospitals' Committee might delegate one of its members to act on the governing body of the voluntary hospital. In either way some step would be taken to the necessary co-ordination between the various Metropolitan hospitals. Where the Central Hospitals' Committee represented that any voluntary hospital was not made proper use of, or was not required for the purpose for which it was used, it should have the power, with the sanction of the Local Government Board, of purchasing such hospital, and using it as a fever hospital, consumption hospital, or other purpose. The Hospitals' Committee would, of course require local committees for every one or more of the various institutions, and would be required to receive into its institutions, as far as possible, all cases sent by the Poor Law Relief Committee, or by the Local Sanitary Authority.

(c) *Unity of Preventive Medicine and Medical Relief.*—

It has been seen that a large amount of medical relief though not under this name, is now given with more or less legal sanction by sanitary authorities. The tendency of recent years is to continually add to the number of infectious diseases, and more and more to recognise that prevention of infection involves a certain amount of medical treatment of individual cases, and on the other hand that ordinary medical treatment is to a great extent useless unless combined with hygienic treatment; *e.g.*, the prevention of the spread of diphtheria often requires medical treatment with anti-toxin; and the prevention of the spread of phthisis requires medical and sanatorium treatment of the individual; and it is useless for any practitioner to attempt to treat infectious and other diseases successfully, if he does not give sufficient consideration to the hygiene of the sick room and the individual habits of the patient. To whatever extent preventive measures and medical treatment are provided at the public expense, they should be recognised as having one object, and being under one control. The control would be the Sanitary Authority, and the object obtaining early information as to illness and putting medical and hygienic assistance within the easy reach of all. The present Poor Law medical officers, or their successors, instead of working under orders from the relieving officers might with advantage work in combination with the Medical Officer of Health, or under his supervision. They might in this way relieve him often of duties which he now has insufficient time to perform, *e.g.*, swabbing throats for the detection of diphtheria, medical consultations in doubtful cases of infectious disease, and seeing children suspected of infectious disease by school teachers and others. They could also attend cases of infectious disease whom the Medical Officer of Health deemed it unnecessary to remove to hospital, but who were unable to pay for medical attendance, and supervise cases discharged from fever hospitals.

(d) *Assistance of Health Visitors and Nurses.*—If the Elberfeld system were developed as I have very briefly indicated, the members of local committees would themselves be visitors, each having a limited number of houses to visit and befriend. They would not, however, generally be skilled health visitors, but if they performed their duties satisfactorily they would, as the friends of every family, receive early intimation of any case of illness. The poor house-occupier would, of course, send direct to the medical officer in any acute illness, but more chronic and apparently slight conditions of ill-health might be first reported to the lay visitor or

APPENDIX No. XLIV.—*Continued.*

discovered by him. These, if they did not need medical attendance at once, would be referred to a paid health visitor who would have had some training in sick-nursing, acting under the Medical Officer of Health, who would advise as to whether a medical man was required, or who might deal with the trouble herself by giving hygienic advice as to diet, cleanliness, etc. If a medical man was required, the service of one of the Sanitary Authority's medical officers would be called in, and the health visitor would in certain cases continue to attend to see if the directions of the medical officer were carried out. The visits of the latter could thus be curtailed. If, however, the case was such as required a fully trained nurse she would take the place of the health visitor. In this way much earlier information of infectious disease could be obtained and the disease dealt with. All insanitary conditions would, of course, be referred to, and dealt with, by a sanitary inspector. The system sketched would probably to a large extent prevent unnecessary demands on the time of the medical officer, and if cases occurred where persons who sought and used his services were able to pay for them, the Sanitary Authority should have power to recover the charge for his assistance at law. This would prevent any discouragement to employing

private medical practitioners, and contributing to medical clubs and provident dispensaries. Indeed the system would be perfectly compatible with considerable development of the provident dispensary system, for the visitors, health visitors, and others would impress on persons the necessity of providing for medical assistance, and when they failed to do so, and the services of the Sanitary Authority's medical officer were required, probably a threat to recover the cost would be sufficient to make those who were able to do so join the provident dispensary.

(e) *Indirect Compulsion to obtain Medical Assistance.*—It is in the interest of the community that no-one should neglect to obtain for himself or his family early medical assistance in illness. This end would be helped on if the existing responsibility of householders, under the Notification of Infectious Disease and Public Health (London) Acts, to notify infectious disease, were extended. At present the householder has only to say that he was unaware that the illness was infectious, and he is exempt from the law. It should be provided that the defence of being unaware should only be admitted when the householder had taken proper steps to become aware by calling in a medical man.

APPENDIX No. XLV.

STATEMENT OF EVIDENCE AS TO THE MEDICAL ASSISTANCE OF THE POOR BY MR. G. F. McCLEARY, B.A., M.D., D.P.H., MEDICAL OFFICER OF HEALTH, HAMPSTEAD.

1. I am a Bachelor of Arts, a Doctor of Medicine, and a Diplomate in Public Health of Cambridge University. For the past year I have been medical officer of health of Hampstead, and previously I was for five years medical officer of health of Battersea. For a year before my appointment to Battersea I held the post of assistant to the medical officer of health of Manchester, and previous to that I was for some six months assistant medical officer of health of Huddersfield. Before taking up public health work I had nearly three years' experience of general medical practice as *locum tenens* for practitioners in London and in various parts of the country. Most of the practitioners for whom I acted as *locum tenens* had extensive club practices, some held Poor Law appointments, and four were part-time medical officers of health. I may claim, therefore, to have had some considerable experience from various points of view of the conditions under which the poor are medically assisted at the present time, and I have been led to the conclusion that those conditions are inimical to the health of the community.

LACK OF MEDICAL ASSISTANCE AMONG THE POOR LEADS TO THE SPREAD OF INFECTIOUS DISEASES, e.g., SMALL-POX.

2. In the first place it may be said that the poor do not have recourse to medical advice as often as is necessary both for the interest of the individual patient, and for the welfare of the community. The reason why medical assistance is not more frequently sought is usually that of expense. There is naturally much unwillingness to incur expenditure for "doctoring" unless there appears to be good reason for it. For various reasons large numbers of the poor do not belong to provident dispensaries or other voluntary medical aid associations, and, so far as my experience goes, there is a widespread disinclination to utilise the services of the Poor Law doctors. In consequence of this failure to seek skilled medical advice many cases of infectious disease go unrecognised, and to this fact we must attribute the comparative ineffectiveness of our modern methods of dealing with scarlet fever and diphtheria. In small-pox, too, the unrecognised or "missed" case plays a most important part in the spread of the disease, although in small-pox the seriousness of these cases is masked by the immense protective effect of vaccination. I personally investigated all the 253

cases of small-pox that occurred in Battersea in the years 1901-02-03, and in the majority of instances I found that either the primary infecting case had not been identified as a case of small-pox until I discovered it myself, or that the identification had been delayed until other persons had become infected. In these cases a doctor had not been called in at all, or not until the patient had been ill for a considerable time, or, having been called in, he had failed to make a correct diagnosis. The following are two examples of cases of this kind:—

(a) On May 10th, 1902, a case of small-pox was notified to me in the person of C. C., an unvaccinated child, aged twelve months, of Dashwood Street, Battersea. I ascertained that the patient was taken ill on April 30th, and that the rash had appeared on May 2nd. On the latter date she was taken to the out-patients' department of a general hospital not far from Battersea, but, the rash being in the earliest stage, the nature of the disease was not recognised. The patient was not again seen by a doctor until the day of her death, May 9th. I found that a fortnight before the child was taken ill the mother had had a mild attack of small-pox for which she was not medically attended. No less than twenty-four persons are known to have taken small-pox directly or indirectly from this patient.

(b) On December 9th, 1901, a case of small-pox was notified to me in the person of Thomas C, of Carpenter Street, Battersea. I found that he had been taken ill on December 1st, the rash appearing on December 3rd. He went to his work as usual until Saturday, December 7th, and on the following day he saw a doctor for the first time during his illness. This man infected seventeen persons to my knowledge.

SCARLET FEVER.

3. The "missed" case plays an important part in the spread of scarlet fever. For this disease we have no prophylactic such as vaccination, and for its prevention we are compelled to rely upon the prompt isolation of the patient, followed by disinfection of infected articles and premises. These measures, however, are far from having achieved the success that was formerly predicted for them, and of late years, indeed, the utility of hospital

APPENDIX No. XLV.—*Continued.*

isolation as a means for preventing the spread of scarlet fever has been seriously called into question. The comparative failure of our efforts to check the prevalence of scarlet fever must be attributed to the fact that a considerable number of cases never come under medical observation at all, or not until they have already spread infection. For some months past I have had to deal with an unusual prevalence of scarlet fever in West Hampstead, chiefly in connection with one of the elementary schools in that district. The disease has been present in a mild form, and many cases have not been recognised in time to prevent the spread of infection. I have found that in several instances a child suffering from a mild attack of scarlet fever has been allowed to return to school, after a few days' absence, while still in an infectious condition. One child was found in a school class-room to be in the early desquamating stage of scarlet fever, and on visiting her home I found another (untreated) case, and two days later two other members of the family were attacked. During the last nine months of 1906 I discovered nine cases of scarlet fever, none of whom had been treated by a doctor, and some of whom had been going to school as if nothing out of the common had happened.

4. It is all the more remarkable that so many of these cases should have occurred in this borough, for the poor of Hampstead are exceptionally well provided with dispensaries and other voluntary medical agencies. There is a large dispensary, the Hampstead Provident Dispensary, at New End, with a branch in Mill Lane. This dispensary has six medical officers. In Greville Road there is the Kilburn Provident Medical Institute, to which no less than fourteen medical officers are attached, and just outside the borough there are two dispensaries, the Kilburn General Dispensary in Kilburn Park Road, and the Malden Road Dispensary, both of which are much used by Hampstead residents.

5. The Charity Organisation Society is exceedingly active in Hampstead, and it has been instrumental in inducing a large number of working people to join sick clubs such as the Foresters Friendly Society. The Hampstead Hospital, which has an out-patient department, is another important medical agency and several medical practitioners have private medical clubs of their own. In spite of these facilities for medical assistance, however, Hampstead, as I have said, has recently suffered from an exceptional prevalence of scarlet fever, which I have found to be due to the spread of infection by patients who have not come under medical observation.

DIPHTHERIA.

6. The "missed" case plays an important part in the spread of diphtheria, a disease that ought to be more readily controlled than scarlet fever because of the facilities bacteriology affords for the diagnosis of diphtheria, and because we possess in the diphtheria antitoxin an agent of great therapeutic and considerable prophylactic value. A marked reduction in the prevalence of, and mortality from diphtheria is one of the results that may most confidently be expected to accrue from a re-organisation of the work of the municipal public health department on a more widely extended basis.

MEASLES.

7. Measles is frequently spread by cases that have not been identified. In this disease the characteristic eruption does not appear until the fourth day, and until its appearance the symptoms resemble those of a severe "cold." It is quite common for children to be sent to school in the pre-eruptive stage of measles, for until the rash appears the parents usually do not know from what complaint the child is suffering. A medical practitioner ought, however, to make a correct diagnosis before the rash appears, for Koplik's spots, an important diagnostic feature, may be observed as early as the second day of the disease; and I have no doubt that with a better system of medical assistance we could bring some measure of control to bear upon this disease, the present mortality from which is a reproach to our methods of public health administration.

CONSUMPTION.

8. In consumption early diagnosis is a matter of great importance. The earlier the disease is recognised the better prospect there is not only of curing the patient, but also of instructing him in those measures of personal cleanliness (proper disposal of sputum, etc.) which are necessary for preventing the spread of the disease to other persons.

IMPORTANCE OF EARLY DIAGNOSIS IN THE NON-COMMUNICABLE DISEASES.

9. So far I have dealt with the importance of early diagnosis only in those diseases which are communicable from one person to another. In these diseases the chief object of early recognition is to facilitate the earliest possible isolation of the diseased person. I have selected as examples, small-pox, scarlet fever, diphtheria, measles and consumption, but the same principle holds good in all communicable diseases. In addition to these, however, there are serious diseases in which early diagnosis is important not because it tends to limit the spread of the disease in the community, but because it tends to check or eradicate the disease in the individual patient. A good example of these dangerous non-communicable diseases is cancer. Cancer in certain accessible situations, such as the lip, or breast, is a disease in which there is a good prospect of cure, provided that a diagnosis is made before the growth has spread beyond the reach of the surgeon's knife. Every year many persons die of cancer whose lives could have been saved had they sought medical advice in time. Especially is this true of the poor. The dissemination of information as to the hopeful prospect of cure in early cases of cancer is educational work that sanitary authorities might undertake with much advantage, and its usefulness would be greatly enhanced if the authority afforded facilities, pathological and clinical, for the early diagnosis of the disease.

10. There are, moreover, diseases in which, although "cure" is impossible in the present state of our knowledge, yet the patient's life may be prolonged and his activity maintained for a considerable period if he submits to a prescribed regimen. Among such diseases are chronic kidney disease, chronic heart disease and diabetes. Patients suffering from these diseases may, by adopting a suitable diet and suitable modes of living, continue to follow their vocations for many years. In these diseases it is most important for the patient that an early diagnosis should be made so that proper precautions may be taken in time.

SANITARY AUTHORITIES INQUIRE INTO THE SANITARY CONDITION OF PREMISES FREE OF CHARGE.

11. It is evident that it is to the interest of the community to secure the earliest possible identification of cases of disease. In the non-communicable diseases this would not only preserve many lives that are now prematurely lost, but it would also be the means of maintaining the working efficiency of many patients who suffer from chronic disorders that are not necessarily disabling, and would, therefore, prevent much of the chronic "invalidism" that is now a heavy tax upon the resources of the community. And in the communicable diseases there would be the additional advantage that early identification would very greatly increase the effectiveness of our control of such diseases. At the present time, as I shall show later, much is being done by sanitary authorities to further the diagnosis of disease, and there is a growing tendency to expand this branch of the work of the public health department. But the facilities so far provided by sanitary authorities for the diagnosis of suspected cases of infectious disease are slight when compared with what is required for the protection of the health of the community, or when compared with the provision that is made for the investigation of suspected drainage defects or other insanitary conditions of environment. If a householder suspects that the drains or other sanitary arrangements of his house are defective, all he has to do is to complain to the sanitary authority, who will promptly ascertain what is wrong and then take the necessary steps to remedy any defects that are discovered. Complaints of this kind are of daily occurrence, and the investigations called for by such

APPENDIX No. XLV.—*Continued.*

complaints form a large part of the work of a public health department. These examinations are done free of charge ; they involve the ratepayers in considerable expense, and they are done in view of the fact that drain testing and the making of sanitary surveys are operations which are carried out for a livelihood by private firms of "sanitary engineers." It is rightly held that sanitary authorities are under an obligation to make these inspections, that it is the duty of the sanitary authority to discover and remove insanitary conditions of environment. This is distinctly laid down in Section 92 of the Public Health Act, 1875, which runs as follows :—

"It shall be the duty of every local authority to cause to be made from time to time inspection of their district, with a view to ascertain what nuisances exist calling for abatement under the powers of this Act, and to enforce the provisions of this Act in order to abate the same."

Section 1 of the Public Health (London) Act, 1891, is even more imperative ; it makes the authority responsible for the "proper sanitary condition of all premises within their district."

"It shall be the duty of every sanitary authority to cause to be made from time to time inspection of their district, with a view to ascertain what nuisances exist calling for abatement under the powers of this Act, and to enforce the provisions of this Act for the purpose of abating the same, and otherwise to put in force the powers vested in them relating to public health and local government, so as to secure the proper sanitary condition of all premises within their district."

12. It is well known that sanitary authorities are willing to enquire into cases of suspected drainage defects, etc., and the public are not slow to act upon this knowledge. The householder who suspects his house to be in an unwholesome condition has but to make a complaint and the matter will be promptly investigated. If, however, he suspects his child to be suffering from infectious disease the services of the sanitary authority are, in most cases, not available. He must either incur expense for medical attendance, or become pauperised by applying to the Poor Law doctors, through the relieving officer ; or he may go without medical attendance altogether, and that is what he frequently does, to the grave injury of the public health. The sanitary authority, which makes free provision for the testing of drains suspected to be defective, has as yet made comparatively little provision for the examination of patients suspected to be suffering from communicable diseases, although experience has shown that undiscovered cases of communicable disease are far more important sources of suffering and of expense to the community than most drainage defects are likely to be.

IMPORTANCE OF NOTIFYING CASES OF DISEASE TO THE SANITARY AUTHORITY.

13. The control of communicable disease would be made much more effective if the public were not only encouraged to report suspected cases to the sanitary authority, but were compelled to do so. This could be done by an extension of the present statutory provisions for the notification of infectious diseases. Under the existing law the duty of notifying infectious cases is laid not only upon the medical practitioner in attendance, but also upon the head of the family to which the patient belongs, "and in his default the nearest relatives of the patient present in the house or being in attendance on the patient, and in default of such relatives, every person in charge of or in attendance on the patient, and in default of any such person the master of the house." (Public Health (London) Act, 1891, Section 55, Sub-section (1) (a)). These provisions should be made to apply to suspected as well as to actual cases, and at the same time the list of notifiable diseases should be extended. It then would become the duty of the medical officers of the sanitary authority to examine all patients notified as suspected cases and to take the necessary precautions.

THE DEVELOPMENT OF PERSONAL HYGIENE IN BRITISH PUBLIC HEALTH ADMINISTRATION.

14. In the development of our system of public health administration far too little attention has been given to matters of personal hygiene. In the collective control

of disease the community has relied chiefly upon the sanitary engineer, and it is only within a recent period that it has begun to utilise the services of the pathologist and the physician. The great sanitary reforms of the reign of Queen Victoria consisted for the most part in the removal of unwholesome conditions of environment. The prompt removal of waste matter from the vicinity of human beings, which is the beginning of sanitary wisdom, was accomplished by the provision of elaborate and costly systems of drainage and sewerage, and of refuse removal and destruction. The vast cess-pool, which in the early years of the nineteenth century was an important part of a London dwelling house, was abolished—although even now this survival of a pre-sanitary era is occasionally brought to light by systematic sanitary inspection. Plentiful supplies of pure water from carefully supervised sources took the place of the polluted wells and streams which formerly served as sources of water supply. Improved methods of street paving and street cleansing were introduced, open spaces were provided, the sanitary standard of building construction was raised, offensive trades were regulated and the smoke nuisance brought under some measure of public control. So far as these Victorian sanitary reforms can be described by any single phrase, it may be said that they were measures of communal cleanliness. The aggregation of increasing masses of the population into large urban centres brought with it increased danger of disease, and in self-preservation the community evolved an organisation for the protection of the public health the first aim of which was to secure communal cleanliness. In this way results of great value have been attained, but, great as have been the triumphs of environmental hygiene it is very far indeed from covering the whole field of hygienic reform. It is now fully realised that the community suffers from an enormous wastage from diseases and premature death that is comparatively untouched by the sanitation of surroundings. It is not enough to remove the insanitary environment of the people if the people themselves remain ignorant of the essentials of clean and healthy living, or if they are inadequately provided with proper medical assistance when sick ; and of late years our methods of public health administration have been more and more inspired by the idea that to remove that ignorance and to provide such assistance is as much the duty of the sanitary authority as is the supervision of drains and damp-proof courses.

15. It is probably owing to some extent to the survival of the idea that the business of the sanitary authority is to do with drains that the administration of the Vaccination Acts has not been transferred from the Poor Law authority. Vaccination was one of the first of the measures of personal hygiene that have been employed in our modern system of public health administration. Then came a gradual increase in the provision for the hospital accommodation of cases of smallpox, scarlet fever, diphtheria and typhoid fever, and the control of communicable disease was advanced by the Infectious Diseases (Notification) Act of 1889, and by the Infectious Diseases Prevention Act of 1890. The Cleansing of Persons Act of 1897, to which reference will be made later, was an important step in advance, and in the last years of the century the control of tuberculosis began to be consciously taken in hand by such measures as the adoption of systems of voluntary notification and by the distribution of advisory literature. And in attacking the problem of infantile mortality sanitary authorities have vastly extended the more purely medical branches of their work, and a still further extension has been brought about by the recent development of school hygiene. A few of these modern extensions of the activity of the public health department I will venture to describe in some detail.

ASSISTANCE AFFORDED BY SANITARY AUTHORITIES IN THE DIAGNOSIS OF DISEASE.

16. The provision of facilities for the early diagnosis of certain diseases is at the present time a part of the work of the sanitary authority. In most districts the public health department undertakes, free of charge, the bacteriological examination of pathological specimens from patients suspected to be suffering from diphtheria or typhoid fever. In some districts, e.g., Brighton, Lambeth

APPENDIX No. XLV.—*Continued.*

and Bermondsey, this work is done in a municipal laboratory; in others, *e.g.*, Manchester and most of the Metropolitan boroughs, it is done by arrangement with some institution such as the Lister Institute of Preventive Medicine. The method generally adopted is as follows:—Each medical practitioner in the district is supplied with an outfit containing appliances for collecting and transmitting the specimen. When the specimen is received at the laboratory a new outfit is sent to the practitioner, who is apprised of the result of the examination by telegram, a written report of the case at the same time being sent to the medical officer of health. Similar arrangements are made for the early diagnosis of tuberculosis, and, more recently, of epidemic cerebro spinal meningitis, a disease in which bacteriological examination is of great importance. There is, fortunately, a tendency for sanitary authorities to extend this pathological work. A microscopic examination is often necessary in early cases of cancer, and an examination of the blood is of great diagnostic value in anæmia and in various other conditions. The free examination by the sanitary authority of such pathological specimens would greatly add to the efficiency of medical practice.

17. Assistance in the way of clinical diagnosis is also afforded. Although it is no part of the duties of a medical officer of health, as those duties are defined by the Order of the Local Government Board, to act as consultant diagnostician in suspected cases of infectious disease, yet, as a matter of fact, he usually does act in this capacity, and it is very desirable that he should so act. In the year 1902 I examined, at the request of the attending practitioners, 112 suspected cases of small-pox, forty-five of which were actually cases of small-pox. The Hampstead Borough Council made it one of the conditions of my present appointment that I should examine suspected cases of infectious disease when asked to do so by a medical practitioner, and I am glad to take every opportunity of acquiring by such means the earliest knowledge of possible centres of infection. Medical officers of health are now being called in to see suspected cases of epidemic cerebro spinal-meningitis, and the London County Council have sent one of their assistant medical officers of health to study this disease at Glasgow in order to acquire special skill in diagnosing suspected cases of the disease. Some years ago, when it seemed likely that plague would be imported into London, the County Council engaged an expert in the disease to be available in assisting to identify doubtful cases of plague.

18. Another way in which the medical officer of health acts in the capacity of free diagnostician is in examining suspected cases of infectious disease reported to him by school teachers. I have already mentioned a recent outbreak of scarlet fever in connection with one of the elementary schools of this borough, and I may say that in dealing with this outbreak I have received great assistance from the teachers, who have supplied me with the names and addresses of children absent from school owing to illness. On visiting the homes of these children I have found several to be suffering from scarlet fever, and I have had them promptly removed to hospital. In my opinion it is only by the adoption of some such method as this that we shall be able to check the spread of disease by school infection.

THE DISTRIBUTION OF ADVISORY LITERATURE BY SANITARY AUTHORITIES.

19. Another method by which sanitary authorities seek to further the detection of cases of communicable disease is by distributing advisory literature. In periods of prevalence of measles, for instance, it is not uncommon for the authority to distribute leaflets describing the chief symptoms of the disease and containing instructions as to the isolation and treatment of the patient. The distribution of advisory literature on health matters has, indeed, become an important part of the work of sanitary authorities at the present time. One of the latest developments of this work is the posting of placards setting forth some of the injurious effects of alcohol on health, and in some districts this has been supplemented by a house-to-house distribution of leaflets containing similar information. Advisory leaflets are also distributed on such subjects as the feeding and management of infants, the prevention of consumption,

the prevention of diarrhoea, etc. This literature is distributed in various ways. The infant management leaflets are in some districts handed by the registrars to every person registering the birth of a child, or they may be sent by post to the homes in which births have occurred. Sometimes the leaflets are distributed house-to-house, and occasionally the information is put into the form of placards. The most effective method of distributing advisory literature, however, is by the agency of health visitors, and here we come upon what is probably the most important development of contemporary public health work. The first health visitors began work in Manchester in 1862. There were working class women employed as health visitors by the Manchester and Salford Ladies' Sanitary Association, and it was not until the last years of the nineteenth century that health visitors began to be directly employed by sanitary authorities. The high infantile mortality of the last ten years of the nineteenth century forced the whole question of the waste of infant life prominently before the public and undoubtedly gave rise to a great increase in the number of health visitors, for so far health visitors have chiefly been engaged in work having for its object the prevention of infant mortality. The first health visitors were drawn from the working classes, but most of the visitors now employed by health authorities are highly educated women; many have had a university training, and some five or six are fully qualified medical practitioners.

HEALTH VISITING.

20. The main function of the health visitor is to visit the homes of the less fortunate members of the community and to give simple practical instruction in certain matters of personal hygiene. The work is medical in character, and it should always be done under competent medical supervision. It is chiefly preventive, but by no means wholly so, for in personal hygiene it is no more possible to make a sharp distinction between prevention and cure than it is possible to mark out a border line between health and disease. Still, it is true that the health visitor does not undertake the treatment of patients who are likely to be seriously ill. It is her duty in such cases to do all she can to persuade the persons in charge of the patient to call in a doctor. From a public health point of view this method has many disadvantages. In the first place the authority and influence of the visitor are impaired. In those cases where advice is most needed she can do little but recommend that a doctor should be sent for. Her ministrations would be much more effective if she could either treat the patient herself (if she were qualified medically, as is sometimes the case) or call in a medical colleague from the Health Department. Secondly, the advice to seek medical aid is often not acted upon in the poorest districts, where her work chiefly lies. The visitor is told that poor people cannot afford to call in a doctor for every little thing, and should she venture in case of necessity to suggest that the services of the Poor Law doctors might be sought, she runs the risk of receiving an official reprimand, for encouraging pauperisation, from the Poor Law authority. An example of this occurred in Hampstead some three years ago. In the early part of 1904 there was an epidemic of measles in Hampstead. The number of cases brought to the notice of the medical officer of health during the year was no less than 741, and as measles is not a notifiable disease it is probable that the total number of cases was much greater. The 741 cases actually reported were visited by the borough council's lady inspector, who gave the mothers the usual leaflet on the precautions to be observed in cases of measles, supplementing the printed directions by simple practical advice on the isolation and care of the patient. From the Annual Report of the medical officer of health it appears that the inspector found that in 166 cases, or 22·4 per cent. of the whole, no doctor was in attendance on the patient. In cases of measles it is specially important that the patient should be medically attended, for the result of the illness greatly depends upon the care and treatment the patient receives, and the inspector was instructed by my predecessor, the late Dr. Herbert Littlejohn, to do her best to persuade the parents to have the patients medically attended, and in those cases where it appeared that medical aid could not be secured in any other way, to point out that the services of the Poor Law doctors were

APPENDIX No. XI.V.—Continued.

available. These instructions were carried out with the result that there was a considerable increase in the number of cases of measles treated by the Poor Law medical officer in the district of Hampstead in which the disease was chiefly prevalent. This fact was brought to the notice of the guardians, who thereupon caused the following letter to be sent to the inspector:—

“Offices of the Board of Guardians,
“Workhouse, Hampstead, N.W.
“January 21st, 1904

“DEAR MADAM,—The guardians desire me to inform you that the assistant relieving officer at Kilburn has reported that you have recommended people to apply for the aid of the Poor Law in Kilburn, where it subsequently appeared that the family were not by any means destitute. The guardians desire me to point out to you the importance of using discretion before calling upon the Poor Law for assistance in respect of medical relief, as it often happens that this method of receiving Poor Law relief by poor people leads in the end to the loss of their independence.

“Yours faithfully,

“(Signed) H. WESTBURY PRESTON, Clerk.”

ANTAGONISM BETWEEN POOR LAW AND SANITARY AUTHORITIES.

21. The incident illustrates the antagonism, from the public health point of view, of the forces directing the work of the sanitary authority on the one hand and that of the Poor Law authority on the other in relation to disease. The services of the medical officer of health and his department are given gratuitously, and it is the object of the medical officer of health continually to extend the field over which those services are operative. In so doing he is encouraged by his authority. The Poor Law authority on the other hand seek to restrict the work of their medical officers, apart from vaccination, as much as possible. Yet it is difficult to see what difference there is between the work of the medical officer of health and that of the Poor Law medical officer which would justify the antagonistic positions taken up by their respective authorities in relation to the extension of their work. It is agreed that there is no taint of pauperisation in the ministrations of the health visitor who, visits a case of measles to leave the printed instructions of the medical officer of health as to the isolation and general care of the patient, and to explain and amplify these instructions by oral advice—to tell the mother, for instance, to keep the patient warm in bed in a room apart from the other members of the family and to keep the room scrupulously clean and well ventilated. This advice, though given gratuitously, does not pauperise; but the advice of the Poor Law doctor, which is, after all, nothing but an extension of that of the medical officer of health as conveyed by the health visitor, it would appear does pauperise. I do not intend to enter upon a discussion as to what is, or what is not pauperisation; but I am very strongly of opinion that it would be greatly in the interest of the public health if the work now carried out by lay health visitors in relation to such diseases as measles and whooping cough were completed by the visits of medical health visitors, who would supervise the entire treatment of the patient. The same may be said of consumption. This disease, in the majority of cases, is best treated in a sanatorium, at all events, in certain stages of the disease. Sanatorium treatment is advisable both for the health of the patient and for the health of the community. The need for sanatorium treatment varies, however, in different stages of the disease, and the patient should therefore be kept under medical observation so that he may know when to seek such treatment, and in any case it is important that the patient should be medically attended, for the treatment proper in certain stages of the disease is improper in others. One of the factors in the success of sanatorium treatment is the constant medical supervision, which enables the proper treatment to be adopted as soon as it is needed. Consumption is so insidious and deceptive a disease from the subjective point of view that the patient alone cannot be relied upon to seek medical advice when he needs it, even when he has the means and opportunity for obtaining such advice, which the poor

patient in many cases has not got. In Hampstead an excellently planned organisation for the control of consumption has been gradually built up. There is a special phthisis committee, composed of representatives of the Hampstead Health Society and the Charity Organisation Society, working in co-operation with the sanitary authority and the Poor Law authority. Cases of consumption are investigated; premises are disinfected; the patients are visited, their progress is watched, and where necessary they are assisted in various ways. This work is valuable, but it falls far short of what is needed. It is extremely difficult to obtain an adequate number of voluntary workers to visit the cases, although Hampstead contains a large population of leisured persons, many of whom might be expected to engage willingly in useful work of this kind. The patients frequently do not receive sufficient medical attendance. Some attend occasionally at the out-patient department of the Mount Vernon hospital for consumption, but this department is in Fitzroy Square, which is too far away adequately to serve the needs of this district. It is necessary for the committee to be informed from time to time as to the physical condition of the patients, and on such occasions a medical practitioner is asked to examine the patient and report to the committee. This system of reporting, however, is found to be unsatisfactory both from the point of view of the practitioner, who usually reports gratuitously, and from that of the committee. The control of consumption would be very much more efficient if the poor patients were under the supervision of medical health visitors attached to the public health department.

THE PREVENTION OF INFANTILE MORTALITY.

22. The work of sanitary authorities in the promotion of personal hygiene has reached its fullest development in the movement for the prevention of infantile mortality. It is in work of this kind that health visitors are chiefly engaged, and it is important to note that during the last two or three years the methods of health visiting have been considerably developed. Formerly, when the workers were fewer, it was not practicable to pay more than one or perhaps two visits to each mother, but at the present time in an increasing number of districts it has been found possible, by increasing the number of paid workers and by the employment of voluntary health visitors working in co-operation with the sanitary authority, to keep each baby under regular supervision until the completion of the first year of life. The work of health visiting in relation to infantile mortality has been most fully developed in Huddersfield, where the two qualified medical women employed by the sanitary authority have been reinforced by eighty voluntary workers. By the local Act of 1905 the corporation is informed of the birth of every child born in the borough within forty-eight hours of the event, and, except in those cases where visiting is thought to be unnecessary, each home is visited by one of the Corporation's medical visitors, who leaves advisory literature and gives the usual oral instruction. Subsequent visits are regularly paid by the voluntary workers, who make periodical reports, and, if necessary, invoke the aid of the medical visitors. The whole of the work is done under the supervision and direction of the medical officer of health.

23. The work of the health visitors is of great value in the prevention of infantile mortality, but it is done under serious disadvantages. The ailments of babyhood are sudden in onset and may very soon become grave, and it is important that competent medical attendance should be promptly secured. In these circumstances it is the duty of the health visitor to urge the mother to call in a doctor, and at this point difficulties often arise that tend to neutralise the good effect of the health visitors' ministrations. Among the poor the doctor is often either not called in at all, or not until the baby has become seriously ill, or, having been called in, he too frequently gives directions which are diametrically opposed to the advice of the health visitor. For medical attendance the poor depend largely upon medical practitioners in the lowest rank of practice, who are popularly known as “sixpenny doctors,” and the influence exercised by these practitioners frequently constitutes one of the chief difficulties the health visitor has to meet. Health visitors are accustomed to advise that hand-

APPENDIX No. XLV.—Continued.

fed babies should be fed upon cows' milk, and not upon condensed milk and patent foods; that a nursing mother should not take alcohol; that a nursing mother who is unable to suckle her child entirely should supplement her milk with cows' milk instead of weaning the baby altogether on the ground that the "milks will not mix." This advice is frequently contradicted by the "sixpenny doctor," as all who have had experience of health visiting can testify. I have even known practitioners to advise the use of the long-tubed feeding bottle. In this way the educational effect of the health visitors' work is very seriously impaired. Our efforts in the prevention of infantile mortality would be made very much more effective if health visitors were enabled to call in the assistance of medical visitors attached to the public health department and responsible to that department for the advice they would give.

MILK DÉPÔTS.

24. The municipal milk dépôt represents another important extension of modern public health work. Since 1899 some twenty municipalities, St. Helens being the first, have established dépôts for the supply of specially prepared milk for those unfortunate infants for whom there is nothing for it but to be fed by hand. The work of the institutions has been much misunderstood. In some quarters they have been regarded as representing nothing more than an unregulated outburst of "municipal trading," as merely so many places where bottles of more or less sterilised milk are handed out over municipal counters. What the municipal milk dépôt really does represent is an extension of the supervision of baby-rearing by the medical officers of the sanitary authority. In a well-conducted dépôt the milk is supplied only to those mothers who can produce good reasons for the failure of the baby's natural nourishment. A careful record is kept of each child, for whose varying needs the milk is modified as occasion requires, and the homes of the children are periodically visited by health visitors who endeavour to secure a proper use of the milk. Efforts are made to induce the mothers to bring their babies regularly to the dépôt in order that the progress of the babies may be gauged by the best practicable test of infant well-being, namely, periodical weighing, and in some dépôts the milk is not supplied unless this condition is fulfilled. The milk dépôt is a clinique, not a milk shop; and the work of the milk dépôts would be much more valuable if it were extended on its more purely medical side. When I had charge of the Battersea milk dépôt I attended two afternoons a week at a room at one of the public baths, where the babies fed upon the dépôt milk were brought by their mothers to be weighed. In this way I was able to estimate the progress of the babies and to vary from time to time the quantity and modifications of the milk to suit their varying needs. Beyond altering the milk, however, I made no attempt to treat the babies medically, although my advice was frequently asked by the mothers. In the French institutions, the *Consultation de Nourrissons* and the *Goutte de Lait*, from which our milk dépôts are derived, the babies are medically treated, and it is for this reason that these institutions are more effective than the milk dépôt.

THE MIDWIVES ACT.

25. The Midwives Act is being made an instrument of great value in the prevention of infantile mortality. About one-half of the total births in England and Wales take place under the care of midwives, and in an increasing number of districts the sanitary authority is instructing the midwives in the principles and details of infant management so that they may be qualified to advise the mothers they attend.

26. In these modern developments of public health work relating to infantile mortality—in the early notification of births, the supervision of midwives, in the distribution of advisory literature, in systematic health visiting and in the work of the infants' milk depôts, we perceive the sanitary authority exercising a more and more intimate control over the conditions of infant life. Public health authorities are building up a system of advisory supervision of child-rearing—midwives, nurses and mothers are being educated by the authority in the things that are

necessary for healthy infant life. These measures are already having a considerable effect on infantile mortality, and they would be still more effective if the sanitary authority could provide medical treatment for those sick infants who at the present time are either not treated at all, or who come under the treatment of ill-informed and irresponsible practitioners.

SANITARY AUTHORITIES ARE LARGELY ENGAGED
IN THE TREATMENT OF DISEASE.

27. It may be objected that the extension of the work of the sanitary authority on the lines I have indicated would introduce a new principle in public health administration, by making the authority responsible for the treatment as well as for the prevention of disease. But at the present time sanitary authorities are extensively engaged in the treatment of disease. Large numbers of patients are treated in public fever hospitals, in asylums, and in sanatoria for consumptives, and the number so treated is rapidly increasing. Moreover, the Public Health Act empowers any sanitary authority to provide hospitals for diseases other than the communicable diseases, and also "to provide a temporary supply of medicine and medical assistance for the poorer inhabitants of their district." The Cleansing of Persons Act, 1897, empowers the sanitary authority to treat cases of pediculosis, and an increasing use is being made of this Act, especially for the treatment of school children. Cases of ringworm in school children are also beginning to be treated by the sanitary authority. In Manchester (and possibly in other districts) during the summer diarrhoea season diarrhoea medicine is distributed gratuitously at the city police stations, and in many districts diphtheria antitoxin is supplied free by the sanitary authority. Free diagnosis is, as I have already pointed out, an important feature in modern public health administration, and much of the work of health visiting is, strictly speaking, treatment. From whatever point we view the question there is no doubt that the treatment of disease is an important part of modern public health work.

28. It is, however, impossible to distinguish between the conditions that constitute "prevention" and those that constitute "cure." Even that aspect of public health work which is regarded as most definitely preventive has also its therapeutic side. The removal of unwholesome conditions of environment undoubtedly tends to prevent healthy persons from becoming sick; but it also tends to help sick persons to become well. And the "cure" of a sick person tends to prevent disease in that person, and, if the disease be communicable, in other persons also. Such conditions as diabetes, granular kidney, and aneurism are not necessarily diseases. If the condition is recognised early and the patient adopts the proper regimen the symptoms that really constitute the disease may be postponed for a considerable period. The feature that best distinguishes the medical work of the sanitary authority is, not that it is preventive as opposed to curative, but that it is *educational*. Among the poor diseases are regarded as mysterious entities to be exorcised with bottles of medicine and boxes of pills and it must be confessed that the conditions of medical practice in the poorer districts do not greatly tend to remove this impression. The sanitary authority, however, seeks to diffuse more enlightened ideas of disease. It endeavours to popularise the conception of disease as something that depends largely on conditions which can be explained in simple language and which can be prevented. It strives not only to remove unhealthy conditions of environment, but also to explain and inculcate the importance of defective personal hygiene as a factor in the causation of disease. The social value of this educational work upon which sanitary authorities are now engaged is great and it would be much enhanced if it were extended on its more purely medical side. The physician can exercise a powerful influence on the habits and mode of life of his patient, and the services of the physician employed on the lines on which sanitary authorities are now working could be made an educational force of immense value making for the raising of the standard of life of the poor. I should welcome therefore a wide extension of the work of health visiting. The number of official health visitors should be increased and a greater use should be made of the services of voluntary

APPENDIX No. XLV.—*Continued.*

health visitors working in co-operation with the sanitary authority on the methods adopted in Huddersfield and in Hampstead. In addition there should be attached to the public health department an adequate number of medical practitioners, male and female, who would supplement where necessary the work of the non-medical visitors; and the duties of all these workers should be carried out on the principle that now actuates the work of the sanitary authority, the principle, namely, that it is in the interest of the community that public medical work should be developed to a maximum and not restricted to a minimum as is now the aim of the Poor Law authority. Such a system would bring to light a large number of cases of communicable diseases that now escape discovery, and it would, therefore, make our control of such diseases much more effective. It would lead to the timely detection and competent treatment of many cases of non-communicable diseases which now for the lack of such detection and treatment inflict a heavy loss on the community. More important still, the efforts of such a body of workers would form a social force of considerable magnitude tending to the promotion of wholesome habits and therefore to the formation of character. The establishment of such a system would involve no new departure on the part of the sanitary authority; it would merely be an extension, on existing lines, of work that has already been considerably developed. And the best way of establishing such a system would be by the transference to the sanitary authority of the medical work now undertaken by the Poor Law authority.

DISADVANTAGE OF MEDICAL CLUBS.

29. It may, perhaps, be urged that the advantages I have indicated could be secured if the poor could be induced to make a much more extended use of medical clubs and friendly societies. I am very strongly of opinion that these advantages could not be so secured. In the first place large numbers of the poor do not belong to clubs and I do not know of any method short of sheer compulsion which would induce a sufficient number to join. Those of the poor for whom medical attendance is most needed, both for their own welfare and for that of the community, are precisely those who are least likely to join clubs; and the careful workman who regularly pays his club subscription has not only to pay for his own medical attendance, but, as a ratepayer, he has to bear his portion of the expense incurred by the community in medically attending his less careful or less fortunate neighbour, and in dealing with the disease spread by patients who have not come under medical observation. Secondly, the conditions under which club practice is now carried on are so unsatisfactory that the interests of the community would not be furthered by an extension of the system. To the medical profession club practice is most distasteful. No practitioner remains a club doctor any longer than he can possibly help. The disadvantages of club practice constitute a burning question for the medical profession at the present time. In various parts of the country, practitioners are banding together to resist what are spoken of as the "sweating" methods of the clubs, and the weapon of the strike (with the concomitant ostracism of the "blackleg") is being freely employed by these associations of medical practitioners in their struggle for better conditions of club practice. Moreover, the "club doctor" is not infrequently regarded as an inferior kind of practitioner. I have known several cases where members of clubs on the occurrence of serious illness in

themselves or their families, have discarded the services of the club doctor and incurred the expense of employing a private practitioner. A few weeks ago I was asked by a workman whether I thought a "club doctor" was competent to treat a case of scarlet fever. And there can be no doubt that club patients do not receive the care and attention that is bestowed upon private patients. A successful practitioner either gets rid of his club patients altogether or he transfers them to his junior partner or assistant who as a rule is much too over-worked to give the necessary time and attention to the diagnosis and treatment of the cases. From my own experience in club practice I can testify to the extremely unsatisfactory conditions under which it is carried on. The examination of a patient should be conducted on the principle laid down by Trousseau, "Interrogate all the functions," but in a busy club practice it is impossible to interrogate even one function with sufficient care.

30. Moreover, I consider the treatment of patients in "surgeries" and out-patient departments is unsatisfactory. There are certain diseases for which institutional treatment is desirable and patients suffering from those diseases should be treated in institutions. In all other cases, however, the patient should be treated in his own home. The long waiting in the crowded waiting rooms at the doctor's "surgery" or the hospital out-patient department tends to spread infectious disease, to injure the health of the patient and to cause a considerable loss of time, which in many cases inflicts inconvenience or even actual loss on the poor. Moreover, the doctor should take account of the home conditions of the patient. In the home there are various influences which assist or retard recovery, and the doctor should make himself acquainted as far as possible with those conditions and endeavour to modify them in the interest of the patient. For instance, sanitary defects should be reported to the sanitary authority, and advice should be given as to the due sanitary ordering of the home. The overworked club doctor, however, has time for none of these things. He reduces his domiciliary work as much as possible and encourages the patients to come up to his surgery for treatment, and it is extremely rare for him to report anything to the sanitary authority except cases of notifiable infectious disease. I do not see, therefore, how an extension of club practice could lead to that co-ordination of the various agencies dealing with disease that is so much needed for the health of the community; and as an educational force it could in no sense become a substitute for the work of that co-ordinated body of medical and lay health workers which I have indicated as forming a necessary development of the function of the public health department of the sanitary authority.

31. It must be borne in mind that the "self-supporting" character of a medical club is largely an illusion. There are many diseases that a club doctor does not attempt to treat. The vast majority of notifiable cases of infectious disease, lunacy, and an increasing number of cases of tuberculosis are treated in rate-supported institutions. Abdominal surgery, ophthalmic surgery, any surgical operation except the most trivial, and many other conditions are treated in hospitals that are supported by private charity. If these institutions were not available, clubs and provident dispensaries could not be conducted on their present conditions, and, therefore, it is true to say that, in a sense, these so-called "self-supporting" medical agencies are partly supported by the rates and partly by private charity.

APPENDIX No. XLVI.

STATEMENT OF EVIDENCE AS TO THE MEDICAL ASSISTANCE OF THE POOR, BY HARRY COOPER PATTIN, DOCTOR IN MEDICINE, MASTER OF ARTS, BACHELOR IN SURGERY, AND DIPLOMATE IN PUBLIC HEALTH OF THE UNIVERSITY OF CAMBRIDGE, MEDICAL OFFICER OF HEALTH FOR THE CITY OF NORWICH AND COUNTY OF THE SAME. (JANUARY, 1907).

1. I have had fourteen years' experience of public health work (in York and Norwich) with charge of corporation hospitals for infectious diseases. Three years' experience as a resident medical officer at the York Public Dispensary, six months as acting medical officer to the York Union Infirmary (during illness of incumbent), and six weeks of rural Poor Law medical work, including care of small infirmary, in Hampshire. Have been retained as expert witness by the Treasury, the London, and the Norfolk County Councils; have collated and redacted the annual reports of its rural medical officers of health for the latter body, and am a writer of impropvident "contributions toward a rationale in national healthiness."

2. *The Norwich City Council* is the local sanitary authority, and conducts its work by the agency of committees of its members to whom it delegates its powers. Such operations as it carries out for giving medical assistance and advice to the population committed to its care are directed by its Health Committee. It provides an asylum for the treatment of its insane poor which has accommodation for 450 patients.

3. It provides a medical officer of health, who devotes his whole time to his duties, and is its principal executive health officer, and an assistant (whole time) to the medical officer of health who acts as bacteriologist. It also provides an isolation hospital for the reception and treatment of certain infectious diseases, limited at present to cases of scarlet fever, enteric fever and diphtheria, and also a special hospital for the separate treatment of small-pox. In connection with the aforementioned isolation hospital it provides a staff of trained nurses.

4. Patients are received into these institutions without regard being paid to their social status or pecuniary resources. If, in the opinion of the medical officer of health, who is also medical superintendent of the corporation hospitals, it is desirable in the interests of the community that a person afflicted with one or other of the above-mentioned diseases be removed to, and treated in the corporation hospitals, that course is followed. No charge is made for such treatment unless some special privilege is desired, such as a separate ward.

5. The corporation uses a very considerable amount of antitoxin outside of its hospital, partly in the curative treatment of such cases of diphtheria as it cannot, for various reasons, admit into its isolation hospital; but chiefly in preventive treatment; it being the practice of the medical officer of health, when diphtheria is notified in a household, besides removing the notified member, to give *prophylactic injections of anti-toxin* to the other members of the household; a practice which he has found to be very effective in preventing the spread of the disease.

6. Some few years ago the medical officer of health suggested that the guardians should supply their medical officers with anti-toxin so as to secure the promptest possible application of that remedy to any cases of diphtheria which came under their notice; the guardians however, did not act upon the suggestion, and more recently the medical officer of health has offered to re-supply to the Poor Law medical officers any anti-toxin they may use to Poor Law diphtheria patients. This proffer, so far, has been very slightly acted upon; the reason being the fact that the Poor Law medical officers do not appear to carry anti-toxin with them, and content themselves with notifying the existence of diphtheria to the medical officer of health (the said officers, of course, commonly do not know beforehand the nature of the case they are called to), a procedure which always involves delay, and sometimes danger to the patient, and is costly to the community, inasmuch as in combatting diphtheria early injection of anti-toxin is of the utmost importance; delay meaning diminished efficacy of the treatment and usually a more lingering convalescence. The medical officer of health has been applied to by

medical practitioners to supply anti-toxin for the treatment of club and also of private patients. In respect of the former the claim has been based upon the fact that the payments made per head by club patients do not cover the cost of anti-toxin; and he knows of instances where money for the purchase of anti-toxin has been furnished by the friends of a patient.

7. The direct operations of the sanitary authority for medically assisting the poor in respect of infectious diseases are at present restricted to the treatment of cases of scarlet fever, diphtheria, enteric fever and small-pox, with the consequential disinfection of bedding, clothing, rooms, etc. It makes no special provision for the treatment of other infectious ailments such as measles, German measles, whooping cough, chicken-pox and mumps nor for the tuberculous diseases, nor for such contagious diseases as scabies, and the pediculi, nor for venereal diseases.

8. The Health Committee has under consideration a proposal to schedule phthisis among the notifiable diseases; about 120 deaths occur from this disease annually. The medical officer of health since 1894 (at Budapest International Congress), has advocated the notification of *all* the tuberculous diseases.

9. The indirect operations of the sanitary authority for medically assisting the poor are less easy to describe because they include preventive rather than curative methods, and from this standpoint may be said to include practically its whole work. Selecting those elements which bear more directly upon points raised by the Commission's reference as being those upon which it wishes to be informed, the most important method by means of which the sanitary authority gives aid to the poor is, in my judgment, through home visitation by its women inspectors. These women (there are two employed),* are fully qualified sanitary inspectors—*i.e.*, they hold the qualifying certificate of the Royal Sanitary Institute and in addition each is a fully qualified midwife—a circumstance of which the medical officer of health avails himself in carrying out the Midwives Act, as he makes use of these women in instituting enquiries respecting still-births, premature births, etc., and in inspecting the bedrooms of midwives. It is the duty of these women to visit the homes in which births are registered (incidentally the medical officer of health calls attention to the need of making registration of birth within forty-eight hours obligatory),† and to give such counsel and advice as they may deem suitable as to the management and feeding of the child—their instructions being to encourage feeding from the breast wherever this is practicable—also to advise them other as to the management of herself. If anyone be ill and no doctor called in, they are instructed to see that steps are taken to secure medical assistance with as little delay as possible. They give advice as to nursing, and often suggest that application be made for the service of a district or parish nurse if such be available, or suggest removal of a sick person to a hospital, etc., sometimes they procure orders entitling a patient to hospital treatment, special relief, etc. Last year they so procured 150 of such orders, chiefly for ailing women and sick children.

10. During the last year these women inspectors made visits to over 5,000 poor-class houses, and made over 4,000 revisits. They thus became acquainted with the fact that these dwellings contained nearly 3,000 ailing persons. Seven hundred and sixty-six of the householders were either out of work or on short time. They inspected nearly 4,000 infants (*i.e.*, children under one year of age), and report that of these, 1,984 were being fed from

* Now (1908), four.

† Notification of Births Act has since been adopted.

APPENDIX No. XLVI.—Continued.

the breast, 884 fed from the breast supplemented by sop, 162 fed entirely on sop (with a spoon), 799 were fed with long tube, and 314 with short tube feeding bottles. 1,423 infants were more or less ill. Of the mothers, 2,307 they reported to be healthy, 647 healthy, but not strong, 140 very delicate, 113 badly nourished, and 551 who either went out to work, or took in work at home. On their recommendations seventy-two infants were supplied (by the corporation) with dried milk powder with, on the whole, very satisfactory results.

11. These women inspectors distribute printed directions for the feeding of infants, and cards of instructions to persons suffering from phthisis for the medical officer of health. They call at the homes to see patients discharged from the isolation hospital, and exercise a certain supervision over them. They visit the workrooms and abodes of all female out-workers. Without being able to furnish statistical evidence, they inform the medical officer of health that they think a good deal of overlapping of relief, or, more precisely, rotation of relief takes place. (Their attention hitherto has not been directed specifically to this matter.)

12. The work done by these women is regarded as being very valuable by the medical officer of health, and if it were developed and systematised women health visitors could be made use of to obtain early information of the existence of illness of all kinds—to supply what may be termed medical “first aid,” to supervise and supplement home nursing, feeding of and cookery for the ailing, and generally to propagate a practical knowledge of home hygiene.

13. The Poor Law authority—to which the Commission is referred for detailed information—the Poor Law authority in Norwich provides an infirmary for its sick, with a medical officer (non-resident) and nurses, etc. It divides the city into eight districts for the purpose of affording medical aid, and assigns each of these districts to a medical officer. These medical officers are all in general practice, and the Poor Law medical aid is afforded by them as part of their ordinary work. I am not aware that the Poor Law authority provides any staff of trained nurses systematically to attend upon its patients who are treated in their own homes, the need of which is in my judgment great, though I believe it does pay for the services of a nurse or nurses in special cases. It gives very handsome subventions to the local hospitals, etc., by rating them at a nominal figure; and thus may be said indirectly to aid in providing medical aid for those who receive treatment at these institutions.

14. [Norwich swarms with endowed charities, administered adventitiously; but as these deal rather with relief than with medical assistance, your Commission will be able to furnish itself with full information respecting them by making application to the Charity Commission (which has been holding a local inquiry recently); the writer only alludes to these charities because he is shrewdly of opinion that, if they were pooled, a very considerable sum might very properly be applied to the provision of medical aid.]

15. *The Norwich Society for Relieving the Sick Poor.*—This is a society which furnishes medical aid to the poor not directly in the form of treatment, but in the shape of special appliances, instruments, etc. Last year, besides giving relief in money to 1,934 people at their own homes, this society supplied surgical appliances, etc., to forty-seven persons at a cost of £28 5s. 11d., and expended £79 9s. 2d. in providing nurses, milk, and food, in helping maternity cases, and in assisting to pay the expenses of invalids at convalescent homes. The society has bags of linen and sheets, air cushions, water beds, hot water bottles, bed rests, crutches, etc., which it lends to sick persons. It is catholic in its operations (except that it will not relieve vagrants, nor give money to an unmarried woman on her confinement) and does not exclude from the benefit of its operations persons in receipt of Poor Law relief. Its general secretary is of opinion that there has been, and is still, a great amount of overlapping of relief in Norwich. (A copy of the society's last annual report, in which are embodied its rules, is forwarded.)*

16. *Norwich District Visiting Society.*—A provident and charity society having for its objects:—

- (1) Relief of the deserving and necessitous poor.
- (2) The encouragement of provident habits.
- (3) The discouragement of mendicacy.

* Not printed.

(A copy of its last report transmitted.)*

17. *Norwich Charity Organisation Society.*—Established eight years. Dealt last year with 262 cases. Report transmitted. Secretary is of opinion that there is an enormous amount of overlapping of relief in Norwich.

18. *Norwich Invalid Children's Aid Association.*—A new society, established only in December last, to secure supervision of invalid children, aid in furnishing crutches and implements to cripples, etc. Will work very much on Charity Organisation Society lines.

19. *The Norfolk and Norwich Hospital.*—Supported from voluntary contributions, donations, endowments etc. A general hospital of a fine type with 220 beds and a largely attended out-patient department. The medical aid afforded at this institution is given gratuitously, contributions being accepted, but not claimed from patients. This hospital aids the sanitary authority by admitting a few cases of enteric fever, and cases of diphtheria, if these be in urgent need of tracheotomy. 1,113 Norwich citizens were treated in the wards of this hospital last year, and it is estimated that some 8,000 were treated as out-patients. Dr. Burton Fanning tells me that, from enquiries made among a proportion of the out-patients, it is estimated that over 50 per cent. of the out-patients have club doctors of their own, that rather less than 20 per cent. probably would have made some such provision for themselves if the hospital did not exist, and that about 30 per cent. are unable to afford to, or otherwise are unable to join a club, and would be dependent upon the Poor Law doctor were it not for the hospital. There is, in his opinion, little ground for believing that the hospital is used improperly by people able to pay fees to private doctors.

N.B.—This hospital is now soliciting and obtains contributions from rural boards of guardians. Last year it received from this source £220. (The handsome if indirect subvention it receives from the Norwich guardians in the shape of a nominal rating has been referred to already.)

20. *Jenny Lind Infirmary for Sick Children* derives its income from endowments, donations and voluntary contributions. Last year it treated 367 patients in its wards—292 of them Norwich people—and about 2,000 in its out-patient department. The proportion of these who were Norwich people is not known, probably four-fifths. 1,741 of the out-patients were new patients, i.e., not carried over from the preceding year. Treatment is gratuitous, certain conditions as to “recommendations” being complied with. (Copy of “terms of admission” forwarded, p. 2 of Annual Report.)* The “terms of admission” will guide as to class of patient.

21. *The Norwich Dispensary* gives medical aid (advice and treatment) at the dispensary, and in the homes of its patients. Last year 7,073 patients were treated at the dispensary, and 2,751 visits were paid by the members of the medical staff to patients in their own homes. This institution derives its income from dividends and annual subscriptions and donations, but chiefly from what is known as “the members’ fund” (a provident department). Out of a gross income of £1,083 9s. 3d. last year £684 5s. 3d. was derived from the provident department. There is no wage limit. The monthly rates are:—

For single persons, 5d.

For man and wife, 8d.

For man, wife and children, 1s.

For widows, 4d., for each child, 1d., but not more than 6d. for the whole family.

Its medical staff consists of six non-resident medical officers, among whom the patients can, I believe, make their own choice. The dispensary does very useful work among people unable to pay private fees, and work of a type that deserves extension. Its operations include attendance in child-birth. (A copy of last Annual Report transmitted.)*

22. *The Norwich Homeopathic Dispensary* is a small specialised institution run on similar lines, its income being obtained from dividends on endowments, subscriptions and donations, and from its provident department, a payment of 2s. 6d. securing a month's attendance and medicine and attendance at the dispensary, and a payment of 7s. 6d. a month's attendance at home. (A copy of its last report is transmitted.)* I estimate the number of people who receive treatment at 800, and the senior doctor tells me they are all too poor to pay private fees.

* Not printed.

APPENDIX No. XLVI.—Continued.

23. *The Norwich Maternity Charity*.—A combined charitable and provident society for affording assistance to women in their confinement. Its income is derived from interest and dividends, subscriptions and donations, etc. Last year it treated 623 cases, 518 on ordinary recommendations, and 105 on provident club tickets. It provides four medical accoucheurs, three certificated midwives, loans linen, etc. Its object is stated officially to be "to provide skilful midwives and medical attendants, for delivering poor married women at their own habitations." As a rule women whose husbands' weekly wages exceed £1 are deemed ineligible. It is a very useful society, and undertakes work which deserves greatly to be extended. (A copy of the last Annual Report, which includes a copy of the "Rules" is forwarded.)*

24. *The Norfolk and Norwich Eye Infirmary* derives its income from dividends, donations and subscriptions—various boards of guardians are subscribers—it treated last year 854 patients, 125 as in-patients. They all are too poor to pay private fees, and more than three-fifths are county people—the remainder, say 300, belonging to Norwich. (A copy of 1905 Report transmitted.)*

25. *Norwich Public Medical Service*.—A society founded to enable persons who cannot pay private fees at customary rates to secure for themselves and their families medical attendance during illness, with the right of selecting their medical attendant from the list of doctors on the staff (twelve to fifteen). The society is managed entirely by medical men. The number of members is near upon 4,000, and the income approaches £800. It has a wage limit. Families in which the combined weekly income of the parents does not exceed 30s. are eligible. Single persons are eligible if the weekly income does not exceed 25s. The rates are 1d. per week or 1s. per quarter for men, women and children up to four children, but not more than four children are charged for in the same family.

26. [The system followed of permitting each member to select his or her doctor from the list is interesting, and so far has worked satisfactorily. The society has been in existence five years, there being no extras in the shape of food, etc., to be prescribed. A considerable, though not, I think, a preponderating amount of professional opinion favours the adoption of the like practice in dealing with Poor Law medical treatment, the suggestion being that the names of the doctors willing to act in any district should be placed on a list, and the patient permitted to make his own choice. The objection, and to my thinking a fatal one, is the absence of any check upon a doctor attracting to himself patients by ordering freely "extras," etc., and "extras" are what Poor Law patients as a rule have more desire for than for physic.]

27. *The Norwich Friendly Societies' Medical Institute*.—Established 1872. Has a total membership, men, women and children, of over 10,000. It employs two medical officers who give to its service their whole time. It has no wage limit. Gross receipts, 1905, £1,663. Its rates are:—

3s. each per annum for men.

4s. each per annum, for wives and daughters over the age of children.

8s. per annum for wives and children, *i.e.*, families.

It is affirmed that members continue to belong to this society who, having "riz" in the social scale, measured pecuniarily, can well afford to pay private fees at the customary rates. Moreover its rate for men is 3s. per annum, the local common club one being 4s., and for these and other cogent reasons—one being the possibility of funds contributed primarily for medical relief being used for non-medical purposes—this institute is not regarded with favour by the local medical fraternity.

28. *Medical Clubs*.—Not reckoning associations connected with, and limited to special works, *e.g.*, the Carrow works dispensary—from inquiries I have made among the doctors I estimate that from 12,000 to 15,000 people (men, women and children) secure to themselves medical attendance by means of club contracts with doctors. The usual rate being 4s. per annum per member, and taking the whole city, I estimate that over 40 per cent. of its entire population is provided with medical aid either through the guardians, or such agencies as those I have enumerated, and the main cause for such aid being so provided for and sought is *inability to pay private fees at the customary rates*.

29. The most striking evidence of the extent to which the agencies mentioned overlap is furnished by the out-patient department of the Norfolk and Norwich Hospital, where it is estimated that over 50 per cent. of those who attend have club doctors. Some of these patients, there is little doubt, are recommended to go to the hospital by their club doctors, but the majority go of their own accord, a main cause of this practice being adopted is, I believe, a wish to avoid the delay which often occurs when a club doctor is sent for in the ordinary way, and the uncertainty of finding him at home except at certain specified times. Moreover, the patients know very well that the resources and appliances of the out-patient department of the hospital far exceed those which are at the disposal of the average club doctor.

30. I have no satisfactory evidence of co-operation amongst the agencies, other than the cordial relationships which prevail between the medical officer of health's department of the municipality, and the Norfolk and Norwich Hospital for dealing with infectious cases; the amalgamation of friendly societies to form the Friendly Societies' Medical Institute; and the co-operation of the doctors concerned in managing the Norwich public medical service. *Per contra* there is occasioned unquestionably a large amount of financial waste in the separate management and want of co-ordinated organisation of the agencies affording medical relief, a striking example being the founding and continued existence of the Jenny Lind Infirmary for sick children, when the appropriation, or even the building, if needed, of a wing at the Norfolk and Norwich Hospital would have served, and so have saved the waste incurred in running two staffs, etc. The wards or wards of the said wing could have been known as the Jenny Lind ward or wards, and so have perpetuated the name of that amiable and accomplished songstress, with at least an equal prospect of honourable distinction.

31. I am clearly of opinion that it is quite possible to hand over the whole work and duty of medical assistance to the poor, to one authority or agency; and moreover, I am satisfied that such unification would add to the efficiency of the service, and reduce its cost. I am further of opinion that such authority or agency should be the local sanitary authority acting through a special committee. I see no need to restrict membership of this special medical aid committee entirely to members of the sanitary authority, and can foresee many advantages in this not being the case. Provided that the sanitary authority secured to itself a majority of the seats upon the suggested special committee to which it would entrust the control and organisation of medical assistance, I think the principle of co-opting members, specially experienced, or otherwise interested in the work to be directed, could be acted upon with great advantage to the community: as, for instance, is the practice in constituting the local education Committee. I should not restrict the co-opted members to humane beings of the male sex. In this way a central directing agency on which the sanitary authority, the medical profession, and sanely philanthropic women were represented would be enabled so to direct its operations as to co-ordinate and combine all the various types of medical assistance to be rendered to the community into one comprehensive organisation of medical aid. The medical officer of health, as the adviser of the sanitary authority, would become the principal executive officer of the local committee of control; and his duties would thus become advisory, administrative and supervisory; advisory to the committee, administrative as to internal organisation of office work, and supervisory as to the external duties performed by the various medical officers,* health visitors, nurses, etc., employed.

32. For such a scheme as that adumbrated to be worked successfully, it would be necessary for all local authorities to be subordinated to a central Government Department which, in turn, would inform itself of the way in which any particular local authority carried out its duties through peripatetic inspectors. To make such a system work satisfactorily, it would be necessary to establish certain minimal requirements by statute in the form of officers, hospitals, dispensary and out-patient departments of hospitals, etc., and to make the provision

* Not printed.

* In my judgment these should be whole-time officers.

APPENDIX No. XLVI.—*Continued.*

of these by local authorities obligatory: such provision being insured by repeated inspections. It should be permissible for any district to advance beyond the statutory requirements, but it should not be possible for any district to fall behind them; and by means of special grants for exceptional efficiency, districts should be encouraged to advance beyond the statutory minimum; but it should not be possible for any authority to fall below it without finding itself compelled to satisfy the statutory requirements, and in the event of such local authority proving refractory, the central authority should be empowered to supersede such defaulting authority, and to surcharge it with all costs. How such a system of statutory requirement, Government inspection, and of rewarding good administration by grants would work in practice, one may draw inferences from the results of the like treatment of the police forces.

33. I am satisfied that the health of the community suffers under existing conditions not so much from insufficiency in amount or quality of the medical assistance at present available for the poor (excepting always home nursing) as from the delay which occurs before such assistance becomes available. To make medical aid most helpful *illnesses need to be sought out* and reported in their earlier stages, and not be left to become firmly established before medical aid is sought. This seeking out of illness can be effected most easily, amongst the poor, by means of women inspectors and health visitors who would pay house to house visits and make inquiries in the poorer districts. With this should go a rationalised propaganda of the leading principles of disease prevention, and this I should commence in the primary schools and elaborate by means of lectures, etc. For example, it is most probable that the vast amount of disablement (temporary and permanent) which is occasioned by what are known as "Gout" and "Rheumatism" could be very largely lessened and indeed prevented if adequate instruction were given respecting the evil results of improper dieting. I repeatedly have evidence of the dangers involved in the delay which takes place in calling for medical aid

in the cases of the notifiable infectious diseases which come under my notice, more particularly with reference to diphtheria, and am told, and in fact, know that a corresponding delay takes place in dealing with the un-notified diseases. In the long run this delay proves very costly as well as dangerous to the community. Suppose, for example, a person without pecuniary resources is taken ill, say with bronchitis, before he or she is attended by the Poor Law medical officer, application for an order has to be made to the relieving officer who has to be satisfied that the applicant is virtually penniless; given that, and all this takes time, an order is made out by the relieving officer which has to be conveyed to the doctor for the district in which the patient resides, and without wilful waste of time, a delay occurs which may be of the highest importance in determining the course, character, and cure of the ailment. In brief, the great fault of the present system is delay. Delay in its earlier stages due most often to ignorance, and in its later to red-tape; and in my judgment this delay is the most deadly disease the community has to treat. A corresponding delay occurs in a greater or lesser degree in connection with all medical assistance for which orders, recommendations, etc., are needed. [Special communities suffer exceptionally in other ways, e.g., the members of the Norwich Friendly Societies' Medical Institute undoubtedly suffer from the circumstance that the local members of the medical profession will not meet their doctors in consultation, or, indeed, hold professional intercourse with them.] Unintentional but detrimental delay often occurs in the case of club patients from the want of reliable information respecting the relative seriousness of the illness: the club doctor receives calls without this information, and naturally makes his visit at the time which is most convenient to himself; whereas, if notification of the illness came from say, a trained health visitor, capable of giving "first aid" he would have reliable guidance as to the seriousness or triviality of the trouble. *Delay, I repeat, is the most deadly disease medical aid has to combat.*

APPENDIX No. XLVII.

STATEMENT OF EVIDENCE AS TO THE MEDICAL ASSISTANCE OF THE POOR BY MR. HAROLD MEREDITH RICHARDS, M.D., B.S. (LOND.), M.R.C.S., L.R.C.P., FELLOW OF UNIVERSITY COLLEGE, LONDON; MEDICAL OFFICER OF HEALTH, COUNTY BOROUGH OF CROYDON; MEDICAL OFFICER, CROYDON EDUCATION COMMITTEE; MEDICAL SUPERINTENDENT OF THE BOROUGH (ISOLATION) HOSPITAL, AND OF THE CROYDON AND WIMBLEDON JOINT SMALL-POX HOSPITAL; DIRECTOR, CROYDON BACTERIOLOGICAL LABORATORY; PRESIDENT OF THE HOME COUNTIES BRANCH OF SOCIETY OF MEDICAL OFFICERS OF HEALTH; EXAMINER AND MEMBER OF COUNCIL OF ROYAL SANITARY INSTITUTE, ETC.; FORMERLY MEDICAL OFFICER OF HEALTH, CHESTERFIELD MUNICIPAL BOROUGH AND DRONFIELD URBAN DISTRICT; DEPUTY MEDICAL OFFICER OF HEALTH, DERBYSHIRE COUNTY COUNCIL; MEDICAL SUPERINTENDENT, BIRMINGHAM CITY HOSPITALS; MEDICAL OFFICER NOTTINGHAM CITY HOSPITAL, ETC.

1. It is commonly supposed that the activities of sanitary authorities and their officers are limited to the preparation of vital statistics, and to securing such amelioration of environment as can be attained by the sanitary inspection of dwellings, the provision of public water supplies and so forth. Though much benefit has thus been obtained, I am of opinion that further progress in public health is mainly a question of improved personal hygiene and that medical officers of health will in the future be more concerned with preventive *medicine*, than with sanitary engineering. In the past we had to secure means of ventilation; our present problem is to see that use is made of these means.

2. In Croydon the medical officer of health is also medical officer to the education committee, and so far as practicable a distinction is made in this Statement between the work done under the direction of the Sanitary Committee and that done for the education committee. There is, however, no hard and fast line, and this is one of many reasons why school work should be co-ordinated with that of the Public Health Department.

The estimated population of Croydon County Borough is 154,342.

3. *Staff of the Croydon Public Health Department.*—In addition to the staff engaged in sanitary inspection and in the supervision of foods, the following are employed in

APPENDIX No. XLVII.—*Continued.*

what one may call the preventive medicine side of the department :—

- (a) The medical officer of health.
- (b) The resident medical officer of the borough hospital, who also acts as bacteriologist and deputy medical officer of health.
- (c) The assistant medical officer, borough hospital, who also assists the medical officer of health in investigating outbreaks of infectious disease.
- (d) Three health visitors (women). These are usually selected from applicants who have nursing experience, and an aptitude for educational work. At the moment we are fortunate in having as one of the health visitors a qualified medical woman who wishes to gain practical knowledge of public health work.
- (e) An inspector specially trained to investigate cases of communicable diseases.
- (f) Clerical staff.
- (g) *Auxiliary Medical Assistance.* The Hospital Committee obtain the services of a consulting surgeon when necessary and they also pay another medical practitioner for treating cases of ringworm by X-rays ; extra medical assistance is also obtained when required for the smallpox hospital. The Education Committee also employ an ophthalmic surgeon to examine the eyes of children attending school and a lecturer on school hygiene to instruct their teachers in the application of hygiene to school life.*

4. The above staff, under the general direction of the medical officer of health, is engaged in medical work of various kinds which may be briefly summarised as follows :—

- (a) *Medical treatment* is provided free of charge at the Borough Fever Hospital for patients suffering from scarlet fever, diphtheria and enteric fever, and under special circumstances for other communicable diseases, such as puerperal fever, measles, erysipelas, glanders.
- (b) Small-pox is treated at the hospital of the Croydon and Wimbledon Joint Board, which is elected by Croydon County Borough, Wimbledon Municipal Borough, Croydon Rural District and Penge Urban District.
- (c) Ringworm and minor skin diseases occurring among children attending elementary schools are treated under the direction of the medical officer, suitable cases being submitted for treatment by an X-ray specialist at the expense of the sanitary authority.

5. *Medical Advice* is tendered by the Public Health Department under the following circumstances :—

A.—On the occurrence of notifiable infectious diseases, *i.e.*, diphtheria, scarlet fever, enteric fever, small-pox, puerperal fever, erysipelas, plague. The exact procedure naturally varies in each instance, as measures have to be adapted to the natural history of the disease. As it is not generally appreciated how much strictly medical work is involved in the administrative control of the procedure may be exemplified by considering the case of diphtheria. In the presence of this disease :—

- (a) The medical officer of health frequently sees doubtful cases in consultation with the medical attendant.
- (b) "Swabs" from the patient's throat are examined bacteriologically and quarantine maintained until freedom from infection can be inferred.
- (c) All cases of sore throat or of nasal discharge occurring among inmates of the infected house are examined at the instance of the medical officer of health, and in most instances by the public health staff.
- (d) Should the patient be a child attending an elementary school, a note is made of the particular class, enquiries are made as to sore throat, etc., among class-mates, any cases of suspicious illness are examined in school and absentees followed up at home.

Should two cases of diphtheria occur in one class all the children are medically inspected and cultures taken when suspicious symptoms are observed.

(e) Children who have been in contact with diphtheria are not allowed to resume attendance at public elementary schools until examined both clinically and bacteriologically either by or at the instance of the medical officer.

(f) Advice as to prevention is given in every case both verbally and by handbill.

(g) Diphtheria patients discharged from the borough hospital are occasionally kept under the observation of the public health staff so that they may not attend school work until fit.

In the case of the other notifiable disease the procedure is—*mutatis mutandis*—similar. In most instances more complete control of the disease could be obtained if medical aid were at once sought and if one had more qualified assistance for the discovery of slight and anomalous cases of infection. During 1906 thirty-five cases of notifiable disease were notified by the medical officer of health or his deputy in addition to those seen in consultation with the medical attendant. When small-pox is prevalent in nearly every instance the diagnosis is made by the officers of the Public Health Department.

B.—*Voluntarily Notifiable Diseases—Phthisis and Meningitis.*—All cases coming to the knowledge of the department are visited by one of the medical officers who investigates the origin and explains the methods to be adopted for limiting infection. When necessary further periodical visits are made by one of the health visitors. On the whole the results of making phthisis notifiable have been disappointing. This is largely due to the fact that at present the sanitary authority does not undertake treatment.

C.—*Non-Notifiable Communicable Diseases.*—Cases of measles, German measles, mumps, "sore throat," whooping cough and chicken-pox reported by school teachers and attendance officers are visited and advice given as to the hygiene of the sick-room. Medical treatment is not offered but "swabs" from cases of "sore throat" are usually submitted to bacteriological examination so that anomalous cases of diphtheria may be detected. A short report of each case is made to the medical officer, who advises as to school attendance and investigates any cases which appear to demand special attention :—*e.g.*, chicken-pox ; during a small-pox outbreak ; so-called "mumps," associated with diphtheria ; anomalous cases of measles, etc. Under present conditions these examinations cannot be made as often as one would wish ; supervision is not so complete and the advice given is not so useful as it would be if it were more frequently given by a medical practitioner.

D.—*Diseases of Infant Life.*—Lists of births registered in the borough are received each week from the registrars and a visit is paid by one of the health visitors to such mothers as are likely to welcome advice. In practice this amounts at present to about 73 per cent. of the infants born. At least one other visit is paid during the first six months of life and nearly every death under one year is the subject of investigation. Short "talks" or lectures on infantile ailments and on personal hygiene are also given during the winter to mothers' meetings and similar audiences. During the last four years 238 lectures have thus been given.

6. After more than ten years' personal experience of such work, both in Croydon and in Derbyshire, I am year by year more impressed with the desirability of extending the more definitely medical as opposed to the merely hygienic side of this work. Even trained nurses require to be very closely supervised if their teaching is to be as efficient as possible, while the activities of the half-trained people, sometimes appointed as health visitors, need to be constantly restrained. The choice of a substitute for mother's milk in the case of prematurely weaned infants is in many cases so difficult as to need medical advice. One of the most hopeful measures for combating infantile mortality would be the initiation of clinics similar to that of the Hôpital Tarnier in Paris. At such clinics a diet could be prescribed in detail, the progress of the infant recorded and minor ailments treated while in the curable stage. There is reason to believe that such an

* The council also have a medical staff consisting of a medical superintendent and two assistant medical officers at their mental hospital.

APPENDIX No. XLVII.—*Continued.*

organisation would be especially useful in checking the mortality from infantile diarrhoea.

7. Though the supervision of boarded-out infants under the Infant Life Protection Act is, strange to say, entrusted to the guardians, I am from time to time unofficially consulted by the local inspector under that Act.

8. *Puerperal Fever*.—All notified cases are investigated by one of the health visitors. A handbill of advice to expectant mothers has also been prepared at the suggestion of a practitioner in the town with a large midwifery practice. Cases of puerperal fever occurring among the pauper class are treated by the corporation either in their own houses or at the borough hospital. The number of cases coming within this category is small, but similar assistance might well be rendered to other than pauper cases were the medical work of the district better organised.

9. *Supervision of Midwives*.—The duties of the local authority have been delegated to the Borough Hospital Committee and the inspection of the midwives is carried out by the medical officer, assisted by the health visitors. No arrangements have been made for paying the fees of medical men called into assist midwives, though doubtless such payments will become obligatory before long. Should that be so I am of opinion that if such assistance is to be paid for by the municipality or Poor Law authority the work should be done by the district medical officers who would, from their independent position, be able to exercise an amount of supervision over midwives that is at present impracticable. Under present conditions a private practitioner may be prejudiced in his practice if he does not stand well with the midwives in his district.

10.—*Miscellaneous Medical Work for the Sanitary Authority*.—The medical officer is also from time to time required to give medico-legal advice in connection with claims for alleged injury by the corporation and for compensation under the Employers' Liability Acts. Reports have also to be given in reference to workmen suffering from chronic ill-health.

11. *Medical Work for the Education Committee*.—This is already considerable in amount and must eventually increase. Should the medical inspection of school children become compulsory a large extension of medical work will at once ensue. The medical work carried out in Croydon at present includes :—

(a) The medical examination on two occasions of each pupil teacher candidate.

(b) Reports on the health of members of the staff who are on the sick list.

(c) Examination of blind, deaf and mentally defective children.

(d) Examination of truant children before admission to truant schools.

(e) Examination in certain cases of children alleged to be physically unfit to attend school.

(f) Enquiry into all cases of suspected infectious disease occurring in children attending elementary schools. Cases of this nature to the number of 2,927 were investigated by the health visitors during 1906 and subsequently dealt with by the medical officer.

They included :—

595	cases of suspected measles.
323	" " whooping cough.
289	" " sore throat.
449	" " ringworm.
1,271	" " other cases.

(g) During the year special inquiries are usually instituted into certain medical problems concerning which more information is required. Thus during 1906 the height and weight of children attending two different types of elementary schools were ascertained and compared with similar figures for 1905. An investigation was also made into the prevalence of phthisis among school children.

(h) A system for dealing with verminous children is also supervised. This requires the medical examination of neglected cases prior to prosecution.

(i) As already explained, cases of ringworm excluded from school are treated if the parents so desire.

(j) The ophthalmic surgeon visits the schools and excludes cases of communicable eye diseases. He

also tests the sight of selected children and refers certain cases requiring treatment to the general hospital.

(k) The sanitary condition of the buildings is from time to time ascertained.

(l) Two courses of lectures for teachers on the hygiene of school life are given each year.

The Poor Law.

12. *Outdoor Medical Relief* in the borough is rendered by seven part-time district medical officers. From the published report of the guardians it appears that 2,888 patients were treated by these officers in the year ending lady-day, 1906.

13. *Indoor Medical Relief* is rendered by the infirmary staff, consisting of the medical superintendent and the assistant superintendent. The infirmary accommodation is 410 beds with an average of 395 beds occupied during the year ending 1906.

14. The guardians also appoint the public vaccinators for the borough. These officers are five in number. It is an obvious anomaly that these officers should be appointed by an authority which has no further concern with the prevention of disease.

15. *The Voluntary Hospitals* are two in number :—

(a) The Croydon General Hospital has a nominal accommodation of 100 beds and admitted 925 patients in the year 1905-6. About one-fourth of these patients contribute 5s. per week towards their maintenance while the rest are treated free of cost. During the same period the casualty department dealt with 4,821 persons and the following numbers of patients were treated at the out-patient department :—

Medical and surgical patients	-	-	5,595
Ophthalmic patients	-	-	2,383
Dental patients	-	-	663

The out-patients pay 6d. per week while attending the hospital. Both in-patients and out-patients are required to produce subscribers' letters.

(b) *The Norwood Cottage Hospital* is situated near the borough boundary and treated about 147 patients from the borough during the year ending March, 1906. Patients contribute varying amounts, as fixed by the committee, towards their maintenance in hospital.

Clubs and Dispensaries.

16. *The Croydon Provident Dispensary* (established 1881) has 900 to 1,000 members, who pay for single monthly tickets, 8d. ; for family monthly tickets, 1s. 2d. ; and if more than two children, 1s. 4d. Members can be attended by any one of the five medical officers attached to the institution. Confinements are attended for 18s., and eye, ear and throat cases are also treated.

17. *The Croydon Dispensary* (established 1835) has nearly 1,100 members who pay 1d. a week each with a maximum of 6d. per week per family. Members can be attended by any one of the four medical officers. Confinements are attended for 10s. 6d.

18. *Medical Aid Clubs* have also been established in connection with certain large works and as an auxiliary to many of the provident societies. The following are the most important :—

(a) *The Croydon Gas Company's Sick Fund* has 350 members. The subscription (4d. per week) entitles members to sick pay as well as to medical attendance for members, their wives and children under fifteen.

(b) The local branch of Oddfellows has about 450 members entitled to medical relief.

(c) The Foresters have a membership of eighty-five entitled to medical relief.

(d) The Croydon Slate Club has a membership of 192 entitled to medical relief.

(e) The St. Mark's Dispensary has a membership of ninety-nine entitled to medical relief.

19. There are also other medical clubs of a more or less private character concerning which I have no exact information. Note should also be made of the fact that the members of the police force are attended by the police

APPENDIX No. XLVII.—*Continued.*

surgeon and that post office servants earning less than £150 per annum are attended by the post office medical officers.

20. The medical work of the sanitary authority and of the Education Committee is completely co-ordinated, with very considerable advantage, but under present conditions there is little co-operation between the other agencies charged with the provision of medical relief and advice, nor does it seem possible to effect any considerable change while the public health department and the guardians regard illness from entirely different stand-points. As long as actual destitution is the test of suitability for medical relief many persons just above the pauper class are deprived of medical advice. This is especially the case when the illness is not of a sufficiently alarming nature to induce parents to at once summon a private practitioner. Many cases of whooping cough and measles are thus untreated until complications ensue, and infants are frequently only brought under medical care when lack of skilled advice as to dieting has already produced disastrous results. Similarly anomalous cases of illness and suspected cases of communicable disease which require strict medical supervision do not at present receive that supervision because the public health department has not sufficient qualified assistance; the Poor Law authority does not regard supervision and advice (as opposed to physicking) as one of their functions, and it is difficult to induce poor people to pay for advice if unaccompanied by bottles of medicine. Frequently medical men will advise me that they were called to see a patient suffering from anomalous symptoms, suggestive of, say, scarlet fever, but that on the acute symptoms passing off they had been obliged to cease attendance. Such cases are as far as possible kept under observation by the public health department, though the staff is insufficient to do this efficiently. Again, cases of itch frequently come under notice which could be quickly cured if use could be made of the baths and means of disinfecting clothing which are available at a good infirmary. This is, however, impracticable except in the case of the destitute.

21. Attempts to supplement the work of the public health department by referring children to the general hospital have also been unsatisfactory for the following reasons:—

(a) Occasionally parents are unable to pay the fee, especially when more than one child is affected.

(b) The popularity of the hospital is itself a drawback, as out-patients frequently have to wait several hours before they can be seen. This is a great hardship when weekly visits have to be paid and the mother is a bread-winner.

(c) Furthermore, when cases are referred to the hospital it is difficult for us to continue supervision, as we do not know what opinion the hospital doctor has formed, nor can we get detailed certificates from him—occasionally the certificates are even misleading. The prompt treatment of minor eye diseases has been especially unsatisfactory.

(d) Nominal attendance at the hospital is sometimes made an excuse for absence from school.

(e) Successful treatment necessitates more than weekly calls at the hospital. Home supervision is imperative in many cases, especially if the parents are ignorant or indifferent.

22. The out-patient departments of general hospitals would be more useful to the community if they reserved most of their energies for the diagnosis of cases and referred the patients for treatment to other agencies, unless special therapeutic measures (such as baths, electricity or massage) were required.

23. No effort has yet been made to co-ordinate the work of the borough mental hospital (asylum) with the health department. This would be most useful in connection with the examination of mentally defective children. Arrangements should also be made whereby borderline cases could, with the consent of the parents, be placed under observation at the mental hospital. It is often most difficult to gauge the mental condition of a child at a short interview.

24. Under present conditions illness is rarely viewed from the proper standpoint. The object should be first

to cure the patient; secondly, to prevent a recurrence of the disease in the patient or his associates. The latter object is frequently lost sight of by medical men not trained in preventive medicine, and I have often been astonished to hear suggestions made that, while harmless from the patient's point of view, are dangerous to public health. Thus I recently saw a suspected case of mild scarlet fever for which I advised quarantine, and heard his medical attendant (a perfectly competent doctor) tell the patient that it would do *him* good to take a ride on a tram car. In his anxiety to secure recovery of the patient the doctor had quite lost sight of the risk to the community. Again, private practitioners among the poor are in many respects in an invidious position. While medical work is utterly unorganised, competition compels them to see more patients than they can treat with advantage, cases are often "rushed" and the doctor easily falls into the habit of choosing the line of least resistance, giving the advice that the patient expects and omitting unpalatable advice. Trouble frequently arises in this way respecting medical certificates for exclusion of children from school.

25. In reply to the third question I can see no difficulty in handing over to one authority the whole of the medical assistance of the poor. Even supposing that destitution still remains the test of eligibility for medical treatment, there would be an advantage in co-ordinating the work of the district medical officers with that of the public health department. Qualified practitioners would at once become available for systematic supervision of communicable disease and for those developments of personal hygiene which have been indicated in the first part of this Statement.

26. In the case of communicable disease a considerable amount of free diagnosis is already undertaken and an increase of this work is essential, especially in connection with school work. It is also probable that the extension of the Employers' Liability Act will necessitate the reference of a large number of cases of illness to independent medical men not engaged in private practice.

27. As medical inspection of school children develops, the necessity for undertaking treatment will have to be faced, as has already been the case in respect to a limited number of diseases. In this direction, for various reasons, progress must be gradual.

28. Though I was disposed to fear that an extension of free medical relief might tend to impair parental responsibility and so prove detrimental, experience has convinced me that this is an error. In the case of ring-worm the result has been just the reverse as since we are able to offer free treatment we are able to take a strong line with parents who refuse to carry out our treatment or to get their children treated by other qualified practitioners. In short, the more directly plain medical advice is placed at the disposal of the parents the more easy will it be to make it really compulsory to practise those general principles of personal hygiene which are at present neglected with impunity by the ignorant and by the indifference to the prejudice of the next generation. Even under present conditions the amount paid by the Imperial Government and by the various local authorities is considerable. Thus in the borough of Croydon the amount is over £5,000 per annum. There is, therefore, a considerable nucleus for the gradual formation of a State medical service. Such a service would naturally require considerable clerical assistance which could well be rendered without extra cost to the State by making the registrars and vaccination officers part of the general medical service.

29. Changes of the kind indicated need not, and, in my opinion, should not be made suddenly, as any immediate change would entail either great cost or injustice to vested interests, but if the ideal of a unified medical service were constantly kept in view there would be no difficulty in gradually evolving a satisfactory system. Means would have to be found, by examination or otherwise, for securing high professional qualifications of candidates for posts in the service and the opportunities for promotion and conditions of service should also be such as would tempt men of the highest attainments to enter the ranks.

APPENDIX No. XLVIII.

REPLIES by PEYTON T. B. BEALE, F.R.C.S., to questions submitted to him by the Commission.

In complying with your request to furnish you with a memorandum upon the questions asked, I must apologise for its disjointed nature, and for the fact that the answers are not strictly limited to the questions asked. The time at my disposal has been so short, and my numerous duties so exacting, that I have not had the leisure necessary to arrange my remarks in the manner in which I should like.

I must also state that these remarks are made in my own private capacity, without consultation with any of my colleagues, and they must not in any way be considered as expressing my views as Dean of a Medical School. If the memorandum is to be published, I trust that publication may be in compliance with the above statement.

My experience of the subjects dealt with in the series of questions asked by the Commission is limited to a period of 19 years, and it has been gained whilst holding the following appointments:—

Assistant-Surgeon and Surgeon, King's College Hospital, for 15 years; member of the Committee of Management, and Dean of the Medical School; Surgeon to the Great Northern Central Hospital for 18 years, formerly to out-patients, and recently to in-patients; House-Surgeon to King's College Hospital one year (1889-1890); member of the Committee of Management Great Northern Central Hospital, and member of various sub-committees which have from time to time been appointed to consider the working of the out-patient department and the duties of the almoner, to carry into effect suggestions made by the Central Hospital Council and the British Medical Association as to the class of patients to whom out-patient relief should be given, and the co-operation of Provident Dispensaries and medical men residing in the neighbourhood of the hospital in preventing abuse of the charity by those able to pay for treatment.

Question I.—To what extent are Voluntary Hospitals (indoor and outdoor) used by persons able to make payment for the treatment they receive, and do you think that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends either at the hospital or through part-pay hospitals?

Answer I.—There is no doubt whatever that in most of the Voluntary Hospitals in London persons are admitted as in and out patients who can afford to pay outside medical practitioners. The numbers of such patients are becoming less and less every year in proportion as the hospitals appoint properly qualified and trained almoners to inquire into the financial status of all applicants for hospital treatment and so render access to that treatment more irksome and tedious.

As Regards Out-patients.

The people who apply for treatment may be classified as follows:—

- (a) Those who have no home or visible means of subsistence. Such must obviously be admitted and treated somewhere until they are able to take care of themselves; they should, under existing conditions, be referred to the Poor Law Authorities as soon as possible.
- (b) Those who have homes and are just managing to live—i.e., are unable to spend any money at all for prolonged medical treatment, but who might be able to pay for advice and medicine on a single occasion.
- (c) Those who can pay for ordinary medical treatment, but who cannot afford the expenses entailed by prolonged and serious illness or surgical operations.
- (d) Those who when in work are able to afford private treatment, and when out of work are practically penniless. I have come across these in the shape of skilled hands in Wool-

wich Dockyard and Arsenal earning for some weeks about £10 per week, and then out of employment for some months.

Classes b, c and d ought to be efficiently dealt with when their circumstances have been inquired into by a trained almoner.

If Voluntary Hospitals are to remain as now constituted, I consider that a scheme such as the following should be adopted by every out-patient department. This scheme was drawn up as the result of many weeks' careful deliberation, and has been found to work exceedingly well.

The certificate mentioned below as being required by the almoner before a patient can be treated a second time, is one signed by a medical man, or in certain exceptional circumstances, by a minister or other person capable of knowing the patient's means.

Rules for the Admission of Out-patients.

- (1) The hospital is intended for the relief of the sick poor only.
- (2) All cases applying to the hospital out-patient department for relief will be examined in the first instance by a medical officer.
- (3) Persons applying for relief are required to give the fullest information as to the earnings of themselves and family from all sources, and to answer such inquiries as may be necessary to satisfy the almoner that they are entitled to become patients under the regulations of the hospital. A form of certificate is given to all patients who fail to satisfy the almoner as to their fitness, as regards means, for gratuitous treatment, and it must be presented duly signed before the patient is treated a second time.
- (4) The fitness or unfitness of any person for gratuitous relief is as far as possible determined on a wages scale, and those whose earnings exceed this scale are not eligible for relief except under special circumstances.
- (5) Any patient whose condition in the opinion of the out-patient medical officers does not require hospital treatment (for example, trivial cases, and those requiring good food rather than medicine) may be referred by the almoner to his own medical practitioner, to a provident dispensary, or to such other agencies for the relief of sickness or distress as the needs of each case may seem to require.
- (6) All new patients in the out-patient department shall, after registration, be examined by the casualty officer, who shall, by distributing various cards, divide them into two classes:—

- (a) Those seriously ill and requiring immediate treatment or otherwise of special interest to the hon. medical staff.
- (b) Those whose cases are not serious or urgent or are unsuitable for hospital treatment.

The first class he shall refer to the surgeon, physician, or specialist of the day; to the second class he may render first aid, and such patients attending a second time, and having been certified by the almoner, must be referred to the hon. medical officer of the day, who may, if he thinks fit, refer such patients back to the casualty officer for treatment.

(7) All patients, after having been seen by the casualty officer, shall attend before the almoner, bringing their cards. In the case of patients in class (a) the almoner shall make the usual inquiries, excluding such persons as do not come within the regulations of the hospital, and shall require certificates in all doubtful cases, but no patient in class (a) shall be excluded (on account of means) without having been first seen by the physician or surgeon of the day.

(8) The almoner shall examine the patients of the second class and shall refer them in general terms to

APPENDIX No. XLVIII.—*Continued.*

medical practitioners in their own districts, a provident dispensary, or to the Poor Law as discretion and circumstances of each case may dictate.

As Regards In-patients.

There is considerable difficulty in dealing with in-patients as regards their financial position. Experience shows that it is not advisable in any sense to accept the statements made by a patient, his medical attendant, or his relatives or friends in this respect, for the simple reason that they cannot tell whether the patient is suitable for a free ward, a contributing ward, or a pay hospital, for this suitability depends upon (1) what medical or surgical treatment is required, whether, for example, the patient needs only rest or change of air or scene, or whether he requires skilful prolonged nursing and attendance, or a severe operation, and (2) his financial position, (1) and (2) being considered in conjunction. This being so, I consider the proper course to be as follows:—

The patient applying for in-patient relief should be admitted into a receiving ward, and be first examined by a member of the hospital staff, who will determine what medical or surgical treatment is necessary or desirable. Then the patient is examined by a trained almoner as to his financial position, and the almoner makes inquiries from the patients' friends and relations, and from any other available sources, and comes to a conclusion as to whether, in consideration of the treatment which is to be carried out, the patient shall be admitted—(1) to a free ward, (2) to a contributing ward, or (3) to a pay hospital or ward, and in the two latter cases what amount should be paid by the patient or by his friends or employers, should the latter be willing to pay for him.

It is quite certain that no patient should be admitted to a pay or contributing ward or hospital until his financial position, in conjunction with the kind of treatment required, has been fully inquired into by some responsible authority. In the case of a patient who is found able to contribute or to pay, it is clear that he should not be in a free ward, where he is occupying a bed which may be needed for a poor patient unable to pay, and he should not be in a contributing ward if he is in a position to pay for skilled nursing or for surgical operative treatment, and can afford the fees of an experienced physician or surgeon. Of the two evils I prefer the former, *i.e.*, I would prefer him to be kept in a free ward until his medical and financial position have been determined accurately in conjunction with one another, but the medical examination should precede the financial investigation.

The most difficult cases are those of patients coming from a distance to London to place themselves under the care of some particular hospital physician or surgeon whose fees for private treatment they cannot, or will not, pay.

This I consider a most reprehensible practice, but the only way of dealing with it seems to me to institute a strict inquiry system by almoners, much on the same lines as that which is carried out by the Income Tax Authorities (who communicate with one another in all parts of the country and ascertain what income is derived from various occupations in various places).

It is by no means unusual for a patient to come from the North of England to London for treatment which he could receive just as well, and with as great skill, at Liverpool or some other northern city.

It is only necessary here to consider those who are found on investigation by the almoner to be able to pay something towards the cost of their treatment. These should in my opinion be carefully considered by some competent committee of inquiry belonging to the hospital, and having upon it representatives of the staff, and be then admitted to contributing or part paying wards, which should be contiguous to, but not actually a structural part of, the hospital.

(See Rules for Pay Wards, Great Northern Central Hospital, enclosed. (*Appendix No. XLVIII. (4)*)).

I have before me full particulars of the Toronto General Hospital, where patients are admitted at from 30 dols. to 4 dols. a week, and are attended by their own doctors, and have also to pay their attendants' fees. Some are admitted upon a city order, and these are paid for by the city or State from which they come.

This seems an ideal plan, but in the present condition of the medical profession in London it could not be worked, as no hospital committee or governing body would feel inclined to admit outside practitioners to attend patients in their hospital, because they would not have sufficient confidence in their skill, and would not take the responsibility for the treatment such practitioners might desire to carry out.

At the same time this is clearly the line which the hospitals should attempt to take. The general complaint of practitioners is that the hospitals take patients away from them, and keep them attending afterwards, when they could well be attended by their own doctors at their own homes, and it is in many cases quite true. I can quite conceive a plan whereby a practitioner might bring his patient (who was unable to afford proper outside consultation fees) to the hospital at an arranged time and to consult with a member of the hospital staff as to what line of treatment should be adopted. The patient would then be admitted to a ward intended for contributing patients, and the treatment carried out perhaps primarily by a member of the hospital staff, and secondarily and subsequently by the outside practitioner and the hospital resident officer. In such cases I consider that the member of the hospital staff should receive such fee for his services as might be arranged.

Question II.—Considering the patients both from the medical and from the social point of view, to what extent is there any co-operation or overlapping between Voluntary Hospitals and the Poor Law in regard to indoor or outdoor patients, and what suggestions would you make towards a scheme of co-operation?

Answer II.—As Regards Surgical In-patients.—It is quite usual to find patients in a Voluntary Hospital who have on a previous occasion been in a Poor Law Infirmary. In some parts of London a hospital and an infirmary are within a short distance of one another. Both are provided with operation theatres fitted with costly and elaborate appliances and instruments. Both are doing the same work. In one instance at least there is a mutual understanding between the infirmary medical superintendent and the hospital—he sends cases to the hospital requiring operation, when they are in a fit state to be moved, and the hospital sends him such cases as, from pressure upon the beds, cannot be kept. I should like to see some scheme whereby all acute cases and those requiring operation are at once sent to the hospital. Thus the hospital would treat acute cases only, and when they were fit to be moved they would enter the infirmary.

'As Regards Out-patients.

I see no reason why every person requiring out-patient treatment should not be treated at the out-patient department of a hospital. If there could be a closer union between the hospital and the Poor Law Infirmary, such as would abolish the necessity for keeping in a high state of efficiency two separate institutions doing much the same type of work, the relief of the destitute, of those unable to pay, and of those unable to contribute towards the cost of their treatment, would, I believe, be carried out much more economically than at present.

It would, however, require at first (1) a very close co-operation between the Guardians and the Hospital Committee; (2) the appointment of more than one almoner at each hospital; (3) the appointment of several persons acting under the almoners who would know the whole district around the hospital and infirmary, and be in a position to form an opinion as to which applicants for relief should be recommended to join a provident dispensary, and which be sent to a medical man outside. In a very short time it would be found that patients able to pay would not apply for charitable relief. They would realise that it was no use trying to get for nothing that for which they were able to pay. There would always have to be a medical opinion expressed as to what kind of treatment was required (expensive drugs or appliances, prolonged treatment, etc.) before an almoner could judge whether the patient was fit for charitable treatment or not. It would also be necessary to remove the existing condition whereby a patient admitted to an infirmary loses his parliamentary vote for a year.

APPENDIX No. XLVIII.—*Continued.*

I should like here to say a few words about private hospitals and nursing homes. Medical and surgical science has advanced in late years to such an extent that very few, if any, of the existing nursing homes are able to afford the appliances, laboratories, theatres, X-ray apparatus, etc., necessary for modern treatment.

It has been found in Toronto that all patients, even those able to afford large fees, insist upon being treated in a properly built and equipped hospital.

I am not aware that there is in London one nursing home nearly as well equipped for treating disease as the most modern of our Poor Law Infirmaries, so that a patient who can afford to pay one hundred guineas for an operation *may* not now receive treatment as safely, or as efficiently, as a hospital or infirmary patient.

Question III.—What would be the effect on Voluntary Hospitals of a State-provided or rate-provided system of gratuitous medical relief either for indoor patients or for outdoor patients, or for both?

Answer III.—There is, as far as I am aware, in London, no evidence as to the effect of the working of any such system. The only answer I can make is an expression of my own pious opinion to the effect that properly organised assistance provided from the State, or from the rates, or from both, for our hospitals would relieve the members of the committee and the hon. staff from an enormous amount of anxiety regarding the finances of the hospital to which they were attached, and would cause them to realise in a very short time (probably not immediately) that the prodigious amount of work that they are now doing and have done in the past to relieve the sick poor, was shown to be worthy of some recognition, and would enable them to redouble their efforts in combating disease, in carrying out researches to ascertain the cause of disease, and to find out remedies for diseases at present incurable. In proof of this I need only mention the stimulus which has been given to research in the pathology of diseases of the nervous system by the splendidly equipped and staffed laboratories of the new County Council Asylums.

Question IV.—What would be the effect on Voluntary Hospitals of State-provided aid towards building or management expenses, and if such a system were adopted what conditions do you suggest should be attached to such grants?

Answer IV.—It seems to me that King Edward's Fund will soon become the one and only source for the reception of charitable donations and subscriptions intended for hospitals. As old friends of existing particular hospitals die, it becomes more and more difficult to obtain money from the public. The public now seems to prefer to pay a sum to the King's Fund and to allow the Fund to distribute money to the various hospitals. I welcome the King's Fund as the great distributor of charitable funds to each hospital, and I welcome also its methods of inquiring into the management of each hospital, and of pointing out defects and extravagances, and commending economies.

There might well be a State body which would distribute State aid to the various hospitals. Assuming each existing hospital to be affiliated to the Poor Law Infirmary nearest to it, it should not be difficult to determine what proportion of the work done in the two institutions should be paid by State or rate aid. Under such conditions of working I think the State should build all hospitals. The King's Fund would then equip and maintain them, aided by contributions from the State, or from the rates, or from both. The conditions attached to State-provided aid should be exactly such as are enforced by the King's Fund at the present time. This fund sends visitors to every hospital and receives reports from them as to economical working, proper equipment, etc. It also takes steps to ensure hospitals being placed in districts where they are most needed, and to ensure proper inquiries being made as to the class of persons applying for relief. I consider that it has already done more good in the short period during which it had been at work than has been accomplished in the fifty years previously. The removal of King's College Hospital is a case in point. Without the aid of the King's Fund this could never have been accomplished.

I think also that the present hon. staffs of the hospitals should be appointed by the State, and receive remuneration for the work which they perform—work which is now far more arduous and exacting than it was some years ago.

APPENDIX No. XLVIII (A).

Handed in by P. T. B. Beale, F.R.C.S.

GREAT NORTHERN CENTRAL HOSPITAL, HOLLOWAY ROAD, N.

PAY WARDS.

- I.—The Pay Wards are intended for the benefit of Patients of limited incomes who are willing to contribute towards the cost of their maintenance when in the Hospital.
- II.—Except in urgent cases, Patients can be admitted only after consideration of their applications by the House Committee of the Hospital. The Committee meets to receive applications every Wednesday at 5.30 p.m. Each application must be accompanied by a Recommendation from a Registered Medical Practitioner.
- III.—Intending Patients may obtain forms of application, and information as regards payments, from the Secretary, at the Hospital.
- IV.—No Patient can be received without a guarantee in writing (on the form provided for the purpose) from some responsible person, for the necessary payments and for the removal of the Patient when required.
- V.—Patients will be admitted under the care of the Medical Officers of the Hospital, who will alone be permitted to prescribe the treatment to be carried out in each case.
- VI.—Patients may be visited by their friends as follows:—Sundays, 1.30 to 3; Tuesdays and Fridays, 5 to 6. Permission to visit on other days can only be granted in exceptional cases, on application to the Secretary, and subject to the approval of the Resident Medical Officer in charge of the case.
- VII.—Patients must in all respects conform to the regulations from time to time prescribed by the House Committee for the due government and management of the Hospital and all matters incidental to their position therein and removal therefrom.

The treatment of the Patients in the Pay Wards is undertaken by the Honorary Medical Staff gratuitously, under the same conditions as to the treatment of Patients in the Free Wards.

PAYMENTS.

Payments may be made to the Secretary at the Hospital on week-days from 10 to 4; Saturdays, 10 to 1. Payments in all cases must be weekly in advance. Part of a week will be charged as a whole week.

[These rules are not, in my opinion, ideal, but when they were drawn up, they formed the best solution of a very difficult problem which was possible under the existing circumstances. I do not believe that Pay or Contributing Wards should be a structural part of a free hospital, nor do I consider that the patients in them should be treated gratuitously by the Hon. Staff].—P.T.B.B.

APPENDIX No. XLIX.

REPLIES by Sir HENRY BURDETT, K.C.B., to Questions submitted to him by the Commission.

By way of introduction I may point out that the principles involved raised by the four questions submitted to me by the Royal Commission on the Poor Laws and Relief of Distress have been under discussion with more or less persistence for upwards of forty years, during the whole of which time I have been actively connected with the administration of hospital affairs in the United Kingdom. Private committees or commissions of various kinds have sat since Sir William Fergusson's famous Commission of 1871, most of them having covered mainly the same ground, and their recommendations having unfortunately remained for the most part unenforced. It is remarkable in this connection to remember that if the six recommendations of Sir William Fergusson's Committee of 1871 had been adopted, it is not too much to declare that all or nearly all of the principal abuses attaching to the voluntary hospitals in England in the present day would have been obviated and prevented. The underlying cause of all the trouble is want of co-operation for any effective purpose amongst the whole of the voluntary hospitals, Poor Law infirmaries, and the authorities responsible for granting free medical relief in any form. If this could be effected, as it ought to be effected without delay, we should then obtain a standard of efficiency in regard to the administration of each group of medical institutions, and it would be easy to make it impossible for anyone to misuse charity by obtaining free medical relief from any existing agency of any kind if they were not by their circumstances entitled to receive it.

I will now deal with the questions in order.

THE ABUSE OF VOLUNTARY HOSPITALS.

Question I.—To what extent are Voluntary Hospitals (indoor and outdoor) used by persons able to make payment for the treatment which they receive, and do you think that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends, either at the hospital or through part-pay hospitals?

Answer I.—There is no doubt that all the facts available tend to prove that the Voluntary Hospitals are used at present to an increasing extent by persons able to make payment, or partial payment, for the treatment which they receive. I could occupy much space with statistics demonstrating these facts, but I refrain from doing so because I understand that many statistics bearing on this point have already been laid before the Commission.

The underlying cause of this condition of affairs is that no means at present exist whereby persons of moderate income can obtain efficient treatment and hospital care when ill at a rate which they can afford to pay. The present system, or want of system, whereby medical relief is granted to practically all applicants by the Voluntary Hospitals has grown up without any combined attempt to organise it efficiently, or to check abuses. The whole system rests upon a wrong basis, and the best interests of every class of the population demand that it should be abolished in favour of a system which will afford the maximum of justice.

(1) To the poor.

(2) To those who can afford to pay in part or in whole the cost of their medical treatment and care at a hospital.

(3) To the medical profession.

(4) To the subscribers and supporters of Voluntary Hospitals, whose gifts should be strictly applied to the purposes they were intended to serve; and

(5) To the ratepayers who are entitled to a guarantee that the maximum efficiency is secured by the Poor Law system of medical relief.

That the present plan of free medical relief to practically all applicants granted by the Voluntary Hospital rests upon a wrong basis is proved by the effects which other systems in other countries have had upon the reduction of the abuse of charity. The remedy is very simple and easy of application. Every

Voluntary Hospital, whilst admitting at once all accident and urgent cases needing immediate attention, should institute a system whereby each applicant would be asked to prove that he or she was a fit object of charity. The only real attempt to reduce abuse has so far been the appointment by many of the larger hospitals in recent times of almoners, to ascertain whether certain selected patients were in a position to pay or not. By putting the burden of proof of eligibility to receive free medical relief upon the patients and their friends, all abuse of every kind must speedily cease. There would be no hardship entailed upon the patients by such a system, as experience has proved, but to make it effective the present system of providing for in and out patients must be radically changed in this country, for as matters stand at present if a voluntary hospital attempted to enforce this simple method they would be met with the difficulty that where it was found that a patient or his friends could pay at any rate something, there is no department connected with British hospitals—as is the case in regard to hospitals in the United States—to which such in-patients could be transferred to accommodation provided in paying wards. In the same way, directly the out-patients were dealt with under such a system it would be made apparent, where a case could be properly treated under the Poor Law, that no plan of co-operation to secure this is at present organised. If the patient, being of a better class, were suffering from a relatively minor ailment, and could be properly dealt with at a Provident Dispensary, the fees of which he could easily pay, the same absence of co-operation must make it practically impossible readily to enforce the system. When, again, an out patient of the better class was entitled, from the severity of his ailment, to receive the advantages of a consultation by the medical staff, no method at present exists whereby this aid could be rendered to him and his transfer afterwards to the care of a medical practitioner attached to some Provident Dispensary, or resident near the patient's home, could be properly carried out. It follows that it is essential, if adequate reform is to be effected, that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends by an entire reorganisation of the existing system of medical relief, not only at the voluntary hospitals, but under the Poor Law system as it exists at present. The reforms required in regard to voluntary hospitals are that every large hospital shall have connected with the in-patient department, in separate buildings, but under the administration of the managers, pay wards for the reception of those patients who are able to pay some part or all of the cost of treatment; that, as regards out-patients, the out-patient department, as it at present exists, should be abolished; that in substitution for it each hospital should have a casualty department and a department for consultation. In the casualty department every applicant should be seen once, and be there disposed of by being handed on to the consultation department; if his case was sufficiently important, he should then be transferred to some Provident or Poor Law Dispensary, or be referred to a private medical attendant. It would no doubt take time to overcome the incidental difficulties which would necessarily arise in effecting so radical a reform as is here contemplated, but if all voluntary hospitals adopted the same system, and were to be brought into active co-operation with Provident Dispensaries and Poor Law Dispensaries and private medical practitioners, the new system might be successfully introduced and made effective within twelve months, and probably within six months, from the date of its commencement. This opinion is based upon the assumption that the existing Provident Dispensaries would be standardised, and that everyone of them would be brought up to a state of the highest efficiency. In the town of Northampton the Royal Victoria Dispensary has been worked with the maximum of success, so far as the patients and the medical practitioners are concerned. In London and in other large towns like Manchester and elsewhere the

APPENDIX No. XLIX.—*Continued.*

Provident Dispensary has, so far, not succeeded as it has done in Northampton, because the members of the medical profession are not alive to the importance of making it their first business to provide that every patient connected with the Provident Dispensary who attends at the surgery of a private medical practitioner receives at least equal attention and accommodation to that afforded to every other private patient, whatever the fee he may pay. In the same way, Poor Law Dispensaries, as they exist to-day, must be radically reformed. Everything which tends to excite a feeling of shame on the part of the patient attending the Poor Law Dispensary, such as the printing of the word "pauper" at the beginning of the space on which the patient's name is entered, must be abolished, and the class of medical service and all the arrangements for the treatment of the patients, however poor, at the Poor Law Dispensary, must be made at least as efficient as those provided by voluntary hospitals.

I would recommend, in this connection, for the consideration of the Commission, a careful study of the Swedish system of medical relief in all its bearings, and I would venture, further, to suggest the introduction by the Government of a system of insurance whereby for a small but adequate annual premium everybody who desired to maintain their self-respect should be able to obtain medical relief when ill, and to pay for it at a rate within their means.

I may briefly remind the Commission that in Sweden the Government have for many years worked the hospitals on a system which would confer great benefits upon our towns, by bringing the Poor Law and Voluntary Institutions into more intimate association, though managed by separate governing bodies. This has been secured in Sweden by a scale of charges demanded from all patients who are admitted to the hospital. The first grade pays a substantial sum, and obtains anything and everything the patient may care to have or to pay for, subject to the control of the medical attendant. The second pays a much less, but a remunerative, rate for all that they receive at the hospital; and the third class are paupers, who are paid for on an agreed scale by the Poor Law authorities. Thus, well-to-do, thrifty artisan and improvident pauper are all treated by one staff, controlled by one administration, and are located in immediate proximity to each other, though in separate pavilions. This I believe to be the true system to aim at securing, and I hope that ultimately some such plan will find acceptance in Great Britain, to the advantage of everyone concerned. As to a system of Government insurance whereby all classes who desire to be thrifty may pay a small annual premium in the day of health, and secure adequate hospital treatment and care when ill, I may state that for some years I have had this point under consideration, and with the aid of an eminent actuary have worked out certain tables which show that for a relatively small annual premium—say £3 per annum as a maximum—the whole sum necessary to defray the cost of hospital medical treatment in a pay ward or at a consultation department of a great hospital can be provided as a matter of business. The reason why it has been under consideration is that it was suggested that a great insurance company might be provided by private enterprise to meet this urgently-demanded reform. I have hesitated, however, to associate my name with the scheme from the circumstance that, to make it efficient, it is necessary in the first instance, assuming, as I have ascertained to be the fact, the the existing Voluntary Hospitals, or many of them, have sites available upon which pay wards might be erected, to provide initially a large capital outlay, which in my judgment could only be supplied through the munificence of some millionaire or the co-operation of the State. Granted the provision of the initial cost for buildings and equipment, an adequate system of pay wards for the whole country could be rapidly introduced, and the new system here suggested could speedily be brought into practical working. I propose to deal with this point fully in my reply to Question IV.

OVERLAPPING BETWEEN VOLUNTARY HOSPITALS AND THE POOR LAW.

Question II.—Considering the patients both from the medical and from the social point of view, to what extent is there any co-operation or overlapping between Voluntary Hospitals and the

Poor Law in regard to indoor or outdoor patients, and what suggestions would you make towards a scheme of co-operation?

Answer II.—My reply to this question, having been dealt with by anticipation in my preceding remarks to a large extent, may be brief. In the absence of any adequate system of co-operation, and a clear understanding of the relative duties cast upon the Voluntary Hospital managers and Poor Law Guardians, there must necessarily be, and there undoubtedly is at the present time, considerable overlapping between Voluntary Hospitals and the Poor Law. So far as co-operation is concerned at present, it amounts in practice to the giving of relatively small annual subscriptions by Poor Law authorities to Voluntary Hospitals in certain districts. It includes further payments made by Poor Law authorities to certain hospitals at a fixed rate per diem for Poor Law cases which may be admitted to the latter. In the case of Cottage Hospitals—and I believe I am correct in saying in regard to certain County and some Metropolitan Hospitals—some Boards of Guardians agree to pay the cost of the medical treatment of accident and operation cases, and they also occasionally defray the cost of artificial limbs and appliances where such are needed to enable the patients to have the best facilities for maintaining themselves after their discharge from the hospital. I think, however, that were a standard of the medical relief granted by

(a) Voluntary Hospitals, and

(b) The Poor Law Institutions

to be established, accompanied by adequate co-operation, overlapping between the two classes of institutions must cease. In this connection I may be permitted to urge strongly that it must never be forgotten that the function of the Poor Law is the relief of destitution, whilst it should be the object and duty of each Voluntary Hospital to apply its resources entirely to the prevention of destitution by stepping in to grant free medical relief to the provident and thrifty when, through no fault of their own, they meet with an accident or are overtaken by disease. In this way it is the privilege of the Voluntary Hospitals to save such patients from the necessity of requiring the relief which it is the object of the Poor Law to supply.

THE EFFECT OF A STATE-PROVIDED OR RATE-PROVIDED SYSTEM OF GRATUITOUS MEDICAL RELIEF.

Question III.—What would be the effect on Voluntary Hospitals of a State-provided or rate-provided system of gratuitous medical relief, either for indoor patients or for outdoor patients, or for both?

Answer III.—Having devoted myself for upwards of forty years to an earnest endeavour to provide that all our Voluntary Hospitals shall be supplied with ample means from voluntary contributions adequately to relieve the deserving poor who in the days of health are able to maintain themselves without any aid from the Poor Law, I should regard the provision of a State-provided or rate-provided system of gratuitous medical relief, either for indoor patients or for outdoor patients, or for both, as a grave evil. My opinion on this point rests upon the knowledge that the effect of such State-provided or rate-provided medical relief must eventually lead to the extinction of the Voluntary Hospital system. Such a result must be attended by the gravest evils, for it would injure the morale of all classes and tend to harden unnecessarily the relations which at the present time so happily exist between rich and poor, who through our voluntary system have come to share each other's sufferings and to be animated by the warmest feeling of respect and confidence towards each other.

STATE-PROVIDED AID TOWARDS THE BUILDING AND MANAGEMENT EXPENSES OF VOLUNTARY HOSPITALS.

Question IV.—What would be the effect on Voluntary Hospitals of State-provided aid towards building or management expenses, and, if such a system were adopted, what conditions do you suggest should be attached to such grants?

Answer IV.—First of all, I may say that, in my view, no State-provided aid is required or should be given towards the management expenses of Voluntary

APPENDIX No. XLIX.—*Continued.*

Hospitals. I am of opinion, however, that under proper safeguards the effect on Voluntary Hospitals of State-provided aid towards building expenses could be made of the highest value. It would enable the whole existing system of medical relief in this country to be remodelled so as to secure that in practice the existing abuses attaching to free medical relief in this country should be finally abolished. The first essential connected with a great financial change such as is here contemplated must be to secure that no State aid of the kind should be granted to any Voluntary Hospital in advance of the requirements of the population to the needs of which it ministers. Otherwise large sums might be spent upon new buildings in advance of the actual requirements of the population, with the result, which some existing Voluntary hospitals exhibit to-day, that when these buildings had been erected they must be kept inadequately equipped and sometimes wholly unoccupied for want of money to defray the cost of keeping the beds occupied. Had this proposal been adopted ten years ago, it might have entailed an expenditure of between ten and fifteen millions sterling on the part of the State, for during this period many of the principal hospitals have been reconstructed or rebuilt, and the money to defray the cost of this work has been provided from voluntary sources. To state a fact like this is to prove to demonstration the success of systematic voluntary support of hospitals in this country as it exists to-day. But apart from this, I regard it as most fortunate that any such State aid provided towards building in connection with voluntary hospitals will, in fact, as matters stand at present, be occasionally, if not entirely, required to defray the cost of erection of wings for the setting up of a system of pay wards throughout the country. If adequate grants by way of loan at, say, 3 per cent. can be made to voluntary hospitals for this purpose, it should be possible, under an insurance scheme such as I have indicated, to provide for the repayment of these loans by a sinking fund out of the payments received by the patients who are admitted to treatment in the pay wards. An insurance scheme, preferably under Government auspices, is desirable, because it would reduce the whole matter to a business basis by guaranteeing the hospitals against loss, and insuring the prompt payment of the fees charged to patients in the pay wards. I have satisfied myself, as I have already stated, that such a system of insurance could be made profitable in the ordinary course of business. Still, the late Henry Fawcett, when Postmaster-General, showed that the trend of opinion in this country is popularly in favour of thrift, and it is undoubtedly the duty of the State in every possible way to encourage all classes to exercise thrift and not to look to the State for doles, or the payment of many matters which a self-respecting man or woman must properly regard as items which should be met by themselves out of their own resources. I would suggest that in the case of any such grants by the State to voluntary hospitals for buildings, the following conditions, amongst others, should be enforced:—

1. All grants should be confined to the expenses of building and equipment of pay wards, or in the alternative to new buildings and equipment for some special department rendered necessary owing to modern medical requirements.

2. Before any grant was made, a complete building scheme, with plans, should be submitted and approved, together with an estimate of the cost of equipment, furniture, etc., and it should be clearly laid down that any grants made should be expended only upon the objects covered by the approved scheme.

3. That before any payment should be made under any grant of the kind, evidence should be required, including a Budget statement, showing how the money for the maintenance and upkeep of the new department or pay ward is to be provided.

In regard to this condition, I may point out that medical opinion in this country requires that any system of pay wards shall be so conceived as to render it possible that the medical attendance of the patients shall be provided under a system which will do full justice to the interests of the medical men. Whilst it is essential for economical and administrative considerations, as an experience of thirty years' working of a pay hospital in this country has convinced me, that pay wards shall be attached to hospitals, it is

further essential that the scale of charges in connection with each such department shall be such as to secure that it will pay its way, and all accounts connected with it must be kept separately. From the modern point of view, three requirements must be fulfilled:—

1. The pay ward, though under the same administration, must have a separate entrance and be quite distinct from the free hospital.

2. The medical staff must fix the scale of remuneration they are to receive for their services in the pay wards, and

3. No member of any medical staff should be compelled to undertake the charge of patients in the pay wards as part of his duty to the hospital.

If these conditions are fulfilled, there is evidence to show that medical men attached to hospital staffs would be willing to see patients in the pay wards at a reduced rate, and that they would consent to a fixed scale of fees. There will, I have little doubt, be certain members of the staff whose time is too fully occupied to enable them to attend cases in the pay wards, and hence freedom of action must be given to every member of every hospital staff in this connection.

This system would have the following further advantages, for it would secure that:—

1. All abuses in connection with the in-patient departments of the voluntary hospitals would cease.

2. Adequate accommodation would be provided for every class of person who desires hospital treatment for payment in whole or in part.

3. The medical service would be paid for and organised upon a plan which will protect the interests of every member of the profession, including members of the hospital staff, as well as the general practitioner.

4. The wisest economy in administration must prevail.

5. The training of nurses for private work would at length be made efficient.

6. A check would be effectually placed upon the improper growth of medical treatment in hospitals by preventing those who can afford it from obtaining such relief without payment, as they do at present.

I venture to attach great importance to the re-organisation of our existing system of medical relief in this country in all departments upon the plan which I have ventured to formulate. The institution of pay wards containing nothing but paying patients in connection with the voluntary hospitals in this country is called for, because there is no other means whereby the ever-increasing growth in the number of hospital patients can be effectually regulated and hospital abuse prevented. We must have a reform in our present methods of hospital relief, or there is a very real danger that the rising generation will demand free hospital treatment as their birthright, no matter what their means be, and so great injury must ensue to the moral fibre of the nation as a whole. Free medical relief has a tendency, unless given with a due regard to the social position of each recipient, to make against habits of thrift and self-dependence.

May I venture, in conclusion, to impress upon the Commission the fact that the new system which I have indicated would in practice enforce all except one of the six recommendations of Sir William Fergusson's Commission in 1871? It involves the improved administration of Poor Law medical relief; the placing of all free dispensaries under the control of the Poor Law authorities; the establishment of an adequate system of Provident Dispensaries; the curtailment of the present unrestricted system of gratuitous relief, partly by the selection of cases possessing special clinical interest, and partly by the exclusion of those who, on social grounds, are not entitled to gratuitous medical advice; the payment of the medical staff engaged in in and out patient work by fees in the pay wards, and the consultation departments of the voluntary hospitals. It does not involve the abolition of all payments for medicine, because experience has proved that in practice these small payments, which might be continued in connection with the casualty departments of the voluntary hospitals, do no harm. On the contrary, they do, in fact, produce an important revenue for the hospitals which have made experiments with this system.

APPENDIX No. L.

REPLIES by Dr. J. FREDERICK W. SILK, to questions submitted to him by the Commission.

Question I.—To what extent are Voluntary Hospitals (indoor and outdoor) used by persons able to make payment for the treatment they receive, and do you think that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends either at the hospital or through part-pay hospitals?

Answer I.—If by Voluntary Hospitals is meant "General Hospitals," and by payment "adequate payment, at its market value," I doubt whether any serious abuse of hospitals exists that cannot be easily controlled by the hospitals themselves, or by inquiry officers or almoners. Owing to the very natural tendency of the public to run after "Specialists," there is, no doubt, a greater danger of abuse in the case of Special Hospitals, but even this should be easily controllable if the Special Hospitals would only take the trouble to do so. And even in the case of the Special Hospitals the tendency to abuse is less marked of late years owing to the fact that special departments are now established at most of the large General Hospitals, where the regulations as to the admission of patients are more stringent and carried out with greater independence and sense of responsibility. Such abuse as does exist is largely due, particularly in the Special Hospitals, to the rivalry between the respective institutions, each hospital seeking to justify its existence in the eyes of its subscribers by recording a large number of "cases relieved" and interesting cases.

It ought not to be possible to set up a hospital in any district without the sanction of the Local Authority, after satisfying the latter that the general or local conditions justify the establishment; in deciding this question, while due weight should be attached to the opinion and good will of the local practitioners, these should not be the sole determining factors in arriving at a conclusion upon the subject. Probably the majority of patients *could*, and I think a good many do, contribute small sums to the hospitals (if only a few pence), but such payments cannot possibly be commensurate with the value of the highly-skilled and valuable advice received and the expensive appliances which are at their disposal. Even in the aggregate I doubt whether such sums could be made to bear any appreciable proportion to the enormous cost of modern hospital management. In some cases, and in some neighbourhoods, advice and medicine can be obtained from local practitioners for even less than 6d. a visit, either directly or through one of the sick clubs or benefit societies. But although of course there are many honourable exceptions, on the whole such advice is more often than not much worse than useless. It has been shown, too, that the club system, as at present conducted, is open to such flagrant abuse that many respectable practitioners decline to have anything to do with them. But of the money which, as some maintain, is thus diverted from the pockets of the struggling practitioner, a not inconsiderable proportion would reach the prescribing chemist, the quack, and the patent medicine fraud, who undoubtedly reap rich harvests out of the pence of the poor and needy. Only a proportion would go to the practitioners. I am doubtful therefore whether the objection made to hospitals on behalf of the "struggling practitioner" is of any real importance. The real objections to the part-payment system rest upon the enormous extent to which it encourages hospital abuse, and the increased expense entailed by the employment of additional inquiry officers. The part-payment patient is, for financial reasons, apt to be accepted in lieu of the really necessitous poor, who are crowded out. Not a tithe of the class from which such part-payment patients are derived can be induced to believe that their payments, however small, do not represent the market value of the advice and treatment they receive, or that the money does not go direct into the pockets of the staff. This has a bad moral effect both upon the staff and upon the patients, and renders

the latter difficult to manage. Any attempt at a differential tariff is not only open to the same objections, but the difficulties of nursing such patients are very greatly increased. Objections, too, are raised to such part-payment patients being used for teaching purposes. In any case, to prevent abuse, most stringent regulations must be enforced, and careful enquiries made as to each patient and this is only possible where the hospital is small and the district it serves very limited in area. It becomes impossible when the hospital draws its patients from large and thickly populated districts.

On the whole, I do not think, therefore, that the payment system should be adopted either in whole or in part.

It not infrequently happens that patients come to London and the larger provincial towns from considerable distances in the country; they not only pay a good deal of money for railway fares, but often actually pass through towns in which there are good hospitals. In very many instances this is quite unnecessary and should be guarded against as far as possible.

I would abolish all "Subscribers' Letters," and I believe that the substitution of the recommendation of local practitioners is open to even graver abuses. Each case should be judged on its own merits.

Question II.—Considering the patients both from the medical and from the social point of view, to what extent is there any co-operation or overlapping between Voluntary Hospitals and the Poor Law in regard to indoor or outdoor patients, and what suggestions would you make towards a scheme of co-operation?

Answer II.—At present there is a good deal of overlapping, and the municipalities have just awakened up to their responsibilities in the direction of medical relief, and are spending vast sums in the erection, equipment, and management of their infirmaries. The overlapping will gradually become more and more acute, and there will sooner or later come a time when there will be an actual competition between the two for cases to fill the hospital wards for teaching purposes. One of the most important functions of the hospitals is that of teaching, and already many excellent teaching cases are lost in the infirmaries. This overlapping is largely due to the inherent difficulties in deciding which cases are eligible for hospitals and which for infirmaries.

I would certainly advocate co-operation between the hospitals and the Poor Laws. In outline, the plan I would suggest would be:—I would abolish all parochial medical officers as such, and all hospital out-patient departments except for such special departments as eyes, throats, ears, skins, and possibly gynaecology.

In each parish or district I would establish, if they did not already exist, several dispensaries with very full staffs of both residential and consulting medical officers and inquiry or relieving officers. Applications for relief to be made primarily to a dispensary. Very trivial cases could be treated there; more severe cases would be visited at their own homes, or seen by one of the consultants. If acute, special, surgical, or of clinical interest they would be transferred forthwith to a hospital; if chronic or mainly the result of senility or malnutrition they would be sent into the infirmary. Cases should not be retained in the hospitals for more than a definite period—(?) three months. Practically this amounts to the transfer of the out-patient departments to several local centres. The environment of the patient has an immense and important bearing upon the treatment, and should always be inquired into. This can only be done by visiting them in their homes.

APPENDIX No. L.—*Continued.*

The whole cost of these dispensaries to be paid out of the rates. The staff of the dispensaries to be paid, but to be elected by and responsible to the hospitals with which they are affiliated. Students would attend these dispensaries for out-patient instruction at the hands of the consulting staff. The latter might possibly, in due course, be promoted to the hospitals when they would cease to receive any payment. Application for medical relief should not *ipso facto* pauperise a patient.

The scheme thus outlined may perhaps be considered Utopian, and, of course, would require to be carefully worked out in detail, due regard being paid to the various professional and other interests. But I do not think that these interests need be irreconcilable, or that the difficulties are insurmountable. At any rate, it leaves the voluntary position of the hospitals intact, while at the same time relieving them of the great cost of the out-patient departments. The hospitals would always be open for the reception of accidents and casualties.

Question III.—What would be the effect on Voluntary Hospitals of a State-provided or rate-provided system of gratuitous medical relief either for indoor patients or for outdoor patients, or for both?

Answer III.—As I understand the matter, some such system has always existed. In former years relief was only accorded out of the rates to those who "came on the rates" and voluntarily or involuntarily declared themselves paupers. It was to meet the wants of the stratum of society immediately above this that Voluntary Hospitals were founded. The feeling is rapidly gaining ground that the duties of municipalities and the State in the matter of medical relief should extend to a considerable portion of the community hitherto dependent upon Voluntary Hospitals. The effect of such extension would be to greatly diminish the voluntary subscriptions upon which the hospitals depend, so that they could no longer be maintained in the state of efficiency which has been their chief characteristic hitherto. The question is complicated by the desire to retain the hospitals in some shape or form (which could, I think, be done by the plan suggested above), and still further by the desire to make provision for a very large and

most deserving portion of the community which at present is much worse off in the matter of expert medical assistance than the day labourer or pauper, viz., people of the clerk and governess type. I am quite in sympathy with both these desires, but I think that they should be kept quite distinct and dealt with independently of each other. The most urgent need for the latter class is, in my opinion, relief from the great expense of efficient nursing in cases of prolonged illness and an organised system for obtaining special and surgical treatment at reduced fees. I see no difficulty about this.*

Question IV.—What would be the effect on Voluntary Hospitals of State-provided aid towards building or management expenses, and if such a system were adopted what conditions do you suggest should be attached to such grants?

Answer IV.—The conditions which must of necessity attach to such aid must tend to deprive the hospitals of their independence, and to retard or stifle progress.

To obtain a grant towards building, the plans must meet with the approval of the State. Either a special hospital bureau would have to be set up, which might tend to red-tapism and political jockeying, or special advisers quite unacquainted with local conditions would be consulted and would over-ride the better informed.

State aid for management would mean State representation on hospital boards of management, or auditing of accounts by a public auditor. I do not think that either of these conditions is advisable.

Rate aid might perhaps be preferable to State aid, as there would be a certain amount of emulation between the municipalities, but I do not advocate either form of subvention. If some such plan as that suggested be not adopted, the hospitals should either be taken over entirely or left alone.

The views I have expressed are entirely personal to myself, and I am not in any way expressing the opinions of the staff of the hospital with which I have the honour to be connected.

* A very great desideratum is the establishment of well-equipped Nursing Homes in the districts where this class of the community mostly reside. Not only should the nursing fees be low, but the doctors who attend patients in these homes should do so at fixed reduced fees irrespective of the status of the patient, and such fees should be paid in the first instance to the home authorities and not direct to the doctors.

If the State or the Municipalities took over the Voluntary Hospitals *en bloc* provision would have to be made for the adequate remuneration of the whole of the staff of such hospitals.

APPENDIX No. LI.

REPLIES by THEODORE THOMPSON, M.A., M.D. (Cantab.), M.R.C.P. (Lond.), F.R.C.S. (Eng.), Assistant Physician to the London Hospital, Assistant Physician to the Hospital for Sick Children, Great Ormond Street, Physician to the Poplar Hospital, to questions submitted to him by the Commission.

Question I.—To what extent are Voluntary Hospitals (indoor and outdoor) used by persons able to make payment for the treatment they receive, and do you think that methods should be adopted with a view to some part or all of the cost of treatment being provided by the patient or his friends either at the hospital or through part-pay hospitals?

Answer I.—The extent to which Voluntary Hospitals are used by persons able to make payment for the treatment they receive varies with the different classes of hospitals. These may be divided into—

- (a) The large general hospitals.
- (b) The smaller general hospitals in the outlying districts of London.
- (c) The hospitals for the treatment of special diseases.

As I happen to be a member of the staff of a hospital in each class, I have perhaps exceptional opportunities for observation on this question.

APPENDIX No. LI.—*Continued*.

(a) The London Hospital, to which I am attached, may be taken as the type of the great central general hospitals. While the very great majority of patients are quite unable to pay for the services they require, yet a certain proportion exists who could afford to pay something towards their treatment. These persons belong to the middle class, and attend the hospital for special treatment, such as surgical operations, treatment by the "Finsen Light," "X-Rays," and "Radiant Heat Baths," etc., which they cannot obtain from the general practitioner, and for which the fees charged by specialists are generally too great for a class which has to keep up an appearance of respectability and at the same time feels greatly the heavy burdens of rates and taxes. As a concrete example of this I may quote the following case:—A person of the middle class attended the hospital on the recommendation of his family doctor. A difficult operation was performed, and he completely recovered. During his stay in the hospital he provided the other 25 patients in the ward with milk and fruit daily, and when he was discharged gave a donation of £10 to the institution. While affording all praise to this person for his generosity, it seems clear that he would have been able to pay, in part at any rate, for the difficult operation performed upon him.

(b) At the smaller general hospitals in the outlying districts of London, such as the Poplar Hospital for Accidents, to which I belong, the number of people able to pay anything for treatment is exceedingly small. These hospitals are as a rule situated in working-class districts, and any prolonged illness makes it practically impossible for the working people to pay even the very small fees of the general practitioner, while they are totally unable to afford to pay anything for the special forms of treatment above mentioned.

(c) At the hospitals for the treatment of special diseases, the class of patients who attend are often able to pay something for the treatment. These hospitals are largely used by general practitioners to send their patients for expert opinion, and are thus looked upon as consultative institutions. As a result, many patients make long journeys to be seen at the hospitals, and are therefore of a better position than the majority of people attending general hospitals.

Thus in 1903, at the Hospital for Sick Children, in nearly 5 per cent. of the cases the parents had an income of 35s. a week or over, while in one-third of the cases they were in receipt of 25s. a week or over.

The best method to be adopted with a view to the part payment for indoor treatment by such patients is in my opinion, to establish certain wards in the large general hospitals and in the special hospitals where patients of the middle classes could be treated at a fixed fee, part to go to the hospital and part to the physician or surgeon who attends them. If this is in certain cases impossible, the difficulty could be met by erecting a suitable building adjacent to the general hospital, in which the persons treated might pay in part for their treatment. This is, in my opinion, the best solution for indoor treatment. With regard to outdoor treatment, the question is more difficult. It has been partly met by the establishment of almoners, who inquire into the means of all patients who present themselves for outdoor treatment. Such officials have been appointed by the hospitals to which I belong. The difficulty lies especially in the class of people who earn £2 a week in a situation and have to keep up a considerable appearance in order to retain their situations. The establishment of part-pay outdoor hospitals for this class of patient would naturally and very rightly be strongly opposed by the general practitioners who form the great proportion of the medical profession. Possibly the difficulty might be met by all patients who are sent up to the hospital with a doctor's recommendation being made to pay a small fee, unless the doctor who sends them states that they are unable to do so. In my opinion, the establishment of new part-pay hospitals for outdoor treatment would be a great mistake, since the conditions can be met by a modification of the rules of existing institutions, of which there are already a plethora. The amalgamation of the smaller hospitals now being carried out at the

instance of King Edward's Hospital Fund is an excellent reform, and the addition of special part-pay hospitals for outdoor treatment to their number is inadvisable.

Question II.—Considering the patients both from the medical and from the social point of view, to what extent is there any co-operation or overlapping between Voluntary Hospitals and the Poor Law in regard to indoor or outdoor patients, and what suggestions would you make towards a scheme of co-operation?

Answer II.—Both from the medical and social point of view I consider that the relations at present existing between Voluntary Hospitals and Poor Law Infirmarys are excellent. The Voluntary Hospitals are institutions in which not only are existing methods of treatment applied for the benefit of patients, but are also places where new methods of treatment are devised, and in which investigations into the causes of disease are carried out. The Poor Law Infirmarys, not being equipped for such research, take over from the Voluntary Hospitals chronic cases of disease which would otherwise, if kept in the Voluntary Hospitals for long periods of time, prevent the treatment of acute cases of disease. These remarks apply to indoor and outdoor treatment. Many patients, however, show much unwillingness to enter a Poor Law Infirmary, but this is rather a question of the management of the infirmaries than of their relations to the Voluntary Hospitals, which are only indirectly affected.

Question III.—What would be the effect on Voluntary Hospitals of a State-provided or rate-provided system of gratuitous medical relief either for indoor patients or for outdoor patients, or for both?

Answer III.—It is impossible for me to state my opinion as to what would be the effect of a State-provided or rate-provided system of gratuitous medical relief unless I was in possession of further details as to how this system would be applied. As a general statement, however, I consider that a competitive system of gratuitous medical relief would be distinctly disadvantageous to the Voluntary Hospitals, and would hamper them in their special work of endeavouring to perfect the methods of treatment of disease. The voluntary subscriptions to such hospitals by the public would almost certainly decrease were a competitive State or rate provided system of gratuitous medical relief in existence.

Question IV.—What would be the effect on Voluntary Hospitals of State-provided aid towards building or management expenses, and if such a system were adopted what conditions do you suggest should be attached to such grants?

Answer IV.—I consider that State-provided aid would be distinctly advantageous to Voluntary Hospitals, and, in fact, that it has become a necessity. Rate-provided aid, on the other hand, would not, in my opinion, be advisable. This aid should be provided for building and management expenses. I would point out that the Voluntary Hospitals train all the doctors for the Army and for the Navy, and do this without receiving any recompense from the Government. The aid given to the Government by the nurses who are trained in the Voluntary Hospitals should also be considered.

The conditions which I suggest should be attached to such grants are as follows:—

- (1) That the hospitals thus aided should be subject to inspection by the Local Government Board.
- (2) That King Edward's Hospital Fund should report to the Local Government Board on the finances, management, and work of the hospitals to which such grants are made.

APPENDIX No. LII.

STATEMENT OF EVIDENCE BY DRS. A. E. COPE AND ARTHUR DRURY, ON BEHALF OF THE ASSOCIATION OF PUBLIC VACCINATORS OF ENGLAND AND WALES.

1. The following extracts from Memoranda and Resolutions explain the position of the Association of Public Vaccinators of England and Wales upon the question of the transfer of vaccination from the guardians of the poor to some other administrative authority.

2. Resolution of the Council, November 22nd, 1901:—

"That in view of the very serious danger now threatening the community by reason of the obstructive methods adopted by many boards of guardians in regard to vaccination and re-vaccination, the Council of the Association of Public Vaccinators of England and Wales consider that it is of vital importance that the whole administration of vaccination should be removed from the control of local boards, and vested entirely in the Local Government Board, or some other central authority."

3. Report of Council to members of the association, 1902:—

"Your Council are of opinion that the administration of vaccination should be removed from the boards of guardians and placed entirely in the hands of the Local Government Board."

4. Letter to the President of the Local Government Board (Right Hon. Walter Long, M.P.), June 23rd, 1903:—

"With reference to the authority which should administer the Vaccination Acts, the Council begs respectfully to give it as its opinion that the only authority to which such administration can be wisely removed is the Central Government Sanitary Authority—namely, the Local Government Board itself.

"The Council's opinion is . . . that vaccination should be central, and not local, in administration, and

that, unless complete centralisation, or until satisfactory change of local authority, can be secured, the present authority should continue to administer the Acts, but the public vaccinator should be responsible solely to the Local Government Board."

5. Letter to the President of the Local Government Board (Right Hon. John Burns, M.P.), May 2nd, 1906:—

"The Association desires to emphasise as strongly as possible the absolute necessity which exists for a complete nationalisation of the vaccination service in England and Wales, if its inhabitants are to derive any advantage commensurate with the efforts put forth. . . . There is one branch of the public service which is completely organised and uniformly administered, is free from all local political influence, and is co-ordinated and controlled by a central authority, viz., the Registration Service. There are at present many points of contact between registration and vaccination and an extension of the vaccination organisation on lines parallel with that of registration, rather than on the lines of Poor Law or sanitary administration, would appear to afford the most satisfactory solution of the problem as to how, with a minimum of alteration in the existing law and practice, to render uniform and complete the vaccination system, and make it truly national."

6. The views of the association, as thus expressed, have been formed after careful consideration and with intimate knowledge of the difficulties of the problem to be solved. The Council of the association will be pleased to have the opportunity of sending representatives to explain the reasons which have led to these conclusions, and to answer any questions which the Poor Law Commissioners may wish to put to them.

APPENDIX No. LIII.

STATEMENT BY KING EDWARD'S HOSPITAL FUND FOR LONDON MADE IN REPLY TO QUESTIONS ASKED BY THE ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS.

81, Cheapside, E.C.
October, 1906.

GENERAL INFORMATION.

1. In 1897, when this fund was founded, it was calculated that £100,000 to £150,000 would put the hospitals of London on a sound financial basis.

2. The amount distributed among hospitals has been as follows:—

	£
1897 - - - - -	56,826
1898 - - - - -	32,500
1899 - - - - -	42,000
1900 - - - - -	50,000
1901 - - - - -	51,000
1902 - - - - -	101,000
1903 - - - - -	100,000
1904 - - - - -	80,000
1905 - - - - -	101,000

3. The number of hospitals to which grants were made in 1905 was 94.

4. The working expenses of the fund for 1905 were 12s. 6d. per cent. on the amount received for the year.

5. The first Statistical Report published related to the year 1903 and then included sixteen hospitals. For the year 1904 it comprised thirty-six hospitals. For the year 1905 it comprised forty-eight hospitals. The figures show that the saving on the sixteen hospitals which were the subject of the first report amounted to about £20,000 for the year 1905, this being the first year in which they had had time to avail themselves of the information supplied to them. The figures for the year following cannot yet be calculated.

(A) *The basis on which the fund is distributed among hospitals.*

6. Every spring a list of institutions applying for grants is considered by the executive committee, now sixteen in number, who decide whether any institution is to be debarred from the list by reason of not being strictly a hospital or being outside the limit, which comprises all within seven miles of Charing Cross or within the

APPENDIX No. LIII.—*Continued.*

London County Council area. Those admitted are then allocated in convenient groups to the visiting committee, consisting of medical men and laymen in equal numbers—in all at present fifty-two. Each hospital is subsequently visited by a medical man and a layman, who send in their report to the fund office. Care is taken to change round so that the same institution is not inspected for too long a period by the same visitors. The distribution committee, now ten in number, meet after the visitors' reports are received and other information tabulated and sit *de die in diem* until their work is concluded. Their first consideration is the amount available for distribution, which has been settled by the executive committee. This amount is then compared with the amount distributed in the year previous. The needs and obligations of the hospitals come next, for the fund was initiated to put the London hospitals on a sound financial basis. The reports of the visitors furnish the most important evidence and these are very carefully considered, foremost among their conclusions being the question as to whether the conditions, if any, on which last year's grant was given have been complied with. The working of each institution is judged from the economical point of view as shown in many cases by King Edward's Hospital Fund's Statistical Report (copies of which are appended together with copies of our last Annual Report, that for 1905), and encouragement is given to those who show good management. Awards having been agreed on and the list having been revised, it is then sent through the executive committee to the general council, numbering at present thirty-nine, and by them approved or amended.

7. But it must be remembered that these committees and the council itself are only advisory bodies, the members being nominated annually by His Royal Highness the President, who approves, or if he so desires has the power to disapprove, the course recommended.

8. Thus we have as security against error in all seven safeguards, namely the reports of the inspecting visitors both medical and lay, the Statistical Report, the judgment of the distribution committee, which includes leading representatives of the medical and surgical professions, the approval of the executive committee, through whom the proposals of the distribution committee pass on to the general council, which is in itself a strong and representative body. Further, we have the constant supervision of His Royal Highness the President and on more important matters the sanction of His Majesty the founder and patron of the fund which bears his name.

(B) *Whether any, and if so what, conditions are attached to the acceptance of a grant from the fund.*

9. All grants are subject to the following two conditions:—

(a) As the result of the report of a Committee appointed to enquire into the financial relations between hospitals and medical schools in London (a copy of which is enclosed), the Hospitals were notified on April 12, 1905, that on and after January 1, 1906, no grants would be made to any hospitals which made payments to, or on account of, their medical schools out of general funds subscribed for the relief of the sick poor.

(b) All hospitals receiving grants are required to present their accounts in accordance with the "Uniform System of Hospital Accounts," including a balance sheet.

10. Special conditions are frequently attached for such objects as the following:—

(a) To open (or re-open) and maintain beds closed for want of funds. 413 beds hitherto closed have been made available by this means up to the present date.

(b) To reduce debt.

Where a hospital owes money to its tradesmen it is practically unable to purchase supplies in the open markets, and is consequently put to additional cost for purchase of ordinary supplies. Or it may be that owing money to a bank it is handicapped by the interest payable.

(c) For special work, as for purchase of adjoining land which is urgently required,—or for an operating room, improvement of nurses' accommodation, etc.

(d) For removal to a place where its services are more required than on its present site, as in the case of King's College Hospital now removing to South London.

(e) For amalgamation, as in the case of the Orthopaedic hospitals now being amalgamated in view of the fact that one central special hospital with a country branch will be better for patients who require lengthy treatment, with probably a series of small operations, than three rival institutions all in the streets of London.

(f) For extension where this appears badly needed.

Care is taken that sums given for special purposes are used for the purpose intended, and it should be clearly understood that the sums given for special purposes are as a rule not necessarily to be considered as adequate for the purpose but as substantial grants to encourage the collection of the whole amount required.

(C) *The future of the finance of voluntary hospitals in London as judged by past tendencies and present conditions.*

11. The answer to Question C being a matter of opinion, we prefer to leave the subject to individuals whose responsibility is limited to their own evidence.

(D) *The extent to which the Poor Law infirmaries are competing with the work of the general hospitals.*

12. This being a matter which does not come within the scope of our work, we are not in a position to answer this question satisfactorily.

SUPPLEMENTARY STATEMENT, JULY, 1908.

13. As the result of the King Edward's Hospital Fund for London Act, 1907, the constitution and procedure of the Fund have been altered in the following respects amongst others:—

(1) The Fund is now a corporation and the governing body is the president and general council.

(2) The distribution committee recommends as to all questions of distribution to hospitals and reports direct to the president and general council.

(3) The power of deciding all questions as to the distribution or disposal of the funds of the corporation is vested in the president and general council.

(4) In all other matters the president has power to approve or to disapprove the course recommended.

MEMORANDUM BY THE MEDICAL OFFICER OF THE LOCAL GOVERNMENT
BOARD ON THE UNIFICATION OF THE OFFICIAL MEDICAL
SERVICES FOR THE POOR.

As indicated by the terms of the reference to me which is appended to this Memorandum, I am asked to make general observations on the feasibility and expediency of separating the powers and duties of the Poor Law guardians in connection with medical relief from those relating to ordinary relief and transferring them to the existing sanitary authorities; and to make further observations on points of detail in relation to this proposal.

It is assumed in the reference (Appendix): (1) That these powers and duties as to medical relief will remain the same as at present; and (2) that no change apart from the transfer will occur in the existing sanitary authorities.

These conditions have been assumed to hold good in the following Memorandum, except that, as occasion has necessitated, I have pointed out the unsatisfactory character of many of the smaller sanitary authorities, and the importance of modifying the official medical services for the poor, in such a way as shall prevent the evils arising from the belated and insufficient treatment of disease.

On the general question of the feasibility of the suggested severance, I have nothing to add to the answer given to Question 1 (a), except that the magnitude of any difficulties involved in the transfer will need to be considered in context with the advantages to public health which would result. If a given change of sanitary administration improves the value in sanitary result obtained for a given expenditure of money and energy, it is desirable to obtain this result; and a similar criterion must be applied to decide whether a measure is feasible or not. Feasibility is usually a relative term; and as there is no inherent impracticability in the suggestion to unify the medical services for the poor, which I am asked to discuss, the question turns on the degree of desirability, as set forth in subsequent sections of this Memorandum.

In my answer in detail I shall give reasons for the conclusion that the present division of medical duties is gravely mischievous to public health, and the unification suggested is very desirable. The only general observations which appear to me to be required in supplement to these detailed replies consist of a short statement of the principles on which, as it appears to me, the consideration of such questions should be based. Sickness is always more costly than the means for preserving or restoring health; and the standard of medical aid required by the community, both on economic and on hygienic grounds, is such a system as will ensure the early recognition and the proper treatment of all sickness. Early recognition of disease, followed by its efficient treatment, is one of the most important parts of preventive medicine, not only by preventing the spread of infection, but also by preventing in a large proportion of cases the later and less curable stages of serious disease which may not be infectious. It has to be added that under the present conditions of treatment of sickness for the poor, diagnosis is usually belated, treatment is curtailed, and its efficiency is correspondingly diminished.

(1) (a) *Assuming such severance as above mentioned, what practical arrangements could be made for medical relief by sanitary authorities?*

There would be no serious difficulty in the sanitary authority taking over the district medical officers, and undertaking through them the outdoor medical work now done under the Poor Law. Under the auspices of the sanitary authority, a larger proportion of the destitute sick might be expected to apply for medical aid. Any case in which the qualification was in doubt could be referred to the relieving officers, who would continue under the board of guardians or whatever body may take its place, and would make any necessary inquiry for the sanitary authority, just as at the present time attendance officers under the control of the education committee investigate and report to the watch committee cases of boy-workers, and to the medical officer of health the causes of absence from school of suspected children.

APPENDIX No. LIV.—*Continued.*

In some cases there would be difficulties in the transference to the sanitary authority of the medical work now carried on in workhouses and workhouse infirmaries, owing to structural and administrative identity between the two. Such difficulties are not likely to be insurmountable in any case, but it is impossible to express the mechanism best suited for the transfer in a formula universally applicable. As a rule the administrative arrangements would have to be considered with an eye to the special circumstances of each case. If there are separate buildings for sick and able-bodied paupers, separate administration can be arranged. In larger administrative areas it will even be practicable to specialise, allotting particular buildings to special classes of cases. In smaller areas, where at present the workhouse and infirmary are in the same building, it would be desirable to separate them, if this could be done conveniently and without too great expense. The possibility of such separation would depend on the nature of other purposes for which building accommodation was required, and on the possibility of adapting existing buildings of the guardians for such purposes or in some other way effecting an exchange. In many cases where this was impracticable the addition of some part of a building might possibly permit the separation of existing premises into two. The addition for instance of a separate kitchen might enable the infirmary building or the infirmary wing to be shut off from the workhouse. However, when the circumstances of each case allowed of it, it would be indispensable to find means for avoiding dual control in a single building, which would be likely to be fatal to efficient administration.

(1) (b) *Whether the existing use by sanitary authorities of their powers as to the prevention of disease and treatment of infectious disease including the management of hospitals are on the whole satisfactory.*

Among sanitary authorities are included bodies charged with the health of as few as 219 and as many as more than 700,000 persons, employing medical officers of health giving as little of their time as is represented by a salary of £3 per annum, up to whole-time officers, and differing in a great variety of other local circumstances.

I do not see how I can offer any trustworthy estimate of the efficiency "as a whole" of this heterogeneous collection of administrations. A first approximation to such an estimate is all that can be put forward with any confidence, and perhaps the most convenient way of obtaining this is to set forth the relative death-rates in successive quinquennial periods since 1861-65 from all causes and from certain diseases over which sanitary authorities have exerted especial control.

I do not include in this table the figures for phthisis and smallpox, because the administrative control of these diseases has been divided between the sanitary authorities and the boards of guardians. Nor have I included measles and whooping cough, which the majority of sanitary authorities have made little effort to combat. I may add that I entertain little hope of success in respect of these two diseases until more efficient medical attendance is promptly available in the homes of the very poor.

TABLE I.
RELATIVE DEATH-RATES, 1861-65 to 1901-05.

(The death-rate under each heading in 1901-5 is given as 100, and the death-rates in earlier quinquennia are stated in proportion to this).

—	General Death- rate.	Scarlet Fever.	Diphtheria and Croup.	Typhus.	Enteric Fever.	Diarrhoea and Dysentery.	Erysipelas.
1861-65	141	780	243	—	—	135	244
1866-70	140	762	152	—	—	182	230
1871-75	133	603	133	5,820	331	152	295
1876-80	130	540	125	2,440	246	126	226
1881-85	122	346	144	1,630	192	99	231
1886-90	119	192	134	472	159	101	151
1891-96	117	145	146	272	154	96	134
1896-1900	111	107	139	100	155	121	98
1901-05	100	100	100	100	100	100	100
Death-rate per 1000 of population in 1901-05.	16.00	0.13	0.22	0.001	0.11	0.68	0.04

APPENDIX No. LIV.—*Continued.*

The record here set forth is, on the whole, extremely satisfactory. The improvement exhibited is due in part to general social amelioration, as broadly indicated in the reduction of the general death-rate. The much greater reduction than that shown by the general death-rate, which has occurred in the death-rate from those diseases with which sanitary authorities have busied themselves, suggests that the aggregate action of sanitary authorities must have had a very substantial share in the improvement of public health, although it cannot be measured with exact numerical accuracy by the excess of the reduction in the death-rate from these diseases over that from all causes in the aggregate. For enteric and typhus fevers the sanitary authorities may claim the entire credit.

An enumeration of some details of the work performed by sanitary authorities leads roughly to the same conclusion.

They have hospitals for the treatment of cases of the more serious acute infectious diseases, and occasionally they lend out nurses for the home treatment of cases of these diseases, especially of puerperal fever, erysipelas and enteric fever. They provide, in many instances, antitoxic serum for the gratuitous treatment of diphtheria, both for prophylactic and for curative purposes. The medical officer of health acts both in consultation with practitioners and independently in diagnosing doubtful cases of these diseases; and either he or his medical assistant visits infected or suspected houses, with a view to the detection of "contact" cases and "missed" or overlooked cases. A large proportion of sanitary authorities also provide gratuitously for the diagnosis of doubtful cases of diphtheria, enteric fever, and phthisis by bacteriological means. A few sanitary authorities pay doctors' fees when they have been sent for by midwives in difficult cases. Much work is also being done by sanitary authorities in the treatment of phthisis (consumption). Free examination of sputum is provided. Voluntary or compulsory notification of cases is followed, to some extent, by action beneficial both to the patient and his family. The patient's room is disinfected and cleansed; spit-bottles and handkerchiefs are supplied; sanatorium training and treatment may be, and is sometimes, provided (in Brighton half the total notified cases have been treated and trained in the sanatorium). Similar instructions as to the management of the patient's illness and the prevention of infection are given to the patient at home. Any relatives found to be flagging in health are encouraged to secure medical aid or helped by its provision. The new work opened up by the compulsory medical inspection of scholars under the Education (Administrative Provisions) Act, 1907, will lead to the detection of much disease, advice being given to parents as to the appropriate medical aid. School clinics have been begun in some towns for the treatment of certain diseases, especially the neglected chronic communicable diseases of the scalp and skin. The school nurse and health visitors are following up this work by school and domiciliary visits. The responsibility for lunacy is divided, the guardians paying for most of the patients in asylums, with the help of a capitation allowance from the Government, while county councils and county boroughs administer the asylums.

This statement is incomplete, but it discloses the facts that the line has never been strictly drawn between the prevention and the treatment of disease, and that sanitary authorities are already responsible for the treatment of a very high proportion of the total acute sickness among the poor. If lunacy be included under this head, sanitary authorities, including county councils, probably treat more than half of the total sickness institutionally treated at the expense of rates and taxes. The attribution of a substantial share in the reduction of disease to the administration of the sanitary authorities is thus justified by a summary analysis of their work, and the conclusion, favourable to the aggregate work of the sanitary authorities, must include, "on the whole," the several elements of administration to which reference is made in the Question 1 (b).

Although I do not wish materially to qualify this conclusion in respect of scarlet fever, it may be desirable to deal here with the suggestion occasionally made that the continued prevalence of this disease shows that the isolation hospitals of sanitary authorities have failed to restrain it. This suggestion, and such evidence as has been advanced to favour it, ignore the facts that our knowledge of the means of spread of this disease is imperfect, and that the segregation of recognised cases is only one out of many preventive means required. Before this extremely and rapidly infective disease can be expected to disappear, sanitary authorities will require more accurate and rapid means of avoiding "missed" cases and more efficient provision of medical supervision of the families of patients, than at present are usually secured. Meanwhile, hospitals for scarlet fever not

APPENDIX No. LIV.—Continued.

only meet a great social need, but, where established by sanitary authorities, aid in controlling the disease, although the results are masked by sources of infection at present beyond our control.

The conclusions to which these facts lead in regard to sanitary authorities are that their existing use of their powers as to the prevention of disease and treatment of infectious disease, including management of hospitals, are on the whole satisfactory, so far as a valid opinion can be expressed on the average behaviour of a very heterogeneous collection of bodies. To any one familiar with the workings of the less efficient sanitary authorities it will be obvious that this conclusion in regard to the general body of authorities, in regard to many of them is not justified. In order to form an idea of the extent to which this relative inefficiency is to be expected, it is convenient to consider shortly the distribution of the population of England and Wales among sanitary authorities and among boards of guardians respectively. The facts are summarised in Table II. and the same facts are set out graphically in Fig. 1.

FIG. 1.

50,000 and over - - - - -	178	4	72
Totals - - - - -	643	660	1 129

■ Taking the country as a whole, the average population of sanitary areas is not much more than one-third that of unions. This is owing chiefly to the number of very small urban and rural sanitary districts. Of the total 660 rural districts and 1,129 urban districts 8·5 per cent. of the former and 19·9 per cent. of the latter had a population under 3,000, 18·4 per cent. of the former and 39·1 per cent. of the latter had a population under 5,000, 52·4 per cent. of the former and 62·2 per cent. of the latter had a population under 10,000. On the contrary, only 12·7 per cent. of the Poor Law unions had a population under 10,000. These figures need to be partially qualified for the few districts which have combined to secure the services of a medical officer of health who devotes the whole or a large part of his time to the public service. Such combined authorities do not affect materially the general view that more than half of the sanitary authorities—happily, however, representing a much smaller proportion of the population of the country—consist of units of less than 10,000 population.

Experience has shown that, as area of administration is sub-divided below certain minimum limits, so local personal interests predominate; and that, in accordance with this, a very large proportion of the smaller sanitary authorities are unworthy of their powers. Local considerations of expense and favouritism, and the insecurity of tenure of office of their sanitary officers, make efficient work an exception. A chief reason why sanitary progress has been impeded, is furnished by the continued existence of these unsatisfactory small sanitary authorities. They do not as a rule obtain skilled advice, nor can they afford to obtain it when uncombined with other districts. Even when such advice is obtained, a small area of administration increases the risk of its neglect.

In considering, therefore, the work of sanitary authorities under any improved conditions, it is indispensable that the anomalously small authorities must be combined or re-distributed into units of at least the same order of magnitude as that of the large majority of the parochial unions, so that each may have within the reasonable limits of its purse the minimum staff and equipment required for efficiency.

(2) *Whether it would be prejudicial to the existing functions of sanitary authorities to super-impose upon them the functions of the guardians in relation to the treatment of disease.*

In the course of my answer to Question 1 (a) it has been shown that the sanitary authorities already treat a very large amount of sickness. The super-position on sanitary authorities of the medical functions of the guardians would in addition place under their control, such part of the medical treatment of the destitute poor as is not already in their hands. The destitute poor are precisely that class of the community whose disease is most largely caused or increased by the sanitary conditions of their homes and families, the supervision of which is already incumbent on the sanitary authorities. This supervision at present has to be conducted under the grave disadvantage that Poor Law medical

APPENDIX No. LIV.—*Continued.*

officers are the only persons with medical knowledge who are acquainted through daily intercourse with the evil and insanitary conditions associated with sickness among the very poor. The knowledge as to circumstances of sanitary significance, which they could acquire on the mere occasions of being called in to discharge medical duties, is at present sought by the sanitary authorities through the over-lapping but infrequent and less satisfactory visits of a sanitary inspector. Subject to the condition that new district medical officers should possess sanitary as well as purely medical knowledge, the transfer to the sanitary authorities of their duties and services and the daily co-ordination of their work with that of the medical officer of health, so far from being prejudicial to the existing functions of the sanitary authorities would immediately relieve the inspectors of these authorities of much work now done under less advantageous conditions than those of the district medical officer. Thus, with no greatly added expense, the sanitary authorities would secure more complete and more timely information than they now obtain. When account is taken of the importance of securing preventive measures at the earliest possible stage, the mere increase in promptitude of diagnosis of sanitary evils would be an enormous gain to the public health. Under the altered conditions, it would be possible to prevent and control many infectious diseases which baffle the belated efforts made under the present system. The gain would not end with the immediate gain of notification. In the hands of the sanitary authority notification of disease or of insanitary conditions is the start-point, not merely for treatment of recognised disease, but also for the application of all practicable measures for improving defective environment, and for the detection of fresh cases of disease at their inception. It is scarcely necessary for me to labour the contention as to the great assistance which can thus be given to the sanitary authority in adopting remedial measures for that proportion of the population which most breeds and most suffers from disease; but I may illustrate these definite but general propositions by instancing circumstances in which the proper work of the sanitary authority would be assisted by the transfer of powers under discussion.

Information as to insanitary occupations, as to overcrowding or uncleanness, or bad conditions of housing, or other conditions or habits militating against health will no longer be allowed to run into *culs-de-sac* and there be lost, but will be utilised to its fullest extent for the public welfare.

In phthisis, the sanitary authority can, and does to a certain extent in some instances, already utilise institutional treatment as an educational aid to the prevention of the spread of infection. A few boards of guardians have carried out similar work. With a unified medical service this work would become much more efficient.

In measles and whooping-cough, and in summer diarrhœa, the union of functions under one authority would greatly tend to the successful prevention of disease, and there is reasonable ground for hoping that it would bring under control these diseases which have hitherto been regarded as largely outside the scope of preventive influences.

In the light of my experience, my opinion is that the existing duties of sanitary authorities would incur no risk of being neglected through attention to their new medical duties, in the event of medical services for the poor being unified. On the contrary, it will be apparent from what I have said already, that the connection will tend to extract from each branch of the unified service a fuller measure of utility than can be obtained from the present separate branches. There might be such a risk in the case of the small sanitary authorities whose constitution I have discussed in my answer to Question 2 (b). No one responsible for the public welfare, however, so far as I am aware, proposes to entrust them with further duties, or favours their continued existence. With larger authorities increased duties are a question of adjustment, and, if needed, of increase in the number of executive committees. In my experience, it is immensely easier to secure active co-operation between the different committees of one authority than between different public authorities having no statutory relationship to each other.

(3) *Whether there is any evidence to show that the existing division of medical activity, as between the guardians and the sanitary authorities, is detrimental to public health.*

A detrimental effect attributable to the division of medical activity between the guardians and the sanitary authorities may be seen in certain individual instances. Thus the divided responsibility as to cases of puerperal fever and erysipelas needing institutional treatment at the present time leads to inefficient arrangements for such cases and to much suffering and some loss of life. Certain guardians, again, have neglected their statutory duties in respect to vaccination. Had they been charged with the maintenance of a small-pox hospital and its patients, an additional incentive to efficiency in vaccination would have been at hand. Such instances represent only a small part of the mischief caused by the division of responsibility and powers. The principal mischief, the existence

of which can scarcely be demonstrated except by personal experience, lies in the fact that treatment by the guardians is unpopular to the patient and wasteful of opportunity to the sanitary authority. General relief under the Poor Law is, necessarily, deterrent in character, and medical relief is entangled in the general system; the conditions under which it is given being consequently stricter than would be either necessary or desirable if every applicant was recognisably disabled by disease. For the most part, this strictness and the sense of indignity felt in connection with it, attaches in some measure to parochial medical treatment, although, in fact, it is administered with greater leniency especially in regard to institutional treatment. Hence the endeavour of many sick men on the verge of pauperism is to keep away from the pauper status, in which they could obtain efficient relief. They seek the cheap but extremely unsatisfactory medical aid available to those just above the pauper line; and thus aggravate their disease by delay, and by continuing work when physically unfit for it. There necessarily follows extension of disease, increase of the ultimate cost of treatment, and reduction of the prospect of cure. The close connection between disease and poverty, and the vicious circle in which they act and re-act on each other, make this exacerbation of the effect of non-communicable sickness a serious detriment to the public health. In infectious cases, the mischief does not end with the individual, but extends to the population in contact with the patient.

In the case of phthisis, the institutional treatment of patients is the most efficient of the several important administrative means for controlling the spread of the disease; and the effect, in this respect, of the treatment of phthisis in workhouse infirmaries would plainly have been greater if, on the average, the treatment had attracted patients at the earlier stage of their disease instead of repelling them till the disease was advanced.

The division of medical activity between guardians who treat disease and sanitary authorities who endeavour to prevent it presents the further disadvantage of wastage of valuable and opportune information. The houses visited by the district medical officer and the relieving officer are, as pointed out in my answer to Question 2, precisely those most urgently needing the attention of the sanitary authority. They are always the houses yielding the richest crop of sanitary defects and unwholesome conditions, and containing the most likely vehicles of infection; and the occasions when these houses are visited by the Poor Law officers are those on which the need for supervision from a public health standpoint is almost certain to be at its greatest. If the district medical officer were also an officer of the sanitary authority, trained to a certain extent in sanitary as well as general medical knowledge, and if it were made part of his duty to include sanitary matters in his purview, his visits would lead to the prompt recognition of conditions of persons and of their environment needing remedy at a time when the remedy could be applied most effectively. Thus preventive medicine, acting through the sanitary authority, would gain the advantage of early diagnosis both of disease and of unwholesome environment. In existing circumstances this advantage is lost altogether, infection and sanitary defects persisting until the attention of the sanitary authority is directed to them by further disease or by some independent circumstances.

(4) *Whether any general or particular suggestions can be made as to greater co-operation between guardians and sanitary authorities.*

It would be advantageous to the public health that the sanitary authority should be able to utilise the institutional accommodation at the disposal of the guardians in the same way as the guardians have the use of beds in the sanitary authority's isolation hospital. This advantage, however, would as a rule be reduced to a minimum by the effect of the association of the infirmary with the workhouse, to which attention is drawn in the answer to Question 3.

It is also desirable that the medical officer of health should receive from the district medical officer, the relieving officer and the medical officer of the infirmary, immediate notification of every case of phthisis when first brought to their notice, and advice of admission to and discharge from the infirmary and of change of address; immediate report from the district medical officer and relieving officer on insanitary and unwholesome conditions found in houses visited by them; and a weekly list of all houses visited by them in which there was any sickness. Such information would enable the sanitary authority to take the measures such as disinfection required for phthisis, etc., as well as to move in matters of sanitary defects, and to direct the attention of their sanitary inspectors and health visitors to houses specially needing supervision. On the grounds given in my reply to Question 2, I do not think that such arrangements, except those for the notification of phthisis, would work efficiently in practice, and I assume that in these circumstances it is not desired that I should discuss them in detail.

ARTHUR NEWSHOLME.

APPENDIX No. LIV.—*Continued.*

PAPER INDICATING THE NATURE OF THE MEMORANDUM DESIRED FROM THE MEDICAL OFFICER OF THE LOCAL GOVERNMENT BOARD.

The question has been raised whether the powers and duties of Poor Law guardians in connection with medical relief should be severed from those in connection with ordinary relief and transferred to the existing sanitary authorities. A memorandum containing general observations on the feasibility and expediency of this proposal is desired, and, in addition, observations on the following points:—

(1) (a) Assuming such severance as above mentioned, what practical arrangements could be made for medical relief by sanitary authorities.

(b) Whether the existing use by sanitary authorities of their powers as to the prevention of disease and treatment of infectious disease including

the management of hospitals are on the whole satisfactory.

(2) Whether it would be prejudicial to the existing functions of sanitary authorities to super-impose upon them the functions of the guardians in relation to the treatment of disease.

(3) Whether there is any evidence to show that the existing division of medical activity as between the guardians and the sanitary authorities is detrimental to public health.

(4) Whether any general or particular suggestions can be made as to greater co-operation between guardians and sanitary authorities.

APPENDIX No. LV.

STATEMENT OF EVIDENCE BY THE QUEEN VICTORIA'S JUBILEE INSTITUTE FOR NURSES.

1. Queen Victoria's Jubilee Institute for Nurses was incorporated by Royal Charter in September, 1889, and was endowed by her late Majesty Queen Victoria with £70,000, the offering of the women of Great Britain and Ireland, on the occasion of the celebration of the fiftieth year of her reign. The objects to which the annual income of the fund is to be applied are stated in the Charter to be "the training, support and maintenance of women to act as nurses for the sick poor, and the establishment (if thought proper) of a home or homes for such nurses, and generally the promotion and provision of improved means for nursing the sick poor." The provisional committee appointed by Her Majesty to give effect to her wishes decided, with her approval, to adopt as the institute's particular work, the larger development of district nursing by providing trained nurses for the sick poor in their own homes.

Affiliation.

2. The institute recommends Queen's nurses to affiliated associations only, the local committees having power to engage or dismiss such nurses.

That an association may become affiliated, the promoters agree to carry on the work on certain broad principles, and also to take the necessary measures to satisfy the council that the financial prospects of the association give reason to expect that the work will be permanent. The few rules that the institute has laid down as indispensable in defining the lines of work of its affiliated associations are such as have been proved by experience to be essential to success and the attainment of the objects in view, namely, the efficient nursing of the sick poor.

Inspection.

3. In order that the standard of efficiency may be maintained, the institute reserves to itself the right of requiring reports from affiliated associations and of periodical inspection of the nurses' work.

Systematic inspection is an essential factor of the work of the institute. It is carried out by Queen's nurses who have had practical experience in the various conditions of district nursing. Although these inspections are entirely professional, and in no way interfere with

local committees, the inspectors are always ready to help and advise committees and secretaries as to the organisation and conduct of the work.

Training.

4. The following qualifications are considered requisite in order to entitle a nurse to be placed on the roll of Queen's nurses:—

(a) Training at approved hospitals or infirmaries for not less than three years, to include at least two years in an approved general hospital or infirmary.

(b) Approved training in district nursing for not less than six months, including the nursing of mothers and their infants after childbirth.

(c) Nurses to be employed in midwifery must, in addition, receive the training required by the Central Midwives' Board, and be certified under the Midwives' Act (1902).

These conditions are subject to modification by the council, to meet exceptional cases of those engaged in district work under any association at the time of affiliation, who may afford satisfactory evidence of competency.

A hospital trained nurse engaged by the institute for district training enters one of the affiliated homes for six months, during which time she works in the district under the instruction and close supervision of the superintendent. She learns how to adapt the knowledge and skill she has gained in hospital to the circumstances of her district patients and how to make the best of the unfavourable conditions and limited appliances available in a poor home. Lectures on "Hygiene," "Cookery," and other subjects, with special reference to district work, are also given.

General Rules.

5. I. The nursing of patients is carried out under the direction of medical practitioners.

II. The nurses are strictly forbidden to interfere in any way with the religious opinions of their patients or of members of their families.

III. The services of the nurses are for cases of the sick poor and working classes in their own homes, without distinction of creed. Patients, however, may be attended

APPENDIX No. LV.—*Continued.*

who, though unable to incur the expense of a private nurse, are able to make some contribution to the funds of the association, provided that the full performance of their primary duty of nursing the sick poor leaves the nurses time for such work.

IV. The nurses attend cases of childbirth, either as midwives or where a medical man is in attendance, provided that proper precautions are taken. Nurses employed as midwives in large towns do not undertake general sick nursing. With regard to midwifery cases a fee is charged for the nurse's services, except in special cases.

V. The nurses may not attend infectious cases unless with the sanction of the medical men and committee.

District Area.

6. Experience has proved that one nurse is sufficient for a population of 4,000 to 9,000 in a town where midwifery is not required. A radius of from three to four miles, with a population of from 700 to 1,500 or 2,000, is usually a convenient area for one nurse in the country where it is possible to combine midwifery with general nursing, although much larger areas are undertaken. Much depends upon the geographical conditions of the district as to hills, rivers and the condition of the roads.

Expense.

7. A Queen's nurse costs the district which employs her from £85 to £100 a year. The minimum salary is £30 a year, with an annual allowance of £4 for uniform. In addition to this sum, which is independent of local conditions, board, laundry, furnished rooms, fire, light, and attendance, or equivalent allowances, have to be provided. In some cases the nurse receives an inclusive sum to cover her salary and all other expenses. The conditions and requirements of different districts vary so much that it is not possible to name a definite sum as the cost of a Queen's nurse, but, as a rule, except under very exceptional circumstances, £85 to £100 are the limits. When two or more nurses live together, the cost per head is a little less.

Lines of Work.

8. A nurse working alone in a small town or country district is responsible to the committee of the association and reports to them, at their monthly meetings, on her work. It is the nurse's duty to visit all cases on her books once or twice a day or as often as they require, and to do for them all that is necessary, in each carrying out the instructions of the medical man as to treatment, etc. She is responsible for the personal cleanliness of her patients and the nursing order of their rooms and should, as far as possible, teach the friends of patients to do what is needful.

In towns the nurses live together and, where more than four are employed, are under the supervision of a superintendent, herself a Queen's nurse. Each nurse is usually allotted a district, and all applications for the nurses' services are made to the superintendent. She keeps the register of patients and time book, and is generally responsible to the committee and the medical men for the management of the home and the efficient nursing of the patients.

To quote Mr. Charles Booth in support of this method of work: "A number of nurses collected at one centre, their course of work arranged and supervised by a lady superintendent—who is herself a trained nurse—can accomplish far more, and do it far better, than if distributed amongst the parishes and placed, each individually, under parish control."

Relief.

9. Except under very special circumstances no relief of any kind is administered to patients by the nurses. All cases needing help are reported to the hon. secretary or other proper authority, who would see that the necessary assistance is given.

County Nursing Associations.

10. County nursing associations are affiliated to the institute with the following objects:—

(a) To promote local interest in the work of providing trained nurses and midwives for the sick poor in their own homes throughout the county.

(b) To raise funds locally for the training and support of such nurses within the county.

(c) To establish nursing centres as far as may be throughout the county.

(d) To seek out and train suitable women either as Queen's or village nurses in accordance with the regulations of the Queen's Institute.

A county nursing association undertakes to provide for, further develop and increase the efficiency of district nursing throughout the county. It attains these ends:—

(i) By organising and affiliating local nursing associations and assisting them to obtain:—

(a) Queen's nurses, *i.e.*, nurses with full hospital, district and maternity training, at a cost to the local nursing association of from £85 to £100 a year.

(b) Village nurses, *i.e.*, nurses with preferably twelve, but in no case less than nine, months' district and maternity training in an accredited training school, certified as midwives under the Midwives' Act, at a cost to the local nursing association of from £45 to £60 a year.

(ii) By providing expert supervision by a Queen's nurse, the county superintendent.

County Superintendents.

11. The county superintendent is responsible for the efficient supervision of the village nurses, and, if the extent of the work require it, an assistant superintendent is employed. In connection with this duty the Queen's Institute will, when funds permit, contribute to the salary of the county superintendent or that of her assistant. The minimum salary of the county superintendent is £110 a year, rising £5 annually to £120; this covers salary, board, lodging, uniform and laundry.

The county superintendent is responsible to the county committee for the maintenance of a high standard of the nursing work throughout the county. Her duties include the interviewing and engaging of nurses, subject to the approval of the committee and arranging for their training and future work. She superintends the work of the nurses of the association, visiting them all and reporting to the county committee and the local associations as to their efficiency. In order to maintain the standard of nursing and to encourage and supplement the training of village nurses, she sees them at regular intervals, visiting with them the patients under their care. During their first year's and second year's work the visits are usually monthly, or oftener if need be. All the nurses connected with the county association report to her once a month, notifying their new cases: she keeps a register of the nurses, and a record of their work. She goes to places in the county desiring nurses, explains the methods of work, and helps to start the new association.

Employment of Nurses.

12. Queen's or village nurses are employed by associations according to the population and requirements of the district, in accordance with the regulations specified by the Queen's Institute, which will only sanction the employment of village nurses:—

(a) In a rural district where it is impossible to support a Queen's nurse and the population of the district does not as a rule exceed 3,000; or

(b) In a district in which a Queen's nurse is already employed, and where special conditions make it desirable that a village nurse also should be employed under her directions.

The employment of village nurses for general sick nursing shall be entirely on the responsibility of the association under which they work, and with the sanction of the medical men; they should only be allowed to live in the patients' houses where the local circumstances render it necessary.

Fees.

13. The council of the Queen's Institute, while approving the encouragement of contributions from patients, whether as voluntary offerings or by means of fixed charges on the provident system or otherwise, disapproves of charges for the nurses' services being made by the

APPENDIX No. LV.—*Continued.*

visit, or the nurses being made responsible for the collection of the fees, experience having proved that the adoption of either of these practices hinders the usefulness of the nurses' work. It is understood that the nurse's services are given free in all cases of necessity. With regard to midwifery cases, a fee should, except in special cases, be charged for the nurse's services when she is engaged to act as midwife. The nurses are strictly forbidden to interfere in any way with the religious opinions of their patients or of members of their families.

Existing associations in the county are in no way interfered with, but are eligible for affiliation provided they conform to the rules of the county association.

Training of Village Nurses.

14. Each county association makes its own arrangements for the training of its village nurses within the limits laid down by the agreement with the Queen's Institute. The majority receive their training at the Plaistow Home, where the training of village nurses has been systematised. There is an enormous population in this "London over the border," mostly of the unskilled labour class, which gives wide scope for nursing help, both for maternity and general district nursing. The candidates selected by the various county associations receive here a regular course of practical and theoretical midwifery, and are obliged to pass the examination required by the Central Midwives' Board. A further course of instruction is given in "First Aid" and "Sick Nursing" in the homes of the poor under a staff of trained district nurses.

In many counties the technical education committees of the county councils grant nursing scholarships for the training of the local women in midwifery and district work. When these scholarships are obtainable the expenses of the central funds are not so heavy.

If found satisfactory, candidates are required to sign an agreement to remain in the service of a county committee for a fixed period, usually three years. A village nurse is provided with the county uniform and nursing bag at the expense of the association. The usual training fees are from £30 (nine months) to £35 (twelve months); the bag, uniform, and other incidental expenses bring the total cost of twelve months' training to about £50.

The salary of a village nurse varies from 14s. a week, rising to 16s., 18s., or £1 a week during the term of agreement to cover salary, board, lodging and laundry. The uniform, provided in the first instance by the county association, is maintained afterwards by the local association.

Owing to the irregularity of the nursing work in the country the village nurse may be required almost day and night for a short time, and at other times have almost nothing to do. In such cases the nurse, when not busy, should be encouraged to visit any chronic cases or old people and read to or otherwise interest them, or to take charge of a young child to relieve a busy mother for an hour or two. Under wise supervision such employment is beneficial to both nurses and patients. As the nurse is responsible to the committee for the good order of the various garments lent to patients, she may also, when not busy, keep them in repair.

GENERAL INFORMATION.

Midwifery.

15. A Queen's nurse working in a rural district where midwifery is necessary will be a certified midwife. Due provision for the nursing of general cases must be made under the rules of the Central Midwives' Board. It is often practical and desirable to employ a village nurse as midwife in rural and small urban associations working under and in conjunction with the Queen's nurse.

By the agreement between the Queen's Institute and its affiliated associations, no midwifery cases may be undertaken without the payment of a fee, except under very special circumstances.

Valuable statistics have been collected with regard to the midwifery work of the nurses in connection with the institute during 1905. One satisfactory result is that they tend decidedly to show that midwifery and non-infectious district nursing may be combined with safety by Queen's nurse midwives or the village nurses of the institute.

In four county associations the county superintendent is also undertaking the duties of inspector of midwives for the county council.

School Nursing.

16. School nursing is undertaken in eight affiliated associations and it seems probable there will be a fresh extension of this useful work in the near future. The district nurses not only attend to the children and carry out the treatment prescribed by the doctors, but instruct the mothers in the prevention of many of the minor ailments which interfere with attendance at school.

Support of Associations.

17. There are various methods of raising funds to support the work. It depends on the condition of labour in the district as to which method should be regarded as the mainstay of the association.

In towns (large and small) with a mixed population without uniform employment, annual subscriptions and donations from all classes are the chief source of income. In this case general nursing is free, but patients should always be encouraged to give according to their means, and efforts should be made to secure small subscriptions—half-crowns, shillings, even sixpences—from tradespeople, small shopkeepers and the working classes, by house-to-house collections. A systematic collection by collectors, to each of whom a few streets or a ward of a town is allotted, gives substantial results. All churches and chapels should be asked to devote the collections on at least one Sunday in the year to the nursing fund. Boards of guardians may also be approached, as they are allowed to make grants to district nursing associations in order that the nurses may attend those in receipt of outdoor relief. There are often local trust funds or charities from which grants and even endowments can be obtained. A saving in the expenses of associations can also be effected if tram and railway companies can be induced to give free passes on the cars and railways for the nurses. Such passes are always a great boon to the nurses personally.

In many mining, colliery and manufacturing centres, where there is a uniform level of work and wages, it is possible to support an association on the lines adopted by some of the provincial hospitals, i.e., the men employed in the various industries agree to the deduction of a certain sum, $\frac{1}{2}$ d., 1d., or $1\frac{1}{4}$ d. weekly, fortnightly or monthly from their wages. Such a system with representatives of the various trades on the committee works well, and there is more than one instance of an association which is almost self-supporting. If medical clubs exist in the district it is better that the payments to the nursing fund should not be arranged on exactly the same lines.

In small country towns of a population of less than 10,000, and in rural districts, it is advisable, if possible, to place the scheme on a provident basis, with a scale of contributions suitable to all classes, from the labourer earning 15s. per week to the small tradespeople and farmers. Such a system entitles the subscribers of the fixed amounts to the services of the nurse for themselves and their families, non-subscribers may obtain her services at a higher rate, while cases in receipt of outdoor relief are provided for by a grant from the guardians. All subscribers should be provided with membership cards on which their payments (monthly, quarterly or annual, as the case may be) should be entered as received; these should be presented when application is made for the services of the nurse. It is not always possible to make such an association entirely self-supporting, and the funds may need supplementing by annual subscriptions and donations from the wealthier residents, by church collections, and the other sources suggested for urban districts.

The work in England, Ireland and Wales is directly under the central council of Queen Victoria's Jubilee Institute for Nurses. A Scottish council has from the beginning undertaken the responsibility and management of the institute's work in Scotland, raising all funds required beyond the annual grant from the central fund. A great impetus has recently been given to the work in Ireland by the foundation of Lady Dudley's "Scheme for the establishment of district nurses in the poorest parts of Ireland," in accordance with which nurses, provided by the institute, are maintained in the extreme west and congested districts, where poverty is so universal.

APPENDIX No. LV.—*Continued.*

that local committees cannot be formed. The comments of the Viceregal Commission on Poor Law Reform on the "unqualified success" which has attended the efforts of Lady Dudley's committee in the poorest parts of Ireland are most satisfactory. Two new districts have been recently added to the list, making the total of fifteen Queen's nurses thus supported.

It has been found necessary to specially train Welsh-speaking women for employment in many of the rural districts in Wales.

A striking testimony to the value of the work is given by Mr. Charles Booth in his volume "Notes on Social Influences" :—

"Of all the forms that charity takes, there is hardly one that is so directly successful as district nursing. It is almost true to say that wherever a nurse enters, the standard of life is raised.

"Not only are skilled women available for every public or private emergency, not only has each city its nursing institute ready to respond to all appeals, but every little country district is finding that about £100 a year is well spent in this form of assistance to the doctor's work, by which the whole population benefits, and to which all who will can subscribe. In every neighbourhood so provided the direct influence on health is considerable; but far greater must be the gradual educational influence exerted, which it may be hoped will eventually bring enlightenment to the common ideas of the people, not only as to the special requirements of a sick room, but on such subjects as cleanliness, the care of young children, and the preparation of food not for invalids alone; as well as on many other points of ordinary domestic economy which a trained nurse will generally understand and naturally inculcate."

Statistics.

18. Number of nursing associations in affiliation with the institute, employing Queen's nurses, on August 1st, 1907 :—

In England	-	-	-	-	-	-	411
„ Scotland	-	-	-	-	-	-	190
„ Ireland	-	-	-	-	-	-	86
„ Wales	-	-	-	-	-	-	85
Total	-	-	-	-	-	-	772

Number of county nursing associations in affiliation with the institute on August 1st, 1907 :—

In England	-	-	-	-	-	-	17
„ Scotland	-	-	-	-	-	-	3
„ Wales	-	-	-	-	-	-	1
Total	-	-	-	-	-	-	21

These associations are employing 498 village nurses, in addition to 132 Queen's nurses (including 22 superintendents and assistant superintendents).

Number of Queen's nurses on the roll, August 1st, 1907 :—

In England	-	-	-	-	-	-	942
„ Scotland	-	-	-	-	-	-	282
„ Ireland	-	-	-	-	-	-	115
„ Wales	-	-	-	-	-	-	119
Total	-	-	-	-	-	-	1,458

The total number of nurses in England and Wales on August 1st, 1907, in connection with the institute, including Queen's nurses and probationers, village nurses and midwives, was 1,803—England 1,673 and Wales 130.

The total number of nurses in Scotland and Ireland on January 1st, 1907, in connection with the institute, including Queen's nurses and probationers, and midwives, was 456—Scotland 326 and Ireland 130.

19. The Poor Law Act of 1879, which gave to boards of guardians the power of subscribing to institutions formed to provide nurses for the poor, having now been in operation for twenty-eight years, it is possible to collect information showing how far this power has been made use of, how the system has been found to work in practice and what its effect has been on the nursing associations affiliated directly or indirectly to the Institute. Of the nursing associations in England and Wales affiliated to the Institute, 242 have received annual grants from boards of guardians, amounting to £3,632 15s. (The names of the associations receiving these grants, together with the amount of the different grants received, are shown in the schedule attached to this statement.) (See Appendix No. LV. (A).)

20. In the same way, of the associations affiliated to county nursing associations (employing about 493 village nurses) 144 have received grants from boards of guardians, amounting to £386 11s. (The names of the associations receiving these grants, together with the amount of the different grants received, are shown in the schedule attached to this statement.) (See Appendix No. LV. (B).)

21. During recent years on the whole the tendency of the boards of guardians is to increase the number of grants; this is especially marked in Cornwall, Cumberland, Devonshire, Lincolnshire, and Somerset.

22. The position of the institute, owing to its close connection with such a large number of nursing associations, gives it perhaps a unique opportunity of seeing whether these subscriptions from boards of guardians have resulted in any difficulty or friction arising either as to the appointment or management of the nurses, or as to the people who shall have the benefit of their services. There is no evidence of any such friction or difficulty having occurred.

23. While in many places, where nurses are supported by well-to-do people, the subscriptions of boards of guardians are essential to enable a nurse of a high level of efficiency, or even a nurse at all, to be employed, these subscriptions are found by experience to be of especial importance in districts where the nurses are supported on the provident system. In these districts the subscriptions are really in the nature of payments made year by year for the services of the nurse when required; and the very poor, particularly when old and infirm, can make no such payment and yet they are the people, many of them in receipt of outdoor relief, to whom the services of the nurse are most essential. In these districts the subscriptions of boards of guardians really represent payments made on behalf of these very poor people and enable them to receive the services of the nurse, without the regular contributors having to increase their contributions.

24. These grants also enable nursing services to be available for the class just above the recipients of Poor Law relief, who otherwise would come upon the rates in time of sickness.

APPENDIX No. LV. (A).

APPENDIX No. LVI.

STATEMENT OF EVIDENCE BY THE SCHOOL DENTISTS' SOCIETY ON DENTAL SERVICE IN POOR LAW SCHOOLS.

1. The School Dentists' Society wish to emphasise the desirability of an efficient and uniform system of dental service in Poor Law schools throughout the country. They base this petition on three chief grounds:—

- (1) Improved general health during school years and in after life.
- (2) Freedom from toothache or other pain connected with the teeth and consequent loss of school time.
- (3) Avoidance of rejection for the public services on account of defective teeth.

That such results accrue from conservative dental treatment is abundantly testified to, so far as school years are concerned, by those having the care of children, such as superintendents, medical officers and matrons, in those schools where dental surgeons have already been appointed for several years. It is impossible in a few words to give proof as to the effects of treatment on the general health in after life, but it is now quite generally recognised by the medical profession that many serious diseases are occasioned by neglect of the teeth in childhood. As regards recruiting for the public services, it is only necessary to mention that according to the Returns for the Army for several years the rejections on account of defective teeth are far greater than from any other cause.

2. The School Dentists' Society wish to point out that effective treatment includes not only extraction of teeth and instruction in oral hygiene, or the care of the mouth, but also conservative work or the "stopping" of decayed

teeth; and that such work necessarily involves a great deal of time and must be adequately remunerated. They feel that this aspect of the matter is not always considered or appreciated sufficiently by boards of guardians.

3. The society would welcome the institution of compulsory regulations on the lines of those recommended to boards of guardians by the Local Government Board (See App. No. LVI. (A)), which deals with conditions of dental appointment, provision of instruments and equipment, etc. It is felt that it would be very desirable if the remuneration, either on a time or capitation basis, could be made uniform throughout the country, as, at the present time, different men are receiving varying stipends for the same amount of work. The question of travelling expenses, where it is necessary for the dental officer to come from some distance, should also be considered. As regards the equipment, this should as a rule be provided entirely by the guardians; but some elasticity is advisable in this particular, because under certain local conditions it may be most economical for part of the work to be done at the dentist's own house.

4. In urging the need for uniformity, the society wish to suggest that, if these appointments were controlled from a central office and reports were sent up, valuable statistics might be collected; and also that as the appointments become more general some supervision by a dental inspector may become necessary. Such inspection would be acceptable to dental officers, and would materially assist in standardising the scope and character of the work done throughout the country.

APPENDIX No. LVI. (A.).

Handed in by the School Dentists' Society.

STATEMENT OF CONDITIONS RECOMMENDED FOR ADOPTION BY BOARDS OF GUARDIANS, OR OF MANAGEMENT, IN REGARD TO THE APPOINTMENT OF DENTAL OFFICERS.

1. The officer appointed should be required:—

To attend at the school or other appointed place according to his agreement with the guardians or managers.

To inspect the teeth of all children admitted since his last visit.

From time to time, according to his agreement, to inspect the teeth of all the children in the school or workhouse, as the case may be.

To attend duly and punctually at each visit upon each child requiring dental treatment, and upon any child who may be brought to him for treatment in the intervals of such visits.

To keep a record of his work, and to report the same to the guardians or managers, in a book to be provided by them for the purpose, under the following heads:—

Date.

Number of children inspected.

Number of temporary teeth extracted.

Number of permanent teeth extracted.

Number of teeth filled.

Number of scalings.

Number of other operations performed.

Any matters which the dental officer may deem necessary or desirable to bring to the notice of the guardians.

This book should ordinarily be kept at the school or workhouse, and should be laid before the guardians or managers by the clerk at each meeting, and should be produced to the inspectors of the Local Government Board when required.

2. The dental officer must be duly registered in accordance with the Statutes in that behalf (41 & 42 Vict., c. 33, 1878, and 49 & 50 Vict., c. 48, 1886), or if not so registered, by reason of any medical or surgical qualification exempting him from the obligation of registration as a dentist, the officer appointed shall produce satisfactory evidence that he holds a licence in dental surgery from either of the following:—

The Royal College of Surgeons of England.

The Royal College of Surgeons of Edinburgh.

The Royal College of Surgeons of Ireland.

The Faculty of Physicians and Surgeons of Glasgow, or other approved authority.

3. The guardians or managers may pay a dental officer either by:—

(a) An inclusive salary; or

(b) Partly by salary, and partly by fees on a fixed scale for specified operations, provided that all payments for extractions shall be included in salary assigned to the officer and shall not be made by fee.

4. If the dental officer attends at the school or workhouse, it would be necessary that the guardians or manager should provide for his use a suitably equipped surgery including a dental chair and a dental engine, and such other apparatus as may be necessary. It is desirable that they should also provide the requisite materials for fillings and such special appliances as may be needed for mechanical treatment.

Local Government Board,

July, 2nd, 1897.

APPENDIX No. LVII.

MEMORANDUM FROM THE WORKHOUSE NURSING ASSOCIATION.

The executive committee of the Workhouse Nursing Association beg respectfully to draw attention to the following points:—

1. *That the present organisation of Workhouse Sick Wards, which remain unseparated from the Workhouse as regards Medical and Nursing Control, leads to friction.*—This, in its turn, acts injuriously on what should be the main object of all those who are employed in the nursing of the sick; namely, (a) in chronic cases the maintenance of their best comfort, and (b) in other cases efforts towards their cure and rapid return to active life outside. Obviously, an untrained master and matron should not be the supreme authorities over well-trained nurses who are, according to existing law, only in medical matters (and that to a limited extent) under the medical officers in non-separated infirmaries.

This relative position of master and matron and trained nurse leads to dual control, and thus, obviously, to friction; and therefore cannot tend to the best interests of the patients, which should be the chief care of those concerned.

The following is one of many instances:—

Poor Law Officers' Journal, April, 1907.

Question.

Workhouse Administration. Matron's Visits to Hospital. Duty of Porter.

(i) I am engaged as charge nurse of this workhouse hospital, and yet the matron of the house comes round the wards night and morning. Is it her duty to make these rounds when there is a trained nurse in charge and on duty? (ii) I asked the porter, who is

APPENDIX No. LVII.—*Continued.*

bathman, to bath a patient who has an ulcerated leg, and he refused to do it, saying the master had told him not to bath him because he had got a bad leg. Who is to know whether a patient is fit for the bath or not—the master or the nurse?—X. Y. Z.

Answer.

(i) In all matters other than those appertaining to the treatment of the sick, a nurse is subject to the directions of the master and matron of the workhouse. *The matron is required to visit the sleeping wards morning and evening.* (ii) If it is the duty of the porter to act as bathman to the patients in the hospital, we are of opinion that the master should not have interfered with the order given by the nurse.

2. *That Defects in the Nursing Order of 1897 lead to :—*

Article I
(1 and 2). (a) *The continued employment of Paupers to attend upon the Sick*, especially on night duty, a period in which chronic, aged, “senile” cases and sick children are, as well known by medical authorities, particularly dependent for their well-being or cure on skilled conscientious and *trained* care.

Reference need only be made to the reports of the Local Government Board inspectors, which show very clearly that this deplorable system of pauper assistants is far from decreasing in as rapid a manner as may have been hoped, after the issue of the Nursing Order of 1897. (*See Appendix No. LVII. (A).*)

Articles
II and III. (b) *Evasion of the Order* through the employment of entirely untrained nurses, which makes it possible to avoid the appointment of a superintendent nurse.

Extract from information received from a fully trained nurse who was working in a small infirmary on the date quoted. (This nurse does *not* belong to the Workhouse Nursing Association.)

September 25th, 1906 :—

“They call my assistants ‘wardsmaids’ here and I am nurse-in-charge, not superintendent nurse; why, I do not know. I am enquiring of the Local Government Board if it is an arrangement sanctioned by them. Where three or more ‘nurses or assistant nurses’ are employed, I see by the Order that there must be a superintendent nurse. I have three under me.”

Later date :—

“I have been told that this is being done in many small infirmaries for the same reason. This appointment of wardsmaids to the post of nurse is in order to obviate the necessity of appointing a superintendent nurse.

“We had two workhouse women to do the rough work. Our wardsmaids did the nursing work. When I came I was told ‘the pneumonia cases generally die with us.’” (*See Appendix No. LVII. (B).*)

Article III.
(3). (c) *Laxity in the enforcement of the Order* in some instances. This is evidenced by the following extract from the *Poor Law Officers’ Journal* of May 10th, 1907 :—

The Local Government Board have sanctioned the appointment of Mrs. M. M. Ablett, workhouse matron, Eton, to the additional office of superintendent nurse at the workhouse, without extra remuneration. The Board have also dispensed with the requirements, as regards the Eton Union, of Article III. (1) of the Nursing Order, 1897, whilst Mrs. Ablett retains the office of matron and so long as the arrangement is working satisfactorily.

(d) *Lack of uniformity.*—This forms a difficulty in engaging and securing the nursing staffs. One small infirmary may be well and carefully managed, whilst in another the guardians and officials are not interested in the sick; inspection cannot alter this. (*See Appendix No. LVII. (C).*)

3. *That a Supply of Probationers to Small Workhouse Infirmaries should be discouraged.*—The material is insufficient for training and the tone frequently undesirable, especially at a time when not only thorough technical knowledge should be carefully taught, but observation of and an improvement in general character of the probationer aimed at; such an effort alone deserves the title of “training” in its true sense. (*See Appendix No. LVII. (D).*)

APPENDIX No. LVII.—*Continued.*

The association therefore from long practical experience desires to suggest:—

4. (a) *That there is urgent need for the formation of a Nursing Department under the Local Government Board in which the whole Nursing Service should be reorganised.*—If this were done it appears essential that some of the Consolidated Orders should be altered, especially that which gives to the matron of the workhouse “the general care of the sick.” A rearrangement of duties should be aimed at in order to lessen friction.

(b) *That suitable and trained Women as Inspectors should be appointed to investigate the conditions of (i) Nursing generally in the sick wards of infirmaries and of workhouses, including the lying-in wards. (ii) The management of infants and young children in workhouses.*

APPENDIX No. LVII. (A.).

“NURSING NOTES.”—JULY, 1906.

Mr. Bagenal's return for the East and West Riding of Yorkshire regarding the nursing statistics for 1905 shows an increase in the number of nurses employed. For 5,157 sick, 437 nurses (day and night) were in attendance “together with 104 pauper attendants.” For the epileptic patients the number of nurses employed was seventy-eight (day and night) to 1,123 cases, with thirty-six pauper assistants. Mr. Bagenal, in his summary, while admitting advance, remarks:—“The only weak point in the return is that in fourteen workhouses it has not been found possible to provide a night nurse.” This is certainly a serious blot on the administration of these institutions; we may also point out that the proportion of pauper attendants is still very high.

The return of Mr. E. B. Wethered, the general inspector for parts of Gloucestershire, Herefordshire, Somersetshire, Wilts and Worcestershire, is even more unsatisfactory; for he reports an increase in the number of pauper attendants. On January 1st, 1905, there were 159, and on January 1st, 1906, there were 175.

“NURSING NOTES.”—JULY, 1906.

Dr. Fuller, medical inspector under the Local Government Board, has recently made the following report on the sick wards of the Bedford Workhouse:—

“As regards the nursing staff, though it has vastly improved since my last inspection, it cannot be called adequate when the class of cases to be dealt with is considered. Out of a total of thirty-seven male and forty-two female cases, sixteen males and thirty-five females required constant nursing care by day and night. So long as the present wards are utilised, and to avoid pauper ward attendants performing nursing duties, a staff of four nurses, including the superintendent nurse, by day and two (one of whom should be trained) by night, is a necessary minimum to properly perform the nursing duties, and to give the inmates that care, attention, and comfort that their cases demand. A general principle in nursing in workhouses specially applicable here, is the fact now generally accepted by guardians, that helpless or wet and dirty cases or cases bordering upon or actually suffering from senile dementia, require much more skilled care and attention from suitably trained nurses, and should take up necessarily much more of their time night and day than average cases of illness, such as pneumonia, rheumatic fever, etc., after the very acute stage is passed.”

Dr. Fuller's remark “to avoid pauper ward attendants performing nursing duties” is welcome, but while such matters are left to the discretion of local authority, we shall continue to see “pauper attendants performing nursing duties.” The master hand of central control is needed to abolish this disgrace in the present arrangements for the care of our sick poor.

Dr. Fuller has already given evidence, we hear, before the Royal Commission on the question of the medical inspection of provincial workhouses, and it is to be hoped that he has dealt fully with this question of pauper “nursing,” which is of such vital importance.

Since the Nursing Order of 1897 was issued the number of nurses employed in Poor Law infirmaries has increased from 3,658 to 5,897. This is really a growth, and would be a considerable advance if the standard

APPENDIX No. LVII. (A).—*Continued.*

of training had improved; but, unfortunately, this is not the case. The assistant nurses employed are often very ignorant and quite unsuited to the responsibilities thrust upon them; and the system of accepting “probationers” in the smaller workhouse infirmaries is much to be deplored. What sort of training can they hope to get in institutions which have no real standard? In fact, they begin in the wrong way and get imbued with quite the wrong theories.

The appended extract from a report of Mr. James Lowry, issued this year (1907), is further and later evidence :—

“THE POOR LAW OFFICERS’ JOURNAL.”—MAY 10TH, 1907.

Nursing Staffs in the Northern Counties.

Mr. James Lowry, Local Government Board Inspector for Northumberland, Durham, North Riding of Yorkshire, and a part of Cumberland, has just issued the annual nursing return for his district for 1907. The particulars relating to sick nursing include the following, viz. :—

Date.	Number of Sick.	Nurses on Day Duty.	Nurses on Night Duty.	Total.	Number of Patients to each Nurse.	Number of Pauper Attendants.
January 1st, 1903 -	2,832	119	34	153	18·51	208
“ „ 1904 -	2,901	137	45	182	15·94	197
“ „ 1905 -	3,094	143	45	188	16·86	211
“ „ 1906 -	3,056	146	45	191	16·00	151
“ „ 1907 -	3,221	146	47	193	16·69	192

As regards the imbeciles and epileptics a similar comparison shows as follows :—

Date.	Imbeciles and Epileptics in Special Wards.	Attendants on Day Duty.	Attendants on Night Duty.	Total.	Number of Patients to each Attendant.	Number of Pauper Attendants.
January 1st, 1903 -	242	9	7	16	15	22
“ „ 1904 -	230	7	5	12	19	24
“ „ 1905 -	231	8	5	13	18	29
“ „ 1906 -	235	9	6	15	16	23
“ „ 1907 -	261	11	8	19	14	19

The figures for each separate union, which are given in the return, show that there is still room for additions to the paid nursing staff of several infirmaries. At Tynemouth, for instance, the number of patients to each paid nurse is thirty-five by day and eighty by night, or twenty-four by day and night. Hartlepool is almost similar. At Gateshead the figures are forty-eight by day and 142 by night, or thirty-six by day and night. At Auckland and Stockton the number of patients to each paid nurse is twenty, taking day and night duty together, and at Easington the number is twenty-two. There are several small unions where only one nurse is engaged, and this is not satisfactory, as there should always be some one on duty. The Newcastle, South Shields, and Middlesbrough unions seem to have staffs more approaching the standard which has been laid down as necessary for Poor Law institutions. The number of patients in each of these unions to a paid nurse is (taking night and day duty together) fourteen, fourteen, and eleven respectively.

APPENDIX No. LVII. (B).

The following are further extracts (dated October 23rd, 1906) from information received from the same writer—a fully trained nurse—as quoted in 2 (b) :—

“Our infirmary has forty beds. There are three nurses and myself—four in all. *But*, the nurses are called wardmaids—although they regularly take, one the male, one the female side of the infirmary, and one the night nursing, under my supervision. Whilst there was an interregnum between the resignation and departure of the last nurse-in-charge and my appointment, one of these girls had to take charge—imagine it! Of course, they are quite ignorant. It is a thoroughly anomalous condition of affairs and leads to great abuse. Is it common?”

“I find that, in consequence of their knowing nothing of nursing, if the patients are to be *in any sense* adequately nursed, I must devote my whole time to the work. Since I came here four months ago I have only been outside the gates three times.

“During the holidays of the three nurses, we have worked short-handed; at one time one day nurse and I were attending to thirty-eight patients, of whom twelve or fourteen were bed-ridden. That meant for me

APPENDIX No. LVII. (B).—*Continued.*

eighteen hours work per day for a fortnight and being called up at night as well, as we had a lying-in case, with twins, and the mother could not manage both babies.

"The extraordinary responsibility, too, of the nurse strikes one with amazement. I am the only person in the place who knows a thing about nursing. The doctor only comes round once a day, and we are very fortunate in the man we have here, but anything may happen whilst he is on his rounds, miles away—in which case I see to it. Practically, one is entirely mistress of the position; and yet one works as a *subordinate* entirely. The thing is absurd.

"I am very glad to have this experience and to see for myself what work under the Poor Law really is. At this moment I am sitting by a very sick man in the early morning, having had just two hours of sleep. Yet my work through the day must be done just the same. . .

"I have had some good cases:—Two pneumonias, a fractured ribs and cut head, a fractured femur, a pernicious anæmia, an aortic aneurism, a gangrene foot, a multiple neutitis (acute), besides several other things of interest. . .

"I have got them to provide some things most urgently required and more are coming. But the labour ward remains absolutely only four walls and a fireplace, for all my talking. Of course lying-in cases are extremely rare—I have had one, and a miscarriage, since I came. But if they are taken at all (as they must be) due preparations ought to be made for them. I had to manage the labour with most inadequate arrangements—and how I should have done for, say, hot water even, had I needed it for special purposes, I cannot imagine. . .

"I am not complaining as for myself. I came to see and I am seeing. Experience, *practically*, is the only real means of knowing the inner working of these places. Changes and improvements are badly needed."

APPENDIX No. LVII. (C). '1

"NURSING NOTES.—OCTOBER, 1906."

Infirmary Notes.—Reduction of Staff.

A special committee appointed by the King's Lynn Guardians have had under consideration the recent reduction of the nursing staff from six to five. The following entry made by the medical officer in his report book gave rise to the discussion:—"I consider that one night nurse to be responsible for the cases in two blocks in the infirmary building is inadequate to the patients' requirements, and incurs risk of accident." The committee stated that after an interview with the chief officials, they had come to the conclusion that the present staff of nurses should be maintained, but that there should be two nurses on night duty. The Rev. A. H. Hayes moved an amendment that the number of nurses should be six, two of whom should be on night duty. He said that he had special opportunities of watching the work at the infirmary, and that the committee had overlooked the fact that there were two distinct blocks of buildings. He had never found any idling on the part of the staff and could not see any reason for reducing the nurses from six to five. The reason given was of economy, and this perhaps was justified in certain cases. But considering the enormous responsibility in dealing with the sick, he did not consider economy was justified in the present case. According to the recommendations they would now have three day nurses and two on night duty. They said that this ought to be sufficient, but they seemed to overlook the fact that for ten weeks in the year the holidays were on and the day staff would be reduced from three to two.

A member of the board stated that they had by far the largest staff in the eastern counties, and when they were told by their own staff that the infirmary could be worked efficiently with one nurse less they could not do anything else than reduce the number of nurses. The infirmary would still be carried on efficiently if the report were adopted.

Only four members voted in favour of the amendment.

JANUARY, 1907.

Infirmary Notes.

The lack of uniformity as the weak point in the administration of Poor Law nursing is evidenced so continually that to draw attention to it seems to suggest a dull subject. Yet, until the fundamental principle of organised methods in dealing with the sick is admitted and acted upon, we cannot hope to welcome the long-looked-for day of advance in the important question of the economic and efficient care of the sick in Poor Law infirmaries. An interesting report was recently before the Frome Board of Guardians, giving particulars relating to the nursing arrangements in a number of unions, and the disparity in the average number of patients to nurses is an object lesson, and indicative of the different opinions of individual boards of guardians in regard to providing attendance on the sick under their care. For instance, at Frome itself, the number of nurses employed was two to forty cases, on an average; in contrast, we hear of Docking with four nurses to twenty patients, giving an average of five patients to a nurse. At Salisbury there were four nurses to take care of sixty-five cases; the average per nurse being just over sixteen. There is no mention in this report of whether the nurses take both day and night duty. It makes all the difference if these averages include day and night nursing. But we conclude it does, for the provision of any system of night nursing seems to be considered quite unnecessary in most of the smaller infirmaries.

Although in many unions great economy is exercised in regard to the employment of an adequate staff of trained nurses, expenditure in other direction is often lavish. Some late statistics in regard to the care of the insane in asylums give the curious fact that the cost of maintenance of the inmates of an ordinary workhouse is

APPENDIX No. LVII. (C)—*Continued.*

considerably higher than in a lunatic asylum. It points to very unsatisfactory organisation that a pauper inmate of a workhouse should cost more to maintain than an insane patient whose condition demands the most careful individual care and medical and expert nursing treatment.

At King's Lynn lately the board of guardians were compelled at the strong recommendation of the medical officer, supported by the Local Government Board Inspector, Captain Hervey, to appoint two special nurses, at a salary of two guineas a week each, to take charge of a typhoid case. It appears that neither of the night nurses had any experience in nursing, and the superintendent nurse had been on duty for twenty-four hours on a stretch. It is a disgrace that there should be no experienced nurse on night duty, and it is to be hoped the Local Government Board will insist on the appointment of at least one trained nurse for night duty in the King's Lynn Union Infirmary.

APPENDIX No. LVII. (D).

"POOR LAW OFFICERS' JOURNAL."—MARCH 16TH, 1906.

The St. Asaph Guardians have now decided to appoint a probationer nurse. It will be remembered that a few weeks ago they discussed a recommendation of the Local Government Board Inspector, that they should appoint a fully trained nurse, but action was then deferred. Last week, when the appointment of a probationer was decided upon, the medical officer stated that it was impossible for one nurse to deal adequately with conditions that had arisen during the past fortnight. A case was mentioned by a member where a patient had been brought to the workhouse infirmary in a state of coma and had to be watched day and night. Under the circumstances, it would appear that the guardians would have acted more wisely if they had followed the inspector's advice, for it is quite clear that the appointment of a probationer will not afford the assistance that is necessary in this institution.

"NURSING NOTES."—OCTOBER, 1906.

The Question of Training.

We are glad to note that the false position of many young women who enter for training in many workhouse infirmaries is at last arousing controversy in some directions.

The Chichester Board of Guardians, who undertake to give three years' training in the sick wards of their workhouse, recently received a letter from the father of one of the probationers, giving the board six months' notice on his daughter's behalf to terminate the engagement. The complaint was that no lectures were given by the medical officer, and that the probationer had had to look after lunatics, one of whom had kicked and bitten her. Some members of the Board considered that probationers who had signed for three years' training after the month's trial, should be compelled to remain and complete their full term. Dr. Barford pointed out that the guardians had promised that the probationers should have lectures, but that there was no contract with the medical officer, and any lectures he chose to give were gratuitous. After discussion, a lady guardian (Mrs. Webb) expressed the opinion that the training of the probationers should be put on a better basis. It was agreed to leave the matter in the hands of the visiting committee to hold an enquiry into the training of the probationers.

Probationer or Assistant Nurses.

The guardians of the Romsey Union recently engaged two young women as probationers, and the Local Government Board were asked to sanction their appointment, but demurred to do so unless the nurses were to receive training, and suggested they should be called assistant nurses. The reply of the guardians was that the nurses would receive training at the hands of the medical officer and the head nurse. The latest letter from the Local Government Board, which was read at a recent meeting of the board of guardians, stated that the board still considered that the nurses should not be regarded as probationer nurses, but assistant nurses.

The vice-chairman wished to know how they could tell the difference ?

Mr. Thurston : They are assistants to the nurse.

{ The clerk said they could not be assistant nurses, because when they came they knew nothing about nursing

Sir J. Hopkins said he had seen one of the young women, who said it would make a great difference to her in the future whether she was now to be recognised as an assistant to the nurse or a probationer nurse.

The clerk said that Miss Woolley had written to ask why she was called an assistant to the nurse, because if she was to be called that she must go elsewhere.

The vice-chairman thought they must fight the Local Government Board on the question, and if they would not allow them to appoint their nurses, they had better come down and do it themselves.

The clerk read some of the correspondence which had taken place on the subject, and Sir J. Hopkins said his opinion was that they *should be appointed probationer nurses, and allow the Local Government Board to take what action they liked.* He questioned if they had any power to prevent them. He then moved that the Misses Taylor and Woolley be appointed probationer nurses.

The vice-chairman seconded, and it was agreed to unanimously, and the two probationers were called in and told of the decision.

PART III.—POOR LAW AND MISCELLANEOUS.

APPENDIX No. LVIII.

STATEMENT OF EVIDENCE BY GENERAL BOOTH.

INTRODUCTORY.

1. Some years ago I was led, as the outcome of a long experience in endeavouring to morally elevate the poor and vicious classes, to embark upon a more comprehensive and organised effort for their benefit in connection with the Salvation Army. The principles of that effort were :—

(a) *Individual Reformation.* I placed this principle in the front, and I still do so, in all operations which have for their object the betterment of society. Any effort at social reform which does not provide facilities for the regeneration of the individual is, in my opinion, foredoomed to failure.

(b) *Discipline.* All who participate in the proposed benefits must be subject to appropriate discipline.

(c) *Amelioration of immediate conditions.*

(d) *Co-operation* on the part of the individual in his own reclamation.

(e) *Labour.* Work must be found adapted as far as practicable to the capacity of each worker, and with a view of training for future usefulness.

(f) *Efficient control and oversight by trained officials.*

(g) *Repayment* in some degree, at any rate, of the cost of their reclamation by those benefited.

2. With one exception the main lines of what I proposed to do have been constructed. Many more branches of activity than I expected or dreamt of at the time have been added for grappling with sections of the social distress originally comprehended in the scope of the effort. The convictions I then felt have been strengthened by the experience gained, and the hopes I then cherished have been justified.

3. In proportion as the scheme has been adopted, I am more than ever satisfied with the soundness and practicability of the principles I set forth, and among others, for the following reasons :—

(a) The extent to which some of its proposals and departments have been freely adopted by religious, philanthropic and local government bodies.

(b) The gratifying measure of success which has attended the adaptation of the scheme to the national and social conditions of other countries, civilised and semi-civilised.

(c) The endorsement by Governments of many of my plans for dealing with some of the classes concerned, notably those affecting vagrants, and for colonisation and emigration.

4. In view of the immense importance to the nation of a wise and economical care of its poor, I am led in some measure by the experience thus gained to submit for consideration the proposals outlined in this statement.

5. If I have travelled outside or beyond the strict limits of the questions which have been raised under the general heading, "Distress due to want of employment," upon which the Salvation Army has been asked to furnish suggestions, it is because I feel that that is only one branch of the general question of the nation's relationship to its poor, and can only be adequately dealt with by treating that question as a whole.

6. I regret that the limitations proper to such a communication as this will prevent me from setting out my proposals in any great detail, or from expressing my opinions on many subsidiary matters of importance, but I will endeavour to present an outline of my views as concisely as I may.

7. Many considerations have guided me in framing these proposals. As a statement of these in full would involve the compilation of facts and statistics which I presume have already been tendered from official sources, I will confine myself to mentioning some of the accepted conclusions which have influenced me in arriving at specific opinions, viz :—

(a) The comparative failure of the present Poor Law system to restore to any degree of efficiency the lapsed classes who claim its assistance.

(b) The vicious influences of indiscriminate charity.

(c) The success which has undoubtedly followed the principle of compulsory segregation for certain classes.

(d) The principle that the recipients of State relief should pay the cost, or part of the cost, by some form of labour or otherwise.

(e) That rational reformatory methods should be associated with punitive arrangements.

(f) That a more commonsense classification of the persons concerned has become an absolute necessity.

(g) And the personal conviction stronger now than ever, that the principle of reclamation and reformation should run through the entire gamut of any system of relief.

THE PRINCIPLE OF CLASSIFICATION.

8. The principle of classification is already recognised to a limited extent in the dividing of the sexes, the keeping apart of the sick the feeble-minded the insane, and of the children, who are now largely treated by separate plans.

9. An example is furnished by the Unemployed Workmen Act, 1905, which for the first time recognised that the willing and able-bodied unemployed should be assisted by the State without the stigma of pauperism.

10. It is well known, however, that in some districts even the foregoing broad lines of demarcation are scarcely perceptible. Individual weakness of character, as well as the qualities conducive to restoration, can only be ascertained by a scientific, sympathetic and commonsense system of classifying the men, women and children concerned.

11. I would insist upon the application of this principle of classification to a much wider extent, with these objects :—

(a) To secure greater efficiency and economy in the management of the classes concerned, and

(b) To secure the restoration and reformation of those whose physical or moral conditions have compelled them to seek the aid and protection of the State.

12. Destitution is no longer, I believe, the only qualification for State aid. It has been wisely abandoned as the primary reason. The Act already referred to falls far short in my opinion of what is required by the situation which it was intended to meet, and its administration is open to considerable criticism; but it embodies a valuable principle which, under certain conditions, permits the rendering of aid to men who are able, willing and eager to work but cannot find it, without requiring their actual destitution as a condition precedent.

It removes the stigma of pauperism from a class whose circumstances are not mainly the result of their individual misfortunes or misconduct, and to that

Accepted conclusions which have led to the proposals submitted.

Extent to which classification is already recognised.

Objects of improved classification.

Valuable principle in Unemployed Workmen Act, 1905.

Removal of stigma of pauperism.

APPENDIX No. LVIII.—Continued.

extent (and to that extent only) the Act is an advance on anything that has gone before.

Other recent instances of adoption of principle of classification.

13. Other recent illustrations of the adoption of the principle of classification are supplied by the Probation of Offenders Act, and by the Children's Bill now before Parliament for creating amongst other things Juvenile Courts. If the administration of these measures be placed in the hands of competent and sympathetic persons, I have little doubt that the results will be satisfactory, and that the experience gained will confirm the principle for which I am contending.

Old Age Pensions.

14. But, more important still, the signs of the times point to a far-reaching application of the same principle in the projected provision of Old Age Pensions by the State.

How, then, would I apply this principle?

PROPOSED NEW CLASSIFICATION.

15. I would divide the classes to be helped by the State into four main sections, as follows:—

Class I.

16. *The destitute and the sick poor* who are incapacitated for doing remunerative work on account of—

- (a) Old age.
- (b) Physical unfitness.
- (c) Mental or moral infirmity.
- (d) Sickness.

Class II.

17. *The destitute who are able to engage in labour* to support themselves, but who, because of their idleness, drunken habits, or misconduct, have made themselves a nuisance or a danger to society, including:—

- (a) The vagrant and the unemployable.
- (b) The habitual drunkard.
- (c) The confirmed criminal.

Class III.

18. *The unemployed*, meaning those who are able and willing to work, but unable to procure it.

Class IV.

19. *The children.*

CLASS I.

20. *The destitute, who are incapacitated for doing remunerative work on account of—*

The aged to be separated.

(a) *Old Age.* I would separate this class and would provide for them work in character and quantity suited to their powers.

Desirability of work suited to their capacity.

Some, of course, would be unable to perform any work at all, and these I would maintain in a reasonable degree of comfort, and make their old age as congenial as the circumstances would permit. I am, however, convinced that some work suited to their capacity could and ought to be devised to a much larger extent than is at present done. Idleness even with the aged is not conducive to health, or to enjoyment of life. They ought to work, although in the nature of things their work could not be expected to realise more than a small sum towards their maintenance.

Effect of Old Age Pension scheme.

It may be urged that in the event of an Old Age Pension Scheme becoming law the best type of the aged poor will not seek the hospitality of the State. The effect will probably be that the friendless and those who for the want of a better name may be termed the inferior residuum will alone be left, but I would not deprive any of this class of the facilities for spending the remainder of their days in comfort.

Larger measure of freedom.

I would grant them a larger measure of freedom than many of them obtain at present. For example, I would arrange for their occasional recreation and entertainment, in the form of outdoor exercise, visits to friends, and the enjoyment of the companionship of children from time to time, and such like.

The blind, deaf, cripple and permanently diseased.

(b) *Physical Unfitness.*—Under this heading I include the blind, the deaf and dumb, cripples, and persons otherwise so afflicted or diseased as to make it impossible for them to earn a livelihood in the open market; but here again I would arrange a system of labour suited to their condition so as to give them the benefits which accrue from employment, however limited that employment may be.

Suitable work. Feeble-minded, epileptics, imbeciles, lunatics.

(c) *Mental or Moral Infirmity.*—Under this head would be included the feeble-minded, epileptics,

imbeciles, and insane persons. My experience convinces me that it is desirable—

(a) To segregate these classes as completely as possible. For some, probably, the segregation will need to be permanent and secure, but the harmless might, without disadvantage, be cared for in buildings and under conditions entailing much less cost than those at present adopted.

Segregation

(b) To allow none of them, when once they have come under the control of the constituted authority, to return to the outside world unless and until it be clearly proved that not only have they been "cured" but that there is reasonable ground for believing they are capable of permanently earning a livelihood.

Non-return to outside world

21. As in the case of the aged poor and the physically infirm, so with these classes—*some form of labour should be provided.*

Suitable labour or these assets also.

22. Under the beneficent effects of work, e.g., in the lighter branches of agriculture, many, I am convinced, will ultimately be restored, and will also be enabled thereby to contribute something towards their maintenance.

23. Impoverishment and unhealthy environment have helped to create a large proportion of these classes, and when once a radical change is effected in their condition it often becomes a mere question of time, patience, and skilful treatment to bring them back to a normal state.

Restriction by improved conditions.

24. It is necessary, however, that their replacement in society should be under conditions entirely different from those which were largely responsible for their affliction. Suitable work under healthy social conditions must be found for them, and until they are well on their feet they should remain under the supervision of inspectors appointed for the purpose. If they lapse again they should be immediately retransferred to the institution and dealt with accordingly.

Replacement in society

25. Feeble-minded women should, I think, be treated separately on the lines recommended by my daughter-in-law, Mrs. Bramwell Booth, before the Royal Commission on the Feeble-Minded. Mrs. Booth, with whose suggestions I entirely agree, submitted the following:—

Feeble-minded women. Mrs. Bramwell Booth's recommendation.

(a) Let it be compulsory to register the feeble-minded.

Compulsory registration.

(b) Every feeble-minded woman registered and duly certified by medical men to be made a ward and placed under the care of some legal guardian, such guardian to be, by preference, a relative—where relatives are found to be suitable—but otherwise, under the care of any person or society willing to accept the responsibility. Where no suitable person or society can be found to undertake this, I would make the Judge of the County Court, or some magistrate, the guardian, with power to place them out suitably.

Every feeble-minded woman to be made a ward.

(c) The guardian to be invested by law with full power and control over the feeble-minded woman, irrespective of her age, precisely as if she were a child under sixteen, and be made responsible for her safety and proper treatment.

Power of guardian.

(d) Every feeble-minded woman to be placed under the direction of the laws now in force for the protection of girls under sixteen years of age.

To be secured with girls under 16 for protection.

(e) The feeble-minded not to be removed into institutions from the care of guardians who can provide for them under the normal conditions of their class; but where such provision cannot properly be made, then I favour their being brought into institutions especially fitted for them, where they should be taught useful occupations.

Not to be removed from the care of guardians who can provide for them.

(f) I recommend that such institutions as are here outlined, should be voluntary institutions, and while the financial arrangements should be subject to careful audit, and the homes open to proper inspection, the State should have nothing further to do with them. They should, in short, be as far as possible like homes, and as little as possible like workhouses, asylums, or prisons.

Voluntary institutions. State inspection.

(g) I am of opinion that the only hope of permanently benefitting the feeble-minded is to be found in careful classification, instruction in industries, and constant supervision, combined with the influence of a happy religion.

The only hope for the feeble-minded.

APPENDIX No. LVIII.—*Continue 1.*

26. Now it will be observed that I attach great importance to the operation of the principles of detention and labour.

27. The first requires no argument, I think, in its support. Where the liberty of any person, aged or otherwise, becomes a nuisance or a menace to society there must be a resort to compulsion. Society must be protected, and the individual in his own best interest either segregated or placed under restraint.

28. As to their labour, objections I know are urged against the organised employment of these classes. It is contended that the produce of their labour would come into competition with that of ordinary workmen. On this matter I have considerable experience. At the present time thousands of destitute men and women are engaged in various occupations under our control, *thereby meeting part of their own temporary needs*, while being fitted for future permanent employment.

29. Without such a system they would now either—

(a) Be maintained by the State in enforced idleness; or

(b) Be eking out an existence on the doles of the charitable.

30. On the other hand, their labour saves them from being pauperised or demoralised; on the other, they produce a large number of articles required by themselves and others embraced in my scheme as a whole.

31. I would recommend that this plan should be adopted in providing wholly or partially for the requirements of the above classes, and I claim that it is a right, as well as a sound and economical method of utilising the labour of the State-aided, to say nothing of the obligation which the authority is under to consider the interests of the taxpayers and rate-payers.

But it may be urged that the placing of the surplus articles produced by this class of labour upon the market might be unfair to the trade or workmen generally, to which I reply that such is not the case where—as with articles made in our workshops—there is no under-selling.

33. If the produce of this labour is sold at the market price, the only objection that can be raised is that a new competitor has entered the field. But surely, in the name of common sense and humanity, it is as legitimate to use commerce as a means of uplifting and reforming men as of increasing the personal wealth of individuals.

34. Besides, is there any other method of enabling the recipient of State aid to co-operate with the State to effect his social salvation and to contribute something towards paying the cost involved?

I think not.

(d) *Sickness*.—I contend that the sick poor should be the first care of the nation, whether the sickness be induced by their own ignorance or folly or by poverty, contagion, or natural causes.

The method of dealing with the sick poor should be such as to make it possible to afford immediate aid. There should be no circumlocution about it. It is better that mistakes should be made than that the sick, especially serious cases, should be allowed to suffer unnecessarily or to spread disease.

To protect the State I would give the authority concerned power to recover the cost in certain events.

For a considerable number of years the care of persons suffering from infectious diseases has been the duty of the local authorities.

By municipalities this has been freely rendered without pauperisation. In rural districts the cost has, in fact, at times been paid out of the poor rate, with consequent pauperisation of the recipients, while at other times it has been paid out of the sanitary rate without pauperisation.

The sick poor, whether suffering from infectious disease or not, should be treated by the Public Health Authority without any stigma of pauperisation.

There should be one Local Health Authority for each district directing and controlling the necessary duties, and health visitors ought to be organised, and sufficient infirmary or hospital provision made for the patients requiring treatment in such institutions.

In connection with my visit to Japan last year the necessity for a large development of the principle underlying such an authority was very forcibly brought before me by the system adopted in Japanese cities. A re-examination of the social conditions of the poor in this country induces me to believe that the time has arrived for a similar movement here.

Lessons from Japan.

At present the outdoor medical relief afforded by the State is generally limited to the service of the parish doctor. Voluntary agencies have certainly sprung up in the form of free dispensaries and kindred charities, which no doubt render valuable service to the community, but they are not organised or co-ordinated so as to cope with the sickness or disease in the parishes in which they are situated, and I fear there is some overlapping.

Voluntary free Dispensaries.

The Health Authority should, in the system I advocate, take the initiative. It should not wait for the sick poor to come; it should find them out.

The Health Authority should find out the sick

CLASS II.

35. *The destitute who are able to engage in labour to support themselves, but who because of their idleness or drunken habits or misconduct have made themselves a nuisance, an expense, or a danger to society.* Under this head I would include:—

(a) The vagrant and those who, from various reasons, are unfitted for regular employment, sometimes called the unemployable.

(b) The habitual drunkard.

(c) The confirmed criminal.

36. For these classes I propose the establishment of compulsory labour colonies, I would divide the country into zones, in each of which one or more of such colonies should be established, in which persons belonging to these classes should be detained.

37. The persons affected should be transferred to the proposed colonies in the following manner. That is to say:—

Method of transfer to the colonies.

(a) Convicted vagrants, on the order of any court of summary jurisdiction.

Of vagrants.

(b) Habitual drunkards, confirmed criminals, incorrigibles, on the order of a magistrate or judge, who should be empowered to commit to the colony and others, in lieu of, or in addition to a term of imprisonment.

Of habitual drunkards, confirmed criminals, incorrigibles, on the order of a magistrate or judge, who should be empowered to commit to the colony and others.

(c) Prisoners who at the expiration of their term of sentence are unable to produce to the visiting justices of any prison in which they may be detained, satisfactory evidence that they have the means of supporting themselves by honest labour, and are intending to do so, on the order of two such visiting justices.

Time expired of sentence are unable to produce to the visiting justices of any prison in which they may be detained, satisfactory evidence that they have the means of supporting themselves by honest labour, and are intending to do so, on the order of two such visiting justices.

(d) Any member of either of the above classes voluntarily declaring before a magistrate his desire to be committed to a labour colony, on the order of the magistrate before whom such declaration is made.

Voluntary entry.

38. Speaking broadly, I do not see any serious objection to mixing individuals of these classes in the same colony. It may be found advisable to place persons guilty of the most serious offences in a class by themselves, but experience leads me to conclude that those who are nearly akin in feelings and character, though transgressing in different ways, do better together than apart. For some of the more intelligent and those who belong to a higher social class conditions should be provided favourable to their superior breeding and education.

Mixing of classes in colonies.

39. The aim of these colonies would be reclamation and reformation of the persons committed to them with a view to their subsequent return to their ordinary occupations and privileges in society.

Aim of the colonies reclamation and reformation.

40. The means to be employed in seeking the attainment of this object would be in the main as follows:—

Means to be employed.

(a) *Detention* for such a period as the necessity of each individual case would suggest.

Detention.

(b) *Discipline*. I would not abrogate the penal principle in the discipline of such colonies. Provision should be made for compelling the idle to work, and the drunkard to undergo the treatment prescribed for him. Insubordination should also be subject to disciplinary measures. But I would

Discipline.

APPENDIX No. LVIII.—Continued.

Discipline.	not rely upon compulsion to any great degree. Hence my next method would be :	(e) Thus it will be seen that they frequently bring bad reput upon the genuine worker, who is often discredited on a wide scale solely because of the idle, loafing, filthy habits and ingratitude of a handful of tramps, who appear and re-appear in a locality with the regularity of the seasons.	Bring ad reput on genui worker.
Kindness.	(c) <i>Kindness.</i> I would treat the colonists, not as convicts, but as men or women desiring and deserving to be reformed in their disposition and habits.	(f) Much of the charity dispensed in the large cities finds its way to this class. It is thus rendered not only unproductive of good, but a source of positive evil, if only because it helps to support a section of the poor which propagates disease and demoralises all who come within its influence.	Receiv undue proportion of charit
Instruction.	(d) <i>Instruction.</i> By all sorts of means, I would set before the inmates of a compulsory labour colony the physical, moral, and material benefits arising from honesty, industry, and sober living. Many of these classes are what they are by reason of superficial and false education.	(g) Most of the efforts to check the growth of the evil are rendered abortive chiefly by the fact that there is no method of keeping the tramp in one place, and compelling him to work until he acquires the habit of industry and prefers it to idleness. Some magistrates, when a vagrant of this class is brought before them for some petty larceny, feel so deeply the importance of giving him a chance of settled employment that they pass upon him the fullest sentence permissible by the law—for example, sending a man to prison for two years for a theft of a clothes peg or a turnip. Such cases have occasionally been known to turn out well ; but, as a rule, I fear the prison associations are no more likely to reform him than those of " the road " or the workhouse.	Abortiv effort to check the evil.
Formation of character.	(e) <i>Formation of character or the actual formation of habits favourable to right living.</i> It is not enough to instruct them in morals. I believe in the practicability of making men moral, if taken in hand as unruly children, and compelled to eat, drink, labour, walk, talk, and act, on very much the same principles as would be the case in dealing with such children.	(h) If an effective system of State control were established under reasonable and benevolent conditions, I am led to believe that a considerable proportion of these wandering vagrants would be reformed. In our experience on the Hadleigh Land Colony, where men of this class have formed a fair proportion of the total number received, our officers have seldom found them absolutely refusing to work. We have observed that many of them were not averse to labouring for a day or two, but the continuity of the thing was the real trouble! The results with the man who could keep steadily at his task for the first month or six weeks were almost invariably satisfactory. Some such have been permanently recovered from their lost estate, and if we could have prevailed upon the others to remain, and persistently struggle against the habits of years, they too might have been restored. But when the "moving on" impulse moved them it proved too strong. On they must go, and so our efforts for them, and their own little labour and hope for themselves, were lost. These are, I think, fit subjects for State treatment. Nay, the State is under obligation to give them at least the opportunity for reform.	State intr necessity.
Training.	Many of these classes I am convinced can be reformed—		
Influences of religion.	41. By training in some suitable form of employment ; and 42. By the influences of religion—by a change of nature through the operation of the Divine spirit. 43. Now I submit that those who compose this Class II. have ever been and still are both the curse of the poor generally and the despair of every State official who has to deal with them. The vagrants, at any rate, up to the present, show no sign of diminishing in number. The habitual drunkard is still with us ; the professional and confirmed criminal still preys on society, and while constituting a big percentage of our prison population, is constantly on and off the poor rate in some way or other. It is generally agreed that the present system both in its punitive and reformatory character has practically failed, and that the moment is at hand for introducing complete reform. Punishment alone is no remedy, and the prison is not a reformatory.		
Vagrant and unemployable.	44. In the year 1904 I endeavoured to arouse public opinion to the need of reform with regard to the existing system of dealing with vagrants, and on looking again at what I then published in a pamphlet entitled, "The Vagrant and the Unemployable," I am more strongly convinced than ever that the propositions there set forth are worthy of serious consideration.		
Provision for dealing with "tramps."	45. I take this opportunity of repeating some general observations and proposals submitted at that time, as follows :— For several years it has appeared to me that some definite provision should be made by the community for dealing effectively with that class of vagrant known to us all as "the tramp." 46. The information acquired by my officers in their large experience amongst the submerged classes, especially since the inauguration of the Darkest England Scheme, and partly as a result of the success attending that effort, leads me to several important conclusions with regard to this class.	(i) Provision should also be made for that pitiable class—the willing but inefficient, from whose numbers the ranks of the vagrants and loafers are recruited.	The w ng but ineffici
Those who live without work.	(a) It is beyond question that there is a section of the population who by one means or another contrive to subsist at the expense of the community without work.	47. Having regard to these conclusions, I venture to propose that a new departure, so far as this country department is concerned, should immediately be sanctioned by the Government.	Time f ne depart
They secure help intended for the genuine unemployed.	(b) This class is prominent in times of bad trade and scarcity, and being skilled in habits of "sponging" and other objectionable courses, manages to secure a large proportion of the help intended for the genuine worker who, often without fault of his own, has fallen out of employment.	48. A central authority analogous to the Prison or Lunacy Commissioners will, I think, ultimately become a necessity ; but for present and practical purposes, in order to carry out the plan, I would suggest :—	Author
Habits of vagrants.	(c) These vagrants are a kind of nomad. They take advantage to the fullest extent possible of the Poor Law provisions. They contrive, in extreme weather, and in sickness—often induced by their vicious habits—to pass in and out of the workhouses, infirmaries, and casual wards with the greatest freedom, while at other times they prey, in one way or another, on all around them.	(a) That the Vagrancy Laws be so amended as to give magistrates the power under certain prescribed conditions to commit tramps coming before them to colonies or settlements established for that purpose, for periods of not more than three years.	Suggest Commi to labor colonies
Averse to work.	(d) As a class they are constitutionally averse to work, partly because they have never felt its necessity, having learned how to exist without it, and partly because they have never been set to any sustained and remunerative labour which they were capable of performing.	(b) That local authorities be empowered to establish labour colonies for such vagrants, and that they or any charitable society doing so may—on receiving the licence of the Secretary of State—receive and detain vagrants so committed to them for the purpose of employing them, the licence to be issued after such inspection as the central authority may determine (much as in the case of the Inebriates Acts).	Establishment of labor colonies
		(c) That such disciplinary powers (for the purpose of compelling the idle to work), as the Secretary of State may think necessary be granted under bye-laws, as in the case of inebriates' reformatories.	Discipl powers.
		(d) That the cost of maintaining such colonies be provided by a contribution from the Treasury at the same rate as it now contributes to the support of inebriates' reformatories, and that muni-	Cost of mainte

APPENDIX No. LVIII.—Continued.

cialities, county councils, and other authorities be also empowered to contribute at such rates as may be agreed upon.

(e) That the necessary capital, in at any rate a large part, be provided by extending the powers of the Board of Agriculture with respect to land improvement loans, or by conferring on the Home Office similar powers for industries.

49. Should this proposal be adopted, I would urge the great importance of employing to the full the influences of kindness and sympathy, as well as the motives of religion, in dealing with these men. Many of them, notwithstanding their idle and repulsive habits, are still capable of making an effort at reformation. With some the memory of better days is not dead, or anything approaching it, and on others the barest hope that they may rise to lives of decency and industry has a wonderful effect. That they may have at least a chance under favourable conditions is the object of my suggestion.

These proposals were received with general approval by Statesmen, Poor Law experts, Justices of the Peace, and the Press.

50. With some, it may be undue, confidence that if put into the form of a Bill, Parliament would accept them, I was emboldened to promote a Bill on these lines. In the arena of legislation the Bill was received with favour, and its principles were endorsed by an inter-departmental Committee on Vagrancy, which, in its Report, 1906, page 75, paragraph 28, made the following statement:—"Of the many schemes which have been put before us, we would draw special attention to that contained in a Bill introduced in the House of Commons by Sir John Gost during the Session of 1904, with the support of a number of Members on both sides of the House. Its main principles have received wide approval. We understand that it was prepared at the instance of the Salvation Army, and represented their views at the time."

51. But the Government of that time took no action in the matter, nor has the Government now in power indicated any disposition to legislate on the lines recommended. This is all the more disappointing when it is remembered that there was nothing to prevent the Government adopting the Bill, which it was generally agreed would not only deal effectively with the vagrant class, but at the same time would do much to clear the ground for a practical consideration of the unemployed question as a whole.

52. It appears to me, therefore, that the present moment is opportune for reviving the consideration of the plan for establishing compulsory labour colonies, and I earnestly hope that the Government may be prevailed upon to promote legislation for this purpose.

53. I have pleasure in appending a copy of the Bill.*

54. The financial aspect of such colonies as are contemplated, has occupied my close attention. In connection with my frequent visits to America, and to Canada, and other parts of the British Empire, as well as to several Continental countries, I have been able to discuss the question with experts and others who have had official and practical experience in directing beggar and labour colonies. I may also claim to have acquired a considerable acquaintance with the economical working of undertakings somewhat akin to those proposed, by experience gained in connection with the City and Land and Industrial Colonies of the social work of the Salvation Army.

55. My leading officers in the management of this division of our operations in different parts of the world have reported to me from time to time on the working of other similar institutions, especially the labour colonies on the Continent, and, altogether, I am more than satisfied that, if the State will provide the facilities for the establishment of such colonies in this country for the purpose specified, the financial results will not after a time be found to involve any serious burden.

56. Take the Witzwyl Colony, Switzerland, as an example of what can be done with forced labour. This I especially quote, as it is the most successful financially of those which have come under my notice.

57. H. Preston Thomas, Esq., Local Government Board Inspector, in a Report to the Right Hon. Walter Long, M.P., dated June, 1904, stated:—

"The forced labour farm at Witzwyl, Canton, of Berne, was established in 1895, and in various respects appears to be admirably successful. It occupies an area of about 2,000 acres in the plain lying at the

foot of the Jura mountains, at the north-east end of the Lake of Neuchatel. It used to consist mainly of water-logged soil, subject to inundations, but extensive works of reclamation have been carried out, and, at the present time, at least two-thirds of it is under cultivation, and produces considerable crops. It is under the control of the Police Committee of the Canton of Berne, and receives persons sentenced by criminal courts for terms of imprisonment up to three years, including some forty or fifty convicted of habitual tramping with refusal to work. There is accommodation at present for about 200 men (picked as able-bodied, and otherwise suitable to be present here), but the number seldom exceeds 150. The violent and insubordinate, and those who make attempts to escape, are transferred to ordinary prisons; but such cases are rare.

"Great stress is laid on the importance of the staff not merely supervising the men, but taking active part in the work so as to stimulate them by example, and also to get acquainted with them. All inmates on their first entry are set to labour on the farm, and, after some experience has been gained of their conduct and their capacity, they are either retained there or are employed in other occupations.

"There are various workshops where tailoring, shoemaking, smith's work, and carpentering are carried on. Only men brought up in these trades work at them.

"The guiding principle of the management is to 'improve the land by man, and man by the land.' The first of these objects, at any rate, is secured in a conspicuous degree. A huge marsh has been converted into a fertile farm, traversed by newly-constructed roads, and supplied with sufficient buildings. More and more ground has been reclaimed each year, and, while the peat extracted has been sold at satisfactory prices, the soil, by scientific treatment and the abundant use of chemical manures, has been made to produce abundant crops. The original price paid for the land by the canton was £29,710. No trustworthy estimate of the present value can be given, but it is noticeable that the sales of farm produce in the three years, 1901-2-3, are about double what they were in 1896-7-8, and it is not unreasonable to suppose that the worth of the estate has been raised in a corresponding degree. Without reckoning interest on the first capital outlay, the establishment is really self-supporting. It is true that the canton makes an annual grant, which in 1902 amounted to about £1,200, but this was more than counterbalanced by the increased value of buildings (all erected by home labour) and stock in the course of the year. When the land was originally taken over, in 1896, the valuation amounted to £200; it has now risen to £17,385.

"In the course of five or six years more the work of reclamation, on which a large number of men are now employed, will be finished, and all the land at present covered by peat (about one-third of the whole) will have been brought under cultivation. The amount of labour then required will depend upon the crops grown, and if, as is proposed, vegetables are produced in considerable quantities on land now employed for stock-raising, the additional work involved will take the place of that which has been devoted to drainage. There is, therefore, no reason to anticipate that, even in the altered circumstances, the establishment will require any substantial contribution from public funds for its continued maintenance."

58. Since Mr. Preston Thomas made the above statement, I have reason to believe that his anticipations have been more than fulfilled. The colony, economically at least, is such a success as to lead me to hope that with better land, experiments of a similar kind would be attended with even more important results here.

59. On the question of cost, the late Sir Walter Besant, after a visit to our colony at Hadleigh, which was established rather for restoring "unemployables" than for finding work for the reputable unemployed, made some very appropriate remarks. "Every man," he wrote, "who does not work lives on the labours of other men. If a wastrel of London streets devours and consumes and uses up, one way and other, in a year, at least £40 worth of food, drink, clothes, light, fire, and shelter he ought to produce by his own work at least £60 worth of something or other; so that every such idle and worthless creature is a dead loss to the community of £100 a year."

Establishment self-supporting.

* See Bill No. 124 of 1904.

APPENDIX No. LVIII.—Continued.

"If 260 of these creatures are converted from ways of waste to ways of carefulness, there is a saving to the community of £26,000 a year in clear money.

"Most of my readers will agree with me, however, that this is not the best or the truest estimate of the gain to the community. By the gain or rescue of one hundred men—less the failures who were quite fallen, degraded, and apparently hopeless—the gain to the country of every single case can never be estimated, can never be measured by any standard; it is the gain of an example; it is the gain of children and grandchildren—one knows not how far and wide the gain may reach—brought up in honesty, with the example of honesty and temperance; it is the gain of one man more on the side of order; it is the gain of infinite possibilities in the direction of good rather than evil. These gains can never be set down in figures or estimated by dollars."

CLASS III.

What is meant by the unemployed.

60. *The unemployed*—meaning those who are able and willing to work but unable to procure it. They may generally speaking be described as working men and women of good repute out of work.

Causes of unemployment.

61. I need not occupy much time in enumerating what I consider are the principal causes which lead to periodical displacements of labour. The causes of unemployment are manifold. Some are totally beyond the foresight and control of any Government.

Financial crises.

62. For example, financial crises. That which originated on the other side of the Atlantic a few months ago brought about not only a serious shrinkage of money there, the suspension of banks and many bankruptcies, but it also disturbed the money market here and on the Continent of Europe, and no disturbance in the money market can occur without the labour market being also affected. The crisis in America caused a measure of unemployment in England and elsewhere.

War.

63. War is another cause of unemployment. It undoubtedly releases and sends in circulation a large amount of capital, and revives trade in certain directions, but the waste which invariably occurs produces an effect similar to that which happens when a man has been living for some time beyond his income. He has to reduce his expenditure and the people who depended on his disbursements become sufferers. Moreover it also leads to the actual destruction of capital in one form or other and so reduces the spending powers of the community.

Destruction of capital.

New laws.

64. At home the introduction of new laws intended ultimately to benefit the people and, it may be to raise the standard of existence and comfort, have the effect of throwing people out of employment for a time. Such is the penalty a progressive nation has to pay for reform, and I suppose it cannot be avoided.

Labour-saving machinery.

65. The invention of labour-saving machinery often acts in a similar way.

Other causes.

66. Then we have strikes, bankruptcies, the gradual absorption of many male occupations by women, bad harvests, the effect that the seasons have upon outdoor occupations, and the inscrutable tidal-like rise and fall in trade all operating against the regular continuity of employment.

Plans for alleviating the difficulty.

67. Now, I frankly confess to the complexity of the problem; but that very complexity affords, I submit, a ground for introducing the assistance of the State in dealing with it. I know, of course, that such assistance must be most carefully safeguarded, or it may do more harm than good. The difficulty is, no doubt, in many of its aspects an economic one, but having regard to some of the causes from which it springs it is not merely economic, and, in my judgment, it will never be satisfactorily solved without some degree of help from the law and some measure of co-operation from the State.

68. I believe the distress caused by want of employment could be considerably lessened by the adoption of the following plans:—

Compulsory registration of both employers and employes.

69. *Compulsory Registration* at Local Bureaux both by those who are in need of employment and by those who seek workers.

70. At present it is almost impossible to ascertain at any given time the number of skilled and unskilled persons out of work on the one hand, or to discover, on the other, where and to what extent labour is in demand.

71. There is no national Labour Exchange, while Defects of local and many voluntary Labour Bureaux have become a delusion and a snare. Registrations are duplicated, and exaggerated statements as to the number of the distressed follow with corresponding disturbing effects on the public mind.

72. Then, again, Municipal Labour Bureaux, for the lack of compulsory registration on both sides, are not in a position to bring the needs of capital and labour together. We simply muddle through both normal and abnormal periods of distress, the unemployed being driven to wander hither and thither in search of work, and the employers mainly, and often vainly, relying upon advertisements in the newspapers or voluntary applications at the gates to meet their needs.

73. Without elaborating the details I suggest the adaptation of the Continental system of labour registration for this country.

Roughly stated my plan is—

(a) To compel all able-bodied men generally who are out of work for more than a week to register personally on forms provided for the purpose, giving particulars of age, occupation, where last employed, and whether prepared, if the authorities will grant facilities to travel, to go to places at a distance where their particular class of labour is in demand.

(b) To compel all employers of labour to make a weekly return to the Local Bureau of the number to of their employees actually at work and how many new hands, if any, they are in immediate need of, and whether they desire the aid of the Bureau to fill these vacancies.

Such a return should also specify the divisions of labour.

(c) To affiliate the Local Bureaux with the National Labour Exchange, so that the entire facts relating to unemployment may be tabulated and the local authorities be kept regularly informed of the districts to be avoided, and those which they may recommend to applicants for work.

74. With such an instrument in the hands of the authority, it would be possible, as I have hinted, for that authority to bring the requirements of capital and labour together at least in a greater degree than is the case at present.

75. How far it would be possible for local authorities to assist the unemployed in finding work outside the area of their jurisdiction is a question which I need not here discuss, though I would point out that the principle for enabling authorities to do so to the extent of assisting unemployed persons to migrate and emigrate has already been accepted by the Legislature in the Unemployed Workmen Act of 1905.

76. But when you have registered the forces of capital and labour in the manner described, or, in fact, by any other scheme, there will remain, I fear, a serious amount of unemployment accompanied, of course, by a want of wages—and on the heels of that calamity follows want of bread—and then slowly, but surely, in too many instances come starvation or vice and crime.

77. There is no doubt that, here and there, some of the idle and loafing classes who prefer to live on the relief supplied by the Poor Law Authorities and the doles of the charitable rather than earn their bread by the sweat of their brow will always succeed in attaching themselves to the ranks of the bona-fide unemployed. If, however, my suggestion to establish Compulsory Labour Colonies were adopted, these would soon be reduced to a very small number, and the brand deserved by the few ought not to be indiscriminately stamped on the many who are unemployed owing to the lack of employment.

78. *Work.* The question now arises how we shall provide work for this unfortunate surplus and thereby prevent them from falling into the ranks of the unemployable.

79. The higher grade of skilled workmen might on the whole be safely left to a system of insurance against unemployment, which should be supplied by their respective trade combinations. Except in the case of prolonged strikes, which result in depleted funds and consequent misery, these protective associations might be expected to prevent their members becoming a charge on the State.

80. The unemployed problem, and especially that aspect of it with which the Poor Law is chiefly concerned, is mainly caused by unskilled labourers, and it

APPENDIX No. LVIII.—*Continued.*

is to this class that we must principally address ourselves. I think that extended powers with proper safeguards should be conferred on local authorities to enable them to make temporary provision in the shape of work for the unemployed when a state of general unemployment is found to exist in a community.

81. The responsibility for mitigating distress rests to some extent at present on the local authority, and if we are to grapple in dead earnest with the unemployed problem, it seems to me that ultimately we must look to a Statutory authority to set in motion the necessary machinery.

82. It is important that we should be clear as to the principles which should determine relief in the shape of work for the unemployed, and I venture to submit the following conclusions:—

(a) That every man who is able to work should be enabled to work, and that at some form of remunerative labour.

83. An opportunity to work for his maintenance should be afforded every man, and if he cannot find it by the exercise of his own powers and energy, and is thereby placed in a condition of want, the community should step in through its constituted authority and provide him with work.

(b) That the work so provided should be of a character likely to prove of value to the community.

(c) That the rate of remuneration to the worker should be fixed below that ordinarily paid for the kind of labour offered.

(d) That the responsibility for fixing this price should devolve on the local authority, which should take into account, of course, the economic conditions of the area within their jurisdiction.

84. The rate for one class of labour in Birmingham during a period of distress might be higher or lower, as local circumstances might determine, than that fixed under similar conditions at Newcastle.

(e) That payment at the rate thus fixed, should be made according to the amount of the work done, and that only.

85. Without such safeguards the unskilled in partial employment might be tempted to get out of the same by some means and throw themselves on relief works.

86. I am absolutely opposed, in the interests of all parties concerned, to the fixing of an attractive price for labour carried on under these abnormal conditions.

87. Where the value of the work done is inadequate to the needs of the worker, and it is thought expedient to pay more than is earned, such payment should be debited to the worker as a grant in aid or as a loan, the latter to be recoverable by the local authority, in the event of the worker being considered able to pay in the future, within a period to be fixed by the local authority.

(f) That the selection of work be left entirely in the hands of the local authority. In one place it may be deemed best to manufacture goods so as to fit the capacity and habits of the local unemployed. In another place the local authority may decide upon the repair of roads, making footpaths, planting trees, building sea walls, reclaiming land, the creation of parks, etc.

(g) That where articles are produced, however, either by machinery or hand labour, they shall not be put in the open market at prices lower than the prevailing trade figure—in other words, there must be no under-selling.

88. I believe the wider application of these measures will set in motion a vast body of unskilled labour, which really, after all, contributes two-thirds to the unemployed problem.

89. I need not dwell upon the obvious advantages that such an arrangement would bring to their dependents, as well as to the landlord, shopkeeper, artisan, and the rates.

90. I am compelled, however, by the logic of experience to admit that, even given the most vigorous action by local authorities in all the directions above indicated, there will still be a surplus of the people unprovided with work. I proceed then to make a suggestion for dealing with that surplus, by means of emigration.

91. *Emigration.*—By emigration I do not mean the imperfect and unsystematic effort which, in the past has so often led to disappointment and misery.

92. For instance, no one can condemn more than I do the indiscriminate transfer of men and women to another country where, on landing, they are left in their ignorance to shift for themselves, and as a consequence become only too often a prey to unprincipled people, and ultimately a source of perplexity and expense to the new community.

93. Neither do I mean the exportation of a class more or less composed of the refuse of the community, whether vicious and criminal, or shiftless and wastrel.

94. The recent experiences of some public authorities who have engaged in emigration work would show, I think, the unwisdom of sending abroad large parties of one class, and leaving them practically without after care in the way of advice or help.

95. As an illustration of what can be done our agencies in this country have during the last three or four years selected and transferred over 30,000 people from the British Isles, and successfully settled them, mostly in Canada. The number of "disappointments" does not amount to 1 per cent. of the total. The repayment of moneys advanced from our funds to assist the emigrants is being made in a measure which is gratifying and the authorities in Canada ask us to send more emigrants of the same character. The vast majority of those sent out were either out of employment here or in work which was so uncertain that we had little hesitation in advising them to emigrate.

96. The organisation of the Salvation Army has placed us in a position peculiarly favourable to regulating this work. Our agents are scattered all over the world, and it is their business to keep in close touch with the conditions which affect the supply and demand of labour. This has enabled us to guide the emigrant without delay to the district where there was the greatest need for his labour, and to afford him advice, assistance, and sympathy which have proved of real service. Our arrangements have included the provision of conductors to travel with the parties from the port of embarkation to the port of landing, where each emigrant is introduced to other officers, who have been previously advised of the needs and qualifications of the persons composing the party. It is the business of these reception officers to find work for the new arrivals.

97. By special arrangement we have also secured the entire accommodation on certain Atlantic steamers, and have thus been able to guard against intoxicating drinks and other evils common on ocean passages.

98. Advantage has been taken of the voyage in these cases to place before each emigrant various openings for settlement, with the result that each man and woman has left the ship fully instructed for his or her destination, and with the definite assurance of a particular situation, or employment, to some extent of his or her own selection.

99. Now I submit that the law should include in its system fuller provision for the emigration to other parts of the Empire of that surplus of respectable labour for which employment cannot be found at home.

100. The principle involved in such transfer has long been admitted, for since 1848 guardians have been empowered to expend a limited amount of money "in or about the emigration of poor persons." In this connection I would refer in addition to the Unemployed Workmen Act of 1905, to the Crofters Acts, and to the work which is being accomplished by the Congested Districts Board in Ireland. There cannot be, I suggest, any serious difference in principle between the transfer and settlement of men from one part of the country to another, and their transfer and settlement from one part of the Empire to another.

101. My view is that the authority responsible for the poor should itself be prepared, if necessary, to make provision for dealing with the particular class we are now considering. At any rate, the work should not be left to inexperienced persons, societies or bodies who with the very best intentions often fail in their efforts, because they have not the experience necessary for selecting the right kind of people for transference nor the machinery to provide adequate oversight during the journey, and, more important still, cannot give itself that after care in the early days of settlement which is so vital to success.

102. I suggest that such emigration could not but be beneficial from whatever point of view it may be considered.

(a) It must be beneficial for the Empire at large. No one in his senses would contend that it is in the interests of the British Empire that its most

Unwise methods of some public authorities.

Salvation Army emigration over 30,000 in 4 years.

Disappointments under 1 per cent.

Repayment of emigrants satisfactory.

Unique qualifications of Salvation Army for emigration work.

Conducted parties.

Employment provided.

Special temperance sailings.

Choice allowed as far as possible

The Law should make fuller provision for emigration of surplus population.

The principle already admitted Crofters Acts Irish Congested Districts.

No real difference between transfer from one part of kingdom to another, and from one part of the Empire to another.

Work to be skilfully done by the State itself if necessary.

Beneficial from all points of view. For the Empire at large.

APPENDIX No. LVIII.—*Continued.*

fertile possessions should be the home of every nationality but our own.

It has been, and is, no small matter of concern with many statesmen who have discussed the subject with me, in various parts of the world, that aliens in blood and sentiment may so easily outnumber the Anglo-Saxon communities.

Surely those who have any regard for the permanence of our race and the continued prosperity of this Empire must see the enormous advantages which accrue from a wise and careful emigration.

(b) The country would be benefited. It is obvious that the presence in any community of a class which produces nothing and the members of which are from time to time in one form or other a charge upon the producers is a serious evil.

The United Kingdom as a whole would benefit by their transfer, for not only would it be a direct advantage that they should become self-supporting elsewhere, but it should be remembered that their location in some other part of the Empire would create a market for the products of their fellow workers left in the home country.

(c) It must be in the interests of the Colonies to receive a working population. It is quite unnecessary to say anything in support of such a proposition. It is universally admitted that the Colonies are capable of assimilating practically unlimited numbers of the right class of immigrants, and every family adds to the strength and wealth of the whole.

(d) Such emigration must be beneficial to the emigrants themselves. Here they suffer from the uncertainty of casual employment, or from the misery and wretchedness of absolute want. Here, if they cannot obtain work, the community, in one form or other, must support them in idleness, to the ultimate loss of that self-reliance which is so important. Here they are not wanted, and presently they become the prey of discontent and often come under the influence of predatory doctrines, or are exposed to temptations which have a more lamentable effect upon them because of the conditions into which they have fallen. There they are welcome and find immediate employment, and are absorbed into the community in a healthy and natural way, to become citizens of repute.

103. I believe that, under suitable conditions, a large part, if not the whole, of the cost of such emigration as I here advise would be recovered from the emigrants after their settlement.

CLASS IV.

104. *The Children.*—It is now so generally accepted that the education and physical development of children, especially of the poor, degraded, vagrant, and criminal classes, constitutes one of the important duties of the State, that the suggestions I submit do not involve any serious departure from the principles upon which recent legislation on behalf of children has been founded.

105. Just as I believe that the compulsory registration of the unemployed, the granting of larger powers to the local authority for dealing with abnormal periods of distress, and the steady operation of a properly-organised system of emigration would prevent the manufacture of the pauper class, so I am equally persuaded that wider measures than those at present in force for the reclamation of the children of vagrants, confirmed drunkards, and criminals will be of the highest value to the State.

106. Looked at from any standpoint—whether economic or moral, from the individual point of view or from that of the community—the measures I have in mind would be a great gain. Money wisely spent on the child in the formation of a healthy body, brain, and character must prove in the long run a remunerative investment.

107. If, as has been recently stated on high authority, a child at birth is worth £5 to the State, and a skilled mechanic at 25 is worth £200, then it is obviously to the interest of the country that a child who is in danger of becoming a pauper, thief, hooligan or unemployable should be rescued.

108. Surely one of the saddest sights to be met with under our present civilisation is that of little children, dirty, verminous, thinly clad, poorly fed, weak and stunted in growth, being left to themselves or being dragged about the country in all weathers by parents who have practically lost all sense of decency and parental responsibility. It is inevitable that such children will join the ranks of the indolent, the vicious, and the criminal. I maintain that the State should come in with a stronger hand than it has yet exerted and say, "this shall not be allowed to continue."

109. I am encouraged by the attitude of the Government on the general question of children to believe that Bill. legislation calculated to reach this end may now be obtained. The Children's Bill at present before Parliament, with its provision for establishing Juvenile Courts and desirable improvements in existing laws, is a gratifying sign of the times.

110. The Salvation Army carries on a widely extended work among women who have been betrayed and ruined, and my officers engaged in that rescue work would advocate the following important amendments to the present Bastardy Acts:—

(a) A more humane treatment of the mother.

(b) The allowance to the mother for the support of her child to be fixed with some reference to the income and circumstances of the father of the child, and to be further secured on behalf of the child in the event of the death of the mother.

(c) Provide for drastic punishment where the father of a child, as is now so often the case, fails to meet a maintenance order.

111. Amendments framed on these general lines would, I think, prevent the destruction of many illegitimate children.

112. My experience leads me to suggest that the authority should have power to send to a well-regulated rescue home, at the public cost, any young woman seeking relief who in their opinion was a fit subject for such a home, and in the case of unmarried women who enter a State-maintained infirmary for a second confinement provision should be made for their being placed in a rescue home and being maintained there, with a view to reformation, for a period not exceeding two years.

113. I would strongly urge with reference to all children (the blind and imbecile as well as the able-bodied) coming under the control of the State that every reasonable effort should be made to instruct them in some useful handicraft or manual labour, even if they are not apprenticed to some trade. It appears to me to be both cruel and wasteful to compel the children of the poor to spend the most valuable years of life in acquiring book-knowledge to the neglect of that training which will best fit them to succeed in the form of labour upon which their very existence must depend in the future.

114. It is, I believe, a fact that 90 per cent. of the girls who have left Industrial schools during the last three years, and 86 per cent. of the boys, are now in permanent employment. It is submitted that the money spent on these children has been a good investment, for if it had not been spent, the majority of them would probably have cost infinitely more to maintain in workhouses and prisons.

115. While encouraging "boarding out" at farms and cottages here, I would suggest the granting of extended powers to the authorities to provide not merely the means for the emigration to British Colonies but also the maintenance and training there of suitable children.

116. I have recently been led to advocate an important change in the working of the Industrial Schools Act, and for that purpose to promote a Bill in Parliament (a copy is attached, see *Appendix No. LVIII. (A)*). The Acts are only a partial success, and in many parts of the kingdom an admitted failure, so much so, indeed, that (in the fiftieth report of the Inspector of Reformatory and Industrial Schools) it is stated that "as reforming institutions the industrial schools may claim to have been successful, but as preventive institutions in the fullest sense their good work has been neutralised by the lack of interest in them displayed by the local authorities as a whole."

APPENDIX No. LVIII.—*Continued.*

117. Mr. Bramwell Booth, in a pamphlet entitled "*The Abandoned Child*, a plea for the amendment of the Industrial Schools Acts 1866 and 1880," points out:—

Under the Act of 1866 "any person" may bring a child under 14 years found begging, wandering without home or proper guardianship, destitute, having parents in prison, who frequents the company of thieves, or who lives with or frequents the company of prostitutes, before a Justice of the Peace, who may commit such child to an Industrial School.

(a) Now, it is proposed (by the amending Bill) to make it a duty of education authorities, and also the duty of the police, to bring such child before the court. The court, if satisfied on inquiry that it is expedient to deal with such child under the proposed Act, *shall*, instead of *may*, as at present, order him to be sent to an Industrial School. The provision that "any person" may bring the child still remains.

(b) It is further proposed to empower magistrates to issue search warrants, so that a house of ill-fame may be entered, and a child searched for and removed in the same way as magistrates are now empowered to act under the Prevention of Cruelty to Children Act (4 Edw. 7, c. 15, s. 10). This provision would mainly affect brothels.

(c) At present education authorities are not obliged to provide school accommodation.

It is proposed by Section 3 of the Bill to make it as compulsory on the education authorities to provide Industrial School accommodation when required as to provide elementary schools.

The first Schedule to the Bill shows the offences for which children can be committed to Industrial Schools. The reasons are also given for the proposed amendments.

118. If this new power be granted by Parliament, which I hope may be the case, I believe that some 30,000 children belonging to the classes enumerated may be rescued from their appalling surroundings and placed where they can be educated and brought up in habits of purity and industry.

AUTHORITY AND COST.

119. I do not feel myself competent to offer any suggestion as to the best authority for carrying out such proposals as those I have outlined. I have no doubt that if they, or any important part of them, should be adopted, careful consideration would be given to that question by those better able than I am to decide the matter.

120. I think that the present system of administering the Poor Law is quite unsatisfactory. It is costly, and often absurdly slow and inadequate. The country has, I feel, outgrown it. No one can admire more than I do the immense amount of splendid work done by guardians of the poor, but I doubt very much if its serious, delicate, and costly character has been fully realised, and whether it has always been in the hands of the most capable class of citizens.

121. The multiplication of Acts of Parliament and of Local Government Board orders; the unequal system of valuation and rating; the complicated nature of the relationships and obligations of one union to another; and the tendency of the Poor Law system,

by its refusal to consider anything but destitution as a condition of relief, to foster hypocrisy and fraud; have all made the work of the guardians extremely and growingly difficult—far too difficult, in fact, for such a body to carry out effectively. It is unquestionably work which requires the highest technical skill, combined with the wisdom, patience, and sympathy which only enthusiasts in the cause of the poor can supply.

122. As to the cost of giving effect to the proposals I have formulated, I do not put them forward on the grounds of present economy. I do not, however, consider they would be more costly than the present system, even in the initial stages, and it is my belief that after a few years they would prove a great economy.

Proposal submitted would prove a real economy.

123. As to existing buildings, I believe that, with slight alteration, many could be utilised for one or other of the purposes to which I have made reference.

Use of existing buildings.

IN CONCLUSION.

124. I desire, in conclusion, to make one observation of a general character. The ethical principle which I believe to govern the views I have here somewhat hurriedly and crudely set out, is one which I am convinced cannot in our civil life, any more than in our family or our commercial or our national affairs, be ignored with impunity. It is best expressed in words which I quote with all reverence:—"Whatsoever ye would that men should do unto you, do ye even so to them."

125. I believe that the working out of that principle as between the community—representing the whole of the individuals composing it—and the poor, vicious, and less fortunate of its members, is most likely to be successful in safeguarding the true interests of the one, and in improving the condition of the other. What is bad for either must be bad for both. What is beneficial for either must be beneficial for both.

126. On the low ground of self-interest it is wise that the State should make every reasonable provision for the aged, the sick, the defenceless, and the workless, lest their neglect become a danger to its own security. It should give every possible opportunity alike by voluntary and by compulsory means, for the reform of the idle, the vicious, and the criminal, if only because their neglect must become a menace of moral disorder to the whole people.

127. And it is because I am convinced that the economic recovery of the classes which so largely occupy the attention of our Poor Law system can only be achieved by their moral recovery that I urge the employment of the means I have here indicated. The whole history of our Poor Laws stretching back for a thousand years or more testifies to the truth that mere economic changes can never effect the economic prosperity of the dependent poor. Only moral forces—the touch of human sympathy—the light of truth—the influences of divine grace—can effect that moral change which is the foundation of their economic recovery. While urging, therefore, the organisation by the State of the various agencies on behalf of the poor to which I have here alluded, I confess that I have little hope of their success in dealing effectively with many of the problems before us unless they be worked with true sympathy and with the full recognition that society has an intellectual, an ethical and a religious, as well as an economic work to do for all who seek its shelter or its aid.

APPENDIX No. LVIII. (A).

Handed in by General Booth.

INDUSTRIAL SCHOOLS AMENDMENT BILL.

MEMORANDUM by Mr. BRAMWELL BOOTH with Reference to the Industrial Schools Acts, 1866 and 1880 and Proposing a Bill to compel Education Authorities to provide Industrial School Accommodation.

I.—MAIN FEATURES OF THE PROPOSED BILL.

1. Under the Act of 1866 "any person" may bring a child under 14 years coming within any of the descriptions set out in the repealed sections on page 4 of the draft Bill.

It is proposed to make it the duty of education authorities and also the duty of the police to bring such child before the court. The provision that "any person" may bring the child still remains. The court, if satisfied on inquiry that it is expedient to deal with such child under the proposed Act, shall, instead of may, as at present, order him to be sent to an industrial school. This makes it obligatory upon the court to exercise their discretion, but leaves them still discretion.

2. It is proposed to empower magistrates to issue search warrants, so that a house may be entered and a child searched for and removed in the same way as magistrates have power to do at the present time under the Prevention of Cruelty to Children Act (4 Edw. 7. c. 15. s. 10). This would mainly apply to brothels.

3. At present education authorities are not obliged to provide industrial school accommodation.

It is proposed by Section 3 of the Bill to make it as compulsory on the education authorities to provide industrial school accommodation as to provide elementary schools.

The first schedule to the Bill shows the offences for which children can be committed to industrial schools. The reasons are given in the margin of the Bill for the proposed amendments.

The sections under the present Acts, which it is proposed to repeal, will be found following the second schedule, on page 4 of the Bill.

II.—ARGUMENTS AND FACTS.

Among the really beneficent Acts which have been put on the Statute Book on behalf of children are the Industrial School Acts of 1866 and 1880. These Acts aimed at the rescue of children who were in danger of becoming vagrants or thieves, or having their morals corrupted.

The working of the Acts, however, leaves much to be desired. It is scarcely an exaggeration to say that in many parts of the country they are not put into operation at all, and in those parts where some industrial school work is done, that work does not, in our judgment, meet the requirements of the case.

The reason for the failure to put the Acts into operation is that there is no compulsion on the local authorities to provide industrial school accommodation. A magistrate may think it is in the interests of a child, and in the interests of the State that it should be saved from becoming a vagrant, pauper, thief, or prostitute, but the child cannot, of course, be placed in an industrial school unless the local authorities provide such a school. Free education (at great expense), free meals, free medical inspection, and (in many towns) free clothes, are worse than thrown away on thousands of children who, because of the apathy of the local authorities, grow up under the most harmful conditions.

If, as has been recently stated on good authority, a child at birth is worth £5 to the State, and a skilled mechanic at twenty-five is worth £200 to the State, then it is obviously to the interest of the country that a child who is in danger of becoming a pauper, thief, hooligan, or unemployable, should be rescued so as to make it an asset instead of a burden. In this connection it may be mentioned that 90 per cent. of the girls who have left industrial schools during the last three years, and 86 per cent. of the boys, are now in permanent employment. It is submitted that the money spent on these children has been a good investment, and if it had not been spent the majority of them would probably have cost infinitely more to keep in workhouses and prisons.

Investigations into the working of the Acts have been made in most of the large centres of population in Great Britain, and the figures of industrial school committals supplied by the cities and towns visited show clearly the need for a more efficient and systematic carrying out of the law.

London, although far from perfect, has always been to the front in this respect, and ever since the passing of the Act of 1856 has supported a staff of industrial school officers. According to last reports, London sent to industrial schools 752 children; Liverpool, with about one-seventh of the population of London, sent 616; while Manchester and Salford, with a combined population of nearly 80,000 more than Liverpool, sent about 100, or one-sixth the number of Liverpool; Birmingham sent 120, Glasgow 165, and Edinburgh only 21; while in many districts absolutely nothing was done.

The majority of education authorities in the country allege that their work begins and ends with seeing that children go to school. If they come to school clean and properly clothed, it is not the business of the school attendance officers to inquire into their habits or surroundings outside the school.

The police, on the other hand, say their work is to detect and punish crime, and to prevent it, and not to rescue children who have committed no crime. The consequence is that many thousands of children are allowed to become criminals, paupers, and prostitutes, because it is no one's business to rescue them. It is true the Act says: "Any person may bring," but it is very seldom that any private individual brings a child before the court. Few people, even among those interested in the question, know of their powers under the Acts.

It is submitted that it ought to be as much the duty of a policeman to arrest a child with a view to its rescue from certain conditions, as to arrest a drunken man with a view to his punishment; and it ought to be the duty of an attendance officer to bring before the court any child who comes under the descriptions mentioned in the Act.

Some education officials are zealous in the work of child rescue, others simply ignore what appears to be their duty.

There are two classes of children who are practically untouched by the present Acts:—

1. Children on tramp with their parents.
2. Children living in immoral surroundings.

APPENDIX No. LVIII. (A)—*Continued.*

III.—CHILDREN ON TRAMP WITH THEIR PARENTS.

As to the former, at a very low estimate there must be at least 5,000 who are wandering with their parents from town to town, receiving little or no education, and who will, in their turn, grow up to be vagrants, and possibly criminals, and produce another generation of their kind.

On the night of the 7th July, 1905, a census was taken, at the request of the Vagrants Committee, by the different police forces in England and Wales, of persons without a settled home, living in common lodging-houses and elsewhere, but not in casual wards. 62,212 persons were found in this condition, of whom 2,718 were children. And no fewer than 2,230 children were received in the casual wards of Berkshire in 1905 according to a return obtained by the chief constable of the county. It is true that some of these children might have been in all the twelve casual wards in Berkshire during the year, but when it is considered that the census was taken by the police in the middle of the summer, when many would probably be sleeping out, that the figures given by them do not include the children in casual wards, and that Scotland is not included, it will be admitted that 5,000 is a low estimate.

The argument usually urged by the local authorities against their rescuing these children is that they do not belong to their own districts. Why should they pay for their maintenance? They seem to forget that if they get tramps from other districts, such other districts get tramps from theirs. Some local authorities have suggested that such children ought to be paid for entirely by the Treasury and other authorities have suggested that the only way of doing industrial school work effectually is that all the expense of maintenance should be borne by the Treasury.

IV.—CHILDREN LIVING IN IMMORAL SURROUNDINGS.

With regard to children living in immoral surroundings, the question of girls need only be strongly emphasised here, because while it is bad enough for boys who are brought up amid such surroundings, it is much worse for girls, who in the nature of things may be expected to become prostitutes.

In 1906 only 995 girls were placed in industrial schools, committed for all the offences mentioned in the Act. The number for 1905 was 847. It is submitted that these figures do not represent probably a tenth of the number of girls living in immoral surroundings in Great Britain, who could and (in the interests of the community) ought to be rescued.

It has not been possible to obtain the exact figures of these cases from the education authorities in the places in which investigations have been made, but a fairly accurate estimate may perhaps be made. During the three months ending 31st December, 1906, eight girls

were committed at Liverpool—say, 32 for the year—and in London, during 1906, 31 were committed, making a total for the two cities of 63. London and Liverpool together actually send one-third of the total number of children sent to industrial schools in Great Britain. Basing an estimate on these figures, it would appear that not more than from 180 to 200 girls are rescued yearly from immoral surroundings. Investigations all over the country clearly show the awful surroundings of thousands of children, and the little that is being done for their rescue. It has been a common saying by people with a thorough knowledge of some districts, and working among children, that an industrial school could be filled with girls from immoral surroundings alone in some of them.

In these cases also the same arguments are used by the police, who say that if they have information about a brothel, and the evidence is sufficient, their business primarily is to raid the brothel and prosecute the keepers. That is what their warrant calls for; the rescue of children is a secondary consideration. They may be rescued if there is industrial school accommodation. Some instances have been mentioned of children going to the workhouse during the imprisonment of parents, and rejoining them when they come out of prison. The police, as a rule, do not seem to understand that the Act says nothing about a brothel, that it is not necessary to prove a child is living in a brothel before it can be rescued. They act merely because a crime has been committed, and ought to be punished.

The education authorities say, with respect to cases of immoral surroundings, that if children go to school regularly, they know nothing about their circumstances. It is only when they do not attend that inquiries are made, and it may be ascertained then that they are in an immoral environment. They also state that they have not the men or the time at their disposal to deal effectively with these cases, which necessarily require watching. They are, therefore, usually referred to the police or to some voluntary society.

Investigations clearly prove that the Industrial School Acts have very largely failed in their purpose for the reasons given above, and it is suggested that the only remedy for the present condition of things is that it should be made obligatory on the part of the local authorities to provide industrial school accommodation. The cost to the ratepayers, so far as can be ascertained, would not exceed 4s. per week per child, and the majority of authorities freely admit that it would be cheaper and more profitable for the State to spend money for the rescue of the children than to provide workhouses, prisons, reformatories, and similar institutions for those who are allowed to become failures in life.

APPENDIX No. LIX.

STATEMENT OF EVIDENCE BY THE CHELSEA COMMITTEE OF THE CHARITY ORGANISATION SOCIETY.

278, King's Road, Chelsea, S.W.
June 1st, 1908.

Dear Sir,

My Committee desire me to submit the enclosed tables for the consideration of the Commissioners. The scheme which it is desired to bring to their notice was instituted 3½ years ago with a view to the prevention of overlapping, and promotion of co-operation amongst the relief agencies in Chelsea and the procedure is as follows. The agencies forward monthly or weekly lists of their cases to this office, where they are compared, and if the same name is found on two or more lists, the fact is notified to those agencies upon whose lists the name appears.

The scheme receives increasing support, and we have lately commenced holding monthly conferences of the overlapping agencies for the purpose of considering the possibility of restoring the families to a state of independence and mutually agreeing upon future action in regard to them.

I am

Yours faithfully,

M. Z. HADWEN,
Hon. Sec.

R. G. DUFF, Esq.

CHELSEA MUTUAL REGISTRATION OF ASSISTANCE.

OPINIONS ON THE SCHEME.

Agency XXIX. writes: "May I take this opportunity of saying that the Registration is absolutely invaluable . . . without its aid half the good of our work would be neutralized."—December, 1907.

Agency XXIV.: "I am requested by the Committee to express their appreciation of the valuable assistance rendered."—November, 1907.

Agency P.: "I found the Registration the greatest help while I worked in the District."—January, 1908.

Agency XVII.: "The information received has been invaluable."—November 9, 1907.

Agency XXIV.: "We have been greatly assisted in obtaining information concerning the cases in our hands by the Hon. Secretary of the Registration Bureau established at the office of the Charity Organization Society in Chelsea."—*Annual Report*, 1905.

"We have again to acknowledge the valuable assistance rendered."—*Annual Report*, 1907.

Agency IX.: "Throughout the year we have continued to exchange with the Chelsea Committee of the Charity Organization Society lists of cases before us, and thus have been enabled to gain most useful information, and also to prevent overlapping."—*Annual Report*, 1906.

London Unemployed Fund, 1904-5. Report of the Central Executive Committee.—"Overlapping" is one of the curses of disorganised administration, providing, as it does, the opportunity for the unscrupulous and penalizing the honest man. As one step towards

its prevention, the list of the Relieving Officer should be consulted, and if possible the list of the organised charities of the district. In at least two Boroughs last winter a general register was accessible at a single centre, and it was an instruction that the "Relieving Officer's and Charities Register (now kept at ———) must be consulted."

"It would be desirable that in every district such a 'clearing' list should be formed and used. It is to be noted, however, that unity of action has a far greater value than that of checking abuses such as overlapping. Unity and co-ordination are also first steps towards efficiency and the greatest outcome of efficiency is not the merely negative advantage of detecting abuses, but the positive one of more assured remedial and preventive action. To this point we return in the section dealing with Decisions."

"It should be the duty of the Committee to report to the Guardians, as has already been done in at least two districts, the names of those by whom employment has been refused, and where registration of assistance is in operation, lists of all to whom assistance is offered should be contributed."

Agency IX.: "We have to thank the Hon. Secretary for the invaluable assistance rendered in preventing overlapping."—*Annual Report*, 1907.

Agency VI.: "The Committee thank the Charity Organization Society for the information furnished by the Mutual Charities Register and for the attendance of their delegate at the Society's weekly meetings."

APPENDIX No. LX.

STATEMENT OF EVIDENCE BY MISS MARY CLIFFORD.

1. That (in my estimation) the main causes of the present defective condition of Poor Law administration are of two kinds.

2. The lack of public intelligent interest.

(a) Guardians are not as a rule acquainted with Poor Law.

(b) There is practically no public opinion and little interest. In this city (Bristol) scarcely one-third of the voters record their votes at an election.

(c) There are at present few, if any, generally accepted principles of administration, the result of this being that there is no uniformity of practice and no knowledge on the part of applicants of how they will be treated. Therefore, little sense of justice and little moral stimulus.

(d) Even in the case of relieving officers, no certificate or test of acquaintance with Poor Law is required.

3. As practical suggestions, may I mention :—

(a) The nomination of persons to serve as guardians by some independent authority, such as the Local Government Board (as has been done in some London Boards).

(b) The requirement of a certificate of Poor Law knowledge in the case of all relieving officers prior to their appointment.

(c) Clear definite bye-laws as to relief and a guarantee that they are attended to.

4. The absence of directing power in the Local Government Board. The practice of the Local Government Board is to abstain from initiating any scheme but to express approval or disapproval of what is submitted to it. Considering the circumstances alluded to in Paragraph 2, a more constructive policy might be expected to answer better. This may be illustrated by the account of the recent scheme for a new infirmary in Bristol (not

to be taken as advocating the infirmary, but as an example of the entire absence of initiative or directing power on the part of the Local Government Board).

TREATMENT OF DEFAULTING PARENTS.

5. The Bristol Union has adopted a large number of children under the 1899 Act. (I hope to supply details as to number, etc.)

6. The plan has been to adopt children deserted by both parents, orphans, and cases of aggravated cruelty and neglect, and as to the latter to allow no visiting from relatives. The parents are of course ordered to contribute, and as payment is diligently demanded, it is found that with this description of parent adoption is very unpopular, and there have been frequent requests for the return of the children.

7. When, on inquiry, there is improvement in the home, the children are allowed to return on trial (without rescission of the adoption) and the official visitors (ladies employed by the Bristol Board under the Infant Life Protection Act,) visit and report.

8. There are, however, three legislative alterations required :—

(a) The process of recovery of sums due for maintenance of children by guardians is cumbrous and tedious and not effectual. It should be the same as that in use under the Industrial Schools Act.

(b) In many cases no payment will ever be recovered owing to the socially hopeless character of the parents. Is not this a strong instance of the need of a penal industrial "colony" or institution? Such people ought not to escape their responsibilities and their detention would act as a real deterrent.

9. May I add that the real reclamation of the children is in numbers of cases very striking and a great testimony to the national importance of the Act. Only it cannot be denied that more power is necessary to punish and if possible reform the parents.

APPENDIX No. LX.—*Continued.*

(c) There is an ambiguity in the 1899 Act which should be cleared up. It is left uncertain whether a child may be adopted under the Act if deserted by one parent only or whether desertion by both parents is required. The Local Government Board seems to hold that one parent only is indicated. The Act may, therefore, be used to deprive a good parent of his or her family which would be contrary to the intention of the Act and a manifest injustice.

10. As in occasional instances it has been desirable to adopt the children of a respectable mother in order to protect them from a bad father who has deserted them, I would suggest a clause to the effect that under such circumstances the adoption to be valid must have the consent of the parent who is not in fault.

YOUNG UNMARRIED MOTHERS IN WORKHOUSES.

11. It seems very desirable that cost of maintenance for these should be recoverable from the date of chargeability. This would make the obtaining of orders of maintenance far more general. In the interests of morality this is of importance. The Bristol Union has a carefully organised plan and has succeeded in a good proportion of cases. Out of 417 cases only 156 have failed through absolute want of proper evidence.

12. It is also very desirable that women of the above class should, if of feeble intellect, be detained under care for their protection.

13. This, of course, does not imply that the detention of women who are mentally responsible would be wise or right. A large number of those who come repeatedly to the workhouse and who have or have had several illegitimate children are no doubt of weak mind, but some are responsible.

14. These latter may very likely in the future come under some general legislative arrangement dealing with able-bodied persons who make themselves continuously chargeable to the rates.

15. I would earnestly deprecate any special legislation for the special class of unmarried women with children.

16. It would be necessarily one-sided, would deal with an effect of wrong-doing and not its cause and would inevitably produce more serious evils than it could prevent.

17. There are several alterations in the law relating to the subject of unmarried mothers required.

18. Detention for their protection under humane conditions should be applied to both men and women of feeble mind if they are without natural protectors.

APPENDIX No. LX. (A)

ADDENDUM TO STATEMENT BY MISS MARY CLIFFORD.

COPY OF OPINIONS EXPRESSED AT A MEETING OF WOMEN GUARDIANS.

AMENDMENTS.

1. Steps should be taken to obtain affiliation orders and to recover costs of the mother's maintenance as soon as she becomes chargeable.

2. The putative father should be called upon to find security for the payments he is ordered by the magistrate to make.

3. The death of the mother should not prevent a maintenance order being made if the evidence of paternity is sufficient.

4. Five shillings should not be the maximum payment that can be ordered in court.

5. If a child of sixteen is unfit, from its bodily or mental condition, to maintain itself, the father should continue to contribute to its maintenance.

6. The child should be legally liable to maintain the mother in her old age.

7. The mother should be legally able to appoint a guardian to the child.

We would suggest that the employment of qualified women in the investigation and treatment of these cases should be encouraged.

APPENDIX No. LXI.

STATEMENT OF EVIDENCE BY MRS. ELLINOR C. L. CLOSE.

1. I am the founder and president of the Children's Farm Home Association, the object of which is to receive certain of the pauper and other children of our workhouses and public institutions in England for upbringing in such parts of our Colonies, and Canada in particular, as provide the conditions of a free open-air life, wholesome surroundings, good educational advantages, and an invigorating climate, calculated to make them self-reliant, self-respecting, and healthy citizens.

2. I am about to hand over to this Association a farm fifteen miles from St. John, New Brunswick, which I bought in 1906.

It is known as the Ellinor Farm Home, and consists of a good house, with outbuildings and land—185 acres in extent, of which 90 acres are highly cultivated, and situate on a main road a quarter of a mile from a station on the main line of railway.

In addition, there is a house which I have built for the farmer and his wife—Canadians—whom I employ to work the farm and instruct the children. Since April, 1906, I have maintained in the farm an average of 13 boys and girls from 6-13 years of age.

3. The capital cost involved in this farm, including land, two houses, all farm stock and furniture, is about £80 per child, against £280 to £320 here, without land or stock.

The maintenance of the children works out at £22 per head per annum, against an average cost of £33 9s. prevailing in some of the institutions in England.

The journey of a child under 12 from London to the door of the farm costs £2 12s. 6d.

4. Under my scheme we include delicate children (free, however, from actual disease), who would be difficult to board out and impossible to adopt.

5. The children of the farm go to the local school, and work and play with the rest of the school children of the place. They take the keenest pride and pleasure in the farm and the horses, cows, poultry, gardens, and orchards upon it. The change that takes place in their physique and appearance is remarkable.

Two English ladies, one of whom is a trained nurse, are in charge of the children.

APPENDIX No. LXI.—Continued.

The doctors' visits have been merely formal visits of inspection.

6. Among those who have been interested in my experiment I may particularly refer to the testimony of (a) Earl Grey, the Governor-General, who visited the farm last year, and stated it to be an ideal place to rear a healthy, God-fearing race; (b) the Bishop of St. Albans, who inspected it last October, and who considers the experiment wise from every point of view; (c) the Duke of Argyll, who, in presiding at a Mansion House meeting held last year in support of the Association, said: "If adopted on a large scale the scheme would not only benefit both the children and the Colonies, but would tend to relieve the rates in England very considerably. It was like sending the children from one side of the Thames to the other."

7. A committee of local Canadian ladies and gentlemen superintend the farm and the children.

The liveliest interest is taken in the venture by the people of the locality, and by many others throughout the entire province of New Brunswick.

The Agent-General for New Brunswick remarks: "New Brunswick will certainly do everything possible to encourage this scheme, which we heartily approve of. It is an object good for the Old Country and the new. Yours is a home in the true sense."

8. We have recently been offered another farm as a gift, with house complete, and stocked with cattle, sheep, etc., in one of the most beautiful parts of New Brunswick.

It will prove an ideal home for a further number of poor children on funds being provided for working it.

At present the best plan is to take up improved farms, which are to be found in plenty in New Brunswick at most remarkable prices, and will always be worth the money expended on them.

It may be said of the eastern provinces of Canada that they are:—

- (a) The nearest part of the empire to England;
- (b) considerably warmer than North-West Canada;
- (c) specially suitable for fruit growing; (d) most like the Old Country.

9. My submission to the Commission is that this scheme is well calculated to meet the difficulty now existing with regard to the boarding out of poor children who have to be brought up at the public expense, and, in particular,

(a) *The children of our workhouses* under the Local Government Board and the Guardians of the Poor, especially the *orphans* and *deserted* children.

(b) *The children of our Industrial Schools* under the London County Council. There is practically no difference in the classes (a) and (b); all are of the poorest, and all are, under existing conditions, beginning life under the most serious disadvantages.

We do not, of course, propose to apply the scheme to children afflicted with bodily or mental diseases, or to Reformatory children.

10. All experts agree that country-bred men and women are superior to town-bred. (See Departmental Committee's Report on Rider Haggard's Report and Wilson Fox's Notes, etc.)

11. Notwithstanding this consensus of opinion, we bring up some 50,000 children under the Local Government Board, and several thousands more under the London County Council and other public bodies, in towns, in wholly unsuitable places, such as Mile End, Brixton, etc. (See Local Government Board's Reports.)

We consider that the dull routine, the cramped outlook in life, the impossibility of giving individual attention to large numbers of children herded together are the reasons why so many pauper children become listless, indifferent, and lacking in initiative.

12. Six hundred to 700 girls are annually discharged from Metropolitan Unions alone, wholly ignorant, and necessarily ignorant, of real home life, duties, etc. (See Local Government Board's Reports.)

13. Training schools would appear to be very costly and bad substitutes for what is really required. The expert opinion is that the system of boarding out is excellent, but that it is not capable of wide extension in the rural districts of England, each rural district appearing to have quite enough to do to provide for the boarding out of the children of its own locality without being able to receive children from such a quarter as the Metropolis. (See Local Government Board Report, Miss Mason, Miss Pell, etc.) Some 8,000 children only can at present be dealt with under the boarding out system; some 80,000 require to be thus dealt with.

14. Simple country life, healthy environment, and an agricultural experience in youth, are no hindrance to boy or girl in after life.

These advantages can be afforded to many of our State children by availing ourselves of the cordial co-operation of our colonies, and purchasing small, old-established, comfortable farm houses, with from 100 to 200 acres of land or thereabouts.

For physical reasons it appears to us best that this out-door treatment should be commenced at as early an age as possible. Say from six years onwards.

The ultimate destination of each child must of course rest with its legal guardians. They can either return to England as capable of taking up good situations here, or they can remain in the Colony, and become capable citizens there, as may be decided by those in authority in this country.

Children returning to England will have benefited by the exhilarating air, the wholesome food, and excellent environment.

For those who wish to remain in Canada the benefits are inestimable. Brought up in the country where they will later settle, surrounded by friendly neighbours, with whom they will eventually work, fully acquainted with local conditions and requirements, they will naturally secure the best situations and openings in life.

The number of children on each farm being limited to twenty, our ladies in charge are enabled to give each child personal attention to develop their characters and powers, and train them to be self-reliant and self-respecting.

15. The opinion of competent counsel (Mr. Hartley B. Mothersole), has been taken as to the powers of the different public authorities to provide for the upbringing of children under their charge in the ways above directed.

The opinion, which is herewith enclosed (*See App. No. LXI. (4)*) is to the following effect:—

A. AS TO POOR LAW CHILDREN.

(1.) *Orphan and Deserted Children* under 16 who are chargeable may be sent out by Guardians with the consent of the Local Government Board and of the children themselves under Section 4 of the Poor Law Amendment Act, 1850. (See also Local Government Board Memorandum April 10th, 1888, and circular letters Jan. 22nd, 1898, and April 20th, 1898, which enable public money to be expended for outfit, journey, and inspection, but not apparently for maintenance.)

Maintenance, however, is probably authorised by Section 4 of the Act of 1850.

Statistics supplied by one of the poorest districts in East London show that in one night there were seventy orphan or deserted children sleeping in the workhouse school building.

(2.) *Children maintained* by the guardians to whom they have resolved to stand in *loco parentis* up to the age of eighteen, may be sent out to be placed under the permanent or temporary control of any society or institution for the care of children under Section 1 of the Poor Law Act, 1899.

(3.) *Boards of Guardians* may also with the consent of the Local Government Board expend sums for the maintenance of *emigrated children* under Section 6 of the Poor Relief Act, 1849, or in default under the Poor Law (Certified Schools) Act, 1862, which is extended to illegitimate children by the Poor Law

APPENDIX No. LXI.—*Continued.*

Amendment Act, 1868, Guardians may also under the first named Act (same section) provide for the maintenance of paupers in houses not being workhouses, under contracts for payment, regulated by the Local Government Board.

Canadian schools for the children sent out may be certified under Section 2 of the Poor Law (Certified Schools) Act, 1862. Local inspection is provided for by the order of 20th April, 1898.

(4.) *Guardians* may with the consent of the Local Government Board *subscribe* to any institution (without apparently being restricted as to locality) which appears to both bodies to be calculated to render useful aid to the administration of the relief of the poor.

(Poor Law Act, 1879, Section 10.)

B. AS TO INDUSTRIAL SCHOOL CHILDREN.

(1.) A child may with its own consent and that of the Secretary of State be placed out on *license* from an *Industrial School* (Industrial Schools Act, 1891, Section 1).

(2.) A child may be *discharged* from any *Industrial School* either absolutely or conditionally for purposes of emigration or otherwise under the Industrial Schools Act, 1866, Section 43.

(3.) Children may be *licensed* to live (without restriction as to locality) with any trustworthy and respectable person, named in the license and willing to receive and take charge of them.

Such license, limited to a period of three months, is renewable (Industrial Schools Act, 1866, Section 27); and if children may under this section be licensed to reside outside the United Kingdom, the Treasury can contribute to their custody and maintenance because such residence may be regarded as part of the period of detention in the school. (See same Act and Section.)

It is a question whether the Treasury can contribute to the custody of children discharged from a certified Industrial School. If it can contribute in the case of *licensed* children, surely it should be able to contribute in the case of *discharged* children.

16. The law on this subject would appear to be somewhat of a puzzle, and to require simplification, and codification and some expansion.

17. It appears to me quite feasible for such a body as the London County Council to save a great portion of the capital outlay of £70,000 involved in the building of an institution here for the accommodation of three hundred children by availing themselves of the emigration scheme which I have described.

Such a scheme is much more economical than either of the schemes outlined in the Report of the Special Schools Sub-Committee, and yet it is in accordance with the principles set forth in one of such schemes.

The present cost in an Industrial School is apparently about £25 per annum for maintenance, exclusive of capital charges. Our charges vary from £16 to £25, inclusive of capital charges.

18. The Government of New Brunswick has agreed to set aside 200 acres of land for every home of twenty children established in the province, and to help in other ways, notably in free education for the children, in the provincial schools, and freedom from taxation for 20 years.

It is, I submit, for our public bodies, who can borrow money if need be at a lower rate of interest than provincial bodies or private individuals, to come to the front when such an offer as this is made, and at least to avail itself of voluntary enterprise.

19. The objects of my Association satisfy entirely, as I submit the double test of supplying what is best for the children and of affording material relief to the taxpayer and the ratepayer.

APPENDIX No. LXI. (A.)

Handed in by Mrs. Close.

Re MRS. CLOSE'S SCHEME.

CASE FOR OPINION.

What powers have the different central and local authorities and managers of reformatory and industrial schools in respect of Poor Law children and reformatory and industrial school children:—

(a) To license or discharge children for purposes of emigration, and

(b) To make payments, whether periodically or in a lump sum, in respect of outfit, journey and subsequent maintenance of children so emigrated.

(c) Where a single body, such as the managers of a reformatory or industrial school, draws its funds from different sources, out of *which*, if any, can they pay?

(d) What amendments in the existing law would be required to give powers for the above purposes where they do not now exist?

(e) If there was constituted, to the satisfaction of the Local Government Board as regards the guardians and the Home Office as regards reformatory and industrial schools, a committee of trustees of Mrs. Close's Scheme, would it be possible, *under the existing law*, for children to be handed over to this committee by the authorities concerned and payments to be made by them in respect of such children

without any special stipulation as to where those children are to be brought up, *i.e.*, whether in England or Canada.

OPINION.

I propose to consider these points under the heads:—

A.—Poor Law Children.

B.—Reformatory and Industrial School Children.

A.—*Poor Law Children.*

(a) Orphan or deserted children under sixteen years of age who are "chargeable" may be emigrated by the guardians, with the consent of the Local Government Board, provided that the consent of such orphan or deserted child shall have been given before the Justices in Petty Sessions and that a certificate of such consent signed by the Justices shall have been transmitted to the Local Government Board (Poor Law Amendment Act, 1850, 13 & 14 Vict., c. 101, Sec. 4). Guardians desiring to emigrate such children must pass a resolution to expend a sum not exceeding £ on the emigration of each of the children named therein.

The Local Government Board require a copy of the resolution to be sent to them, and to be satisfied that the conditions in their Memorandum of April, 1888,

APPENDIX No. LXI. (A)—Continued.

their Circular Letter January 20th, 1898, and their Circular Letter of April 20th, 1898 (copies annexed hereto) have been or will be complied with. I am of opinion that the guardians may exercise these powers not only in the case of orphan and deserted children referred to above but also in the case of children maintained by them to whom they have resolved to stand *in loco parentis* up to the age of eighteen years, under Sec. 1 of the Poor Law Act, 1899, 62 & 63 Vict., c. 37.

The children referred to in Sec. 1 of the Poor Law Act, 1899 are:—

- (1) A child deserted by its parent.
- (2) A child whose parent is in the opinion of the guardians by reason of mental deficiency or vicious habits or mode of life unfit to have control of it.
- (3) A child whose parent is unable to perform his or her parental duties owing to detention in penal servitude or under the Inebriates Act, 1898.
- (4) A child whose parent has been sentenced to imprisonment in respect of any offence against his or her children.
- (5) A child whose parent is permanently bedridden or disabled and is the inmate of a workhouse and consents to the "adoption."
- (6) A child both of whose parents are dead or in the case of an illegitimate child, whose mother is dead.

The guardians are authorised by Sec. 1 of the Act of 1899 "to permit the child to be, either permanently or temporarily, under the control of any society or institution for the care of children."

The section also provides that a court of summary jurisdiction, if satisfied on complaint by the parent or guardian of the child that there was no ground for the resolution or that it is for the benefit of the child that it should be under the permanent or temporary control of the parent or guardian, or that the resolution of the guardians should be determined, may make an order accordingly.

I am of opinion that this limitation would not prevent the guardians emigrating such children, but it is probable that the Local Government Board would require, as a condition of its consent to the emigration (Poor Law Amendment Act, 1850, Sec. 4), that the parent should consent to the child being emigrated, or in the event of that consent not being forthcoming, that the guardians should undertake to bring the child back to the country in case of a successful appeal by the parent under the Act for the restoration of control over the child.

(b) Under the conditions referred to in (a) above, the guardians may "expend money *in and about* the emigration of orphan or deserted children under sixteen years of age" (Poor Law Amendment Act, 1850, 13, 14 Vict., c. 101, Sec. 4). The money may, however, only be expended in accordance with the conditions contained in Sec. 20 of the Poor Law Amendment Act, 1849 (12, 13 Vict., c. 103) one of which conditions is that the money may be expended "with the order, and subject to the rules and regulations of the Poor Law Board (now the Local Government Board) but not otherwise."

The orders of the Local Government Board of April, 1888, January 20th, 1898, and April 20th, 1898, are annexed to this Opinion, and under these Orders the guardians may expend money for outfit, journey, and subsequent inspection of these children, but not apparently for maintenance.

I am of opinion that the Local Government Board are clearly authorised to make any regulations they, in their discretion think fit as to the manner of payment of such sums as they authorise the guardians "to expend in and about the emigration," *i.e.*, as to whether the payments are to be made periodically or in a lump sum. I am further of opinion that the words "in and about the emigration" in Sec. 4 of the Poor Law Amendment Act, 1850, would authorise the guardians to expend, and the Local Government to assent to the expenditure of money for the subsequent maintenance of the emigrated children.

The Local Government Board have already, by their Circulars (annexed to this Opinion) authorised money for expenses other than those actually incurred "*in*" emigrating, *viz.*, for subsequent inspection.

I am of opinion that they have authority to do so under the words of the Statute authorising money to be expended "*in and about the emigration*," but I submit that they have also authority under the Statute on similar grounds to authorise an expenditure for the maintenance of the emigrated children.

If I understand Mrs. Close's Scheme rightly, the allowance of a sum for maintenance either periodically or compounded for in the first instance is more vital to its success than is the case with other emigration schemes for children, in that other agencies emigrate the children when they are likely soon to become wage-earners and self-supporting, whereas under her scheme provision for maintenance, though at a less cost than in England, is still necessary.

Assuming that under Mrs. Close's Scheme it can be shown that a net saving to the guardians would result by its adoption in the case of orphans or deserted children when the expenditure incurred in England up to sixteen years was compared with the expenditure incurred "*in and about the emigration*" up to sixteen years in Canada the Scheme appears to be one which, on grounds of economy, ought to appeal to the guardians and the Local Government Board.

I am of opinion that some one or more boards of guardians who are friendly disposed to it should call the attention of the Local Government Board to the possibilities, under Sec. 4 of the Poor Law Act, 1850, of authorisation of sums for maintenance being paid by guardians in respect of these emigrated children. I understand that the Local Government Board have expressed some general opinion that the guardians have no lawful authority to expend money for maintenance of these children under the existing law, but I do not know whether their attention was specially directed to this section. Any decision of the Local Government Board, advised as they are by the highest authorities, must of course be treated with great respect, but their decisions on the construction of Statutes are not, of course, authoritative, and in one well-known instance were not upheld (*R. v. Cockerton*, 1901, 1 Q.B. 726). The Local Government Board would probably refuse to give an opinion on any hypothetical case. I would, therefore, suggest that a definite offer to take certain children on certain terms including maintenance, payment to be made either by way of a lump sum or periodically, be made to a friendly board of guardians, that the said board of guardians should then apply, stating the terms of the offer, to the Local Government Board, for an order under Sec. 4 of the Poor Law Amendment Act, 1850, authorising its acceptance. The board of guardians should state in their letter the advantages, from the point of view of economy, which would ensue, and that, in their opinion, the words of the Statute "*in and about*" would cover such an expenditure.

The board of guardians should remind the Local Government Board that by authorising and requiring a sum to be paid for subsequent inspection they have already, by their Circulars, shown that they interpret these words of the Statute to cover more than the actual expenses of the journey, etc., and that in the opinion of the guardians the subsequent maintenance stands on the same footing as the subsequent inspection already authorised, both being expenses incurred outside the United Kingdom.

The board of guardians should also say that they have noted with satisfaction the opinion of the Local Government Board expressed in their Circular Letter of March 3rd, 1903, that "emigration affords one of the best means of providing satisfactorily for the orphans and deserted children under the care of the guardians," in which opinion they concur.

The board of guardians has (in accordance with the hope expressed by the Local Government Board expressed in that letter) given "the matter their careful attention with a view to emigrating such of the children as are suitable for the purpose."

APPENDIX No. LXI. (A)—*Continued.*

The board of guardians is of opinion that the present systems, though useful as far as they go, whereby children about to become wage-earners and self-supporting are emigrated, are only able to deal with a very small portion of the children, in their opinion, "suitable for emigration" and that by a new Order in the terms applied for a much larger number of children could be dealt with annually to the advantage of the children themselves and to the economy of the rate-payers.

(c) I am of opinion that in the case of the boards of guardians the expenses would be chargeable on the common fund.

(d) I am of opinion, for reasons stated in (b) above, that the boards of guardians have power, subject to the consent of the Local Government Board, to expend sums for the maintenance of emigrated children in addition to those sums already authorised by the Local Government Board for outfit, journey, and subsequent inspection. I am of opinion that the power exists, under Sec. 4 of the Poor Law Amendment Act, 1850 (13, 14 Vic. c. 101) and that, therefore, there is no need of new legislation, but in the event of the Local Government Board refusing to adopt this view of Sec. 4 referred to, I am of opinion that before resort is had to the legislature that the Local Government Board should be asked by a friendly board of guardians as before, for their assent to the expenditure, either under Sec. 6 of the Poor Relief Act, 1849, or, in default, under the Poor Law (Certified Schools) Act, 1862.

The maintenance of paupers in houses not being work-houses under contracts for payment by the guardians is regulated by the Poor Relief Act, 1849. The inspection and visitation of such persons is by the Justices or by an inspector, appointed by the Local Government Board, but paid by the guardians, who shall visit and inspect such houses and report thereon to the Board.

Under Sec. 6 of the Poor Relief Act, 1849, the Local Government Board may issue such Orders as they deem necessary for regulating the mode in which such contracts shall be entered into, for lodging, board, maintenance, etc., and the terms and duration of such contract.

No Order, as far as I know, has been made under this Act to allow the maintenance of paupers under contract abroad, and probably on a hypothetical case the Local Government Board would refuse to give an opinion or state that no such Order was contemplated as feasible at the passing of that Act in 1849, but in order that the matter may be definitely settled I am of opinion that some board of guardians should apply to the Local Government Board for sanction to a provisional agreement, say in Canada, where the inspection of such paupers could be arranged for locally, as in the case of inspection of orphan children sent to Canada, the cost of inspection of whom is already authorised by the Local Government Board (Order April 20th, 1898.)

Under the Poor Law (Certified Schools) Act, 1862, the guardians may send any poor child who is an orphan or deserted by his or her parents or surviving parent, or one whose parents or surviving parent shall consent, to any "school" certified by the Local Government Board, as fitted for the reception of such children, and supported wholly or partially by voluntary subscriptions. Application being made by the managers of the school to the Local Government Board, the Local Government Board may appoint "such persons as they deem proper" to examine into the school and report to the Local Government Board, who, if satisfied certify the school." There appears to be no reason why the Local Government Board should not appoint one of the inspectors of the Canadian Government to make this report and the necessary subsequent inspections; as is already done as to subsequent inspections of orphan and deserted children emigrated to Canada under the Local Government Board's special rules as to emigration (Local Government Board Order, April 20th 1898.)

Under the Act of 1862, the guardians may pay out of the same fund and in the same manner as the relief otherwise supplied to the child would be charged, expenses incurred in maintenance, clothing and education of such child in such school, and may pay the conveyance of such child to and from the same, and, in case of death, the expenses of his or her burial.

The Poor Law (Certified Schools) Act, 1862, limited the expenditure for maintenance, etc., to a sum "not exceeding the total sum which would have been charged for the maintenance of such child if relieved in the work-house during such period," but this limit of expenditure is removed by the Divided Parishes and Poor Law Amendment Act, 1882, Sec. 13, under which the guardians may now pay the reasonable expenses for maintenance, etc., in accordance with a scale to be sanctioned by the Local Government Board for that particular school.

The Poor Law (Certified Schools) Act, 1862, is extended to illegitimate as well as legitimate children by the Poor Law Amendment Act, 1868, Sec. 23.

There appears to be no restriction in the Acts above quoted which would prevent the Local Government Board certifying a "school," *wherever situated*, and the conditions as to report and inspection might easily be satisfied in accordance with the precedent already established by the Board under their Order (April 20th, 1898) as to inspection of children emigrated to Canada by the inspectors of the Canadian authorities.

I am of opinion, therefore, that it would be advisable for the managers of some school or institution in Canada desiring to take these children to apply to the Local Government Board under Sec. 2 of the Poor Law (Certified Schools) Act, 1862, for such school to be certified and to point out that the conditions of preliminary report and subsequent inspection requisite under Sec. 2 and 6 of the Act can be satisfied in the manner already authorised by the Board by their Order of April 20th, 1898, *re* inspection of children emigrated to Canada.

In the event of the Local Government Board refusing to authorise the expenditure for maintenance, either under the Poor Law Amendment Act, 1850, the Poor Relief Act, 1849, or the Poor Law (Certified Schools) Act, 1862, I am of opinion that steps should be taken to induce the legislature, if possible, to amend the sections of these Acts above referred to, in order to specifically cover this charge, but unless the authors of the scheme can convert the guardians generally or the Local Government Board to the desirability of the scheme, I am afraid the chances of a Bill being passed are not very good.

(e) I am of opinion that it would be possible, with the sanction of the Local Government Board, for the boards of guardians under the existing law to hand over children to a committee as suggested, but if the Local Government Board should hold that the powers alluded to in (b) and (d) above do not authorise the boards of guardians to spend money on the maintenance of children outside the United Kingdom, I am of opinion that probably they would also veto the accomplishment of the end in view by a "side wind." There is, however, another way in which the Local Government Board might be approached for their sanction to a scheme for handing over these children to a committee as suggested.

By Sec. 10 of the Poor Law Act, 1879, the guardians may, with the consent of the Local Government Board, subscribe towards any institution which appears to the guardians, with the consent of the Local Government Board, "to be calculated to render useful aid in the administration of the relief of the poor," provided that the Local Government Board be satisfied that the paupers under the guardians have or could have assistance herein in case of necessity.

The objects of an association on the lines indicated in the case for opinion would come within the definition of this section. I may point out that the legislature itself has extended these powers under the section to subscriptions for associations for the prevention of cruelty to children (4 Edw. VII., c. 15, Sec. 23). The connection here is somewhat remote and legislative power may well have been considered necessary, but in the case under notice it would not appear to be so.

The matter is again, however, one absolutely in the discretion of the Local Government Board, but if the Local Government Board desired to further the scheme I am of opinion they would have power under Sec. 10 of the Poor Law Act, 1879, to sanction subscriptions of any amount, dependent on the number of children benefited or otherwise, and that they would not be obliged under the Statute to impose any condition as to *where* "the useful aid in the administration of the relief of the poor" was to be rendered.

APPENDIX No. LXI (A).—Continued.

B.—Reformatory and Industrial School-Children.

(a) The managers of any certified reformatory or industrial school may emigrate any youthful offender or child detained in or placed out on licence from the school, who conducts himself well, with his consent and that of the Secretary of State. (Reformatory and Industrial Schools Act, 1891, 54-55 Vict., c. 23, Sec. 1.)

3 The Secretary of State may at any time order any offender to be discharged from a certified reformatory school under Sec. 17 of the Reformatory Schools Act, 1866 (29-30, Vict., c. 117.) The Secretary of State may at any time order any child to be discharged from a certified industrial school or from any industrial school, whose rules have been approved by him, either absolutely or on such condition as the Secretary of State approves. (The Industrial Schools Act, 1866, 29-30 Vict., c. 118, Sec. 43.)

The usual practice, is, I believe, to make application to the Secretary of State for discharge of a youthful offender or child for the purposes of emigration, and the Secretary of State requires to be satisfied on the following points:—

- (1) The consent of the child.
- (2) A certificate that the child is of good conduct, sound health and good physical development and is well fitted for emigration, such certificate to be signed by the medical officer of the school as well as some responsible manager or official.
- (3) The consent of the parent, or in lieu thereof, satisfactory evidence that the parent's character is such that the Secretary of State is justified in ignoring his or her wishes.

I do not know whether the powers possessed by the managers of certified reformatory schools and of industrial schools at the expiration of eighteen months of the period of detention of children therein, to licence such children "to live with any trustworthy and respectable person named in the licence willing to receive and take charge of them" have ever been exercised in this direction outside the United Kingdom. These powers are contained in Sec. 18 of the Reformatory Schools Act, 1866, and in Sec. 27 of the Industrial Schools Act, 1866 (29-30 Vict., c. 117, c. 118.) It will be noted that these Sections contain no limitation as to the place of residence. The duration of the licence must not exceed three months, but it is renewable from time to time until the period of the child's detention is expired. In view of Sec. 1 of the Reformatory and Industrial Schools Act, 1891 (54, 55 Vict., c. 23) I am of opinion that the consent of the Secretary of State would still be necessary to such disposal by emigration, but if procedure under these Sections should be found possible, I am of opinion that the difficulty as to the legality of contributions by the Treasury for the purposes of emigration might be solved. (See Opinion on (b) below.)

(b) Under Sec. 24 of the Reformatory Schools Act, 1866 (29, 30 Vict., c. 117) and under Sec. 36 of the Industrial Schools Act, 1866 (29, 30, Vict., c. 118), the Treasury may, on the recommendation of the Secretary of State, contribute such sums as he thinks fit "towards the custody and maintenance of (offenders and) children detained in" the reformatories and industrial schools.

I am of opinion that the contributions of the Treasury under these sections must be limited to sums expended on children, etc., "detained in" the schools and reformatories and therefore cannot be made in respect of children discharged from these schools and reformatories for emigration.

If, however, it should be held that the managers, in the exercise of their powers under Sec. 18 of the Reformatory Schools Act, 1866, and under Sec. 27 of the Industrial Schools Act, 1866 (29, 30, Vict., c. 117), to license children to live with trustworthy persons willing to receive them, might license children so to reside outside the United Kingdom (see Opinion on (a) above) I am of opinion that the Treasury could in that case contribute towards the "custody and maintenance" of these children because under these sections the time during which the youthful offender or child is absent from the reformatory or school in pursuance of a license is "deemed to be part of the time of his detention in the school or reformatory."

The county councils, to whom (except as to boroughs with a population of over 10,000), the powers of the prison authority were transferred by Sec. 3 of the Local Government Act, 1888 (51, 52 Vict., c. 14), may contribute towards the ultimate disposal of any child to whose support in a reformatory or industrial school they have contributed (Youthful Offenders Act, 1901, 1 Edw. VII., c. 20, Sec. 8).

The borough council with a population over 10,000 remains a prison authority and under Sec. 5 and 9 of the Reformatory and Industrial Schools Act, 1872, may contribute towards the ultimate disposal of any inmate of a Reformatory or industrial school established by it (35, 36, Vict., c. 21).

The councils above referred to have similar powers as successors to the school boards under the Education Act, 1902 (2 Edw. VII., c. 42), and in consequence of the same Act the council of an urban district with a population of over 20,000 acquires a similar right to contribute towards the ultimate disposal of children to whose support they have contributed (*vide* the Elementary Education Act, 1900, 63, 64 Vict., c. 53, Sec. 4).

I am of opinion that all the contributions above referred to can be made in the shape of a lump sum to cover outfit, journey, and subsequent maintenance. In view of the words "ultimate disposal" it would seem preferable to effect this by a lump sum rather than by periodical payments.

In addition it must be remembered that most of these schools are managed by voluntary associations, and that the managers, subject to these rules, can likewise contribute towards the ultimate disposal of any of the inmates.

I am of opinion that where a single body, such as the managers of a reformatory or industrial school, draws its funds from different sources it can only elect which fund it would use for emigration purposes, with the consent of the contributors.

In the event of a Treasury contribution being found possible as suggested in (b) above, or as regards any sum specifically allotted by a local authority towards ultimate disposal as referred to in (b) above there would appear to be no difficulty as to coming to an amicable arrangement.

(d) I am of opinion, for reasons stated in (a) and (b) above, that powers exist under the present law to achieve what is desired, with the exception of the difficulty as to Treasury contributions which I am of opinion can only be solved in the present state of the law if the suggestion I make in (a) and (b) above as to the substitution of licensing for discharge be found feasible.

In the event of this not being possible, I am of opinion that Sec. 24 of the Reformatory Schools Act, 1866, and Sec. 35 of the Industrial Schools Act, 1866, would need amending say to this effect: "Notwithstanding anything contained in Sec. 24 of the Reformatory Schools Act, 1866, or in Sec. 35 of the Industrial Schools Act, 1866, the Treasury may, from time to time, contribute out of money provided by Parliament for the purpose, such sums as the Secretary of State from time to time think fit to recommend towards the custody and maintenance of any youthful offender or child discharged from a certified reformatory or industrial school in order that he may be emigrated."

I am of opinion that it would be better to leave the actual expense of outfit and journey to be provided for by the local authorities under their powers to contribute as to "ultimate disposal" of inmates.

(e) I am of opinion that under Sec. 18 of the Reformatory Schools Act, 1866, and under Sec. 27 of the Industrial Schools Act, 1866, the managers of certified reformatory and industrial schools could licence such children to the Committee without restrictions as to place of residence, viz., "to live with any trustworthy and respectable person named in the licence willing to receive and take charge of them."

I have given my reasons for that opinion in (a) and (b) above and have pointed out the advantages which would, in my opinion, accrue if the course suggested should be held possible.

In the event of it being held impossible I am of opinion that the managers could hand over youthful offenders

APPENDIX No. LXI. (A).—*Continued.*

or children from the certified reformatory or industrial schools to the committee for emigration with the consent of, and after discharge by, the Secretary of State under Sec. 1 of the Reformatory and Industrial Schools Act, 1891 (54-55 Vict., c. 23).

In this case the local authorities could contribute as at present under their powers of contribution towards "ultimate disposal," and I am of opinion that it would probably be held that a lump sum at all events might be paid in this connection which would cover in advance

an agreed cost of maintenance, but it would, in my opinion be impossible to obtain a Treasury contribution under Sec. 35 of the Industrial Schools Act, 1886 (29, 30, Vict., c. 118), and Sec. 24 of the Reformatory Schools Act 1866 (29, 30, Vict., c. 117).

HARTLEY B. N. MOTHERSOLE.

4, Pump Court, Temple, E.C.

December 13th, 1906.

APPENDIX No. LXII.

STATEMENT OF EVIDENCE BY MR. WILLIAM CROOKS, M.P., L.C.C., LATE CHAIRMAN OF THE POPLAR BOARD OF GUARDIANS.

[*Note.*—By direction of the Commission certain paragraphs of Mr. Crook's Statement have been omitted on the ground that they involved personal questions of conduct or misconduct into which the Commission could not enter.

1. In placing before the Commission my views on pauperism and its causes in Poplar, I would begin by calling attention to the fact that the theoretical administration of the Poor Law is often assumed to be governed by the principles laid down by the Commissioners of 1834, the basis of which is the fundamental principle that with respect to legal relief of the poor the condition of the pauper ought to be on the whole less eligible than that of the independent labourer.

2. Ever since these principles were first laid down they have been violated in practice. Public opinion, as expressed by legislation, past, present and anticipated, is against them. Boards of guardians, Local Government Board, and Parliament are alike guilty—if guilt there be—of evading enactments suggestive of harsh treatment, and it is now generally conceded that the suppression of pauperism offers no solution in eliminating poverty. Occasionally, * * * officialism reverts back to archaism, which proves how necessary it is to recognise that while the doctrinaire has stood still, the application of more genial influences to the problem has in seventy years quite altered the conception of our duties to the pauper.

3. Consider medical relief: In institutions where medical relief is afforded at the cost of the rates, patients receive food, medicine, clothing, nursing, etc., of a nature infinitely superior to what could be obtained in the home of an independent workman. Now let us consider the children: In the bad old days of which Dickens wrote, the sins of the parent were visited on the children. This has all been changed by order of the Local Government Board. Receiving homes, scattered homes and highly organised schools have been established, and children are brought up away from the taint of pauperism. The Poplar Board may justly claim to have had a hand in bringing about this change. From the official point of view, even worse than this change is the policy which will be set up by the passing of the Bill for feeding hungry school children. The late Government made it the duty of boards of guardians to feed hungry children. The education authority may now do the work. The principle is established that children whose parents are too poor to provide them with proper food may be fed by the education authority without being branded as paupers. This step is largely in advance of the policy of the Poplar Board. Again, before free education was established, the guardians in certain districts paid the school fees for children, the parents becoming paupers as a consequence. To-day all may be educated at the cost of the rates.

4. Take the aged poor: Successive presidents have laid it down that the aged poor should receive care and attention and better treatment than other classes of the poor. Finally, we have Mr. Chaplin's circular, the issue of which was brought about partly through our policy, which reads as follows:—

"With regard to the treatment of the aged and deserving poor, it has been felt that persons who have habitually led decent lives should, if they desire relief in their old age, receive different treatment from those whose previous habits and character have been unsatisfactory and who have failed to exercise thrift in the bringing up of their families or otherwise. The board consider that aged deserving persons should not be urged to enter the workhouse at all unless there is some cause which renders such a course necessary, such as infirmity of mind or body, the absence of house accommodation or of a suitable person to care for them, or some similar cause, but that they should be relieved by having adequate outdoor relief granted to them. The board are happy to think that it is commonly the practice of boards of guardians to grant outdoor relief in such cases, but they are afraid that too frequently such relief is not adequate in amount. They are desirous of pressing upon the guardians that such relief should, when granted, be always adequate."

"When, however, it is necessary that such persons should receive indoor relief, the Board consider that they might be granted certain privileges which could not be accorded to every inmate of the workhouse."

5. The present Government, through Sir Henry Campbell-Bannerman and Mr. H. H. Asquith, declared their intention of bringing in a measure for conferring old age pensions on all persons who reach a certain age. Those who have made this declaration are honourable men, and when their measure becomes law, what will be left of the principles of 1834? Surely this is the last thing needed to prove that we in Poplar were right when we declared, not once but many times, that the aged poor were entitled to maintenance in old age, without the brand of pauperism being put upon them.

6. The able-bodied problem has been the most complicated, but here again the principles of 1834 have hopelessly broken down. Between 1886 and the present time, each President of the Local Government Board has urged local authorities, apart from the guardians, to find work for the unemployed. Compared with this practice, what we have done at Poplar is, in principle, child's play. The practice sets up the principle that men are entitled to work the same to be provided by the community when it cannot be obtained through the usual channels, and the further principle that such work shall not carry with it the taint of pauperism. In 1905 Parliament concurred in these principles by passing the Unemployed Workmen Bill and by granting £200,000 from the National Exchequer to pay wages to men employed under the Act. I put all this on record to show that the policy of the Poplar Board was always in line with public opinion as expressed in the legislation of the late and present Governments. We wish judgment to be passed on our policy; and we ask that a clear judgment may not be obscured by a consideration of alleged maladministration.

APPENDIX No. LXII.—Continued.

7. Let us now examine Mr. Davy's Report, the figures of which were questioned from the commencement of the inquiry.

8. Owing to the complexity of our system of local government, the multiplicity of authorities, and the want of co-ordination in the various accounts and returns, official statistics relating to matters of local government require to be handled with great care if trustworthy inferences are to be drawn from them. Especial care is needed in dealing with Poor Law administration owing to the number and diversity of the disturbing factors which affect from time to time both the numbers and the cost of "paupers." For instance, as to the numbers, apart from the regular oscillation caused by the differing conditions of summer and winter, there have to be taken into account both general and local crises of distress of varying duration and intensity, changes of classification of paupers, especially with regard to children, the growth of lunacy, distribution as to sex and age, changes in national policy, e.g., as in the State's attitude towards the unemployed and as regards meals for underfed school children, etc., etc. As to cost, besides the natural effect of change in the numbers, there have to be taken into account changes in the relative proportions of the different classes of those in receipt of relief; and more particularly when it is sought to affix responsibility, the system of divided control over expenditure must be kept in mind. Now in attempting to express the statistics of a subject in tabular form, certain cardinal rules must be observed if confusion and misrepresentation are to be avoided.

9. Like must be compared with like, and where this is not altogether possible, attention must be drawn on the face of the table to any want of accurate correspondence in comparison.

10. In contrasting individual years, some distance apart in point of time, great care must be exercised in the selection, to see that they are fairly typical of the periods they represent. Abnormal years must not be contrasted with normal, except to show their abnormalities.

11. Means should not be treated as averages. Averages should be weighted. Percentages should be used with discretion.

12. In making summary tables, care should be taken that aggregates represent cognate things; and the summaries should be in relation with the detailed tables where given. In fact, all tables which profess to deal with the same facts should, though presenting different aspects of those facts, preserve the unities of time and classification.

13. The Memorandum as to pauperism in Poplar has obviously been drawn up without due regard to the above canons of statistical expression. We have no sort of unity or uniformity in comparison, no proper correspondence between the summary and the detailed tables, no traceable relation between figures and tables apparently representing the same thing, no regard for averages, a misuse of means, a disregard of headings, a fallacious use of percentages, and a litter of tables and charts which do not correspond.

14. For instance, we have the following confusing and conflicting set of tables:—

I.—Numbers :

Table A.—Detailed statement of numbers of paupers in Poplar Union 1885–1906.

Table B.—Summary statement of pauperism in Poplar and the whole Metropolis 1890–1906.

Table D.—Pauperism in Poplar and neighbouring unions 1895–1905.

Table E.—Statistics relating to the Poplar Union 1896–1905.

Table G.—Numbers of paupers in Poor Law unions of Metropolis, January 1st, 1895, and January 1st, 1905.

So far as the Poplar figures are concerned, not one of these tables is in absolute agreement with any other. Here is an illustration, showing incidentally the fallacy of "means" as taken in the Memorandum:—

Poplar Paupers in 1905.

—	On January 1st.	"Mean" for year.
Table A - -	11,666	9,656
" B - -	11,767	11,412
" D - -	—	9,364
" E - -	—	9,349
" G - -	11,344	—

Note particularly the striking difference in the "mean" according as you take Table A. or Table B. Of course they have been differently calculated like all the others, but what kind of statistics are these which speak with so many voices at once? Note also the complete want of uniformity in the periods covered by the tables.

II.—Cost :

Table C.—Poplar Union; cost of relief; indoor and outdoor, 1885–1906.

Table E.—Statistics relating to the Poplar Union 1896–1905.

The figures for "in-maintenance" in the years covered by both tables are totally at variance.

The divergence is enormous, growing from one of about 10 per cent in 1896 to one of 30 per cent in 1905. Here are the figures of cost for these two years as given in Tables C. and E. respectively:—

—	1896.	1905.
TABLE C.—In-maintenance, including cost of chargeable paupers in Poplar and Stepney Sick Asylum and other institutions not under the control of the guardians.	£40,930	£68,279
TABLE E.—In-maintenance and Poplar payment in respect of Poplar and Stepney Sick Asylum.	£44,542	£88,691

What makes the matter more curious is that the cost of out-relief in the two tables agrees within a few pounds. Again, what confidence can be placed in conclusions drawn from tables so carelessly selected? Obviously a mass of unrelated figures have been grouped together without sufficient regard to the "headings" of account, and sometimes one and sometimes another taken according as it suited the comparison of the moment.

15. There are numerous charts attached to the Memorandum, but as these merely illustrate the tables, their accuracy or the reverse is, of course, bound up with the accuracy or otherwise of the tables themselves.

16. I pass to a more detailed criticism of the Memorandum.

17. Its object was to show statistically for the Poplar Union what had been the increase of pauperism in recent years, and what had been the increased cost of pauperism for which the board of guardians was responsible. The causes and character of such increase in numbers as might be shown, and the reasons for such increased cost as was under the control of the Poplar Board of Guardians, were the subject of the inquiry. But the Memorandum was intended to be merely a statistical statement of the case requiring investigation. Its figures should have been beyond cavil, conveying no false implications; its methods should have been beyond reproach, not suggesting conclusions but stating facts. It failed at every point. Its figures are provably misleading, and its statistical methods demonstrably wrong. Four main

APPENDIX No. LXII.—*Continued.*

fallacies like woof and wrap run criss-cross through the web of figures:—

A.—“Mean” numbers are put forward as if they were averages fairly representing the state of pauperism for a given year. This is the fallacy of “means.”

B.—An abnormal year, rendered abnormal by an acute and prolonged industrial crisis of peculiar local severity, is put forward as representing a permanent state of things. This is the fallacy of extremes.

C.—Figures of cost are used which include large sums over which the Poplar Board of Guardians had no control, and for which they could not be held responsible. This is the fallacy of indiscriminateness.

D.—Aggregate figures are compared both as to numbers and cost without regard to the qualifying effect upon such comparisons which the varying relative proportions of the component parts of such aggregates might produce. This is the fallacy of aggregates.

A.—*The Fallacy of “Means.”*

18. In Table A. the quantity of Pauperism for a given year is taken to be the mean between the total number of paupers on January 1st of that year, and the total number on *July 1st of the previous year*. The figure thus obtained has no necessary relation to the average number of paupers in the union for the year.

19. For instance, a low average number of paupers for eleven months in the year may be to a great extent falsified by a couple of weeks severe frost and accompanying distress about January 1st.; and on the other hand, a year of exceptional distress which happened to include exceptionally fine open weather in January would not be adequately represented. The extent of the possible error involved may be conveniently illustrated from a comparison of the facts indicated in the chart facing page 20 of Mr. Davy's report with those implied by Table A. in the Memorandum:—

Outdoor Pauperism in Poplar, 1904.

Mean of numbers on July 1st, 1904, and January 1st, 1905. (1905 in Table A.)	- - - - -	6,011
Average weekly numbers throughout 1904. (Estimated from Chart at p. 20. 25 per 1,000 of population of 170,000)	- - - - -	4,250
Difference	- - - - -	1,761

20. Now, obviously, the lower figure represents the amount of outdoor pauperism in Poplar for the year 1904, more correctly than does the higher. In fact, this 6,011 represents nothing of truth. On January 1st, 1905, the actual numbers were far higher, for ten months of the year they were very much lower, and for eight months little more than half this misleading figure.

21. Nor can it be said that though in itself misleading it is yet fairly, comparable with a similar “mean” for, say, 1895. Although the winter of 1894–5 was one of acute distress the number of outdoor paupers on January 1st, 1895, only exceeded by three the number of July 1st, 1894! (See Table A.) Yet in that winter the average number of outdoor paupers for the six weeks ended March 30th, 1895, was 5,700, rising suddenly from about 2,000 in the third week of February, and falling as suddenly to the same figure in April. (See p. 20 of Mr. Davy's report). It should be observed that it is impossible completely to reconcile the figures at p. 20 of the report, and on the Chart with those in Table A. of the Memorandum. Possibly the former do not include children.

22. Both sets of figures profess to deal with the number of outdoor paupers, but this is only typical of the general statistical carelessness with which the Memorandum has been compiled; it does not materially affect my criticism.

23. We note, then, that the method of “mean” number adopted in the Memorandum not only tends to misrepresent a given year, and does so to a quite remarkable extent, in the case of 1904 (“1905”) by some 40 per cent., but renders comparison between different years absolutely misleading owing to the differing conditions of given years.

24. Nor is this all. Against a comparison of numbers arrived at in this fallacious way is set a comparison of cost relating to a different period of time. Take the year 1895. In Paragraph 2 of the Memorandum the mean number of outdoor paupers for “1895” is given as 2,078 (N.B.—This is the mean of the number of outdoor paupers on July 1st, 1894, and January 1st, 1895) and the cost for the same year £14,171 (N.B.—The cost is for the year ended Lady Day 1895). Now this £14,171 includes the cost of some five weeks in February and March, 1895, when the number of outdoor paupers was more than three times the number on January 1st (5,750 against 1,750). Five weeks of 4,000 extra paupers at a low estimate represents £3,000 included in this £14,171, which was not expenditure incurred in connection with the “mean” number of outdoor paupers for “1895” (including children).

25. But it is this swollen figure of £14,171 which, compared with the cost for 1885, gives an increase in the cost of 92 per cent. against an increase in the numbers of only 37 per cent. The contrast is, of course, ridiculously unfair, because the expenditure relates to a much larger number of paupers than that to which it is wrongly attributed.

26. So much for the fallacy of “means.” I may say there was no reason why averages should not have been employed, as there are weekly returns of the number of paupers in every union in England and Wales from which the Local Government Board compile a monthly statement of pauperism. There may be justification for comparing the numbers in January or July in one year with those in January or July respectively in another year, but none for mixing them up as is done in the Memorandum.

B.—*The Fallacy of Extremes.*

27. The tables at Paragraphs 1 and 2 of the Memorandum with their fallacious use of percentages suggest a wholesale pauperisation of Poplar. Of course this suggestion is produced by comparing “1906,” a quite exceptional period of distress, with “means” for 1895 (whose exceptional winter condition is concealed by the method of “means”) and 1885 as if all three years were fairly typical of the point in time they represent. A minor matter is the contrasting of a period of ten years (1885–1895) with one of eleven years (1895–1906.) As a matter of fact such comparisons obscure the facts. If changes in the amount of pauperism are to be expressed by reference to numbers on a particular day, it would seem, for fairly obvious reasons, desirable to take the numbers in midsummer, i.e., on July 1st, as the quantitative measure of pauperism. That time of year is certainly most favourable to poverty, and taking one year with another, is less subject to extreme fluctuations than is midwinter. High numbers in July are much more significant than high numbers in January, and it is with these (while connoting exceptional periods of crisis whether in winter or summer) that a careful statistician would deal, failing the more desirable method of weekly or even monthly averages. Now the most cursory study of the figures in Table A. shows that the three dates, January 1st, 1905, July 1st, 1905, and January 1st, 1906, were for statistical purposes in a class by themselves. Any fair representation over a series of years of the growth of pauperism in Poplar regarded as a continuing condition, was bound to stop at July 1st, 1904, and then give the figures for July, 1905, as indicative of a crisis. The character of the crisis, whether industrial, administrative or the product of a particular policy was matter for comment, but the fault of the Memorandum is that it creates a statistical crisis which overstates and falsifies the true position. Keeping in view these considerations, the

APPENDIX No. LXII.—Continued.

following table shows for *Outdoor Pauperism* the state of affairs in Poplar during the last twenty-two years :—

Outdoor Pauperism in Poplar.

July 1st	—	Remarks.
1884 - - -	1,491	Nine years.
1888 - - -	1,711	
1892 - - -	1,533	Average 1,565.
1893 - - -	2,050	Seven years.
1895 - - -	2,218	
1898 - - -	2,030	Average 2,115.
1899 - - -	2,102	Increase 35 per cent.
1901 - - -	2,644	
1903 - - -	3,299	Rapid increase in five years, 97 per cent.
1904 - - -	4,153	
1905 - - -	7,183	State of crisis.

28. Of course, these figures being aggregates need considerable elucidation, but for the moment I am only dealing with the fallacy of extremes. I submit that the figures, properly handled, reveal a sufficiently serious situation ; whereas the crudity of the methods adopted in the Memorandum imparts an air of unreality, and to that extent misrepresents the state of the case.

C.—*The Fallacy of Indiscriminateness.*

29. Reverting to Paragraph 1 of the Memorandum and the table there given relating to *Indoor Pauperism*, we find it stated that whereas the numbers of indoor paupers increased by 36 per cent. between 1895 and 1906, their cost increased by 86 per cent. This statement is repeated in Paragraph 3. But the figures for cost, apart from the fact that they do not relate to the same period as the numbers, as already pointed out, include expenditure on account of the Poplar and Stepney District Asylum, over which the Poplar Board of Guardians had no control and for whose expenditure they were not responsible. This item, though affecting only some 600 paupers in both years, represents more than 50 per cent. of the cost and accounts for some £19,000 out of the total increase of £32,594. Deducting this portion of the increase for which the Poplar Board of Guardians were not responsible, the increased cost works out at £13,594, or about 36 per cent., *the same relative increase as in the case of the numbers.* I must again point out that the cost of in-maintenance for these years is differently stated in Tables C. and E. of the Memorandum ; but Table C., the figures of which are used in Paragraphs 1 and 3 here under criticism, expressly includes “the amount expended on the maintenance of chargeable paupers in the Poplar and Stepney Sick Asylum, and of persons in other institutions not under the direct control of the guardians.”

D.—*The Fallacy of Aggregates.*

30. Suppose two flocks of sheep, A. and B., A. flock consisting of 900 sheep and 100 lambs, and B. flock of 100 sheep and 900 lambs. Suppose the value of sheep to be 50s. a head and of lambs 20s. a head: then the value of flock A. would be £2,350 and of flock B. £1,150.

Outdoor Paupers.

—	1895.	Per cent. of Total.	1906.	Per cent. of Total.	Increase.
Aggregate - - - - -	2,078	—	7,247	—	5,169
<i>Analysis.</i>					
Able-bodied :—					
Males - - - - -	90	4·5	671	9·25	581
Females - - - - -	365	17·5	1,229	17·	864
Children - - - - -	326	15·5	2,492	34·5	2,166
Not Able-bodied :—					
Males - - - - -	263	13·	810	11·25	547
Females - - - - -	938	45·	1,967	27·0	1,029
Children - - - - -	96	4·5	77	1·	19 less

Suppose a statistical expert from the Local Government Board described these two flocks as each consisting of 1,000 head of sheep, flock A. being priced at an average of £2·35 per head, and flock B. at an average of £1·15 per head ; and then proceeded to show by tables and charts that flock A. was 100 per cent. dearer than flock B. without pointing out the difference in the composition of the two flocks, what would plain men think ? But this is just the kind of fallacy involved in dealing, as does the Memorandum, with the aggregate numbers of paupers, without due and sufficient regard to the changing composition of the gross totals.

31. To show how materially the *composition* of the aggregate figures so loosely employed in the Memorandum must affect the meaning of many of the comparisons there made, I mention the following facts :—

(a) With regard to indoor pauperism, taking the figures in Paragraph 1 and analysing them as shown in Table A., we have this striking result :—

Indoor Paupers.

1885	-	1,656	Able-bodied	-	521	Increase per cent.
			Not able-bodied	-	998	
			Insane.	-	136	
1895	{	2,809	Incr. 70%			
			Able-bodied	-	570	10
			Not able-bodied	-	2,011	100
1906	{	3,833	Incr. 36%			
			Insane	-	228	67
			Able-bodied	-	588	3
1906	{	3,833	Incr. 36%			
			Not able-bodied	-	2,938	46
			Insane	-	307	35

But again, caution is necessary, for by reason of changes in classification of children, able-bodied connotes a varying proportion of adults and children in the three years above given. Distributing the totals for 1885 and 1906 by sex and age, we get another set of results which again should modify our reading of the aggregates in comparison.

Indoor Paupers.

—	1885.	1906.	Increased per cent.
Males - - -	538	1,552	188
Females - - -	492	783	60
Children - - -	490	1,191	143
Insane - - -	136	307	126
Aggregate - -	1,656	3,833	131

(b) But if it is necessary to keep always in view the numbers of the different classes of indoor paupers, it is still more necessary, if grave misconception is to be avoided, to know every time exactly what is meant by the inclusive term outdoor paupers. I have already shown from the point of view how misleading is the statement of the increase in outdoor pauperism as tabulated in Paragraph 2 of the Memorandum. I will now briefly deal with it in relation to what the figures really represent. It will be sufficient if I take the contrast between the numbers as given for 1895 and 1906. Here are the gross totals of the Memorandum analysed into their component parts :—

APPENDIX No. LXII.—*Continued.*

This analysis shows at a glance what the aggregate figure does not suggest, that no less than four-fifths of the enormous increase was composed of women and children, a qualitative fact of at least equal importance with the quantitative one to which alone prominence is given in the Memorandum.

32. I would put on record the fact that the inquiry was held at the request of the Poplar Board, which, from the beginning, courted the utmost publicity. * * * *

33. Mr. Davy's history of the events which led up to the inquiry is, on the whole, accurate. But the paragraph relating to the Laindon Farm Colony (p. 5) ought also to state that the police charges were met and answered at the time they were made, that the reply of the guardians was accepted as satisfactory by the Local Government Board, and that the certificate, whereby a large portion of the cost was placed on the Metropolitan Common Poor Fund, was continued. He should also have stated that the question of the borrowing powers of the guardians had already been investigated by the Local Government Board. By an Order in Council, sanctioned by Parliament, those powers were increased. Thus further inquiry was unnecessary, and, in fact, Mr. Davy made no reference to the matter at the inquiry. At the same time, however, it might have been stated that Poplar was not alone in having its borrowing powers increased. Bethnal Green and Stepney have found it necessary to apply for similar orders. This seems definitely to point to the fact that an undue burden, so far as the support of London's poor is concerned, is borne by the poorer districts of the Metropolis.

34. The report might also have shown that questions arising out of the practice of giving outdoor relief, on the score of sudden or urgent necessity were outstanding, not only between the Local Government Board and the Poplar guardians, but between the Local Government Board and many other boards of guardians. It is well known that able-bodied men have been relieved on account of sudden or urgent necessity for many years past.

* * * * *

39. So far, I have confined myself to preliminary matters only. I now propose to deal with the general question of pauperism in the district. At the beginning let me say that I do not propose to challenge Mr. Davy's figures as to the increase. That rise was inevitable wherever the new policy was introduced. But I challenge the statement that this rise is due to causes which the guardians of the poor could control. It will be well now to show what the policy of the guardians really meant; those responsible for the policy are best fitted to describe it. It may roughly be summarised as a policy of dealing with the poor in a humane spirit. The guardians were obliged to carry out extensive alterations in the administration of the workhouse and schools, the chief being as follows:—The provision of warmer underclothing and clothing generally for the aged and infirm (no flannels were allowed prior to the new policy); decent and proper underclothing for women; overcoats for aged men and the abolition of uniforms for men and women; an adequate staff of nurses for the sick wards; the establishment of workshops on the premises wherein, as far as possible, boots and clothes were made for men and women by paid workpeople, assisted by inmate labour; the placing of paid attendants instead of inmates in charge of the aged; the abolition of task work for so-called able-bodied men.

40. Many Local Government Board inspectors reported very favourably on this policy. They agreed that the condition of the house, so far as the able-bodied were concerned, was much improved. These reports were presented at the inquiry.

41. At the schools, which came under the control of the guardians seven years ago, the first thing to be done was to abolish the practice of conveying guardians from Poplar to Forest Gate in broughams. Secondly, the dinner provided for the managers was abolished. This dinner was quite an up-to-date affair, including in the menu soup, fish, poultry, joints, sweets, etc. It is worth noting that this management committee, which considered such a dinner necessary every time it met, was composed mainly of large ratepayers. Thirdly, the

condition of the children was improved. Uniforms were abolished, a good and sufficient dietary table brought into operation, real technical education was begun, half-time was abolished, and the older children were left free to go in and out without attendance. In these circumstances, the boys and girls rapidly improved in every respect, and they now command improved situations when they leave the schools.

42. The indoor sick of Poplar are dealt with at the Poplar and Stepney Sick Asylum. Here again our policy has had the effect of securing to the patients the very best treatment. An adequate nursing staff has been established, and the institution is considered as the most efficient of its kind in the Metropolis.

43. The Poplar Board has done its best to carry out a policy of outdoor relief which provides for the adequate relief of the aged outside the house whenever possible and desirable. Formerly it was the practice to grant such small amounts as 1s. 6d. per week. The amounts now range from 2s. 6d. to 8s. per week. No fixed amount is laid down, each case being dealt with on its merits. Adequate relief is granted to sick people when dealt with in their own homes. For a certain period out-relief is granted to widows, but at the end of that period the children are taken to the schools.

44. Able-bodied applicants do not, as a general rule, receive out-relief. When the case is one of starvation or severe privation, relief in kind has been given. As will be seen later on, this is the crux of the whole matter so far as the Local Government Board and the Poplar Board are concerned.

45. The foregoing is, roughly, the policy carried out by the Poplar Board. It is now expedient to state the reason for this policy. It was never put into operation with the idea that it would lead to a reduction in the rates or in the number applying for relief. No one imagines that decent treatment of the poor will choke off applicants. We only look for that result when a harsh system is employed. We claim that, under the Act of Elizabeth, the poor, not merely the destitute, are entitled to approach society in times of need. The State provides roads, sewers, light, the police, Army and Navy, education, etc., and we all have the benefit of those services. The State pensions its otherwise well-paid officials and ministers. We claim that the poor, whose Charter is the 43rd of Elizabeth, should not be penalised for needing help, but should be given such help in an ungrudging measure and in a manner as will most effectively preserve their self-respect.

46. To a certain extent our policy is responsible for the increase in the pauperism of the district, but the conditions which make applications for relief necessary are conditions over which boards of guardians have no control. In setting the records of other districts against the record of the Poplar Board Mr. Davy only proves, in my opinion, that in those other districts, the poor do not get what they are morally and legally entitled to.

47. In his report, Mr. Davy says that the board subsidises wages. This does not mean that relief is the cause of sweating and low wages. Sweating exists where no out-relief is given at all. The workers who are sweated must get help somewhere. In the case of Poplar it comes from the rates. There is another question, however, which arises from Mr. Davy's figures. He is at some considerable pains to show that from 1904 to 1906 our figures went up enormously, and points out that some of this increase is due to the altered policy of the borough council with regard to casual labour. I want to make this point clearer, and, to this end, will draw your attention to the fact that the altered policy of the borough council put out, at one stroke, something like 600 heads of families. As the average number in a family is five, it will be seen that 3,000 individuals were affected. Table A, p. 51, shows that from January 1st, 1904, to January 1st, 1905, the increase in the number of those in receipt of out-relief was 3,814, but when these figures are analysed, it is proved that the number represents 871 men, 1,018 women and 1,925 children of all classes. Of the men, thirty-nine were relieved on account of their own sickness, accident or infirmity, 665 were able-bodied relieved from other causes, and

APPENDIX No. LXII.—*Continued.*

167 were not able-bodied. It will be seen that the actual increase of 3,814 included not less than 2,943 women and children and that the number of able-bodied men relieved (665) approximated to the number dispensed with by the borough council. In comparing our relief figures with those of other districts, Mr. Davy leaves out of account the fact that Poplar stood almost alone in its abolition of casual labour by the borough council. While Poplar refused to recognise the borough council as a relief authority, Stepney was dispensing with the use of the horse-broom, and in common with most other boroughs held to the three days a week system. I contend that if the comparison is to be fair, then to the poor relief in other boroughs must be added the relief given by means of the three days system. Further, it is not fair to take the abnormal years 1904, 1905 and 1906 to test to what extent our pauperism had increased. If the figures down to 1903 are taken and compared with the figures of Stepney and St. George's-in-the-East (the Jews being left out of account in each case, they being dealt with by their own authorities) it will be found that Poplar's percentage is under five, and that of Stepney and St. George's four. These figures are very different from those quoted by the inspector.

48. I will now deal with the Laindon Farm Colony. The colony was established because the Poplar Board considered it inexpedient to immure able-bodied men, and to put them to degrading and useless work. It is by these latter methods that habitual inmates are manufactured. Of course a certain proportion is unemployable. The board thought it would be a good plan to secure a piece of land and put able-bodied men to useful, productive work. This would also be a good way of getting rid of the "wastrel," for it is said that if there is one thing this class does not like it is work. After many applications to the Local Government Board, extending over many years, the guardians were offered the use of a farm free of charge for three years. The Local Government Board then gave their consent to the inception of the colony. That there are some unsatisfactory features connected with the place is quite true. It should be remembered, however, that we were dealing with the most hopeless class in the community. For when a man and his wife, especially if they have children, come to the workhouse, it is very safe to say that they are at their last gasp. The Poplar Board can truly say that it has helped some of this class to tide over troublous times, and the people of Poplar should be proud of this. It can also claim to have relieved the rates of the cost of some "won't-works," for which Poplar people should be glad. To run the colony has cost money. Poor Law administration is always expensive. But regarded in the light of the good work it has done, the colony has been cheap. From the beginning of the colony in 1904 to March 31st, 1906 (under two years), there were 821 admissions, representing 563 individuals. Twenty-five of these emigrated to Canada. Nine obtained employment outside. 314 were discharged, twenty-six absconded, ninety-one were chargeable in other institutions and ninety-eight were still at the colony.

Of the 314 discharged, 118 had not since been relieved by the guardians. At Laindon the guardians acted within the knowledge of the Local Government Board, but the success of the experiment was greatly impaired because the board was obliged to keep 150 men on the farm, whereas the place was only intended to accommodate fifty. (For dietary table, see *Appendix No. LXII. (A)*).

* * * * *

52. It is not worth while to go into the various items of expenditure on food in detail. The Poplar Board pleads guilty to the charge of having bought and used the best food wherever possible; it was particularly careful in regard to meat, milk and bread. We do not agree that it is good to use frozen meat; and in specifying the goods needed on a contract form, we thought it impracticable to ask for bad or middling meat; so we asked for the best. In the end we think this course was the cheapest. Such items of food as biscuits, arrowroot, fish, etc., were for the sick, the officers and the children. People were led to suppose the inmates of the Poplar Workhouse were fed with these delicacies. I append dietary tables, in use at the workhouse and at the schools, which are sanctioned by the Local Government Board. It was published broadcast that the inmates were supplied with Mazawattee tea. As a matter of fact only certain officers were supplied with this tea. (It was, however, used at the before-mentioned tea for the committee.) £18 7s. 10d. was spent on it in a year. Nevertheless the item had not been noticed in the grocery contract, or it would have been changed. I might now add that all the books of the Poplar Board were open to the Government auditors year by year. Is it not reasonable to expect that any slip made by the board would be discovered and brought to its notice by the auditor? The board is also entitled to a copy of any report which the auditor may make on the books of the guardians. The board applied for a copy of the letter which accompanied the auditor's analysis of the cost of maintenance—an analysis which was submitted to the Local Government Board and printed in the evidence of the inquiry—but has not yet received it. If the auditor had thought it necessary, he should have called attention to the rise in cost of maintenance long before the inquiry.

53. Finally, I repeat that our pauperism is due to our poverty. The policy of the Poplar Board is based on claims recognised by Statute as the claims of the poor. I do not palliate any lapses on the part of any members or officers of the board. As a board I claim that we have fulfilled our duty as efficiently and economically as possible. Relief was never given indiscriminately either in or out of the workhouse. We tried to do our duty firstly to the poor, secondly to the ratepayers. For the past ten years we have never ceased to urge that the poor should be maintained by the whole country and that the Poor Law should be reformed. Despite the attack made upon us last year, we are glad to know that our work has been successful. As a result of our policy the poor in other parts of the country are better cared for than heretofore.

APPENDIX No. LXII.—(A).

1oz. of dripping may be substituted for 1 oz. of butter for breakfast or supper at the option of the colonists.
Watercress, lettuce or radishes to be given in addition to the above rations during the summer months.

APPENDIX No. LXIII.

STATEMENT OF EVIDENCE ON BEHALF OF THE APPRENTICESHIP AND SKILLED EMPLOYMENT ASSOCIATION, BY MISS M. M. DALGLISH, SECRETARY OF THE ASSOCIATION.

1. *Objects of the Association :—*

(1) To prevent boys and girls leaving the elementary schools from drifting into unskilled occupations, and later on into unemployment.

(2) To promote the thorough industrial training of boys and girls by apprenticeship and other methods, including arrangements for attendance at technical classes and trade schools.

2. *History of the movement.*—For some years past there has been a growing feeling in London that boys and girls leaving the elementary schools frequently waste time and opportunity by drifting from one employment to another and that the standard of industrial skill is suffering from lack of thorough industrial training. Various isolated bodies attempted to deal with this problem, but until 1902 there was no central organisation.

(a) *Formation of Central Agency, 1902.*—In 1902 a Central Industrial Bureau for the employment of girls was formed. It was found that the work could only be satisfactorily dealt with by the local committees who would undertake registry and investigation for their own districts in co-operation with the various societies already at work in these districts.

(b) *Extension of Local Committees.*—By 1905 nine local committees were affiliated to the Central Bureau.

(c) *Extension of Central Association, 1906.*—An increasing number of committees worked with equal success for both boys and girls. There was therefore a strong feeling on the part of the Committees that the work of the central body should be extended to boys, and as the result of this feeling, in April, 1906, the Apprenticeship and Skilled Employment Association was formed with the object of extending the work amongst boys as well as girls.

(d) *Functions of the Central Association.*—The association is an agency, whereby all local agencies dealing with the skilled employment of boys and girls may be brought into co-operation with each other. Its functions are :—(1) To receive, co-ordinate, and supplement, when necessary, the industrial information obtained by the local committees and to give affiliated committees access to all such information. (2) To encourage the formation of new committees by acquainting their promoters with the methods of those already in existence, and by placing the industrial information already collected at their disposal. (3) To arouse public interest in the objects of the Association by organising meetings and conferences, and to issue such literature as may be useful, *e.g.*, pamphlets on trades, suggestions to new committees, etc.

(e) *Funds.*—This work is carried on entirely by voluntary subscriptions. Local committees pay an affiliation fee of £1 ls. per annum.

3. *Method of Work.*—The work of the association is carried on by means of local committees, working closely in touch with the schools and working boys' and girls' clubs within their districts. The committees collect industrial information, find suitable openings for boys and girls who apply to them for help, and make terms between the employer and apprentice or "learner" with a view to securing fair conditions to them and satisfactory workers to the employer.

There are at present seventeen committees affiliated to this association. Several new committees are in process of formation.

4. *Local Committees :—*

(1) Apprenticeship and Registry Committee Women's University Settlement, 44, Nelson Square, Blackfriars Road, S.E.

Began work in 1902 for normal children.
Before that dealt with cripples only.

(2) Union of Jewish Women, 59, Gloucester Place, W.

Began work 1903. Girls only.

(3) Employment Bureau, West Central Jewish Girls' Club, 8, Dean Street, Soho, W.

Began work 1903. Girls only.

(4) Skilled Employment Committee, 52, High Street, Stepney, E.

Began work, 1903.

(5) After-Care Committee, 76, Denison House, Vauxhall Bridge Road, S.W. Started 1905.

(6) Apprenticeship and Skilled Employment Committee, Club Room, Oriel Place, Hampstead, N.W., 1904.

(7) Apprenticeship and Skilled Employment Committee, St. Hilda's, Old Nichol Street, Bethnal Green, 1906.

(8) Trade Registry and Apprentice Committee, Maurice Hostel, 51 Herbert Street, Hoxton, N., 1903. Girls only.

(9) Holloway Skilled Employment Committee, 457, Holloway Road, N., 1907.

(10) Apprenticeship and Skilled Employment Association, 37, Sutherland Avenue, Harrow Road, Paddington. Started 1904.

(11) Skilled Employment Committee, 51, Upper Baker Street, Marylebone, W. Started 1904.

(12) Apprenticeship and Skilled Employment Committee, 131, Kennington Road, North Lambeth, S.E. Started 1907.

(13) Apprenticeship and Skilled Employment Association, 274, King's Road, Chelsea. Started 1908.

(14) Apprenticeship and Skilled Employment Association, 140, Church Street, Kensington, W. Started 1908.

(15) Apprenticeship and Skilled Employment Committee, 38, Barclay Road, Walham Green, Fulham. Started 1908.

(16) Skilled Employment Committee, 19, Compton Terrace, Highbury Corner, Islington. Started 1908.

(17) Apprenticeship and Registry Committee, 17, Peckham Road, Camberwell, S.E. Started 1908.

(18) Corresponding Committees in the provinces :—

(1) Liverpool Registry and Apprenticeship Committee, Hon. Secretary, Miss Forman, 294, Netherfield Road North, Liverpool.

(2) Hove Skilled Employment Committee, Hon. Secretary, J. Freeman Dunn, Esq., 52, Lansdowne Place, Hove.

(3) Hastings C.S.U. Employment of Children's Committee, Hon. Secretary, Miss A. E. Newill, 2, Anglesea Terrace, St. Leonards-on-Sea.

(8) Edinburgh Apprenticeship Committee.

APPENDIX No. LXIII.—*Continued.*

5. *Supervision of the Apprentice or "Learner."*—The committees undertake, in addition to finding suitable work, to keep a careful watch on the progress of each boy or girl placed, a register being kept with reports at stated intervals. They endeavour also to arrange for attendance at technical or other evening or day trade schools.

6. *Need of the Work.*—The Parliamentary Report on the employment of elementary school children (1899, 205. 23, Part II. "Employment of children on leaving school" Upper Standards) shows that in London more than 53 per cent. of the boys took up unskilled work as errand boys, newsboys, and in miscellaneous occupations.

7. *Ignorance of Industrial Opportunities.*—The experience of the Skilled Employment Committees is that this large proportion is to a great extent due to the ignorance of the parents as to industrial conditions and to a want of realisation of the importance of some immediate sacrifice of wages during the time of learning a trade, as against the higher wage received where there is nothing to learn. In all districts, but especially in the poorer districts, there is a great ignorance on the part of the parents as to the openings for their children in skilled trades. In the case of the children of unskilled labourers this is especially marked.

8. *Haphazard Method of Finding Work and its Effects.*—It is a common occurrence for a boy or girl on reaching the age of fourteen to be sent out into the streets to look for notice of a vacancy, and when the place is found, there is generally no knowledge as to what the prospects are or if there is anything to be learnt. In many cases the parent does not even know where the child is working. Every committee has received applications from youths too old to learn a trade, whose careers testify to the need of apprenticeship work. It is quite common to find boys of eighteen and nineteen working as unskilled casual labourers and unable to improve their positions, who were considered promising boys when at school, and left from high standards; many of them have filled numbers of situations, some of which, from their nature, could not have been permanent. Meanwhile, the demand for skilled artisans in some trades seems to be largely met by country trained youths, notably in the building trade.

9. *Attitude of Employers.*—Experience has shown that on the whole employers prefer to take boys and girls on the recommendation of an accredited committee rather than to engage them in the casual method described above.

10. *Results of the Work.*—During 1906 the local committees have placed satisfactorily 354 boys and girls; in 1907 they placed 512 boys and girls besides giving advice and help in many other cases. The following list of trades to which boys have been apprenticed by this association shows that apprenticeship exists very generally, and under proper conditions, which the apprenticeship committees secure, might increase still further.

11. *Trades to which the boys were apprenticed :—*

Art metal work.
Bookbinding.
Brushmaking.
Cabinet-making.
Carpentry.
Coachbuilding.
Compository.
Display printing.
Drawing instrument making
Engineering (electrical).
Engineering (mechanical).
Fitting, turning and lift making
Glass and sign writing.
Gun stocking.
Lithographic draughtsmanship.
Lithographic printing.
Machine coopering.
Machine minding.

Microscope making.
Musical instrument making.
Photo process engraving.
Pianoforte making.
Plumbing.
Reader (printer's).
Seamanship.
Silver engraving.
Silversmithing.
Smithing.
Surgical instrument making.
Tinsmithing.
Upholstery.
Van building.

Physically-handicapped boys have been placed at :—

Basket making
Billiard table making.
Boot making.
Brush making.
Cabinet making.
Cricket ball stitching.
Gold blocking.
Machine minding.
Nursery gardening.
Pianoforte making.
School and church furniture making.
Tailoring.
Ticket writing and designing.
Watch making.

12. *Scope of the Work.*—The work of this association and the committees affiliated to it is too recent to afford data for evidence as to whether the opportunities for skilled employment are increasing, but the evidence of all the committees shows an increase both in the number of applicants and in the numbers placed and in the amount of industrial information collected whereby the work is made more efficient. There is need for a committee of this sort in every district in London in order that every boy or girl leaving school may be given the opportunity of learning a trade or entering a suitable occupation.

13. *Poor Law Boys.*—Only one local committee, the Stepney Skilled Employment Committee, has touched these, and this has dealt with two cases only.

Case 1.—Referred to the committee by a district visitor. A widow wished her boy, away at school through the Local Poor Law Guardians, and then aged fifteen, to return to her and take up good work, but had absolutely no knowledge of how to find an opening. The committee made enquiries but found that no public or private body took any responsibility whatever for the after career of boys who leave the Poor Law schools to return to their homes (except in one Poor Law union, that of Southwark when the "Southwark Boys' Aid Association" (1a, C Block, Rochester Buildings, Westminster, S.W.) places and looks after such boys).

The Stepney Skilled Employment Committee therefore undertook the case and placed this boy as an apprentice to engineers' pattern making, the Local Board of Guardians paying the premium at their request. The boy has worked well for two years, and so far justifies the experiment of apprenticing a Poor Law boy from his own home. Had he not been taken up by the committee he would certainly have drifted into the unskilled work of the neighbourhood.

Case 2.—The boy was placed at the Home for Little Boys, South Darenth, by the Local Board of Guardians till he was sixteen, when he wished to learn engineering, having had a little training at the school. Instead he was placed at unsatisfactory work by the school authorities. The committee are endeavouring to find an opening for him at engineering but at his present age, seventeen, it is now difficult.

APPENDIX No. LXIII. (A.)

Handed in by Miss M. M. Dalglish, Secretary Apprenticeship and Skilled Employment Association.

SUGGESTIONS TO APPRENTICESHIP AND SKILLED EMPLOYMENT COMMITTEES NEWLY STARTING.

It is advisable:—

1. To consult the Apprenticeship and Skilled Employment Association, 55, Denison House, S.W., and to avail yourself of the industrial information registered there.

2. To limit and strictly define your area, and where possible to co-operate with other Skilled Employment Committees.

3. To work, closely in connection with the schools within your area, so that the teachers may tell the parents and children of your committee, and send those children to you who require help in finding work. Keep in touch with all social workers in the district as far as possible. Work also in connection with evening and technical classes, arranging as far as possible that all children you place shall attend them.

4. Only to undertake to try and place a *boy on the personal application of the child and at least one of the parents.

5. To have a name and fixed address, and office hours, if possible, daily, and the full time of at least one responsible worker.

6. To have fixed weekly hours, out of school hours and out of ordinary working hours, for the parents and boys to make application for your help, and for the boys* who have been placed to report to you from time to time.

7. To adopt a definite method for taking down the application, and for the subsequent procedure:—

See Appendix A.—Directions for taking down of application and procedure.

See Appendix B.—Direction for finding a vacancy and procedure.

See Appendix C.—Directions for placing an apprentice or learner.

See Appendix D.—Useful books for reference.

8. To ascertain before starting work, the proper method of keeping a card-index of trade information, and to keep careful record of all information acquired.

9. To keep a register of all children placed, with stated dates for reports on progress.

10. To secure the services of a solicitor, to consult on legal points which may arise, and a doctor to advise on trades for delicate boys.

N.B.—A sum of about £10 will be needed to stock the office with necessary files, cards, directories, etc.

A certain expenditure on premiums (either by loan or gift) will be necessary, but committees are advised not to refrain from starting till a fund is raised, but to appeal on special cases.

TAKING DOWN OF APPLICATION, AND PROCEDURE.

A case-paper is recommended, but in any case the following questions should be asked:—

Full name.

Address.

Exact age.

Name of school and master.

Standard. Best subjects. Tastes and aptitudes.

Health and sight.

Father's name in full. Work and wages.

Mother's work.

Members of family and their work.

Lowest wages they can afford boy to start with.

Who sent the applicant.

Reference for boy*; (a) Schoolmaster; (b) former employer (if any).

For parents—two references, preferably landlord and employer.

Trade desired.

If any opening available through aid of relatives or friends.

Having taken down the application, take up references as to the character of the boy, and the ability of the parents to carry out their part of the contract of apprenticeship.

Arrange to see the father, do nothing without the full understanding of the parents. Home visit is advised by some committees.

N.B.—If parents' references are too bad, committees are advised not to have the boy* bound by indenture. If boy's* references are too bad, explain that he must earn a good character and come up again.

* These remarks apply throughout to girls also.

APPENDIX No. LXIII. (B.)

Handed in by Miss M. M. Dalglish, Secretary Apprenticeship and Skilled Employment Association.

DIRECTIONS AS TO FINDING A VACANCY.

(a) Committees are advised to start by using the information about firms available at the Central Office.

(b) To fall back upon a list of recommended firms from the Trades Union Secretaries. For addresses of T. U. Secretaries, see Directory of Industrial Associations (Wyman & Sons, Fetter Lane, E.C.)

(c) As a last resort to consult the Post Office Directory.

(d) To write for openings in batches of about ten letters, or visit firms personally to enquire.

WHEN A VACANCY IS HEARD OF.

(a) Find out and arrange exact terms of trial, and what the boy will be taught.

(b) Make enquiry from Stubbs, the enquiry agent, as to respectability, financial soundness, and suitability for apprenticeship.

(c) Take up trade references for employer, *e.g.*, from (1) customers; (2) people who give him credit; (3) former apprentices.

APPENDIX No. LXIII. (C.)

Handed in by Miss M. M. Dalglish, Secretary Apprenticeship and Skilled Employment Association.

DIRECTIONS FOR PLACING AN APPRENTICE OR LEARNER.

Having found a *prima facie* suitable opening—

(a) Where advisable, arrange for parent to take the boy up to see the employer.

(b) Arrange a trial of at least a month's duration, if possible with wages during that trial. *N.B.* Warn the parents that he must not leave during the trial with or without notice, but is to refer to you and you will give notice for him.

Note date of trial. (The month's trial should be included in the term of apprenticeship.)

(c) At the end of three weeks find out from boy, parents

and master if all are satisfied. If so bring draft of indentures before your committee.

Make out indentures and two copies. Boy and father come up to sign. Go through indentures explaining each clause. Take it up to employer to sign and get 2s. 6d. for stamp. Take it nearest inland revenue office to be stamped within thirty days.

(d) Arrange for technical classes with employer and boy.

(e) Ask boy up to report, and visit employer from time to time.

PATTERN FORM OF INDENTURE AS USED BY LOCAL COMMITTEES.

THIS INDENTURE made the 20th day of March, 1907, between John Smith of 1, Cross Street, London, E. (hereinafter called "the Master") of the first part Thomas Jones of 2, Bell Street, London, E., of the second part William, Son of the said Thomas Jones (hereinafter called "the Apprentice") of the third part and Henry Brown, Chairman of the Apprenticeship Committee (who and whose successors for the time being in the said office are hereinafter referred to and included in the expression "the Chairman" of the fourth part WHEREAS the Apprentice has agreed to bind himself and the Master has agreed to accept him as an Apprentice upon the conditions hereinafter mentioned AND WHEREAS the Chairman has at the request of the said Thomas Jones (hereinafter called "the Parent") agreed to advance out of funds belonging to the said Committee the premium required for such apprenticeship the same being charity moneys AND WHEREAS by an Agreement of even date herewith and made between the Parent of the one part and the Chairman of the other part the Parent has agreed to repay to the Chairman the £20 so advanced by weekly instalments as therein mentioned NOW THIS INDENTURE WITNESSETH that in consideration of the sum of £10 by the Chairman to the Master paid on the execution of these presents and of the agreement to pay the further sum of £10 hereinafter contained and of the covenants and agreements entered into by the Parent and Apprentice HE the Master hereby covenants with the Parent and Apprentice and also as a separate covenant with the Chairman in manner following that is to say that he the Master will take and receive the Apprentice as his Apprentice from the day of the date of these presents for the term of five years and also will during the said term to the best of his knowledge power and ability teach and instruct or cause to be taught and instructed the Apprentice in the trade or business of Engineer's Machinist and in all things incident or relating

thereto AND that he the Master shall and will allow the Apprentice such leave of absence as may be reasonable for the purpose of attending technical classes of instruction and that the Apprentice shall not suffer any diminution of wages on that account AND that he the Master will pay to the Apprentice wages at the rates and in manner following that is to say during the first year 6s. per week; during the second year 8s. per week; during the third year 10s. per week; during the fourth year 15s. per week during the fifth year 20s. per week AND that he the Master will not assign the Apprentice to another Master without the previous consent in writing of the Chairman AND IT IS HEREBY AGREED that if the Apprentice shall absent himself from work without just cause the Master will on the request of the Chairman take all such proceedings at law or otherwise to compel the attendance of the Apprentice as the Chairman may require the Chairman in such event repaying any Court Fees the Master may have expended for this purpose AND IT IS HEREBY FURTHER AGREED that if the Master shall during the first two and a half years of the said term well and truly observe and perform the covenants and stipulations on his part herein contained then the Chairman shall upon the expiration of such two and a half years pay to the Master out of the funds of the said Committee the further sum of £10 AND in consideration of the covenants and agreements hereinbefore contained on the part of the Master the Parent doth hereby place and bind the Apprentice and the Apprentice with the consent of the Parent doth hereby place and bind himself with and to the Master during the term aforesaid during all which time the apprentice shall faithfully honestly and diligently serve him the Master and obey and perform all his lawful and reasonable commands and requirements and shall not do any damage or injury to the Master or his goods or knowingly suffer the same to be done without acquainting him therewith He shall not waste the goods of his said

APPENDIX No. LXIII, (D).—*Continued.*

Master nor shall he buy or sell during his said apprenticeship. He shall not absent himself from his Master's service unlawfully but shall in all things conduct himself as an honest and faithful Apprentice ought to do AND for the considerations aforesaid the Parent doth hereby covenant and agree with the Master that the Apprentice shall faithfully honestly and diligently serve the Master as his Apprentice during the term aforesaid AND ALSO that he the Parent will at his own expense provide the Apprentice with sufficient board clothing and lodging and all other necessities during the said term AND ALSO that the Apprentice shall work in his said Master's business from the hour of 6.30 in the morning to the hour of 5.30 in the evening during the summer season and from the hour of 7.30 in the morning to the hour of 5.30 in the evening during the winter season but in case the Apprentice shall be required to work before or after the said hours such work shall be considered overtime and shall be paid for at a rate proportionate to the wages then payable to the Apprentice and in no case shall be bound to work overtime contrary to his express desire PROVIDED ALWAYS and it is further agreed by and between the parties to these presents that if and when the Chairman or some person acting on his behalf shall give notice in writing to the Master that default has been made by the Parent in repaying the premium by the weekly instalments before referred to the Master shall deduct from the wages of the Apprentice thenceforth to become due the following amounts that is to say during the first year of the said apprenticeship the sum of 3s. 6d. per week during the second year of the said apprenticeship 4s. 6d. per week during the third year per week and thereafter during the said term the sum of per week until the whole of the moneys repayable shall have been repaid and the Master shall and will from time

to time on demand pay the moneys so deducted to the Chairman or as he may direct AND IT IS HEREBY FURTHER AGREED that in case the Apprentice or the Master shall die during the continuance of the term in the former case the Master and in the latter case the executors or administrators of the Master shall repay to the Chairman a proportionate part of the premium paid regard being had to the time for which the apprenticeship shall then have to run AND FURTHER that in case of the breach non-performance or non-observance by the Master of any of the covenants or provisions herein contained or if it shall appear to the Chairman that from any cause whatever either the Master or the Apprentice is unable to fulfil the conditions on his part herein contained then the Master shall on demand repay to the Chairman a proportionate part of the premium paid regard being had to the time for which the apprenticeship shall then have to run as liquidated damages exclusive of any legal claim on the part of the Apprentice or the Parent on account of such breach non-performance or non-observance and the Chairman shall then be at liberty if he shall think fit forthwith to cancel this Indenture.

IN WITNESS whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

SIGNED SEALED AND DELIVERED by the above-named JOHN SMITH, THOMAS JONES, WILLIAM JONES, and HENRY BROWN, in the presence of ABEL THORNE.

JOHN SMITH,
THOMAS JONES,
WILLIAM JONES,
HENRY BROWN.

APPENDIX No.—LXIV.

STATEMENT OF EVIDENCE BY MRS. G. F. HILL, HON. SECRETARY OF THE SCHOOL OF SOCIOLOGY AND SOCIAL ECONOMICS AS TO THE TRAINING OF RELIEVING OFFICERS.

1. The first active steps to provide lectures for relieving officers and others practically interested in the administration of the Poor Law, on subjects bearing upon the duties of their office, were taken in 1903, when a meeting of guardians, clerks to guardians and relieving officers, was convened by Sir William Chance, Sir William Bousfield, Mr. Aveling, Mr. Millward and Mr. Vallance. At this meeting a resolution was passed affirming the desirability of instituting such courses of instruction, and a committee was formed to carry it into effect. The Metropolitan Relieving Officers' Association elected three of its members and its hon. secretary to serve on this committee, which shortly afterwards agreed to become a "Special Committee on Poor Law Education" of the School of Sociology and Social Economics, sending to the Executive Committee of the School three representatives, two of whom were to be relieving officers.

2. In the autumn of 1903 a pioneer course of lectures was given by Mr. A. F. Vulliamy, late clerk to the Ipswich Guardians, and the interest shown in the experiment encouraged the committee, with the experience thus gained, to arrange for a series of courses, of which the subjects would very fairly cover the main duties which relieving officers are called upon to fulfil in their daily work. At first the subject of relieving officers' books and accounts was omitted, as one in which the average relieving officer would not admit his need of instruction, but later on this was included for the benefit of the quite inexperienced, or those who are as yet only aspirants to office.

3. The other subjects treated are General Duties of a relieving officer, the Lunacy Acts, Maintenance and Desertion, and elementary Settlement, and the practice is now established of providing a complete set of the

five courses in preparation for each examination. (In Appendix A is set out a complete list of the lectures given, with details as to attendance.)

4. It may, of course, be urged that the numbers attending were very small as compared with the total number of officers employed in the Metropolis, but there should be taken into account the fact that the idea is a new one and only likely to appeal to the more strenuous among the officers whose work has become more or less a matter of routine, and who feel their own position to be secure. But the very high average of attendances made, especially in the first half-dozen courses, shows the zeal with which the select few took advantage of the opportunity offered. Certificates of attendance are given to all those who make not less than four attendances out of a possible total of six, and the proportion of those granted for the minimum number is very small, a most creditable result when it is remembered that all these men have already done a day's work, and in many cases live at a distance necessitating considerable expenditure of both time and money.

5. In the later courses the attendance has fallen off somewhat, but this is almost inevitable in the case of lectures of which the subject matter appeals to a strictly limited public, which does not undergo any great change from year to year.

6. In February, 1905, a public meeting was held, with Lord Stanley of Alderley in the chair, at which there was a good attendance, not only of Londoners, but also of people from the country interested in Poor Law administration.

APPENDIX No. LXIV.—*Continued.*

7. The following resolution was carried *nem. con.*:—"That with a view to improving Poor Law administration this meeting approves of the efforts of the Special Committee on Poor Law Education (School of Sociology and Social Economics) to introduce a system of certificates to be given after examination to relieving officers, assistant relieving officers, and others intending to enter the Poor Law Service."

8. After this meeting, much serious consideration was given to the examination question, and as information reached the Committee that other associations were also considering the matter, an attempt was made to bring together an informal conference on the subject. The proposal, however, proved impracticable, and finally the decision was taken to hold an examination under the auspices of the School. The tentative nature of the experiment was fully recognised, and also the fact that the worth of the certificate would depend entirely on the respect inspired by the examiners in the minds of the public.

9. Two examinations have now been held, the first in March, 1906, and the second a year later, while the third is arranged for February, 1908. The following is a list of the subjects and examiners:—

General duties of a relieving officer (Mr. H. F. Aveling, Clerk to the Guardians, Paddington (1906); Mr. R. Clay, Clerk to the Guardians, Shoreditch (1907).

Relieving officers' books and accounts (Mr. A. A. Millward, Clerk to the Guardians, St. Pancras).

The Lunacy Acts (Mr. Joshua Scholefield, barrister-at-law).

Elementary Settlement (Mr. Joshua Scholefield).

Maintenance and Desertion (Mr. R. A. Leach, Clerk to the Guardians, Rochdale).

An essay on some subject connected with the work of a Relieving Office (Mr. H. G. Willink, M.A., sometime Chairman, Bradfield Board of Guardians). (*See App. No. LXIV (A) and (B).*)

10. The committee has decided that except under special circumstances no one shall act as examiner more than three years in succession, and in order to give effect to this decision without causing any breach of continuity, two changes have been made for the forthcoming examination, when Mr. H. W. Wallis Grain, Assistant Auditor of the South-Eastern Counties Audit District, will examine in Accounts, and Mr. T. Cutter, Clerk to the Woolwich Union, in the Lunacy Acts and Settlement.

11. A preliminary qualifying examination was also instituted to test the general education of candidates other than relieving officers and assistants, unless they could produce a certificate of some recognised educational body, or other satisfactory testimony as to their efficiency. This has, however, now been discontinued; it was valuable as a protest against the idea that anybody, however illiterate, is a fit person for the post of relieving officer, and its abandonment was due to practical difficulties, and not to any modification of the view as to the need for setting up a standard of efficiency in this respect, for which the main examination was found to provide an adequate test.

12. The first examination was held in London only, and the number of candidates who sat for it was 38; 32 of these were relieving officers of different grades, including assistants, the remaining six were, or had been in the Poor Law service in other capacities. It was agreed that no candidate should be granted a certificate who did not pass in the papers on General Duties and Accounts, and at least one other subject (not being the essay), a high standard to be required in the case of this minimum. Twenty-eight candidates gained certificates, 19 in all six subjects, seven in five subjects, and two in four.

13. The second examination was held in Liverpool, as well as in London, this course being made possible by the co-operation of Professor Gonner and Mr. D'Aeth, of the School of Social Science (Liverpool University), who kindly undertook the whole of the responsibility and work of the local centre. Thirty-three candidates entered for the examination, but only 30 actually did the papers, seven of whom sat at Liverpool; 19 gained certificates, 11 in all six subjects, five in five, one in four, and two in three subjects. The occupations of the candidates were more

varied than before: 13 were relieving officers of different grades, 11 more were in the Poor Law service in other capacities, including that of hall porter and baker, three were outside the service, though one had had some experience of a relieving officer's work, and was among the successful candidates, together with the baker. Four relieving officers failed, and of these only one seems to have had experience of normal service. Appendix B gives the regulations, time-table, and examination papers.

The holding of the examination at Liverpool marked a great step in advance, as it roused country officers to consider the possibility of entering for the examination, and the consequent demand for facilities has made the Committee arrange for ten more such centres. It has also brought in many demands for tuition by correspondence to compensate for the lack of lectures, though in London by no means all the successful candidates have availed themselves of the classes provided. Perhaps one of the most satisfactory features is the way in which successful candidates come to the lectures after their examination.

14. In Liverpool the School of Social Science has since taken up the provision of lectures; the opinion was unanimously expressed that any duplicating of examinations is much to be deprecated, but it would be impossible for the School of Sociology to make itself responsible for teaching outside London, so that it welcomes any arrangements that can be made for the latter locally. In Liverpool an Advisory Committee was formed for the work, consisting of the chairmen and clerks of the four local Boards of Guardians, and three neighbouring ones, together with Professor Gonner and Mr. D'Aeth, as representatives of the School of Social Science. Appendix D* gives the list of lectures arranged, for which 37 have entered their names, the average attendance being 31. Such a result implies a considerable amount of work on the part of Mr. D'Aeth, who acts as secretary, but nothing is more satisfactory than the way in which the idea is taken up by the men themselves, when once it is suggested to them. In London last year candidates came up every evening from places as far off as Watford, Frimley and Purley, but two of those who sat at Liverpool took the three necessary journeys from the middle of Staffordshire some miles from a station, getting home again at 3 a.m. One of these two wrote an account of the examination in the "Poor Law Officers' Journal," which gives such a good idea of the spirit in which the men take it that I have ventured to add it as Appendix E.* I am glad to say that his fears of failure were not realised. Another candidate, also not from a London Union, wrote: "There is no doubt but that the scheme is an advantage to the service, because I know from observation that the last examination has done more good in this Union than you might possibly imagine. Amongst officers who were not candidates, as well as the candidates, there was much talk and edifying discussion created, and in this respect alone I consider the scheme a success." I have noted that this was not a London officer, as the expression of opinion might not be thought to be quite so spontaneous from that source, as I know one or two of the most strenuous supporters of the movement have done a great deal to forward it among their fellow members of the Metropolitan Relieving Officers' Association. Another point which bears on the attitude of the men themselves towards the matter is the way in which senior officers have come forward to be examined, largely as an encouragement to others to follow their example; three Superintendent Relieving Officers have gained certificates, and of the others it is by no means only the younger ones who have offered themselves as candidates. In one of the North of England towns, where we were arranging for a "local centre," a Superintendent Relieving Officer, when consulted, said at once it was a very good idea, and he should certainly take the examination himself to encourage others to go in.

15. Another very satisfactory piece of evidence of the value set by the men themselves on the teaching is the request that was made to us quite spontaneously a month or two ago by the Assistant Master of a London workhouse; he said many junior officials had

* Not printed.

APPENDIX No. LXIV.—*Continued.*

expressed a desire for lectures on Workhouse Masters' Books and Accounts, and asked whether we could not provide such a course. Twelve lectures have accordingly been arranged, which are to be given by Mr. John Green, Master of the St. Pancras Workhouse, and we have already received demands for an examination to follow the course, and we hope to be able to comply with them. (See Appendix F.*) [Fifty-eight persons attended the first lectures, of whom twenty-six had taken course tickets.]

16. These requests are not brought to us from any wish to spare themselves, for as in the case of the relieving officers mentioned above, this Assistant Master has spent time and trouble most ungrudgingly in efforts to make the course known and to persuade men to take it; I see, too, from a letter of his in the paper that it is only a preliminary to demands for other courses.

17. I was asked the other day whether there was not a difficulty in getting the men to pay fees, and I can honestly state in reply that in this the Poor Law section of our students set an excellent and much-needed example to their wealthier fellows; they are

punctilious in enclosing stamped and addressed envelopes for reply, and pay the fees prescribed without a murmur (5s. for the examination and 2s. 6d. for each course of six lectures). As regards both the fees and matters affecting the standard of work to be demanded to gain a certificate, the relieving officer members of committee are the sternest opponents of the smallest proposal to lower the requirements.

18. In conclusion, I wish to emphasise the fact that any success to which we can lay claim is due to the close co-operation of persons actually engaged in Poor Law administration. Without the help, most ungrudgingly given, of those who have acted as lecturers and examiners, the work could not, of course, have been done at all. But more than this, the scheme in all its details has been formulated by the Special Committee on Poor Law Education. Without their expert advice there would have been much more of that learning by the bitter experience of failure, which makes progress so slow; and without an advisory committee of such a nature I am convinced there would have been an entire failure to inspire the officers themselves with that confidence which alone can induce them voluntarily to avail themselves of the education offered.

SCHOOL OF SOCIOLOGY AND SOCIAL ECONOMICS,
63, 64, Denison House, 296, Vauxhall Bridge Road, S.W.

EXAMINATION IN POOR LAW SUBJECTS.

The School of Sociology and Social Economics has arranged to hold an examination in Poor Law subjects in February next, for relieving officers and others who desire to present themselves as candidates. The papers will be set by experts in the different subjects, and certificates, signed by the examiners, will be issued in accordance with the results of the examination. The ground covered by the papers will be strictly confined to that part of the subject with which relieving officers should be conversant in their daily work.

Those candidates who gained certificates in a previous examination, but were not successful in all subjects, will be allowed to take the papers in the subjects in which they failed, without re-entering for the whole examination.

The fee for the examination, or any part of it, is 5s., payable in advance to the hon. secretary.

The examination will be held in some central position in London, Liverpool, and certain other towns, of which a separate list will be furnished; in each case candidates will be informed of the precise address, as the arrangement will vary according to the number of entries.

Intending candidates should send in their names on the special forms, which may be had on application to the hon. secretary; these must be returned, duly filled up, not later than February 3rd.

The list of subjects, with the names of the examiners, is appended, and also a time table.

LIST OF SUBJECTS.

General Duties of a Relieving Officer. Examiner: Mr. Robert Clay, Clerk to the Guardians, Shoreditch.

Relieving Officers' Accounts. Examiner: Mr. H. W. Wallis Grain, of the Middle Temple and South-Eastern Circuit, Barrister-at-law, Assistant Auditor of the South-Eastern Counties Audit District.

The Lunacy Acts and Settlement (elementary). Examiner: Mr. T. Cutter, Barrister-at-law, Clerk to the Woolwich Union.

The Law of Maintenance and Desertion. Examiner: Mr. R. A. Leach, Barrister-at-law, Clerk to the Guardians, Rochdale, author of "Education of Pauper Children," "Criticism and Analysis of Valuation Bill, 1904," "The Unemployed Workmen Act, 1905," etc.

An essay or paper on some subject connected with the work of relieving officers. Examiner: Mr. H. G. Willink, M.A., sometime Chairman of the Bradford Board of Guardians.

TIME TABLE.

Thursday, February 20th, 7—10 p.m. General duties of a relieving officer.

Tuesday, February 25th, 7—8.15 p.m. Relieving officers' accounts. 8.15—10 p.m. Lunacy Acts and Settlement.

Thursday, February 27th, 7—8.30 p.m. Maintenance and Desertion. 8.30—10 p.m. Essay.

W. CHANCE, Chairman of Special Committee on Poor Law Education.

M. HILL, Hon. Secretary to Executive Committee.

H. A. CRAIG, Hon. Secretary to Special Committee on Poor Law Education.

All communications respecting the examination should be addressed to the hon. secretary, Mrs. G. F. Hill, at 10, Kensington Mansions, Earl's Court, S.W.

SPECIMEN EXAMINATION PAPERS.

I.

GENERAL DUTIES OF A RELIEVING OFFICER.

TIME ALLOWED: 3 HOURS.

1. Mention two of the principal statutes on which the English Poor Law system is based, and describe briefly the conditions which led to their being passed.

2. In what various ways may relief be legally given—(a) By the Board of Guardians. (b) By a relieving officer between the meetings of the Guardians?

3. What particulars concerning applicants for relief must the relieving officer enter in the application and report book? Illustrate your answer by giving particulars as to an imaginary applicant for relief. (Note.—The order in which the headings and particulars are given is of no consequence.)

4. What is the object of the question, "How long resident in the union without relief or interruption"?

5. What is the meaning of the term "liable relatives" and who are "liable relatives"?

6. What is the difference between a settlement and a status of removability? Give a brief description of what is meant by each expression.

7. What is the difference between the Outdoor Relief Prohibitory Order and the Outdoor Relief Regulation Order?

8. When is it legal to relieve able-bodied men out of the workhouse, and what are the conditions attaching to such relief?

9. Define the legal meaning of the term "destitution."

10. On whom does the responsibility rest in the first instance of giving relief to a person on his becoming destitute?

11. What course should a relieving officer adopt when a person to whom the Guardians have offered admission to the workhouse declines to come in?

12. Who is responsible for the burial of destitute persons dying outside the workhouse?

13. What main principle should relieving officers bear in mind in dealing with applicants for relief?

HENRY F. AVELING, Examiner.

II.

RELIEVING OFFICERS' ACCOUNTS.

TIME ALLOWED: $\frac{3}{4}$ -HOUR.

1. What are the titles of the principal books of account required for the duties of a relieving officer?

2. Enter under the prescribed headings on the accompanying form marked A, particulars of a typical case of application for relief—the applicant being an able-bodied man, sick or temporarily disabled, with wife, and four children under 16.

3. Assume that an allowance of outdoor relief, in money and kind, has been granted, for a specified period, by the Guardians; and enter the particulars in the form marked B.

4. Complete the entry for four weeks, cross-cast the sums paid, and enter the total in the proper column.

APPENDIX No. LXIV. (B)—*Continued.*

5. Enter two other typical cases in Form B, of relief granted and paid, viz.:—(a) To an adult male with wife and three children on account of sickness of his wife and one of his children; (b) to a widow with two dependent children under 16.

6. Cross-cast the sums and enter the total, then complete the entries of the totals at the foot of the page.

7. Assume that you have paid relief to a number of persons residing in your own district, but each having an ascertained settlement in some other parish or union—the relief so paid to be recouped by the Guardians of the parish to which the recipients respectively belong, how is this class of poor designated?

8. In which part of your out-relief list would you make the entry of your payments to this class?

9. Mention (in your own words) a regulation to be strictly observed by the relieving officer before making any entry to his credit in his out-relief list or other account book.

10. Enter on the accompanying form, marked C, the account of the first week's receipts and expenditure. In doing so, assume (a) that for that week's expenditure you have received from the Guardians a sum of £10; (b) that a sum of £4 was received by you in that week from some other source on behalf of the Guardians; and that you forthwith paid the latter sum to the treasurer to the Guardians; (c) that you have been required to expend a sum of £1 10s. in connection with the conveyance of a lunatic to an asylum.

11. When do the half-years for closing the accounts terminate?

12. What duty devolves on the relieving officer at the end of each half-year in respect of names entered in the indoor-relief list, of persons whose names have also been entered in the out-relief list in the course of the half-year?

13. What has the relieving officer to do, at the end of each half-year, in respect of persons—whose names appear in the district medical relief book—who have not received any other than medical relief during the half-year last closed?

A. A. MILLWARD, Examiner.

III.

LUNACY ACTS AND SETTLEMENT.

TIME ALLOWED: 2½ HOURS.

1. What is meant by the following expression used in the Lunacy Act, 1890:—"A justice being a judicial authority under this Act"?

2. A person living within the district of a relieving officer is not a pauper and is not wandering at large, but is deemed to be a lunatic and is neglected by a relative in whose charge he is. Is any duty cast upon the relieving officer, and, if so, what are the proper steps to be taken?

3. A person within the district of a relieving officer is not a pauper and is not wandering at large, but is deemed to be a lunatic and is not under proper care and control, and the relieving officer is satisfied that it is necessary for the welfare of the alleged lunatic that, before any formal proceedings under the Act can be taken, the alleged lunatic should be placed under care and control. What, if anything, ought the relieving officer to do?

4. If it comes to the knowledge of a relieving officer that a pauper resident within his district is deemed to be a lunatic but the medical officer has given to the relieving officer no notice in respect of such pauper, is it incumbent on the relieving officer to take any, and, if any, what steps with respect to such pauper?

5. A pauper lunatic has recently been sent to institution for lunatics from the X Union. The lunatic has no settlement in that union and his settlement cannot be ascertained. Does his maintenance become a charge on the X Union? If not, what steps should the X Union take, and by what officer should proceedings be taken?

6. Define settlement by renting.

7. A B went to reside in the Z Union in July, 1902, and has continued to have his residence and his house in that union until the present time. On May 1st, 1905, he was admitted into a hospital for consumptive people outside the Z Union, and remained there till the end of June in the same year, when he went to a convalescent home also outside the Z Union. He remained there until July 29th, 1905, when he returned the present time. He has now become chargeable. Has A B acquired a settlement by residence in the Z Union under Sec. 34 of the Divided Parishes Act, 1876? Give the reasons for your answer.

8. J S lived in A, a parish in X Union, for nine months. He afterwards lived in B, a parish in Y Union, for four months, but six months ago returned to A and has now become chargeable. Say whether in your opinion he has acquired a status of irremovability in the X Union, and give reasons.

9. A lived in one parish in Y Union for six months and then for a period of eleven months lived in a different parish in the same union. Say whether in your opinion he has acquired a status of irremovability and give reasons.

10. J. S is settled in the X Union. Last August he and his wife came to live in the Y Union, and he died there six weeks ago. The widow has become chargeable. Say whether the Guardians of the Y Union may forthwith obtain an order for her removal to her place of settlement, and give reasons.

JOSHUA SCHOLEFIELD, Examiner.

IV.

MAINTENANCE AND DESERTION.

TIME ALLOWED: 1½ HOURS.

1. Upon whom and under what statutes may Justices make orders for maintenance of pauper relations?

2. In an application for an order for maintenance state what must be proved on behalf of the Guardians: (1) In respect of the pauper; (2) in respect of the relative against whom the order is applied for.

3. (a) Under what circumstances is a husband released from his liability to maintain his wife? (b) Do such circumstances release him also from liability in respect of the maintenance of the children remaining in the wife's custody?

4. To what extent is a man liable for the maintenance of children his wife had at the time of his marriage?

5. A is possessed of property in respect of which he has made a will. In the will no provision is made for his wife or children. At his death they are destitute and become chargeable. Can they or the Guardians maintain an action for maintenance against the executors or administrators of A's estate?

6. Where a pauper is possessed of property—or dies possessed of property—what proceedings may the Guardians take for the recovery of the relief to the pauper?

7. A, whose whereabouts are known, deserts and neglects his family. His behaviour brings them, or some of them, chargeable to the Guardians. Have the Guardians a choice as to the proceedings that may be taken against them? If so, state what.

8. Where proceedings are taken under the Vagrancy Act, within what period must they be taken:—(1) Against persons who desert their families; (2) against persons who neglect their families.

9. May proceedings under the Vagrancy Act be legally taken against a deserter or neglecter of family by the relieving officer without the consent of the Guardians? If so, under what circumstances would you say that the relieving officer is justified in taking proceedings without the previous consent of the Guardians, and under what circumstances is he not so justified?

10. State reasons which may be given for and against the making of maintenance orders on persons of small earnings. Say which reasons you endorse, and why.

R. A. LEACH, Examiner.

APPENDIX No. LXIV. (B)—*Continued*.

EXAMINATION PAPERS.

V.

ESSAY.

TIME ALLOWED: 1½ HOURS.

Write an essay on *one* of the following subjects. (N.B.—No credit will be given for more than one subject.)

(A) "A relieving officer should not only carry out his bare legal duties, but should endeavour to prevent

persons from becoming, or continuing to be, paupers." Examine this statement, giving reasons for your opinion, with illustrations.

(B) Medical relief has been called the "open door to pauperism." What is the meaning of this, and what can be done to counteract the tendency?

(C) "The fuller a relieving officer fills his report book, the shorter will be his list." Explain and comment on this.

H. G. WILLINK, Examiner.

APPENDIX No. LXV.

**CORRESPONDENCE AS TO AREAS AND THE AUTHORITY FOR POOR LAW PURPOSES
BETWEEN THE COMMISSION AND MESSRS. STAFFORD HOWARD AND F. A. HYETT.**

Scotland House,
Victoria Embankment,
Westminster, S.W.
4th February, 1908.

SIR,—

I am desired by Lord George Hamilton, the Chairman of the above-named Commission, to inform you that in the course of their inquiry, the Commission have had to consider proposals which would involve a change both in the area and the authority for Poor Law purposes. The area generally suggested in place of the Union is the County and County Borough. Those advocating this change would associate a Central County Administration over institutions (to be exercised through a Statutory Committee), with local Relief Committees, who would, in their respective locality, hear and adjudicate upon the applications made to them, such Committees to be under the control of the County Authority.

It is also suggested that each County Authority should frame, subject to Local Government Board approval, a scheme for the sub-division of the county into the necessary local areas. Those who would advocate this plan contend that it would be possible under it to readjust the Poor Law Relief Centres to existing conditions which have in certain counties greatly changed since 1835, and at the same time to so fit in Poor Law administration with rural and urban divisions of councils as to give county government a symmetry and a convenience it now lacks.

As you are known to have given great attention to subjects of this character, the Chairman would be much obliged if you would be so kind as to give him your views upon this scheme or any other which you might wish to substitute for it.

I am, Sir,

Your obedient Servant,

(Sgd.) R. G. DUFF, Secretary.

Office of Woods,

1, Whitehall Place,

London, S.W.,

10/2/1908.

SIR,—

In reply to your letter of the 4th inst., asking me on behalf of Lord George Hamilton to give him my views on certain proposals which have been put before the Poor Law Commission, I beg to say that it is now so long since I have been able to take any active share in Poor Law administration that I am afraid that my opinion is really worth but little, and I should not wish to be considered as having any special or expert knowledge on the subject.

But so far as I am able to form an opinion, I should approve the proposal to associate a central authority for each county, elected for the purpose, with local relief committees to administer the Poor Law; but I think that each district should, if the cost of the indoor poor is paid for by the whole county, be made liable for the greater part of the out-relief, so as to check any disposition to excess in this direction.

It would certainly be an advantage if, where local government areas at present overlap, they could be adjusted, and so fit in the Poor Law administration with rural and urban districts.

I should like to see local relief committees acting in concert with the organisation of local charity, so that deserving cases might receive assistance from the latter outside the Poor Law altogether, and in a more efficient and satisfactory way.

I am, Sir,

Yours faithfully,

E. STAFFORD HOWARD.

R. G. Duff, Esq.

Painswick House,

Stroud.

SIR,—

I must apologise for not having replied to your letter of the 4th inst. before this, but I have been rather seriously unwell.

I am afraid that I cannot throw much light on the important subject on which you have done me the honour to ask my opinion. I have had no recent experience in the administration of the Poor Law. My present personal knowledge of local affairs is derived mainly from County Council and Education Committee work (with that of their innumerable sub-committees), and from Quarter Sessions.

I sat as an ex-officio or as a co-opted guardian from 1877 to 1898, and attended the Board meetings with regularity. The evils of the present Poor Law system were then apparent enough, and I have reason to believe that they have since become more aggravated. The scheme for removing them, outlined in your letter of the 4th inst., appears to me to have much to commend it.

The substitution of the county or county borough for the union as the administrative area possesses a double advantage:—

- (1) It utilises existing public bodies (*i.e.*, County Councils, Borough Councils, Education Committees, Visitors of Lunatic Asylums, etc., etc.) experienced in the duties which they will be called upon to perform.
- (2) It facilitates classification of the destitute in accordance, more or less, with the causes of the destitution, and so enables them to be relieved by entirely different methods.

APPENDIX No. LXV.—*Continued.*

The suggestion made in the second paragraph of your letter—namely, that each County Authority should sub-divide its county into local areas, is almost a necessary corollary to the scheme. It is impossible to offer an opinion as to the approximate size of such areas without knowing something more of the constitution of the Local Relief Committees which would serve them. This constitution would be one of the difficulties of the scheme. I think they should be nominated (or at least largely nominated) by the Central Authority, otherwise the friction between the Local and Central Authorities would be great. It would not disappear by nomination (I am speaking from experience gained from the management of Council Schools), but it would not be serious. What would have to be guarded against in the creation of these Local Committees would be the continuance of Boards of Guardians under a new name, who would carry on the traditions of the present Poor Law system. Indeed, however constituted, they would require much central control, or there would be a relapse into something akin to present conditions. I have heard it suggested by those who are dissatisfied with the Poor Law system that the nature and extent of the relief to

be given in any particular case should be determined, not by an unaided committee, but either

- (1) By such committee, acting under the direction of a highly-paid official of good standing, or
- (2) By such official alone.

If Parliament could be induced to accept and the ratepayers to tolerate such an appointment, I believe it would make for the diminution of pauperism perhaps more rapidly than any other scheme that could be devised, especially if alternative (2) were adopted. Obviously under alternative (1) the relations of such an official to the Relief Committee would have to be very clearly defined.

Possibly, at first, the machinery (especially as regards the Inquiry Department) would have to be more elaborate and costly than would be permanently necessary.

I have the honour to be, Sir,

Your obedient Servant,

F. A. HYETT.

The Secretary, Poor Law Commission,
Scotland House.

APPENDIX No. LXVI.

CORRESPONDENCE AND MEMORANDUM AS TO THE SYSTEM IN VOGUE IN REFORMATORY AND INDUSTRIAL SCHOOLS UNDER THE JURISDICTION OF THE HOME OFFICE, FOR KEEPING SOME SUPERVISION OVER THE AFTER CAREERS OF CHILDREN WHO HAVE BEEN IN SUCH SCHOOLS.

Scotland House,
Victoria Embankment,
Westminster, S.W.,
5th December, 1907.

[COPY LETTER.]

SIR,—I am desired by the above Commission to inquire whether you would be good enough to cause to be prepared for the information of the Commission a brief memorandum setting out the system (if any) in vogue in reformatory and industrial schools under the jurisdiction of the Home Office, for keeping some supervision over the after careers of children who have been in such schools.

An analogous question has been much brought before the Commission in the evidence relating to Poor Law Schools, and the Commission are anxious to learn what the position of this matter is in the reformatory and industrial schools.

At the same time, I am desired by Lord George Hamilton, the Chairman of the Commission, to say that the Commission would be much obliged if you could see your way to kindly causing them also to be furnished with a brief memorandum setting out the methods and results of the Borstal System for dealing with juvenile offenders.

I am desired by the Commission to say that they will much appreciate an extension of the Secretary of State's courtesy in this matter, and I have the honour to remain,

Your obedient servant,

(Signed) R. G. DUFF,

The Secretary of State,
Home Department.

Secretary.

Whitehall,
15th January, 1908.

SIR,—

With reference to your letter of the 5th ultimo, requesting information as to the after supervision of children committed to reformatory and industrial schools and as to the "Borstal System" for juvenile-adult prisoners, I am directed by the Secretary of State to transmit to you herewith, for the information of the Royal Commission on the Poor Laws, the enclosed papers, namely:—

- (1) A Memorandum by His Majesty's Inspector of Reformatory and Industrial Schools on the subject of after-supervision (with inclosures).*
- (2) Copy of a pamphlet issued by the Borstal Association relative to the Borstal System.†
- (3) Copy of the last annual report of the Borstal Association.†
- (4) Copy of the report to the Secretary of State by Sir E. Ruggles-Brise, K.C.B., on the proceedings of the International Penitentiary Congress at Buda-Pesth, which contains in Section IV. (p. 33) a Memorandum by Sir E. Ruggles-Brise on the Borstal System.‡

I am, Sir,

Your obedient Servant,

W. P. BYRNE.

The Secretary to the
Royal Commission on the Poor Laws
and Relief of Distress,
Scotland House, Victoria Embankment, S.W.

[* Cd. 3759.]

[† Published by Messrs. Witherby & Co., High Holborn, W.C.]

[‡ Cd. 2849.]

APPENDIX No. LXVI.—*Continued.*MEMORANDUM ON THE AFTER SUPERVISION OF REFORMATORY
AND INDUSTRIAL SCHOOL CHILDREN.

Great Scotland Yard,
London, S.W.

The managers of reformatory and industrial schools are not bound by statute to supervise the after-careers of children who have passed through the schools, and accordingly no regular system applicable to all has been imposed upon them. From the first, however, the schools have been required to furnish H.M. Inspector with returns of the children who have left the schools during the three preceding years, setting forth their present circumstances and character so far as known, and every year, from 1859 inclusive, tables of results compiled from these returns have been published in the Inspector's annual report. The managers have recognised that the confidence of the public must necessarily depend on the quality of these results, and have gradually evolved a system for themselves which, though differing in certain details according to the particular circumstances of the school, or the genius and energy of the particular superintendent, is in its main ideas practically uniform throughout. The chief means adopted for keeping in touch with ex-inmates are:—

- (1) Correspondence.
- (2) Visiting.
- (3) Reports by special or general agencies.
- (4) Annual gatherings.
- (5) Encouraging the revisiting of the schools at any odd time.

(1) Very little encouragement is needed to induce the children to correspond with one or other of the officers of the school, the bulk of the numerous letters received, however, coming to the superintendent, but to give greater effect to the general invitation to correspond with their old school a certain portion of the award money earned during their school life is sometimes retained and paid out in instalments on application. Some schools circulate a school magazine or annual account of the school's doings, and their eagerness to secure a copy of this brings many letters from old scholars. The effect of such devices is to keep the school authorities informed, not only of the addresses of applicants themselves, but also of useful particulars concerning such old school-fellows as they may have met or heard of. Such information prepares the way for

(2) As a rule the superintendent prefers to visit the ex-inmates at their homes or places of employment himself; at the same time he is often able to rely upon the assistance of one of the teachers or other experienced and tactful officer. A good plan adopted by certain superintendents when a number of boys has been disposed of to certain large centres like London, Liverpool, etc., and at a distance from the school, is to fix a certain hour and day in the year for meeting at a particular coffee tavern. Such gatherings will be attended by not only the fortunate, but also the unfortunate who are in need of help or advice. Information is at the same time obtained of others who have not put in an appearance, and a few days are spent in hunting up these and attending to the needs and verifying the reports of the others. As a rule, however, it is practically impossible for a superintendent or other officer of the school to visit all cases, and the services of certain agencies are enlisted.

(3) A few large schools have paid agents of their own who deal with cases in certain large districts like South Wales or the Metropolis. In addition, there are numerous general agencies, such as that of the Reformatory and Refuge Union, which practically covers the whole of the country, and mention may also be made of police court missionaries and other officials, private philanthropists, clergymen, etc., who are willing to do useful work for the schools, and at the least keep them informed as to how the children are getting on. Employers also are often willing to furnish the schools with monthly or quarterly reports, and, indeed, are expected to do so when the child is licensed to them. Where independent reports are received,

whether from agents or employers, much trouble is saved to the school, as it then only becomes necessary for one of its own officers to visit the more difficult cases with a view to preventing further disaster. It cannot be said that the field of willing and capable more than probable that there are many who would be voluntary agents is by any means exhausted, and it is willing to assist the schools if they knew that their services would be welcomed. It is probable, too, that more could be done in the way of gaining the consent and co-operation of the parents, whose opposition—sometimes due to sheer perverseness—too often stands in the way of the advancement of the child. Managers are beginning to realise that more exact information as to the character and habits of the parents and the nature of the home surroundings must be obtained than can be expected from official reports received from the police or Local Education Authority. That, in fact, it would be advisable to have the home kept under observation during the whole of the time the child is in the school, if anything like a correct estimate is to be obtained.

Undesirable parents are apt not only to visit the schools in borrowed finery, but also to write or cause to be written, plausible letters to the children, with the result, whether intended or not, of deceiving the managers. On the other hand, decent parents sometimes, through a misunderstanding of the situation, refrain from visiting or even corresponding with their children, or in some other way create a false impression. Several reformatories have lately taken advantage of an additional grant given by the Treasury, and have contracted with an agency started by a couple of experienced officials, the object of which is not only to assist in the disposal and after-supervision of the children, but also to keep the schools informed as to the various private and other agencies available, and to furnish reports on the homes of all children still under detention.

(4) Practically every school has its annual gathering about Christmas time or early in the New Year. A certain day is fixed upon (e.g., the first Thursday in the New Year), so that the children may be sure of the date without receiving a special invitation. At these annual gatherings, which are numerously attended, prizes are distributed to old boys and girls who have kept their situations for a certain length of time, or have otherwise distinguished themselves by good conduct.

(5) Children, while still in the school, very soon learn that all old pupils are welcome, and if there is nothing against their character, are allowed to spend a part of their holidays in their old school. This privilege is often taken advantage of by young soldiers and sailors when on furlough.

Every school is expected to keep a "Disposal on Discharge" book, in which all information, direct or indirect, is recorded, and, although the schools are only required to report to the Inspector for the first three years after a child has left the school, reference to these records often shows that provided there has been no great change in the management it is possible to keep in touch with old scholars for a considerable number of years. In the cases of children emigrated to the Colonies, a report is required to be furnished to the Home Office within six months, and all reports received during each year are required to be sent up with the annual return. This regulation necessitates the schools taking advantage of all existing agencies in the Colonies, and where these are not available, employing an agent of their own.

The Tables showing the last published results will be found in Appendices III. (D) and IV. (D) of the 50th Report of the Inspector, and in the earlier portion of that report (e.g., pages 36 to 44) the matter of the disposal, etc., is dealt with at some length.

Enclosed with this Memorandum is a specimen form of the annual return which the managers are required to fill up. (See Appendix LXVI. (A).)

(Signed) T. D. ROBERTSON.

Date of Certificate

RETURN showing the Number of Boys (or Girls) committed under the Reformatory School Acts, who were Discharged or Licensed (and not since re-admitted) during the years 1904, 1905, and 1906, with their present Character, Address, and Nature of Employment, as far as known.

N ^o . of Heading.	DISCHARGED OR LICENSED, viz. :—	Left in 1904.	Left in 1905.	Left in 1906.	Total for three years ending Dec. 31, 1906.	Since Dead.	PRESENT CIRCUMSTANCES.			REMARKS.
							In Regular Employment.	In Casual Employment.	Convicted of Crime.	
1	To Employment, or Service found by School :— (a) Away from Friends - - - (b) To live with Friends - - -									
2	Returned to Friends :— (a) Friends of decent character - - - (b) Friends of questionable character, or otherwise undesirable - - -									
3	Emigrated - - -									
4	Sent to sea - - -									
5	Enlisted - - -									
6	Discharged on account of Disease - - -									
7 & 8	Discharged as incorrigible or sentenced to Penal Servitude - - -									
11	Discharged as Absconded - - -									
	Total - - -									
8	Transferred to other Schools - - -									
9	Died in the School - - -									

NOTE.—It is particularly requested that the *date* of the last Report, occupation (*underlined in Red Ink*), address, *in full*, and name or description of employer be given in each case.

The date of the Report should be :—

(1) In cases of Home Employment, between 1st July, 1907, and 31st December, 1907. In cases of Employment Abroad or on Seagoing Vessels, between 1st January, 1907, and 31st December, 1907.

And in no case should the date of report be prior to 1st January, 1907, or subsequent to 31st December, 1907.

APPENDIX No. LXVI. (A).—*Continued.*NAMES, Characters, and Date of Report of Boys (or Girls) discharged
as in Summary on other side.

No. of Heading.	Name.	Date of Discharge or Licence.	Date of Report.	State clearly :— (1) Occupation. (2) Address. (3) Name of Employer.	Number under which shown in Summary of Occupations.	Character :— State whether this is, on information received, satisfac- tory, fairly satisfac- tory, or unsatisfac- tory.

APPENDIX No. LXVII.

STATEMENT OF EVIDENCE AS TO POOR LAW REFORM, BY MR. JOHN HUTTON, J.P., D.L.,
SOLBERGE, NORTHALLERTON.

1. Boards of Guardians who were formed in 1834, under the great Poor Law Act, were an enormous improvement upon the former state of affairs: they have, on the whole, discharged their duties with creditable efficiency, but it is very doubtful whether they are any longer the most fitting or suitable authority either as district councils for the maintenance of the highways, and for sanitary purposes, or for the administration of the Poor Law; the members of the rural boards of guardians and district councils are generally the best and busiest men in each parish; their council meets on the market day, and they spare an hour or two in the afternoon to attend it; they are, in Yorkshire, at all events, generally very kind to the applicants for Poor Law relief, but unless the guardian for the particular parish is present, they are naturally dependent upon the report of the Relieving Officer. Generally the detailed administration of the council passes into the hands of a few members with leisure, and no one who reads in the local papers the reports of the meetings of boards of guardians and district councils can fail to see how impossible it is for them to grapple with any difficulties which may arise, and however much the majority of the members may have an earnest desire to do what is right, the very fact of their meeting being full of business with the short time for discussion, too often places them at the mercy of the greatest talkers and of the officials of the council.

2. Recent revelations of some of the Metropolitan boards of guardians have shown how evil-minded persons can work an authority of this kind to their own advantage, and not for the benefit of the ratepayers they are supposed to represent, nor of the poor, whom they are appointed to protect.

3. Surely the time has arrived when it will be best to abolish the district councils and boards of guardians, and to retain two authorities only—namely, the county

council and the parish or borough council, but strengthening the parish councils so as to make them efficient for the discharge of their increased duties, which might be done by causing every parish which at the last census had less than, say, 400 inhabitants, or has an assessable value of less than, say, £4,000, to be, by order of the county council, after due inquiry, amalgamated with an adjoining parish or parishes so as to include an area containing not less than, say, 400 inhabitants and, say, £4,000 assessable value, and granting them all the powers now possessed by an urban or rural council.

4. It is worth the very serious consideration of Parliament whether the time has not now arrived when the whole question of the administration of the Poor Law should be revised. There has been of late years a strong feeling growing and extending that our treatment of the aged poor is not worthy of a great nation like ourselves. Parliamentary Commissions and Royal Commissions have, session after session, been considering and reporting upon this subject, and one scheme after another has been laid before Parliament, and a new Royal Commission is now considering the general working of the Poor Law.

5. England appears to be the only Great Power which treats its aged poor with so little consideration. It is true that in England every poor person in a condition of destitution has the legal right to claim relief, but in no other country are the aged poor, who have come to poverty through no fault of their own, placed under the same roof and treated under practically the same conditions as worthless vagabonds, vicious women, and vagrant tramps. Even where adequate out-relief is given they are treated as paupers with all the disgrace and disabilities of citizenship which that word represents.

APPENDIX No. LXVII.—*Continued.*

6. The care of the aged poor has from earliest times been the charge of the parish to which they belong. It would be much the kindest and most reasonable plan to again make their neighbours and friends of the parish responsible for their care, and it should be done by placing them in cottage homes, where they could continue to reside in their native places. It would, of course, be necessary to prevent undeserving or otherwise unsatisfactory persons availing themselves of such assistance.

7. It is not suggested that a parish should be required to build an expensive house for the purpose, but that in rural parishes they should rent or purchase an ordinary cottage, such as the people have lived in all their lives, and provide the inmates with the necessities of life—food, light, and fire—and to pay some woman of the parish to cook and do the work of the house, and look after the old people. Probably two cottages would be required, one for the aged men and one for the aged women, where they would live among those whom they had known possibly all their lives, and not feel themselves outcasts of society. They would, in fact, be parochial almshouses. As Miss Edith Sellers has shown in her admirable book, "The Danish Poor Relief System," the system is already universal in Denmark, and in a modified form in France, Germany, Austria, and even Russia. A parish council would be very careful not to confer the privilege of the cottage home on worthless, undesirable persons, for, as working men are sure to be among the members of the council, and they or their near relations might eventually wish to enter the home, they would endeavour to keep it respectable and of good repute. There must be a jury in all cases of discriminating between the deserving and undeserving, and the parish council, the members of which know every individual in the parish, would be far more likely to give a true verdict than a board of guardians.

8. There must, however, be always cases when an aged man or an aged woman can remain with a son or daughter, or other relation, who cannot afford to maintain them without assistance. In such cases the parish council should be authorised to grant an "old age pension" of five shillings a week on exactly the same conditions as those which would entitle an aged person to enter a cottage home. These conditions might be that the applicant:—

- (a) Is a British subject;
- (b) Is of the age of sixty-five or upwards;
- (c) Has not within the last twenty years been convicted of an offence and sentenced to penal servitude, or imprisonment without the option of a fine;
- (d) Has not received Poor Law relief, other than medical relief, unless under circumstances of a wholly exceptional character, during twenty years prior to his application;
- (e) Is resident within the parish;
- (f) Has endeavoured, to the best of his ability, by his industry or by the exercise of reasonable providence, to make provision for himself and those immediately dependent upon him.

9. The principle of cottage homes for the aged poor was adopted by the House of Commons in 1899, when the Cottage Homes Bill was read a second time without a division, and referred to a Select Committee. That Committee, under the chairmanship of the then Secretary of the Local Government Board, Mr. T. W. Russell, after hearing much evidence, reported in favour of cottage homes. The recommendations of the Committee were specifically adopted, and included in the report of the Old Age Pensions Committee of the same year, presided over by the then President of the Local Government Board, Mr. Chaplin; and they were again endorsed by the Select Committee on the Aged Pensioners Bill, 1905, the Chairman of which was the Secretary of the Local Government Board, Sir John Grant Lawson, so that the principle has had the approval of the House of Commons and three Select Committees of the House, probably a unique position for a Private Member's Bill. The Cottage Homes Bill has also been "backed" by no less than three Secretaries of the Local Government Board—namely, Sir Walter Foster, Mr. T. W. Russell, and Sir John Grant Lawson.

10. In the large towns and boroughs, where the number of aged poor must be considerable, they would be dealt with on the same principles, but would be provided for in large buildings, such as flats, on the lines of the Rowton Homes. The difficulty of discriminating between the deserving and undeserving poor is much greater in the towns than in the rural districts, but it has already been done to a limited extent at Sheffield and elsewhere, and the classification of paupers instituted during Mr. Chaplin's Presidency of the Local Government Board has greatly improved the condition of the aged persons in the workhouses, and accustomed the authorities to the desirability and possibility of differential treatment; and it would be well worth considering whether it would not be better to leave the classification of the poor in the large towns to a highly trained, well paid expert inspector.

11. Probably about 1 per cent. of the population would have to be provided for; suitable cottages in rural villages could be rented at about £4 a year; a caretaker would look after both cottages at about 7s. a week; the total cost of each inmate should not exceed £20 a year, and that would probably be also the cost of the larger establishments in the towns. To take an extreme case of a parish with 400 population and £4,000 assessable value: four old people would have to be provided for, equal to £80, half of which would be repaid by the County Council, leaving £40 to be provided by the Parish, which would mean a rate of 2½d. As the proportion of assessable value to population increases, so the rate would decrease, and in the large towns the increased cost of rent and living would be reduced by the larger number of inmates in the homes.

12. The charge of the deserving aged poor should not be entirely left to the cost of the local parish. The county council should contribute a fixed sum, calculated as one-half—namely, £10 a year, for each inmate of a cottage home, and £6 for an aged pensioner. It would be necessary for county councils to appoint Poor Law committees, who would through their officers be responsible for the condition of the homes, and that the inmates had been properly selected. Every cottage home should be inspected at least once a year by an officer of the county council, and the county councils should have power to withhold their contributions to a parish failing to comply with their requirements. Any aged person feeling aggrieved at the action of the parish council in refusing him admission to the home should have the right of appeal to the County Council Poor Law Committee, who, if they considered an injustice had been done, might order the parish to admit such person to the cottage home.

13. Parliament should be asked to contribute to the cost of maintaining these homes by granting to the county councils £5 for every inmate, and also £3 for every aged pensioner.

14. The inmates of aged poor cottage homes and the pensioners on the aged pensioners' list should not thereby be debarred from voting for the election of a member of Parliament or of the county council, but should not vote for the election of a member of a parish council.

15. The county councils would have to provide aged homes or workhouses, where those would be maintained who could not fulfil the conditions required for a cottage home or aged pensioners' list, and it would be the duty of the parish council to at once inform the Poor Law officer of the county council of such persons, so that they might forthwith be removed to the homes provided by the county council.

16. The county councils would take over from the boards of guardians all the workhouses and other property belonging to them, together with their debts and charges for loans, etc., and from the district councils, the fever hospitals, etc. The county councils would use the workhouses for the reception of women, children, imbeciles, and sick and infirm paupers, and as places of detention for such of the destitute whom it might be thought desirable to remove from their parishes for more complete control or care. In rural districts, the county councils would be able to set apart separate workhouses for different purposes.

APPENDIX No. LXVII.—*Continued.*

Able-bodied. 17. Able-bodied destitute persons would apply to the parish council for relief: the parish council would require them to do such public work as they might think fit, but not allow them to be employed on behalf of a private individual, and they should supply them with such food, lodging, and clothes as they considered necessary.

18. If a parish council should be unable to find suitable employment for an able-bodied applicant for relief, or if an applicant should refuse to work, the Poor Law officer of the county council would, on the application of the parish council, remove such person to a workhouse or other place appointed by the county council, who would charge the maintenance of such person to the parish council. The county council should be permitted to detain such persons in the workhouse for a period not exceeding three months.

Money Relief. 19. No money relief should be given to the able-bodied destitute, except to deserted wives, and widows and their children.

20. All able-bodied persons so relieved should be deemed paupers, and for the next two years disqualified for voting for the election of a member of Parliament, or of a county or parish council.

Medical Treatment. 21. Medical officers of health and all sick relief should be paid for by the county council, and be under their supervision and authority. Sick relief is not considered "pauperism," and there can be no reason why arrangements should not be made for the reception of patients into the local hospitals; but it might in many districts be desirable for the county councils to utilise some of the existing workhouses as hospitals, where the sick and infirm would be treated, and women received for their confinements.

22. Any destitute person being sick or infirm and thereby unable to work, would apply to the parish council for relief: such application would be immediately reported to the district medical officer, who, if he considered the applicant was suffering from illness or infirmity sufficient to incapacitate him from work, would supply such medicines or nourishment as he might think necessary at the charge of the county rate; or he might order the applicants into a hospital or infirmary provided or approved by the county council.

23. Such persons should not be deemed paupers or be deprived of their votes or other duties of citizenship.

Women. 24. Widows and deserted wives and any destitute women must be allowed exceptional treatment, though it would have to be executed with care and caution; on the recommendation of a parish council, the Poor Law officer of the county council should be permitted at his discretion to provide them with relief in kind, or a weekly sum of money sufficient for their maintenance; or they might be required to enter a home or workhouse provided by the county council.

Children. 25. Children left destitute should be under the control of the county councils, and should as soon as possible be boarded out or sent into a children's home; if any child should be suddenly left destitute, the parish council should provide for its immediate wants, and report the case to the officer of the county council.

26. The parish to which the child belonged should pay to the county council one-half the cost of its maintenance.

Report of Vagrants. 27. As recommended by the recent Departmental Committee, presided over by Mr. John Lloyd Wharton, vagrants should be transferred entirely to the care of the police, who should, under rules approved by the Secretary of State, have power to pass on a genuine wayfarer seeking for work to his destination, providing him with necessary food and lodging; while on the other hand the professional vagrant should be detained, and compelled to do a certain amount of work in labour colonies or penal workhouses. The existing casual wards could in most instances be transferred to the police without interfering with the privacy or usefulness of the workhouse.

Imbeciles. 28. It has become an urgent necessity that imbeciles and persons of weak intellect should be cared for in suitable institutions other than the asylums. This could be done by utilising a disused workhouse. There

would be no occasion for the elaborate precautions and costly staff of an asylum, and the expenses would not be nearly so great. Any person wishing for an order for the admission of an imbecile to such an institution would have to apply to the parish council, and if the medical officer of health, according to such strict rules and regulations as the Local Government Board might direct, certified such person as an imbecile or weak minded, but not insane, the parish council would apply to the county council for his admission to an imbecile asylum. The parish council should pay to the county council half the cost of such imbecile.

29. The Government should be urged to take over the lunatic asylums, and place them under the control of the State, with visiting committees appointed by the county councils, similar to those appointed by the Prisons Act, 1876. At the present time the asylums are a grave anxiety to the county councils, and an enormous expense, caused not only by the steady increase of lunacy, but also by the constant requirements of the inspectors for improvements and structural alterations.

30. Probably two main objections will be taken to this scheme, namely, that the county councils have already more than they can do, and that the parish councils would be less efficient for carrying out the details of the Poor Law than the boards of guardians.

31. With regard to the county councils, experience rather points to the fact that the more important and varied the duties, the more anxious are the best men to come into the council. The work of a county council attracts men who have a desire to be useful to their county. The Education Act has doubled the work of the county councils, but it has been dealt with and organised in almost all counties with an energy and efficiency which cannot be too highly praised; and if the responsibility of watching over and protecting the administration of the Poor Laws was added to their duties there can be little doubt that they would be most efficiently carried out, and some of the best men in the county taking special interest in the wants of the poor would be inclined to give their services.

32. With regard to the parish councils, they are now a failure, because they have no real work to do; but if they were made responsible for the charge of the poor in their parishes, and enabled to carry out their own sanitary improvements, and to rate themselves as they thought fit, there can be little doubt that the very best men in each parish would gladly join their council, and as the meetings would generally be in the evening they would be able to attend, and fully discuss the subjects before them.

33. It will probably be said that parish councils could not be trusted to deal with our aged poor or destitute, as local interests and local prejudices would so affect their decision, and that great diversity of treatment would ensue; but if these proposals are examined carefully, it will be seen there is little scope for favouring or the reverse. The selection for the cottage home or aged pensioners' list would be limited by the fact that each parish council will be compelled to maintain a home, which they will naturally endeavour to keep full rather than grant a pension. Take the case of the aged poor: an old person reaches the age of 65, and applies for relief; the parish council have to decide whether that person has fulfilled all the conditions mentioned above. If the person is so far eligible, then the only optional duty will be to decide whether the applicant shall be admitted to the parish home or be placed on the aged pensioners' list. They may stretch a point in favour of a doubtful case, but it seems most probable, as has been already said, that some of the members of the parish council will be working men, and will be looking forward to the time when they, or their near relatives, may themselves become applicants, and they will take the greatest care that they only select those for the privilege whom they know deserve it. Then, in any case, the officer of the county council will supervise, and ascertain whether the inmates or pensioners fulfil the requirements, and will inspect the homes. The county council would refuse to pay its contribution, about one-half the cost, if any jobbery or irregularity was found out, or if the homes were not properly maintained.

34. It does seem to be the natural and historical right and privilege of each parish community to care for its old people, and surely they can be well trusted to do so with judgment, kindness, and discretion.

APPENDIX No. LXVII.—*Continued.*

35. With regard to the able-bodied applicants, there can be no opening for jobbery or fraud so long as the county council and Local Government Board insist upon the proposed conditions, that no work shall be done for private individuals, and no money or other relief shall be given except in return for work, or that they shall be handed over to the county council officer to employ on behalf of the county council, or to be otherwise dealt with if the person refuses to work.

36. Every parish council will appoint either one of its own members, unpaid, or a paid officer to interview applicants, etc., and to report to the county council officer.

37. Surely it would be of the greatest value to our rural districts to foster and increase local duties and responsibilities, and the good done would be infinitely greater than any small abuse of power which might occur, notwithstanding the constant and effective supervision and guidance of the county council.

38. The cost of the scheme to the ratepayers would probably be less than the present system; the medical and sanitary officers would have their areas arranged independently of union boundaries; the Poor Law administration would benefit by the fact that each parish would be responsible for and have to pay for its own idlers and loafers, who would soon learn that they must either work or leave the parish, probably for a long period, to a county council workhouse.

39. In the year 1905 each indoor pauper cost the ratepayers £13 7s. 9d. per head (in London £27 17s. 10d.), so that even in cottage homes the increased expense for a limited number of most deserving persons, if it should be as estimated, £20 a head, would only increase the cost of their maintenance by £6 12s. 3d., and if Parliament would grant £5 per head towards that cost, the addition to the rates would be infinitesimal.

40. It may be said that the principle of cottage homes and aged pensions is pure Socialism, because it does not require a life contribution by the person benefiting; it may be so, but there are two kinds of Socialism, one which considers the poor a trust of Society, the other which professes to believe all men are equal, and ignoring mental or physical superiority, demands that all should fare alike by absorption into the State of everything in the nature of property, or, in other words, what a man may now call his own, from a castle to a spade; but it must be true that Society—that is, the whole nation—is the guardian of its weak and poor.

41. Anyone who knows the feelings of the working classes in the rural districts must be deeply impressed by the fear of the workhouse which is always hovering around them, and how that fear is increased by the knowledge that in the workhouse they will have to end their lives among the low, blackguard, drunken wastrels of Society, and how they dread the curtailment of their liberty and the final horrors of a pauper funeral. The political cry of both parties for old age pensions is in itself a testimony of the strength of the feeling.

42. The system advocated in this paper would be a solution of the true demand for old age pensions, as the State is asked to contribute £5 a year to each aged person selected by their neighbours on certain conditions. Taking the population of Great Britain as 40 millions, 400,000 persons would represent the one

per cent. to be provided for, which would require £2,000,000 to be annually raised by Parliament—a reasonable sum compared with the £20,000,000 supposed to be necessary for the purpose.

43. It is impossible for many industrious working men and women to provide for old age. They may have under most adverse circumstances avoided applying for relief, and brought up respectable families, and worked hard all their lives without being able to save anything; but at the last old age and infirmities incapacitate them; and it is a brutal thing that their country should only provide for some of its best citizens, whose one fault is they have lived too long, the horror of ending their days in the workhouse, among men and women whom they would hardly have spoken to in the former years of health and strength, but whom they find, at the decline of life, treated as their equals. Outdoor relief may be, and is, granted by many boards of guardians, but is too often inadequate, carries with it the disabilities and disgrace of pauperism, and is of no use to many old people who have no home or family ties.

44. A small country workhouse, with 50 or 60 inmates, is a shame to our Christian civilisation. There may be found collected in it perhaps ten old men and ten old women, drunken, idle blackguards, the outcasts of Society, and, compelled to live among them, perhaps five or six respectable old people who, through absolutely no fault of their own, having worked hard all their inoffensive lives, have come to poverty. There will probably be three or four imbeciles of each sex, sometimes harmless and amusing, very often vicious and annoying to the inmates; two or three single women waiting for their confinements—in many cases an annual visit; three or four loafing “ins” and “outs,” able-bodied men; three or four feeble persons; and eight or ten illegitimate children, all practically living together, and too often under a master who is tyrannical in his treatment and careless of his duties. It is a life absolutely repugnant to the respectable poor. Surely the time has come when, for the sake of not only the aged poor, but of the sick, the imbeciles, and the children, a drastic reform should be made, which would, at all events, bring us to a level with Denmark and other European countries.

45. A well-known and very influential labour member of a county council lately said to the committee (2 Thess. III.) which was considering the question of finding work for the unemployed, under Mr. Walter Long's Socialistic Act, “Mr. Chairman, the law of England says no man shall be allowed to starve. The Scripture says, ‘If any man would not work, neither should he eat.’ In my opinion the law of Scripture is better than the law of England.”

46. Let us, at all events, do what we can to help those who have fallen wounded and helpless, after faithfully fighting the battle of life, and not treat them in the same way as those who have made no effort, and have only been the selfish wastrels of Society.

47. All those who have for years had at heart the condition of the rural poor earnestly hope that the Royal Commission which is now sitting will strongly grapple with the facts of Poor Law administration, and may make such recommendations as will effectively deal with all the problems of the Poor Law, and improve the administration of local government.

APPENDIX No. LXVIII.

STATEMENT OF EVIDENCE GIVEN ON BEHALF OF THE ST. JOHN THE DIVINE (KENNINGTON) RELIEF COMMITTEE, BY MISS HELEN G. KLAASSEN, HONORARY SECRETARY.

1. My Committee request me to submit to you, respectfully, the following statement of the difficulties they have observed in the administration of the Poor Law in the Ecclesiastical Parish of St. John the Divine, Kennington, which is situated in three Poor Law Unions.

2. The guardians do not act upon sufficiently fixed principles, the poor never know the limit of what they may hope to obtain. If the guardians carried out a

more consistent policy, we think there would be less suffering, as the poor would attempt to adjust their lives accordingly.

3. There is suffering in the family of a man who, though regarded by the guardians as able-bodied, is yet, for one reason or another, unable to earn sufficient to maintain his family up to a healthy standard. If a child of such a family has marked signs of wasting disease, it

APPENDIX No. LXVIII.—*Continued.*

is true that the guardians will take him into the infirmary, but there is no remedy before this stage is reached. The difficulty is aggravated by the fact that the parents who cannot support their family are often also dirty and negligent. When the man is really bad, or callous, or stupid beyond a certain point, there is the additional difficulty that he may not be willing to apply to the guardians for proper treatment for his wife or children when they are ill. If the wife applies in his place, she is liable to be sent back and told her husband must apply himself. We have known cases of serious destitution, where the wife has been discouraged by the relieving officer from making application, even when she has been driven to apply for admission to the house with her children.

4. Although it may be true that men who have once been to the workhouse return there too readily, and also that families become destitute unnecessarily through want of thrift, none of us have ever known a case where a family living in an ordinary home has gone to the workhouse in the first instance at a too early stage of destitution. We think the tendency is for the respectable man out of work to hold out too long and thus to endanger the health of his family. We believe that he does so more from fear of injury to his future career, than from the prospect of losing the poor remains of his furniture or from any dread of the discipline a temporary sojourn in the workhouse would involve.

5. Relief in illness administered in the patient's home is less satisfactory than infirmary treatment. The district medical officer may be unable to give the close attention which individual cases need owing to the large number of parish cases for which he is responsible in addition to his private practice. Inadequate medical attendance leads to inadequate diet in sickness. Out-patients are often badly fed during the convalescent stage and are rarely sent to convalescent homes.

6. It is always difficult for a woman with children to leave home for infirmary or convalescent treatment. It is almost impossible for the wife to go to the infirmary if the husband is of dissolute character. She can neither leave her children unprotected, nor find a woman willing to take charge of them; she has no security against loss of her home or even desertion.

7. (a) The out-patient treatment of confinement cases is not satisfactory, because the guardians supply a doctor only and the destitute person cannot pay for a skilled nurse. Adequate treatment requires either a midwife, or else a doctor and skilled nurse. (b) The in-patient treatment is unsatisfactory for married women who find themselves in the same ward with the unmarried. (c) Many women go through their confinement with insufficient nourishment, without making application to the guardians for help.

8. Out-relief is given to persons of bad character when there are no peculiar circumstances to justify it.

9. Patients are treated by the guardians at home in a badly verminous condition.

10. We have heard applicants use the expression "my friend on the Board."

11. The guardians officers, either through pressure of work or from lack of encouragement by their Boards, are not sufficiently alive to openings for preventive work on behalf of members of families with whom they are dealing.

12. Suffering is caused by the want of co-operation between hospitals and the Poor Law guardians.

13. The following are a few of the Poor Law cases which have been brought to the notice of my committee. (*See Appendix No. LXVIII. (A)*). They are selected, not as typical of the guardians' work in general, but as illustrating by the detail which has been recorded, some of the difficulties with which the guardians and their officials are confronted in their attempt to give adequate help by means of out-relief.

(1) and (2). Illustrate the difficulty of giving efficient help by means of out-relief to persons of a low type of character, whose word cannot be trusted.

(3) Illustrates the fact that serious consequences may result if the head of the family is too callous about his children's welfare to be willing to make application to the guardians.

(4) Illustrates the need for elasticity in official procedure, when it is not easy for the applicant to make his application in the usual way.

(5) Illustrates paragraphs 11 and 12 above.

APPENDIX No. LXVIII. (A.).

Paper handed in by Miss Helen G. Klaassen.

CASES ILLUSTRATING THE DIFFICULTIES UNDER WHICH BOARDS OF GUARDIANS AND THEIR OFFICIALS LABOUR IN THEIR ATTEMPTS TO GIVE ADEQUATE HELP BY MEANS OF OUT-RELIEF.

I.

July 17th, 1906.—District visitor found woman without food at time of her confinement. The woman was attended by a free midwife from a maternity charity. District visitor gave milk at once, and got man to apply to relieving officer, who gave nourishment for woman at once. The baby died.

September 30th, 1906.—Letter from clergyman saying that the same woman is ill and destitute, and attended by parish doctor. I called on relieving officer who told me she is having relief on medical order. Reported this statement to clergyman.

December 5th, 1906.—Report from clergyman saying relieving officer is giving food, which does not include milk, and the doctor has ceased to visit since last Monday. The man is now ill in bed and cannot go to fetch the doctor. Called at the home. Man and woman both in bed. Room has appearance of being very destitute and dirty. Woman looked very weak, and said she had been suffering from rheumatism. The man had a sore throat. They told me they had had no milk, but had been given a bottle of ginger beer by a friend. Doctor's order had run out,

and the man had not been well enough to go out to renew it. I gave milk and wrote to the relieving officer. Relieving officer gave milk (a quart a day) at once. Man was only ill a few days.

January 4th, 1907.—Letter from district visitor saying that the woman is still ill and weak, and wants both food and firing. Housekeeper at clergy house told me she had called with an order for milk and found the man drunk, and nothing in the house to fetch the milk in except a beer can.

January 4th, 1907.—I called at the home. The woman looked both weak and emaciated, but her rheumatism had left her, and the doctor had stopped calling, considering her to be better. The milk had also stopped. Dirtiness of room was deplorable. Two women with the appearance of drunkards were present. These women said the patient had a bad cough and brought up much thick phlegm. I advised woman to apply to be taken into the infirmary or infirm ward, and promised to do my best to try and make some arrangement about the children. She would not hear of this. She abused the

APPENDIX No. LXVIII (A).—*Continued.*

doctor for having ceased to call, and the relieving officer for stopping relief. I offered to see relieving officer and doctor about it.

January 4th, 1907.—Saw relieving officer who told me man had just got some odd work, and also that he always found it difficult to make out if the man was really earning or not.

January 4th, 1907.—Saw parish doctor who told me he thought the woman was malingering, and ought to make an effort to rouse herself and get up. I told the doctor of the extreme thinness of her body, and the cough and phlegm which the friend had told me of. Whether the cause is malingering or not, she keeps weak so long that one would feel happier if she were, at any rate, offered to come into the infirm ward.

January, 1907.—Some days later I called on the woman and heard that the parish doctor had called the morning I saw him. The woman said that he had not examined her, but offered to take her into the infirm ward. She was up and looking brighter. The floor had been scrubbed. She said her eldest boy had just started work behind a van. She has three girls, the eldest is feeble in mind, the youngest is six years old. She told me the relieving officer had spoken roughly to her because her husband had not gone up to the relief station. She said she was better, and if I called again, I should find her quite well. She would on no account go into the infirmary.

January, 1907.—Saw relieving officer who said the woman abused him when he called, and said she wanted neither him nor the doctor, and she supposed it was "that lady who sent him." He said to her: "No wonder she did when your room is so disgusting, I wonder she did not notify to the sanitary authority."

A few months later, I heard that the woman was seriously ill with consumption in the infirmary.

II.

November 23rd, 1904.—Report from district visitor saying that Mrs M—, a widow who lives alone, was found ill in bed in a very destitute home without food or firing. She is a parish case, attended by the parish doctor.

November 23rd, 1904.—Called on woman. She said she could ask the parish doctor for nourishment when he called, and preferred that I should not ask for her. There was no fire, insufficient bed clothes, and she said she could not get nourishment.

November 23rd, 1904.—Visited the relieving officer, and informed him of district visitor's report.

November 25th, 1904.—Letter from district visitor to say that woman was found in the same state (November 24th 1904) no food, no fire, no proper bed clothes. As no one from the parish had called that day, she gave coals and swiss milk, and asked that the case should be attended to by *someone* to-morrow as the woman is *really* ill.

November 25th, 1904.—Called on the Roman Catholic priest as the woman is a Roman Catholic. He told me he knew that the woman was in this state, but was doing nothing as he knows the whole family well, and they are all bad drunkards.

November 24th, 1904.—Called on the relieving officer, and asked him to deal with the case either by giving necessities or offering the House.

November 26th, 1904.—District visitor told me the relieving officer did call yesterday as requested; did not mention the workhouse, but gave milk and beef-tea, but no coals. The day was a very foggy and cold one, so I called at once, and finding no fire gave coals to the value of 6d., and reported to the relieving officer. (The relieving officer explained to me later that he did not give coals as he found a fire when he called. This fire was made with the coals given by the district visitor.)

November 29th, 1908.—Called on Mrs. M—, and asked her for full particulars of her application for relief, so that I could make a statement to the guardians about it. Her manner changed, and she said she would not like this to be done. She said she received 3s. from the parish, which is very good relief, more than most widows get, and the parish doctor and relieving officer have been most attentive

to her. She was taken ill with bronchitis the Thursday before last, asked for the parish doctor, and he came at once. She never asked him for anything; her relations have been helping her. The relieving officer and the superintendent relieving officer had both called on Thursday, and asked her if she would not like to come into the House—she would find a good fire there.

November 30th, 1908.—Letter from superintendent relieving officer thanking us, and saying that necessary inquiry has been made by the relieving officer, and the case will come to-day before the guardians.

December 2nd, 1904.—The relieving officer gave me the following account of the case. Mrs. M.— has 3s. a week from the guardians. She is not old nor has she children to keep, but the relief is given on account of her being delicate. When he has interviewed her in the past, she would never own to earning anything, and he therefore assumed that her relief of 3s. would be supplemented when ill, in whatever way it was supplemented when she was well. The landlady at the previous address gave her a character for being deceptive, and for drinking. Her family have been on the parish for thirty years. He brought the case before the guardians, and they did not offer the House, but gave extra relief on doctor's order.

III.

January 16th, 1904.—Case of sick child requiring nourishment was notified to me. I called at the home, and the mother told me that her husband had been out of work six months, then in work one month, and then out again two months, and that he was out of work at the present time. During this period she had been confined and had lost the baby. I found one child of two years very ill with measles and bronchitis, and a child of five years who seemed to be sickening for an illness. The woman said the parish doctor had called once and told her the child was very ill, but had not called again. I advised the father to ask the doctor to call. He would not do this, nor would he apply to the relieving officer, although the home was very destitute, and both parents told me that they had neither money nor food, and the child looked as if it might not survive. I told the woman that, if her husband would not apply, it was her duty to do so, if the child's life was in danger for lack of nourishment or medical advice. The husband then threatened his wife, in case she should make application. At last the woman declared that she would see that application was made, and I gave milk to last from Saturday to Monday.

January 19th, 1904.—Called on Monday. The woman said she could not go out, as the elder child is now down with measles. The husband still refused to go for the doctor who had not called yet. The woman was in great despair, as she did not know what to do for the child of two years, who was seriously ill with bronchitis. She said someone had given her brandy, which she had given the child with its milk. I left a letter for the parish doctor at his house the same morning, stating the circumstances, and leaving the responsibility with him.

January 20th, 1904.—Called at the home. The doctor had not called yet. The woman looked wretched. I gave more milk. Called again at 4 p.m. The doctor had not visited. I wrote to the relieving officer stating the case fully, and asking him to let me know at once if it is not legal for him to act on my application on behalf of these people, as I must see that the case is attended to by someone.

January 21st, 1904.—Called at the relief station. The parish doctor resented our interference, and said that the case was down in his book to be visited to-day, but that if he did it at our request, it would be at our expense.

January 28th, 1904.—Called at the home and heard that the doctor has been calling regularly since my last visit, and that the relieving officer has given the necessary nourishment.

IV.

June 9th, 1903.—The case of Mr. B—, an old man of 76 years, suffering from chronic bronchitis and asthma, with a wife of 65 years, a chronic invalid who could not get in and out of bed by herself, was notified to us as

APPENDIX No. LXVIII. (A).—*Continued.*

needing relief. I called and found that they had two daughters, the one earned 9s., the other was delicate, and earned 8s. The man had been unable to earn for one year, the family had been helped by his brother, who could do so no longer, and by his son, since dead. An attempt was made to improve the daughters' earnings, which failed, and the case was sent to the Charity Organisation Society, in the hope they might be able to raise a pension for the old couple. The Charity Organisation Society reported that they found the character to be good, but not up to pension standard. The home was clean and tidy, and the references considered the family to be very poor. We gave *interim* help while the case was under consideration, and after the Charity Organisation Society sent its report, we advised the B.'s to apply to the guardians for help.

October 27th, 1903.—Letter from clergyman saying the B.'s are ill and in need. Called the same day and learned that the B.'s obtained an order for the parish doctor six weeks ago. The doctor called for some weeks, and then stopped calling. The man said he felt ill and weak, and could not get proper nourishment. They explained their difficulty in going up to the relief station, as neither man nor wife could go on account of their ill health, and the two girls were out at work all day, and feared they would lose the job if they took a day off. I advised Mr. B. to write to the relieving officer, if he could get no responsible person to call on his behalf.

October 29th, 1903. I wrote to the relieving officer sending him a report on the circumstances of the case, as I understood the B.'s were applying to him.

November 2nd, 1903.—I called at the home and heard that someone had called on the relieving officer on their behalf, and that the relieving officer had promised to call, but had not done so yet. I gave 2s. 6d., as the man seemed ill and weak.

November 5th, 1903.—Called again, and heard that the relieving officer had not called yet.

November 5th, 1903.—Called on the parish doctor, and he kindly offered to mention the matter to the relieving officer, and call himself on the B.'s to-morrow.

November 19th, 1903.—As the B.'s had not yet seen the relieving officer, I asked a visitor to call on relieving officer. The relieving officer said no application for relief had been made to him. The B.'s had sent for

medicine, but had given no message. Relieving officer promised he would call some time when he is round there, but said the case could not come before the guardians till December 2nd.

November 20th, 1903.—Sent a visitor to make a definite application on behalf of the B.'s, so that there could be no doubt in future as to whether application had or had not been made.

December 4th, 1903.—The guardians granted 5s. a week.

In this case the man suffered from insufficient nourishment for eleven weeks after his case was in the hands of the parish doctor, five weeks after a full written statement had been sent to the relieving officer, one month after the doctor had had his attention drawn to the necessities of the case.

V.

January 26th, 1904.—Mrs. P. brought a boy of two years to the office, and reported that the doctor at the hospital said the child was losing the use of his limbs through want of proper nourishment. He must wear splints, be kept off his feet for a long while, eat fat bacon in the morning, potatoes, greens, and minced meat at midday, no sweets, plenty of milk, and a few biscuits. I took down the following particulars from her:—

Man.—In the infirmary since Christmas. Ill seven weeks before.

Woman.—Has been earning 5s. a week, but not since last September, since then nothing, and they have nothing left to pawn.

Children.—Boys of 8, 5, and 2 years.

Rent.—5s.

Relief from the Guardians.—4 lbs. meat, 4 loaves, 2 oz. tea, 2 lbs. rice, 1 lb. sugar, no money, no coal.

January 26th, 1904.—Letter to the hospital asking them to either take the child into the hospital where they would make sure that he is fed, or else refer the case to the parish and leave the responsibility with the guardians.

February 5th, 1904.—The relieving officer told me the parish doctor would be seeing the child to-day.

In this case the hospital had not ascertained whether the treatment they ordered could be carried out, nor had the relieving officer considered it his duty to draw the attention of the parish doctor to the child's state.

APPENDIX No. LXIX.

MEMORANDUM BY THE LOCAL GOVERNMENT BOARD AS TO THE INTERNAL ARRANGEMENTS FOR THE ADMINISTRATION OF THE POOR LAW.

1. The business of the Local Government Board, as performed within the office, is distributed amongst five divisions, each of which is under a separate assistant secretary.

2. The work of each division is again distributed amongst one or more separate departments, each of which is in charge of a principal clerk, who has a staff of clerks under him.

3. Cases which involve matters of principle, or are for some reason of special importance, are referred by the assistant secretary to the permanent or Parliamentary secretary, and are, where necessary, brought before the President.

4. The administration of the Poor Law is for the main part conducted in the Poor Law Division of the office, which consists of two departments—viz., the Poor Law Administration Department and the Poor Law Officers' Department. These two departments are under the superintendence of the assistant secretary, who also acts as chief general inspector.

5. Some other departments of the office also deal incidentally with matters relating to Poor Law as a branch of local government. The questions coming before these

departments are for the most part not of an administrative character, and it is usual, if administrative considerations arise, to refer them to one of the departments mentioned above for advice on their administrative aspect. The functions and duties assigned to the various departments will be seen from the following paragraphs.

POOR LAW DIVISION.

POOR LAW ADMINISTRATION DEPARTMENT.

6. The matters relating to the Poor Law functions of the Local Government Board dealt with in this Department are, shortly, the following:—

7. Correspondence, preparation of tabular and other statements and memoranda, and the examination of reports and returns on matters relating to the general administration of indoor and outdoor relief; the arrangements and management of workhouses, district and separate schools, and grouped or scattered homes for pauper children, Poor Law infirmaries, district sick asylums and the establishments under the Metropolitan

APPENDIX No. LXIX.—*Continued.*

Asylums Board; the periodical and special reports of inspectors on Poor Law institutions and certified schools; the reports of Lunacy Commissioners on workhouses; the erection, alteration, and enlargement of workhouses and other Poor Law buildings; the purchase or hiring of land and premises by guardians; contracts and tenders; workhouse and school dietaries; the religious creed of paupers; complaints by paupers; emigration; the education and employment of pauper children; boarding out of pauper children; the certifying of homes and other institutions; contributions of guardians or managers towards maintenance of children in industrial schools, subscriptions to hospitals, institutions, and associations or societies rendering aid in the administration of the relief of the poor; the relief and treatment of vagrants, and the weekly reports of the visiting officers of Metropolitan casual wards; tasks of work to be performed by vagrants and able-bodied paupers; the resignation of office by guardians and rural district councillors; local inquiries and other matters relating to the general administration of the Poor Law; the alteration of unions, representations, and orders made by county councils under the Local Government Acts, 1888 and 1894, as to union and parish boundaries and local inquiries relating thereto; and the number and retirement of guardians and rural district councillors.

8. The Department is in constant consultation with the general inspectors, the Poor Law medical inspectors, the inspectors of boarded-out children, and the Board's architects, and frequent conferences are held at the office with officers and deputations from boards of guardians and others interested in Poor Law matters.

* POOR LAW OFFICERS' DEPARTMENT.

9. The following are the matters dealt with in this Department:—

Correspondence relating to the appointment, qualifications, remuneration, duties, and resignation or dismissal, of all the more important officers of boards of guardians and other Poor Law authorities; the staff to be employed in institutions, and for other purposes; preparation of the necessary statements as to staffs and salaries, and keeping of permanent records as to officers. Special control and regulation of the staffs in the Metropolitan, and the salaries repayable from the Metropolitan Common Poor Fund; investigation of complaints in regard to officers addressed to the Board, and of all serious matters affecting the conduct and tenure of office of Poor Law and parochial officers, involving in many cases official or informal inquiries by the general inspectors; consideration of various administrative questions which arise in connection with officers' duties, particularly as regards the medical care and nursing of sick and mental patients in workhouses and infirmaries, the practice as to surgical operations and midwifery under the Poor Law, and the arrangements for medical and general relief to the outdoor poor; applications from the Registrar-General as to alteration of registration areas, and from borough or urban councils for power to appoint assistant overseers; examination of draft regulations and confirming orders which affect the duties of officers and their tenure of office; questions arising under the Poor Law Officers Superannuation Acts as to contributions and superannuation of officers, addition to years of service in computing allowances, and decision on appeals as to the right to or amount of an allowance; compensation to officers for loss of office or emoluments under various Acts of Parliament, and decision of appeals as to compensation under certain Local Acts and Confirming Orders.

10. This Department also is in constant communication with the General and Poor Law Medical Inspectors.

11. It is the practice to consult the General Inspector on any administrative Poor Law question which arises in his district, and to refer the correspondence on the matter to him.

OTHER DEPARTMENTS DEALING INCIDENTALLY WITH MATTERS TOUCHING THE POOR LAW.

LEGAL DEPARTMENT.

12. This Department in connection with its general work touching various branches of local government is concerned with the following matters affecting Poor Law:—

13. Questions of law submitted to the Board relating to the Poor Laws; the repeal or alteration by provisional order of local acts relating to Poor Law administration; questions with respect to the election of guardians; the decision of disputes between boards of guardians as to the settlement, removal and chargeability of paupers; correspondence concerning valuation lists, or otherwise arising under the Union Assessment Acts; applications for consent to provision of parochial offices; and correspondence under the Unemployed Workmen Act, 1905.

ORDER DEPARTMENT.

14. This Department is mainly occupied with the drafting and issue of Orders and Provisional Orders to give effect to the decisions reached in the administrative departments of the Board. A considerable proportion of the Orders so issued is concerned with Poor Law administration.

15. As Poor Law loans are authorised by Order, the correspondence with regard to the raising and repayment of these loans—so far as finance is concerned—is conducted in this Department, which also deals with questions relating to the sale of Union property and the extension of time for the payment of debts by guardians.

AUDIT DEPARTMENT.

16. This Department deals with the accounts of local authorities; with the reports of the district auditors on these accounts and the general supervision of the auditors' work. It is thus concerned with the accounts of Poor Law authorities, and the audit of them.

AUDIT APPEALS AND SANCTIONS DEPARTMENT.

DUTIES RELATING TO POOR LAW AUTHORITIES.

17. This Department deals with appeals made to the Board against allowances, disallowances, and surcharges by district auditors. Its work has reference to all local authorities submitting accounts to the district auditors, including Poor Law Authorities.

STATISTICAL AND LOCAL TAXATION DEPARTMENT.

18. This Department of the Local Government Board deals with the preparation and issue of statistical returns which are required, whether periodically or occasionally, by Parliament, by Royal Commissions, by Statute, or for the Board's own purposes. It may be said, very roughly, that about one-fourth of the work of the Department is in relation to Poor Law matters.

APPENDIX No. LXX.

**MEMORANDUM PREPARED BY THE LOCAL GOVERNMENT BOARD (ENGLAND) ON THE
SUBJECT OF DEATHS ATTRIBUTABLE TO, OR ACCELERATED BY, PRIVATION OR
STARVATION.**

A considerable proportion of the cases of deaths attributable to starvation or privation occur either in a workhouse or Poor Law infirmary, to which the patient has been removed in a dying condition.

By a Regulation of the Local Government Board, the medical officer of every workhouse and infirmary throughout the country is required to report to them the case of every sudden and every accidental death which may occur in the institution and the cause of the death so far as he is able to explain it. He has to make this report within 24 hours after he has received information of the death.

The term "sudden" or "accidental" death is regarded as comprising all deaths which occur in the workhouse or infirmary by accident or without previous illness, and cases where the death has been attended by any untoward circumstances which may be deemed to have occasioned or accelerated the death.

If an inquest has been held at the time the medical officer writes, he usually reports the verdict and any rider or recommendation which the jury may attach to their verdict; but if he writes before the inquest the Board obtain this information from the guardians subsequently.

The information thus supplied is generally sufficient to enable the Board to form an opinion on the case, but where an inquest has been held, the Board, if they deem it necessary, obtain from the coroner a copy of the depositions of the witnesses examined at the inquest. If the facts indicate neglect of duty, or the suspicion of neglect of duty, on the part of an officer of the guardians, or any defect in administration, the Board, after consulting one of their Poor Law medical inspectors and the general inspector of the district, make further inquiry, and when the facts have been fully cleared up, they communicate their decision to the guardians. In some cases where the facts are in dispute the Board instruct one of their inspectors to hold a local inquiry at which the evidence is taken on oath, and they then decide what action to take.

The Board believe that the Regulation above referred to ensures their receiving information of all deaths from privation or starvation where the death has occurred in a workhouse or infirmary, but there is no regular method outside the Metropolis by which they are informed of such cases where the death has taken place outside a Poor Law institution. Such cases do, however, come to the knowledge of the Board, either through the coroner reporting them or from letters from private persons or from newspapers sent to the Board or from their inspectors hearing of them. Indeed, it may fairly be presumed that a case in which there has been any notable failure of Poor Law administration generally comes under the Board's notice.

All such cases, however brought to the Board's knowledge, are considered in the manner above described.

As regards the Metropolis, Mr. J. G. Talbot, M.P., has for many years past moved annually for a Parliamentary Return in the following terms:—"Return of the number of all deaths in the Administrative County of London in the year—upon which a Coroner's Jury has returned a verdict of Death from Starvation, or Death accelerated by Privation; together with any Observations furnished to the Local Government Board by Boards of Guardians with reference to Cases included in the Return." This Return is furnished by the Home Office, but the Board receive from them information of the cases to be included in the Return and they ask the guardians of any union in which a case has occurred for their observations with regard to it. A summary of

APPENDIX No. LXX.—*Continued.*

these observations is printed in the Return. They are carefully scrutinised by the Board, and if the administration of the guardians or the procedure of their officers appears to have been at fault the Board communicate with the guardians on the subject.

It is the practice of the Board to comment on the Returns in their Annual Reports.

The following extract from their Report for 1905–6, the last published, may be regarded as typical of these comments —

“A Return (Parliamentary Paper No. 285, Session 1905) was made to an address of the House of Commons of the number of deaths in the administrative county of London in the year 1904, upon which a coroner’s jury had returned a verdict of death from starvation, or death accelerated by privation, together with any observations furnished to us by boards of guardians with reference to cases included in the Return. The number of such deaths returned by the coroners was 42. We requested the guardians of the union or parish in which the death occurred to furnish us with such facts in regard to the deceased as were known or could be ascertained by the guardians or their officers. The purport of the information received in reply is included in the Return. In only one case was death ascribed solely to want of sufficient food. For the most part the deaths appear to have been due to disease consequent upon or accelerated by want or exposure, or both, and to self-neglect. In most of the cases either no application had been made for poor relief, or application was only made when the deceased was in a dying condition. The cause of death does not appear to have been attributable in any case to neglect on the part of the guardians or their officers.”

It may be added that some of the cases included in these Returns have been reported to the Board by the medical officers of the unions when the death occurred, many months before the Return is asked for.

Any such case would have been investigated by the Board on receipt of the Report.

Local Government Board,

September, 1907.

APPENDIX No. LXXI.

STATEMENT OF EVIDENCE BY THE LONDON COUNTY COUNCIL AS TO ARRANGEMENTS WITH REGARD TO CONTRACTS FOR THE SUPPLY OF STORES FOR INSTITUTIONS UNDER THE CONTROL OF THE COUNCIL:

The institutions under the control of the Council may be classified under two heads:—(a) The county asylums, accommodating some 18,400 patients and 3,500 officers; (b) Avery Hill Training College and hostel, residential special schools, *i.e.*, schools for mentally and physically defective children, residential and day industrial schools, with accommodation for some 2,055 children and 160 officers; and (c) the Farmfield Inebriate Reformatory with about 113 women and 25 officers.

(a) *County Asylums.*—The county asylums are controlled by an Asylums committee appointed by the Council under Sec. 169 of the Lunacy Act, 1890, and, as a statutory committee, the committee make their own arrangements for the supply of provisions, stores, etc., required for the maintenance of the patients and resident staff and the up-keep of the institutions.

In accordance with a provision of the Lunacy Act, 1890, there is a separate sub-committee of the asylums committee for the visitation and management of each asylum. These visiting sub-committees arrange for the purchase of minor supplies and farm stock which are not included in the Asylums committee’s contracts for “periodical supplies.”

Each visiting sub-committee prepare and submit to the Asylums committee for approval, in such form, for such periods and at such times as the committee determine, an estimate of all “periodical supplies” required. Such supplies comprise the food, provisions, stores and other articles which are required for the asylum during continuing periods, excepting farm stock, which is purchased by the visiting sub-committee. Seeds for the farm and garden required for the asylum are, however, “periodical supplies.”

These estimates when approved by the asylums committee are referred to a contract sub-committee, who then invite tenders for supplies on the basis of the estimates, and in due course open and consider the tenders received. The contract sub-committee consist of representatives of each of the visiting sub-committees. At present there are twenty members. The contract sub-committee are not authorised to accept tenders, but they report to the Asylums committee upon those received, recommending for acceptance those which they think fit. The Asylums committee, when they consider the Contract sub-committee’s recommendations, do so with full information as to the whole of the tenders which have been received.

APPENDIX No. LXXI.—*Continued.*

No visiting sub-committees have power to enter into any contract for "periodical supplies" unless specially authorised to do so.

Most of the contracts for "periodical supplies" last for twelve months, the exceptions being:—

Groceries and Provisions, which are contracted for twice yearly, in periods of seven and five months (April 1st to October 31st, and November 1st to March 31st.)

Earthenware, Glasware, Printed Forms, Books, Stationery, which are contracted for every three years.

Tea, which is purchased every three months.

Except in a few instances, the tendering is thrown open to public competition, tenders being invited by advertisement in the principal newspapers. The exceptions are: Painters' materials, varnishes, indiarubber goods, drugs, druggists' sundries, photographic goods, cricket materials, seeds, bulbs, and tea. Selected firms only are invited to tender for these supplies.

Except in a few instances (mentioned below) forms of tender are issued which contain schedules of the requirements of each class of goods and state the quantities which are estimated to be required at each asylum during the period for which the contract will run. Where necessary and practicable, standard samples are shown and tenders are required to be for the supply of goods equal and answerable to the standard samples. Where no sample is shown the goods are required to be of the best quality or in accordance with a specification contained in the contract schedule. No samples are received from tenderers (except in the case of cocoa, tea and indiarubber goods). In drawing up the schedules, makers' names are excluded, unless for special reasons it is essential that a particular make shall be supplied.

Each tenderer for cocoa is required to submit a sample of what he proposes to supply, this to be in accordance with the specification in the schedule, and the accepted sample becomes the standard sample. The same arrangement applies in the case of indiarubber goods. The submitted samples of both these commodities are analysed by the Council's chemist and reported on by him before a tender is accepted.

The samples of tea are obtained as mentioned in a later paragraph.

In the case of drugs, druggists' sundries, photographic goods and cricket materials, where the actual requirements for twelve months are difficult to estimate, schedules are not issued, but a select list of reputable purveyors is kept, and the firms whose names are on this list are invited to submit their catalogues and to quote a discount off the catalogue prices. Any article priced in the catalogue of the selected tenderer can then be ordered under contract. In judging which of the quotations submitted is the most favourable, the Contract sub-committee's practice is to take a number of articles known to be in considerable demand, and to test, one against the other, the prices quoted therefor in the catalogues of the various tenderers, deducting the discount which is allowed.

All tenders are required to be delivered sealed up, and when a form of tender is issued an envelope for its return is issued with it. Tenders have to be placed in a box which is secured by two different locks, one key being held by the chairman of the Contract sub-committee, and the other by the clerk of the committee. When the tenders are opened by the Contract sub-committee each tender is initialled by the member who opens it, and a record of the number received is made. The tenders are then referred to the clerk of the committee for examination, and he prepares classified lists in readiness for the Contract sub-committee's further consideration, which follows as soon as practicable after the scheduling has been completed.

As a rule the Contract sub-committee recommend for acceptance the lowest tender received, provided the tenderer's references are satisfactory, or provided he has carried out a previous contract satisfactorily. Each tender is not necessarily dealt with as a whole, but the right is reserved where it is thought desirable to treat each item as separately tendered for, and to accept for certain items only. On acceptance of a tender the contractor is required to set his seal on the standard samples, where these are provided.

Special arrangements have been made for the supply of coal and tea.

As regards coal, tenders are invited for the supply of certain coals named in the schedule, or of coals of similar quality. No tenders are considered except those from colliery proprietors (or their sole agents) for coals raised at their collieries.

The Contract sub-committee in considering tenders for coal, have the expert advice of the asylums engineer, and they consider the prices quoted in relation to the calorific value of the coals tendered for. The prices tendered are for the delivery of the coal to the nearest railway siding. Separate contracts are made for haulage from the siding to the asylum.

Supplies of tea are obtained (as stated) every three months. An independent expert employed by the Committee advises as to the price which should be paid, having regard to the condition of the market, for such a tea as is needed at the asylums. Firms whose names are included in a select list, now about twenty in number, are each invited to submit a sample of the tea they can supply for the prize fixed. Such samples bear only a private mark, which also appears in the firm's tender. When the tenders and samples have been received, and before the tenders have been opened, a portion of each sample is sent to the expert, who tastes each in water from each of the asylums. The portions sent to him are numbered only, a list being kept identifying each number with its private mark.

When the expert's report has been received, the tenders are opened by the Contract sub-committee, and by reference to the numbered list of samples each sample is then identified for the first time with the tender to which it relates. The tenders are for the supply to each asylum, in one delivery, of the whole quantity of tea required for the period of the contract. When supplies have been received several samples from each asylum are forwarded to the expert, who tastes them with the sample submitted at the time of tendering and advises acceptance or rejection as the case may be.

Occasionally supplies are purchased on the open market without a running contract. This has been done in the case of fruit during the summer time, when the requirements of the asylums fluctuate a good deal.

All supplies under contract, whether of food or stores, are delivered at the various asylums and are received and (except in the case of tea) examined, and accepted or rejected (as the case may be), by the steward (or storekeeper) who has for his guidance a duplicate set of the standard samples (where provided) on which the contracts are based. In carrying out this duty the steward or storekeeper is guided by reports on samples which he sends from time to time to the Council's chemist for examination.

The committee have appointed an inspector of stores whose duty it is frequently to visit the asylums and *inter alia*, examine all stores, etc., received, to ascertain that they are according to contract.

(b) and (c). *Residential Training College and Hostel, Special and Industrial Schools and Inebriate Reformatory.*—As far as possible all stores for these institutions are purchased under contracts entered into for definite periods (usually one year). Such contracts relate not exclusively to the institutions in question but to the various services of the Council (excluding asylums). These contracts are entered into on the recommendation of a Stores committee of from eight to ten members, the reference to which is as follows:—

(1) The committee shall consist of not less than eight and not more than ten members.

(2) The committee shall consider and report as to the provision of all store depots, including those in connection with the education work of the Council.

(3) The committee shall control all store depots and the staff exclusively employed in connection therewith, and shall carry out the regulations of the Council as to store accounts, tenders for stores, and the ordering, issuing, and condemnation of stores.

APPENDIX No. LXXI.—Continued.

(4) The committee shall undertake the preparation of the schedules and the consideration of the tenders for all goods (except coal, lime- and protosulphate of iron) supplied to the Council.

(5) The ordering and receipt of clothing, boots brushes, and woollen goods, shall be undertaken by the committee, aided by competent examiners to be employed for the purpose.

(6) The committee are authorised to deal during a recess with matters of ordinary current administration requiring immediate action on behalf of the council, provided that: (a) such matters are within the reference to the committee and do not involve new principles or expenditure not authorised by the council; and (b) the committee act only upon such decisions as may be unanimously arrived at by the members present, and report to the council anything done under this authority.

The general contracts, which apply to goods required for all services of the Council except asylums, are entered into annually, tenders being invited by public advertisement, and may be sub-divided under the three heads of:—

- (i.) General stores contracts.
- (ii.) Clothing and boot contracts.
- (iii.) Special contracts for institutions under heads (b) and (c).

A copy of each of the schedules now in use is appended, and attention is directed to the clauses in the conditions of contract dealing with quality of goods. The following is a specimen clause:—

The goods to be supplied under this contract are to be of the quality or sort mentioned in the annexed schedule, and where a sample is referred to must be in every respect equal and answerable to the standard sample shown at , and be such as the Council, or its officer duly authorised, shall approve; and where the quality of the article required to be supplied is not specified in the schedule, or no sample is referred to, such article shall be of the best quality.

(i.) *General Stores Contracts.*—There are for the purposes of these contracts twenty-two schedules, comprising in all about 2,500 items, the schedules being as follows:—

Brass, gunmetal and copper, gas and plumbers' fittings, etc.

Brushes, baskets, mats, sponges and chamois leathers.

Cast iron.

Chemicals, medicines, first-aid appliances, etc.

Chemical apparatus, etc.

Electric fittings, lamps, cables, etc.

Engineers' goods, wrought iron tubing, etc.

Firewood.

Fodder.

Glass.

Horticultural goods, flower pots, wooden edging, stakes, and oak pales and posts.

Indiarubber and canvas hose, sheeting, valves, packings, and asbestos.

Ironmongery, etc.

Iron and steel.

Leather, leather beltings, valves, etc.

Linen and woollen goods, canvas, etc.

Oils, lighting and lubricating, etc.

Oilman's sundries, cotton waste, disinfectants etc.

Paints, colours, varnishes, etc.

Ropes, lines, etc.

Tools and implements, etc.

Tramway car fittings.

Fresh schedules are prepared each year, the several chief officers of the Council furnishing estimates of the quantities of each item which will be required in their respective departments during the contract period.

Tenders, when received, are opened by the Council or by the committee under special authority from the Council, and after being summarised by the clerk of the Council, the committee consider as to the tenders to be recommended to the Council for acceptance. In dealing with the tenders submitted, each item is considered as tendered for separately, and the Council reserves to itself the right of accepting a tender either in whole or as regards only such item or items as it thinks fit. In the absence of special circumstances the lowest tender is accepted, but it may be mentioned that it is the general practice not to enter into contracts of less value than £5 a year, and articles of a similar nature are as far as possible grouped in one contract.

The tenders are accepted by the Council on the recommendation of the Stores Committee, and are completed by the clerk of the Council and the solicitor. Two inspectors are employed to examine all brooms and brushes blankets, and woollen goods delivered under contract, and the Council's chemist examines samples of oils, paints, disinfectants and similar stores delivered under contract.

(ii.) *Clothing and Boot Contracts.*—These contracts are dealt with in a manner similar to that detailed in (i) page 2 and include clothing and boots supplied for all the Council's services (except the asylums.) Two qualified examiners are employed to examine all supplies of boots and clothing.

The undermentioned table shows the number of articles of clothing and boots examined during the last two years:—

Year ended.	Description of articles examined.	Number examined.	Number rejected.	Percentage of rejections.
31st March, 1907 ...	Clothing, hats, caps, etc.	40,290	932	About 2¼ per cent.
„ 1906 ...	„ „ „ „ „ „	31,007	1,540	„ 5 „
„ 1907 ...	Pairs of boots „ „ „ „ „	2,965	286	„ 9½ „
„ 1906 ...	„ „ „ „ „ „	4,621	319	„ 7 „

(iii.) *Special Contracts.*—Contracts are made annually in the manner set forth in (i.) for the supply to industrial and Special Schools, Avery Hill Training College and Farmfield Reformatory, of the following articles: (i.) Grocery, cheesemongery, etc.; (ii.) flour, bran, corn-chandlery, etc.; (iii.) bread, milk, fish, butchers' meat, vegetables, etc.; (iv.) leather, grindery, yarn for mat-making, etc.; and (v.) drapery, tailors' trimmings, etc.

Supply of Coal.—Tenders for the supply of coal for use for all services of the Council (except the asylums) are invited annually by public advertisement and are considered by the Main Drainage Committee of the

Council, who submit recommendations to the Council as to the acceptance of tenders for the several items in the schedule, a copy of which is appended.

Examination of Stores for Quantity and Quality.—A clause is inserted in the several contracts dealing with the rejection of goods not up to sample and empowering the Council to purchase in default. The examination of clothing, boots, oils, brushes, woollen goods, etc., is performed by experts as described above. Other articles are examined by the store-keeper at the depot or institute at which the goods are delivered, and he certifies as to quantity, quality and price.

APPENDIX No. LXXI.—*Continued*.

Supply of Stores.—No goods are ordered for any institution except upon the authority of the controlling committee. The following rule may be accepted as the general practice:—"Goods, with the exception of provisions which are the subject of a contract, are not to be ordered or work done except upon the authority of the committee. It shall be the duty of the superintendent to detail all goods required to be purchased (save provisions under contract) or work required to be done in the want book. The executive officer shall obtain the authority of the committee to purchase the stores required, and advise the superintendent to issue the necessary orders on the contractors." With regard to the ordering of provisions a standing authority is given to superintendents to order up to a certain amount per head per week.

Stocktaking.—The stock in hand at the several institutions is taken periodically by the comptroller of the Council, and compared with the balances of the stores-ldgers. Lists of differences are presented by the comptroller to the committees concerned, and after considering reports thereon from heads of departments concerned the committees authorise the comptroller to pass the

differences. The comptroller keeps all accounts (other than the records of quantities of goods received and issued), checks all contractors' invoices before payment, and audits the whole operations of the stores.

Examination of Invoices and Accounts.—The accompanying print of regulations as to contracts and accounts prescribes the procedure to be followed with regard to the examination of invoices and accounts.

Standing Orders, Regulations, etc.—Copies of Standing Orders and Regulations as to accounts are appended:—

- (1) Farmfield. (*Appendix No. LXXI. A.*)
- (2) Special and Industrial schools. (*Appendix No. LXXI. B.*)
- (3) Avery Hill. (*Appendix No. LXXI. C.*)
- (4) Regulations as to contracts and accounts. (*Appendix No. LXXI. D.*)

G. L. GOMME,

Clerk of the Council.

21st January, 1903.

APPENDIX No. LXXI (A).

Handed in by the London County Council.

REGULATIONS GOVERNING THE ACCOUNTS OF FARMFIELD INEBRIATES REFORMATORY.

I.—ORDERING OF STORES AND EXAMINATION OF INVOICES.

Want book.

1. No goods are to be ordered or work done except upon the authority of the committee, such authority to be previously entered in the Want Book.

Orders to be on authorised forms.

2. All orders are to be made out upon the authorised form and signed by the superintendent of the reformatory.

Instructions to contractors and tradesmen.

3. Instructions in the following terms are to be printed on every order:—

Instructions to the Firm Supplying the Goods.

(1) *Orders.*—All orders will be made on this form only, and will bear the signature of the superintendent. The Council will not be liable for goods ordered in any other manner, and the officers have been directed to see that these instructions are strictly adhered to. Deliveries must not exceed the quantity ordered.

(2) *Invoices.*—Each delivery of goods must be accompanied or preceded by a priced invoice, in duplicate, to be sent to the superintendent, and each invoice must be headed "Public Control Committee." The number of the order and exact name of article must be quoted. If under contract, the item number must also be given. The invoices are to be written on one side of the paper only.

(3) *Accounts.*—At the expiration of every quarter, or other period as may be agreed on, a statement of account showing the date and amount of each invoice rendered during the quarter (or period) must be forwarded on the first day of the month following to the superintendent.

4. When a contractor or tradesman delivers stores short in quantity the invoice is to be corrected to the net quantity received.

5. Invoices are not to be certified for a quantity greater than that stated in the official order.

6. Each delivery of goods must be accompanied or preceded by a priced invoice *in duplicate* to be sent to the superintendent. Invoices for work done must also be rendered by the tradesmen, in duplicate.

7. Upon the receipt of all invoices, it shall be the duty of the superintendent or of her deputy, to examine and sign each of such invoices both as to quantity and quality or as to work done as the case may be. The deputy shall

also examine each invoice as to the prices charged and as to its arithmetical accuracy. The invoice is then to be numbered with an "invoice number." Before an invoice is sent to the comptroller, the carbon copy of the order quoted on the invoice is to be marked with the "invoice number."

8. Upon the face of each invoice, the name of the sub-head of account to which it should be charged is to be stated. If an invoice is to be charged to sundry sub-heads, the amount to be appropriated to each sub-head is to be shewn.

9. The statement of account must be examined to see that invoices for all the items have been received. In the case of an invoice being missing, steps are at once to be taken by the superintendent to obtain it.

10. An account is to be prepared by the superintendent on the form provided in favour of each contractor, shewing the sub-heads of the annual estimate to which the amount for payment is to be charged and the total amount due to the contractor. The account, to which the contractors' statement of account and invoices are to be attached, is to be certified by the superintendent and forwarded to the comptroller.

11. A quarterly summary of accounts shall be prepared on the form provided and shall accompany the accounts sent to the comptroller for payment. The total of each wages sheet, the quarterly salaries (paid by warrant) the value of the farm and garden produce supplied during the quarter, and the total of the petty cash disbursed each month shall also be shewn thereon appropriate to its sub-head of service.

12. The duplicate of every invoice is to be pasted in the invoice guard book.

II.—CASH AND ACCOUNT BOOKS.

13. The particulars from which the claim against the Government for contributions towards the maintenance of inmates is prepared are to be recorded in the maintenance account book. A statement showing details of the amount due each quarter is to be forwarded by the superintendent to the comptroller within seven days of the end of such quarter.

14. Sums of money will be advanced by the Finance Committee to the superintendent as required to meet petty disbursements. All moneys received and disbursed

Stores delivered short in quantity. Orders not to be exceeded. Invoices to be in duplicate. Invoices to be examined by the superintendent.

Invoice guard book.

Maintenance account book.

Petty book.

APPENDIX No. LXXI. (A).—Continued.

by the superintendent are to be recorded in the petty cash book. Each entry on the credit side is to be shown under the sub-head of account to which it relates in the column provided. At the end of each month the cash book is to be ruled off and balanced.

15. A voucher must be obtained for each payment made. The voucher is to show the sub-head of the annual estimate to which the amount is chargeable. At the end of each month a statement supported by the vouchers, showing the payments made during the month, classified under the sub-heads of the annual estimate is to be forwarded to the comptroller. The monthly account should contain full particulars of every charge and the vouchers accompanying it must be numbered to correspond with the items of the account. Any fraction of a penny in the total should be entered as a penny. Travelling and incidental expenses only, as a rule, are to be paid out of these advances.

16. All moneys received by the superintendent on account of sales, etc., are to be recorded in the receipts cash book. Each entry is also to appear under the heading to which it relates in the column provided. At the end of each week the total amount of such receipts is to be paid to the cashier at the County Hall. In the memorandum of advice to the cashier, accompanying each remittance the sub-head to which the amount is to be credited must be stated.

17. No article is to be sold except under an order of the committee.

Payment for articles sold is to be made to the superintendent, who alone is allowed to receive money (see Regulation No. 16) before the removal of the articles.

On the removal of an article, a ticket, showing the name of the purchaser, the quantity and description of the article sold, is to be handed to the receiver.

18. An entry from the carbon copy of the ticket is to be made in the sales book against the name of the purchaser showing the description and value of the article sold. The date of payment and the number of the receipt must be entered against each item.

19. Each supply from the farm is to be entered in the farm supplies book under the heads of the article supplied. The entry is to appear under the sub-head concerned in the column provided. At the end of the quarter the book is to be totalled and the total of each column calculated at the rate fixed by the committee for each description of article. The totals are to be summarised and the total of the summary is to be entered on the "Summary of Accounts" to be sent to the Comptroller (see Paragraph 11.).

20. On each occasion of luncheon being provided for members of the Council and for visitors on official business, the name of each person partaking of the meal is to be entered.

The amount column is to be used for entering: (1) the sum of ls. against the name of each member of the Council; and (2) the word "official" against the name of each official visitor.

The practice of each member and official of the Council entering his name in the book should be encouraged.

Refreshments supplied to Visitors of Inmates to be paid for.

21. A book is to be kept in which the amount paid by each inmate's visitor for refreshment supplied is to be recorded. The charge is to be based on the cost price of the article.

22. A postage-book is to be kept in which will be shown the value of stamps received, and the details of the stamps used.

The postage-book is to be ruled off monthly and the balance of stamps in hand shewn.

23. A record is to be kept showing the purchase of and production of live stock and of its disposal.

24. The farm bailiff will, under the directions of the superintendent, prepare a list on December 31st in each year, showing the quantity, description, and value of all live and dead farm stock, growing crops, cultivations,

etc., in his charge on that date. In the case of plant and tools, the value placed upon each item in the list for the previous year is also to be shown. The list is to be examined by the comptroller who is authorised to call in such assistance as the Asylums committee may afford through one of the stewards of the asylums (or such as he may, with the approval of the committee consider desirable to employ) to test the estimated quantities and the values which the farm bailiff places upon the various items. The list will be presented to the committee together with a statement of account, by the comptroller.

25. In cases where goods are used for a sub-head of service other than that to which the invoice for such goods is charged, the superintendent will prepare a statement on December 31st in each year showing details as to the quantity, description and cost of such stores and the service in which the goods were used. The statement is to be forwarded by the superintendent to the comptroller as soon as possible after the close of each year, so that transfers may be made in the accounts. Provided that the amount of the proposed transfer is, in the opinion of the comptroller, one which should be made.

26. The superintendent will prepare and forward to the comptroller pay sheets for the salary or wages due to each of the staff. The pay-sheet containing the weekly items must be forwarded so as to reach the comptroller on Thursday at 9.30 a.m. each week. The pay-sheet for the monthly items must be forwarded so as to reach the comptroller at 9.30 a.m. on the last day of each month.

The sub-heads of service to which the gross amount of each pay-sheet is chargeable must be shown. Before a pay-sheet is sent to the comptroller, particulars as to amount and appropriation must be entered on the "Summary of Accounts" (see Paragraph 11.).

III.—STORE AND ACCOUNT BOOKS AND STOREKEEPING.

27. The superintendent of the reformatory is to be responsible to the Public Control Committee for the receipt, custody, issue and use of stores and will keep a record of the receipt and issue of all stores.

28. A separate section is to be provided in the stock ledger for each class of stock. The headings in each section are to be arranged alphabetically. The debit side of the stock ledger will be posted from the duplicate invoice pasted in the invoice guard book (see Regulation No. 12). The credit entries will be made from the "receipts for stores issued." The various sections of stock ledger will be balanced and ruled off monthly or quarterly as the comptroller may arrange.

29. Each article is to be entered in the books under one denomination of quantity only, viz., that most generally used. When other denominations occur they are to be reduced to the common one. For example, if an article is used generally in lbs., the receipt of 1 cwt. is to be entered as 112 lbs., and the issue of 8ozs. is to be entered as $\frac{1}{2}$ lb., the same rule applying to measures of length and capacity.

30. Stores are to be issued to such officers as the superintendent of the reformatory may in writing appoint, and a list of the names is to be kept by the storekeeper.

31. Issues of stores shall, as far as possible, be made at a certain time on fixed days, and not at all hours of the day.

Receipts for stores issued for general purposes are to be made out upon the form printed on white paper, and are to be marked with the name of the service for which the stores are required. Receipts for stores issued to the workshops for manufacture are to be made out upon the form printed on red paper. All receipts are to be written in ink.

32. Stores are not to be issued except upon a "receipt for stores issued" given by the officer receiving the stores. The storekeeper is not to make out any receipt for stores, and every alteration in a receipt is to be initialled by the officer receiving the stores. When tangible articles are

APPENDIX No. LXXI. (A).—*Continued.*

issued, the necessity for the issue is to be endorsed on the "receipt for stores issued" in one of the following terms:—

- (a) First Supply.
- (b) Additional to those in use.
- (c) Old one returned.
- (d) To replace one lost.

Approval of issue by the superintendent. 33. The superintendent, or, in her absence, her deputy, is to indicate her approval of all issues by initialling the "receipts for stores issued" previous to the stores being drawn.

Articles to be branded. 34. Stores of the nature of plant are to be branded previous to being issued.

Preservation of receipts. 35. All receipts are to be carefully preserved by the storekeeper. At the end of the month they are to be arranged: (1) In "service" order; and (2) in order of date. They are then to be numbered consecutively and tied up in bundles.

Workshop book. 36. A memorandum book is to be kept in each workroom. An entry is to be made on the left hand page for all materials drawn from the stores on a red receipt form (see Paragraph 31). On the completion of a job an entry is to be made on the right hand page showing the number and description of the article made and the quantity and description of the materials used in its manufacture. The entry on the right hand page will enable the storekeeper to make the necessary entry in the workshop ledger (see No. 37). The articles are to be handed to the storekeeper who will issue them in the same manner as other stores.

Articles manufactured in the shops to be handed to storekeeper. 37. An entry is to be made in the workshop ledger for all stores issued to the workrooms for the manufacture of articles. On the completion of a job the number of the articles made and the quantity of materials used in their manufacture are to be shown in the columns provided. The left hand side of the workshop ledger is to be written up from the red receipts and the right hand side from the memorandum book kept in the workroom (see Regulation No. 36). The book is to be totalled monthly. The totals on the left hand side are to be credited to their respective accounts in the store ledger. The number of articles produced, as shown on the right hand side are to be summarised monthly and posted to the debit of the accounts concerned in the store ledger.

Workshop ledger. 38. When stores and serviceable articles are returned into store after issue, a memorandum of the fact should be pasted in the store invoice book (see No. 12) without moneying out.

Returned stores. 39. No unserviceable stores or article is to be removed from the reformatory or otherwise disposed of except under an order of the committee.

Condemned stores approved by committee. Method of procedure. 40. A condemned stores room is to be established in which as far as possible unserviceable stores and worn out articles are to be placed. An entry is to be made in the "Stores awaiting Condemnation" book, when an article is placed in the condemned stores room. Periodically the entries in the "Stores awaiting Condemnation" book are to be summarised and entered in the "condemned stores" book. The superintendent is to enter against each item a recommendation as to its disposal and obtain the approval of the committee thereto. The Superintendent is then to carry out the instruction of the committee.

Stocktaking. 41. The stock of stores and the stock of farm produce are to be checked by the comptroller once in each year. Any excess or deficiency resulting from a comparison of the stock as shown in the stock-books and the stock as found is to be entered in the stock-books. The comptroller is to submit a list of the discrepancies to the committee, calling their attention to any items which appear to him to need special consideration. The superintendent is to report upon the discrepancies to the committee and the committee will, after receiving the explanation furnished by the superintendent, consider as to authorising the comptroller to pass the discrepancies.

Safety of stores. 42. All stores are to be kept under lock and key. The storekeeper is not to allow the keys of the storeroom to go out of her possession and at night she is to deliver them to the superintendent.

43. Valuable stores are to be kept under a second lock and key in the store room.

44. Stores of the same category are to be kept near to each other, and the different kinds placed in separate and properly fitted receptacles.

45. Labels are to be placed outside pigeon holes, drawers and other receptacles.

46. No one is to be allowed to handle the stores or to be in the storeroom unless under the direct supervision of the storekeeper.

47. The storerooms are to be used solely for the purpose of stocking articles which are shown in the stock ledger as being stock in hand.

48. Upon the receipt of stores, the storekeeper is to place them as quickly as possible into their proper receptacles, but not until quantity and quality have been examined and verified.

49. The superintendent is to keep standard samples of stores and will arrange that all stores supplied shall be compared with the stores contracted for.

50. A stockbook is to be kept by the bailiff, in which to record the quantity of farm produce stored. When produce is disposed of, the quantity and the date of its disposal are to be noted. When work is done which affects the stock—such as threshing—an entry to correspond must be made.

A stock book is to be kept by the dairy attendant in which to record the number of eggs gathered and the quantity of milk, cream and butter produced. Entries as to the quantities disposed of and the date of its disposal are also to be made.

The stock in hand on December 31st each year is to be entered in the stock books. Any surplus or deficiency entry which may be necessary to balance an account must be made and the stock books are to be ruled off (See Paragraph 41.)

IV.—MISCELLANEOUS.

51. An inventory of articles in use in the reformatory is to be prepared on March 31st in each year, showing: (i) the description and number of articles in use on the corresponding date of the previous year; (ii) the number of articles added to the complement during the year; (iii) the number of articles condemned during the year as shown in the condemned stores book or returned to store; (iv) the number of articles in existence when the inventory is prepared; and (v) an explanation of the discrepancies. The inventory is to be checked by the comptroller and is to be presented and reported upon by the superintendent to the committee.

52. The superintendent will keep a book in which to show the number of inmates and staff in the reformatory at the end of each day. The names of the inmates book, admitted, re-admitted, licensed, transferred and discharged each day are also to be recorded.

53. The books and forms used are to be approved by the comptroller.

54. The comptroller is to make test audits from time to time of the account and stock books and to report thereon to the committee.

Inmates Savings.

55. All moneys received by the superintendent on behalf of the inmates are to be entered in the savings bank cash book. On the date of the receipt of each amount an entry is to be made on the debit side. When cash is withdrawn, an entry is to be made on the credit side and the inmate withdrawing it is to sign, in the column provided, for the amount received.

In the event of a withdrawal by an inmate who is not at the time in the institution, a receipt is to be obtained previously to the payment being made. A reference to the receipt—which is to be numbered and filed—is to be made in the space provided in the cash book for the signature. The cash book is to be ruled off monthly and the balance agreed with the cash in hand.

APPENDIX No. LXXI. (A).—*Continued.*

53. An account is to be opened for each depositor and for "Cash," "General Post Office" and "Interest." The entries in the ledger are to be posted from the cash book.

At the end of each month, after a trial balance has been made, the ledger is to be ruled off and the balances brought down.

57. The cash in hand—which must be kept in a cash box and not be kept with other moneys belonging to the Council—held by the superintendent as trustee, must not exceed £5. To comply with this rule a transfer of sums (in even) is to be made periodically to an account to be opened by the superintendent in the General Post Office Savings Bank.

Mark Money System (Rewards to Inmates).

58. Each attendant in charge of inmates is to fill up and submit a "marks sheet" once a week to the superintendent in accordance with the rules governing the Marks system. When a marks sheet is under examination the superintendent will state the number of marks to be deducted in each case where a deduction is to be made.

59. An account is to be opened for each inmate. The ledger is to be written up from the weekly marks sheets approved by the superintendent. At the end of each

quarter the marks so entered are to be totalled and valued, and the amount placed to her credit in the column provided.

60. In a case where a woman is to be licensed in the Advances on near future, an advance of money may be made by the account. superintendent for the purpose of buying materials to be made into outfit clothing. Each advance is to be reported by the superintendent to the committee at their next meeting. Provided always that the said clothing is the property of the council until such time as the balance of mark money, standing to the credit of a woman, be paid to her.

61. When the period of a woman's detention expires Payment of or when a woman is licensed, the amount standing to mark money. her credit will be applied to her benefit or be paid to her by the superintendent, as the committee may direct. No payment, however, is to be made until the amount proposed to be paid has been verified and a reference to the account in the marks ledger endorsed on the receipt.

62. When a woman's marks are forfeited a report as Forfeiture of marks and outfit clothing. to the circumstances is to be made by the superintendent at the next meeting of the committee. Total forfeiture of marks carries with it the forfeiture of any outfit clothing purchased with mark money advanced.

(Signed) H. E. HAWARD.

January, 11th, 1906.

APPENDIX No. LXXI. (B.)

Handed in by the London County Council.

REGULATIONS GOVERNING THE ACCOUNTS OF THE INDUSTRIAL AND SPECIAL SCHOOLS
(APPROVED BY SPECIAL SCHOOLS SUB-COMMITTEE ON 30TH JUNE, 1905).

I.—ORDERING OF STORES AND EXAMINATION OF INVOICES.

1. Goods with the exception of provisions which are the subject of a contract, are not to be ordered or work done except upon the authority of the committee. It shall be the duty of the superintendent to detail all goods required to be purchased (save provisions under contract), or work required to be done in the Want Book. The executive officer shall obtain the authority of the committee to purchase the stores required and advise the superintendent to issue the necessary orders on the contractors.

2. All orders are to be made out upon the authorised form and signed by the superintendent of the school.

3. Each delivery of goods must be accompanied or preceded by a priced invoice in duplicate to be sent to the superintendent.

4. The superintendent shall examine and sign all invoices, both originals and duplicates, as to quantity and quality of the goods received, prices charged and as to arithmetical accuracy. The invoice (original and duplicate) will then be numbered with an invoice number, which must at once be inserted on the carbon copy of the order referred to on the invoice.

5. Invoices are not to be signed for a quantity greater than that stated in the official order.

6. When a contractor or tradesman delivers stores short in quantity the invoice is to be corrected to the net quantity received.

7. Upon the face of each invoice the sub-head of expenditure to which it should be charged is to be stated. If an invoice is to be charged to more than one sub-head the amount to be apportioned to each sub-head is to be shown.

8. Instructions in the following terms are to be printed on every order:—

Orders.—All orders will be made on this form only, and will bear the signature of the superintendent.

The Council will not be liable for goods ordered in any other manner, and the officers have been directed so see that these instructions are strictly adhered to. Deliveries must not exceed the quantity ordered.

Invoices.—Each delivery of goods must be accompanied or preceded by a priced invoice in duplicate to be sent to the superintendent and each invoice must be headed "Special Schools Sub-Committee . . ." The number of the order and exact name of article must be quoted. If under contract, the item number must also be given. The invoices are to be written on one side of the paper only.

Accounts.—At the expiration of every month, a statement of account showing the date and amount of each invoice rendered during the month must be forwarded on the first day of the month following to the superintendent.

Time of Delivery.—Goods must be delivered before 4 p.m. and on Saturdays before twelve noon.

9. The monthly statement of account must be examined Monthly to see that invoices for all the items have been received. statements In the case of an invoice being missing, steps are at once of account. to be taken by the superintendent to obtain it.

10. An account is to be prepared by the superintendent Preparation on the form provided in favour of each contractor showing of accounts the sub-heads to which the invoices should be charged, for payment. as already detailed thereon, and the total amount due to the contractor. The account (to which the contractors statement and invoices are to be attached) is, after being signed and numbered by the superintendent, to be forwarded to the comptroller.

11. A monthly summary of accounts shall be prepared Monthly on the form provided and shall accompany the accounts summary of sent to the comptroller for payment. The value of farm accounts. or garden produce supplied in the month shall be shown thereon together with the totals of the petty cash payments for the month.

APPENDIX No. LXXI. (B.)—*Continued.*

II.—CASH AND ACCOUNT BOOKS.

Cash book.

12. Sums of money will be advanced by the Finance Committee to the superintendent as required to meet petty disbursements. All moneys received and disbursed by the superintendent are to be recorded in the cash book. Each entry on the credit side is to be shown under the heading of account to which it relates in the column provided.

All other moneys received by the superintendent on account of sales, etc., are to be recorded on the debit side of this book. At the end of each week the total amount of such receipts is to be paid to the cashier at the Education Offices and a contra entry made on the credit side in the column provided.

Petty cash payments.

13. A voucher must be obtained for each payment made. The voucher is to show the sub-head to which the amount is chargeable. At the end of each month a statement, supported by the vouchers, showing the payments made during the month is to be forwarded to the comptroller. The monthly account should contain full particulars of every charge, and the vouchers accompanying it must be numbered to correspond with the items of the account. Any fraction of a penny in the total should be entered as a penny. Travelling and incidental expenses only, as a rule, are to be paid out of these advances.

Dinner and tea contributions.

14. A book is to be kept, in the case of the Special Schools, in which will be shown the payments made by each scholar (and teachers, etc., if necessary), for dinners and teas partaken of at the schools. The book is to be totalled weekly and the money, which is to be remitted to the cashier at the Education Offices, will be passed through the cash book in the ordinary way.

Monthly accounts book.

15. An entry is to be made in this book showing the particulars of each account sent in accordance with Paragraph 10 to the comptroller. At the end of each month, the book will be ruled down and the total shown therein will be the total of the accounts sent forward to the comptroller for payment.

Salaries and wages.

16. On or before the 14th of the month the superintendent will prepare and forward to the executive officer a pay sheet for the salaries and wages due to each of his staff for the month and show thereon the sub-heads to which the amounts are chargeable.

Garden and poultry produce.

17. *Eggs and Fowls.*—An entry for the number of eggs laid, and for the number of fowls killed is to be made on each occasion on the debit side of the "provisions" stock book. The credit entry will be made from the "issues" book.

Vegetables and Fruit.—An entry is to be made in the "garden produce" book (consumption), on each occasion of vegetables and fruit being taken from the garden and the value thereof is to be apportioned as between "officers" and "children." Entries from the garden produce book to correspond with the *total value* of these items will be made on each occasion on the credit side of the "provisions stock" book. The entry on the debit side of the "provisions stock" book will be the monthly total of these credit items, and will correspond with the total shown of the value of produce supplied for the month in the "garden produce" book.

Garden produce and poultry account book.

18. For the purposes of the Home Office Return a "garden produce and poultry" account will be opened. The entries on the debit side will be the expenditure (cash payments) for seeds, plants, fowls, fowls' food, etc. The entries on the credit side in respect of vegetables and fruit used will be the monthly totals shown in the "garden produce" book. The credits on account of eggs and fowls will be the monthly totals shown in the "provisions stock" book on the credit side.

A record is also to be kept in this book showing :—

- (a) The number of fowls added to stock.
- (b) The number of fowls disposed of.
- (c) The number of fowls remaining in stock.

Invoice guard book.

19. The duplicate of every invoice is to be pasted in the invoice guard book.

20. On each occasion of the committee partaking of Committee luncheon at a school the names of the members must be recorded in the committee luncheon book, other details as to date of payment, etc., will be recorded.

21. A postage book is to be kept in which will be shown the value of stamps received and the details of the stamps used. The postage book is to be ruled off monthly and the balance of stamps in hand shown.

Postage book.

III.—STORE ACCOUNT BOOKS AND STORE-KEEPING.

22. The superintendent of the school is to be responsible to the executive officer for the receipt, custody, issue, and use of stores, and will keep a record of the receipt and issue of all stores.

Responsibility of the superintendent.

23. The books in which the accounts relating to stores are to be kept are to be as follow :—

Store ledgers—

Provisions received and consumed book (officers).

Provisions received and consumed book (children).

Necessaries and miscellaneous receipts and issues book.

Clothing stock book.

Clothing materials receipt and conversion account book.

Day book of workshop sales.

Workshop book.

Workshop account book.

Register and disposal of articles made (woodwork, etc.).

Provisions and Necessaries Books.—The debit entries in these books will be made from the duplicate invoices and the credit entries from the "issues" books.

Clothing Stock Book.—The debit entries in this book will be made either from the duplicate invoices or from entries in the workshop book. The credit entries will be made from the "issues" book.

Clothing Materials Receipt and Conversion Account Book.—The debit entries will be made from the duplicate invoices; the credit entries from the workshop books.

Day Book of Workshop Sales.—In the case of work being undertaken for other schools or for private individuals the orders received therefore will be detailed in this book.

Workshop Book.—A memorandum book is to be kept by the tradesmaster in each shop. An entry is to be made on the left hand page for all materials drawn from stock and the tradesmaster will sign for this material below the last entry on this page. On the right hand page will be shown the number and description of the articles made or repaired, and the quantity and description of the materials used respectively therefor, together with the estimated cost of the work done. The entries on this side will enable the necessary entries to be made in the "clothing stock" book and in the "clothing conversion" books. The articles are to be handed to the superintendent who will sign for them and issue them in the same manner as other stores.

Workshop Account Book.—This will be kept for the purposes of the Home Office Return, and will show the expenditure on wages and materials, etc., in each workshop, the particulars of the work done, and the estimated cost, and will be written up on the debit side from the invoices. Particulars of other expenditure incurred in each shop (such as wages, petty cash, work done by one shop for another shop) will be written up from the documents on which such items appear. The entries on the credit side will be made from the particulars shown in the workshop book.

In the case of the Day Industrial Schools, where clothing stock books are not required, additional columns will be provided in the workshop account book to show the additions to, and the issues from, stock and the stock of manufactured articles on hand.

APPENDIX No. LXXI. (B.)—*Continued.**Register and Disposal of Articles Made (Woodwork, etc.)—*

In the case of articles (such as woodwork, saddlery and millinery) made in the schools, a book shall be kept showing in respect of each article; (i) the date of production; (ii) its description; (iii) estimated cost; (iv) the amount realised and when disposed of; and (v) date of payment.

24. Each article is to be entered in the books under one denomination of quantity only, viz., that most generally used. When other denominations occur, they are to be reduced to the common one. For example, if an article is generally used in lbs., the receipt of 1 cwt. is to be entered as 112 lbs., and the issue of 8 ounces is to be entered as $\frac{1}{2}$ lb., the same rule applying to measures of length and capacity.

25. All stores are to be kept under lock and key.

26. Stores of the same category are to be kept near to each other, and the different kinds placed in separate and properly fitted receptacles. Labels are to be placed outside pigeon holes, drawers, etc.

27. No one is to be allowed to handle the stores or to be in the store room unless under the direct supervision of the superintendent.

28. The store rooms are to be used solely for the purpose of stocking articles which are shown in the stock ledger as being stock in hand.

29. Upon the receipt of stores, the superintendent is to place them as quickly as possible into their proper receptacles, but not until quantity and quality have been examined and verified.

30. Stores are to be issued to such officers as the superintendent of the school may in writing appoint, and a list of the names is to be kept.

31. The superintendent, or, in his absence his deputy, is to indicate his approval of all issues by initialling the "issues" books, previous to the stores being drawn.

32. Stores of the nature of plant are to be branded before being issued.

33. When an issue is made of stores, particulars of the stores drawn shall be duly recorded in an "issues" book in which the person receiving the same shall sign his name. In the case of raw material drawn by the tradesmasters and flour taken from the baker's stock, the officers concerned shall sign for the quantities they receive in their workshop books and work books respectively.

When tangible articles are issued, the necessity for the issue is to be shown in the "issues" book in one of the following terms:—

- (a) First supply.
- (b) Additional to those in use.
- (c) Old one returned.
- (d) To replace one lost.

34. At those schools where bread is made the following procedure shall be adopted. The baker shall keep a "work" book, in which he will record on each occasion the quantity of flour he draws from stock to make bread, etc., initialling for the same therein. He will show the actual quantity of flour used for breadmaking apportioning the same as between "officers" and "boys." He will also show the number of loaves made and the actual and reputed weight of the bread made, divided in the latter case as between "officers" and "boys." From this work book the credit entries will be made for the flour used and the debit entries in the "provision" ledgers for the bread made.

35. The stock of stores is to be checked by the comptroller once in each year. Any excess or deficiency resulting from a comparison of the stock as shown in

the store books and the stock as found is to be entered therein. The comptroller is to submit a list of the discrepancies to the committee calling their attention to any items which appear to him to need special consideration. The executive officer is to report upon the discrepancies to the committee and the committee, will, after receiving the explanation furnished by the executive officer, consider as to authorising the comptroller to pass the discrepancies.

36. When stores are returned to the superintendent after issue, a credit entry (in red ink) is to be made in the "issues" book. Stores returned to superintendent or storekeeper.

37. On the occasion of any articles being condemned as unserviceable or worn out, an entry is to be made in the "stores awaiting condemnation" book. The articles will, so far as it is practicable to do so, be placed together so that they may be inspected. Periodically the entries in the "stores awaiting condemnation" book are to be summarised and entered in the "condemned stores" book. The superintendent is to enter against each item a recommendation as to its disposal and the executive officer will obtain the approval of the committee thereto. The superintendent is then to carry out the instructions of the committee. Condemned stores.

No unserviceable stores or articles are to be removed from the school, or otherwise disposed of, except under an order of the committee.

38. The superintendent is to keep standard samples of stores, and he is to compare all stores supplied with the stores contracted for. Samples.

39. An inventory of articles is to be prepared each year showing: (i.) the description and number of articles in use on the corresponding date of the previous year; (ii.) the number of articles added to the complement during the year; (iii.) the number of articles condemned, as shown in the "condemned stores" book or returned to store; (iv.) the number of articles in existence when the inventory is prepared; and (v.) an explanation of the discrepancies. Inventory.

The inventory is to be checked by the comptroller and is to be presented and reported upon by the executive officer to the committee.

IV.—MISCELLANEOUS.

40. A book shall be kept showing the names of the children admitted, re-admitted, licensed or discharged, and will also show the number in the school at the close of each day. Daily record of admissions and discharges.

41. The superintendent shall prepare and forward to the executive officer the quarterly claims, and in the case of day industrial schools, the yearly claims against the Treasury, etc. After certification by the executive officer, the account will be forwarded to the comptroller who will make the claims upon the authority concerned. Contributions and grants from Treasury, etc.

42. No articles are to be sold or work done without the authority of the committee. Sales and work done.

43. The books and forms used are to be those approved by the comptroller. Comptroller to approve books and forms.

44. The comptroller is to make test audits from time to time of the account books, and he is to report thereon to the committee. Audit by comptroller. Uniformity in accounts.

45. For the purposes of uniformity, a list is to be prepared by the superintendent showing the nature of the expenditure he proposes to charge under each head of account. The list is to be approved by the comptroller.

46. Any question as to the meaning or intention of these regulations is to be referred to the comptroller, or to the committee for decision. Questions to be referred to comptroller or committee.

APPENDIX No. LXXI. (C.)

*Handed in by the London County Council.*REGULATIONS GOVERNING THE ACCOUNTS OF THE AVERY HILL TRAINING COLLEGE
(APPROVED BY THE HIGHER EDUCATION SUB-COMMITTEE, APRIL 19th, 1907.)

I.—ORDERING OF STORES.

Want book.

1. Goods, with the exception of Provisions which are the subject of a contract, shall not be ordered or work done, save in cases of emergency, except upon the authority of the committee. It shall be the duty of the principal to detail all goods required to be purchased (save provisions under contract) or work required to be done in the want book. The executive officer shall obtain the authority of the committee for the same and advise the principal to issue the necessary orders to the contractors.

1 Goods ordered or work required to be done on emergency shall, at the time, be detailed in the "want" book in red ink, and authority therefore obtained at the next meeting of the committee.

Orders to be on authorised forms.

2. All orders shall be upon the authorised forms and be signed by the principal who shall see that the instructions thereon are strictly adhered to.

II.—INVOICES, ETC.

Invoices to be in duplicate.

3. Each delivery of goods shall be accompanied or preceded by a priced invoice in duplicate.

Invoices to be examined by the principal.

4. The principal or her approved deputy shall examine and sign all invoices (originals and duplicates) as to quantity, quality, prices and arithmetical accuracy.

Credit notes.

5. Credit notes (with the exception of those for "returned empties" the council not being responsible for the return of, or payment for, empties) received from contractors shall be dealt with in the same manner as invoices for stores delivered.

Preparation of accounts for payment

6. An account shall be prepared by the principal on the form provided, one for each contractor, showing the sub-heads to which the invoices are chargeable as previously detailed thereon, and the total amount due to the contractor. Such account (with the contractor's statement, invoices and credit notes attached) shall after being signed and numbered by the principal, be forwarded to the comptroller (Education Offices.)

Monthly summary of accounts.

7. A "Monthly Summary of Accounts" shall be prepared on the form provided and shall accompany the accounts sent to the comptroller for payment. The totals of the petty cash payments for the month shall also be shown thereon (Registered 20.)

III.—ISSUE OF STORES.

Issues to authorised officials.

8. Stores shall be issued to such officers as the principal may, in writing, appoint, and a list of the names shall be kept.

Receipts for stores issued

9. Stores shall only be issued upon a "receipt for stores issued" form signed by the person receiving them. The store official shall not make out a receipt for stores and any alteration on a receipt, increasing the original quantity approved, shall be initialled by the principal or her authorised deputy.

Approval of issue by principal.

10. The principal or her approved deputy shall indicate her approval of all issues by initialling the "receipts for stores issued" previous to the stores being drawn.

Articles to be branded.

11. Articles of the nature of plant shall be branded before issue.

IV.—CUSTODY AND RECORD OF STORES.

Responsibility of the principal.

12. The principal shall be responsible to the executive officer for the receipt, custody, issue and use of stores and shall keep a record of the receipt and issue of the same.

13. The books relating to the accounting for stores shall be as follow :—

Store ledgers : Provisions ; Household necessities.
Invoice guard book.
Condemned stores book.

14. The store room shall be used solely for the purpose of stocking articles which are shown in the stock ledger as being stock in hand and all stores shall be kept under lock and key.

15. On the occasion of any stores or articles being condemned as unserviceable or worn out, an entry shall be made in the "condemned stores" book. The articles shall, so far as practicable, be placed together so that they may be inspected. The principal shall enter against each item a recommendation as to its disposal and the executive officer shall obtain the approval of the committee thereto. The principal shall then carry out the instructions of the committee.

No unserviceable stores or articles shall be removed from the college, or otherwise disposed of, except under an order of the committee.

16. The stock of stores shall be checked by the comptroller once in each year. Any excess or deficiency resulting from a comparison of the stock as shown in the store books with the stock as found shall be entered therein. The comptroller shall submit a list of the differences to the committee calling attention to any items which appear to need special consideration. The executive officer shall report upon the differences to the committee who will consider as to authorising the comptroller to pass the same.

17. An Inventory of articles shall be prepared each year showing : (i.) the description and number of articles in use on the corresponding date of the previous year ; (ii.) the number of articles added to the complement during the year ; (iii.) the number of articles condemned (as shewn in the "condemned stores book") or returned to store ; (iv.) the number of articles in existence when the inventory is prepared ; and (v.) an explanation of the differences.

The inventory shall be checked by the comptroller and shall be presented and reported upon by the executive officer to the committee.

V.—CASH RECEIPTS AND PAYMENTS

18. The books relating to cash receipts and payments shall be as follows :—

Cash book.
Postage book.
Sundry fees register.
Visitors' meals, etc., register.
Stationery sales register.
Committee luncheon book.

19. Sums of money will be advanced by the Finance Committee to the principal as required to meet petty disbursements.

20. A voucher shall be obtained for each payment made. The voucher shall show the sub-head to which the amount is chargeable. At the end of each month a statement, supported by the vouchers, showing the payments made during the month shall be forwarded to the comptroller (Education Offices). The statement shall contain full particulars of every charge and the vouchers accompanying it shall be numbered to correspond with the items of the account. *Travelling and incidental expenses only shall as a rule be paid out of these advances.*

21. On or before the 14th of each month the principal shall prepare and forward to the executive officer a "staff return" from which will be prepared the pay

APPENDIX No. LXXI. (C).—*Continued.*

sheet for the salaries and wages due for the ensuing calendar month.

VI.—GENERAL.

22. All cash account and store books shall be balanced and ruled off at the end of the financial year, viz., March 31st.

23. Those officials of the college (or their deputies) who receive or pay money on behalf of the Council shall be guaranteed in such sums as may be approved by the Finance Committee.

24. The comptroller shall make test audits from time to time of the account books and he shall report thereon to the committee.

Audit by
comptroller.

25. The books and forms used shall be those approved by the comptroller, who shall issue, for the guidance of the officials concerned, explanatory notes with regard to the keeping of the store and other accounts, and any question as to the meaning of these regulations shall be referred to him.

Comptroller
to approve
books, forms,
etc.

(Signed) H. E. HAWARD,
Comptroller.

AVERY HILL TRAINING COLLEGE.

REGULATIONS AS TO ACCOUNTS.

NOTES BY THE COMPTROLLER FOR THE GUIDANCE OF THE PRINCIPAL. (APPROVED BY THE HIGHER EDUCATION SUB-COMMITTEE, APRIL 19TH, 1907).

Invoices.

1. The invoices (originals and duplicates) should be marked with an "invoice number" which should at once be inserted on the carbon copy of the order to which they refer. This will prevent a second invoice being dealt with. The page of the want book should also be stated on each invoice. When an invoice refers to two or more pages, the page to which it relates should be stated against each item on the invoice.

An invoice number should also be given to each credit note and upon it should be stated the number of the invoice to which it relates.

2. Invoices which require correction will be dealt with as follows:—

(a) The original invoice should in all cases be dealt with and forwarded to the comptroller for payment.

(b) Where an item is struck out through non-delivery, rejection or other cause, the reason for deleting the item should be briefly stated on the invoice.

(c) If the quantity received is less than the quantity invoiced, the invoice should be altered accordingly and the correction initialled.

(d) Invoices will not be signed for a quantity greater than that stated in the order.

(e) When, in order to rectify an obvious error, an increase is made in an invoice in respect of quantity price or extension, the original invoice duly corrected and initialled should be sent forward for payment accompanied by an invoice marked "corrected invoice" supplied by the contractor, to support the alteration made. The principal should obtain this "corrected invoice" which she should regard as a memorandum and neither sign nor number. The principal should however exercise her discretion before increasing any invoice in the manner indicated, as such increase can only be justified in exceptional cases.

3. The monthly statement should be examined to see that invoices for all the items have been received. In the case of an invoice being missing, steps should at once be taken by the principal to obtain it.

4. Every invoice should show the sub-head of expenditure to which it is chargeable and in the case of an invoice being chargeable to more than one sub-head the apportionment should be shown.

5. Duplicate invoices and credit notes (where necessary) should be filed in the "invoice guard" book.

Duplicate
invoices.

Stores.

6. When articles of the nature of plant are issued, the necessity for the issue should be shown on the "receipts for stores issued" in one of the following terms:—

As to need
for issue
of certain
stores.

(a) First supply.

(b) Additional to those in use.

(c) Old one returned.

(d) To replace one lost.

7. Should stores be returned to stock after issue details of the same should be shown, without moneying out on a memorandum which should be filed in the "invoice guard" book. The entries in the ledgers should then be made from these memoranda as in the case of duplicate invoices. If stores are returned within a month of their issue the quantity should be recorded on the credit side of the ledger in red ink.

Stores
returned.

8. *Store Ledgers.*—The debit entries in these books will be made from the duplicate invoices and the credit entries from the "receipts for stores issued."

Store books.

9. Each article will be entered in the books under one denomination of quantity only, viz., that generally used. When other denominations occur, they will be reduced to the common one. For example, if an article is generally used in lbs., the receipt of 1 cwt. should be entered as 112 lbs., and an issue of 8 ozs. should be entered as $\frac{1}{2}$ lb. The same rule will apply to measures of length and capacity.

Denomina-
tion of
quantities.

10. Stores on delivery, should after examination, be put as quickly as possible into their proper receptacles, of those of the same category being kept near each other. Labels should be placed outside pigeon holes, drawers, etc.

Arrange
ment, etc., of
stores.

11. No one should handle the stores or be in the store-rooms unless under the direct authority of the principal or her approved deputy.

Authorised
officials and
store room.

Cash—Receipts and Payments.

12. All moneys received and paid by the principal will be recorded in the cash book which will be divided into two sections. The first section should show the receipts and payments on account of petty disbursements and salaries. The cheques received by the principal for these two purposes will be shown on the debit side of this book in separate columns; on the credit

Cash book.

APPENDIX No. LXXI. (C).—*Continued.*

side the "petty disbursement" payments will be shown under the heading of account to which they relate, while the payment of "salaries" will be shown in a separate column.

In the second section will be recorded receipts by the principal of students' dinner fees, stationery sales, etc., as shown in detail in the registers (Notes 14 to 17). The sums received will be shown on the debit side in total under those heads. On the credit side will be shown the total (in one) amount paid into the bank.

13. The postage-book should show the value of stamps received and the details of stamps used. It should be ruled off monthly and the balance of stamps in hand shown.

14. This register will show the fees received from each resident student, which information should be obtained from a statement supplied by the assistant comptroller (Education) and the dinner fees, etc., received from the day students, terminally or weekly. In the latter case the money will be paid in advance to the principal who will give receipts therefor. From the counterfoils of these the details will be recorded in the register.

15. When visitors to the staff partake of meals, etc., at the college, an order should be sent by the member of the staff concerned to the matron so that the latter may make provision for such meals, etc. These orders should be handed by the matron to the clerk so that she

may take steps to recover the money for the meals supplied. Details of the number of meals supplied, amount due, number of receipt, etc., will be recorded in this register.

16. On receipt of stationery to be sold to the students a "stationery sales" account will be opened. The debit to this account will be the value of such stationery as shown by the requisitions. The credits will be the total of the daily receipts. The balance on this account should represent the value of the stock of stationery in hand which will be periodically tested by the comptroller.

17. When a member of the council or of the committee partake of luncheon, etc., at the college his name should be recorded (preferably by himself) in the "committee luncheon book." The details as to payment will also be recorded therein.

18. The registers above referred to should be totalled and the amounts passed through the cash book (Note 12) a reference to the same being given against each total. The money should then be paid into the bank each day, if necessary. The bank "paying in" slip accompanying the money should show details as to how the money is made up, whether for students' fees, etc., or stationery sales, etc.

(Signed) H. E. HAWARD,

Comptroller.

APPENDIX No. LXXI. (D).

Handed in by the London County Council.

REGULATIONS AS TO CONTRACTS AND ACCOUNTS.

(Revised by the Finance Committee, June 26th, 1907.)

I.—ORDERS AND CONTRACTS.

1. The several committees, when giving authority for works or goods, are to require the officer giving the order to state thereon the name of the committee from whom the order proceeds, and to request the person or firm to whom the order is sent to state on each account the name of the committee, the number of the order and the name of the place where the work was done or the goods delivered, and to render a separate account in respect of each committee.

2. Contracts and agreements involving the payment of money either to or by the council, shall be sent to the comptroller for registration immediately upon their execution; also a memorandum, certified by the head of the department concerned, of all estimates which, having been accepted, have virtually become contracts.

[Hereafter the word "contract" means a contract, an agreement, or an accepted estimate, as the case may be.]

II.—DOCUMENTS FOR COMPTROLLER.

3. All documents required by these regulations to be sent to the comptroller must be addressed to him as follows:—

Accounts relating to services other than Education—County Hall, Spring Gardens, S.W.

Accounts relating to Education services—Education Offices, Victoria Embankment, W.C.

III.—EXAMINATION OF INVOICES AND ACCOUNTS.

(i.) *When they relate to Stores.*

4. Every contractor delivering stores shall deliver therewith invoices made out *in duplicate*, bearing the name of the committee from whom the order proceeded. The number of the order, the place of delivery and the exact name of each article must be quoted.

5. Upon the receipt of the goods the store officer shall examine and sign each of such invoices as to quantity, quality and prices. Such officer shall then send to the comptroller one of the invoices so signed, and numbered with a store invoice number. Where a contractor neglects to deliver invoices with the goods, it shall be the duty of the store officer to apply for such invoices, and to continue the application until they are received. The store officer shall notify the comptroller of the cause of the delay whenever an invoice is not examined and forwarded to the comptroller within seven days of the delivery of the goods.

6. Credit notes (with the exception of those for "returned empties"—the council not being responsible for the return of, or payment for, empties) received from contractors are to be dealt with in the same manner as invoices for stores delivered. An invoice number is to be given to each credit note, and upon it must be stated the number of the invoice upon which is charged the item to which the credit note relates.

7. The prices of all articles supplied under contract are to be doubly checked; first by the department by which the orders were given, and afterwards by the comptroller. The responsibility of checking the prices of articles supplied which are not included in any contract is to devolve entirely upon the head of the department by whom the orders were given.

8. At the expiration of every quarter, month or other period as agreed with the contractor, the contractor shall forward to the comptroller a list of invoice totals for the preceding period, a separate list being sent in respect of the orders of each committee. The only particulars required in these lists are the date and total of each invoice, the number of the order, and the name of the depot or place at which the goods were delivered. The comptroller shall compare them with the invoices, and if found correct shall forward such list with the invoices to the department concerned. The head of

APPENDIX No. LXXI. (D).—*Continued.*

the department shall certify the account, if accurate, and return it to the comptroller with a view to payment.

(ii.) *When they do not relate to Stores.*

9. All accounts of fees, demand notes for rates and taxes, and all other bills and accounts shall be sent direct to the comptroller for registration. If sent to any other department, they shall at once, before being dealt with by such department, be sent to the comptroller for registration.

10. The comptroller shall forward the accounts, immediately after registration, to the heads of the departments to which they relate, for their examination and certificate, after which they shall be returned to the comptroller for his examination.

11. If an account is not received for examination within fourteen days after the expiration of the month in which the services have been rendered or the work completed, it shall be the duty of the department concerned to request the creditor to render an account forthwith to the comptroller, and to continue the application until the account is received.

12. In cases where it is necessary that the invoices, accounts, or claims should be summarised before certificate by the head of the department, they shall, after examination and when ready for certificate, be sent to the comptroller for that purpose, and he shall prepare the account for the certificate of the head of the department.

13. All prices under contract (except for printing) shall be doubly checked, first by the department by which the orders were given, and afterwards by the comptroller; but when not under contract, and in case of printing, the responsibility of checking the prices shall devolve entirely upon the chief officer of the department by whom the orders were given.

14. In all accounts for works, the contract prices are to be distinguished by the professional officers from those not under contract; the former being marked in red and the latter in blue.

15. Any variation amounting in value to:—

£100 and upwards on contracts under £20,000;

£500 and upwards on contracts over £20,000 and under £100,000;

£1,000 and upwards on contracts over £100,000, is to be reported by the head of the department to the committee concerned. Any variation which would reduce the amount of advances payable from time to time to the contractor is to be referred to the comptroller for his information.

16. Before preparing a certificate for any payment under a contract for works, the professional officer will notify to the comptroller the amount proposed to be paid. When the amount payable has been verified by the comptroller, the professional officer will prepare and issue his certificate and forward the same to the comptroller with a view to payment.

(iii.) *Correction of Invoices.*

17. Invoices and accounts which require correction must be dealt with as follows:—

(a) The original invoice must in all cases be dealt with and forwarded to the comptroller for payment.

(b) In every case where an item is struck out through non-delivery, rejection, or other cause, the reason for deleting the item must be briefly stated on the invoice.

(c) If the quantity received is less than the quantity invoiced, the invoice must be altered accordingly and the correction initialled.

(d) When in order to rectify an obvious error an increase is made in an invoice in respect of quantity, price or extension, the original invoice, duly corrected and initialled, must be sent forward for payment accompanied by an invoice marked "corrected invoice," supplied by the contractor to support the alteration made. It shall be the duty of the examining officer to obtain this "corrected invoice," which he should regard as a memorandum and neither sign nor number. The examining officer should exercise his discretion before increasing any invoice

in the manner indicated, as such increase can only be justified in exceptional cases.

(iv.) *Certification of Accounts.*

18. The head of a department may, if he so desire, certify accounts by means of his initials, provided that the certification of payments to contractors for works and of accounts for purchase-moneys and other accounts of a like nature shall be attested by his signature.

19. During a recess or under exceptional circumstances, the signature of the deputy is accepted, for a limited period, on the written request of the head of the department.

20. It shall be the duty of the department responsible for the certification of an invoice or account to state upon the face of every invoice or account payable by the council, a reference to the authority under which the expenditure has been incurred.

21. Heads of departments shall present to the Finance Committee at their second meeting in every quarter a complete return of all liabilities incurred more than three months previously and not certified for payment. If there are no such outstanding liabilities a *nil* return must be presented.

22. The comptroller is required to present to the Finance Committee, at their first meeting in every quarter, a schedule of all accounts rendered more than forty-two days previously and not certified for payment.

IV.—APPROVAL BY COMMITTEES.

23. All accounts are to be signed by the chairman or duly authorised member of the committee directing the expenditure, as indicating the approval of that committee, before they are submitted to the Finance Committee; but the comptroller may submit accounts requiring immediate payment without the signature of the chairman or other member of the executive committee. The Finance Committee are to be informed by the committee concerned whenever a member (other than the chairman) of the committee directing the expenditure is authorised to sign accounts. The signature of the chairman or other member shall not be required to the weekly accounts of wages and disbursements certified by the clerk of the Council, nor to the accounts of the Tribunal of Appeal and of the Standing Joint Committee, certified by the respective clerks of those bodies.

24. In order to avoid delay in passing accounts for payment, the chairman or other member of an executive committee appointed by such committee may, between the meetings of the committee, approve and sign any duly certified account presented to him by the comptroller, provided that no account shall be so signed unless the amount of or prices contained therein have already been approved by the committee or settled under an express authorisation of the committee, or is for costs and charges certified by the solicitor; and further, that no account shall be so signed except at the county hall or other offices of the council.

25. The comptroller shall report to the committee concerned, at their next meeting, every account signed by the chairman or other member of the committee since the last meeting of the Committee, and also any account paid without such signature; and the comptroller shall, if required, produce the accounts, or any of them, to the committee, in order that they may investigate the same as fully as they might have done if presented to them in the first instance.

26. The comptroller is to report to the Finance Committee every case in which an account paid does not receive the approval of the committee on whose behalf the payment was made.

27. Claims for small charges and for petty disbursements generally, may, after being certified by the head of a department and examined by the comptroller, be paid without being submitted to a committee; but the comptroller may, if he think fit, require that any such claim shall be submitted, before payment, to the appropriate committee for their approval.

H. E. HAWARD,
Comptroller.

APPENDIX No. LXXII.

STATEMENT OF EVIDENCE BY THE LONDON COUNTY COUNCIL AS TO THE INCIDENCE
OF COST OF MAINTENANCE OF PAUPER LUNATICS IN LONDON.

1. On the 3rd December, 1907, the Council without a division passed the following resolutions:—

(a) That in the opinion of the Council—

(i.) The existing system of charging the cost of maintaining London pauper lunatics is complicated, cumbersome, and unsatisfactory.

(ii.) The cost of maintaining London pauper lunatics should be charged directly upon the Metropolitan Common Poor Fund instead of first being charged upon individual poor law unions.

(iii.) The grant of 4s. a week for each pauper lunatic, payable by the Council to Guardians, pursuant to Section 24 (2f) of the Local Government Act, 1888, should be paid into the Metropolitan Common Poor Fund, or be deducted from the cost of maintenance before such cost is charged upon the Metropolitan Common Poor Fund.

(iv.) The responsibility for maintaining all pauper lunatics belonging to unions in the County of London should be in the hands of the Asylums Committee of the Council.

(v.) The responsibility for ascertaining the settlement of pauper lunatics in the County of London, and obtaining adjudication orders, and of effecting contributions from estates and relatives of lunatics, should be transferred to the Council.

(vi.) The charges made by some of the boards guardians in connection with the certification and removal of pauper lunatics are excessive.

(b) That the foregoing resolution be sent to the Royal Commission on the Poor Laws, with a request that evidence may be received from the Council with respect to the matters referred to therein.

2. The following statement is made in pursuance of these resolutions, and for convenience it is arranged in the same order as the resolutions.

3. By way of introduction it should be stated that the Asylums Committee of the London County Council is the Visiting Committee within the meaning of the Lunacy Act, 1890, and that its function is to administer the ten lunatic asylums belonging to the County of London. It is also responsible for recommending the London County Council to provide asylum accommodation to meet any increase in the number of London pauper lunatics. The Council, as the local authority for the purposes of the Lunacy Act, 1890, is required by Section 239 of that Act to exercise the powers conferred by the Act for providing asylum accommodation by a visiting committee.

4. Prior to the passing of the Local Government Act, 1888, the provision and administration of County lunatic asylums was in the hands of the County justices. This Act transferred these powers to County Councils, and the London County Council took over the London County asylums in 1889.

5. On 1st January, 1890, the number of London lunatics for whom the County was primarily responsible to find accommodation was 10,104. On the 1st January, 1907, the number was 18,841.

6. In April, 1890, the estimated population of the County of London (excluding the City) was 4,151,795. In April, 1907, the estimated population was 4,670,000.

7. Thus, during the last seventeen years there has

been an approximate increase in the population of the County of London (excluding the City) of nearly 12½ per cent.; but during the same period there has been an increase in the number of lunatics for whom the County is responsible to find accommodation of 86.4 per cent.

8. As against these figures it is worthy of note that the population of England and Wales during the last seventeen years has increased by 21½ per cent., while the number of pauper and criminal lunatics in county and borough asylums throughout England and Wales in 1889 was 50,825, and in 1907 was 88,532, so that in this case the increase is only 74.2 per cent.

9. Over a period of seventeen years, ending January, 1907, the ratio of insane persons in England and Wales registered by the Commissioners in Lunacy (including private pauper and criminal lunatics) has increased from 29.92 to 35.48 per 10,000 of population. Comparable figures for the County of London show an increase during a similar period from 39.4 to 55.2 per 10,000 of the estimated population.

RESOLUTION (a) (i.).

10. To obtain figures for a complete statement of expenditure it is necessary to revert to the year 1904-5.

11. The London County Council is responsible for the provision of asylum accommodation for County of London lunatics, and for the pensions paid to asylum officials, the City Corporation being similarly responsible for the City. The average number of patients of all classes in London County asylums in the year 1904-5 was 16,920, and in the City asylum in the year 1904 563, while the numbers on 31st December, 1904, were 16,987 and 565 respectively. The approximate cost of providing accommodation (i.e., buildings) was as follows:—

	London County (1904-5)	City 1904.	Cost per patient per week	
			County.	City.
	£	£	s. d.	s. d.
Debt charges in respect of interest.	58,513	320	—	—
In respect of repayment.	68,279	—	—	—
	126,792	320	2 11	0 3
Repairs and additions, insurance, taxes, &c.	70,764	*	1 7	—
Pensions of officials	13,017	495	0 3	0
	210,573	815	4 9	0

12. The Asylums Committees of the Council and the City Corporation are responsible for the maintenance of lunatics in the respective County asylums, recovering most of the cost from the guardians.

APPENDIX No. LXXII.—*Continued.*

13. The expenditure of these Asylums Committees for 1904-5 is given in the Local Taxation Returns as follows:—

—	County of London.	City of London.	Total.	Cost per Patient per Week.	
				County (16,920).	City (563).
Salaries, wages and uniforms - - - -	£ 168,480	£ 6,108	£ 174,588	s. d. 3 10	s. d. 4 2
Provisions - - - - -	157,318	5,395	162,713	3 7	3 8
Farm and garden expenses - - - -	29,539	1,655	31,194	0 8	1 2
Clothing of patients - - - - -	19,090	375	19,465	0 5	0 3
Fuel, lighting, furniture and other necessities and funeral expenses.	79,336	3,581	82,917	1 10	2 5
Miscellaneous expenditure (including rates)	52,421	1,886	54,307	1 2	1 4
Total maintenance in London asylums - -	506,184	19,000	525,184	11 6	13 0
Transfers to Building and Repairs Fund Accounts, &c.	2,585	7,387	9,972	0 1	5 0
	508,769	26,387	535,156	11 7	18 0
To other asylums committees for maintenance of London lunatics.	36,065	—	36,065	—	—
Total - - - - -	544,834	26,387	571,221	—	—

14. The "Transfers to Building and Repairs Fund Accounts, etc.," are made up of the surplus of contributions for out-county, criminal and private patients over the actual cost of maintaining those

patients. These sums go in relief of the item "Repairs, etc.," in the table set out in paragraph 11.

15. This expenditure was provided for as follows:—

—	County of London.	City of London.	Total.
The Asylums Committees obtained receipts from the following sources:	£	£	£
Sale of produce and miscellaneous receipts - - - -	3,774	219	3,993
Private Patients - - - - -	17,481	14,334	31,815
Criminal Patients - - - - -	827	90	917
Out-county Guardians at 14s. a head per week for both the County and City - - - - -	1,474	* 929	2,403
	23,556	15,572	39,128
The excess cost of London patients maintained in other asylums over the cost in London asylums was charged on the London County Council - - - - -	7,979	—	7,979
The cost of maintaining "county patients" (<i>i.e.</i> , patients for whom no parish settlement could be found) was charged on the London County Council and City Corporation respectively - - -	17,745	2,146	19,891
	25,724	2,146	27,870
The main part of the expenditure was charged on the London Guardians, viz.:			
In respect of patients in London asylums (London County charge 11s. 4½d. a week; City charge 12s. 3d. a week.) - -	474,593	*7,000	481,593
In respect of patients in other asylums (London County charge 11s. 4½d. a week.) - - - - -	25,047	—	25,047
	499,640	7,000	506,640
Total receipts - - - - -	548,920	24,718	573,638

* The total receipts by the City of London Asylum Committee from Boards of Guardians amounted to £7,929. Of this amount it is estimated that about £7,000 was received from the Guardians of the City of London Union and the remaining £929 from Guardians of other Unions.

APPENDIX No. LXXII.—*Continued.*

16. In addition to the £506,640 charged to London guardians by the Asylums Committees, the guardians have to pay the cost of maintaining lunatics in asylums not under reception contracts made by the Asylums Committees. The total expenditure of London guardians in maintaining lunatics was £525,629. The guardians also spent sums amounting to £12,613 in connection with pauper lunatics, but not upon their maintenance. These sums remain chargeable upon the various unions.

17. The expenditure of the guardians for maintenance of pauper lunatics is not, however, directly charged on the unions concerned.

The guardians collect from relatives and estates of patients a portion of the cost -	£	32,361
They obtain from the London County Council a grant out of the Exchequer Contribution Account, in substitution for the discontinued grants (prior to 1889-90), paid direct to the guardians out of the Imperial Exchequer. The grant is calculated at the rate of 4s. a week for each pauper lunatic whose net cost, after deducting contributions by relatives and out of the lunatic's estate, exceeds that amount - - - - -		167,906
		<u>200,267</u>

The expenses charged upon the Metropolitan Common Poor Fund amount to - - -	£	315,805
Total - - -		<u>£516,072</u>

18. There is thus a difference of (£525,629 - £516,072), £9,557; but probably this is due to net decrease of balances.

19. The following sums were provided by the London County Council out of the Special County Account:—

	£	£	£
Debt Charges - - -	-	126,792	-
Repairs, additions, insurance, etc. - - -	70,764	-	-
Less excess receipts on out-county, criminal and private lunatics in London asylums - - -	2,034	68,730	
			195,522
Pensions to asylum officials - - -	-	-	13,017
Total cost of County lunatics in London and other County asylums. - - -	-	17,863	
Less amounts recovered from relatives. - - -	402	-	
Pauper lunatic grant transferred from the Exchequer Contribution Account. - - -	6,076	-	
Other receipts - - -	17		
		6,495	11,368
Excess cost of London lunatics at out-county asylums. - - -			7,979
Payments to Guardians in respect of maintenance and removal of County patients - - -			1,469
Expenses of inquiry into settlement, &c. - - -			298
			<u>229,653</u>

20. The corresponding charges falling on the City were as follows:—

	£	£
Debt Charges (1904) - - -	-	320
Pensions to asylum officials (1904) - - -	-	495
City County Lunatics (1904-5) - - -	2,146	
Less grant from Exchequer Contribution account and other receipts (1904) - - -	411	
		1,735
		<u>2,550</u>

21. The Exchequer Contribution Account bears the following charges, whose incidence in effect is on the General County Rate:—

Pauper lunatic grant of 4s. a head per week:—

To guardians (including the City Guardians) -	167,906
To Special County Account for London County lunatics - - - - -	6,076
To City Corporation for City County lunatics -	379
	<u>£174,361</u>

22. A summary of chargeability may be made from the above details.

Charged on relatives and estates of lunatics:—

	£	£
Private lunatics (collected by the Asylums Committees) - - -	31,815	
Pauper lunatics (collected by Guardians - - - - -	32,361	
London County Council - - -	402	
City Corporation - - - - -	32	
		64,610
Charged on Guardians of the Poor of out-county Unions - - - - -	2,403	
Charged on Guardians of the Poor of London Unions - - - - -	12,613	
Charged on the Imperial Exchequer in respect of Criminal Lunatics - - - - -	917	
Charged on the Special County Account - - -	229,653	
Charged on the City - - - - -	2,550	
Charged on the Administrative County:—		
(a) Exchequer Contribution Account -	174,361	
(b) Metropolitan Common Poor Fund -	315,805	
		<u>£802,912</u>

23. The result of this complicated system is to charge the whole cost of maintaining pauper lunatics belonging to London either upon the County at large or upon the City and the Special County, thereby relieving the guardians of individual unions from the financial burden of maintenance. But the bulk of the expenditure figures in the guardians' accounts, because the County and City Asylums Committees are obliged to charge the maintenance of each pauper lunatic upon the union responsible. The unions, however, recover the whole cost from the County (or City), the Metropolitan Common Poor Fund, and from the relatives or estates of patients.

RESOLUTIONS (a) (ii.) and (iii.).

24. The object of these suggestions is to abolish the complications of the system of charging and counter-charging, with the vast amount of unnecessary book-keeping it entails. They are made—as are all the present suggestions of the Council—on the basis of the existing state of authorities and jurisdiction, because it is not known what changes may be recommended by the Commission. But all the present suggestions could be carried out, whether the present authorities are maintained or not.

25. If the net cost of maintaining pauper lunatics be charged directly upon the Common Poor Fund, it will be distributed by an equal pound rate over the whole County. But before this can properly be done the grant of 4s. per week per patient from the Exchequer Contribution Account must be credited. If these grants were payable either to the Asylums Committees or to the Common Poor Fund, the effect on the ratepayer of the Administrative County would be the same. As matters now stand, it would be slightly more convenient to credit these grants before throwing the burden upon the Common Poor Fund.

APPENDIX No. LXXII.—*Continued.*

RESOLUTIONS (a) (iv.) and (v.).

26. The Lunacy Act, 1891, provides, by Section 3, that a lunatic sent to an institution for lunatics under Section 13 or 16 of the Lunacy Act, 1890, shall be classified as a pauper until it is ascertained that he is entitled to be classified as a private patient.

27. In consequence of the decision in the case of *re Steneult* (1894), 29 L.J.N.C., 345, it has been deemed the duty of the Asylums Committee to ascertain whether any of the patients coming to the asylum as paupers are entitled to be classified as private patients. Eminent counsel have advised that where the full rate of maintenance at the asylum is paid by the friends or out of the patient's own estate, the patient is entitled to "private" classification. The guardians, through their collectors, have imposed on them the duty of obtaining, either from property belonging to the lunatic, or from relatives legally responsible, reimbursement, as far as possible, of the cost of maintaining a pauper lunatic in the asylum. The guardians' officers are consequently better informed of the existence of property belonging to the lunatics, or of relatives and friends able or willing to repay the cost of maintenance.

28. It is the practice of the Asylums Committee to make inquiries of the guardians as to the means of any lunatics who may appear likely to be entitled to classification on the private list. Whilst many boards of guardians and their officers readily afford all information within their knowledge, it has been most difficult to get any particulars from other unions and parishes. Inquiries are not answered, and knowledge of means and property is deliberately withheld. The fact of a patient being placed on the "private list" at the asylums results in the patient being removed from the guardians' list, and the maintenance cost being paid direct to the asylum. The Local Government Board recently informed the London County Asylums Committee, in reply to an inquiry, "that the collectors of guardians who collect under the direction of the guardians, moneys due and payable to them, are paid by commission in the several Metropolitan Poor Law Unions, with the exception of Poplar." Thus, if a patient has sufficient estate to reimburse the full cost of his maintenance, or if the relatives repay such cost, it is against the collector's personal interest that the patient should be put on the private list, and that his maintenance should be paid direct to the asylum and not to the guardians. There are numerous instances of patients whose full maintenance cost is paid to the guardians, and who are yet described in the guardians' books and in their returns as "Paupers."

29. Figures illustrative of this question are obtainable in connection with the County Pauper Lunatic Grant. The Council is required to pay to the guardians a county grant of 4s. a week in respect of every pauper lunatic whose net cost of maintenance amounts to more than that sum. In making claims for this grant the guardians are required to state the amounts received by them from relatives and friends, and from pensions and estates of the lunatics.

30. From an analysis of the contributions received by the respective boards of guardians in the year ended

30th September, 1906, it would appear that in 468 cases (or 15 per cent. of the total) contributions amounting to 10s. a week or more were received. As the total cost of maintenance during this year was 11s. 4½d., or 11s. 1d. a week, the contributions in all these cases were very nearly the full maintenance cost. If the contributory relatives had been aware that an additional shilling or so per week would have transferred the patient from the category of pauper lunatics to the private list, this would have been a strong inducement to them to pay the full contribution.

31. An even more important point is that, included in these 468 cases are 328 cases in which the full cost (and in a few cases more than the full cost) has been collected by the guardians, and the patient still treated as a pauper lunatic, although entitled to be placed on the private list.

32. These figures exclude the 228 cases in which lump sums were paid. These amounted to a total of £5,756 in the year, or an average of £25 5s. a case.

33. Cases have occurred where friends have reimbursed the guardians the full cost of a patient's maintenance in the belief that the patient was considered to be a private patient, and their indignation has been great at finding that the patient's name has still remained amongst the paupers.

34. The guardians are now responsible for paying the Asylums Committee for the maintenance of the pauper lunatics chargeable to them, but if that responsibility were removed to the Asylums Committee, the latter body would have such knowledge of the means of patients and their relatives as would enable them to give the proper classification to all patients under their care.

35. An appreciable number of the persons who are certified as insane in London are without a "settlement" in the unions or parishes of the county. A person who becomes insane and has to be dealt with by the parochial authorities is held to have a *prima facie* chargeability to the union or parish in which he is at the time residing or is found wandering. The Lunacy Acts provide the necessary machinery for the adjudication of the chargeability of lunatics to the union or parish in which they have a proper settlement. Speaking generally, if a person has resided for three years in a parish (without relief) he has acquired a "settlement" there, and the parish is responsible for his maintenance if he becomes a pauper. He is "irremovable" if he has resided for 12 months in the parish or union in which he was residing at the time he became chargeable as a pauper, and in this event he is exempt from removal to the parish of his settlement, and the parish in which he has acquired such exemption is liable for his maintenance.

36. The powers of the guardians of the poor include the ascertainment of the proper settlement of every pauper receiving poor relief. In the majority of cases there is no question as to the chargeability of the pauper being with the parish which has dealt with him, but in cases where detailed inquiries are necessary different policies are adopted in the different London parishes, some making very few inquiries.

APPENDIX No. LXXII.—*Continued.*

37. The following return shows the number of adjudications of pauper lunatics (admitted to the London County Asylums) made by the various unions in the County of London during the three years ending 31st December, 1906, distinguishing between the number of adjudications to Unions within and without the County respectively, together with the proportion of such adjudications to the total adjudications.

	Total Admissions.	Adjudications.			Percentage of Adjudications to Admissions.		
		Within the County.	Without the County.	Total.	Within the County.	Without the County.	Total.
Bermondsey - - - - -	217	11	8	19	5.1	3.7	8.8
Bethnal Green - - - - -	235	18	7	25	7.6	3.0	10.9

38. From these figures it will be seen that, while the average proportion of adjudications to admissions is nearly one-fifth (18.3 per cent.), the individual unions range from nearly one-half (Bloomsbury 49.5 and Strand 49.2) to less than one-twentieth (Southwark). Allowance must be made for the class of neighbourhood of the various unions, in some of which there is a considerable transient population, *e.g.*, unions in which there are many lodging houses, railway termini,

etc.; yet this will not sufficiently account for the big differences shown by the return.

39. It will be observed that there are very considerable difference between contiguous unions, for example, Kensington with 9.1 is surrounded by unions having proportions of 24.5 (Chelsea), 21.2 (Fulham), 32.2 (Hammersmith), 26.1 (Paddington) and 32.2 (St. George's). Again, Bloomsbury with 49.5 is surrounded by unions having 15.9 (Holborn), 17.8 (St.

APPENDIX No. LXXII.—*Continued.*

Pancras), 24.3 (St. Marylebone), 34.4 (Westminster) and 49.2 (Strand). Southwark Union with 4.7, and Bermondsey Union with 8.8 are abnormally low.

40. There is no real advantage, either to the individual London union or to the county at large, gained by the adjudication of a pauper lunatic from one London union to another, inasmuch as the cost of maintaining pauper lunatics becomes eventually a charge on the County at large. Thus the cost of adjudication proceedings in 1,250 out of the 1,800 cases was practically wasted, the only possible advantage obtained being that inquiries set on foot to remove the chargeability from one London union to another have disclosed a "settlement" in an out-county union. On the other hand, it will readily be seen that the adjudication of out-county cases with due speed is a matter of considerable importance to the authority which is called upon to house the lunatics. The incentive to the guardians is little, if any, as the payments they make to the county asylums for the maintenance of their lunatics are all repaid to them either by relatives or by means of the Metropolitan Common Poor Fund and the 4s. capitation grant of the Council. Although due care is necessary in obtaining an adjudication order, as such orders are granted *ex parte* and may be appealed against, it is frequently found that out-county patients remain in the London asylums several months before they are adjudicated. It is only possible to recover from the union to which the patient is adjudicated the cost of maintenance (not lodging) for twelve months; thereafter, if the patient is not removed to another asylum, a sum not exceeding 14s. per week can be charged for him. During the whole time an out-county patient remains unadjudicated the county has to provide lodging, the cost of which is irrecoverable. In addition to this, dilatoriness in adjudication must have the effect of unduly and unfairly increasing the number of lunatics for which the County of London has to provide. It is not easy to dissociate delay in obtaining adjudication orders from the practice in London of payment of commission to settlement officers and collectors in respect of amounts recovered. The natural tendency of such a system is to retard adjudication.

41. It is therefore submitted that the present system of dealing with the settlement of pauper lunatics is not calculated to obtain the best results. It would be preferable for this work to be carried out under the supervision of the authority which is responsible for providing the accommodation; this body, at any rate, would have a wholesome incentive to carry out the work thoroughly. This would secure uniformity of action. Instead of 29 authorities, with their different policies, there would be the one central authority. The work would not only be more effectively, but more economically carried out. A small central staff would be able to do what is now done by officers in 29 unions and parishes. Formal adjudications from one London union to another need not be made so long as it was established that the settlement was in a London parish, but out-county settlements would be vigorously prosecuted. It is not proposed that the parishes of the County of London should merge into one large union; for purposes of settlement and irremovability the parishes would remain as they are.

Resolution (a) (vi.).

42. The majority of the pauper lunatics in the London county asylums are persons who have been re-

moved from their homes to the workhouse or infirmary because they have become insane—that is, their insanity has caused their pauperism. When a person of limited means (other than a pauper in the workhouse) becomes insane, it is usual for notice of the fact to be given to the parish relieving officer, who, under the Lunacy Act, has then specific duties to perform. It is his duty to give notice to a justice of the peace, who orders the lunatic to be seen by a medical practitioner. If, however, it is deemed for the benefit of the lunatic or the public welfare that the patient should be removed to a workhouse in the meantime, the relieving officer is empowered to do so, and the lunatic can be detained therein by the master of the workhouse for three days; but, before the expiration of that period, notice must be given by the relieving officer to a justice of the peace. As a matter of practice in London, almost without exception, all alleged lunatics notified to relieving officers are removed to the workhouse or the workhouse infirmary. Although it is within the power of the justice to whom the case is reported by the relieving officer to call in any medical practitioner he may think fit, in nearly every union and parish the union doctor, either the infirmary medical superintendent or the district medical officer, is the practitioner who certifies the patients. Some unions have made it a rule that their doctor is not to receive a fee for any lunatic certified by him, but, in the majority of the unions and parishes, fees are paid ranging from 10s. 6d. to 21s. In some unions the cost of medical certification of a lunatic amounts to two guineas. The number of pauper lunatics certified annually in London for removal to asylums numbers some 4,000, and probably the numbers brought into the workhouses and infirmaries as alleged lunatics amount to quite half as many again, there being a considerable number who are not certified to be kept in an asylum.

43. Various methods of removal from the workhouse to the asylum are adopted by the different unions. Sometimes the lunatic is brought by train to the nearest station, and thence by cab to the asylum. In other cases a vehicle is hired to bring the lunatic down, and some unions have their own conveyance or ambulance. The relatives are, if able, called upon to reimburse to the guardians the cost of certification and removal, and this, at times, is a great hardship on the individual. A case recently brought to the Asylums Committee's notice was that of a female patient admitted to a London asylum in June, 1906, afterwards discharged recovered, but readmitted in May, 1907. The cost of removal and certification on the first occasion was £4 5s. 6d., on the second occasion £4 9s. 6d. Each time the medical examination fee was £2 2s., and the rest of the charges were for removal and attendants.

44. If the *onus* of removal of the patients were with one authority, which might well be the Asylums Committee, proper ambulances could be provided, and more than one patient removed at a time. Trained attendants could be employed, and the result would be that the removals would be conducted in a more humane, efficient and economical way than is possible under the present system.

45. It would be advisable that medical officers of the union who are called upon to certify lunatics should not be dependent on fees for so doing; it would be preferable that they should be paid a fixed salary for such work irrespective of the number certified.

APPENDIX No. LXXIII.

REPLIES BY THE LONDON COUNTY COUNCIL TO QUESTIONS AS TO INDUSTRIAL AND REFORMATORY SCHOOLS, &c., SUBMITTED TO THEM BY THE COMMISSION.

Question I.—What classes of children are sent to industrial and reformatory schools, including truant schools and day industrial schools respectively?

Answer I.—Reformatory Schools.—The young persons committed to these schools all come under one description, viz., those under 16 years of age, "who have been convicted of an offence punishable by penal servitude or imprisonment."

Industrial Schools.—The children committed to these schools may be classified as follows: (a) Children of dissolute parents who exercise no control over them, with the result that they are found "wandering," and not having any home or settled place of abode or proper guardianship or visible means of subsistence, or are found begging, etc. (b) Children of vagrants who, when not tramping the country, make their home in common lodging-houses or in single "furnished" rooms. (c) Children found in brothels or living with prostitutes. (d) Children of respectable parents who, in consequence of being out at work all day, are unable

to exercise efficient supervision over them. (e) Children of respectable parents of weak character who are unable to exercise control over them.

Truant Schools.—Children who dislike school, and absent themselves from the ordinary elementary school.

Day Industrial Schools.—Speaking generally, these are for troublesome children whose homes, however poor, are of a fairly decent character, and for children who are falling into bad or irregular habits through the want of proper supervision. Day industrial schools are not suitable for the vicious or wandering child or for the persistent truant.

Question II.—What evidence is there as to results in the way of success in life of the training in industrial and reformatory schools, and to what feature in them is such success attributed?

Answer II.—The practical result of the training and care received by the children is demonstrated in the following Table, showing the disposals during the year ended 31st March, 1907:—

School.	Army or Army Bands.	Royal Navy.	Mercantile Marine.	Placed in Trades.									Other Services.						Transferred.	Emigrated.	Discharged by Secretary of State.	Discharged to ordinary Elementary Schools.	Re-admitted as Voluntary Cases.	Died.	Discharged to Guardians.	Unknown.		
				Boat Builder.	Shoemakers.	Carpenters.	Bricklayers.	Painters.	Bakers.	Engineers.	Tailors.	Printers.	Domestic Service.	Railway Service.	L.C.C. Service.	Garden and Farm Service.	Factory Hands.	Various Occupations.

* To Residential Industrial Schools.

† 1 transferred to Drury Lane Day Industrial School, and 5 sent to Residential Industrial School.

Results 10 years after disposal.

Evidence of the fact that the good results are of a permanent nature is furnished by the following table, which gives information extending over a period of ten years respecting all children sent by the Council who have left the schools. (See App. LXXIII. (A).)

At the end of three years after a child has left the

school the further supervision of the managers is entirely voluntary. It is evident, therefore, that the managers and the superintendents of schools take a great personal interest in the careers of their old scholars, and make every effort, either by correspondence or by personal visits, to keep in touch with them.

APPENDIX No. LXXIII.—Continued.

It will be noticed that the number of "unknown" cases increases year by year. It must not be assumed, however, that these young persons are unsatisfactory. On the other hand, many of them are doubtless doing well. The percentage of girls who are "unknown" is greater than that of boys, and this is to a great extent due to the fact that they marry, and do not desire that their former detention in an industrial school shall be known.

The success in regard to disposals and after careers may be attributed to the fact that the industrial school child is under care and training uninterruptedly from the time of his entry into the school until his final disposal, and that he cannot, in the meantime, be removed by his parents. The education and training are carried on progressively and methodically throughout his school course. The general training is systematic, the individual child is studied as to his fitness for any particular calling or occupation; his life in the school, the discipline, instruction, recreation, and feeding are all arranged with the sole object of making him self-reliant and self-supporting.

When a child reaches the age of fourteen years and nine months a full report with regard to his educational attainments, industrial occupations, conduct, mental capacity, and physical condition must be furnished to the Council, together with a suggestion by the managers as to the most suitable age and manner of disposal. With this information before them the Council are able to come to a decision in each case, which the managers undertake to carry out. If it is subsequently found that effect cannot be given to this decision, the case is re-submitted, with an explanation, and an alternative method of disposal is decided upon. From the time a child leaves the school until he reaches the age of eighteen years he is kept under observation by the managers, who submit a periodical report to the Council in every case.

The reasons for the success of industrial school children in after life may be summarised as follows:—

1. Continuous treatment of the child in the school and the non-interference of parents.
2. The formation of character by the general system of training and education, and the preparation of the child for final disposal.
3. The care exercised in the disposal as to the choice of suitable occupations.
4. The supervision by the superintendent or matron and managers; the watchful eye and the helpful hand during a period of three or four years after leaving the school, during which time supervision is compulsory, and voluntary supervision for an indefinite time afterwards.
5. The fact that information as to each case must be furnished to the Council from the time a child is eligible for disposal until he attains the age of 18 years.

Under the existing agreement with reformatories the Council has no control over the disposals, but steps are being taken to make the procedure in this respect the same as in the case of industrial schools. From the report of the Government Inspector for the year 1906 it would appear that, of the young persons discharged from reformatories during the three years ended 1905, about 75 per cent. were in regular employment, 7 per cent. were in casual employment, 12 per cent. were convicted, and 6 per cent. were unknown.

Question III.—Is any inquiry made as to whether the family is in receipt of Poor Law relief, and would such relief interfere with the sending of a child to the industrial or reformatory school?

Answer III.—There is no record as to whether any of the families from which children are sent to industrial schools are in receipt of Poor Law relief. No inquiry is made by the Council upon this point, and the fact of such relief being granted would not disqualify a child for admission to an industrial school.

Reformatory cases do not at present come within the cognisance of the Council until after committal.

Question IV.—What is the procedure as to contributions to each of the various kinds of school, and to what extent are contributions actually received?

Answer IV.—Parental contributions towards the maintenance of children committed to reformatory or industrial schools are fixed by magistrates either at the time the child is sent thither or at a later date. The maximum is fixed by the Reformatory or the Industrial Schools Act respectively at 5s. a week, but it is very rarely that an order for the full amount is made. The amounts are collected by the agents of the Inspector of Industrial Schools, and go to the relief of the Treasury contribution. From the report of the Inspector of Industrial Schools it appears that the sum collected amounts to about £1 14s. per head in reformatory cases, and about £1 5s. in industrial school cases, but it is not known what proportion this bears to the amount ordered. The prosecutions are instituted by officers of the Government, who alone could furnish this information.

With regard to day industrial schools, the parental contributions in "committed" cases may be a sum of not exceeding 2s. a week, and for "voluntary" cases the minimum payment per week is fixed at 1s. The parental contributions are fixed by the magistrate at the time of making the order in "committed" cases, and are collected and retained by the local authority.

A sum of £3,201 was obtained from the parents of 3,284 children in attendance at the day industrial schools throughout the country during the year 1906, giving an average of about £1 per head. The amount collected from the parents of children at the Council's day industrial schools during the year ended 31st March, 1907, was £410 16s. 1d., or a sum of £1 18s. 7d. per head on the average number maintained.

Question V.—Is there any connection, co-operation, or overlapping between the administration of the Industrial and Reformatory Schools Acts and that of the Poor Law?

Answer V.—There is at present no co-operation between the Council as Education Authority and the Boards of Guardians, but concerted action between those bodies would undoubtedly result in a much more efficient and more economical system of working.

The Chairman of the Special Schools Sub-Committee of the Council (Major Skinner) in the course of certain evidence (see *Appendix No. LXXIV.*) which has been deposited with the Commission, submits a statement with regard to cases of children, who, having been dealt with in some form or other by the Poor Law Authorities, afterwards come before the Special Schools Sub-Committee on being charged at a police court with an offence under the Industrial Schools Act. The list shows that during a period of twelve months 113 cases were so charged, and that in 94 cases it was necessary for the safety and welfare of the children to commit them to industrial schools.

Question VI.—Would it be possible for the Poor Law Authority to make use of the day or residential industrial schools for any of the children relieved from the Poor Rates, bearing in mind the possibility of prejudice on the part of the parent?

Answer VI.—Under the existing law it would only be possible for a Poor Law Authority to make use of an industrial school in the cases of refractory children in workhouse schools, or where a parent of children in such schools had been convicted. In the event, however, of the law being amended there would be no difficulty or disadvantage in amalgamating the two classes of schools and placing them under one Authority. In the case of day industrial schools there would probably be no prejudice on the part of the parents, inasmuch as the children would be returned to their homes at night. In Liverpool and Glasgow such an arrangement is now in successful operation. The children who would be sent to the residential schools would be either those who had no parents or those whose parents were inmates of the workhouse. In the first class of cases there would, of course, be no difficulty, and in the second class it is suggested that objection would be taken only in a very small number of cases. This prejudice might be altogether removed by altering the title of the schools.

APPENDIX No. LXXIV.

STATEMENT OF EVIDENCE BY MAJOR C. L. A. SKINNER, OF THE LONDON COUNTY COUNCIL.

Charles Lancelot Andrewes Skinner will state that :

1. He is a member of the London County Council and chairman of the Special Schools Sub-Committee of the Education Committee of the Council. He is authorised to give evidence before the Royal Commission by resolutions of the Council, dated July 16th, 1907, and January 21st, 1908.

2. The Special Schools Sub-Committee of the Education Committee has the immediate control of the nine industrial schools belonging to the Council. These schools are Brunswick Road, Drury Lane and Ponton Road Day Industrial Schools, Gordon House Girls' Home, Home for Little Boys, Highbury and Upton House Truant Schools, and Feltham and Mayford Industrial Schools. The Council also has agreements with fifty-seven industrial schools throughout the country for the reception of cases from London. The expenditure in connection with the schools maintained by the Council is about £48,000 per annum, and in connection with agreement schools about £36,500 per annum. A section of the Committee (of which witness is also the chairman) meets at the Education Offices weekly for the purpose of dealing with the cases of children charged before the Metropolitan Police Magistrates with offences under the Industrial Schools Acts. The particulars presented to the Committee concerning these cases give full information with regard to the children and their parents.

3. From these particulars it appears that the parents of many of the children are thriftless, vagrant or dissolute persons who frequent workhouses and casual wards, and who are unfit to have the custody of children. Some of the parents are from time to time committed to prison for varying terms. While the parents are in prison or are the inmates of workhouses the children are placed under the care of the Poor Law guardians, and are usually sent to the parish schools; but when the parents are discharged from prison, or when they choose to leave the workhouse, they have the power to claim their children, who are thereupon removed from the care of the guardians and are again subjected to evil influences and degrading surroundings. In some instances, the children are deserted by their parents, and in such cases the guardians endeavour to trace them with the object of compelling them to resume the custody of their children. Only in cases where the children are orphans, or where the parents remain continuously in the workhouse, or where the guardians are unable to trace the parents, do the children remain permanently under the care of the guardians.

4. Under Section 1 of the Poor Law Act, 1899, the guardians have power to adopt children maintained by them under the following circumstances until such children reach the age of eighteen years :—

(a) Where the child has been deserted by its parent.

(b) Where the guardians are of opinion that by reason of mental deficiency, or of vicious habits or mode of life, a parent of the child is unfit to have control of it.

(c) Where a parent is unable to perform his or her parental duties by reason of being under sentence of penal servitude or of being detained under the Inebriates Act, 1898.

(d) Where a parent of the child has been sentenced to imprisonment in respect of any offence against any of his or her children.

(e) Where a parent of the child is permanently bedridden or disabled, and is the inmate of a workhouse and consents to such adoption; or

(f) Where both the parents, or in the case of an illegitimate child, the mother of the child, are or is dead.

It is the experience of the Council that guardians are in most cases reluctant to put into force their powers of adoption under this section, presumably on account of the cost.

5. When children are removed by their parents from the care of the guardians it frequently happens that the parents have no homes, or are habitual beggars. In such cases the children often fall into the hands of the police, and are charged with wandering without any home or settled place of abode or proper guardianship. In other cases the parents and the children are charged with begging. When this happens the cases of the children are referred to the Council's officers by the police and they then come before the Industrial Schools Cases section of the Special Schools Sub-Committee, who, in order to save them, frequently suggest that the children shall be sent to industrial schools. The cost of their maintenance for a long period is, therefore, mainly borne by the Council, and considerable expenditure falls upon the education rate on account of children who, in many instances, are not London children.

6. A statement of the cases of this nature which have, during a period of twelve months, come before the Special Schools Sub-Committee is submitted in the Appendix (*see App. No. LXXIV. (A.)*), from which it will be seen that for the sake of the future of the children they have, in many cases, been committed to industrial schools, and that in numerous instances, two, three, and even four members of one family have been dealt with in this way.

7. In addition, moreover, to the children who fall into the hands of the police or the Council's officers, it is evident that there are many others who escape the vigilance of both, chiefly because their parents are constantly moving from one common lodging-house or free shelter to another, or, without committing any offence which causes them to be taken into custody, are in and out of the workhouse. For such children there is no hope of any other career than that of vagrancy or criminality.

8. It is therefore desirable that all children who are without proper guardianship should, immediately they fall for the first time into the hands of the guardians, be rescued from their evil surroundings and be dealt with in such a way as will ensure their being educated and trained to become self-supporting and respectable citizens. As, however, the children are in many cases not permanently resident in the district in which the workhouse is situated, it is felt that it is inequitable that the cost of maintaining, educating and training them for a number of years should fall upon the local authority of that district.

9. In the Report of the Departmental Committee on Vagrancy issued in 1906 the subject of vagrant children is dealt with. In Chapter XVIII, Paragraph 414, it is stated, with reference to the powers of adoption possessed by the guardians under the Poor Law Act, 1899 :—

"If the guardians take action the child must be maintained by them, but, as a rule, they are not willing to throw upon the rates of their union the burden of the maintenance and education of children who are not settled there nor to go to the trouble and expense which would be involved in an attempt to ascertain their place of settlement."

The Report goes on to state (Paragraph 415) that it is very desirable that boards of guardians should exercise their powers of adoption under the Poor Law Act of 1899, but that it is hardly reasonable to expect them to assume, in all cases, the cost of the maintenance of children not belonging to their union. A suggestion is made that power should be given to the county council to make a contribution from the county rate towards the cost of the maintenance of a vagrant child who may be adopted by a board of guardians.

10. In Paragraph 419 of the Report the Committee call attention to the excellent results to children of that class from training in an industrial school, and add, "We feel strongly that so far as possible use should be made of industrial schools for dealing with vagrant children who, from their previous surroundings, need training of a correctional nature."

APPENDIX No. LXXIV.—*Continued.*

11. Paragraph 421 quotes Section 13 of the Elementary Education Act of 1876, which deals with the duty of a local authority to take proceedings under that Act or the Industrial Schools Act, 1866, and states that, "Difficulty here has arisen from the proviso, which leaves it in the discretion of the local education authority to take proceedings or not, as they may think proper. It is doubtful whether the section has been used to any extent in the case of vagrant children on account of the objection to putting the cost on a small area, but it will be seen that if it were acted on it would afford ample means for securing control of all children passing through a district who are not receiving proper education."

12. The concluding paragraph of the Report (428) states that "Where the parent or guardian of a child is dealt with as an habitual vagrant there should be power to the court to order the child to be sent to an industrial school or to be dealt with in such other way as may seem expedient."

13. Arising out of this Report a Bill (entitled the Vagrant Children Bill) was introduced into Parliament in the session of 1906. The Bill did not follow the recommendation of the Departmental Committee on Vagrancy as to committing vagrant children to industrial schools, but provided that such children should be committed on a magistrate's order to the workhouse, and if the guardians so desired they might adopt them under the Poor Law Act of 1899. The cost of maintenance, so far as it was not paid by the parent, was to be repaid to the guardians out of the county rate by the county council of the county in which the union was situate. This did not, however, appear to the Council to be an equitable arrangement, as they were of opinion that if it was decided that the cost of maintenance should be a local burden it should be borne by the body dealing with the children. In the cases of children sent to industrial schools at the instance of county councils as local education authorities the cost is borne partly by them and partly by the Treasury. Having regard, however, to the fact that the children in question are vagrants without any settled place of abode, the Council was of opinion that the charge should not be local, but national, and that a local charge in these cases would constitute a potent and effective influence against any action. The Bill further proposed that action should be permissive; but the Council was of opinion that in order to be effective, particularly if maintenance was

to be a local charge, action should be compulsory. It was intended to take steps to secure the amendment of the Bill in the direction indicated, but before this could be done the Bill was withdrawn.

14. Witness is of opinion that in any legislation affecting this matter provision should be made that in all cases where children under fourteen years of age, whose parents are apparently of vagrant or dissolute or criminal habits, are admitted to workhouses, casual wards, free shelters, or common lodging-houses, it shall be the duty of the officer in charge of the workhouse, casual ward, shelter or lodging-house to send to the police, or to the local education authority, an immediate notification of such cases, and that upon such notification being received it shall be the duty of the police or of the education authority, as the case may be, to at once take steps to charge such children under the Industrial Schools Acts.

15. It would therefore be necessary to amend Section 14 of the Industrial Schools Act, 1866, so as to include the description of children mentioned in Paragraph 14. In such cases the charge should not be a local but a national one. In any legislation, however, it should be clearly defined what cases are to be dealt with under the Poor Law Acts, and what cases under the Industrial Schools Acts. With regard to the latter, the attitude of magistrates and the strong objection in some quarters to any action which may tend to relieve parents of the care of their children should be taken into consideration.

16. Prompt action would in such cases be necessary, as otherwise the children would be removed before action could be taken. So far as London is concerned, the Education Committee of the Council has recently been entrusted by the Council with the duty of putting in force the by-laws relating to the Employment of Children Act, 1903. This would necessitate some of the Council's officers being on duty early in the morning and late at night, and it would probably be possible for such officers to visit the workhouses and other institutions previously mentioned for the purpose of obtaining information as to vagrant children, and of taking action with the object of securing their detention in a remand home pending inquiry as to whether the circumstances of the parents are such as would render it necessary to commit the children to industrial schools.

January 22nd, 1908.

APPENDIX No. LXXIV. (A).

STATEMENT giving particulars of Cases brought before the Cases Section of the Special Schools Sub-Committee, from November, 1906, to November, 1907, where Children have previously been in Workhouses or Parish Schools:—

Identification Number.	Initial of surname and Christian name.	Age.	Charge.	Particulars of Home, Parentage, etc.	Additional particulars.	Action taken by County Council.

Identification number.	Initial of surname and Christian name.	Age.	Charge.	Particulars of Home, Parentage, etc.	Additional particulars.	Action taken by County Council.
2,230	B., Daniel ..	12 $\frac{8}{12}$	E. E. Act, 1876.	Parents poor but respectable. Boy charged with stealing and birched 18.7.07. Again charged with wandering at Walthamstow. Sent to workhouse. Truant and sleeps out. Education Act case (truancy).	Boy has been in workhouse (apparently only pending inquiries).	Sent to an industrial school.
2,255	H., Edwin James	5 $\frac{8}{12}$	Wandering, etc.	Found in a ragged, dirty condition and without boots. Parents no home for 3 years—drink. Father does little or nothing to support family and has been several times charged. Have been in Kensington and Paddington Workhouses.	Family have been in workhouse	Sent to an industrial school.
2,256	H., Walter Thos.	7 $\frac{11}{12}$	Do.			Sent to an industrial school.
2,272	S., Geo. ..	12 $\frac{8}{12}$	Do.	No home. No school attendance for months. Father dead. Case of neglect. Boy has been in workhouse.	Boy has been in workhouse.	Sent to an industrial school.
2,321	F., Alf. . .	10 $\frac{3}{12}$	Wandering, etc.	No home. Parents' character bad—living in workhouses, shelters and lodging-houses. Father a drunkard, children much neglected.	Parents have been in workhouse.	Sent to an industrial school. Sent to an industrial school.
2,322	F., Wm. ..	3 $\frac{10}{12}$	Do.			
2,326	C., Bridget ..	12 $\frac{3}{12}$	Do.	Father dead. Mother drinks. Girl has been in workhouse. Family of 3 in one small room with one bed. Girl said to frequent bad company and to be addicted to habits of indecency.	Girl has been in workhouse.	Sent to an industrial school.
2,334	O'G., Amelia ..	13 $\frac{2}{12}$	Wandering, etc.	Two families who tramp about together. They have had no home for 10 years but tramp the country in summer fruit-picking, etc., and go into the workhouse during the winter. They have been in St. Olave's Workhouse eleven times since 1896.	Families in and out of workhouse.	Sent to an industrial school. Sent to an industrial school. Sent to an industrial school. Sent to an industrial school. Sent to an industrial school.
2,335	O'G., Blanche..	7 $\frac{8}{12}$	Do.			
2,336	O'G., Michael..	4 $\frac{7}{12}$	Do.			
2,337	K., John ..	13 $\frac{3}{12}$	Do.			
2,338	K., Edward ..	10 $\frac{11}{12}$	Do.			
2,361	R., Edwd. ..	9 $\frac{4}{12}$	E. E. Act, 1876.	Father a cripple. No trouble taken to get boy to school—a girl now in Ponton Road D.I.S. Boy has been in workhouse.	Boy has been in workhouse.	Sent to a day industrial school.
2,366	N., Gerald ..	11 $\frac{3}{12}$	I. S. Act, Amendment Act, 1880.	Three years ago mother was sent to an inebriates home; while there her husband died and the children were sent to the workhouse. When the mother left the home she removed this boy from the workhouse (January, 1907). She is leading an immoral life and has had 8 or 10 different addresses since leaving the home.	Boy has been in workhouse.	Sent to an industrial school.
12,367	H., Hy. Geo. ..	10 $\frac{8}{12}$	Begging ..	A wretched family, constantly in and out of the workhouse. The father has deserted his family many times and is now alleged to be living with another woman. The mother has been imprisoned for being drunk while in charge of a child.	Family in and out of workhouse.	Sent to an industrial school.
12,408	R., Charles ..	12 $\frac{11}{12}$	Being beyond control.	Mother died nine years ago; father's whereabouts unknown for last two years. Boy lives with an aunt, who is a respectable woman with a small confectioner's shop. The boy was sent to the Mitcham Schools. He has since been brought up by his aunt, but is now unmanageable; steals money; absconded from home and brought back by police; stubbornly refuses to attend school and gives no promise of amendment.	Boy has been in parish school.	Sent to an industrial school.
72,417	W., Albert Edward.	10 $\frac{11}{12}$	Stealing ..	Boy concerned with others in stealing boots. Mother and children went into workhouse. This was done in order to obtain a warrant for the arrest of the man, who had deserted his family for three years. He was found and sent to prison for six months.	Family has been in workhouse.	Discharged.

APPENDIX No. LXXIV. (A).—Continued.

Identifi- cation Number.	Initial of sur- name and Christian name.	Age.	Charge.	Particulars of Home, Parentage, etc.	Additional particulars.	Action taken by County Council.
72,438	C., John Jos. . .	13 $\frac{1}{2}$	Wandering, etc.	Home, one poor room. Mother dead. Boy sells papers in the City and gets his food by begging. He was in the Brentwood Parish School but absconded, taking his younger brother with him. They were found and taken home.	Boy has been in parish school.	Sent to an indus- trial school.
72,455	T., Violet . .	4 $\frac{1}{2}$	Do.	No home. Parents are tramps who sleep in common lodging-houses when they have money to pay for their lodging. Two children sent to an industrial school in March, 1905. The parents have been tramping ever since the birth of this child in the Plumstead In- firmmary.	Girl was born in the infirmary.	Sent to an indus- trial school.
72,517	W., Ernest . .	9 $\frac{5}{7}$	Begging	No home. Father turned out of his room and children went into work-house. Mother dead. Father has been cohabiting with a woman who sent the children out to beg, spending the money received in drink.	Child has been in workhouse.	Sent to an indus- trial school.
72,530	M., Mary . .	8 $\frac{1}{2}$	Wandering, etc.	No settled home for five years. Mother dead. Father's character is good, but he lives in common lodging-houses. He is a wood-chopper, but is a cripple. Girl has been in parochial school and Bromley Sick Asylum; recently kept by a woman who can now keep her no longer.	Girl has been in parochial school and Bromley Sick Asylum.	Sent to an indus- trial school.

The numbers bracketed together refer to children of the same family.

APPENDIX No. LXXV.

CORRESPONDENCE BETWEEN THE LONDON COUNTY COUNCIL AND THE COMMISSION
AS TO THE QUALITY OF THE WORK PERFORMED BY THE UNEMPLOYED.

Scotland House,
Victoria Embankment,
Westminster, S.W.,
28th January, 1908.

SIR,— I am, at the same time, to say that the Commission would feel much obliged if the London County Council could by the date referred to also send in to them a short statement dealing with the quality of the work performed for the London County Council by the "Unemployed" under Mr. Walter Long's scheme and the Unemployed Workmen Act in each year since 1904-5.

I am, sir,
Your obedient servant
R. G. DUFF,
Secretary.

The Clerk of the
London County Council,
County Hall, Spring Gardens.

LONDON COUNTY COUNCIL.
County Hall,
Spring Gardens, S.W.,
13th March, 1908.

SIR,—With further reference to your letter of 28th January, 1908, as to the quality of the work which

has been executed, on behalf of the Council, by un-
employed workmen since the year 1904-5, I have to
state that, generally speaking, the work has been car-
ried out in a satisfactory manner. A distinct im-
provement has been noticeable, during the last two
years, in the execution of works undertaken at the
Council's parks, such as levelling and returfing play-
grounds and grass areas, mudding out lakes and ponds,
and clearing channels of streams, cleansing and reno-
vating old shrubberies, etc.

The works carried out in connection with the hous-
ing of the working classes and the main drainage
services have also been dealt with in a very satisfac-
tory manner.

I am, sir,
Your obedient servant,
G. L. GOMME,
Clerk of the Council.

The Secretary,
Royal Commission on the Poor Laws
and Relief of Distress,
Scotland House,
Victoria Embankment, S.W.

APPENDIX No. LXXVI.

STATEMENT OF EVIDENCE BY MR. WALTER MILLEDGE, SECRETARY TO THE
BRADFORD CITY GUILD OF HELP.

1.—In order to justify the claim that Guilds of Help merit some consideration, it may be stated that since Bradford first organised personal philanthropy under that title, less than four years ago, thirty-one towns have adopted similar methods. This seems to be sufficient proof that these methods, and the ideas for which they stand, are suited to the temper of the times, and therefore accepted readily; and this is the more evident when we add that no effort at propaganda has been possible.

2.—The following account of the origin of the Guild of Help movement may indicate the causes of its rapid growth and successful operations: a further description of the machinery of the organisation as it has developed in Bradford with an examination of the principal aims which have emerged as the result of experience will be sufficient to show the scope of its present operations; this will lead naturally to suggestions for encouraging the adoption of similar methods throughout the Kingdom, for promoting their efficiency, and for securing the co-operation of Guilds of Help or similar organisations with the Poor Law and other authorities.

ORIGIN OF THE BRADFORD GUILD OF HELP.

3.—(a) The situation in Bradford before the formation of the Guild of Help in regard to voluntary agencies for helping the poor, was one which is common to many large cities; there were many charitable societies and poor funds together with personal almsgiving of a generous description, and as the services of the local C.O.S. to which no voluntary workers are attached were not generally used, the usual abuses and complications resulted, and public opinion might be counted upon to respond to any sentimental appeal, even if somewhat ill-advised.

(b) As against this the public administration of poor relief in Bradford had, under wise supervision, been steadily improving, the efficacy of strict investigation and careful classification had been proved, and several of the leading citizens had become expert administrators. Some of these were also prominent members of the various charitable bodies, and to them it was evident that much of the material help provided by the voluntary agencies was not only ineffectual in securing any permanent improvement in the condition of those who were helped, but was in some cases actually pernicious in its effects. In many cases it was seen that individual and continuous treatment was necessary if lasting benefit was to result from the help given, and to secure treatment of this character it was evident that a large number of workers would be needed. By the advice of a member of the Board of Guardians of ripe experience, who was also familiar with German methods of poor relief, a careful study of the Elberfeld system was made by several influential men and women, with a view to adapting it to the needs of an English town. At their request a conference was called by the mayor, a provisional committee was appointed, and a scheme was drawn up and adopted, and has now been in operation for nearly four years.

PRINCIPLES UNDERLYING THE GUILD OF
HELP MOVEMENT.

4.—(a) In certain directions the conditions in an English city are wholly different from those which obtain in Germany, and some modification in method was necessary, but the basis of the constitution of the Guild of Help is similar to that of the Elberfeld system, inasmuch as it asserts the principle that the citizens are personally as well as collectively responsible for the welfare of the members of the community, and cannot delegate that responsibility to a handful of public officials or charitable agents. The guild enlists its workers, not as members of particular churches or chapels, not as social workers of certain political creeds, not even as philanthropists, but as public spirited citizens concerned

for the common weal. It is easy to under-estimate the importance of this, but the fact remains that in response to an appeal to the personal sense of responsibility of the citizens of Bradford for the well-being of their less fortunate neighbours, 500 workers were secured representing all shades of religious and political opinion, and these have worked in complete harmony for more than three years.

(b) Another principle to which much of the continued success of the work may be traced is seen in the methods of decentralisation. A local and personal sense of responsibility is fostered by giving the local committees control of their own affairs, and by giving the individual worker all the freedom in his work which is consistent with general uniformity. This appeal in the first place to the sense of citizenship, followed by bold reliance on a personal sense of responsibility, has produced an extraordinary response, both in numbers and in the character of the work which has been done.

ORGANISATION OF THE BRADFORD GUILD OF
HELP.

5.—(a) In order to create a sense of local responsibility, the city is divided into small areas which have no relation to the municipal ward areas. The four large Poor Law divisions are each of them subdivided into ten districts, making forty in all, of a size varying according to the character of the district; in the poorer quarters the districts are small. In each district there are ten or more helpers, whose work is strictly defined; no one is given more than four homes to visit, many not more than two, but these homes must be visited frequently and for a considerable period of time. If a district committee has more than twenty-five cases to deal with the area is divided.

(b) The helpers in each district elect their own district head or chairman, and he appoints his deputy, and a local secretary. In this way the whole of the Bradford Union is mapped out into small districts, each with a responsible district head and ten or more helpers. The ten district heads in each division appoint the divisional chairman, and meet together from time to time to discuss the conditions and organization of their division. They also elect one of their own number to represent them together with the divisional chairman, on the executive committee. Thus eight practical workers are duly elected to form the nucleus of the executive committee, with power to co-opt additional members who retire annually. The co-opted members include representatives from the Poor Law Guardians, the Education, Health, and Watch Committees, and the principal charitable societies.

METHODS OF THE BRADFORD GUILD OF
HELP.

6.—(a) Notification of cases which appear to require the assistance of the Guild of Help is made by the clerk to the guardians, the relieving officers, the school medical officers, the school feeding staff, the teachers, the female health inspectors, and occasionally by the police and county court officials. In addition to these there are the more usual sources of information, such as the clergy, the employers, and numerous personal applications.

(b) At the central office there is a register of all recipients of Poor Law relief (outdoor), all defective children visited by the Education (After Care) Committee, and of all cases dealt with by four of the principal voluntary relief agencies.

When a case is notified, the register is searched, and if no record is found, a special enquiry is made of the relieving officer and the Charity Organisation Society for any available information. Such information is copied on to a case paper, which is sent to the district head, and by him is given to a suitable

APPENDIX No. LXXVI.—*Continued.*

helper, male or female, as the circumstances may indicate. The helper visits the home, obtains particulars, and immediately consults his district head in order that steps may be taken at once. The district committee meets fortnightly, when each helper presents a written report, and each case is carefully considered, a decision being made as to the immediate treatment of the case and future policy.

(c) More than two-thirds of the cases are visited weekly for an average period of six months, and after the first visit each of them is recorded in a case book, which provides a continuous record or diary of all the efforts of the helper, and of the decisions of the committee. The remainder are such cases as can be dealt with in two or three visits, and these are recorded on the preliminary case paper, which is then filed. All the papers and books are sent to the Central Office after each District Committee meeting, and the records are copied before the books go back to the helpers. Thus the progress of each case is fully recorded at the Central Office fortnight by fortnight, and in some instances there is a continuous history extending over three years.

(d) There is no relief fund, but each worker is provided with a handbook showing the charitable and social resources of the city, and the district heads become expert in advising as to the proper use of the various agencies, the Guild serving as a clearing house. This may be illustrated by enumerating some of the principal agencies.

FOR SICKNESS OR INJURY.

Royal Infirmary, in, out, and home treatment.
 Eye and Ear Hospital.
 Harrogate Royal Bath Hospital, for uric acid and skin diseases.
 Buxton Devonshire Hospital, for rheumatism and gout.
 St. Catherine's Home, for cancer and incurables.
 Eastby and Eldwick Poor Law Sanatoria, for consumption.
 Bradford Children's Hospital.
 Union Infirmary.
 Surgical Instruments—Samaritan Society.
 Sick Nourishment—Samaritan Society.
 District Nursing Association.

CONVALESCENCE.

Numerous convalescent homes and, in the case of children, the Victoria Children's Convalescent Fund.

CHILDREN.

Education Committee for School Meals.
 Cinderella Club for clogs and clothing, also milk for infants and mothers (supplied from the Municipal Milk Depot).
 Lantern Bearers' Society, for teaching at home crippled or deficient children unable to attend deficient school.
 Summer Holiday Fund and Ambler Holiday Home.
 Nutter Orphanage for Boys.
 Orphan Girls' Home.
 National Society for Prevention of Cruelty to Children.
 Factory Inspectors, in regard to employment of uncertified or unfit children.

WOMEN.

Education Authority's Cookery and Dressmaking Classes for Women.
 Ladies Lying-in Charity.
 Association for Care of Friendless Girls.
 Rescue Committee for Fallen Girls.
 Female Health Inspectors, in regard to domestic filth.

PERMANENT INFIRMITY.

Institution for the Blind.
 Deaf and Dumb Institute.

POVERTY OR INDIGENCE.

Tradesmen's Homes and Benevolent Association.
 Spinsters' Endowment Fund.
 The Jacob Moser Aged Workpeople's Benevolent Trust Fund.
 Charity Organisation Society, for temporary distress.
 Many small charitable funds.

HOMELESS.

Salvation Army Shelter and Elevator.
 Women's Shelter.

Specific needs which cannot be met in this way are provided for on the "special case system," by direct appeal to benevolent persons.

(e) There is a Guild of Help Loan Fund, granting loans not exceeding £5 for refurnishing homes which have been sold up or taken by the hire-purchase companies, for providing stock for hawkers or small shopkeepers, for purchasing tools, false teeth, etc.; but loans are not made to pay debts or redeem pledged goods, the fund being intended to be used "for fresh enterprise." Repayments are collected in small weekly instalments.

(f) In one district a penny bank has been opened, and has met with considerable success owing to the personal efforts of the helpers, although the Yorkshire Penny Bank had not been patronised.

(g) Free legal advice, sometimes followed by legal assistance, is given by several solicitors at the request of the Guild. The larger number of the cases relate to separation and administration orders, and workmen's compensation. In the case of county court and administration orders the helpers collect weekly instalments and pay them into court monthly.

(h) There is a monthly magazine for educational and advertising purposes.

AIMS.

7.—(a) The first object of the Guild of Help was expressed simply as being "to provide a friend for all in need of help or advice," and it is doubtful whether the founders realised the extent to which its active operations would become dovetailed into the work of public bodies. From the first, emphasis has been laid on personal influence rather than on material relief, and on sustained moral pressure rather than any sudden attempt to alter conditions artificially. If it be granted that many conditions of a large industrial centre are directly responsible for the degradation and poverty of the people, it is nevertheless a fact that the first to succumb to those conditions are the mentally and morally weak, and it is the aim of the Guild to provide that mental stimulus and moral support which is needed if any material help is to be made effectual.

(b) The special features of the work are that it is individual and continuous. The helper is able to make friends with all the members of the family, to know each child by name, to hear of relatives, and to get the intimate and personal point of view which can only be gained by frequent visits. It is his aim to develop the internal resources of the home, its wage-earning capacity from the material point of view, and also its social and educational possibilities. This cannot be done in a week or a month, and we have in Bradford an average of 500 homes visited weekly, and many of them have been so visited for more than twelve months. The result is a relationship between helper and helped which may justly be termed as friendship.

THE RELATION OF THE GUILD OF HELP TO PUBLIC ADMINISTRATION.

8.—(a) A very short experience revealed the fact that many cases were already known to, if not immediately under the supervision of, one department or another of the Civic Administration. The conditions in Bradford being peculiarly favourable, it was as readily discovered that the various authorities were quite prepared to assist with information and advice in all such cases, and the further step by which the authorities notify cases needing the help of the Guild soon followed.

(b) In the case of the Health Department, there are five female health inspectors, and, taking only one branch of their work, that arising from the adoption of the Compulsory Notification of Births Act, it is evident that there is an enormous field for the co-operation of voluntary workers. The worst cases of neglectful or ignorant mothers cannot be visited officially more frequently than once a month. These are notified for weekly visitation by the Guild helper, under the direction of the inspector. Filthy homes need the same constant attention.

APPENDIX No. LXXVI.—*Continued.*

(c) The school medical officer notifies cases where medical treatment is not provided after his inspection, or where home conditions are unfavourable to recovery, or convalescent treatment is required. The School Feeding (Education) Authority notifies cases where it is evident that more is needed than the mid-day meal which is being provided.

The county court officials suggest cases where legal advice is needed, or where friendly pressure may secure regular payments under a judgment order, and consequent release from difficulties.

POOR LAW.

9.—But in the case of the Poor Law Authority, the work of the Guild is of even more direct economic importance, and with this department co-operation has been more fully developed. It has been stated that each of the four divisions of the Guild coincides with a relief area of the Poor Law, so that the workers in the ten sub-divisions or districts have one relieving officer and one Relief Committee dealing with their cases. The Guild Central Office also provides a supervisor for each division, who attends the meetings of the District Committees, and to these supervisors the guardians have granted the privilege of attending the weekly Relief Committees held at the relief stations.

This arrangement enables the Guild to select suitable cases for visitation, to grasp the intentions of the guardians in regard to particular cases, in some instances to represent special aspects of a case, and generally promotes real co-operation. In addition to this, the relieving officers are frequently consulted by the district heads direct.

10.—A certain number of the cases referred to the guild by the Guardians are those in which the application for relief has been refused, either because there is no destitution, although there may be distress, or because the trouble is evidently of a temporary nature. In either case timely help may remove the danger of pauperism, and the personal influence of the guild helper may provide the necessary impulse towards recovery of independence. Of those actually in receipt of Poor Law relief two classes offer considerable scope for the work of the guild.

11. *Able Bodied Men with Two or More Children.*—These are granted relief on performing a daily task known as "test work." There is always a danger that they will relax their efforts to find work, and in this they need constant encouragement, while their wives need every inducement to retain their self-respect and "house pride." The guild does not supplement the relief, but the woman is sometimes helped with cast-off clothes, and is taught to make the best of what she has, while the landlord is induced to be lenient in regard to rent. Frequently the home has been depleted of all that is saleable, and even when work is obtained, continued supervision is needed while debts are being paid, and necessary utensils and clothing are being replaced. Help of this description is always possible, and not infrequently the work itself has been obtained as a result of the efforts of the helper, thus the rates are relieved sooner than would otherwise have been the case.

12. *Widows with Dependent Children.*—These have been helped with even greater success. There is a variety of employment for women in Bradford, and in cases where none of the children are under school age, it is quite possible for the mothers to support two or even three children. In some instances a fee is demanded before the trade can be learnt, and in any case some enterprise is needed to secure regular employment. In a number of cases the helper has provided the fee for learning the trade (weaving), has found a suitable dwelling near the mill, and has succeeded in establishing the family in independence. When this has been accomplished, there is always the possibility that illness, or slackness of work, may threaten the security of the home, and constant watchfulness is required until one of the children is old enough to work.

13.—In addition to this, all persons discharged from the Poor Law sanatorium for consumption, both men and women, are referred to the guild, and the helper is required to see that the patient in his own home continues, as far as possible, the conditions under which he has been living at the sanatorium. The prejudice

against open windows on the part of his home people must be overcome, separate sleeping accommodation secured, occupation under reasonably healthy conditions must be sought, and not unusually the patient needs moral bracing after the long period of enforced idleness. When it is stated that the average cost of each patient admitted to the sanatorium is £40, it will be seen that some form of after-care is of economic importance.

14.—Other cases call for the adjustment of family quarrels, for the provision of suitable lodgings for aged persons, and for numerous other friendly services which can be rendered by an intelligent helper, but which are outside the province of the official. In every case it may be claimed that such services remove the need for public relief, or render it more effectual.

PUBLIC OPINION.

15.—The effect of the organisation of the Guild of Help on public opinion is very considerable. Here in Bradford, for example, we have 500 citizens drawn from all classes of the community confronted with the problems of poverty, and studying the policy and effects of the official administration, not academically, but by daily observation. The result is a lively attention to matters which hitherto have been treated with apathy, and the creation throughout the city of an altogether healthy interest in local government and administration.

16.—In order to extend the organisation of the Guild of Help throughout the kingdom, the financial support and recognition of the Public Authority is needed. The expenses of administration are heavy, especially in the item of salaries. This arises from the fact that special qualifications are needed in the paid workers, and also from the extent of the operations of the guild. In order to enlist an army of 500 voluntary workers, the sympathy and co-operation of the religious leaders of all denominations must be secured, and the enthusiasm of all sections of the community must be aroused. The work of propaganda must be persistently carried on, and never allowed to flag. Not only is it necessary to replace workers who from one cause or another are unable to continue their work, but the demands made upon everyone who undertakes to help are so considerable, and the nature of the work is so depressing, that constant encouragement and stimulus must be provided. The district heads need frequent advice, and every new worker must be educated and trained, co-operation with public officials and charitable agencies needs continual adjustment; in a word, the paid workers must have extraordinary tact and resourcefulness, as well as unbounded enthusiasm.

17.—The office work alone is heavy, as may be imagined when it is stated that in Bradford the total number of cases actually reported upon in writing from week to week exceeds the number of those dealt with by the Guardians at all the weekly relief committees taken together. In 1907, 1,071 cases were dealt with, including 4,384 persons. In addition to registration and enquiry, all reports must be carefully scrutinised, in order that, if possible, some useful suggestion may be made to the local committee, and cases which appear to have been neglected must be investigated. Moreover, practical work reveals many opportunities for promoting the development on new lines of old established charities—the Ladies' Lying-in Charity may be transformed into a midwifery centre, the Girls' Club into a housewifery class.

18.—All of this implies the employment of an adequate staff, and in Bradford there is a general secretary, £250; an assistant-secretary (lady), £100; and a clerk (lady), £52. This staff is supplemented by the voluntary services of a gentleman, who gives two hours every morning to office work, and twelve ladies, two of whom come for two hours each afternoon. At present the divisional supervisors are unpaid, but the work is very exacting, and will, probably, necessitate additional paid assistance in the near future.

19.—The number of philanthropic persons who are disposed to contribute towards purely administrative expenses is limited, and while it may be comparatively easy to raise money for relief purposes, it is extremely difficult to provide adequately for office and staff expenses, even on the most economical basis.

APPENDIX No. LXXVI.—*Continued.*

20.—The Poor Law Authority might be empowered to defray these charges, and, possibly, to provide suitable offices for the guild, but further than this some official recognition of the organisation is desirable. The privilege of representation on the relief committee granted by the Bradford Guardians to the guild might be extended without danger by the co-option of the nominees of the Guild to the full membership of the Board of Guardians, and this would clearly define a position which is at present somewhat anomalous, and would justify in the eyes of the Poor Law officials the claim of the guild to their co-operation.

21.—The support and recognition of the guild by the Poor Law Authority would, of course, imply proper representation on the executive committee of the guild, and the fulfilment of certain conditions would be required before such support was sanctioned by the Local Government Board. The Guild of Help should be required to give an undertaking to deal with cases referred to it by the Guardians from any part of the

Poor Law area. It should be able to show that the other charitable societies were properly represented on its executive committee, and that it was the focus of the philanthropic work of the city. The last condition, which implies the formation of a Charities Board for the city, would become much easier of fulfilment if it were known that such a board would be officially recognised.

22.—Assuming that such support and recognition were granted, it is easy to indicate directions in which the usefulness of the guild might be extended. All families discharged from the workhouse, all women leaving the lying-in ward, all persons in receipt of outdoor relief, might be referred to the guild, to say nothing of that large and difficult class of applicants who, when offered "the House," refuse to accept it, and remain, often with young children in their care, in the most undesirable surroundings, and in a most deplorable condition.

APPENDIX No. LXXVII.

STATEMENT OF EVIDENCE BY MR. ALFRED A. MILLWARD, CLERK TO THE GUARDIANS, ST. PANCRAS PARISH, AS TO THE TRAINING OF RELIEVING OFFICERS.

I am submitting extracts from a paper relating to this subject I had the honour to read at a Poor Law Conference in London on the 10th December, 1903, together with a paper read on the same occasion by the Superintendent Relieving Officer of St. Pancras.

Considerable interest and encouragement were displayed in the discussion upon these papers at that Conference, and the development of the proposal for affording facilities for the training of relieving officers has been so far advanced as to have already become favourably recognized far beyond the Metropolis, and

the growth of the scheme to its present successful issue is mainly due to the cheerful energy of the Honorary Secretary to "The School of Sociology and Social Economics"—Mrs. G. F. Hill, B.A., of 10, Kensington Mansions, S.W.

Mrs. Hill has prepared a report upon the work, and results of the lectures and examinations already held, and in allusion to those in prospect; and I think she is ready, if so desired by the Royal Commission, to present that report as evidence on this subject.

APPENDIX No. LXXVII. (A)

Handed in by Mr. Alfred A. Millward, St. Pancras.

EXTRACTS FROM PAPERS ON THE TRAINING OF RELIEVING OFFICERS, READ BEFORE THE SOUTH EASTERN AND METROPOLITAN DISTRICTS POOR LAW CONFERENCE, ON 10TH DECEMBER, 1903, BY MR. ALFRED A. MILLWARD, CLERK TO THE GUARDIANS, AND MR. HODGSON A. CRAIG, SUPERINTENDENT RELIEVING OFFICER, ST. PANCAS.

(a) MR MILLWARD'S PAPER.

Our special attention just now is directed to the measures for dealing with the classes of poor who come within the scope of Poor Law administration, viz., those whose condition of indigence may, for various reasons, have become so urgent as to justify application for assistance from the poor rates, and whose claim for such assistance has, in the first instance, to undergo a careful investigation on the part of the relieving officer; and so my object in this paper is to give some impetus to the growing conviction that candidates for the position of relieving officer should have had theoretical teaching and opportunities of practical administrative education to be qualified for the very important duties to be performed in that capacity.

There is, however, the less reason for me to pursue this as an argument in much detail, since I shall be followed by Mr. Hodgson A. Craig, Superintendent Relieving Officer of St. Pancras Parish, with a Paper which admirably sets forth reasons for the training of relieving officers,

and its value is greatly enhanced by the fact that it emanates from an experienced relieving officer, who is supported in his views on this subject by the majority of his colleagues and co-workers.

* * * * *

In large parishes and unions many of the candidates for the office have had opportunity, as assistant relieving officers, of becoming acquainted with portions of these duties, and some of them may have been entrusted with more than the clerical work; but others are restricted to clerical work, and this in many places demands their full working hours. Even if such candidates as these were sufficiently numerous, and always had preference, the desirableness still remains for the uplifting of the qualifications of candidates; and it seems to be conceded on every side that opportunity should be afforded for aspirants to the position of a relieving officer to become possessed of a knowledge of the principles and aims of the

APPENDIX No. LXXVII. (A).—*Continued.*

Poor Law system; and it will be of the utmost advantage if such officers have received a measure of training in social economics, and in the principles which lie at the root of all social effort, whether legal or voluntary, to entitle them to a reliable certificate as evidence of their having availed themselves of the means of obtaining the requisite qualifications.

Theory unconfirmed by practice is seldom very impressive; but a good acquisition of theoretical knowledge, imparted by experienced teachers, and enlightened by chances of listening to intelligent discussions among those actually engaged in the work, would give a most valuable start towards the entry into practice, and the mind would become stored with an insight into first causes and guiding principles which would inevitably expedite efficiency.

* * * * *

Let the relieving officers be well equipped with knowledge and some training, to attain the skill to wisely use and classify the facts they have to collect.

They have to distinguish between what is real, and what is defective, relevant and irrelevant; they must possess the power of sympathy for one, and sound judgment not to be misled by the other.

The guardians, for the most part, receive their impression of the case from the officer's report, and the trend of the report inevitably gets its impetus from the officer's point of view.

He may deem it to be his duty to confine himself to making a simple statement of facts, without offering comments upon them, but even then his own conception of the value of the facts to be mentioned has its influence. He may have misunderstood a clean and tidy home and respectable exterior, and assumed there were resources which had no existence; or he may have been misled by the signs of penury which had been due to culpable negligence, and did not accurately reveal the true conditions of the case.

His duties and responsibilities under the Lunacy Laws demand the exercise of discretionary powers and intelligence of more than an ordinary degree.

The guardians are not wholly dependent upon the information obtained from the relieving officers; but even those who have had the longest experience require of them reliable reports, and an intelligent statement of thoroughly sought facts for their deliberations; and those guardians who have but recently taken up this public work, with its elements of endless interest, have a right to expect from the officers of whom they may make inquiries, sound and well-tryed reasons for the methods adopted in dealing with applications for relief.

May it not therefore be accurately said, that none should be more ready than the guardians themselves to encourage any means that can be devised to give to young men who aspire to enter the Poor Law service, facilities to obtain a good insight into the nature and description of the duties which would have to be performed by them?

A thorough training can, of course, only be acquired by years of practice; but is it not an accepted fact that the principles of administering Poor Law relief have long since passed beyond the experimental stage, and that those upon whom so much depends, should be well grounded in its principles and methods before being appointed to take office?

The need of such training is recognised and insisted upon in every other profession in which special intelligence and knowledge are necessary.

The importance of the proposed training has a fourfold value:—

(1) *To the Officers themselves.*—The more intelligent their study of general principles and of the Acts of

Parliament and Orders which govern Poor Law relief, the more will be their sympathetic interest in their work, and the more likely will they be to be thorough in their inquiries.

There will be an increasing esteem for the office they hold, when it becomes recognised by all concerned that only those who can produce evidence of having been suitably prepared are regarded as eligible for election.

(2) *To the Guardians of the Poor.*—The advantage of appointing as relieving officers, men who have already made a substantial advance in the acquisition of knowledge, which, in too many instances, is now only attained after years of hesitating and stumbling work and many mistakes, will soon be made manifest, both in the statistical returns and financial statements, and in the greater sense of satisfaction in the onerous duties of the relief committees.

(3) *To the Recipients.*—A highly qualified officer, whilst on his guard against fraud or unnecessary resort to the Poor rate, will, by the thoroughness of his inquiries and lively interest in his work, find frequent opportunities of sympathetically helping those who most deserve encouraging aid, many of whom may thus be saved from becoming a permanent charge upon the rates.

(4) *To the Community.*—Those who are closely acquainted with the inner working of the Poor Law, or indeed of any system, often see cause for lament when successors to an office in which large expenditure of public money is concerned have to gain their experience by starting again on paths which have been repeatedly found to be injudicious and costly. The process of training will help towards giving beginners some of the insight gained by the long experience and failures and successes of their predecessors.

In the largest parishes and unions, where assistant relieving officers are employed, it is sometimes said that a good school already exists; but even there the assistant should be ready in emergencies to fulfil the duties with a properly based knowledge, or much mischief may be caused in a very short time for the want of it.

He cannot obtain all he should know from the officer for whom he is acting.

Some officers (but not all) may be very willing to impart to their assistants important details to be observed quite outside and above the duties upon which the assistants are chiefly occupied, but this cannot always be sufficiently done.

Methods of teaching and of aiding in a course of reading suitable text-books, and of imparting some practical knowledge by demonstrations, are already under consideration and construction, and there is good reason to look forward, as time progresses, to add object-lessons to the teaching of principles.

* * * * *

The sympathy and co-operation of the guardians of the poor are essential and confidently hoped for in this movement; and we now submit it to their most favourable consideration, and trust that as vacancies occur in the appointments they have at their disposal, many occasions will arise when preference will be given to those candidates who have striven to qualify themselves to undertake the duties of the office with credit to themselves, and advantage to those whom they will have the honour to serve.

(b) MR. CRAIG'S PAPER.

The qualifications for the position of relieving officer, as laid down by the Local Government Board, are as follows:—

Art. 162 (a). "No person shall hold the office of relieving officer under this order who has not reached the age of twenty-one years."

Art. 164. "No person shall hold the office of relieving officer unless he is able to keep accounts, and unless he reside in the district for which he may be

appointed to act, devote his whole time to the duties of his office, and abstain from following any trade or profession, and from entering into any other service."

But by Art. 166. "Provided always that the guardians may, with the consent of the Local Government Board, previously obtained, but not otherwise, dispense with any of the conditions specified in Arts. 162 and 164."

It should also be borne in mind that by the 4 & 5 Will. IV., c. 76, Sec. 28: "No person shall be eligible to hold

APPENDIX No. LXXVII. (A.)—*Continued.*

any parish office, or have the management of the poor in any way, who shall have been convicted of felony, fraud or perjury, or of purloining, embezzling, or wilfully wasting or misapplying any of the moneys, goods, or chattels of the union." Nor is a person eligible if he has been dismissed by the Local Government Board.

First, let me say, that I am daily becoming more and more convinced of the absolute necessity for relieving officers to have some previous knowledge of the serious and responsible duties entrusted to their care, and, what is perhaps even better, some previous experience as an assistant relieving officer (although there are objections held by some to the latter office, and to which I will refer later).

* * * * *

Now, I may be asked why I think a special training is necessary. And I will reply by stating that one of the reasons, and perhaps the best, is, in my own actual experience, first as an assistant relieving officer for a period of four years, and then as a relieving officer for twelve years, and during that time being brought into close and constant contact with all classes of poor, and the various departments of relieving officers' work.

First, a man to do his duty must be conversant with the Orders of the Local Government Board governing his office and specifying his work. He will require to bring an open and intelligent mind to bear upon the Orders governing outdoor relief. He must comprehend the difference between the Outdoor Relief Regulation Order and Outdoor Relief Prohibitory Order. He will have to understand something of the law of settlement and removal. He should be acquainted with the Bastardy Laws, the Articles of the Local Government Board relating to medical relief, and to permanent medical relief for the aged and infirm persons receiving outdoor relief. He will be expected to understand various sections of the Public Health Act, the Orders and Law relating to service and apprenticeship, the Boarding-out Order, the Vagrancy Act, the Elementary Education Act, the working of the Outdoor Labour Test Order, and a very practical knowledge of the Lunacy Acts. I have but briefly named some of the Orders of the Local Government Board and Acts of Parliament which contain the duties relating to his office.

It will be quite unnecessary for me to dilate upon these Acts and Orders, however, but I cannot refrain from mentioning that even one section of the Lunacy Act, through being differently read, has required the decision of the law officers of the Crown, and caused much controversy, and in this Act there are no less than eighteen sections specially relating to relieving officers, and many others with which he should be conversant.

Doubtless it would be possible for an ordinarily intelligent person to learn by heart all the various Orders and Acts quoted, but even then he has only learnt the first lesson. The greater one has still to be studied, viz., the *practical* work in carrying them into effect. This can only be done by daily dealing and contact with the vast number of poverty's problems with which it will be his duty to cope. He must learn to discriminate between brazen and chronic loafing and the poor, heart-broken, aged woman, whose dread of the parish is only equalled by her nervousness in applying. He has ever to bear in mind that ratepayers are, in many instances, but little better off than the poor to whose support they must contribute.

* * * * *

During the first years, if he be a diligent officer, he will frequently be discouraged by the statements made to him, which, upon investigation, he will find to be false, and soon he will be looking with suspicion upon all communications made to him; but after a time he will, by a process of quick reasoning, tell instinctively or by intuition how much he can believe as truth. He will become alert to the case of genuine distress and quick to detect imposition.

The relieving officer practically stands in relation to persons applying for relief as the representative of the board of guardians during the interval between their meetings, and important powers are given him, and, only subject to the Local Government Auditor, he may give in food and actual necessities what he deems necessary, although he may not give money.

* * * * *

It will thus be seen that to fill the position of a relieving officer successfully, diligent study of the various Orders and enactments of Parliament is necessary, combined with a practical experience in the habits, conditions of life, mode of living, requirements and necessities of the class of persons who apply for relief; and this brings me to what I anticipate you expect me to refer, *i.e.*, "The Mode of Training required."

First, I hold that the finest training for a relieving officer is to serve as an assistant under an intelligent and painstaking relieving officer.

I know that many Poor Law authorities do not look with favour upon assistant relieving officers, holding that it is better for each relieving officer to do his own work, keeping the whole of the threads in his own hands, and that very often the appointment of assistant relieving officer tends to weaken the energies of the relieving officer and thus leads to lax administration.

I am afraid the objections to these appointments have been mainly brought about by relieving officers themselves. The assistant has often been made a drudge; the unpleasant work has fallen to his share; very frequently he has been overworked; and when anything has gone wrong, he has been the scapegoat. These objections to the appointment of assistant relieving officers have gradually resulted in the relief work in the larger parishes and unions being divided into departments. Thus we find provision made in the Lunacy Act, 1891, for the appointment of one officer to do lunacy work; the prosecution work is also often in the hands of one officer; the work in connection with widows having children in district schools, boarding-out, apprentices and servants, etc., is now very generally given to one man who is called the "general relieving officer"; leaving the actual relief work in the hands of the district relieving officer, *without* assistance. There can be no doubt that, looking at the question from the point of good administration, this system is the best that can be adopted; but looking at it from the view of the training of officers, it certainly does not help the matter.

Now how are men to get the requisite knowledge? My answer is, by studying the various Orders of the Local Government Board, and the enactments relating to the duties; and it is pleasing to find that facilities are being afforded by the School of Sociology and Social Economics for the study of relieving officers' work. The particular committee who have charge of this department embraces some of the best known men in the Poor Law world, and is a guarantee that the education given will be thoroughly sound and of a practical character.

* * * * *

Now, let us see what a few other professions and callings require as to training before the members of them are permitted to act. First, I would draw your attention to the Civil Service and other Government offices. Entrances to these are obtained by passing an educational examination, and appointments made to higher positions when qualified by experience. Ministers of religion are taught at theological colleges the different tenets of the faith they have to teach; medical men have to serve years at medical schools and hospitals, and are not permitted to practise until they have obtained their diploma. The teachers in our public elementary schools are specially trained by serving first as pupil-teachers; thence pass, if found competent, to college; and after two years of special study and the passing of examinations, appointed assistant teachers, and when vacancies occur, are afterwards appointed head teachers. Solicitors are articled, mechanics serve apprenticeships, sanitary inspectors are expected to hold the certificate of the Sanitary Institute, and in hundreds of other callings proficiency is required.

* * * * *

What I believe would be the best guarantee for boards of guardians is a certificate showing them that the person applying was competent to do the work, both as to his ability to keep accounts, and also as to his general knowledge of the duties, and the Orders and enactments governing his office.

The advantages of the possession of such a certificate seems to me to be manifest.

* * * * *

APPENDIX No. LXXVII. (A.)—*Continued.*

A more definite and recognised profession would be an inducement for thoughtful and intelligent men to enter it. Further, the opportunity of obtaining a certificate would be an incentive to assistant relieving officers to study and make themselves more proficient in their work. Its possession would, I venture to believe, enhance the prospect of obtaining appointments; it would aid

boards of guardians desirous of securing trained and qualified men as their officers, and ultimately lead to an improvement in the class of candidates seeking election; it would gradually be the means of shutting out men who are sometimes elected on account of personal influence, or on sympathetic grounds, without the slightest reference to their fitness for the position.

DISCUSSION.

Mr. W. Vallance (replying to a member) said that the certificates would be granted in connection with the training engrafted by the School of Sociology on the scheme of instruction in social economics. The whole of the machinery had not yet been perfected. It was, he added, very refreshing to find two such papers presented to a Guardians' Conference. The second paper, coming from an experienced relieving officer, showed to what a high platform he was disposed to raise the work of those officials. In any machinery which might be devised, there was no intention to interfere with the free discretion of the guardians to appoint their own officers, but simply to provide the best possible men for the choice. (Hear, hear.) He was firmly of opinion that a candidate with little or no experience of relief work but a thorough knowledge of the Poor Law and the Orders of the Local Government Board, that man would be a better officer than another who had experience but no knowledge of principles, and whose mind was a blank to be written on by the board which appointed him. (Hear, hear.) Mr. Craig's able and intelligent paper would evoke the concurrence of guardians generally. (Hear, hear.)

Sir William Chance (Honorary Secretary of the South-Eastern and Metropolitan Conference and of the Central Committee of Poor Law Conferences) was very warmly greeted on rising to address the Conference. He said that he always hesitated to speak at the Conference, because he preferred to listen rather than speak himself. It was evident that the Conference was thoroughly in agreement with the authors of the two papers. One thing they might claim for the Poor Law administration of this country, and that was that the high character of the relieving officer was a conspicuous feature, and that the guardians, as a rule, took great care in making the appointments to that office. (Hear, hear.) But in some cases very unfit persons had been appointed, for reasons he need not go into. In one case the relieving officer was found to be carrying on a coal business, and upon being remonstrated with he transferred it to his wife. (Laughter.) It ought to be clearly understood that neither the relieving officer nor his wife should be permitted to carry on any kind of trade which will offer any sort of inducement to give certain persons relief. (Hear, hear.) Relieving officers sometimes had cause to feel aggrieved that guardians should for personal reasons give appointments to persons who were not the best qualified of the applicants. Relieving officers who had taken the trouble to learn something about the duties of their position felt that very much indeed, and it was not the kind of thing which ought to occur. (Hear, hear.) It was said that a man might be certificated and yet not be a good officer, but, generally speaking, the preference should be given to a man who held certificates provided that he also possessed tact and energy. (Hear, hear.) The idea of training relieving officers was still quite young, but he was convinced that it was a good idea, and would have beneficial results. He was glad that the suggestion had emanated from the relieving officers themselves, as it showed that they wanted to do the work better, and they should be encouraged by the boards of guardians. (Hear, hear.)

Mr. Walker (Maidenhead) said that listening to smart descriptions of the ideal relieving officers, he thought that the writers must have visited his own union, and got the Maidenhead officials' portraits. (Hear, hear, and laughter.) The examination system had much to recommend it, but they were hardly ripe for its application to relieving officers. Again, a man might be able to take honours about the Poor Law Orders, and yet lack common-sense and shrewdness. It was highly desirable that they should have those qualities and a quiet manner. The loud, bombastic manner was utterly out of place in a relieving officer

(Hear, hear.) They needed a man with a soft heart and a hard head. (Laughter.) The paper was in line with the movement for the attraction of a higher class of men and women to all the grades of the Poor Law service. The day had gone by when they could promote a man to be workhouse master simply because he had been a respectable porter. (Hear, hear.)

Mr. George Beer (East Preston) said that while heartily approving the papers, he had been wondering how the trained officers of the future were to get appointments, if the experience in his own union was any guide in respect to the long tenure of office. Their officers had held the positions for twenty-two, thirty, and even forty years. (Hear, hear, and laughter.) He was not there to excite laughter; he wished to excite thought. Some years ago a small committee of guardians was formed in his union to investigate and report on applications for relief beyond a certain radius from the centre of the union. It did good work. (Replying to Mr. Vallance, the speaker said that the committee had ceased to act some time ago. (Hear, hear, and laughter.)

Mr. Sharman (Southwark) said it would be exceedingly unfortunate if the Conference should appear to give unqualified assent to the suggestions in the papers. It would involve an increase in the cost of the staff, for a superior class of men would mean more expense. There was another more weighty objection, and that was that the new type of officers would tend to widen the breach which existed between the officials and those who came to them for relief. (Hear, hear.)

Mrs. Morris expressed the hope that the expense of the special curriculum suggested for relieving officer students would not be thrown on the rates. When appointed, the new trained class of officers would rightly command more money, but would do the work better. St. Pancras, like her own union, were to be congratulated on having very good officers. (Hear, hear.)

Mr. Allison (Clerk, Malling Union) said that this matter interested the officers very much, for they all desired to raise the status of the service. In the result the rates would be benefited by the suggested training of officials, and the supply of certificated candidates would enable the guardians to offer a lower rate of remuneration if they wished. But a more commendable means of economy in the future was to be found in the fact that a more efficient service of officials would reduce the expenditure on relief. (Hear, hear.)

Rev. C. D. Hall (Tenterden) said that they might take it for granted that the future relieving officers, like most other students, would themselves defray the expenses of their studies. He believed that the efficient performance of their duties would reduce the expenditure on relief. He disagreed with the Southwark delegate, who expressed the fear that trained officials would widen the breach between the poor and the officials. On the contrary, he believed that a trained official would be able kindly and firmly and without delay to inform an unsuitable applicant that he could not put his case before the Board, and that he would thus avoid the irritation of raising false hopes. (Hear, hear.)

Mr. Flood (Lewisham) said that in that union there had been no difficulty in getting good officers, as they had a system of promotion which encouraged the officers in each grade to prepare themselves for the efficient performance of the duties of the higher grades. That was the right system, and there was no need to set up an elaborate school which would merely lead to increased expense. Mr.

APPENDIX No. LXXVII. (A).—*Continued.*

Craig had learned his lesson well during his term of office; but there was one or two things in the paper which showed that he must have been a very unsatisfactory candidate. (Hear, hear, and laughter.)

Mr. Hawkes said that if the School of Sociology would give them men of character as well as of certificated knowledge, the difficulties of guardians in the matter of appointments to those offices would be reduced. He presumed that the new instruction would be given by correspondence classes, and would not involve a prolonged residence in London. He did not see why relieving officers alone needed training, Masters and Guardians, and even town councillors might benefit by some instruction in the theory and principles of the work. (Hear, hear.)

Rev. H. L. Paget (Vicar of St. Pancras) said it was something to be proud of to stand there and hear two St. Pancras officials evoke so much approval. He did not see why, in time, the certificate might not be granted after examination by the London University. (Hear, hear.) The demand by the relieving officers for some system of examination showed that the work was becoming more technical, and that protection was needed against the invasion of quacks. (Hear, hear.) It was a sign

of healthy and wholesome activity on the part of the relieving officers. It was almost worse than trifling to say that the increase of knowledge would decrease the sympathy of the officials. Did the typical Poor Law officer of former days, "Bumble," lose sympathy with poor little "Oliver Twist" because of his great knowledge. (Cheers.)

Mr. Millward said that the paper by Mr. Craig was prepared some time ago, and before they were aware of the movement for systematic instruction of relieving officers. As to the cost of training, it would be borne by the individuals who went through the course. With regard to the remarks of the Southwark delegate, they had only to remember that there was no man who was so dictatorial and cocksure as the inefficient person of rather feeble intellect. (Hear, hear, and laughter.)

Mr. Craig expressed his pleased surprise at the kindly reception of his paper, and his entire concurrence with the remarks of the Lewisham delegate as to the efficacy of the system of promotion in force in that union. (Hear, hear.)

The Conference then rose for the day.

APPENDIX No. LXXVIII.

STATEMENT OF EVIDENCE BY MR. HENRY F. NEW, SECRETARY, ON BEHALF OF THE ASSOCIATION FOR BEFRIENDING BOYS.

1. The Association for befriending boys was formed in 1868 by the late Rev. Brooke Lambert, for the purpose of the after-care of boys belonging to Metropolitan unions after their discharge from the guardians' schools.

2. The Association has worked on the lines laid down by Mrs. Eaton Lascelles, who had charge of the boys belonging to the Banstead schools, and by Mr. Brooke Lambert, who looked after the interests of boys from the Sutton schools. Full details of their work will be found in the Report before the Departmental Committee on Poor Law Schools (*v.* Vol. II., Martin, p. 166, Lascelles, pp. 252, 899, Steer, pp. 729, 899).

The Association is assisted by subscriptions from the boards of guardians authorised by the Local Government Board under the Acts 39 & 40 Vict., c. 61, Sec. 33, and 42 & 43 Vict., c. 54, Sec. 10.

4. The Association is managed by a council consisting of:—

(a) One member from each board of guardians or board of school managers which co-operate with the Association.

(b) The district or branch secretaries in each Poor Law district.

(c) One member nominated by the superintendents of "The District and Separate Schools" Association.

(d) Not more than twenty additional members elected at the general annual meeting of the Association.

An executive committee, consisting of twelve members of the council in addition to the chairman, the hon. treasurer, and the secretary, meets once every month for the dispatch of business. The council meets three times a year.

5. The president of the Association is the Rt. Hon. and Rt. Rev. the Lord Bishop of London; the chairman is the Rev. J. Scott Lidgett, M.A.; the treasurer is Sir William Chance, Bart.

6. The *modus operandi* of the Association is as follows:—

(a) When a boy is discharged from a school belonging to the guardians of the unions which co-operate

with the Association,* notice to that effect is sent to the secretary of the Association. The notice is accompanied with full particulars of the boy's name, age, character, length of time in school, parents' and nearest relatives' names and addresses when known, the name and address of the employer to whom he is being sent, and the address of the boy.

(b) The secretary of the Association, if the boy is living in London, sends the foregoing particulars to the local secretary of the Association in whose district the boy is residing.

(c) The local secretary is expected forthwith to enter into communication with the boy, to explain to him that the Association, in the person of the local secretary, is ready and willing to help him by advice, encouragement, and sympathy, to be a friend to him when in illness or in trouble, and on all critical occasions. The local secretary is expected to keep in constant touch with the boy without undue interference with his employer, to send periodical information about him to the central office, and to notify promptly changes of address or employment.

(d) The local secretaries are expected to encourage the boys under their charge to join thrift clubs, educational classes, recreative institutions and benefit societies, and to keep up the practice of their religion.

(e) If a boy is living out of London, then the secretary of the Association endeavours to enlist the sympathy and help of the local clergyman or other suitable person who fulfils in this case the duties of local secretary.

* The Unions which co-operate with the Association at the present time are Bermondsey, Bethnal Green, Camberwell, Chelsea, City of London, Fulham, Greenwich, Hackney, Hampstead, Holborn, Islington, Kensington, Lambeth, Lewisham, Mile End, Paddington, Poplar, St. George's, Hanover Square, St. George's-in-the-East, St. Marylebone, St. Pancras, Shoreditch, Stepney, Strand, Wandsworth, Westminster, and Woolwich and the extra-Metropolitan Unions of Epsom, Edmonton, Kingston, West Ham and Strood.

APPENDIX No. LXXVIII.—Continued.

(f) Boys remain on the books of the Association until they have completed their twentieth year. On reaching the age of twenty they are supposed to be able to look after themselves.

(g) The local secretaries are required to send to the secretary of the Association twice during the year a report on the boy or boys committed to their care. The secretary at the end of each year sends to each board of guardians a report of the boys belonging to the union. Thus the Hackney Guardians, for example, receive reports of all the Hackney Poor Law boys, the Camberwell Guardians reports of the Camberwell boys, and so on.

(h) In districts where there are no local secretaries, the secretary of the Association and his assistants at the central office endeavour, to the best of their power, to perform the duties of local secretaries.

(i) In districts where there is a large number of boys the local secretaries are assisted by visitors for whom they are responsible.

The Association endeavours to obtain employment for the boys when they are out of work and to provide temporary assistance for them when they are looking for work, and its efforts are attended with considerable success.

8. There is no doubt however that in many other ways the Association is of real and substantial help to the boys, especially when the local secretaries are hard-working, tactful and able to gain their respect and confidence. This is clear from the many and continual appeals for help and advice to the secretary and local secretaries and by the gratitude frequently and spontaneously expressed by the boys whom the Association has been able to help even in a small degree. Many of the boys are orphans and quite friendless and they look upon the Association as represented by the secretaries as their only friend.

9. The Association is much hampered in its work on account of its somewhat scanty income; it would be able to extend its work and to do it more thoroughly and efficiently if it could obtain more adequate support.

10. The following table exhibits the actual receipts and expenditure during the last six years:—

—	1902.	1903.	1904.	1905.	1906.	1907.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Receipts - - -	203 13 6	272 9 8	324 15 11	405 2 3	438 9 0	454 13 9
Expenditure - -	273 18 5	306 4 8	357 12 7	495 2 11	409 13 8	421 15 4

It will be seen that except during the year 1906 and 1907, the expenditure during the four preceding years has exceeded the receipts. Owing to the fact that the year 1902 started with a credit balance of £109, the adverse balance on January 1st, 1907 was not as large as would appear from the figures just quoted. The debit balance on January 1st, 1908, was £33, and it is hoped that by December 31st, 1908, the greater part of the debt will have disappeared.

11. The boards of guardians with the sanction of the Local Government Board, subscribe annually to the funds of the Association. The amount received from this source during the last six years is set out in the subjoined table.

1902.	1903.	1904.	1905.	1906.	1907.
£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
130 11 0	137 18 0	140 0 0	166 10 0	174 9 0	204 6 0

In 1907, thirty boards of guardians subscribed.

12. It should be observed that the Association is, with the exception of a somewhat similar Association in Southwark for Southwark Poor Law boys, the only Association that attempts the after-care of Poor Law boys belonging to London Unions. It is hoped that by degrees its work may be extended so as to include many extra-Metropolitan boards. At present the board of guardians for Epsom, Edmonton, Kingston and West Ham are the only boards outside the metropolis which have entered into official relations with the Association.

13. The relations between the boards of guardians and the Association are most friendly and cordial and the Association is deeply grateful to the clerks of the various boards and to the superintendents of their schools for their ready and ungrudging assistance at all times.

14. There have been certain difficulties with regard to the relations between certain Working Boys' Homes and the Association; but these difficulties are in process of solution and settlement.

15. Three tables are appended showing; (1) the numbers of boys belonging to the various unions who have been reported upon by the Association during the last six

years; (2) the ages of 1,889 boys reported on by the Association in 1906; and (3) as far as can be ascertained, the occupations, etc., of the 1,889 boys on the books of the Association in 1906 and reported upon to the various boards of guardians. (*See Appendix No. LXXVIII. (A.).*)

16. With regard to the third table, it may be pointed out that it is probable that some of those boys who are classed as assistants may be apprentices. The information sent to the office is very often not very precise in this particular.

17. Among the assistants classed as "Others, 109," are included all those who in any particular trade or employment do not number ten.

18. The chief difficulty that confronts the Association is the problem of how to deal with the boys between the ages of seventeen and twenty who happen to be out of work and unskilled. As a rule boys who are unskilled manage to do fairly well up to the ages of seventeen or eighteen, provided that they have good characters and are steady and reasonably intelligent. After these ages, however, they become too big for their work, they want higher wages, and the result is that they not uncommonly find themselves out of work have very great difficulty in obtaining fresh employment, and tend consequently to join the ranks of casual unskilled labourers. Boys who have been apprenticed are, as a rule, much better off and seem not to have much difficulty in supporting themselves.

19. It is not easy to suggest remedies. The Association can only venture to express a hope that the boards of guardians should be encouraged and empowered to increase the number of the boys they apprentice and that they should be encouraged also to assist in emigrating suitable boys, provided of course that the boys had some months' previous training.

20. It may be noted that the number of boys under the care of the Association who may be described as satisfactory and doing well is over 50 per cent. of the total, and that the reports of the boys who join the Royal Navy or the Army are almost uniformly eulogistic and are striking evidence of the soundness of the training given at the guardians' schools.

APPENDIX No. LXXVIII.—*Continued.*

21. The Association keeps in touch with the boys in the Army and Navy principally by correspondence, which is conducted by two specially appointed secretaries and their voluntary assistants. The reports on these cases come from commanding officers for the boys in the Army and from the chaplains for the boys in the Navy. The Association is deeply grateful to the commanding officers and chaplains for all their care and trouble over the reports, and it desires also to thank the authorities at the War Office and Admiralty for their ready and ungrudging

assistance in helping to trace boys who have been transferred to different battalions and ships.

22. The annual Reports for the years 1902, 1903, 1904, 1905, 1906 and 1907 are sent with this statement.

23. The chairman of the Association, the Rev. J. Scott Lidgett, M.A., has been nominated by the executive committee to attend and give evidence before the Royal Commission, should he be summoned.

APPENDIX No. LXXIX.

STATEMENT OF EVIDENCE BY THE REV. J. B. PATON, D.D., AS TO A SCHEME BY WHICH THE METHODS OF THE ELBERFELD SYSTEM OF POOR RELIEF MAY BE MODIFIED AND APPLIED TO ENGLAND, WITHOUT A VIOLENT CHANGE OF THE PRESENT SYSTEM OF POOR RELIEF.

1. That guardians shall be no longer empowered to assess the rating values of property, and also shall not make any contracts for expenditure connected with the relief and help of the poor. These duties shall now be entrusted to the municipal council which controls the financial and general interests of the community.

2. That the guardians thus relieved of these accessory duties which may divert them from the special duties for which they are elected, shall be responsible not only for the relief of the destitute, but also for the care of those who are needing help, and who, by such help, may be prevented from becoming destitute and may be restored again to a condition of self-support.

3. That the guardians be chosen, as at present, by the different wards of the town or city, and that a sufficient number be elected to provide a chairman of each district of the town or city into which it is divided for the purpose of providing individual care of the poor in that district. For example, in Nottingham at the present time there are sixteen wards, and three guardians are appointed for each ward. In Nottingham, if the same principle is adopted as in Elberfeld and other German towns for effective, individual care of the poor, there ought probably to be sixty-four districts which would require four guardians to be elected

from each ward. The guardians elected shall be the chairmen of the districts into which the town is divided for the care of the poor.

4. That twelve associate guardians shall be appointed to assist each of the guardians who are chairmen of the several districts, and they shall be responsible for the poor in the twelve small sub-districts into which each district is sub-divided. These assistant guardians shall be appointed by the municipal council of the borough which shall select and appoint persons who have been nominated for that office by the churches, the charitable societies, the Chamber of Commerce, the Trades Unions, and other united and responsible bodies in the borough to whom the municipal council shall make appeal that they nominate members for this office; and in this election there should be no distinction of church, or class, or party.

5. That the districts into which the city is divided shall be grouped in divisions. In Nottingham at the present time there are seven divisions into which the town is divided for poor relief; and seven divisions would be a suitable arrangement for co-ordinating the different districts and effectually carrying out the business undertaken in them.

6. That in each of these seven divisions there shall be a trained secretarial officer who will, together with other business, assist the voluntary associate

APPENDIX No. LXXIX.—*Continued.*

guardians, giving them, if needed, personal training, examining some of the more difficult cases with them, and attending to special types of cases such as lunatics, idiots, orphan children, etc.

7. That the guardians who are the chairmen of the districts shall appoint one of their number as chairman of each division, and that whilst the associate guardians meet once a fortnight with the guardian who is the chairmen of their district, the chairmen of these districts shall meet with the chairman of their division at such regular times as may be necessary for the efficient control and administration of the division.

8. That the seven chairmen of the divisions, together with seven representatives of the municipal council, shall be the *central board* of Poor Law administration in the borough. This central board shall register and preserve in its offices the records of all cases dealt with in each district or division, and the decisions of each district and divisional committee shall be revised and approved by it. Further, this board, conferring with the guardians, shall prepare the annual budget of poor relief, and shall appoint from the guardians and from members of the council, sub-committees for the management of institutions such as the poor house; the infirmary for the old, and infirm, and sick; elementary training schools for children; and training or industrial colonies, if established, in order to provide training for the unemployable, and to find work for the unemployed. The budget prepared by this central board to be presented to, and adopted by, the municipal council.

9. The duties to be undertaken by the guardians and associate guardians will be similar to those that are undertaken in Elberfeld and in other towns in Germany, where the Elberfeld system has been adopted; they will therefore not only give relief to those who are actually destitute by the giving of alms, but in all possible ways prevent needy persons from becoming destitute, and encourage them to recover their independence. The means to be thus used are (a) enlisting the support of relatives and friends and the help of neighbours; (b) by friendly sympathy and counsel giving encouragement and stimulus to efforts towards the recovery of their independence; (c) endeavouring to find employment for those who are out of employment; (d) seeking thus in every way possible to awaken hope and energy, and to strengthen character, in those whom they help. This, of course, to be done under the most careful supervision, and with all the safeguards which have made the Elberfeld system successful, and which, although this larger responsibility and care of the poor is undertaken, have greatly decreased the amount spent in poor relief.

10. There are certain principles which underlie the Elberfeld scheme and also the scheme which I have drawn up in the foregoing paragraphs, which seem not only to commend it, but to make it, or something like it, absolutely necessary in our time.

(1) The conditions of labour in our country seem to make it expedient on many grounds and even necessary, that a community should care not only for those who are absolutely destitute, but by timely and friendly counsel and help, care also for those who may be saved from the degradation of pauperism. The fluctuations and crises in our large industries affect great multitudes of our industrial classes, so that without fault of their own they are suddenly thrown out of employment. They thus find themselves suddenly in great straits, and may not be able for a long period to find employment again. During such a period of unemployment even the thrifty and those who have saved a little money find themselves reduced to deplorable want. When we remember that such a man as Will Crooks went through this terrible experience for many months, it shows that there is a class of people in every community whose poverty makes an appeal for temporary help—who deserve and need it. The very fact that in our present industrial system we seem to require a certain number of unemployed men who are thus ready at once for any new great industrial enterprise that is on hand, shows that unemployment is not now, as it has been under former conditions, an ignominious state into which men allow themselves to fall.

(2) The existence of this state of poverty into which many even of the deserving lapse, is giving rise to

social evils which are degrading the character of great numbers of our people. It is hard to refuse those who beg for alms, when we know there are many to whom alms would be a real help and who deserve our alms; but this willingness to give alms has produced a class of persons who seek for alms diligently and skilfully—a predatory class who live on charity. Further, for this reason, charitable institutions abound to aid in this poverty. But at present the ministries of these charities overlap, and people are tempted to live by sedulously cultivating these charities. All this growing evil of our time would be obviated if every needy case in every district of the town is cared for, and if the whole town is pledged, with necessary safeguards, to care for its poor in a humane and reasonable manner. To this end the charities of a town or district, wisely applied, would contribute.

(3) A new spirit has been awakened in our time which requires that something effectual be done to deal with the social evils and miseries that fester in our towns, and which hurt the conscience of the community. There is a revival in our time of that communal feeling which has always to some extent existed in English communities, whether small or large. There is a growing movement for civic collective action growing sense of communal responsibility for the well-being of the borough or district. I have endeavoured to set this forth on pp. 15, 16, and 17 of the pamphlet which I enclose, and which also enforces other principles which seem to require such a reform of our Poor Law as is suggested in the modified Elberfeld scheme which I have set forth. (*See Appendix No. LXXIX. (A).*)

(4) The development of our industries has led to a great separation of the two classes—employers and employed, and also a segregation of the wealthier and the poorer classes in separate and distant districts of our towns, so that they see little of one another and have no friendly intercourse with each other. This fact makes it necessary that means should be found such as the Elberfeld system provides, for personal acquaintance and intercourse between the more educated and wealthy classes of the community and the poorer classes. It is not simply a sense of alienation, but a sense of antagonism and hostility, that is growing up between these diverse classes, and each suffers because of its separation from, and its ignorance of, the other. There can be no doubt that many of our poorer families would hold themselves in higher esteem, and would be awakened to greater effort after a higher and more honourable mode of life, if they were visited personally by, and had thus the friendship of, men and women of higher social rank than themselves; and the men in higher social position would be better fitted for the duties of citizenship, and take greater interest in the concerns of their town or city if they had personal acquaintance with the needs and difficulties of the poor.

(5) It is recognised by all who have studied the problems of poverty that it is only by individual and personal care that the poor can be wisely dealt with, that appropriate and needful sympathy can be given to the old and sick, and that strong stimulus and patient effort can be applied so as to restore those who have become idle and listless. By the sub-division of labour in the Elberfeld system, and in this scheme by employing a number of associate guardians (each of whom has only charge of a very small district for which he is responsible, and who thus becomes acquainted with the condition of the poor in it), new conditions are created in dealing with poverty; and we may be quite certain that equally good results will follow in English towns as have been seen in Elberfeld. We cannot forget that Saxon freedom has involved from the very beginning of our history duties of common responsibility and of common service in the boroughs of our country; and that England has done much to awaken in Germany the spirit of civic patriotism and of personal service for the community which are now so marked a feature in the national life of that country.

11. Two objections will naturally be raised to the scheme which I have thus ventured to describe and to commend, namely:—

(1) That associate guardians will not be found in numbers sufficient to give the minute and per-

APPENDIX No. LXXIX.—*Continued.*

- sonal service that will be required if Poor Law relief is to be administered in this fashion.
- (2) That if they are found, they would not easily be trained, and that if they were not trained their service would be worse than useless.
12. With regard to the first objection, I would say—
- (a) That England has always been famous for voluntary service rendered to the State and to the municipality.
- (b) That already in England the civic guilds of help which have been established, now numbering 27 or 28, have in a remarkable way obtained voluntary service to carry out the objects of these guilds; and those who have had the chief responsibility in the forming of these guilds have told me that if their work were sustained by public authority so that those who volunteer their service were serving the civic community, and were recognised by the community, voluntary service would be much more easily obtained by them than it is now.
- (c) I have suggested that the borough council should itself appoint the associate guardians who would thus at once obtain an honourable civic status. Their names should be enrolled on a table exhibited in the town hall or guild-hall of the town or city; and further, as in Elberfeld, another distinction might be given, viz., that those who serve the poor in this honourable way for a certain number of years should have their names permanently inscribed in a permanent roll of honour exhibited in the town hall.
- (d) It is difficult to believe that England has not as much public spirit as is shown in the great number of German towns that have adopted this system. In Elberfeld, as is known, and in other towns it is the same, it is deemed an honour to be a helper. As a visitor who was present at a recent meeting of the Administrative Council in Elberfeld says, "A vacancy had to be filled up in one of the districts, but there were three eligible candidates offering themselves for the office." The president of the Administrative Council in Elberfeld humorously remarked to Mr. Grisewood and Mr. Henewinkel when visiting the town that in order to find out how the Poor Law administration is looked upon in Elberfeld, you have only to ask a citizen if he is a visitor of the poor—he will answer either that he is, or he has been, or he will blush with the consciousness that he has not had that honour conferred upon him.
13. In regard to the second objection which concerns the training of associate guardians, let it be remembered—
- (a) That most careful detailed instructions are given to every helper as to how different types of cases are to be dealt with.
- (b) That the secretary of the division, who will be a trained official, will assist any new helper with his experience and advice.
- (c) That each helper will be accompanied at times by the guardian who is the chairman of his district.
- (d) That the associate guardian who visits the case has to make a full report to the district committee of which he is a member once a fortnight, and that whatever is done in regard to any individual case is done after that case has been considered by the committee, so that the visitor carries out its decision.
- (e) There are occasional conferences of all associate guardians with the Central Administrative Council, when the principles and methods of their system of poor relief and care of the poor are thoroughly discussed, explained and enforced, so that there is a thorough understanding of the work which they have in hand.
- (f) The experience of those who have been at work in our guilds of help is expressed in a letter which I have received from one of the most able workers in the Bradford Guild of Help. "Given a good organisation, trained workers guiding and advising all district committees, it is remarkable how few people who do volunteer service prove unsuitable, after a little experience. It affords a remarkable opportunity for social and civic training."
- (g) Our voluntary helpers will be quite as amenable to training as the voluntary helpers who serve at Elberfeld and in other German cities, and they have found that the service of their helpers is effectual, and that they are quickly trained in their work to render such effectual service.
- (h) If, from any special cause, adequate volunteer service is not obtainable in any borough or district, it will be necessary to appoint an assistant secretary in each division to take the place of the associate guardians until they have been nominated and elected.
14. It will easily be understood why it is deemed necessary that guardians elected for the special duties of not only relieving the destitute, but of guarding the poor from destitution, and assisting them by all possible means to maintain their personal independence, should not be invested with the power of assessing the rateable value of property, and should not make public contracts. The civic service to which they are appointed requires special qualifications, and they should be chosen only for their fitness for it. They should not be tempted to seek the office from any other considerations, and to secure civic influence by work of a wholly different kind than that for which they are chosen. The office of guardian should be magnified as one that gives no place or opportunity for any business but the diligent care of the poor, and an office thus magnified would attract the best men and women of the town or city, because of its freedom from business transactions of an alien nature.
15. I am not intimately acquainted with the system of poor relief in country districts, but I am informed by those who are thus acquainted that the same principles and methods as are embodied in the scheme which I now present to you for towns and cities can be applied as easily and effectively in country districts.

APPENDIX No. LXXIX. (A.)

Handed in by the Rev. J. B. Paton, D.D.

A MODIFIED ELBERFELD SCHEME.

NOTE.—The passages in the pamphlet, entitled "A Civic League for our Towns and Cities," to which I refer in para-10(3) above, are the following:—Throughout all the past, cities, when fewer and smaller than now, have yet been the centres of civilisation, as the very word "civilisation" implies; and plainly they will be more so in the future. Hence the problem which con-

fronts us. How can these cities, growing larger in our midst, become the homes of a healthy, happy, industrious, and noble people? We look around us now, and see that the problem of city life menaces not only the civilisation to which they have given birth, but the very existence of multitudes that inhabit them. It is mere ostrich-like cowardice and blindness that

APPENDIX No. LXXIX.—*Continued.*

will not face the truth, and see the swift deterioration that falls upon masses of the people in the insanitary homes and the sordid squalor of the slums of our great cities. There may be fuller and freer life in our cities, but for vast numbers it is life that burns with a fierce fever-heat, and we witness all around the wastage and wreckage which it entails. Macaulay had a prophet's vision when he warned us that the Huns and Vandals who, if no great reform is made, will destroy the Christian states of Europe, are being bred, not in the wilds of Asia, but in the slums of our great cities.

This problem, then, of our city life must be solved, or our national well-being, if not our existence, is imperilled. The civilisation of which we boast is at stake; and the problem can be solved only as that new spirit of the time, of which I spoke—the spirit of “collectivism,” as it has been called, touched with the fine enthusiasm of humanity and a sense of the brotherhood that links man to man, can be organised and applied with wise, civic statesmanship to comprehend the intertwining elements of that problem. A municipal conscience must be roused that shall impress and possess every member of the city's commonwealth. Citizens of every grade and of every class must unite to support the civic authorities whom they have chosen for the government of the city, and take part with them in the furtherance of its well-being.

To this end I suggest, and even venture to invoke, the formation of a civic league, constituted on a large and civic basis, but inspired surely of the redemptive spirit of the Christian faith, which will take upon itself the glorious burden of these civic responsibilities. In this appeal I but seek to revive the soul of our Saxon freedom, which underlay and inspired our British constitution. The “tithing” and the “hundred” of our first English communities were formed in order that the persons in them might give a frank-pledge for the good conduct and the welfare of one another. And the old English word “borough,” as you know, means that all who lived in it gave the same warrant and security to the King and the State for one another. And yet further, in making this appeal to your city I but ask that in larger and nobler ways it may fulfil what in other cities, both abroad and at home, and in marvellous ways, is being done. Everywhere this movement of civic, collective action for the welfare of the city grows apace, and is becoming one of the illustrious features of our time.

In Germany, more than in any other country, this new spirit has possessed the whole country, and civic patriotism has become in our day the finest moral power of that country. Not only in the housing of the people and the planning of their cities, so as to secure the health of the citizens and the beauty of the city, as Mr. Horsfall has shown us, is this patriotism seen; but also, and even more effectively, in other departments of civic life. But, I would remind you, the first impulse of this great movement came from our own country. The most distinguished jurist of Germany, Dr. Gneist, in his great book on the British Constitution, published in the early part of last century, showed how much of the best and most useful public service of this country was given voluntarily by men who devoted their time and their great ability and business experience to the business of their country. He spoke of our magistrates and our juries, our city councillors and guardians of the poor; and of the number of voluntary associations formed for public objects, sustained not only by the money, but by the willing and disciplined service, of their members. At that time, under two great statesmen, Von Stein and Von Hardenberg, Germany was reorganising herself after the desolation of the Napoleonic wars. Dr. Gneist appealed to Germany to reorganise herself in the spirit which animated the public life of Britain. He thus struck and relit the olden spirit of all the Teutonic races; and Germany responded wisely to the appeal, as we now see to-day. Is it not pleasant, then, to know that there are cities and towns in our own

country which are bringing back from Germany the lessons that were first given to her by us? In Bradford and Halifax, in Edinburgh and Belfast, and elsewhere, civic unions of various types are being formed, and citizens from all classes are rallying to the service of the city. In this movement, upon which such vast issues depend, I pray that this twin-city of Manchester and Salford may take a foremost place, and set an example which other cities and towns may emulate and follow.

In such a civic league as I propose, it seems to me there are three great departments of service to be occupied at once.

A.

The first department of service deals with the problem of poverty—a stupendous problem, which lies at the base of every other, for it cannot be dealt with, the social maladies that fester in the city cannot be healed. It is in the solving of this problem the German cities have done their best and grandest work. The Elberfeld system, which is now so widely known, has spread from city to city throughout the German Empire, and more and more commands the approval of the wisest men and the enthusiasm of the people. In this system citizens of every rank take upon themselves the charge and care of the poor, and their duty is fulfilled with such completeness of organisation and such fidelity of service, that there is no poor man or woman or child needing help that is not visited weekly and that does not receive with discriminating sympathy the succour that is needed. I cannot but hope that the new Commission appointed to revise our Poor Law system will ensure in some effective way (if it be but gradually) the adoption of that humane, and, I may say, perfect system of Poor Law relief.

But the care of the poor in German cities, as it should also be here, does not confine itself to the care of those who are forced to ask for poor-relief; it is the care of that greater multitude in every city, who in deep poverty, and often with much suffering, strive to keep their honest independence, and shun what is for them the horror of the workhouse or the pauper's dole. It is the work of prevention amongst this greater multitude that calls chiefly for the help of a civic league, so that they may be helped in their dire distress through poverty, and saved from the lower depths of pauperism.

In Bradford this work has been done. Following the lines of Elberfeld and other German cities, the Guild of Help has been formed there; the city has been separated into four divisions, and each division sub-divided into ten districts—forty districts in all. Each division has its chairman, and each district its district head; and in each district ten helpers at least associate in the work. In all more than 500 workers have taken part in the work, and are training themselves for it, on the one condition that each helper shall visit each case weekly, and that he shall usually have only one case to visit, and never more than four. Five hundred citizens in Bradford of every class and every grade are thus united and engaged in a blessed, humane, and civic service. The area which is covered by this civic league comprises nearly 300,000 people. For the twin-city of Manchester and Salford, with its 800,000 people, there will need to be 1,200 workers rallied to this service, in 12 divisions and 120 districts.* It is personal service that is given, not money; for, strange to say, in Bradford no relief fund has been formed. The endowed charities of the city, the congregational charities connected with every denomination, the private charities which abound everywhere—these, when known to one another, when organised and wisely administered, suffice for all the need where money is required. Dr. Münsterberg, the greatest authority in the world on the problems of Poor Law relief, has said, “There is no country in the world in which so much is given in charities as in England, yet there is no country where so little good is done with it.” And he has spoken truly.†

* In Halifax, it has been resolved to follow the Elberfeld plan of having 15 helpers to a district, so as to give a stronger body of helpers in each district, and to give their fortnightly meeting greater deliberative weight.

† It may be well to state the number of citizens in German cities that are engaged in the administration of poor relief, and in the larger service of giving counsel and help that will save the poor from pauperism. Berlin, with a population of 1,654,256, has 4,221 Volunteer Helpers (called *Armenpfleger*, or those who care for the poor). Hamburg, with a population of 727,000, has 1,565. Leipzig, with a population of 450,000, has 975. Breslau, with a population of 455,000, has 1,452; and Elberfeld itself, with a population of 150,000, has 518. As my friend Rev. A. Holden Byles says: “The sub-division of labour is so minute that individualisation becomes not only possible, but actual. It therefore creates absolutely new conditions in dealing with poverty.”

APPENDIX No. LXXIX.—*Continued.*

The first need, therefore, in this great problem of our city's poverty is the co-ordination and administration of all these charities so that there be no overlapping—no competition and rivalry which excite the cupidity of the poor, and such a wide and careful investigation of all cases of need that the clamant beggar be not enriched while the more deserving poor remain unknown and unhelpt. And then this great good will also be accomplished. There will be no indiscriminate almsgiving, which does harm alike to the beggar and the giver, when it is known that the money of the charitable will be administered through the league, after careful inquiry, with personal sympathy, and in effective ways, so that there shall be throughout the whole city no case of extreme and urgent need that is not cared for.

Moreover, in dealing with this problem of poverty, it is not chiefly alms that is sought and needed. For the sick and the very old they are needed, and should be given no longer as a dole of alms, but as a true gift of charity, which is love. But for the unemployed, the need is not for money but for work, and this problem of the unemployed, hard as it is, can be solved, and in many places is being solved. The bitter curse that comes from unemployment is not only the gnawing hunger in the house and the maddening torment of

fear for the future; it is also the loss, through disuse, of industrious skill and of the habit of honest work, so that men sink down into the crowd of idle and wastrel loafers who no longer care for work. Now to employ this idle labour profitably, and at the same time to preserve and stimulate among our workmen their industrial habit, their self-reliance, and their love of honest work, is an immediate and urgent problem of to-day. I believe it can be, if not altogether solved, yet solved to a degree that may astonish us. Let the public interest, through the civic league, be aroused; let the thought of the best statesmen of the city be focussed and fixed upon it, and here, as in other countries, much will be done. Supplementary industries will be found for the seasonally unemployed; arrangements can be made by which the older men of our workshops can do the work of a shorter day at lower wage; and in times of great distress through the unemployment of masses of the people, public work can be found that will increase the nation's wealth and give men the honest labour which they seek, even if they only secure it by a frugal wage. What Von Steinbeis has wrought in Württemberg, and Pastor Von Bodelschwing is doing at the present time in Westphalia and Berlin, can be done here in the heart of Lancashire, and the doing of it will be the mission of the civic league.

APPENDIX No. LXXX.

MEMORANDUM ON SOME ECONOMIC ASPECTS AND EFFECTS OF
POOR LAW RELIEF BY MR. A. C. PIGOU, M.A.*Definition.*

1. Much social evil is due to unrestricted propagation among the unfit members of the community, and it is sometimes suggested that the Poor Law should be employed as an agency for combating this evil. The suggestion is of great importance. The present memorandum, however, does not touch this subject, but is confined to a consideration of the Poor Law as an agency for relieving destitute persons.

Destitution, when used to describe the condition of a person as a subject for relief, implies that he is for the time being without material resources appropriate for satisfying such of his physical needs as actually exist or are likely to arise immediately. By physical needs are meant needs that must be satisfied in order to maintain life or to obviate, mitigate, or remove causes likely to endanger life or impair health or bodily fitness for self-support. More briefly, destitute persons are persons lacking some, at least, of the necessities of life or health according to the standard of the time. It is the duty of the Poor Law officers to relieve all these persons, and it is illegal for them to relieve any other persons.

This is the sum of what actual legislation provides. In deciding as to the mode of relief, the Local Government Board, and, subject to their orders, the guardians in their several unions, have a perfectly free hand. There is, thus, scope within the law for various lines of policy. Whatever line is pursued is likely to have considerable effect upon the well-being of the community. It is important to determine, so far as practicable, what effect different policies are likely to produce.

CHAPTER I.

The Poor Law and the Elements of National Well-being.

2. Before any step can be taken in this inquiry, it is necessary to distinguish the principal elements upon which well-being depends. These are:—

(1) The people themselves as ethical personalities.

(2) The direct social and other relations of people with one another, and the satisfactions that result therefrom.

(3) The satisfactions obtained by the people from their economic circumstances.

* It would appear from the Merthyr Tydvil case that opportunity to earn wages by work counts as material resource.

APPENDIX No. LXXX.—*Continued.*

3. The policy pursued by Poor Law administration may be expected to react upon all these elements of well-being.

First, it reacts upon the value of the people as ethical personalities. It does this chiefly by affecting one way or another the qualities commonly known as the "economic virtues." Whether it enhances or diminishes the value of the people depends on the value which various degrees of the economic virtues possess as ends in themselves, apart from their effects. Presumably, some modicum of these qualities is good, but an excess of them is likely to be bad. Up to a point an addition to economic virtue is an addition to human virtue ; after a point, it is an addition to human vice. In any case, whenever the economic virtues are stimulated or discouraged, some effect is produced upon the ethical value of the people.

Secondly, the policy pursued may react upon the direct social and other relations of people with one another and the satisfactions that result therefrom. In regard to old age pensions, for example, some urge that they would weaken the sense of family responsibility, and would thus diminish the sum of good social relations. Others reply that the obligation to burdensome monetary support makes rather for severance than for sympathy :—

"Once let it become possible [as it would be, the argument runs, under the pension system] for the poor, as it is for the middle-class and the rich, to soothe and comfort the declining years of their parents by those small gifts which cost so little and mean so much, and we may have at least a chance of awakening those filial feelings which go far to humanise and elevate personal character."*

Thirdly, the policy pursued reacts upon the satisfactions obtained by people from their economic circumstances, a class of reaction of which it is not necessary to offer illustrations.

To determine accurately the influence of any line of policy upon well-being as a whole, it would be necessary to conduct a detailed investigation under each of the above three heads. In some cases all three kinds of effect would be additions to well-being ; in some, all would be detriments ; in some the effect under one head would be an addition, that under another a detriment. A quantitative estimate of the amount of each of them would need to be made, and the aggregate effect obtained by combining them arithmetically with due regard for signs. If this were done, the merits of all practicable lines of policy could be compared by reference to the largeness of their aggregate positive, or the smallness of their aggregate negative, effects upon well-being.

4. In practice, estimates of the kind suggested cannot be made, because there are no means of measuring the effects that fall under the first and second heads distinguished above. Hence it is seldom possible to prove in a rigid manner that one plausible line of policy is superior to another. It may be possible, however, to reach a provisional decision. The effects of different policies upon the satisfactions obtained by people from their economic circumstances, the economic effects in short, *can* be roughly compared. The result of this partial comparison *need* not be the one which would emerge if a complete comparison were practicable. But unknown facts are as likely to confirm as to conflict with known facts. Hence, if one policy is *certainly* superior to another in economic effect, it is *probably* superior to it on the whole ; and, if one policy is *probably* superior to another in economic effect, it is probably, in a lower measure of probability, superior to it on the whole. For this reason, comparisons of the economic effect of different policies, though incomplete and one-sided, may still be valuable. The purpose of this memorandum is to attempt a formulation of such comparisons.

CHAPTER II.

The Poor Law and Private Charity.

5. The Poor Law is an agency for relieving destitute persons. It is not, however, the only agency that relieves such persons. Consequently, any line of policy pursued by it affects the satisfactions obtained by people from their economic circumstances in two ways : (1) indirectly through its influence on the conduct of other agencies ; and (2) directly.

6. It is a commonplace that indiscriminate alms-giving is immensely injurious to economic well-being. The policy of guardians may influence the extent to which this practice prevails. If the public are distrustful of the Poor Law and believe it to be unduly severe, they will endeavour to save from it, without investigation, anyone who comes to them with a persuasive tale. The case of vagrants illustrates this point. At present all vagrants

* Sidney Webb, "The Reform of the Poor Law," *Contemporary Review*, July, 1890, p. 106.

APPENDIX No. LXXX.—*Continued.*

are treated alike by the Poor Law. It is possible, therefore, that a deserving man tramping in search of work may be subjected to hard treatment in the casual ward. Charitable folk, lest one just person suffer this indignity, indiscriminately relieve ninety and nine unjust. If, in accordance with the strong recommendation of the Vagrancy Committee, the Poor Law were, by way-tickets or some other device, to discriminate between these two classes and to treat the genuine work-seeker with lenience, a plausible excuse for indiscriminate alms-giving would be removed. More generally, if the Poor Law conforms to public opinion, it can mitigate activities on the part of private charity that lead to immense injury. It is thus a matter for deliberation whether guardians in particular cases should adopt a standard of administration inadequate to their ideal in respect of direct effects, in order to secure indirectly a more than equivalent advantage.

7. The above is not the only way in which the Poor Law and private charity are related. Generally speaking, they are, in a measure, rivals. That is to say, a contraction in any class of relief given through the Poor Law is likely to be accompanied by an expansion in the amount of that class of relief given by charity, and *vice versa*. It is probable, for instance, that the principal effect of the refusal of out-relief to the old in any union would be a transfer of the maintenance of most of these people to private sources,* and the principal effect of a more lenient policy a transfer *from* private sources. In some degree this relation between public and private charity is natural and inevitable. If fewer people are helped by the Poor Law, more are likely to *ask* for help from charity, and, if more ask for it, more are likely to obtain it. But, over and above this, the relation is sometimes strengthened, in strict unions, by special efforts on the part of the guardians themselves to get hard cases looked after by charity † In this way the forces governing the “stock” of charity are directly modified. Not only is the demand enhanced; but the supply corresponding to any given condition of demand is also enhanced. Two causes are at work to expand the amount of private relief. The result is that, in general, a given contraction or expansion in the number of *legal* paupers, consequent upon a change in the policy of the guardians, involves a very much smaller change in the number of *actual* paupers in the sense of persons who are not self-supporting. This consideration is especially important in regard to the relief of serious illness. Poor Law infirmaries and charitable hospitals are almost perfect substitutes; an expansion of the former probably means an almost equivalent contraction of the latter, and *vice versa*.

8. When the relation between the two agencies is one of perfect substitution, the effect upon economic well-being of the absorption of new ground by the Poor Law depends on two questions: (1) whether a private agency or public officials are likely to prove the more efficient administrators of the class of relief in question; and (2) whether a given sum can be raised with less economic disadvantage by voluntary contributions or by a compulsory levy.

As administrators of relief, the guardians hold the field in the rural districts. In towns, however, it is proper to compare them with Charity Organisation Society Committees. It is recognised that they have advantages over these bodies in respect of cases where the need for relief can be ascertained by a simple objective test and where there is no question of adapting the relief to the special circumstances of individuals. But it is also recognised, in accordance with the views that will be advanced in subsequent sections, that, in any well thought-out system for dealing with destitution, the rôle of quasi-automatic arrangements for relief is much smaller than used to be supposed. The field to which the guardians and Charity Organisation Society Committee may be regarded as rival claimants is, therefore, at the present time large. In respect of it, the following arguments are current. First it is urged that the guardians, as controlling other people's money, and particularly as administering Government grants locally, are apt to be lax. It is replied that the executive committee of a Charity Organisation Society is also chiefly engaged in the expenditure of other people's money. Further, if the guardians are at a disadvantage on the side of laxity they are, on the other hand, wholly unhampered by the danger of inadequate funds. Secondly, it is urged that the guardians' work is too heavy to allow them to pay adequate attention to individual cases. It is replied: (a) that an adequate staff of relieving officers can be obtained without difficulty by a little expenditure; and (b) that the experience of the working classes themselves—an experience the value of which has been made manifest at Elberfeld‡—can be enlisted in the service of administration more easily on a public board than on a private committee. Thirdly, it is urged that the poor are apt to be less moderate in their claims on private charity than on the rates. It is replied that,

† Cf. Report of the Royal Commission on the Aged Poor, p. 27.

‡ Cf. Henderson, *Modern Methods of Charity*, p. 7.

APPENDIX No. LXXX.—*Continued.*

when the private charity is "organised," the difference, *other things being equal*, is not likely to be appreciable. I am not prepared to balance these arguments either in general or in any particular case. I may be permitted to refer the Commission to a detailed scheme for combining the activities of boards of guardians and Charity Organisation Society Committees, which Professor Marshall submitted to the Royal Commission on the Aged Poor.*

9. The question whether a given sum can be raised more economically by voluntary or by compulsory arrangements is susceptible of a more definite answer. If the spectacle of others' need stimulates a *desire* in anyone to give money to a public object, a new motive is afforded him towards energy in earning money. But, if the Government threatens to *abstract* a proportion of his income for such an object, his motive towards energy is reduced. In the former case a new altruistic force is called into operation; in the latter, old egoistic forces are merely driven to seek new channels. The result is that capital and business power tend to be driven abroad, the national dividend is diminished in amount, and the proportionate share available for labour is also diminished. Following this line of thought, Professor Carver has well observed:—

"Though it would have disastrous effects if the State should attempt to enforce universal benevolence, yet only beneficent results could follow if all men were to become wisely benevolent."

For these reasons it is to be expected that the effects of raising a given sum by voluntary contributions would, in general, be less injurious than those of raising the same sum by a compulsory levy.

This conclusion depends, of course, upon the assumption that "voluntary charity" is really voluntary and is not compelled by public opinion. So far as that assumption fails, voluntary contributions have no advantage over rates. But there is no reason to doubt that the assumption is valid in respect of a considerable part of voluntary charity, as it exists in England to-day.

10. The results obtained in the preceding section have a strictly limited bearing upon practice. There is nothing in the nature of things to make it necessary that money raised voluntarily should be administered by a voluntary agency, or that money raised by a rate should be administered by a public agency. Indeed, Professor Marshall's scheme involves what is, in effect, a different arrangement. There are, however, obvious practical difficulties in the way, either of handing over public money to private persons, or of collecting private money for the everyday use of a public board possessed of taxing power. These difficulties are, perhaps, unlikely to be overcome in the near future. For the present, therefore, the conclusion that voluntary contributions are economically superior to rates constitutes an argument in favour of voluntary administrative bodies.

11. In general, however, public and private relief are not perfect substitutes. An expansion or contraction in the relief afforded by the Poor Law, while it does not, as a rule, involve an equal expansion or contraction in the aggregate amount of relief, does involve *some* expansion or contraction. Consequently, the direct effects of Poor Law policy, though mitigated in amount, are not altered in character by the conduct of voluntary charitable agencies. A provisional comparison of different policies can, therefore, be based on an investigation restricted to direct effects. The investigation that follows is of that character.

CHAPTER III.

The Limitations of Statistical Reasoning.

12. It is often supposed that a good measure of the economic prosperity of any group of persons is afforded by the amount of legal pauperism that prevails among them. Upon the basis of this assumption it is inferred that the relative merits of different lines of Poor Law policy are determined when the relative amounts of pauperism that might be expected to prevail under them are known. It is observed that, in the various unions of this country, various lines of policy are being and have been pursued, and it is proposed by statistical

* Cf. also *Economic Journal*, 1892, p. 373, *seq.*

APPENDIX No. LXXX.—*Continued.*

reasoning to demonstrate *à posteriori* that one line of policy has better economic effect than another. This class of argument is capable of large application, but hitherto it has been worked out most completely with reference to the controversy between in-door and outdoor relief. I submit to the Commission that the practical importance of reasoning of this order has been exaggerated, and that, by it, little that is significant can be proved.

Anyone seeking, by means of statistics, to establish a causal relation between pauperism and Poor Law policy has, at the outset, to decide upon some quantitative measure of pauperism. Two measures are practicable. Of these, the better, according to one opinion, is the number of persons relieved during a year, according to another the number relieved on some representative day in the year. In comparing the effects of in-door and out-door relief, the decision between these opinions is of fundamental importance, because it has been found that the ratio of the year-count to the day-count is considerably larger for in-paupers than for out-paupers.* The correct solution, in my opinion, is that given by Mr. Edwin Cannan :—

“The truest index of the amount of pauperism in a particular year would be the number of what, on the analogy of foot-pounds, we might call the number of “day-paupers,” *i.e.*, the number of one-day’s relief given in the course of the year. If in 1890 A. is relieved 300 days; B. sixty-five days, and C. 365 days; while in 1891 A. is relieved 150 days; B., 100 days; C. ninety days; and D. twenty-five days; it would certainly be truer to say that the pauperism of 1890 was double that of 1891, than to say that it was only three-quarters of that of 1891, as it would be if measured by the number of individuals relieved in the year. We cannot, as it happens, get the number of day-paupers for 1891 and 1890 directly, but by taking a fairly representative day in 1890 and a fairly representative day in 1891 (not necessarily the same calendar day), we practically get the number of day-paupers for the two years divided by 365, and this is, of course, as good as the number itself.”†

This result has been combated upon the ground that the day-count fails to indicate the greater extent to which the “taint of pauperism” is diffused in in-unions. But the economic effects of the “taint” in one year is simply an addition to the number of “day-paupers” in Mr. Cannan’s sense in subsequent years, and, therefore, *is* in the end allowed for in the day-count.‡ This objection therefore fails. A correct *absolute* measure of pauperism *is* given by a day-count. Obviously, therefore, a correct *comparative* measure as between different districts is given by the percentage of the population who are found to be paupers by this count. The next step is to find a measure of Poor Law policy. For that purpose Mr. Yule has made use of the ratio of the number of out-paupers to one in-pauper. Subjecting the statistical data to mathematical analysis, he found that, for the unions of England and Wales, in 1871, and more markedly in 1891, there was a fairly high co-efficient of correlation between the ratio of the mean number of out-paupers to one in-pauper and the percentage of the population in the district who are paupers.§ In a subsequent paper he showed that marked correlation also existed in *England* from 1871 to 1891 between *changes* in the out-relief ratio and *changes* in the percentage of pauperism.|| He thus established the proposition that between the magnitude of the out-relief ratio and the pauperism percentage a *causal relation* has subsisted in this country in recent times. By the method of triple correlation he endeavoured to eliminate the objection that this relation is merely an indirect one, arising out of the fact that the out-relief ratio and the pauperism percentage in any district are both causally dependent on such things as the number of old people in the district, the population, or the poverty of the district. As a result of these investigations he concluded :—

“It seems impossible to attribute the greater part, at all events, of the observed correlation between changes in pauperism and changes in out-relief to anything but a direct influence of change of policy on change of pauperism, the change in policy not being due to any external causes such as growth of population or economic changes.”¶

* A partial explanation of this fact may be that a larger proportion of the old, who are, of course, likely to be relieved for long periods, are looked after by private charity in in-unions than in out-unions. The suggestion that, in towns, where in-door relief is more extensively given, the same man is likely to be relieved in several unions during the year and so to be counted twice over is weakened by the rules about settlement.

† *Economic Journal*, 1892, p. 254.

‡ Of course, the evil-in-itself of even for a moment depending on the Poor Law is not thus allowed for. But the opinion that this evil is very important is perhaps due to the failure of popular thought to distinguish sufficiently between two senses of “dependence.” Dependence, when it means a cringing character, is certainly an evil-in-itself, but, when it means merely receiving money, whether from the Poor Law or from anybody else, it is nothing of the kind; and a man may come into contact with the Poor Law without being defiled in character.

§ *Economic Journal*, 1895, p. 625.

|| *Statistical Journal*, 1899.

¶ *Loc. cit.*, p. 277.

APPENDIX No. LXXX.—*Continued.*

It is sometimes supposed that investigations of this character have great practical importance, because they go to prove that a more extended use of out-door relief, such as is at present often advocated, would have injurious results. In my opinion statistical reasoning cannot be rightly used for this purpose.

The fundamental objection to it is that some of the most important influences at work are of a kind which cannot be measured quantitatively, and cannot, therefore, be brought within the jurisdiction of statistical machinery, however elaborate. It is not merely that other forces beyond those taken into account *may* be operating in a way that would tend to reverse the conclusion *prima facie* suggested by the statistics. If that were all, this conclusion would merely be rendered less certain; it would remain a probable conclusion. But, among the non-quantitative facts of the situation is one which obviously accounts, at all events for a part of the correlation on which the conclusion depends. It is well known that, during recent years, those unions in which out-relief has been restricted have, on the whole, enjoyed a general administration much superior to that of the other unions. For this circumstance there are several reasons. It is partly due to the fact that the chief part of authoritative Poor Law literature is imbued with strict principles, so that the more conscientious and painstaking guardians, those who are ready to take trouble, and, incidentally, the trouble of reading about the Poor Law, are apt to be imbued with this spirit. It is partly due also to the fact that guardians in strict unions often look upon themselves somewhat in the light of pioneers, the result of whose policy is to serve as an object-lesson to others. The effects of this attitude are well described by Sir Hugh Owen in his evidence before the Royal Commission on the Aged Poor. Speaking of strict administration, he said:—

“The cases are not numerous, but the results are very remarkable. Usually it has been found that those results have been mainly secured by the action of one man. Someone of considerable firmness, who is very strongly impressed with the necessity of maintaining as far as possible the independence of the poor, becomes satisfied that, in the interests of the poor themselves, out-door relief should be checked. He regards the saving of expenditure as a very minor consideration. He throws himself into the work, heart and soul; he feels that his system is on its trial, and he endeavours to secure that there shall be as few cases as possible of apparent hardship. All hard cases he will get taken over by charity, and he will devise all the means he can for not infringing his rule, and yet giving the relief that is necessary.”

And later on he says:—

“It has usually happened that there has been a certain minority opposed to the action of the majority of the guardians in refusing out-door relief, and the working of the system has been carefully watched with every desire to find out cases of hardship, if they occurred. But those who have been strongly in favour of strict administration have made every possible effort to avoid such cases. The system has been, as it were, upon its trial in these unions, and very special and continuous efforts are made to prevent cases of hardship.” *

In view of this circumstance, what more natural than to suggest that the observed correlation between the out-relief ratio and the pauperism percentage is due, not to any direct causal connection, but to the fact that both have been caused by the character of the general administration? If general administration could be represented as a quantitative fact, the method of triple correlation could be invoked to determine whether this suggestion is correct. Since, however, it cannot be so represented, the result remains in suspense. It can be proved—what indeed scarcely required proof—that out-relief tends to augment pauperism, when it is coupled with relatively lax general administration. But, on the really debateable question whether carefully administered out-relief would be better or worse in this respect than carefully administered in-relief, refinements of statistical reasoning can throw no light.

CHAPTER IV.

Criterion for Determining the Advantages of Various Poor Law Policies.

13. The class of argument considered in the preceding chapter must now be confronted with a more fundamental difficulty. The effect of Poor Law policy upon the amount of legal pauperism could not, in any case, be used as a measure of its effect upon economic well-being. If this could be done, any proposal to bring public relief within the reach of

* Report of the Royal Commission on the Aged Poor, p. 27.

APPENDIX No. LXXX.—*Continued.*

a new class, anything, for instance, in the nature of old-age pensions or relief to school children administered by the guardians, would stand condemned not by argument but by definition. This result is itself sufficient to prove my point. What, then, is the proper criterion to employ ?

14. Economic well-being depends upon two things, the size of the national dividend of goods and services annually available for consumption by the community and the manner in which this dividend is distributed among the different members of the community. In estimating the aggregate economic influence of any Poor Law system, we have, therefore to examine its effects (a) upon the size of the national dividend, and (b) upon its distribution.

15. The magnitude of both these effects partially depends upon the quantity of money devoted to poor relief and the methods of taxation by which that money is collected. That this is the case on the side of distribution is obvious, since practically all poor relief involves a direct transference of money from the richer to the poorer classes. It is also easily seen to be the case on the side of production, since the compulsory collection of this money through ordinary taxation, by diminishing the probable reward of productive energy, is almost certain to lessen the output of that energy, and hence the magnitude of the national dividend. In certain cases, however, a comparison between rival Poor Law policies can be conducted without reference to these considerations. For divergent policies do not necessarily involve widely divergent aggregate expenditures. Rather, Unions which cut down expenditure in one direction are often found to expand it in others. Those, for instance, which rigidly restrict out-relief are apt both to give bigger allowances to such out-paupers as continue to be relieved in their homes, and to devote large sums towards provision for the sick. In view of this circumstance, I shall provisionally neglect, for the purpose of comparing various policies, the effect of differences *in the amount of money* collected under them for transference from the rich to the poor. I shall concentrate attention upon the way in which various *methods of administering this money* react upon the size and distribution of the national dividend.

16. Now, when we suppose the amount of money with which the Poor Law has to deal to be about the same under one policy as under another, it follows that the *direct* effect produced upon distribution must be about the same. For purposes of comparison, therefore, we have only to take account of indirect effects, that is to say, of changes in distribution other than those involved in the actual transference of the money that passes through the guardians' hands. The question which I now wish to raise is this: Under what circumstances is a consideration of differences in these indirect effects upon distribution likely to reverse any practical conclusions derived from a consideration of differences in effect on the magnitude of the national dividend; or, to put it otherwise, under what circumstances do effects on the magnitude of the national dividend afford by themselves an adequate criterion of the comparative merits of different policies ?

17. Before this question can be satisfactorily discussed, it is necessary to examine a popular argument by which the issue is apt to be confused. In my opinion the only way that Poor Law policy can affect distribution indirectly in any appreciable degree is through its operation upon the quantity of the various agents of production seeking employment. It is widely believed, however, that the grant of relief to persons engaged in industry, *apart altogether from its effect on the quantity of work which they or others are induced to do*, necessarily exercises a marked depressing influence upon wages. This view appears to me erroneous.

The case which those who advocate it chiefly contemplate is that of old and infirm persons, unable to earn enough for subsistence, but contriving with the help of the Poor Law—the effect is the same if the help comes from relatives, friends, or organised private charity—to continue in a measure active soldiers of industry. The “subsidy,” it is said, brings it about that these persons work for less than the worth of their work to employers, thus underbidding independent workpeople and indirectly causing the market rate of wages to fall. This argument is chiefly based upon what is called experience.

Within this experience, however, it is necessary to distinguish sharply between fact and inference. It is a fact that many persons in receipt of a Poor Law subsidy are at present earning from private employers considerably less than the ordinary wage per hour current for the class of work on which they are engaged. It is also a fact, given

APPENDIX No. LXXX.—*Continued.*

in evidence before the 1834 Commission, that the refusal of guardians to grant relief in aid of wages “soon had the effect of making the farmer pay his labourers fairly.”* But it is an inference from these facts that, where a Poor Law subsidy exists, workpeople accept a wage lower than the worth of their work to their employers. There is an alternative explanation. In the case of old and infirm persons, may it not be that the low wage per hour is due to the circumstance that the work they can do in an hour is poor in quality or little in quantity? In the case of the old Poor Law, may it not be that the system of differential relief, so long as it prevailed, caused people to work slackly and badly, that when it was abolished they worked harder, and that this was the reason of the alteration in their wages? In sum, the facts are fully explicable without the theory that relieved persons work for less than they are worth to their employers, and thereby exercise a depressing influence upon wages. Consequently, the theory cannot be proved from experience.

Another line of argument is, however, open. It is a fact that a Poor Law subsidy enables a person to accept lower wages than it would be possible for him to accept otherwise without starvation or serious discomfort. From this fact it is inferred that, being enabled to do this, he does actually do it.

Two justifications of the inference may be offered. The first starts from the side of the employer. Thus, Mr. Davy, referring to certain industries in the Poplar Union, which are thought to yield less than a subsistence wage, writes :—

“If no outdoor relief were given, it seems evident that the employers would have to pay more wages and give more regular work.”†

All that is really evident, however, is that, if no out-door relief were given and *if the industries were continued in Poplar*, there would have to be a higher wage. I suggest that the employers are already paying all that those workpeople are worth to them, and that, if relief were stopped, the industries—very likely to the great advantage of the community—would not continue in Poplar.

The second justification is the *à priori* assertion that, if a person is *enabled* to work for less, he will be *willing* to work for less. In certain special cases, no doubt, when a workman, in receipt of a subsidy insufficient to enable him to live up to his accustomed standard of life, is confronted by an employer occupying towards him the position of a monopolist, this reasoning possesses force. In general, however, where competition exists among employers it is quite invalid. A person who, by saving in the past, has become possessed of a competence is *enabled* to work for less than one who has not. A millionaire is *enabled* to work for less even than a relieved pauper. So far from ability making it probable that a man will strike a worse bargain in the higgling of the market, it is likely in general to have the opposite effect.

The idea, therefore, that the concession of a subsidy to persons who would work to the same extent if there were no subsidy exerts a marked depressing effect upon the wages of independent workpeople cannot be sustained.

18. Though, however, Poor Law systems cannot affect distribution in the way that the foregoing popular argument contemplates, there is a way in which they can and do affect it. All practicable systems are sure to alter the quantity of one or more of the agents of production seeking employment. So far as they do this, they necessarily react upon distribution to some extent. The problem is to measure from the point of view of general welfare the importance of this reaction as compared with that of the change produced in the size of the national dividend.

19. The agent of production whose quantity the Poor Law is likely to affect most is ordinary manual work. It may make its influence felt either *mediately* through inducements or *immediately* through direct orders. I shall consider first changes brought about immediately. The kernel of the problem is: Are significant effects upon distribution involved if the Poor Law authorities forbid any class of persons (of course, in practice the only persons accessible to their control are relieved persons) to compete in the labour

* Evidence of Mr. Garrett of Downham Market, Norfolk, quoted in the *Report*, p. 144.

† [Cd. 3240] p. 9.

APPENDIX No. LXXX.—*Continued.*

market *? More concretely, would the real wages of independent workpeople be markedly bettered by the provisions embodied in certain two pension schemes submitted to the Royal Commission on the Aged Poor, one of which contained, as a condition for the receipt of a pension, "the abstention from all work of pensioners, male and female," while the other would have awarded pensions to everyone over sixty and prohibited work beyond that age? †

20. Some popular writers give to this problem a very simple solution. If one man, they say, does a piece of work, the amount of work open to other people is correspondingly diminished, the earnings of all the workers taken together are unaltered, and the new workpeople who have been introduced simply take over what would otherwise be given to those already employed. From the standpoint of a period too short to permit of industry adapting itself to changes, this conception is adequate enough. As an explanation of the *ultimate* effect of the introduction of new workpeople it is, however, erroneous. It depends, as Professor Marshall has pointed out, upon the assumption that there is a fund of work to be done whose amount is fixed independently of the work that actually is done. In fact, however, the work fund is not thus fixed. "On the contrary, the demand for work comes from the national dividend, that is, it comes from work; the less work there is of one kind the less demand there is for work of other kinds."‡ If one person does work, by that very fact he creates opportunities for work and earnings for other people. The idea that he does the opposite is at variance with the whole drift of modern economic science.

21. The correct solution of the problem is, I think, as follows. If the amount forthcoming of any particular kind of work is increased, when sufficient time has been allowed for adjustment, the aggregate amount of the national dividend will be increased, but the real wages per unit of the particular kind of work in question will be diminished. Speaking very broadly, this proposition can be extended from a particular kind of work to the work done by the labouring classes as a whole. An addition to the amount of this will increase the national dividend, but it will diminish real wages per unit of work, and therefore, also, if no change has come about in individual efficiency, real wages per head.

In the abstract it is easy to conceive a world in which the percentage fall in the real wages of independent workpeople brought about in this way would be large relatively to the percentage rise in the number of people at work. Under the actual conditions prevailing in England at the present time there is, however, reason to believe that it would be relatively very small indeed. There are three grounds for this conclusion. First, the wants of the people who consume the products of labour are exceedingly elastic; or, in other words, they would be willing with work of their own to buy the material and immaterial products of a greater quantity of labour at almost as high a real price per unit as they give for the products of a smaller quantity. Secondly, over a fairly wide field of industry labour is able to act as a substitute for capital, and this power makes the fall in real wages which comes about in consequence of an increase in quantity smaller than it would otherwise have been. Lastly, capital is exceedingly mobile between countries. Consequently, if the real wages of labour in England begin to fall, foreign capital is tempted to come over and take advantage of its cheapness. This is tantamount to an increase in the demand for labour here, and greatly reduces the magnitude of any fall that may occur in its price. In view of these considerations it is to be expected that the percentage diminution in real wages per unit of work, consequent upon any given

* Some writers consider that, if Workhouses or Labour Colonies are set up as "entirely self-supporting communities subsisting by their own work, their inhabitants are not competing in the labour market." (Evidence of Mr. Torr, quoted by the Vagrancy Committee Report, p. 83.) This, however, appears to be incorrect. In the long run their work does involve competition of this order, because all of it *could* be done by independent workmen. The "employment available" as the phrase is, for these workmen, is diminished just as effectively when the inhabitants of a Labour Colony erect their own buildings, as it would be if they erected somebody else's.

† The above schemes were advocated by Mr. Hardy and Mr. Lansbury respectively (*Report*, p. 72). It should be noted that the cessation of work by pensioners may be advocated from a more special point of view. The condition of the pension may be declining strength. This cannot be tested directly, but, if abstinence from work were made a condition for receiving, say, a 4s. pension, this condition would ensure that recipients were really incapable of earning much more than 4s. regularly. Hence, though it abolished work on the part of all persons below this line, it might nevertheless be desirable as a means of preventing many other persons from obtaining the pensions, and, in consequence of obtaining or expecting them, from slackening their industry. This policy seems to be pursued by certain friendly societies (Royal Commission on the Aged Poor, Minutes of Evidence, Q. 10880).

‡ *Principles of Economics*, p. 783.

APPENDIX No. LXXX.—*Continued.*

percentage increase in the quantity of work offered, is likely to be very small relatively to this latter percentage. Hence, the aggregate addition to the real earnings enjoyed by the new workpeople (or, if, as may be done in labour colonies, the proceeds of their labour are taken by the management as a contribution towards expenses, by the taxpayers) will be much greater than the aggregate diminution in the real earnings of the original workpeople *: there will also be a small gain to owners of capital. Hence, as regards Poor Law policies that operate *immediately* upon the quantity of work forthcoming, the effects produced upon economic welfare through changes in the magnitude of the national dividend are likely in general to be much more important than those produced through changes in its distribution.

As regards Poor Law systems that operate upon the quantity of work *mediately* through inducements, the same reasoning is in general applicable. The case of Poor Law systems of the pattern of that prevailing before 1834, under which an obvious and heavy premium was put upon large families, is indeed somewhat special. The large expansion of proletarian population, which systems of that kind threaten directly to promote, may under some conditions produce serious distributional consequences. Poor Law arrangements of this character, are, however, scarcely a present danger. Under any system that is at all likely to be introduced, large direct effects upon population need not be anticipated. We may conclude, therefore, that in this group of cases, as in that discussed in the preceding paragraph, the effect upon economic welfare consequent upon changes induced in distribution is likely to be relatively unimportant.

22. Hence, for broad purposes of approximate comparison, except in cases where special cause can be shown to the contrary, we are entitled to regard the effects that are likely to be produced upon the *magnitude* of the national dividend as constituting by themselves an adequate criterion for determining the relative merits of rival systems of Poor Law relief.

CHAPTER V.

The Economic effect of various lines of Poor Law policy.

23. I shall now employ the test thus determined upon for constructive ends. It has been shown (in the first chapter) that, to *justify* any such test, certain assumptions must be made which are not always in accordance with the facts. To render the test *applicable in practice*, yet another assumption of like character is required. This assumption is that the contribution in any year which a poor person makes to the national dividend by work can be measured by his earnings, and the contribution in any year, which the capital he has saved makes to it by the interest—if the investment is in his own skill or strength the interest is nominally wages—which this capital yields him. When this assumption is realised, to affect the provision of aggregate income by a defined amount is to affect the national dividend by the same amount. In reality, however, some contributions are made to the dividend that are not represented in income. All work put forth by a mother in the care of her children is such a contribution. So is the service of all saving which a man invests in the education or training of his children. These contributions are very large and important. The essential point, however, is not their magnitude, but the fact that they are in a measure alternative to other contributions. If, for instance, the Poor Law encourages a widow to earn more wages by offering some kind of bounty, the extra wages she earns mean a much less proportionate addition to the dividend, because a large part of the work she does for them is merely *diverted* from the non-wage-yielding occupation of tending her child. In the same way if the conditions of a pension scheme stimulate saving for old age, the addition to this class of saving in part represents a mere transference from one kind of investment (the training of children) to another kind. The general result of this circumstance is that aggregate contributions to the dividend are affected by Poor Law policy to a smaller extent than the aggregate incomes with which the poor provide themselves. Since, however, they are almost always affected in the same sense, they can often be treated as equivalent without injury to the argument. In what follows I propose, except when special reason to the contrary exists, provisionally to treat them in this way.

* In the case of pensions, since all workpeople are potential pensioners, it may be plausibly argued that, from a long period point of view, even the independent workpeople are interested in the earnings of independent workpeople *plus* pensioners rather than in those of independent workpeople alone.

APPENDIX No. LXXX.—*Continued.*

24. The poor are liable to fall into difficulties : (1) through lack of work when healthy and able-bodied ; (2) through slight sickness or accident ; (3) through grave sickness or accident ; (4) through impotency consequent upon disablement or old age ; (5) through impotency consequent upon tender years. Any system of poor relief to these persons acts upon the dividend in two ways. It affects it :

(1) Indirectly through the belief that help will be forthcoming in certain eventualities, which it implants in persons who regard themselves as potential recipients of help, whether they have actually received it or no :

(2) Directly through the influence it exerts on the capacity and character of the persons who are in fact helped.

These distinctions should be borne in mind throughout the argument of the following chapters.

CHAPTER VI.

The Minimum Guarantee System of Poor Relief.

25. The simplest system of Poor Law policy is that under which each person in any of the categories is guaranteed by the State a certain minimum condition of life, irrespective of his income, or of any contribution not represented in income that he may make to the national dividend. For practical reasons it is obvious that the minimum guaranteed to the different categories must be different. This system will now be examined.

26. The effects of the knowledge that the system exists have two sides. First, it is necessary to inquire how far the *differences* in the minima assigned to the different categories of poor make people pass from one category to another, and thus *indirectly* affect the national dividend ; secondly, how far the existence of a guaranteed minimum in any category affects the dividend directly.

In general, the dictates of humanity ensure that higher minima are guaranteed to the more helpless than to the less helpless categories of poor. To pass into a category with a higher minimum means, therefore, to qualify for greater helplessness and hence in general to contribute less towards the dividend. If, therefore, differences in the minima can induce the migration of many persons from one category to another, injury is generally inflicted on the dividend. *Prima facie*, there would seem to be little danger of voluntary migration between any of the objective categories that the administration of our Poor Law recognizes. A man cannot increase his age ; he will not become sick on purpose ; he will not commit suicide or desert his wife to obtain for her a Poor Law allowance. But the matter is not really so simple as this. Though the magnitude of the guaranteed minimum may be nominally conditional upon the *occurrence* of a physical fact, it is really conditional upon the *appearance* of this fact ; and there is danger that the appearance may be voluntarily induced. It is easy for a woman, in collusion with her husband, to pretend that he has deserted her, or for a man to falsify his age or to pretend that he is ill. He may be tempted to do this by the prospect of being placed in one of the categories of poor receiving the higher minima, and, if he yields to the temptation, he is likely to injure the national dividend to the same extent as he would do if he were really disabled from work by illness or old age. It is to be supposed, therefore, that the differences between the various minima are indirectly responsible for some injury to the dividend though, under careful administration, that injury need not be large.

27. The effect of the existence of a guaranteed minimum within any category is simple. The system is a particular case of differential relief in favour of small earnings. Such relief is often given and always with the same effect. It is given when, the less a person earns in his occupation or district, the more the Poor Law provides for him. The almost certain consequence is that people do *less work* than they would have done apart from the relief. This happened regularly under the old Poor Law. It has been suggested that it also happened recently under the lax system prevalent at Poplar : " Some of the women would not work more than one or two days a week, trusting to the rates for the rest of their maintenance."*

* Mr. Davy's *Report*, p. 10.

APPENDIX No. LXXX.—*Continued.*

Differential relief is also given when, the less well-paid the occupation or district that a person affects, the more the Poor Law provides for him. The almost certain consequence is that fewer persons press upward from worse to better paid occupations and districts, with the result that they do *less valuable work* than they would have done apart from the relief.* This happens whenever relief works are started for the benefit of the unemployed, and wages are paid in excess of the market value of the work done. It happened when doles of out-relief were given to the old hand-loom weavers during the period when their industry was decaying. It happens when out-relief is afforded to young women in the slack season of their trades in London with a view to keeping them together till the good seasons come round again.

In such cases the underlying principle is the same for all forms of differentiation; the real contribution of valuable service which the persons affected make to the national dividend is diminished. When, however, the differentiation takes the form of a guaranteed minimum to any category of poor, its depressing effect is peculiarly great. All those who think that, should they come into this category, their condition of life in independence will fall below the minimum accorded to paupers, will be tempted to make no provision for themselves. If, for instance, a man thinks he might manage to save £150 by the time he is sixty-five, but knows that, if he saves nothing at all, the Poor Law will make an equally good provision for him, the temptation not to save will be very strong.† Many persons are certain to yield to it. Apart then from such contribution as the guardians can compel them to make by labour while actually in receipt of relief—and the value of this is in general exceedingly small—the effect of the law is to cut off from the national dividend the whole of the contribution which, if no law had existed, these persons would have made with a view to protecting themselves from the contingency in respect of which the minimum is guaranteed.

The extent of the injury to the dividend depends upon the extent of the contribution thus destroyed. This depends upon the magnitude of the guaranteed minimum in relation to the number of persons who, in the absence of any law, would have been likely to provide something less than the minimum, and to the amount of provision which a typical representative of these persons would have been likely to make.

28. The 1834 Commissioners, discussing the category of able-bodied paupers, laid it down that their "situation on the whole should not be made really or apparently so eligible as the situation of the independent labourer of the lowest class," ‡ the term independent labourer of the lowest class being used somewhat ambiguously to signify the ordinary unskilled labourer. When the Commissioners wrote, this principle was exceedingly important because unskilled labourers were very numerous, and a typical member of the class was accustomed, when able-bodied, to make a considerable contribution to the dividend. The principle is not, however, either sacred or eternal, and it is necessary to guard against exaggerated applications of it that are often made in modern Poor Law literature.

29. First, it is sometimes thought that a mere reference to the principle is sufficient at the present time to condemn any objective treatment of the able-bodied poor superior to that which the 1834 Commissioners thought themselves justified in recommending. This is not the case. To begin with, the importance of the principle itself has diminished since that time. Economic progress has altered the distribution of population in favour of the more skilled and better paid occupations, and unskilled labourers are relatively less numerous than they were. Consequently, to make the guaranteed minimum superior to the situation enjoyed by these labourers would not now inflict so large a proportionate injury on the national dividend as it did seventy years ago. Though, however, I am anxious to say this, I agree that the principle in respect of the able-bodied is still of considerable importance and ought not to be violated. The practically significant consideration is that, since the situation of the unskilled labourer itself varies in different districts

* Furthermore, the value of a given amount of work by any other persons who may remain in the occupation or district is temporarily lessened by the fact that this particular class of work or work in this particular district has been rendered relatively redundant. This consideration slightly strengthens the argument of the text.

† Cf. Webb, *Contemporary Review*, July, 1890, p. 103.

‡ *Report*, p. 137.

APPENDIX No. LXXX.—*Continued.*

and at different times, the principle cannot require the minimum guaranteed by the State to be the same everywhere and always. It is not, therefore, incompatible with the suggestion that that minimum should be considerably higher now than it was in 1834. During the past half-century real wages all round have greatly advanced, those of unskilled labourers among the rest. We can, therefore, as Professor Marshall has observed, do a great deal more for paupers in 1907 without violating the principle than it was possible to do in 1834.*

30. Secondly, it is sometimes thought—whether with or without the authority of the Commissioners is disputable—that the principles of 1834 can be extended *unreservedly* to categories of poor other than the able-bodied. This is a mistake. It is true that to guarantee to relieved persons in slight sickness or accident a condition of life superior to that enjoyed by independent unskilled labourers in a like contingency would inflict a considerable injury upon the national dividend. For, in the absence of this guarantee, unskilled labourers as a body would probab'y save a large aggregate sum by way of sick insurance. To establish the guarantee, therefore, would involve loss to the national dividend of the fruits of a large contribution of saving. A similar objection holds good against a guarantee to children relieved by the Poor Law of education and general circumstances superior to what unskilled labourers can themselves afford their children. It has even been suggested that widows might deliberately make themselves destitute in order to secure for their children the training the Poor Law offers to those whom it takes under its care. But, *prima facie*, the case is different in regard to Poor Law provision for grave illness or accident involving prolonged treatment in a hospital, and, as some hold, for impotency or old age. Against contingencies of this order, it may be said, the provision made by unskilled labourers will, in any event, be practically *nil*. It is impossible, therefore, that any provision guaranteed by the Poor Law can appreciably diminish their contribution to the national dividend. Whether the very poor “ought” or could “reasonably be expected” to forearm themselves against these severer strokes of fortune has nothing to do with the matter. The ground is cut from under the principle of 1834 by the consideration that, as a matter of fact, they would not so forearm themselves.

In this *prima facie* reasoning there is a large element of truth. It does go to show that the bearing of the 1834 principle on the class of cases under review is much less than is supposed by some of the more rigid economists among Poor Law administrators. It is, however, itself subject to important qualifications.

On the one hand, a part of the deficiency of provision made by the very poor against disablement, old age, and so on, is due merely to the imperfect development of the *machinery* of insurance. The Royal Commission on the Aged Poor, for example, called attention to the fact that juvenile friendly societies in this country are rigidly separated from adult friendly societies, with the result that insurance for the earlier and later ages is dissociated, and a man cannot begin insuring against old age in a friendly society until he is twenty-one years old, a circumstance which, of course, greatly enhances the premiums that he has to pay.† There is no inherent reason why the machinery should not be improved and rendered more attractive in various ways—by the combination of old-age with sickness and life insurance, arrangements for permitting the pension, adjusted, of course, in amount, to begin whenever the insured person wishes, instead of at a fixed age,‡ the German plan for obviating forfeiture in consequence of lapsed payments, and other devices which experience might suggest. This class of considerations, coupled with the probability that the real wages of the poorer classes will continue to increase, suggests that the provision now made by unskilled labourers for old age—and similar considerations apply to disablement—by no means represents the provision that they would make in the near future if Poor Law policy did not intervene.

Secondly, to speak of provision against disablement or old age as something that is either made or not made is misleading. There are degrees of provision. Many persons, who

* Royal Commission on the Aged Poor, Minutes of Evidence, Q. 10379.

† *Report*, p. 63.

‡ Cf. Brabrook, Royal Commission on the Aged Poor, Minutes of Evidence, Q. 11084. Mr. Brabrook suggested that, not only the lessened amount of the pension, but also the fact that, after coming on the fund, a man could no longer draw more sick pay, would hinder him from applying unduly early. He also made the interesting suggestion that a man coming on the fund early would by that fact be proved a less good life, and that, therefore, the reduction in the amount of the pension would not have to be so great as would, *prima facie*, appear (*ibid.*, Q. 11312-4).

APPENDIX No. LXXX.—*Continued.*

do not overtly lay by against the chance of prolonged illness or permanent incapacity, lay by something against "a rainy day," in the conception of which the possibility of these eventualities is vaguely embraced. This kind of provision is probably made to some extent by unskilled labourers, and, by a departure from the principles of 1834 in respect of the said eventualities, would be *pro tanto* diminished.

Lastly, the aggregate contribution made to the national dividend in respect of any person's disablement or old age, when he remains independent, is not adequately represented by the provision which he himself has previously secured. For many purposes the family rather than the individual should be regarded as the economic unit. When a poor man is no longer able to support himself, his children or other relatives, often voluntarily, sometimes under legal compulsion, help to support him. In order to do this, it may be that they are driven to work harder than they would otherwise have had to work. So far as that result occurs, they are making a contribution to the national dividend which would not be made if the Poor Law were to take the care of the old off their hands. These three considerations go to show that the injury to the national dividend that would result from a disregard of the 1834 principle in respect of disabled or old paupers is in reality larger than *prima facie* reasoning suggests. Still, the force of that reasoning, though mitigated, is by no means destroyed.

31. In addition to its effects, exercised through expectation, upon *potential* recipients of relief, the Poor Law has important effects upon actual recipients. These effects are, as it were, the direct return yielded by the guardians' investment of public money in these persons. The subjects of relief may be regarded, from this point of view, as industrial machines which the Poor Law has undertaken to elaborate or repair. The return to investment in them is a function of the alteration made in the capacity of the machines. Relief to old and impotent persons can never greatly affect their capacity. Relief to able-bodied persons can affect capacity, if it either: (1) prevents injury to their health, which might otherwise follow from the privations of a long period of unemployment; or (2) enables them to acquire new forms of industrial skill, or to come into contact with employers through whose agency their existing skill can be utilised. Relief to sick and injured persons can affect capacity if it conduces to the restoration of their strength. Relief to children can greatly affect capacity by building up, in the most plastic period of life, strong bodies and minds trained, certainly in general intelligence, and perhaps also in some special form of technical skill.

So far the human resembles the inanimate machine. It differs from it in that its output is a function, not of capacity alone, but also of will. Other things equal, when willingness to exercise capacity is increased, output is increased. The physical objects given in relief to paupers can affect this willingness indirectly in cases where they intervene to prevent a fall in the standard of living, to which temporary misfortune might otherwise have led. The accompaniments with, and the conditions under which they are given, can affect it in all cases. If the conditions are such that persons hitherto respectable are compelled for any considerable time to associate with vagabonds and ne'er-do-wells, the industrial character of these persons is endangered. If, on the other hand, the material gift is accompanied by the interest, sympathy and counsel of friends, willingness to work and save may be largely and permanently encouraged. A system of Poor Law administration in which attention should be paid to classification by character, and in which, as in the Elberfeld and Bergen plans, the elements of personal care should be largely utilised, is thus likely to prove a better *monetary* investment than one dependent on mechanical rules. It is a matter for detailed enquiry how far the English system, whether as regards casual wards, or workhouses, or the administration of out-door relief, or the treatment of pauper children might, due regard being had to the relatively shifting character of our town population as compared with that of Elberfeld,* be improved in these respects.

32. The results so far attained may now be combined. In respect of the able-bodied, the indirect evils of a Poor Law provision superior to what an unskilled labourer could

* Cf. Henderson, *Modern Methods of Charity*, p. 9.

APPENDIX No. LXXX.—*Continued.*

expect to provide for himself, are very great; the direct benefit is, in general, small. In respect of the sick and injured, the indirect evil is considerable when the sickness or injury to which relief is guaranteed are slight, but less considerable when they are serious and prolonged; in both cases the direct benefit is considerable. In respect of the old, both the indirect evil and the direct benefit are small. In respect of children, the indirect evil is considerable, and the direct benefit may be large. The result is conclusive only in the case of the able-bodied—the genuine able-bodied, that is to say, not those returned as able-bodied in the British Statistics, where “able-bodied temporarily sick” are included. We are thus confronted with two problems. First, if it be granted that the principle of 1834 in respect of the able-bodied ought to be carried out, by what *means* ought it to be carried out? Secondly, in the case of the not-able-bodied, can any plan be devised by which the indirect evils of violating the principle would be avoided and, at the same time, the direct benefits secured?

CHAPTER VII.

The Application of the 1834 Principle to the Able-bodied.

33. The former of these problems may now be discussed. It is required to determine the appropriate constitution for a minimum situation inferior to that of the independent unskilled labourer. The crux of the matter is that a relieved person's situation is not something absolutely simple, but is dependent, partly upon the material provision of food, housing, and so on afforded to him, and partly upon the accompaniments, deterrent or otherwise, with which the provision of relief is associated. The minimum required can thus be constituted by a combination of poor material provision with easy conditions, or by a combination of good provision with hard conditions, while a given intensity of easiness or hardness of conditions can itself be constituted in a variety of ways. The principle of the Poor Law does not, therefore, necessarily carry with it the gloss which the Commissioners embodied in their circular of 1836, that “on no account must the dietary of the workhouse be superior or equal to the ordinary mode of subsistence of the labouring classes.” *

The detailed discussion of how best to constitute the minimum is a matter for practical administrators. The records of recent experience seem, however, to warrant the following general conclusions.

First, the minimum cannot in practice be made inferior to the situation enjoyed by the unskilled labourer by a *mere* limitation in the amount of material provision accorded to relieved persons. That this can be done does, indeed, appear to be believed by the author of the French law of 1905, where it is provided that each commune shall determine the minimum necessary for subsistence in it, and shall allow to every one in need the amount of this minimum minus such private income as he may possess.† It is scarcely possible, however, for guardians to ensure that a person relieved on these terms is not enjoying other sources of income, from charity or elsewhere, that, in conjunction with their provision, lift his situation above what the principles of 1834 would warrant.

This difficulty can be got over if relief is coupled with conditions of: (1) residence in a place where supervision is possible; and (2) the temporary surrender to the guardians of all possessions capable of yielding a money income. But the safeguard thus introduced is not sufficient. The extent to which the guardians' provision of food and so on can be contracted is in this country strictly limited by public opinion. Experience has shown that it is not possible, within these limits, to bring the paupers' situation below that of the unskilled labourer, without resort to definitely deterrent conditions.

Secondly, these deterrent conditions must include labour. The importance of this

* Six dietaries were published for selection according to the condition of the district. A footnote was appended to the effect that “old persons of sixty and upwards may have something more.”

† Under this law only one-half of income due to personal thrift and foresight is deducted.

APPENDIX No. LXXX.—*Continued.*

condition is well illustrated in some of the evidence given before the Royal Commission of 1834. Thus Mr. Henderson, in his Memorandum on Liverpool, stated :—

“The introduction of labour thinned the house very much ; it was sometimes difficult to procure a sufficient supply of junk, which was generally obtained from Plymouth ; when the supply was known to be scanty, paupers flocked in ; but the sight of a load of junk before the door would deter them for any length of time.”*

In the same spirit, Mr. Atkinson, Comptroller of the Accounts for the township of Salford, stated :—

“Finding work for those who apply for relief in consequence of being short or out of work, has had a very good effect, especially when the work has been of a *different kind* from that which they have been accustomed to. In Salford, employment to break stones on the highways has saved the township several hundred pounds within the last two years ; for very few indeed will remain at work more than a few days, while the bare mention of it is quite sufficient for others. They all manage to find employment for themselves, and cease for a time to be troublesome ; although it is a singular fact that, when the stock of stones on hand has been completely worked up before the arrival of others, they have, almost to a man, applied again for relief, and the overseers have been obliged to give them relief ; but, so soon as an arrival of stones is announced, they find work for themselves again.”†

The information given in Mr. Davy's recent Report on the Poplar Union points in the same direction. So also does the opinion sometimes expressed, to the effect that the prospect of freedom from work exercises so great an attraction that friendly societies ought to set their out-of-work benefit at no more than one-third of the amount of a member's ordinary wages.

Thirdly, insistence on a task of work is not by itself an adequate deterrent. The reason is that it is almost impossible to compel persons set to work by the guardians really to exert themselves. Administrative convenience requires that the work provided shall be of a general character practicable for everybody rather than strictly adapted to any body, and there are no means of knowing what output corresponds to a given effort on the part of a man working at a job to which he is not accustomed. Compulsion is, therefore, difficult to apply, while the alternative to compulsion, power of dismissal, is not available. Nor is this all. Even though the actual effort put out in an hour could be made as hard as it would have to be in the open market, Poor Law work still has advantages from the labourers' point of view. Its certainty and continuity absolve him from the risk, trouble and cost involved in occasional loss of employment and the need for finding a new job. Thus, to be equivalent to the total disadvantages of work in the open market, relief work would need to be much more, instead of, as is in fact the case, much less, severe than work for independent employers.

For this reason, some further deterrent condition must be imposed. Disfranchisement and the stigma of pauperism are, in the opinion of practical administrators, insufficient. Consequently, resort must be had to disciplinary measures, and this implies detention under control. It does not, however, appear to be essential that, whenever an able-bodied man is relieved, his home should be broken up, and his family, as well as himself, taken into the House. Some experienced administrators have expressed themselves satisfied with the deterrent influence of the Modified Workhouse Test Order.

CHAPTER VIII.

The Problem of the Not-able-bodied.

34. The problem presented by the not-able-bodied is to devise some plan that will at once obviate the indirect evils and secure the direct benefits of a departure from the principles of 1834. Several plans may be suggested. The keynote of the minimum guarantee system, so far discussed, is that the aggregate condition accorded to an individual in any category is irrespective of the contribution that he has made to the dividend. If this condition be not insisted upon the way is open for more elaborate schemes.

* Quoted in the *Report*, p. 161.

† *Report*, p. 162.

APPENDIX No. LXXX.—Continued.

In respect of most of them it is necessary to enter a *caveat* similar to that introduced at the beginning of Chapter VI. There it was noted that a given addition to income under the stimulus of Poor Law policy does not imply an equal addition to the national dividend, because a part of the contribution made to secure the enhanced income is merely *diverted* from non-income-yielding contributions. In the present case it should be observed that a given addition to *income on account of saving*, made under like circumstances, does not imply an equal addition to income-yielding contribution, because a part of it is merely diverted from *income on account of work*. If, for instance, people are encouraged, by compulsion or by a bonus, to save more with a view to old age, it is probable that, when old, they will work less. This qualification must be borne in mind throughout what follows. By reason of it, the effect of encouragement to saving in general is restricted by an adverse reaction upon work in general, just as the effect of encouragement to a particular kind of saving (in friendly societies, for instance) is checked by an adverse reaction upon other kinds of saving.

35. A system—called hereafter System A—which has found some favour, is the guarantee to everybody of a *Poor Law minimum*, coupled with the rule that, in regard to all persons who have provided for themselves less than a given *stipulated amount*, such provision as they have made shall be ignored when the relief required to make up that minimum is being fixed. A partial application of this plan is made in the Out-door Relief Friendly Societies Acts of 1894 and 1904. Under these Acts the guardians in granting relief are permitted not to take account of any income received from a friendly society of less amount than 5s., and are forbidden to take account of any income so received in the form of sick benefit. The same idea is embodied in more general form in the French law of 1905. When any person, whose name is on the list of the Communal Bureau de Bienfaisance, is relieved, only half of any income he may have secured as the fruit of his own foresight or thrift is deducted in estimating the sum to be allowed to him. It is desirable to compare this system with the minimum guarantee system. Its effect, when applied generally, is to contract below the stipulated amount the contribution of those who, if it had not been adopted, would have contributed more than the stipulated amount itself, and less than the stipulated amount *plus* the Poor Law minimum. Whether the reduction thus made in the contribution of better-to-do poor persons is greater than the reduction that would have been made in that of worse-to-do persons by a simple minimum guarantee cannot be decided *in abstracto*. It depends upon the way in which population is distributed about different levels of income.

This can be made clear geometrically. Construct a curve in respect of axes OX and OY. Along OX mark off successive persons, and let any ordinate to the curve represent the income that would have been earned by the person in respect of whom it is drawn if there had been no expectation of Poor Law relief. The curve thus constructed is called hereafter the income distribution curve.

Let P_1M_1 (Fig. 1) be the stipulated amount; P_2M_2 the minimum guaranteed by the Poor Law; and P_3M_3 this minimum together with the stipulated amount. Under the plan discussed in the present section the injury to the national dividend is measured by P_3HP_1 ; under the simple guarantee plan by P_2M_2T . Which of these two areas is the greater depends on the shape of the relevant parts of the distribution of income curve, and this is not at present known.

Fig. 1.

36. A second and more complicated system—called hereafter System B—is as follows. It is provided that a given minimum situation shall be ensured to everybody, but that the absolute relief given by the Poor Law shall be higher for those persons, who, while securing for themselves less than this minimum, secure more than a stipulated amount. This system may assume various forms. First, all relieved persons whose private provision exceeds the stipulated amount may have their aggregate situation raised to double the height of the Poor Law minimum. Secondly, all such persons may be accorded a defined

bonus which just exceeds the minimum. This idea is partially embodied in the pension laws of Denmark and New Zealand. Thirdly, they may be accorded a bonus which varies directly with the amount of their contribution, and the lowest value of which just exceeds the minimum.

Of these plans, the first seriously injures the national dividend by reducing to the stipulated amount the provision of all who would have provided anything between this amount and double the Poor Law minimum. The second is superior in that it only reduces to

Fig. 2.

the Poor Law minimum the provision of those who would have provided anything between this and double the minimum. As before, the point can be elucidated geometrically. Let P_5M_5 (Fig. 2) be the stipulated amount; P_2M_2 the Poor Law minimum, and P_4M_4 double this minimum. There are other incidental effects, but the broad distinction between the first and second plans is that whereas the one subtracts from the dividend the area P_4RP_5 , the other subtracts the smaller area P_4KP_2 . The first plan may, therefore, be set aside as an inferior and undesirable form of System B.

37. The second and third plans cannot be compared with such decisive results. The second is superior in that it cuts down the provision of a smaller number of persons to the level of the Poor Law minimum, but superior in that it encourages extra exertion, not merely among those persons who could normally have provided a little less than the stipulated amount, but also among those who could have provided anything between this sum and the Poor Law minimum. Between these two forms of System B judgment must, therefore, be suspended.

For a comparison of System B, as a whole, with the minimum guarantee system, either of them may, therefore, be selected. What I have called the second plan lends itself more easily to discussion. It contracts the dividend by the area $P_4KP_2 + P_5M_5T$, but, on the other hand, it encourages those who would have provided a little less than the stipulated sum to make an effort to reach that sum: the minimum guarantee system contracts the dividend by the area P_2M_2T . System B, therefore, must be superior if the area P_4KP_2 is less than $P_2M_2M_5P_5$, but *may be* inferior if it is greater. In our present ignorance of the form of the income distribution sum, we have no means of knowing whether it is in fact superior or inferior.

38. Thus, either System A or System B may be superior to the minimum guarantee system. But both have disadvantages as well as advantages, and it is not possible to determine whether the former are greater or less than the latter. A direct comparison of System A with System B can be shown to have a like indecisive result; for the former is superior in respect of persons normally much below the stipulated amount, and the latter in respect of those normally near to it.

CHAPTER IX.

Classification by Opportunity.

39. One of the chief sources of disadvantage under Systems A and B is the restriction of relief to the poor, and the recognition, as a means to this, of some maximum condition of life to exceed which is to become ineligible for Poor Law aid. Is any modified system practicable by which the disadvantages due to these causes can be overcome?

A possible plan is to abandon the attempt to confine relief to the poor. In Mr. Booth's scheme of universal old-age pensions this is done. His scheme is thus freed from the great defect of other schemes. It does not differentiate in favour of small contributions to the dividend by making certain additions to the provision which a man may secure for himself of no advantage to his aggregate situation. No doubt, in the practical working of the plan

APPENDIX No. LXXX.—*Continued.*

differentiation would not be excluded altogether. For, though the only condition of a *legal title* to a pension were the attainment of a given age, it is probable that, *before a man could actually claim and receive his pension*, public opinion would also require a certain degree of poverty. Still, differentiation, though not abolished, would be greatly mitigated.

The difficulty of this solution of the problem is two-fold. First, a universal scheme, even if restricted to the category of old persons, and, still more, if intended to cover the needs of other not-able-bodied persons, would involve heavy expense and hence, on the side of *collecting* the money needed, would do more injury to the national dividend than less ambitious plans. Secondly, on the side of expenditure, though the dividend would not be injured by differentiation, it would be injured in other ways. Some persons would be estopped from providing for themselves by the general expectation of sufficiently comfortable circumstances to be attained from the State allowance. A complete solution of the problem is not, therefore, to be found in universality.

40. May it not be possible, however, while maintaining the restriction of relief to poor persons, to do away with the impeding influence of the *means* by which this restriction is generally secured? In Systems A and B alike these means consist in the recognition of a kind of general poverty line beyond which the Poor Law declines to intervene. It is possible, however, to effect the same object without resort to any such line, provided that poor persons within any category can be differentiated in accordance with their *capacity* for making provision, instead of with the amount of the provision that they have actually made. Instead of a rule that no allowance be made by the guardians to anyone whose income exceeds a stipulated amount, the provision might run, "to anyone whose income exceeds a stipulated amount unless he is a member of certain objectively defined classes." These classes might be so chosen as to embrace everyone whose income is, as a matter of fact, likely to fall below the stipulated amount. Under a plan of this kind, the more capable members of the specified classes would not be discouraged from making as large a provision as they could, and only a very small number of persons in the non-specified classes would be affected at all. It would, of course, be practically difficult to determine the classes, and care would have to be taken not to tempt people from a higher to a lower class. The classification would have to be based on opportunities which themselves might be in part inferred from occupation. The principle is already applied in some existing schemes by which employers offer a bonus upon savings to certain classes of their servants. By judicious selection of the classes to be favoured, they are enabled to make a *proportionate* addition to the interest earned without the risk of having to make a payment to persons earning *large* interest. A similar idea underlies the arrangements for sick relief instituted by the French Law of 1893. A list of persons who, if they become sick, will be entitled to assistance, is drawn up periodically in each Commune. There is, of course, the difficulty that persons not on the list cannot well be refused help in emergency. But, so far as practicable, the prospect of State aid is accorded to classes incapable of providing for themselves, and not accorded to other classes. Such evidence as is available seems to indicate that the plan has succeeded. It appears that since its inception, voluntary societies for workmen's insurance, so far from declining, have greatly increased in numbers and importance.

41. A second important source of disadvantage under systems A and B is in this wise. Both systems do, indeed, obviate that destruction of all contributions *less than the Poor Law minimum*, which was threatened by the minimum guarantee system. But they do not obviate the destruction of almost all contributions, in the one case *lying between the stipulated amount and this amount plus the Poor Law minimum*, in the other case *less than the stipulated amount*.

By a plan similar to that proposed in respect of the *Poor Law minimum* this element of injury to the national dividend might be avoided. Poor persons being distinguished into classes according to occupation or some other objective sign of opportunity, a *different stipulated amount* might be assigned to each class as the condition of differential treatment. By this plan discouragement could be avoided, or encouragement afforded, to many persons upon whom the simpler plan would operate either adversely or not at all. "If a man on 12s. a week," observes Professor Marshall, "has secured for himself an annuity of 1s., his thrift is a much more real thing than if a man on 50s. has got an annuity of 3s." By a multiple system thrift may be encouraged on the part of *both* these men.

42. Classification by opportunity thus removes the chief disadvantages, which, apart from it, have to be set against the advantages enjoyed by Systems A and B, and render it

APPENDIX No. LXXX.—*Continued.*

doubtful whether they are on the whole superior to the minimum guarantee system. Conjoined with classification they are certainly superior to it, in respect of all categories of the not-able-bodied poor.

43. In some important cases, classification can be applied through the device of recoverable loans. Under the existing law, relief given to parents is recoverable from children if they have the means to pay, medical relief is sometimes given in the form of a loan, and relief to underfed school children may, under the Relief (School Children) Order of 1905, and—though no longer by the guardians—under the new Act, be given in the same way. The practicability of recovery is thus already recognised. The difficulties connected with it are less than they appear to be at first sight, because, if guardians are known to be willing to prosecute at need, the need will seldom arise. I wish to suggest that the plan might be extended in the following manner. In the matter of treating the sick or educating or feeding children, the guardians should always give such form and amount of relief as will produce the best direct effects upon the relieved person, without any regard for the principle of 1834. But they should, at the same time, make an estimate of the provision which, apart from the expectation of their relief, would have been made by an average person in the class or grade of the person concerned against the eventuality in respect of which relief has been given. This sum they should demand, probably by instalments, from that person, and, if necessary, should recover by process of law. The “person concerned” is not, it will be noted, necessarily the relieved person himself. It may be the father or the widowed mother of a child which has been taken to a Poor Law school. It is, in short, the person or persons by whom, apart from the law, provision would have been made. If this plan were carried out with moderate skill, almost as much work and saving would be undergone with a view to the guardians’ demand as would have been undergone with a view to the contingencies for which relief is provided. There would be very little temptation to anybody to neglect any provision that he would, in any circumstances, have made. The indirect evil consequences to the dividend would, therefore, be exceedingly small,* while the relief could be so arranged that the direct beneficial consequences should be the largest that circumstances would allow.

44. This plan cannot be applied with much effect to the case of relief in old age. For old persons there are no better times in the future, where recovery of a loan can be looked for. If, therefore, the method of classification is to be used to promote provision for old age, some other device must be adopted. One practicable method is compulsory insurance. In Germany working men are classified according to the wage-level of their occupation, and are compelled to contribute some proportion of their weekly wage to a State-aided insurance fund. On this plan, the sum deemed reasonable in respect of each grade is *exact*ed from them. An alternative plan contents itself with the *persuasion* offered by differential treatment to those who have been “thrifty according to their opportunities and generally independent in early life.” †

45. Classification according to opportunity has so far been treated as a matter of grades and classes, and it is, no doubt, true that some kind of rough grouping can, at need, be made. But opportunity differs from man to man. A true classification would set up a different stipulated sum in respect not of classes but of individuals. That is the ideal, and, so far as practicable, the proper method. Not only is it more exact in respect of the things which the rougher grouping can attempt to estimate, but it is able to take account of contributions to the national dividend which are not represented in money income, and do not, therefore, enter into that grouping at all. Its principles will be in line with the conditions laid down by Professor Marshall in respect of out-relief, “that the applicant should have subscribed to a friendly society a sum standing in some reasonable relation to his wages, or have made provision in some other way for the future; (after due notice special attention would be paid to the question whether he had saved during the years in which his earnings were high and his family expenses not yet large”). ‡ This policy appears to me economically desirable, and it can scarcely be dismissed as impracticable. How far it could be successfully carried out by boards of guardians as at present constituted, and how far its general adoption would involve an enlarged expenditure upon relieving officers, and closer relations between guardians and the agencies of voluntary charity, are questions for the profitable discussion of which some acquaintance with the practice of Poor Law administration is essential.

* Of course there would be *some* injury to the dividend. For instance, such provision as poor parents might have made to protect their children from the contingency of both their deaths would be checked. But this is a small matter.

† Report of the Royal Commission on the Aged Poor, p. 83.

‡ *Economic Journal*, ii., p. 372.

APPENDIX No. LXXXI.

MEMORANDUM BY MR. J. D. STUART SIM, CHIEF REGISTRAR OF FRIENDLY SOCIETIES, AS TO THE PROVISION OF OUT-OF-EMPLOYMENT BENEFITS BY FRIENDLY SOCIETIES.

1. The provision of out-of-employment benefits is not one of the objects authorised by the Friendly Societies Act for an ordinary friendly society or branch. It is, however, competent for a society to include in its objects the relief of members "in distressed circumstances," a term capable of wide interpretation; and for the relief of members while on travel in search of employment. The former relief is usually restricted to small grants, and to the payment of the contributions of aged and necessitous members from a separate distress fund; while, in the latter case, the traveller is provided by his society or branch with a licence and cheques, of which one *per diem* may be cashed, and also a travelling pass-word by which his *bona-fides* may be proved by the society's relieving officer.

2. A special authority, as provided by Section 8 (5) of the Friendly Societies Act, was granted by the Lords of the Treasury, March 20th, 1877, for the purpose of enabling the registry of societies having for their object that of assisting members out of employment, and it is adapted to those trade societies which do not bring themselves within the definition of a trade union. Forty societies, composed principally of warehousemen and clerks, have availed themselves of registry under this authority.

At the close of the year 1906 the total membership of these societies amounted to 28,029 persons, distributed among the following counties :—

Cheshire	-	-	-	-	-	-	43
Hampshire	-	-	-	-	-	-	98
Kent	-	-	-	-	-	-	316
Lancashire	-	-	-	-	-	-	10,655
Leicestershire	-	-	-	-	-	-	67
London	-	-	-	-	-	-	13,209
Northumberland	-	-	-	-	-	-	1,115
Nottinghamshire	-	-	-	-	-	-	242
Warwickshire	-	-	-	-	-	-	1,395
Yorkshire	-	-	-	-	-	-	380
Glamorganshire	-	-	-	-	-	-	509
							28,029

From the Returns of thirty-one societies giving the information, it appears that £7,887 was paid during the year in unemployment benefits consequent upon trade depression. In addition to these benefits, the rules frequently provide for medical assistance and payments during sickness, in old age, and at death, while facilities are given to members of obtaining employment by means of the societies' labour agencies.

Of the £7,887 mentioned above nearly one-half was paid by the Provident Association of Warehousemen, Travellers and Clerks, of 98, Cheapside, E.C. This society, at the close of 1906, had a membership of 8,856 persons, and an income of £15,110; of which £12,391 was contributed by the members. The expenditure during the year was as follows :—

	£	Percentages.
Out-of-Employment Benefits - - - - -	3,357	36·45
Medical Fees - - - - -	2,442	26·51
Payments for Illness - - - - -	746	8·10
Death Payments - - - - -	365	3·96
Special Grants - - - - -	228	2·48
Special Grants in Old Age - - - - -	146	1·59
Management Expenses, including Salaries } Commission, Advertising, &c. }	1,926	20·91
		9,210
		100·00

The balance of funds at end of year amounted to £74,554.

APPENDIX No. LXXXII.

STATEMENT BY MISS EDITH SELLERS CONCERNING THE WORST FEATURES OF THE ENGLISH POOR RELIEF SYSTEM AND THE BEST FEATURES OF CERTAIN FOREIGN POOR RELIEF SYSTEMS.

1. The fundamental difference between the English Poor Relief system and the foreign systems with which I am acquainted is that, whereas under all these systems the local authorities are strictly subordinate to some higher authority, which can not only restrain them from acting, but can force them to act, under the English system the local authorities are in a great measure independent. They have a higher authority, of course, the Local Government Board; but this authority, although it can restrain them from acting, is in practice, if not

in theory, powerless to force them to act. It has no effective machinery, indeed, through which it can in ordinary circumstances force them to do anything they are determined not to do. It may issue mandates, but its mandates are easily set at naught. Of this we have proof in the fact that the workhouses at Cockermouth and Aysgarth are still in use; for it condemned them as unfit for human habitation years ago. It has auditors, but their business is to prevent Guardians from spending money unwisely, not to force them to spend it wisely;

APPENDIX No. LXXXII.—*Continued.*

all that they even try to do is to secure the ratepayers against gross extravagance and fraud. As for its inspectors, their function is to give advice rather than to issue orders; and the advice they give is more often than not simply ignored. Were it otherwise Guardians would not now be granting out-relief on a scale that spells semi-starvation, nor would thousands of children be found living in workhouses. Besides, in country districts the inspector's visits are few and far between; there are unions where he appears only once every two or three years, the local authorities being left meanwhile free to go their own way. The Local Government Board, it is true, publishes for their benefit exhortations, instructions, and warnings from time to time; but it cannot, of course, compel them to read them, and read them for the most part they certainly do not. Two years after Mr. Chaplin's famous "Circular on the Treatment of the Aged Deserving Poor" was issued, I made careful enquiries among a large number of Poor Law guardians, with a view to finding out to what extent they were acting on the recommendations it contains. Not one of all those to whom I applied had ever read the circular; and quite half of them confessed frankly that they had never seen it, never heard of its existence. Two years later the chairman of an important London Board was in precisely the same position: he too had never heard of it.

2. It is in this peculiarity of the English Poor Relief system, this absence of a higher authority able effectually to direct and control the local authorities, that its chief defects have their origin, or so at least it seems to me. This is at the root of that lack of uniformity in our Poor Law administration, that is so fraught with injustice alike to the poor and to those who must support them. As Poor Law Guardians are practically free to decide for themselves the lines on which they administer Poor Relief, there are hardly two Boards that administer it on the same lines. Every time a new Board is elected its members may, and sometimes do, completely reverse the policy their predecessors pursued. There is therefore neither fixity nor equality in the treatment of the poor. In Berlin, as in Copenhagen and every other foreign town I know where poor relief is organised, the poor, whether they fare badly or well, at any rate all fare alike, as how they fare is determined by the higher central authority. Thus there is none of that rankling sense of injustice there, which prevails so widely in London, owing to the measure meted out to the destitute varying according to locality—being quite different in Whitechapel, for instance, from what it is in Poplar; or in Southwark from what it is in Fulham. In the Southwark workhouse I once found some 200 poor old creatures living in a state of abject misery, such misery that one of them seized me by the arm as I passed and cried: "For God's sake get me out of this place or I shall go mad." At that very same time the old ladies in the Fulham workhouse were passing their days in great comfort, infinite trouble being taken to render their lives pleasant. They were almost as well cared for, indeed, as their neighbours at Southwark were neglected; and that is saying a great deal. Yet the Poor Law is, of course, the same at Fulham as at Southwark, it is only the administration of it that is different, is different because there is no central authority to control it, and thus secure its being the same throughout the city, as in common justice it ought to be, surely.

3. In rural districts the treatment of the poor in one union differs from that in another even more markedly than in large towns. Four years ago I visited a number of country workhouses. In several of them, as in that at Bedale and that at Knaresborough, I found that, from the material point of view, the inmates were extremely well cared for: the majority of them, indeed, were probably better housed, clothed and fed than they had ever been in their lives before. There were other workhouses, however, only a few miles away, where the inmates fared worse than they would have fared in prison, so comfortless was life there in every way. One of them, that at Aysgarth, had been condemned as uninhabitable years before; and two or three more might also have been condemned without injustice. The Helmsley workhouse served at that time—it probably serves still—as lunatic asylum for the district. Whoever went mad was taken there at once, and was left there more often than not, if he were poor,

as it cost less to keep him there than in the asylum. When I paid the place a visit I found a dozen old men simply cowering before one of the lunatics, a great strong fellow who had vowed that he would do for the lot. Nor is it only the indoor paupers who suffer from this inequality of treatment; there are districts where out-relief is granted to all comers, and there are districts where it is practically not granted at all. In some unions as much as 10s. a week is granted sometimes for the support of one person; while in others, as at Hendon was the case in 1904, the average out-relief allowance is only 1s. 8½d. a week. That this state of things is cruel and demoralising cannot be denied; nor can it be denied that it is the direct result of Boards of Guardians being left without a higher authority to control them and keep them in the right path.

4. Then, under the present system, it is not the poor alone who suffer, it must be noted; ratepayers are almost as much at the mercy of the Boards of Guardians as they are; for the Local Government Board auditors have no control whatever over the greater part of the money the Guardians spend, as it is impossible for them to know whether the spending of it was, or was not, necessary. I once devoted a considerable amount of time to sifting the accounts of the Hendon Board of Guardians; and I found that, although there were only some 52,000 inhabitants in their union, they had contrived in the year 1903-4 to spend on the relief of the poor no less a sum than £19,796. They had spent £4,807 on their officials and £679 on coal; while every inmate in their workhouse had cost them £43; and every child in their school, £50 10s. Yet the auditor had passed their accounts without a protest, just as he had passed the accounts of the Westbury-on-Severn Guardians, in whose workhouse the cost per head for adults and children alike was £15. 8s. 5d.; and as he passes year by year the accounts of the Guardians for Wolverhampton, where the poor rate was two years ago 2s. 11½d.; and of the Guardians for Cockermouth, where it was 4½d. Thus, evidently, within certain very wide limits, Poor Law Guardians are free to spend as much or as little on poor relief as they choose, are free, in fact, to be wastefully lavish to the detriment of the ratepayers, or to be niggardly mean to the detriment of the poor. For if the auditors have but little control over their expenditure, the average ratepayer has no control at all; he does not even know what they do with the money they spend, as the financial statements they issue are as a rule beyond all comprehension.

5. What renders the more disastrous, from the ratepayers' point of view, this freedom from control that is accorded to Boards of Guardians is the fact that the men and women who become Guardians have, as a rule, had no previous training for their work as administrators, no experience in dealing with money on a large scale. For there are none of those arrangements in force here by means of which in Berlin, for example, the services of business men, bankers, lawyers, great merchants, actuaries, etc., are secured for the local administration of poor relief; or by means of which elsewhere the presence of trained officials, or of experienced professional men, among the administrators is secured. In Berlin, every ratepayer, whether rich or poor, may by law be summoned to act as Poor Commissioner, as the town has a legal claim on the services of all its citizens. Whether he actually is summoned depends neither on his wishes nor yet on his convenience, but solely on whether, in the estimation of the community, as represented by the municipal council, he is or is not capable of doing the work well. He may, of course, refuse to act; but if he does he suffers in more ways than one, as he forfeits certain of his civic rights and must pay higher rates than his fellows, besides being looked on askance as a bad citizen both by the authorities and society. In Denmark, wherever there are honorary Poor Law administrators, they have a trained official, the burgomaster, as chairman; and in Vienna a trained official, who represents the central authority, is present at all the meetings of the honorary Poor Law officials; while elsewhere in Austria, notably in Steiermark, the parish priest, the parish doctor, and representatives of the chief philanthropic societies and societies for the prevention of pauperism, etc., are all *ex-officio* members of the Poor Board. Thus there is no danger there of the local administration of relief ever falling entirely into the hands of inexperienced amateurs.

Lack of uniformity in the English System, Evils resulting from it in towns.

Evils resulting from it in country districts.

No effective control over the expenditure of the Boards of Guardians.

Arrangements in force in foreign countries for securing the services of business men, bankers, lawyers, etc., as Poor administrators.

APPENDIX No. LXXXII.—*Continued.*

6. Here in England, however, it is otherwise; here a Board of Guardians may consist entirely of persons who know nothing whatever of administrative work, and have never before in their lives had the spending of more than perhaps two or three hundred a year. Yet one of their functions may be to direct the working of a huge establishment carried on at a cost of many thousands a year. Some little time ago I asked a Poor Law guardian, who had been on the Board's finance committee for several years, what was included under the heading "Necessaries" in his Board's financial statement. He had not the slightest idea, he replied, but he would enquire the next time he went to the workhouse. Whenever I come across a Guardian I ask what the cost per head in his workhouse is; but not one in twenty of those whom I ask is able to tell me. So far as my own experience of them goes, the average Guardian does not know what becomes of the greater part of the money he is supposed to spend; in financial matters he is, in fact, completely in the hands of the workhouse officials and the clerk to the Board whom he is supposed to control. This being the case, it is difficult to conceive how ratepayers can ever hope to obtain a fair return for the money the Guardians spend for them.

7. As it is manifestly impossible to insure that on every Board of Guardians as at present constituted there shall be sound financiers and clever administrators, as well as philanthropists with a keen sense of justice and robust common sense, there is no chance, so far as I can see, of securing fair treatment all round, either for ratepayers or paupers, so long as these Boards are allowed to decide what the treatment shall be. There will always be unions where the dictates of economy on the one hand, and of humanity on the other, will be set at naught, unless means be devised by which the worst sort among them can be forced to do what the better sort do of their own free will. How these means can be devised is a hard problem; for although it would be easy enough to create—or strengthen—a higher Poor Law authority, to do so without weakening the sense of responsibility of the local authorities, or their interest in their work, would be far otherwise. Still it is a problem for which, so far as it concerns rural districts, Denmark and the Swiss Cantons Zürich and Bern have already found satisfactory solutions; while so far as it concerns towns, Berlin and Vienna have both found solutions of a kind. Copenhagen, on the other hand, has pronounced the problem insoluble in the case of large cities; and, having made a clean sweep of its amateur Poor Law administrators it has installed trained experts in their place. If we wish to mend our Poor Law administration here in London, we might, I am inclined to think, obtain from the systems of administration in force in Copenhagen, Berlin, and Vienna many useful hints as to how the mending could best be done. From Denmark especially there is much to be learnt not only in the way of Poor Law administration, but of Poor Law making. What renders her experience in those matters more valuable to us than those of any other nation is the fact that her institutions, as ours, are democratic, and that she recognises, as we do, the right of the destitute to relief. Until 1892 her Poor Law was identical with our own, and for centuries it was administered by Boards of Guardians.

Vide App. LXXXII. (A) I., Poor Relief Administration in Denmark; *App. LXXXII. (B)*, Poor Relief Administration in Berlin; *App. LXXXII. (C)*, Poor Relief Administration in Vienna.

8. If our Poor Law as it stands was administered as it might be administered, our Poor Law system would no doubt be infinitely better than it is. Still there are defects in the law itself, for which remedies must be found, if justice is to be done both to the poor and the ratepayers who support them. One of these, and a grave one, is the right the law confers on workhouse inmates to take their own discharge. Anything more demoralising, alike to workhouse inmates and workhouse officials, than the in-and-out game which the worst class of paupers are able to play, under the present law, it would be difficult to conceive. Whenever in a union there is work to be done which an inmate does not care to do, he can take his discharge, go on a walking tour and then return. When any punishment is awarded to him, in nineteen cases out of twenty he can evade it by simply leaving the workhouse; as, even though he remains outside only a

week, on his return by-gones are reckoned as by-gones. I was once at the Southwark workhouse when a woman had just taken her discharge, because she had been told she would not be allowed to go for a walk for the four following Sundays; as, on the previous Sunday, she had returned to the house drunk. If she came back, as she probably would in the course of a few days, she would have her usual Sunday walk, the Master told me. He would not have the power to deprive her of it; as, on re-entering the union, she would start with a fresh record. This state of things is bad enough when men and women are concerned, but it is infinitely worse when they who are concerned are young girls. Some years ago I found, in the York Union, nearly fifty girls all sitting together in one room, each with a baby in her arms. The oldest among them did not look twenty, and a good third seemed more or less feeble-minded. Never a year passes but hundreds, nay thousands, of poor helpless young women plunge themselves into great misery—the ratepayers too into great expense—simply because the law in its cruelty allows them to quit the workhouse when they choose—at the prompting of any passing whim.

9. In Denmark such scandals as these are impossible; as, under the Danish relief system, whoever crosses the threshold of a workhouse remains there until the Poor Law authorities decide that it would be well not only for him—or her—but for the community at large, that he should depart. He cannot take his own discharge, and to abscond is a crime which may be punished with six months' imprisonment in a penal workhouse. Thus not only can the helpless and heedless be kept from harm, but the idle and worthless can be forced to mend their ways; for the length of an inmate's stay in a workhouse depends on how he conducts himself and the amount of work he does. And if he does not conduct himself well, nor do as much work as the authorities think he ought to do, they have the right to send him to a penal workhouse. He may, it is true, appeal to their higher authority, the chairman of the County Council, if he thinks he is being detained unjustly; but, for the chairman to interfere on his behalf, he must be able to prove that he is in a position to support, without help, himself and his family, if he has one, *i.e.*, that he has regular work to go to, or else that he has money enough to tide over the time until he finds work.

10. Of all the various powers the Danish Poor Law officials possess, this power of detaining workhouse inmates is the one to which they themselves attach most importance. They look upon it as by far the most valuable weapon they have wherewith to battle against pauperism. Were they without it it would be impossible, they maintain, to cope effectually with paupers of the worst sort. Danish workhouse officials go even further: a workhouse, they hold, loses all value either as a destitution test, an educational force, or as a punishment, if they who resort there are free to betake themselves off the day the fancy seizes them.

11. So long as Poor Law Guardians have a free hand as administrators, there could be no question, of course, of according to them this power to detain which renders such good service to Danish Poor Law authorities; but were they placed under the surveillance of a higher authority, or were the whole administration handed over to expert officials, it would be otherwise. Then we might find in this feature of the Danish law a remedy for one at any rate of the defects in our own law. In this case, however, fairness would require that we should also adopt another feature of the Danish system, *i.e.*, that we should give workhouse inmates the chance of earning money for themselves. Any workhouse inmate in Denmark—the arrangement is the same in Austria and Germany—who does work over and above his allotted task is paid for this work, one half of what he earns being given to him at the end of every week, and the other half when he leaves. He is able, therefore, if he chooses to be industrious, to earn enough to tide over the time until he can obtain regular employment; and this done he can always obtain his release by applying to the higher authority.

12. One of the most demoralising features of our Poor Relief system is that, no matter how hard a man works while in the Union, or how long he stays there, he is as destitute when he leaves as when he entered. Let him do what he will he cannot earn the wherewithal to buy for himself even a new pair of shoes.

The Danish Poor Law Authorities Right to detain. The great importance attached to this right.

Necessity of rendering Higher Authority effective before conferring on Poor Law Guardians Right to Detain. Necessity also of enabling workhouse inmates to earn money

Demoralising feature of the English System.

APPENDIX No. LXXXII.—Continued.

Defect II.
Children
ranking as
paupers.

13. Another defect in our Poor Law is that under it children rank as paupers, as they are placed in the hands of the same authorities and may be confided to the care of the same officials. There is not a word in it, indeed, to indicate that they who framed it recognised that children differ in any way from paupers, or were alive to the necessity of taking precautions to guard against their being pauperised. So far as the law is concerned, there is nothing to prevent every Board of Guardians in the kingdom from keeping the children for whom they provide shut up in the workhouse. As a point of fact there actually are at the present time some 21,000 children in workhouses and workhouse infirmaries, and some thousands more living in schools, many of which differ from workhouses only in name. And this although it has been proved to the hilt again and again, that to bring up a child in a workhouse is to handicap it almost hopelessly in the battle of life. In theory, it is true, the children in workhouses are kept quite apart from the other inmates, but only in theory in many cases. Even in some comparatively large unions young and old have their meals together; while in small unions I have found little girls sleeping in the same rooms as disreputable women; and boys acting as general workhouse attendants. Nay, I have even found a boy playing with the casuals, and a girl of fourteen passing the whole of her time with a woman of the very worst class who was supposed to be teaching her how to cook. Even to expect these unfortunate little beings to grow up into decent men and women is unreasonable. Then the children who are being supported together with their mothers on out-relief are all pauperised more or less; as they are under the surveillance of the relieving officer, and go to him, together with the other paupers, to fetch the family relief. Besides they, in addition to being pauperised, are as a rule half-starved. In the Hendon Union a mother was expected to maintain a child on 1½d. a day out-relief, even when the Guardians were spending £50 a year each on the children whom they themselves maintained in their workhouse school.

Berlin the
model town
in what
concerns
children.

14. So far as the young are concerned both Germans and Hungarians show more wisdom and more humanity than we do. Berlin does not regard the children it supports as paupers; and, being determined that they shall be under no temptation to develop into paupers, it takes care that they are not associated in any way with paupers or pauper officials; just as it takes care that they shall not be associated with criminals or jailers. No starving little street urchin is ever sent to a workhouse or any pauper resort in Berlin; nor is any child who is accused of crime, or who is even caught red-handed, ever sent to prison. They, as all destitute children, are taken, at once when they are found, to the Orphans' Dépôt, the headquarters of the Orphans' Board (*Vide Appendix No. LXXXII. (B)*, Poor Relief in Berlin). There they remain under the close surveillance of experts, until the director, as the representative of the Board, can decide what shall be done with them to ensure their developing into useful self-supporting citizens. Whether they are boarded out or lodged in institutions, they are always under the guardianship of their own special officials; for when the municipal council appoints Poor Commissioners to take care of the adult poor, it appoints also Orphans' Fathers and Mothers to take care of the children. From first to last they are never under the control of the ordinary Poor Law authorities, never in the keeping of anyone who has any connection whatever with Poor Law administration. The result is there is no touch of the pauper about them; they take their places side by side with their fellows on terms of perfect equality, when the time comes for them to go into the world—the boys at fifteen, the girls at sixteen—and it is an almost unheard-of thing for any one of them to be found later in life in a workhouse. And Budapest is every whit as determined as Berlin to do the very best that can be done for its children (*Vide Appendix No. LXXXII. (E)*). State Children in Hungary).

Defect III.
Guardians
being the
dispensers
of relief to
Casuals,
Work-seek-
ers, and
Work-
shirkers.

15. Children are not the only section of the destitute who might with advantage be removed from the care of the Poor Law Guardians. It is almost as great a defect in the law, it seems to me, to make them, as it does, the dispensers of the relief given to casuals, as it is to make them the dispensers of that given to boys and girls. A

casual is, as a rule, either a work-seeker or a work-shirker; if he is a work seeker, he merits better treatment than they can give him; while if a work-shirker, he deserves punishment of a kind they cannot award. Besides, they are practically without the means of deciding to which category he belongs. Surely it smacks not only of cruelty but of sheer folly to force a man who is able to work, and eager to work, and who is striving his hardest to find work to do, to waste a whole day breaking stones, to the detriment, perhaps, of his skill in his craft, if he asks for a night's shelter and a meal to help him on in his search. When a well-known foreign Poor Law administrator saw the iron cages in which the Fulham Guardians confine their casuals, he looked quite horrified. "Why, you treat these people as if they were wild beasts," he exclaimed. "If you shut up a decent man there, even for one day, what do you suppose is the result?" And hundreds of men, some of them decent men, are shut up there every year. Then the work-shirker is dealt with every whit as unwisely as the work-seeker; for he is allowed to tramp about the countryside with his family at his heels, extorting or cajoling alms from his fellows, and using casual wards and workhouses as temporary resting places when the weather is bad. There is no breaking of stones for him; for he is always more or less of an invalid, or so at least he is clever enough to make it appear. It is not Poor Law guardians who are the proper persons to deal with him, but the police; and practically everywhere, outside England, it is the police who do deal with him, to the great advantage of the community.

16. So far as the treatment of casuals is concerned, the model countries are undoubtedly Austria and Denmark; they are the only countries where a serious attempt is made to differentiate between the genuine work-seeker and the professional loafer, with a view to securing that the one, as the other, shall be dealt with according to his merits. They are the only countries, in fact, where care is taken to give a helping hand to men who are temporarily out of work, and thus keep them from drifting into pauperism; the only countries, too, where loafers are not only punished and forced to work, but are taught how to work, and are, so far as possible, imbued with the wish to work.

17. If a respectable working man, being out of employment, goes on the tramp in Lower Austria, he may not only sleep every night for forty-three nights in Relief-in-Kind stations, but he may have his dinner there every day for forty-three days. These stations, which are within half a day's walking distance of one another throughout the province, are practically casual wards organised on philanthropic lines. They are maintained at the cost of the whole province for the benefit of work-seekers, and loafers are not allowed to cross their threshold. In order to be admitted a man must be able to prove that he has been in regular employment within the previous forty-three days, and must have a clean record so far as the police are concerned. If he arrives at night he is provided with a bath, supper—soup, vegetables with sauce, and bread—and with a comfortable bed. The next morning before 7 a.m. he must turn out; but before he goes he is given his breakfast—soup and bread—and is told exactly where his best chance of finding work lies; for attached to every station is a labour bureau, and one of the duties of the officials is to keep in close touch with all the employers in the district. Between 11 a.m. and 1 p.m. he may go to another station and there have dinner. When he has once been to a station, however, he may not return there for at least forty-three days; and, if after being on the tramp for forty-three days, he has not found regular employment, he forfeits his right to go to any station. He may forfeit it, indeed, before, if it can be proved that he has refused work offered him under reasonable conditions, or that he is not turning to good account the opportunities given him of finding employment.

18. While the work-seeker is thus helped on in his way, the loafer is dealt with in a totally different fashion. By Austrian law any person found begging, or allowing those dependent on him to beg, or who is found wandering about without visible means of support, may be sent to a penal workhouse, although precautions are taken to guard against his being sent there if he deserves a better fate. A penal workhouse in Austria is not only a prison where rigid discipline is maintained, but also a reformatory

penal
workhouses

APPENDIX No. LXXXII.—Continued.

where the idle are given an opportunity of overcoming their evil propensity. All who go there are taught how to work, are forced to work, and are punished if they try to shirk working; at the same time they are given a strong motive for working well, as the fact is brought home to them that their one chance either of shortening their stay there, or of rendering it fairly comfortable, lies in working with their whole heart and soul. An inmate must remain there three full years unless, in the meantime, he can convince the director and the board of managers that he has turned over a new leaf and may be trusted to try to earn an honest livelihood. And the only way he can convince them is by working hard and behaving well, so as to secure promotion from the third class, in which all new arrivals are put, to the second; and from the second, to the first. Until he is in the first class there is no hope of their deeming it advisable to release him.

19. Denmark goes a step further than Austria; for, not content with trying to keep casuals from becoming paupers, she aims also at keeping the unemployed from becoming casuals. In England hundreds of men and women drift into pauperism every year, just because there is no one to give them a helping hand when misfortune befalls them. Illness comes, or they are out of work; they fall behindhand with their rent; their landlord seizes their goods and chattels, and they betake themselves to the casual wards. Thence to the workhouse is but a step, and once in the workhouse they are pauperised. Meanwhile the Poor Law officials, however willing to help, are powerless: it is no business of theirs to interfere. In Denmark, however, the fact is recognised that it is better to spend money on warding off pauperism than on relieving paupers. There the special duty of a Poor Law officer is to help the poor in all ways, but above all to help them not to become paupers. Part of his regular business is to act as general adviser to those who are just hovering on the brink of pauperism, especially to such of them as would work gladly but have no work to do. One of his recognised functions, indeed, is to put them in the way of finding work, by telling them where there is most chance of its being found. Another of his functions is to provide housing, at a reasonable rent, for men and women who, although they have the money wherewith to pay for it, cannot find it for themselves. He must even provide a shelter, and not in a workhouse, for tramps, if they can prove that they are bona fide working men in search of work.

20. But if it is counted the duty of the Poor Law official in Denmark to help the deserving poor, it is counted his duty too to wage war against the whole loafer tribe; and this the Danish law enables him to do in a singularly effective fashion; as it enacts that vagrants, leggars, and all destitute persons who, being without work, leave undone the work the authorities give them to do, may be sent to a penal workhouse. And there they may have to stay, earning every meal before they eat it, not for a few days, or even a few weeks, but for six long weary months, with the prospect always before them of being, at the end of that time, not set at liberty, but merely transferred to a workhouse. There they may be detained until, by dint of sheer custom, they have overcome their old dislike of work and are prepared to make an effort to earn their own living. Every town or commune in Denmark is the owner, or part owner, of a penal workhouse, where insubordination is put down with military sternness, and laziness is punished with solitary confinement.

21. One more defect in our Poor Law, and this the most grievous of all, is that, although it does not ordain it tacitly sanctions that clubbing together of the poor of all degrees which entails such untold misery on the more respectable among them. It makes no attempt to discriminate between the poor old man who has worked hard all his days, and pinched and saved, and the drunken wastrel who has spent all his time when not in prison preying on his fellows. It does not even recognise that there is any difference, in point of merit, between the lazy self-indulgent gadabout, who is a disgrace to her sex, and the widow whose life has been a long fight to bring up her children respectably. It allows exactly the same treatment to be meted out to the one as to the other; nay, it even allows them to be shut up in the same building, and forced to spend their days and nights together. And this

is directly opposed to the teaching of sound economy as well as of humanity; for practically it places a premium on idleness and vice. In many of our unions the worst class of inmates are quite content and happy—they find the place, as one of them told me, “a real home”—while the more respectable among them are unutterably miserable. In this respect the Danish Poor Law is infinitely better than ours, as it recognises the fact that paupers must be sorted and classified, as otherwise great injustice is done. The relief system now in force in Denmark was organised, indeed, for the express purpose of ensuring that every destitute person in the kingdom should, so far as possible, be dealt with according to his merits.

22. In London, if a man—or woman—between fifty and sixty applies for relief, he is as a rule sent off straight to the workhouse, no matter whether he is a scoundrel of the lowest type, a lazy ne’er-do-weel, or a respectable artisan. As often as not the relieving officer does not take the trouble to inquire what his past life has been; for no matter how deserving the applicant may be, he must send him to the workhouse, as there is no other place where he can send him, and he is not allowed to give him out-relief. In Denmark, however, the relieving officer, with the help of the police if necessary, is bound to make a searching inquiry into the character and past life of everyone who applies to him for relief. Then, if a man’s record is thoroughly good, and he can show that it is only temporarily he requires help, he receives a grant out of the Free Fund which carries with it neither the stigma nor the disabilities entailed by Poor Relief. If, however, although his record is good, it seems probable that he will require help not for weeks but for months, out-relief is given to him. Applicants who belong to the doubtful class, who are lazy and thriftless, but not vicious, are sent to the workhouse, unless they be old and feeble, in which case they are sent to a poorhouse; while applicants of the worst sort of all are sent to a penal workhouse.

23. Then in England if a respectable old woman—or man—applies for relief, she too must as a rule be sent off to the workhouse, just as if she were the veriest drunken old tramp, ex-criminal, or worse. In the eyes of the law, indeed, she is not one whit better than the old tramp; and this in itself is enough to stamp the law as unjust, inhuman, and stupid. To her, it is true, out-relief may be granted; but when it is granted it is almost invariably so small in amount that she cannot possibly exist on it. Besides the chances are she is not strong enough to live alone, and has no relatives able and willing to let her live with them. *I once took a census in a number of workhouses with a view to finding out how many of the inmates above sixty-five had relatives with whom they could live, if they were provided with old-age pensions of 5s. a week each. Out of 2,200 inmates I found only 1,200 who were strong enough mentally and physically to leave the workhouse, even if they had relations with whom they could live, and among the 1,200, only 23 who actually had relations with whom they could live, if they did leave it. The overwhelming majority of respectable old people who are destitute must go to the workhouse, unless they choose to starve, as there is nowhere else where they can go.

24. In Denmark it is otherwise: there no respectable old man or woman is ever sent to a workhouse, or has anything whatever to do with the Poor Law or its officials. For the poor who are above sixty are divided into two distinct classes, pensioners and paupers, i.e., the deserving and the undeserving, and the two classes are kept entirely apart. “We need never even see a pauper now unless we wish,” an old pensioner once assured me, with infinite pride. The pensioners are either provided with money allowances, or are lodged in old-age homes, where they are made extremely comfortable, and retain not only their full liberty, but their votes and other rights as citizens. The paupers on the other hand, whether living on out-relief or in poorhouses, are practically in bondage; and while it is regarded as a terrible disgrace to be a pauper, no discredit whatever is attached to being a pensioner. For rightly or wrongly among all classes in Denmark the feeling is strong, that a man who has worked hard in the days of his strength, and has led a decent honest life, has the right to be supported in his old age.

The English relief system contrasted with the Danish.

The hard case of the deserving aged poor.

The Danish old-age relief system. Old-age homes.

APPENDIX No. LXXXII.—*Continued.*

Old-age homes in Roumania, Holland, Germany, and Russia

25. Denmark is not the only country where the aged respectable poor are treated more humanely than in England. In Austria men and women above sixty are not regarded as paupers, no matter how much relief they may require. Old-age homes are provided for them, and there they live in great comfort, being treated not only with kindness but with infinite consideration and respect. There are old-age homes, too, of much the same kind in Roumania, Holland, Switzerland, some parts of Germany, and in Russia.

Treatment of the poor in London compared with the treatment of the poor in Berlin, Copenhagen and Vienna.

26. So far as I can judge, in Berlin destitute children are better cared for than in London; while both in Copenhagen and in Vienna destitute old people are treated more humanely, and the able-bodied are dealt with more wisely. Yet the cost of Poor Relief per head of the population is considerably lower in these three cities than in London. I have watched the working of the Poor Relief systems in force in ten European capitals in my time; but I know no capital, excepting St. Petersburg, and perhaps Belgrade, where, so far as the respectable poor are concerned, so small a return is obtained for the money spent on Poor Relief as in London; and no city where so large a return is obtained as in Copenhagen. Objections may be urged of course not only against the Danish Poor Law, but against the system on which it is administered in Copenhagen; still this system certainly works admirably: it works better, from the ratepayer's standpoint as well as that of the poor, than either the Berlin system or the Vienna, both of which are perhaps, in theory, superior to it in some respects. More

is done for the poor in Copenhagen than in any other city, yet the cost of poor relief together with old-age relief was in the year 1905-06, only 10s. 7½d. per head of the population, or 6s. per head less than the cost of poor relief alone in London. Although the administration is entirely in the hands of paid officials, the working expenses, salaries, etc., of the whole Poor Relief and Old-Age Relief department amounted that year only to £14,582.

27. The full cost per head in the Copenhagen workhouse is 1s. a day; and in the penal workhouse it is 11½d. Even in the beautiful old-age homes where the inmates are surrounded with comforts, the cost per head is only 1s. 8d. a day; whereas in our London workhouses it averages 2s. 0d. And the cost of living is now quite as high in Copenhagen as in London.

28. If I might venture to make a suggestion, the one I would make is that the Royal Commissioners should send an official representative to Copenhagen to report on the working of the Poor Relief system in force there; and that, on his way, there he should pay a visit to the Orphans' Department in Berlin; and on his way home, to a Hungarian Children's Dépôt, and a Vienna old-age home. I would suggest also that he should go to Elberfeld, were it not that the experience of Berlin where an attempt was made some years ago to give the Elberfeld relief system a trial proves conclusively that that system cannot be worked successfully in very large towns.

EDITH SELLERS.

Sudbury, Harrow.

APPENDIX No. LXXXII.—(A.)

Handed in by Miss Edith Sellers.

POOR RELIEF ADMINISTRATION IN DENMARK.

In Denmark there are two kinds of Poor Relief, old-age relief, which is reserved exclusively for the aged, deserving poor, and pauper relief; and the administration of the one kind as of the other throughout the kingdom, excepting in Copenhagen, is vested in the local authorities, i.e., in rural districts in a committee of the Communal Council, and in towns in a committee of the Municipal Council. These committees, each of which is under the chairmanship of the Burgomaster, correspond roughly, so far as their functions are concerned, to English Boards of Guardians. Although in theory the responsibility for the relief of the poor rests not on them, but on the council of which they form part, and which provides them with the money they spend, they are the local Poor Law authorities; and in no other country, with the exception of Switzerland, do these authorities wield so much power over those whom they relieve as in Denmark. All applications for relief must be made to them, and it is they who decide whether the relief shall, or shall not, be granted. They must, it is true, grant relief to all who require it; on that point Danish law is explicit; but in the case of pauper relief—not old-age relief—they are free to determine the form it shall assume and to attach to it what conditions they choose, subject to the approval, of course of their higher authority, the County Council. Nor is this all. "In order that the burden entailed by the universal right to support shall not become altogether too heavy to be borne, the law secures to them, i.e., the Poor Law authorities, the right to exercise very great power over all who receive support." A man who accepts relief forfeits not only his right to vote, but his right to get married, or to do what he likes either with himself or his time. The authorities decide where he shall live, whether in the workhouse or outside, decide too how he shall live, how he shall demean himself towards his wife and children, and how much work he must do. If he fails to do what

they give him to do, or disobeys them in any way, they can send him to a penal workhouse. So long as he is a pauper, in fact, he is their bondsman; but infinite precautions are taken to prevent anyone who deserves a better fate ever becoming a pauper owing to misfortune, temporary distress, illness, or accident.

It is only over the paupers that the authorities wield this great power, it must be noted; they have no right to interfere with the recipients of old-age relief, and are expressly forbidden to send them to the workhouse.

If on the one hand the local Poor Law authorities have more power in Denmark than elsewhere, on the other, more precautions are taken to guard against their misusing their power. In rural districts they are under the close surveillance of their Amtraad, or County Council, which consists of from seven to thirteen members, the majority by one of whom are elected by the communal councils, and the minority, by the landowners. The chairman of the County Council, who is a State-appointed, State-paid official, is the higher authority to whom all appeals against the decisions of the local authorities must be made. Any ratepayer who considers that these local authorities are wasting the money yielded by the communal rates, may appeal to him, as the representative of the County Council, to restrain them; and any pauper who has a grievance against them—to whom they have refused relief or whom they are detaining in the workhouse against his will—may appeal to him for redress. And the chairman's decision is binding; the local authorities must accept it, unless they choose to appeal against it to the Minister of the Interior.

Then the chairman audits the accounts of all the local authorities in his county; and, through a committee of his council, watches over and controls the working of their institutions. No Poor Law institution can be used until it has been certified by the County Council of the

APPENDIX No. LXXXII. (A).—*Continued.*

county in which it stands ; nor can any rules or regulations be in force there, until they have received the council's sanction. Thus the County Council is able to determine in a great measure the treatment of the poor throughout the county, and to prevent the local authorities playing havoc either with the interests of the ratepayers or those of the poor.

In provincial towns the local Poor Law authorities are under the supervision of the Minister of the Interior, who stands to them in the same relation as the chairman of the County Council stands to the local authorities in rural districts. He is for towns the higher authority, and for towns and rural districts alike, the supreme authority, in all that relates to the administration of poor relief.

In Copenhagen the administration of Poor Relief is entirely in the hands of paid officials, highly trained experts for the most part. This administration, as well as that of old-age relief and the control of all the public charities and charitable institutions in the city, is vested in a department presided over by the 3rd section Burgomaster who is appointed to his office by the Municipal Council, subject to the veto of the King, and holds office practically for life ; for, although the Council may dismiss him, if they do so without the consent of the King, they must continue to pay his salary. This Burgomaster is directly responsible to the Municipal Council, as the representatives of the ratepayers, and to the City President, as the representative of the State, for the right-doing of the work of his department. He is the caretaker of the poor of all degrees ; all who are in need of relief must apply to him—through his deputies of course ; and he is answerable alike to the town and to the State for the measure meted out to them.

For Poor Law purposes the city is now divided into fifteen districts ; and these fifteen districts are arranged in three groups, each group containing five districts. A district is under the care of a district superintendent, and a group

is under that of a group inspector. Both the superintendents and the group inspectors are specially trained for their work, and devote to it the whole of their time. A superintendent is responsible to his group inspector, and through him to the Burgomaster, for the administration of the relief granted in his own district. He and his assistant officials are in close touch with the poor of this district ; they go about among them in much the same way as the Charity Organisation Society's officials go about among the poor in London, investigating the causes of poverty as well as relieving distress. As they act in concert with the police, they know the past histories of the people with whom they have to deal ; they know, too, the lives they lead and the amount of their earnings. Thus it is difficult for even professional beggars to impose on them ; and when they help they can adapt what they give to the real necessities of the case. A district superintendent has nothing whatever to do with either old-age relief or the public charities ; it is only pauper relief that he distributes. His work, therefore, lies for the most part among the lazy, the thriftless, and the worthless ; and when he comes across any of the respectable poor in need, instead of relieving them himself, he places them under the care of the special officials whose duty it is to look after them.

A group inspector is directly responsible to the Burgomaster for the Poor Law administration of the five districts that form his group. He watches over the superintendents, sees that they do their work properly, and revises their accounts. At the same time he is the chief of the special bureau that administers the old-age relief law in these five districts. It is to him that all claims for this form of relief must be sent ; and it is he who decides primarily whether they are, or are not, admissible. The three group inspectors are the special guardians of all the respectable aged poor in the city, just as the fifteen district superintendents are the guardians of all the paupers.

APPENDIX No. LXXXII. (B.)

Handed in by Miss Edith Sellers.

"POOR RELIEF IN BERLIN."

From the "Contemporary Review" for December, 1905.

One reason why the system of Poor Relief administration in force in Berlin is fraught with interest for us, as a nation, is that it differs fundamentally from the system in force in London. Berlin, it is true, has its Poor Commissioners just as London has its Poor Law Guardians ; but, although both Commissioners and Guardians are honorary officials, they have not much else in common. In London the Guardians are the Poor Law authorities : it is they who decide what shall be done for the poor and who superintend the doing of it ; they are the controllers of the administration of relief, the actual work of relieving the destitute and investigating the causes of their destitution being in the hands of paid officials. The guardians play the master, in fact, and carry the purse, the paid officials being their servants. In Berlin it is otherwise. There it is the paid officials who control the honorary, not the honorary who control the paid ; there the paid official does, in part at any rate, the work done here by the Guardian ; while the Poor Commissioner does the work done here by the paid official—he sifts and sorts the poverty-stricken and deals out among them food and clothing, or the means wherewith to obtain these things.

* * * * *

Berlin is divided into 326 districts, and in each district a list is kept of the ratepayers living there, who are liable to be called upon to act as the town's honorary officials. Men of all classes are on this list, they work with their hands, they who work with their heads, and they who work not at all ; for every ratepayer, no matter how rich or how poor, may by law be summoned to join the Municipality's honorary staff, as the town has a legal claim on the services of all its citizens. There would be no need for a list at all, therefore, were it not that Berlin, being alive to the fact that the services of some of its citizens are better worth having than those of others, chooses to discriminate among them with a view to

securing the best. A man must be at any rate fairly respectable and law-abiding for his name to appear in the district list, although, on the other hand, he may be as democratic as he chooses, or as reactionary. Whether it does or does not appear there, however, depend neither on his own wishes nor yet on his own convenience, but solely on whether, in the estimation of the community, as represented by the Municipality and its officials, he is or is not capable of rendering useful service to the town.

Municipal Councillors are the only honorary officials in Berlin who are elected directly by the ratepayers ; all the rest are appointed to their various offices by these Councillors, who select them from among the persons whose names are on the district lists. Thus Poor Commissioners, instead of being chosen, as English guardians are, by the ratepayers in response to their own request, are nominated by the Municipal Council without any regard whatever even to their protests. No matter how much they may dislike the work of a Commissioner, or how difficult it may be for them to spare the time in which to do it, they must, the law ordains, accept the office when it is given to them, unless they can prove that they are unable to fulfil the duties it entails owing to physical weakness, or frequent absence from the city on business. A man who already holds an honorary office cannot, however, be nominated Poor Commissioner against his will, nor can any paid functionary of the town or State. The appointment is for six years. Still a Commissioner may, if he chooses, resign office when he has served for three years.

Although the Municipal council has the right to appoint practically anyone whom it chooses as Poor Commissioner, it cannot, of course, compel him to act ; for after all a horse may be taken to the water, but a horse cannot be forced to drink. Still, if he refuses to act, it can and does punish him by inflicting on him social penalties as well

APPENDIX No. LXXXII (B).—*Continued.*

as pecuniary loss. Whoever, when nominated as Commissioner, refuses to act without legitimate excuse, forfeits certain of his rights as a citizen. During the six years he ought to hold office he cannot vote at any election nor take any part whatever in public affairs; and he must pay higher rates than his fellows, higher by from one-eighth to one-fourth. In other ways, too, things are made uncomfortable for him; for he is looked upon as a bad citizen, one who shirks the duty he owes to his town; and in Berlin society and the authorities are at one in taking care not to encourage bad citizenship by showing to it undue toleration. Thus, although many men try to evade acting as Poor Commissioners, very few actually refuse to act.

As the Commissioners are nominated by the Municipal council, they are, of course, subordinate to it; not on them, therefore, but on the council, as the direct representative of the ratepayers, rests primarily the responsibility for the relief of the poor, as for the management of all the business of the town. This council, however, as a council, has nothing whatever to do with the administration of relief, nor even with the control of the administration, as it delegates to another council, the Magistrat, its duties as an executive body together with its authority as a controlling body. The Magistrat is, in reality, the executive committee of the Municipal Council, although its members are not themselves members of that council; and the chief business of the council is to appoint the members of the committee, *i.e.*, the Magistrat, to provide them with the money wherewith to do the work it entrusts to them, to provide them also with subordinate honorary officials—Poor Commissioners among others—to help them to do it, and to keep watch that the money is not wasted and the work is well done. It contents itself, in fact, with safeguarding the interests of the ratepayers, and leaves to the Magistrat the task of carrying on the business of the town.

The Magistrat consists of thirty-four members—*Stadträthe* is the name they bear—seventeen of whom are paid and hold office for twelve years, while seventeen are unpaid and hold office for six years. Every member, however, whether paid or unpaid, is an expert in some branch of Municipal work, and as such is attached to the department most concerned with that branch. Practically the unpaid *Stadträthe* are the expert advisers of the various departments, and the paid *Stadträthe* are the managing directors. Every department is under the control of a paid *Stadtrath*, who is directly responsible for the work it does to the chairman of the Magistrat, the chief Burgomaster, himself a paid official, who, in his turn, is responsible for the work of all the departments on the one hand to the Municipal council, as the representative of the town, and on the other to the City President, as the representative of the State.

Although the responsibility for the work of each department rests on the *Stadtrath* who is at its head, the work itself is done under the direction and supervision, of a Board of managers, of which he is chairman. In the case of the Poor Law Department this board is known as the *Armen-direktion* or Poor Board. It consists of three paid and six unpaid *Stadträthe*, thirteen other paid officials, Magistrats-assessors, etc., eighteen Municipal Councillors and ten *Bürger's* Deputies.

The Municipal councillors and the Deputies, who are also honorary officials, merely attend the monthly meetings of the Board to receive reports as to what it is doing. It is by the other members that the actual work of the department is done, that is by the *Stadträthe* and their paid assistants, with the help, of course, of a staff of subordinate officials. It is these members who, for executive purposes, constitute the *Armen-direktion*; and they are, one and all, trained officials as well as experts in all that concerns the poor.

The *Armen-direktion* is the Poor Law authority for the whole of Berlin; it has full control of the administration of relief in every part of the city. Each district has its Poor Commission, but all the Commissioners are under the immediate surveillance of the *Direktion*. It stands to them in the same relation as that in which the Local Government Board stands to Guardians here, but with this all-important difference, that whereas the Local Government Board can practically only restrain Guardians from acting, it can both restrain Commissioners from acting and force

them to act. Thus it is able to secure uniformity of treatment for the poor throughout the city.

* * * * *

The *Direktion* is able also to secure comparative uniformity of expenditure on the part of the various Poor Commissions, as they are dependent on it for the money they spend. In Berlin, instead of each district supporting its own poor, the town as a whole supports all the poor, the necessary money being obtained from the yield of the Municipal rates. The burden being thus a burden on the whole community, the control of the expenditure it entails is vested, of course, in the central authority—*i.e.*, in the *Armen-direktion* acting for the Municipal council. And the control is certainly effective. The *Direktion* fixes for each district the minimum amount required there for the relief of the poor; and at the beginning of every month this is sent to the chairman of the Poor Commission, who, at the end of the month, must render an exact account, signed by all his colleagues, of how he has spent it. If, as almost always happens, he spends more than is sent to him, the *Direktion* makes good the deficit, but not until it has sifted his accounts and decided that the extra expenditure was necessary.

Then not only does the *Direktion* watch over and control the administration of the whole Poor-Relief system, but it actually administers it for the greater part; for it keeps in its own hands the relief of all children, excepting those who are relieved together with their parents, and the relief of all the indoor poor. It is only the outdoor poor—*i.e.*, the recipients of and applicants for out-relief, whom it leaves to be dealt with by the Commissioners.

The *Armen-direktion* is divided into three Boards, the General, the Workhouse and Refuge, and the Orphans'. The Orphans' Board, although under the same control as the other two, is kept quite apart from them, being housed in a separate building, and having its own staff of paid and honorary officials. The reason for this arrangement is that Berlin does not regard the children it supports as paupers, and being determined that they shall be under no temptation to develop into paupers, it takes care that they are not associated in any way with paupers or pauper officials, just as it takes care that they are not associated with criminals or jailers. No starving little street urchin is ever sent to the workhouse or any other pauper resort in Berlin; nor is any child who is accused of crime, or who is even caught red-handed, ever sent to prison. They and all their youthful kith and kin are taken at once, when they are found, to the Orphans' *Dépôt*, in *Alte Jakobstrasse*, where they are handed over to the safe-keeping of its director, the Orphans' Father, who, as the personal representative of the Orphans' Board, is responsible for the well-being of every orphan the town supports; that is, of all the children it supports, excepting those who are with their own relatives. For in Berlin it is not only the children who are motherless or fatherless who rank as orphans; but all those whose parents are in prison, or who are suffering from chronic disease and therefore cannot maintain them; or whose parents neglect them, ill-treat them, set them a bad example, or have deserted them. All these children are under the guardianship of the Orphans' Board, as by German law their parents forfeit their rights over them, although they remain responsible for their maintenance.

The Berliners have many institutions of which they are proud, but of none of them are they so proud, or with such good reason, as of the Orphans' *Dépôt*, the refuge they provide for their destitute children. It is a wonderful place, a perfect model of skilful organisation combined with careful management; and the good that is done there is untold. Its doors stand open night and day so that any child whom misfortune befalls, or to whom wrong is done, may go there at once. Young apprentices who are ill-treated by their masters, little maids-of-all-work who are turned adrift by their mistresses, wend their way instinctively to the *Dépôt*. If the police pick up a stray baby, or find one whose "father" is starving it, they transport it there at once; just as they transport there the lost children they meet with, the homeless and friendless. But although all the town's orphans go to the *Dépôt*, they none of them go to stay, they are there only as sojourners, just waiting until the director decides what can best be done with them. The average length of a visit is only six days, and no visit can last longer than six months.

APPENDIX No. LXXXII (B).—*Continued.*

The Dépôt is a huge place, for not only is it the general receiving house for all the destitute children in Berlin, and a refuge for them later in life, but it is the headquarters of the Orphans' Board. The whole administration of the Poor Law, indeed, so far as it concerns children, is carried on under its roof, is carried on, too, in all that regards personal relations with the children, through one man, the Dépôt director, acting of course as the representative of the Board, and under its close supervision. It is the director who decides what shall be done with every child who enters the Dépôt to ensure his developing, so far as in him, lies, into a useful, self-supporting citizen. Not only does he find homes for all these children, but, unless the home be an institution, he watches over them in these homes, sees that they are well fed, well clothed, and properly cared for; and brings his personal influence to bear on them at every turn. He actually does, in fact, what, were it not that he does it, one would say no man could do, for he is as a father to all Berlin's orphans, and their name is of course legion.

The Dépôt director has many officials both honorary and paid to help him in his work. Every orphan, indeed, is under the care of no fewer than three honorary officials, a Waisenrath, a Pflegerin and a Vormund. When the Municipal Council appoints Poor Commissioners to help to take care of the adult poor, it appoints also Waisenrathen, or orphans' councillors, to help to take care of the children. There are three or more councillors in every district, and their business is to watch over all the children there, excepting those who are living with their parents. They are the agents through whom the Orphans' Board pay the foster-mothers, and they are required to see the boarded-out children and report on them every month. The Pflegerinnen are the lady-assistants of the councillors and act as their deputies. The Vormünder, who are appointed not by the Municipal Council but by the legal authorities, on the recommendation of the Councillors, are the children's guardians before the law. A Vormund has only one child under his care, and he is expected to interest himself personally in all his concerns. Then every child who is boarded out elsewhere than in Berlin is given a special guardian who lives near his home, and who also has, as a rule, a lady-assistant. All these honorary officials act under the Orphans' Board and in co-operation with the Dépôt director. There is also a paid inspector who spends all his time going round among the orphans to see that they are being properly educated and are given the chance of cultivating any talent they may have. A foster-mother who allows a child to remain away from school unnecessarily for a single day, forfeits her month's allowance; and a master who has an orphan apprentice, and does not send him to a night school, is liable to punishment.

I once spent a morning with the director at the Dépôt when I was amazed at the amount of work he did, and the ease with which he did it, thanks to the lines on which the place is organised. The receiving house part of the building is divided into wards: there are separate wards for babies, for young children, for boys and for girls—both for those who have been respectably brought up and for those who have "just growned." Then there are hospital wards, wards for convalescents, and wards that are reserved for the little criminals whom the State hands over to the Dépôt. There are school wards, too; for however short be the time a child is at the Dépôt he has regular lessons every day in reading and writing, incidentally, too, in good manners and the importance of being truthful and honest. In another part of the building there is a Housewifery School, where the elder girls who are boarded-out in Berlin go every morning to learn how to cook, clean and wash, that they may become trained servants. Here also is a Servants' Home where these girls may go later if out of place, or in need of rest. All the town's orphans, boys and girls alike, who are earning their living in Berlin, are encouraged to spend their Sunday evenings at the Dépôt.

A child who enters the Dépôt is seen at once by two officials, a doctor and an expert in dealing with the young. It is then lodged in the ward most suitable for it, where it is kept under close observation until the director decides what can best be done with it. If it is found to be free from marked physical, mental or moral defect, it is boarded out at once, provided it be a girl; for Berlin boards out all its normal girls until they are sixteen. Its

normal boys it boards out only if they are under six, otherwise it sends them to Rummelsburg, a school organised on the cottage-home system. Still the boys who are once boarded out are left with their foster-parents, if all goes well, until they are fifteen, when they are apprenticed. The boys, it must be noted, are turned out into the world a full year earlier than the girls.

* * * * *

Great as are the advantages of the Berlin system in dealing with children sound in body and mind, they are infinitely greater in dealing with the feeble and diseased. As all the town's orphans are under one administration, the authorities there are not tempted, as our Poor Law Guardians are, to club together unsuitable cases, the half-witted with the whole-witted, or even the no-witted at all, to the detriment of the whole community. They can sift, and sort, and classify the afflicted according to their individual defects; and thus are able to secure for them, one and all, the treatment necessary to enable them to turn to good account any talent they may have; and they most of them have a talent of some sort in their fingers, if not in their heads.

If a child at the Dépôt seems below the average in intelligence, he is carefully watched, and if it is found that he is merely stupid, he is boarded out near some school where there are "special classes." In a special class there are never more than twelve children, and these work with their heads only two hours a day, devoting the rest of their school time to learning how to use their hands. If it is found, however, that he is too deficient mentally to benefit even by the simple lessons given in a special class, he is sent to Dalldorf, the colony the town provides for its feeble-minded children. There any little brain power he may have is carefully cultivated, while infinite trouble is taken to render him dexterous enough to earn his own living by the work of his hands, without much help from his head. If he is epileptic he is sent to the town's colony for epileptic children, where experts at once set to work to battle against his disease. Meanwhile he is carefully educated and fitted to earn his own living. The result is that hundreds of the very sort of children, who in England grow up to be a curse to themselves and all around them, a heavy burden on the ratepayers to boot, are in Berlin put in the way of leading fairly happy useful lives, and are rendered self-supporting.

Then, if the child's defect is not mental, but physical, he is taken in hand by doctors without a moment's delay. If he shows signs of consumption he is sent to a sanatorium. If he is deaf and dumb, or blind, he is boarded out in Berlin, and is educated at the Deaf and Dumb—or the Blind—Institute, where a Housewifery School student, who lives near him, takes him every morning on her way to the Dépôt. It is the same if he has lost a limb, or is deformed; some arrangement is always made by which a good education is secured for him, and such technical training as fits him to earn at least the wherewithal to pay for board and lodging.

The "problematische" children, they whom the law classes as demoralised or criminal, are under observation day and night while at the Dépôt; and a careful study is made of them with a view to finding out how far their depravity is due to their past circumstances. If their expert observers decide that they have no innate evil propensities, they are boarded out in country districts with foster parents who can be trusted to treat them kindly, while keeping a sharp watch on them. They go to the ordinary Volksschule, where they are, although neither they nor their companions know it, under the close surveillance of the teachers. A Dépôt inspector visits them frequently, and at the first sign of back-sliding on their part, transfers them to one of the reformatories the Orphans' Board has organised for such of its children as seem to turn from good to evil by instinct.

The Orphans' Board certainly does its work well; all that it can do it tries to do to keep its charges from harm and fit them to fight their own battles. And in the overwhelming majority of cases it succeeds; a finer set of children, mentally and physically, than the orphans of Berlin it would be hard to find, or a set with a better chance of developing into useful citizens. There is no touch of the pauper about them; on the contrary, they take their places side by side with their fellows on terms of perfect equality, when the time comes for them to go

APPENDIX No. LXXXII (B).—*Continued.*

out into the world; and it is an almost unheard-of thing for one of them to be found later in life in a workhouse.

Then not only does the board do its work well, but it does it most economically; it is a perfect adept, indeed, in the art of making one penny do the work of two. In addition to the multitude of young apprentices and servant maids over whom it keeps watch, it had in the year 1903-4, directly under its care 7,958 boys and girls. Yet its full expenditure was only £78,413, and of this sum £11,031 was refunded to it, partly by the relatives of its charges, and partly by the State, which pays half the expenses of the criminal children. Thus the cost to the town of its orphans was only £67,382. If London could obtain as good a return for the money it spends on its destitute children as Berlin obtains for this £67,382, it would be able, I am inclined to think, to reduce this branch of its expenditure by more than one-half, and yet provide for its little *protégés* better than it provides for them now.

If the whole administration worked as well as this Orphans' Board, Berlin would be a model for all Europe, so far as its treatment of the poor is concerned; but this, unfortunately, is by no means the case, as the results prove. For strangely enough, in this town where the youthful section of the destitute are dealt with both so wisely and so generously, another section of them are dealt with unwisely, and another again ungenerously. The blame for this state of things does not, however, rest on the Workhouse and Refuge Board; it does its work both economically and well.

Berlin has only one workhouse,* and this, although under the management of the Poor Law Authorities and paid for out of the grant for the poor, is in reality a prison. Its inmates are not sent there by the Armen-direktion, but are taken there by the police, and must stay there from six months to two years as the judge who condemns them may decide. Any man found wandering about without visible means of support may be sent to the workhouse; and so may any man found begging or allowing those dependent on him to beg, if during the previous two years he has been convicted of the same offence more than once. This punishment is also meted out to men who, owing to laziness, drunkenness, or gambling, instead of maintaining their families, leave them to be maintained by the authorities; or who, being without work refuse to do the work given them by the authorities; or who, within a given time of their arrival in Berlin, fail to provide themselves with shelter. On April 1st, 1903, there were 1,479 men at the workhouse, and in the course of the following year 2,036 more were sent there—1,039 for begging and 703 for vagrancy. 1,263 out of the 2,036 had previously been in prison; and 1,124 in the workhouse—343 of these latter, indeed, had not been out of the workhouse a year when they returned. This is a fairly strong proof that as a reformatory the place is a failure, a fact, however, that does not prevent its being an extremely useful institution.

A worse-looking gang than the men at Rummelsburg I have never seen—even the better among them have sturdy beggar stamped on their faces. The workhouse is therefore, well worth far more than it costs, if for nothing but that it provides a place where these men can be kept from preying on their fellows and forced to work. And it does not cost much, only 9d. per head a day, administration and everything else included.

Attached to the workhouse is a hospice where some 600 decrepit old men and women, belonging for the most part to the disreputable class, are housed. This, too, is a useful institution, in that it keeps together all in one place persons who, wherever they are, demoralise and degrade those around them.

The Armen-direktion, in dealing with vagrants, distinguishes between work-seekers and work-shirkers: the latter it regards as criminals to be punished, the former as persons to be helped. The refuge it has organised for the benefit of the genuine work-seeker is a casual ward worked on philanthropic lines. Any respectable man may, if destitute, go there for five days, and be provided every day with a bed, breakfast and supper, if he devotes his time to seeking work. If he shows a lack of zeal in his search, however, if instead of going where the labour bureau tells him there is most chance of work

being found, he loiters about in the streets, he is handed over to the police; and the same fate befalls him if he presents himself at the refuge a second time within three months. Part of the refuge is reserved as a home for married men, who may leave their wives and children there while they themselves go off in search of work. Each family has a separate room, and there is a school attached to the block; as the Board would shudder at the thought of allowing children to go untaught even for a day. 1,316 families stayed in the refuge home in 1902-03, and no fewer than 586,863 men and women in the refuge itself.

Whereas the Orphans' Board and the Workhouse and Refuge Board have each clearly defined duties to fulfil, and actually do the work for which they are responsible, the General Board, which is popularly known as the Armen-direktion, fulfils so many duties that it is almost impossible to define them; and what is still more trying, does its work through others for the most part. On this Board rests the responsibility for the administration of out-relief, although it is the Poor Commissioners who administer the relief; and one of its chief functions is to supervise and control the Commissioners in their work. Not only does it provide them with money to distribute among the poor, but with soup tickets, fuel, clothes and even potato fields, *i.e.*, allotments, to let out gratis. Through a council of doctors it controls the sick relief administration, and through two deputations and a curatorium, manages five hospitals and colonies for epileptics, lunatics and the feeble-minded. If a man in Berlin is too ill to be properly treated in his own home, he is transported at once to one of the town's hospitals, if there is a vacant bed; if not, to a private hospital where the Armen-direktion pays for him. If it is a case covered by one of the insurance laws, it recovers what it has spent from the insurance bureau; otherwise it tries to recover it, by small weekly instalments, from the man himself or his responsible relatives. Nor is it only the cost of sick relief that it tries to recover. Every year it saves Berlin thousands of pounds by hunting up the responsible relatives of those who receive relief—brothers and sisters, as well as parents and children—and forcing them to contribute to its cost.

Then the Direktion manages a sort of pawnbroking business for the benefit of the respectable poor; it lends them money, and even makes them presents out of its charity fund, but only if they have had no pauper relief for at least two years. It also advances the money wherewith to pay a month's rent sometimes to families leaving the Refuge; and it not only gives away clothes, but lends out cooking utensils and furniture. There is no limit indeed to its functions, for its business is to help the poor, and the ways of helping the poor are as the sands on the seashore. And it does its work admirably on the whole, that part of it at least in which it acts as administrator. Where it fails is when it acts as controller of the administration of others; and this being the case it may fairly claim, perhaps, that the fault lies with these others. Be this as it may, the one section of the relief system which does not yield satisfactory results is the out-relief section which is worked by the Poor Commissioners, under the supervision of the Direktion.

There are no fewer than 357 Poor Commissions in Berlin, each consisting of from six to twenty appointed members and certain ex-officio members, *viz.*, the district Municipal Councillors, Municipal overseer, medical officer and clergyman, and the chairman of the local Anti-Pauperisation Society. Until quite recently all the Commissioners were men, and even now, out of some 4,000, only thirty are women.

* * * * *

The members of each Commission are required to elect a chairman and a vice-chairman. If, however, they cannot induce anyone to act as chairman—and this sometimes happens—the Direktion steps in and appoints one. The office of chairman is not an enviable one; whoever accepts it must be prepared to devote nearly two hours a day to his work, and to face much worry. He, as the representative of the Commission, which meets only once a month, has all the poor in the district under his care. At a fixed hour every day he must be at his bureau, as all applications for relief must be made to him personally. If he grants relief, he must prove to his colleagues later

* *Vide* Appendix No. LXXXII. (D).

APPENDIX No. LXXXII. (B).—*Continued.*

that it was needed ; if he refuses to grant it, he must justify his refusal to the Armendirektion ; as every applicant to whom relief is refused has the right of appeal to the Direktion. If a case of destitution is reported to him, he must, at once, either go himself or send one of his colleagues to investigate it ; and if help is needed he must provide it. If what he provides costs more than 6s. he must obtain the sanction of one of his colleagues before he gives it ; and he can grant no permanent relief without the sanction of the whole commission.

As a rule the chairman does not himself investigate cases of distress, but deposes his colleagues to investigate them for him. It is his colleagues, too, who watch over the recipients of relief to see that they lead orderly lives, and do not waste what is given them. Out-relief is supposed to be given only to the fairly respectable, and the Armendirektion sends round from time to time a Paupers' Black List, *i.e.*, a list of the persons who are unworthy of help. If a Black Lister applies for relief he may be handed over to the police. Special Commissioners are told off to watch over the paupers who have children to see that they bring them up properly and send them regularly to school. Parents who fail in their duty in this respect speedily forfeit their relief.

Even for the work done by his colleagues the chairman of the Commission is responsible ; he must see that it is done. He cannot absent himself from his office, even for a day, without arranging with the vice-chairman to be there in his place ; as otherwise, if things go wrong, any expense entailed by setting them right would fall on him. Then it is one of his duties to keep down the cost of relief in his district by persuading those who live there to subscribe to charities ; and he is expected to act in co-operation with the local philanthropic societies, especially with the Anti-Pauperisation Society. And all this he has to do gratis, besides keeping the Commission's accounts and writing the diaries of the persons it supports. The rent of his office is paid for him, it is true ; what account books he needs are given to him ; and a policeman is placed at his service to deliver for him his official notices, etc. ; but any other expense he may incur he must defray out of his own pocket.

* * * * *

One day I accompanied the chairman of one of the commissions when he went to pay the permanent list paupers their allowances. We found about 150 men, women and children waiting for us ; and a motley crowd they were. One half of them, I feel sure, would have received no relief at all in England ; while of the rest the majority would have been packed off straight to the workhouse. The blind, the halt, the maimed, were there of course ; lazy ne'er-do-wells of every type mingled with the unfortunate ; decent old folk, standing side by side with folk whom it would be straining charity to dub "shady." And in the midst of them all were children there in the place of their parents. Some of the old men and women were quite pitiable objects ; they seemed half-starved and most wretched and neglected. Little wonder either ; for the town, beyond granting them out-relief, does nothing for them at all, just leaving them to fend for themselves, and that always spells misery. In Berlin there are no refuges to which the poor have the right to betake themselves when too old to work.* The few old age homes there are reserved practically for the afflicted, excepting the one that is reserved for the disreputable ; and even were it otherwise, there is not room in them for a tithe of those who ought to be there.

Alike from the humanitarian and the economic point of view, the administration of out-relief in Berlin is far from satisfactory ; at least so it seemed to me when I was there ; and if the blame for this rests on the Poor Commissioners, it rests also, and in a still greater degree, on the system. The chairmen of these Commissions are expected to do more than the average honorary official can, or will do ; and the result is that much of the sifting and sorting of the poverty-stricken is done only in a

perfunctory fashion. Besides, the Commissions themselves have great difficulties to contend against, it must be remembered, not only because there is nowhere where the more respectable of their old pensioners, who are alone in the world, can be sent ; but also because there is nowhere where the average applicant for relief can be put to the test, as it were. Every year out-relief is granted to hundreds of men and women for no other reason than that they have children ; and there is no institution to which they, together with their children, can be sent for longer than a fortnight.

During the year 1903-4 there were on an average 34,370 men and women, together with 11,060 children, on the permanent out-relief list, in addition to the host in receipt of temporary relief. The population of Berlin at that time, it must be noted, was only 1,917,609. The allowances for the adults ranged in amount from 9d. a week to 7s. 6d. ; and for the children from 9d. to 6s. 3d. Still, although out-relief is administered on wasteful lines the relief system as a whole is administered economically. The full expenditure on the poor in 1903-4, including the expenditure on the Orphans' Depot, the workhouse, hospitals, colonies, etc., was £1,128,949 ; and of this sum no less than £534,870 went in out-relief and its administration. The Armendirektion succeeded in recovering £189,074 of the money it spent. Thus the cost to the town of its poor was £939,875—that is, 9s. 9½d. per head of the population, or 5s. 10½d. less than in London that same year.

It must not be forgotten, however, that throughout Germany there is in force an Old-Age Pension Law, as well as an Invalidity Law ; but if these laws were passed with a view to reducing either the number of paupers, or the expense they entail, in Berlin, they have certainly failed. In 1889, the year they came into force, there were 18,668 men and women on the permanent relief list ; by 1899 the number had increased to 27,771 ; and by 1904, as we have seen, to 34,370. Meanwhile the population had increased from 1,315,412 to 1,917,609. In 1885 the expenditure on poor relief was £405,000 ; by 1899 it had risen to £718,679 ; and by 1903-4 to £939,875. The truth of the matter is that the Old-Age Pension Law is practically a dead letter in Berlin, for no one can claim a pension until he is seventy, and there hardly one working man in a thousand lives to be seventy. At the end of 1904 there were only 2,530 old-age pensioners in the town. As for the invalidity allowances, they are so small that in the great majority of cases they have to be supplemented by pauper relief.

So far as the young are concerned, Berlin has good reason to be proud of its poor-relief administration, for in no other city are destitute children quite so well cared for. So far as the diseased are concerned, too, it has good reason to be proud of it ; for the poor who are ill are cared for there certainly more promptly than elsewhere, if not more humanely. Then the town may fairly claim that if its administrators have failed to devise an ideal system of dealing with vagrants and loafers, they have at least succeeded in devising one that is better—less costly and more just—than the system in force in London. The really worthless among its paupers are at any rate kept on short commons and forced to work. There are many useful lessons in Poor Relief administration to be learnt at the Rummelsburg workhouse, as well as at the colonies for epileptics, etc., and the orphans' Depot.

On the other hand, Berlin cannot plume itself on the way in which its feckless poor are treated ; and among the poor the feckless are always in the majority. The fashion in which its Commissioners lavish doles around is a source of wholesale demoralisation : it pauperises irredeemably men and women alike. As for the way in which the more worthy of its aged poor are treated, that ought to be a subject of heart-searching to the city, for they are certainly neglected most woefully. Nowhere, surely, is the worn-out worker made to realise quite so painfully as in Berlin, that he is a mere cumberer of the ground, a burden on his fellows.

APPENDIX No. LXXXII. (C.)

Handed in by Miss Edith Sellers.

POOR RELIEF ADMINISTRATION IN VIENNA.

In Vienna the responsibility for the relief of the poor rests on the Gemeinderath, or Municipal Council, the members of which are elected directly by the rate-payers. The Burgomaster, as their representative, is responsible on the one hand to the ratepayers, and on the other to the Statthalter, and through him to the Minister of the Interior, for the whole poor relief administration; and if mistakes are made, is it he who is called to account. Practically, however, the Municipal Council, as a council, has nothing whatever to do with the administration of Poor Relief; as its members delegate both their duties as an executive body, and their authority as a controlling body, to their executive committee, the Stadtrath, of which the Burgomaster is the chairman. This committee consists of twenty-nine members—including the chairman, thirty—of the Municipal Council, who are appointed by their fellow members to direct and control the business of the town. Each member of the Stadtrath receives a salary of 3,000 kronas a year, and is responsible personally to the Municipal Council for some part of this business; while the members are responsible collectively for the whole of it. The Stadtrath have under their surveillance and control the Magistrat, *i.e.*, the paid officials, experts for the most part, who together with certain honorary officials, actually carry on the business of the town. The Magistrat, a regularly organised department, is divided into as many sections as this business has branches, and each section carries on one branch under the surveillance of the members of the Stadtrath for this branch. One of these sections, the XI., is charged with the administration of the relief of the poor, so far as it is not administered by honorary officials; while another, the XII., is charged within the same limits with the administration of the relief of the orphans. For Vienna, realising the importance of keeping children free from pauperising associations, does not allow the orphans it supports to be under the care of the same section as the adult poor.

The honorary officials who share with the Magistrat officials the actual work of relieving the poor, are the members of the Armeninstitute, or Boards of Guardians. Vienna is divided into twenty-one districts, and each district has at least one Armeninstitut, the members of which are elected not directly by the rate-payers, but by the District Representatives, that is members of the District Council, who are themselves elected by the district rate-payers to manage for them their purely local affairs. Before an election, the chairman of the existing Institut draws up a list of the persons who are willing to act as Guardians, and who possess the necessary qualifications for acting, *i.e.*, are thirty or more years old, of good repute, ratepayers and residents in the district. This he sends to the District Representatives who elect from among them a certain number, proportionate to the size of the district, to act as Guardians of the poor, a certain number also to act as Guardians of the orphans. The Guardians of the poor must be men, but the Guardians of the orphans may be either men or women. Last year there were 2,069 Guardians, and of these ninety were women.

No Guardian may act until his election has been confirmed by the Stadtrath; and the Stadtrath have the right at any time to deprive him of his office without assigning any reason; they have the right, too, to dissolve any Board if, in the interests of the community, such a course seems advisable. Each Board elects its own chairman, treasurer, book-keeper, and secretary; but each of these officials must be confirmed in his office by the Stadtrath before he can act. Thus the Stadtrath have full control over the election both of the members of the Board and the Board's honorary officials; and can prevent unsuitable persons from being installed in office. They cannot, however, force suitable persons to be installed in office, or to remain there when installed; and therein lies their weakness and the strength of the Boards; for the Stadtrath have to think not once but many times before refusing

to confirm an election, especially the election of a chairman, as otherwise the whole Board might resign and leave the district without any Guardians at all. There is no danger, therefore, of their using their power arbitrarily. Besides, in this matter they always act on the advice of their Magistrat officials, who are in close touch with the Guardians, and whose business it is to help, not to hinder, them as well as the Stadtrath in their work. At every meeting of a Board one of these officials is present as an expert to tender advice.

It is the Stadtrath who decide how many Guardians shall be elected for each district; and each district is divided into as many wards as it has Guardians, each Guardian being responsible for the poor living in one ward. If the district is a large one, the wards are arranged in groups containing not more than eighteen wards each. The Guardians belonging to the same group form practically a subordinate Board, as they act together in all that concerns their own division of the district, while acting with the Board in what concerns the district as a whole.

In addition to the Boards of Guardians and the Section Boards, there is another, higher, board, the Zentralrath, of which the chairmen of all the Boards of Guardians are *ex-officio* members. Certain representatives of the Poor Law paid officials are also members, as well as the chairmen of the Anti-Pauperisation Society, and other philanthropic associations. The chief function of the Zentralrath which meets at the invitation of the Burgomaster and under his presidency, is to bring about improvements in the Poor Relief system. Its members aim at securing uniformity in the administration of the Poor Law, and co-operation between the administrators of Poor Relief and those of private charity. Thus, in theory, its rôle is an extremely important one; and were it to meet fairly frequently, instead of very rarely, it would no doubt be as useful in practice as it is in theory important. Even as it is, it is a notable feature of the Vienna system. Another notable feature is the Zentral Kataster. This Kataster is practically the diary of all the poor whom Vienna supports. The name of every man, woman, or child, who, since 1900 has received relief stands recorded there, each on its own special page, together with the amount he—or she—has received, and the chief events of his life. Whoever applies for relief must fill in a form containing certain questions concerning himself; and he is under no temptation to fill it in untruthfully, as his statements can at once be tested by reference to his papers, and, if necessary, to the police. If relief is granted, this form, annotated by the Guardian for his ward, is sent to the Magistrat by whom it is entered in the Kataster. Whenever a fresh grant is made, the fact is noted. Thus the Zentral Kataster is a complete record, which can be referred to at any time, of all who are in the receipt of relief and of all they have received.

Roughly speaking the administration of indoor relief, including the administration of Poor Law institutions, is in the hands of the Magistrat, while the administration of outdoor relief is in those of the Guardians. The Guardians, however, cannot grant permanent relief without the consent of the Magistrat, and in all that they do they must act in co-operation with them, and under their surveillance; while both they and the Magistrat act under the surveillance of the Stadtrath. The Guardians have, of course, no power of levying rates. They are expected to raise a certain portion of the money they require by persuading the charitable to give it to them, and the rest is supplied to them by the financial section of the Magistrat. Every tenth day the chairman of a Board receives a certain sum wherewith to defray the cost of the relief of the poor in his district; and every tenth day he must render an account, signed by his colleagues, of what he has done with the money received on the previous tenth day. In Vienna there are no relieving officers it must be noted; the relief granted is paid either by the chairman of the Board that grants it, or his deputy. The amount of the relief a Board may grant is strictly

APPENDIX No. LXXXII. (C.)—Continued.

limited, the maximum allowance for an adult being 30 kronas a month, and for a child 36.

Each Guardian of the poor is responsible to his Board for the relief of the poor in his ward. He is expected to be personally acquainted with them all and to pay frequent visits to such of them as are in the receipt of relief. If trouble comes upon them, they have the right to turn to him, no matter whether what they need be material help or advice. All their applications for poor relief must be addressed to him, and be by him presented to the Board, or, if the case be pressing, to the chairman of the Board, who between its meetings represents it. It is for the adult poor alone, however, that he is responsible, as the children are under the care of the Orphan's Guardians whose special business it is to interest themselves personally in the town's children. They must visit them

frequently, see that they are well housed, well fed, and above all, that they are being well brought up, and sent to school regularly. If an Orphan's Guardian is not satisfied with the conditions under which his protégés live, he can insist on their being changed; and if he disapproves of the persons who have charge of them, he may remove them from their care. Not only must he keep his own Board informed concerning them, but every six months he must send a special report concerning each of them to the Magistrat, by whom it is entered in the Kataster. It is only for the children living in the district that the Guardians for the district are responsible. They have nothing to do with those boarded out in the country, or placed in institutions. These are under the care of the orphan's section of the Magistrat, who have their own official inspectors.

Hanted in by Miss Edith Sellers.

ADDENDUM TO APPENDIX BY MISS EDITH SELLERS AS TO POOR RELIEF IN BERLIN.

NOTE IN REPLY TO DR. MUNSTERBERG

From the "Contemporary Review."

In the November number of the *Contemporary Review*, for 1906, Dr. Münsterberg, the President of the Berlin Poor Law Board, published a detailed criticism of an article of mine, "Poor Relief in Berlin," which appeared in the same Review eleven months before. Dr. Münsterberg is kind enough to note with satisfaction that I have "been very successful" in my endeavour to acquire an intimate knowledge of the conditions in Berlin. Everything in my paper "about the management of municipal affairs and especially about the administration of poor relief is entirely correct," he remarks; "the nature and form of the relief were likewise correctly described." He frankly admits, in fact, that upon all points but one every statement I made is perfectly accurate. The admiration I lavished on the arrangements for destitute children in Berlin was well merited, it seems; and so was the approval I expressed of the arrangements for casuals. Significantly enough, it was only when I ceased praising and ventured to blame, when I ventured to hint, in fact, that, although Berlin deals both more wisely and more generously with its children than any other town, it neglects its aged poor more woefully even than we here in London neglect ours, that, according to Dr. Münsterberg, I went astray. That I did in this actually go astray, I, however, cannot admit; I should be only too glad if I could.

I know Berlin well; I have spent months there again and again studying carefully the condition of the poor, especially the aged poor. I was writing, therefore, of what I had seen with my own eyes and heard with my own ears when I stated, in my article, to Dr. Münsterberg's evident wrath, that "the way in which the more worthy of its aged poor are treated ought to be a subject of heart-searching to the city . . . and that the fashion in which its Commissioners lavish doles around pauperises irredeemably men and women alike." When I made these statements I was fully conscious, of course, that their accuracy would probably be called in question. It was not, therefore, without due consideration that I did make them. Practically, however, I had no alternative if my report were to be a fair one; for I certainly found many signs of great misery among the aged poor in Berlin. That there must indeed necessarily be great misery among them Dr. Münsterberg himself incidentally affords strong proof; for he tells us that in 1905 there were 33,734 persons—they were all adults—in the receipt of permanent out-relief in the city; and a glance at the *Statistisches Jahrbuch* shows that the overwhelming majority of them must have been almost within hailing distance of starvation, unless indeed, they one and all had some private source of income—an absurd supposition.

5 of them received 9d. a week.

1,017	"	"	from 9d. to 1s. 6d. a week
2,090	"	"	" 1s. 6d. .. 2s. 3d. "
7,591	"	"	" 2s. 3d. .. 3s. 0d. "
6,443	"	"	" 3s. 0d. .. 3s. 9d. "
5,476	"	"	" 3s. 9d. .. 4s. 6d. "
6,750	"	"	" 4s. 6d. .. 5s. 3d. "

Out of the whole 33,734 only 4,362 received more than 5s. 3d. a week. As for the 6,065 adults who were receiving out-relief temporarily at the beginning of 1905, their grants were even smaller than those of the 33,734 who were receiving it permanently, 2s. 9d. a week being the average amount. These figures tell their own tale. Then, as to my remark that the Commissioners' dole-giving tends to pauperise, that surely is proved to the hilt by the mere fact of there being in a town of the size of Berlin, all these men and women in the receipt of out-relief—33,734 on the permanent list and 6,065 on the temporary—in addition to thousands of children. In the year 1904, 2·3 per cent. of the population were in the receipt of permanent out-relief. Yet the Old Age Pension Law, the Invalidity Law, and the Insurance against Accident Law were all in full working order.

Dr. Münsterberg takes exception to my remark that the Old Age Pension Law is practically a dead letter in Berlin; yet, according to his own statistics, there were in 1905 only 2,530 old age pensioners there out of a population of more than 2,000,000. A law that benefits only 1·2 per 1,000 inhabitants may, I think, without unfairness, be ranked as a dead letter.

He also takes exception to my statement that in Berlin hardly one working man in 1,000 lives to be seventy. The exact number of working men who actually do live to be seventy there is, of course, a moot point; still as only 1·3 per cent. of the male population of all classes reach that age, and only ·12 per cent. of the whole population male and female obtain old age pension, my statement cannot be very far out.

Curious as it may seem, it is on the strength of the fact that Berlin is now building an old age home, and has recently added to the Friedrich Wilhelm Hospital quarters for thirty-three married couples, that Dr. Münsterberg controverts my remark as to there being in Berlin no refuges to which the poor have the right to betake themselves when too old to work. As a point of fact, not only are there no refuges to which they have the right to betake themselves, but there are none to which they can betake themselves, unless, indeed, they be either very

APPENDIX No. LXXXII. (D.)—*Continued.*

disreputable or sorely afflicted. The only Poor Law institutions which could possibly be regarded as refuges for the aged are the Rummelsburg Hospital, which is reserved exclusively for the degraded, and the Friedrich Wilhelm Hospital, which, apart from its recent addition, is simply a hospital combined with a home for incurables. All the inmates, both in the A building and the B, when I was there were either very infirm or ill; and many of them were young. As for the other asylums to which Dr. Münsterberg draws attention, they have nothing to do with the Poor Law, and their inmates do not as a rule belong to the destitute class.

There is certainly one slip in my article. I said that the expenses both of the Rummelsburg Workhouse and the Rummelsburg Hospital were paid out of the poor relief grant, whereas the expenses of the workhouse are

really paid out of the police grant. With this trifling exception on a point of no importance whatever, every statement I made in my article is, so far as I can see—my eyes may of course be holden—perfectly accurate. Berlin has every reason to be proud of the care that is taken of the children for whom it provides; but, as for the way in which the more worthy of its aged poor are treated, this ought certainly to be the subject of heart-searching to the city: such at least is, and has been for years, my firm belief. Had Dr. Münsterberg, for whose own work as an administrator I have the greatest admiration, ever been present while his 4,000 Commissioners were distributing their doles, I very much doubt whether he would have published the article that bore his name in the *Contemporary Review* for November.

EDITH SELLERS.

APPENDIX No. LXXXII. (E).

Handed in by Miss Edith Sellers.

THE STATE CHILDREN OF HUNGARY.

From the "Contemporary Review," March, 1907.

In 1871 the Hungarian Parliament passed a law by which each town or commune in the kingdom was rendered responsible for its own poor. Municipalities and Communal Councils were charged with the duty of providing for the destitute; and that they might have the means wherewith to provide, they were allowed to appropriate for their poor funds the fines levied in the local courts. Probably the local authorities did not find these means sufficient to enable them to do their work well; possibly they resented being called upon to do it at all; be this as it may, they certainly did it badly. The result was disastrous, especially for foundlings and all their youthful kindred, among whom the death-rate, which had always been high, became still higher. The Government tried to arouse the local authorities to a sense of the duty they owed to the State in the matter; but the said authorities turned a deaf ear alike to admonitions and threats, holding that their first duty was to the ratepayers. In 1876 a law was passed to facilitate the boarding-out of children; and in 1886 another law dealing indirectly with the same object. It was all in vain, however; the old state of things continued, and babies that might have lived and thriven were allowed to die.

At length, as the number of deaths among children showed no sign of decreasing, the nation became alarmed; and in 1895 the Government announced their intention of organising a special Department of the Home Office to watch over foundlings and see that local authorities did their duty to them. By 1898, however, they seem to have arrived at the conclusion that if the State wished its children to be properly provided for, it would have to provide for them itself. For, when the law which secures for the hospital fund 5 per cent. of the yield of all direct taxes was before Parliament, the Home Minister proposed that the cost of the maintenance of all deserted children under seven should be made a charge on that fund. He proposed, in fact, that the cost of the maintenance of these children should be removed from the local rates to the national taxes; and that the children themselves should be taken out of the keeping of the local authorities and placed under the care of the State. He went further, for he insisted that an extended meaning should be given to the words "deserted children," so as to include among them not only children whose parents actually have deserted them, but also children who have no parents, or whose parents neglect them, ill-treat them, or are unable or unwilling to support them, and who therefore have been pronounced deserted by the civil authorities

Orphans who cannot be placed in orphanages; children temporarily under care of the authorities owing to the illness of their parents, or to their parents being in hospital, in prison, or in a lunatic asylum; and all children whose parents, or grandparents, cannot support them without depriving themselves of the necessities of life, must rank with foundlings as deserted children, he declared.

The Minister's proposals were greeted with enthusiasm and speedily became law. Already in 1898 the State assumed the guardianship of all its deserted boys and girls under seven years old, and undertook to provide for them. Then a difficulty arose: the Home Minister soon found himself with so many children that he did not know what to do. As something had to be done at once, he decided to farm them out with two philanthropic associations, the Children's Refuge Society and the White Cross, the societies pledging themselves to take good care of them, the Government defraying the expense. Unfortunately, the White Cross, in its eagerness to fulfil its mission, waxed quite reckless in its expenditure; and M. Koloman Szell, who was at the time Minister President as well as Home Minister, was not the man to tolerate havoc-playing with the nation's money. He promptly made up his mind that for economy's sake the State must itself do what the societies were doing for it; and began devising ways and means. In February, 1901, he propounded a scheme under which the State was not merely to see that its children were properly taken care of, but was itself actually to take care of them, to house, feed, clothe and tend them. Parliament passed with acclamation his State Refuges Bill, and provided him with the money to defray the initial expenses of the experiment he proposed trying.

M. Szell then took a bold step. No sooner had the State Refuges Bill received the Royal Assent, than he announced in Parliament that it was sheer folly to take care of children under seven if when they were seven they were to be turned adrift; and that to hand them over to the local authorities at that age was to turn them adrift. So long as this was done, although the mortality among those under seven would decrease, among those over seven it would increase; and if children must die, better let them die as babies than later, he maintained. Besides, even if they lived, as the local authorities could not be trusted to bring them up properly, the chances were they would take to evil ways; and the State would have to spend money on building reformatories for them which it might have spent more profitably on keeping

APPENDIX No. LXXXII. (E).—*Continued.*

them from needing reformation. From the national standpoint it was no good at all saving the babies, he argued, unless the babies could be made to grow up into useful citizens. He wound up by proposing that the State should take into its own keeping all deserted children under fifteen, unless they were in orphanages or other institutions; and that it should continue to defray the cost of maintaining such of them as were under seven, while requiring the local authorities to defray the cost of maintaining such as were over that age. His Bill for the protection of deserted children over seven was passed at once, and the Szell experiment was started.

Under the Children's Protection system, now that it is in full working order, the State is the guardian-in-chief of all the children in Hungary, rich and poor alike. The kingdom is divided into eighteen districts, and in each district there is a State Children's Refuge, *i.e.*, a refuge to which every child in the district who has no home has a legal right to go. Then in every district there is also at least one Guardianship Tribunal, or Children's Law Court, organised for the express purpose of safeguarding the interests of every child there by seeing that it is either under the care of a guardian who does his duty to it, or in the keeping of the State. This court must at once hold an enquiry if it receives notice from municipal or communal authorities, members of philanthropic societies, or other responsible persons that anyone, no matter whether prince or beggar, is ill-treating or neglecting his children or wards; is not providing them with proper food, lodging and education; is setting them a bad example, or in any way exposing them to demoralising influences. Then if the charges against him are proved, the court may either warn him that unless he changes his ways speedily he will be deprived of his rights as a father—or guardian—or it may deprive him of them at once by declaring the children deserted. In this case it appoints for them another guardian, who, unless the court sanctions some other arrangement, must hand them over to the representative of the State, *i.e.*, the refuge director. The children may be lodged in the refuge temporarily while the enquiry is being held.

If a parent is found in the act of ill-treating his offspring, it is taken from him at once and is sent by the authorities of the place where he lives to the nearest refuge. If the police pick up babies in the street they transport them to a refuge; just as they transport there the little waifs and strays they come across, the luckless mites who are left uncared for because their parents are ill, in prison, or perchance on journeys. All neglected, ill-treated or deserted children, in fact, are packed off at once when found to a refuge; and an account of the circumstances in each individual case is sent to the Guardianship Tribunal, so that the wrongs done may be righted, and the wrong-doers be punished.

The children who are sent to the State refuges because of the cruelty or negligence of their parents form but a small section, of course, of those who go there: the overwhelming majority are sent either because they have no parents, or because their parents have nothing wherewith to feed them. Any man—or woman—who cannot support his children because he is unable to work, or can find no work to do, has the right to hand them over to the authorities of his town or commune to be sent to a refuge. And the authorities cannot refuse to take charge of them unless there is clear proof (the duty of producing it rests with them) that he has misrepresented his circumstances, and has in reality the means of providing for them himself. In the case of illegitimate children, the State goes even further in its zeal to do its best for them than in the case of the legitimate; for not only does it take charge of them, but it also, for their sakes, takes charge of their mothers for a time. Local authorities are required, when the birth of an illegitimate child is registered, to make enquiries at once as to whether its mother has the means of providing for it; and if she has not, they must send her, together with her baby, to the nearest refuge. In the case of orphans, too, the State does not wait for them to be handed over to it, it seeks them out that it may take them into its keeping before evil can befall them. Whenever the death of a widower—or widow—is registered, the law requires local authorities to find

out whether he has left children behind him unprovided for; and, if he has, to send them without delay to a refuge and inform the Tribunal that they have done so.

This willingness on the part of the State to take charge of all comers, provided only they be young, seems, of course, from the financial standpoint, reckless in the extreme. In reality, however, it is by no means so reckless as it seems; for although the State does actually provide for such of its children as have no relatives, or only relatives who could not be trusted to bring them up properly, excepting in cases of necessity, it does not provide for them at its own expense. On the contrary, it takes very good care that the money it spends on them shall so far as possible be refunded to it. Responsible relatives, *i.e.*, parents and grandparents, must either maintain those dependent on them or defray the cost of their maintenance, if they can do so without depriving themselves of the necessities of life. On this point Hungarian law is clear. And if, being able to maintain them, they refuse to do so, or seek to evade doing so, they commit a crime for which they may be severely punished. The only case in which a child is actually supported at the cost of the community is when both the child itself and its responsible relatives are destitute.

The very day a foundling is placed in a refuge, the authorities begin a regular hunt for its mother, and also for its father, no matter whether it is legitimate or not, and if they find them, a careful examination is made into their circumstances with a view to forcing them to defray the cost of its maintenance. The same steps are taken in the case of every deserted child. When a father hands over his own child to the State, or allows its mother to hand it over, account is taken not only of his means at the time, but of his ability to add to them. So long as his child is in a refuge, he himself is under the surveillance of his local authorities, who are bound to report to the refuge director any change in his circumstances—if being out of work he finds work, or if his wages are raised—so that he may be forced to contribute to its support according to his increased means. When the State relieves worthless parents of the care of their children against their will, it does not relieve them of the expense the care entails. On the contrary, its officials say to them practically: "We cannot trust you to bring up your children properly, we will therefore bring them up for you; but, as this is work you yourself ought to do, you shall pay the cost—we will do the spending, in fact, but you must provide the funds." So far as money is concerned, therefore, a man is under no temptation to part with his child; for unless he is destitute, he loses rather than gains by so doing. For he must defray the full cost of its maintenance if he can; and if he cannot, he must contribute towards the cost of its maintenance every penny he has after providing himself with bare necessities. And that cost is, of course, higher if the child is in the keeping of the State than if in his own keeping; for the State provides for its children liberally, whereas needy parents can put them on short commons.

Besides, and this is an important point, children who are once in the keeping of the State remain there until it can be proved that to restore them to their families would be an advantage both to the community and themselves. A parent cannot deposit his son in a refuge one day and return for him a few days later; for, by depositing him there, he has forfeited his rights as a father. And until he has recovered these rights—and the only way he can recover them is by convincing the Guardianship Tribunal that he has the means, ability and will, to do his duty as a father—he has no claim on the boy whatever, and cannot interfere with him in any way, although he must support him if he can. Even from selfish motives, therefore, a parent thinks twice before giving up his children; for, although they are a burden to him in their early days, they may be a valuable help when his own strength fails.

The administration of the Children's Protection Laws is vested in the refuge authorities, under the control of a Home Office department, each refuge being the head quarters of the administration for the district in which it stands. The refuge director, who is always a doctor, is personally responsible to the Home Minister for the

APPENDIX No. LXXXII. (E).—Continued.

well-being of the children in his own district; while the manager is responsible for the financial and household affairs of the refuge. They, like the inspectress, assistant doctors and other officials, are under the surveillance of the Inspector General, M. de Ruffy, who, as the representative of the Home Office, practically directs and controls the whole working of the system. He goes about from refuge to refuge revising the accounts of the officials, and bringing his influence to bear not only on them, but on all whom he meets, especially local authorities, to stir them up to interest themselves in the State's new venture.

Although all the State's children go to a refuge, most of them—some 95 per cent.—go there only as sojourners; the law, indeed, expressly ordains that no child who is even fairly strong in body and mind shall remain there. For a refuge is not a home, but a receiving house, or place to which children are sent to be sorted, sifted and kept under observation until the director decides what can best be done with them. Attached to every refuge there is, however, a sanatorium, where those requiring special care may remain for years if necessary; and there are also isolation wards for those suffering from infectious diseases. Besides, the director is in close relation with all the children's institutions in the kingdom, state and private alike; with the homes for incurables, for cripples, for the feeble-minded or idiots; and can draft into them many of his sorely tried little charges; just as he can draft off into discipline schools such of them as are unruly, and into reformatories such as are demoralised. Then, as soon as the great hospital which is now being built in Budapest is finished, he will be able to send there the children who need the advice of the specialist, or the skill of the expert surgeon. For this hospital is to serve as central hospital for the eighteen refuges: all the little inmates who are deformed, paralysed, or in any way afflicted will be sent there that they may, if possible, be delivered from their infirmities.

Happily, however, it is only a small percentage even among deserted children who are afflicted; the overwhelming majority of those who go to the refuges have their fair share of wits and physical strength. The all-important point, therefore, with regard to the new system, is how it provides for these, the State's normal children. This is the test by which it must stand or fall.

M. Szell holds strongly that to bring up children in institutions is bad both for the children and the community. It is bad for the children, because the life they lead there is unnatural, and they are therefore unhappy. As they have no one to care for them, or to make much of them, the best in them, instead of being fostered, is stifled, and they are turned into little machines. Then it is bad for the community, because what is needed is sturdy, self-reliant boys and girls, not machines; and also because institutions entail great expense. From the first, therefore, he was determined that, whatever else was done with the State's *protégés*, they—such of them at any rate as are fairly strong—should not be shut up in institutions. They must live as other children of their class, in cottages, not in huge mansions, he said, and be brought up as other children, going share and share alike with them in life's buffetings as in its pleasures. They must be boarded-out, in fact, for in no other way could this going share and share alike be secured for them. M. Szell was alive to the fact, however, that boarding-out is fraught with dangers if done, as it sometimes is, in a happy-go-lucky fashion. To guard against all risk, therefore, he devised a boarding-out method of his own, one which is the most interesting and suggestive feature of his whole system.

Every director has in his own district a number of villages to which he stands in a somewhat peculiar relationship. In all that concerns sanitation they are under his close surveillance; he keeps watch, too, over their schools, and he brings pressure to bear sometimes on their local authorities. And even the authorities must pay heed to his warnings and act on his advice, as otherwise he would strike their village from off his list, and it would cease to be one of his children's colonies. Then, if this were to happen, the whole community would rise up against them; for it is a great honour for a village to be

a children's colony, an honour, too, that brings money; for it is only in villages that are colonies that the State allows its children to be boarded out.

For a village to be selected as a colony it must have a good climate, as good at any rate as can be had in the district; and it must have open spaces for playgrounds around it. There must be a primary school there, of course; and if there is also a kindergarten, so much the better. Then it must be a well-to-do village: there must be nothing of the poverty-stricken about it, no grim wolves prowling around. On the contrary, it must be a place where those who work hard can live in comfort, and where most people do work hard. It is essential that there should be a good resident doctor, one willing to become the paid servant of the State, and, acting as the refuge director's deputy, watch over its children for it. It is essential, too—a *sine qua non* indeed—that there should be there at least thirty women well fitted to act as foster mothers.

No woman may become foster mother to a State child unless she is strong, healthy, good tempered, and without "nerves." Both she and her husband, if she has one, must be sober, hard-working, and in all ways respectable. They must live in a home of their own—not one room—and must belong to the peasant or artisan class, not that of the unskilled labourer. They must prove that they are earning enough to live on, apart from what they would receive with the child; and, although the possession of a cow is not insisted on, it is a great recommendation. If it is a baby that is given to her, the woman must nurse it herself; and whatever be its age, she must promise to treat it as if it were her own. If she does not do her best for it, she is punished; while if she does, and the child thrives, at the end of three years the director gives her a certificate, and the Home Minister sends her a present. She is in close touch with the doctor, who is responsible both for her and her charge; and is under the surveillance of the director and his inspectress, who pay her surprise visits from time to time; while both she and the doctor are under the surveillance of a committee, consisting of the chief official personages in the neighbourhood and an equal number of ladies and gentlemen chosen by the local authorities. The members of this committee must not interfere either with the doctor or the mothers, however, but must content themselves with reporting to the director when they notice things going wrong. There is a similar committee attached to the refuge itself, the members of which report to the Home Minister.

The number of State children sent to any one village is strictly limited, and varies according to the number of other children there; for great importance is attached to there never being more of them in one village than can be absorbed by the rest of the population. Otherwise they might form a class apart, it is feared, and that would be disastrous. As soon as one village is well supplied with children, the director organises a colony in another village; and this entails no expense at all, it must be noted, although it does entail a considerable amount of trouble.

The largest of the refuges is that at Budapest; but as this was labouring under difficulties, when I was in Hungary, owing to its new buildings not being finished, I went down to Szeged to see how the system was working. The Szeged Refuge, which stands in the prettiest of the town's suburbs, consists of a central building and two pavilions, one of which is the sanatorium. In the central building the basement serves as kitchens, store rooms and laundry; the ground floor as offices, consulting rooms, etc., for the director and his assistants; while on the first floor the children and their nurses are housed in bright, prettily-furnished rooms. Near the director's office are the reception wards. Every child brought there is taken in hand at once, first by the doctor and then by the nurse, who washes, clothes and feeds it. There is no waiting about while questions are being asked, no time lost considering whether it shall, or shall not, be admitted. Within half an hour of its arrival, it is, as a rule, comfortably in bed. Meanwhile, whoever has brought it, unless provided with a destitution certificate, is called upon by the director to give full information with regard to its responsible relatives. If it is a baby, and the bringer is its own mother, she may be detained to act as nurse. The director may either

APPENDIX No. LXXXII. (E).—*Continued.*

keep her in the refuge, or board out her and her baby in a colony; or even board out her child and keep her in the refuge for two months, to nurse another child.

One morning I found quite a little crowd of women in the Szeged Refuge waiting room. Some were there by the director's request to receive children; others, on the chance of his having children to give to them; while one woman had come to try to persuade him to put her on his foster-mothers' list. Her, however, he soon dismissed, as he had already two hundred mothers waiting for foster children, he said. They who remained were all kindly, motherly-looking women, and they were all dressed not only neatly but warmly and well. They were the wives of better class peasants, the director told me, and he seemed to know them all personally.

They watched the door with manifest anxiety; and there was quite a little flutter among them when voices were heard in the corridor, and the first of the children was brought in. It was a poor, weakly, little creature, that looked as if it had the cares of the world on its shoulder. None the less there was not a woman in the room but was eager to have it; for, as one of them said: "A bit of trouble with a baby does not matter, for it is always like one's own." It was given, however, to a woman for whom the director had sent, as she had special skill in rearing the delicate; and she bore it off in triumph. Tears came into one woman's eyes when she heard there were no more babies that morning; and she would fain have gone off without a child at all, if the director had let her. But he allows no picking or choosing; each mother must take what he gives her, or be struck off his list. To her he gave a sturdy little fellow of two; and, although she would rather, as she confessed, have had a girl, within a very few minutes she had him on her knee and was fondling him as tenderly as if she were his mother. Then two little things came toddling in together; for, as they were brother and sister, they must be boarded out with the same mother. The competition for them was almost as eager as for the baby; and the woman to whom they were allotted beamed with delight as she led them off. There was one boy, however, for whom there was no competition at all; evidently, from the glances the women exchanged, none of them wished to have him at any price. He was about ten, one of the vagrant tribe; and to judge by the way he was crying, he did not relish the prospect of being forced to go to school every day and learn the meaning of law and order. His spirits revived, however, when the mother to whom he was assigned showed him some rosy apples she had; and by the time they trudged off together, he and she were already the best of friends.

Another day I paid a visit to Sandorfalva, the largest of Szeged's thirty-one children's colonies, that I might see how the State's *protégés* fare when boarded out, and the sort of homes in which they live. In England Sandorfalva would rank as a country town, for it has some 4,000 inhabitants; in Hungary, however, it is counted as a village, as the chief calling there is corn-growing. It has only two streets, and they straggle about in the most unconventional fashion around a great village green on which fruit trees grow. The cottages—houses are few and far between—are of stone and well built, with gardens around them. Many of them are quite charming inside and out, while they all seem neat and clean. Woe betide the Sandorfalvian, indeed, who is a slattern—who forgets to polish her windows and wash her blinds. Her neighbours soon make life a burden to her, just as they would make life a burden to any woman who let her children run about dirty, thus exposing the State's wards to the risk of contamination.

Most of the foster-mothers were married to peasants, I found; still, the husband of one was a blacksmith; of another, a carpenter; of another, again, a master chimney-sweep. They nearly all owned the cottages in which they lived, and several of them had deposits in the bank, I was informed. Money seemed so plentiful with some of them, indeed, that I was puzzled as to why they should care to be troubled with other people's children, and I told them so. One woman replied with a laugh that that was just what her own people were always saying. "But the place seems so dull," she added, "if there are no little trots about." A husband had a

very significant tale to tell. His wife had broken down completely when their only child had married and left them; and had the director not sent two little boys to cheer her up, he did not know what would have become of her. The boys had evidently served their purpose; for the woman seemed quite happy, and her face glowed with pride as she presented them to me, and told me she was trying to persuade her husband to adopt them.

These villagers often do adopt their foster-children, it seems. According to the director, indeed, a woman who keeps a child two years is rarely willing to part with it; and rather than do so, she will keep it at her own cost, if she possibly can. One of the mothers turned quite white when he told her he had come to fetch a little girl whom she had brought up from babyhood; and when we tried to tempt some boys to leave their foster-parents and come away with us, they straightway made a scene. So far as an outsider could judge, all the mothers treat their charges as if they were their own children; while most of them regard them as their own, and are as keenly interested in them as if they were their own. On one point foster-fathers and mothers alike seemed to have made up their mind: they all wished their charges to settle in the village, under their own eyes—there must be no transplanting of them later into towns. And the doctor agreed with them cordially.

There are 130 children boarded out at Sandorfalva; yet so completely are they assimilated to the other children that no one would ever suspect there were any there at all. Even in the schools the teachers did not seem to know which were the State's children and which were not. It was impossible, indeed, that they should know; for the former are dressed the same as the latter, they look the same, and practically they are the same in all respects. And as it is in Sandorfalva, so it is in all the children's colonies—so the Inspector-General assured me. Even the little Ishmaels who arrive there soon have their corners knocked off and feel themselves so completely at home that they adopt the relations of those with whom they live, and talk of their uncles, aunts and cousins. They become members of the family, in fact, and members of the community to which the family belongs. Thus they must—they have no choice in the matter—go share and share alike with their fellows, luckily both for them and the community, for therein lies their best chance of developing into useful citizens.

As the protection system did not come into force until 1903, it is too early days, of course, to weigh it in the balance. All that can be said of it with any certainty is that so far there is nothing in the results it has yielded to justify the apprehensions with which it was at first regarded. Even the ne'er-do-well class show none of that eagerness it was feared they might show to hand over their children to the State. At the present time the State's wards number only 28,000, and Hungary, exclusive of Croatia and Slavonia, where the new system has not yet been introduced, has a population of more than 17,000,000. Then, instead of more illegitimate children being born under the new system, as it was almost taken for granted there would be, there are fewer by 7 per cent. compared with the legitimate, than under the old system, if we may judge by the refuge statistics. That many babies are now alive who would be dead had the new system not come into force we have proof in the fact that, whereas in 1900, 22·2 per cent. of the children born living died before they were one year old, by 1904 the percentage had sunk to 19·67, and is now lower. What is more significant, and more conclusive, is that while the death-rate among infants under one year of all classes was in 1904, 19·67 per cent., among those under the care of the State it was in 1905 only 15·39. Among children of all ages under the care of the State, the mortality was in 1904 only 7·87, and in 1905, 9·30 per cent., although these children belong for the most part to the lowest class, and therefore the most unfit. This fact in itself is enough to give pause to those inclined to sing a Tekel over the Szell experiment.

Whatever one may think of the policy of the Magyar State in taking charge of its children at all, that, having taken charge of them, it deals with them wisely, economically, and most humanely, is beyond dispute. Not only have many babies' lives been saved since the

APPENDIX No. LXXXII. (E.)—*Continued.*

new system came into force, but the lives of many boys and girls that were a heavy burden to them have been rendered well worth living. Centralisation has its defects; still, where children are concerned, especially pain-stricken children, its defects are of little account compared with its merits, if for nothing but that it enables the best that can be done to be done, for each one of them. Let local authorities take as much trouble as they will, and spend as much money, they can never deal satisfactorily with afflicted or abnormal children; for, as the number with which they have to deal is small, they must club together unsuitable cases, epileptics with idiots, the unruly with the demoralised, to the detriment of their charges and the great expense of the community. With the refuge directors, however, it is different; as they have hundreds of these children to provide for, they can classify them and secure for them individually the precise treatment they each require. The result is, many a poor little sufferer is restored to health and strength, and many a boy who would otherwise have gone through life a worry and expense to his fellows, is put in the way of earning an honest livelihood.

As for the fashion in which the State's normal children are now dealt with in Hungary, it is certainly admirable. Of all the methods of providing for waifs, strays, and their little kith and kin, this boarding-out on the Szell system is by far the best, so far as I can judge, and I have watched the working of it carefully. Children are as safe from neglect and ill-treatment in colonies as in the most costly and best regulated of institutions; and yet they lead there lives of the sort children ought to lead, free, natural lives, full of work, play and bustle, each with his own little nest by a fireside, and with someone at hand to mother him. Thus they "take root" in the villages where they spend their early days, and the chances are they will live and die there, instead of drifting into towns.

Then the Szell system of providing for children is as cheap as it is good, for under it not only is the cost of administration reduced to a minimum, but also the cost of building. One refuge is all that is required for each district, even though the district be as large as London; and in Hungary the average cost of building a refuge is £8,333. In 1905 the full expenditure on the State's children, although the number of them ranged from 20,960 to 25,900, was only £143,089. Of this sum £127,140 was spent on the children themselves, while the directors, officials and servants received in salaries, rations, etc., £15,949. The full average cost per child was only £6 9s. for the year. The State, it must be remembered, maintains at its own cost only the children who are

under seven, those between seven and fifteen being maintained at the cost of the towns or communes to which they belong.

Now those little Magyars who are costing their fellows only £6 9s. a year each, are just as well fed, clothed, housed and taught as English Poor Law children who are costing £20, £30, £40, and some of them even £50 a year each, and they are just as carefully kept out of harm's way, just as skilfully tended when ill. If they are not treated more kindly than our children, they are at any rate treated in a more natural, motherly fashion, a fashion that makes them happier, and fits them better to live on equal terms with their fellows and fight their own battles. Thus were this refuge and colony system established here, the State's children would certainly fare better than now; while, as for the ratepayers, the heavy burden they bear would be lightened. How much the 239,903 children who are supported by the community in England and Wales really cost has never yet been discovered; all that is known with any certainty on the subject is that they, together with their "belongings," cost some £14,000,000 a year. Supposing the 60,000 children who are living in workhouses, schools, homes and other institutions, could be dealt with on the Szell system, a considerable saving would certainly be effected. For, although the cost per head under this system would be higher in England than in Hungary, it would not amount to one-half of what it is under the present system. Then, too, a solution would be found for the little in-an-other problem. These children, the most luckless of all children, as things are, could be kept in the refuges.

It may be argued that the Szell system is out of the question in England owing to the difficulty there would be in finding suitable foster-mothers for the State's charges. So long as a foster-mother is paid only 4s. 6d. a week, or at most 5s., for taking care of a child, and is required for that not only to board and lodge the child, but to provide it with clothes and shoes, this difficulty will exist, of course; but let the terms be raised even by 1s. 6d. a week, and it would speedily vanish. Were refuges established in such places as Lewes, Keswick, Aylesbury, Chichester and Whitby, each one of them would have within easy reach a dozen villages where children's colonies could be organised. If the local Government Board would relax their boarding-out rules, and guardians could be induced to combine so that one refuge might serve for a whole county, or even in some cases for two or three counties, the experiment might be given a trial in a very short space of time.

EDITH SELLERS.

APPENDIX No. LXXXII. (F.)

Handed in by Miss Edith Sellers.

AN INQUIRY AS TO WHAT PERCENTAGE OF WORKHOUSE INMATES HAVE RELATIONS WITH WHOM THEY COULD LIVE, IF THEY EACH HAD A PENSION OF 5s. A WEEK.

During the last six years I have visited a number of typical workhouses for the purpose of finding out what percentage of the inmates, above sixty-five, have relations with whom they could live, were a law to come into force securing to each one of them a pension of 5s. a week. For if workhouse inmates are to derive any benefit from the passing of such a law, they must each have someone with whom they can live, as the overwhelming majority of them are too infirm to live alone; and even those who are not, could not live alone, in any degree of comfort, on 5s. a week. In these workhouses I passed by unquestioned such of the inmates as manifestly required special nursing and must, therefore, whether they had pensions or not, remain in institutions. Such of the rest as were above sixty-five, I not only questioned, but sifted and sorted, trying to get into touch with them: for I was bent on finding out, not

only exactly what each one of them had in the way of relations, but also what sort of relations they were; whether they were or were not of the sort who, in return for 5s. a week, would be likely to welcome an old man or woman as housemate. The inmates who claimed to have relations with whom they could live, I, of course, questioned with special care; I also obtained from them the addresses of these relations, that I might test their claims and learn whether they were, or were not, well-founded.

After visiting the Kensington Workhouse, I myself went to see all the relations whose addresses were given to me by the inmates, excepting two who lived at a distance. To these two I wrote, and received replies to my letters. In every case in which I could trace the relations I asked them each personally if they could, and would, make a home for the old man—or woman—

APPENDIX No. LXXXII. (F).—*Continued.*

who had referred me to them, provided he had 5s. a week. In other unions the testing was sometimes done in a more rough and ready fashion than at Kensington; still, in all of them it was done, thanks to the help given by guardians, workhouse officials, and relieving officers. In two unions a practical test was applied. The Willesden Guardians were kind enough to offer to grant 5s. a week each out-relief at once, without waiting for the passing of any pension law, to any respectable old men or women I found in their workhouse who had suitable homes to go to. The Southwark Guardians made the same offer with regard to the old women in their house. The following are the results of my inquiry:—

In the Kensington Workhouse there were, the day I began my inquiry, 1,053 adult inmates, of whom 685 were above sixty-five. 157 of these I did not question, as they were very infirm. Of the remaining 528 (252 men and 276 women):—

- 171 (67 men and 104 women) had no relations.
- 94 (46 men and 48 women) more had practically no relations.
- 221 (118 men and 103 women) had at least one son or one daughter.
- 61 (24 men and 37 women) claimed to have relations with whom they could live.
- 22 (8 men and 14 women) out of the 61 withdrew their claims after consulting their relations.
- 39 (16 men and 23 women) persisted in declaring that they had relations with whom they could live.

Of these thirty-nine, one woman left the workhouse before I had completed my enquiry, and two other women were found to be too old to leave it. In six cases the relations could not be traced; and in twenty-one cases the relations declared that they could not—some few that they would not—take the old people in. Out of the whole 528 inmates whom I questioned, there were only nine (one man and eight women) whose relations would undertake to make a home for them if they each had 5s. a week.

In the Southwark Workhouse I found 725 inmates above sixty-five, but 427 of them were too infirm to leave. Of the 298 (100 men and 198 women) whom I questioned:—

- 86 (24 men and 62 women) had no relations.
- 51 (17 men and 34 women) more had practically no relations.
- 50 (10 men and 40 women) claimed to have relations with whom they could live.
- 25 (women) withdrew their claims after consulting their relations.
- 25 (10 men and 15 women) persisted in declaring that they had relations with whom they could live.

The claims of the ten men were not tested. Those of the fifteen women were, with the result that it was found that only three women really had relations with whom they could live; and they actually went to live with them, on being granted 5s. a week out-relief.

In the Willesden Workhouse I found 424 inmates. 189 of them were above sixty-five, and 111 of the 189 were very infirm. Of the seventy-eight whom I questioned:—

- 18 (8 men and 10 women) had no relations.
- 10 (3 men and 7 women) more had practically no relations.
- 50 (20 men and 30 women) had at least one son or one daughter.
- 9 (6 men and 3 women) claimed to have relations with whom they could live.

Of the six men, one was an ex-habitual criminal, another an ex-habitual drinker. The relations of the third would not take him in unless he could be kept from drinking, and those of the fourth would not take him in under any conditions. Of the three women, one had only

a son who was out of work; and another, only a son who was lost. Thus, out of the seventy-eight inmates, there were only two men and one woman who really had relations to go to, if they each had 5s. a week.

In the Eastbourne Workhouse there were, when I was there, seventy-two inmates above sixty-five, exclusive of the very infirm; and twenty-nine of them were quite without relations; while only three even thought that they had relations with whom they could live.

At Thirsk, out of sixteen inmates above sixty-five, five were entirely without relations, and none of the rest had relations with whom they could live.

In the large provincial workhouses, the old people, so far as I can judge, are neither richer nor poorer in relations than those in the London. In the little rural houses, however, they are as a rule decidedly richer. Still even there the more respectable of the inmates are almost always either alone in the world, or sorely afflicted. I questioned carefully the inmates of eight rural workhouses; and in each of them, such of the old people as were respectable almost invariably either had no relations, or were too infirm to live with them; while such as were not respectable had no relations who would take them in on such profitless terms as 5s. a week.

In the workhouses I visited from first to last there were roughly speaking 2,200 inmates above sixty-five. Quite 1,000 of them, however, were very infirm, so infirm that they must live in institutions of some sort; while a good 400 more were so feeble in body or mind as to require more care than even a devoted daughter could bestow on them, if she had work to do outside her own home. Among the whole 2,200 there were, so far as I could judge, only about 800 who did not require more care than the chances are they would receive, were they to quit the workhouse and go to live with their own relations, even supposing they had relations.

What relations the 1,000 very infirm inmates had, I do not know, as I did not inquire. Of the remaining 1,200, 360 had actually no relations at all, and 208 more had practically no relations. 147 claimed to have relations with whom they could live, if they each had 5s. a week; but sixty-four of them, after consulting these relations, withdrew their claims; and the claims of sixty more proved on investigation to be unfounded. Thus out of the 1,200 only twenty-three, so far as I could ascertain, really had relations with whom they could, and probably would, be able to live if they each had 5s. a week. Among all these 2,200 old men and women whom I came across in the course of my inquiry, I could find only twenty-three of whom I could feel quite sure that, if 5s. a week each were given to them, they would be able to leave the workhouse. Only twenty-three out of 2,200, practically 1 per cent.

In all the workhouses in England and Wales there are, it is calculated, about 76,000 inmates above sixty-five. If, therefore, the unions I visited are fairly typical, only about 760 out of the whole 76,000 have relations with whom they would be able to live, were a law to come into force securing a pension for everyone above sixty-five. Not but that ten times that number and more would assuredly quit the workhouse were such a law actually to come into force. Again and again I was told, by one after another of these old people, that they would not remain there a single day if they had 5s. a week to depend on. That there will be a great exodus from workhouses if ever old-age pensions are to be had by the inmates, may be regarded as a foregone conclusion. The more worthy of the old men and women who are physically able will, certainly, for the most part, turn out, whether they have relations or not; and so, I am inclined to think, will the really worthless. And the result, so far as the former are concerned, will be great misery for themselves; and, so far as the latter, trouble, anxiety and expense for the community.

EDITH SELLERS.

APPENDIX No. LXXXIII.

STATEMENT OF EVIDENCE OF MISS L. TWINING.

1. I should like to say what reasons and qualifications I have for offering this evidence. Forty-five years ago, in 1861, I did the same (in person) for the House of Commons Committee on the Poor Laws, and it is printed in the Blue-book.
2. I first began to visit workhouses in 1853—the Strand Union, then in Cleveland Street; afterwards also, the Holborn, St. Giles', and numerous others in the country.
3. I have been twice a guardian—for six years in Kensington and three years at Tonbridge. I have also written books and pamphlets on the subject during many years.
4. I have always considered that the method of election and choice of guardians is wrong.
5. They are too often chosen from motives of friendship or politics—not for their knowledge of, or interest in, the Poor Law, or any of its problems; sometimes the obtaining out-relief for some of the poor is a motive. Some change is, I am convinced, necessary.
6. The Local Government Board should be made more efficient by the addition of two or three women advisers—as in the Army Nursing Service—the whole question of relief being mainly concerned with the sick, women and children.
7. For this reason there should certainly be some women inspectors of workhouses, where the duties of inspecting the state of the sick now devolve on non-medical men, who usually visit the wards in company with the master—thus, the nurses have no encouragement nor opportunity of making remarks. (There are only two medical inspectors for all the country and the Metropolitan district.)
8. There should be at least six women inspectors for the country workhouses, the only one at present being for the Metropolitan district. Then I should like to see a higher class of masters and matrons appointed to these important posts.
9. For prisons we have highly educated men and women, and surely the Poor Law institutions require as much power and discretion, with their far more varied classes of inmates.
10. Very often on a vacancy occurring, a former porter is appointed to the post—I have known many such cases.
11. I would have beer abolished for all the inmates, the great majority of whom have been brought to pauperism through drink, as our inspectors acknowledge; and most *certainly* forbidden at Christmas. This was done by the Kensington Board when I was guardian, (1883–90), and was so successful that we were thanked by the master and porter for the change, which gave them the most peaceful Christmas Day they ever had—no quarrelling or intoxication, which was often caused by bartering the drink and some getting too much.
12. Visitors from the outside should be allowed—not only for the sake of the inmates, but for a knowledge of what is going on. This was only discovered when I began to visit at the Strand Union, and made my revelations known through *The Times* and *The Guardian* newspapers. The Workhouse Visiting Society was then started, and the workhouses through England became known to outsiders.
13. Many more *women* should be employed as relieving officers; they are far more fitted than men for investigating the homes of the poor.

APPENDIX No. LXXXIV.

STATEMENT OF EVIDENCE BY MR. WILLIAM VALLANCE, LATE CLERK TO THE GUARDIANS, WHITECHAPEL UNION.

1. I held the office of clerk to the guardians of the Whitechapel Union for thirty-four years—from 1868 to 1902—having previously been clerk of a country union, Braintree.
2. Adopting Mr. Charles Booth's analysis of population in Whitechapel, the district may be said to be largely inhabited by the "poor" and "very poor," including a common lodging-house population of some 7,000 or 8,000. There is also a large Jewish community. The population of the Whitechapel Union according to the census of 1871 was 76,573; and of 1901, 78,768.
3. My experience of Poor Law administration leads me to make submission as follows:—
4. That the policy of administration which has been unvaryingly carried out in practice in the Whitechapel Union during the last thirty-seven years has been justified in its results, both statistical and moral; that it is based upon the principle—broadly laid down by the Royal Commission of 1834—that relief out of compulsory taxation should be strict, uniform and well understood; that an indispensable condition to an efficient system of legal relief is that, whilst adequately and humanely meeting the needs of the destitute poor, it does not injuriously affect the character of the working population for manly independence and provident habits; that the Poor Law is powerless to do the work of Christian charity in personally befriending the poor and distressed; and that any attempt to invade the province of voluntary charity must, as a result, work injury to the poor.
5. That the present policy of administration in the Whitechapel Union dates from the winter of 1869–70 when it was sought, by stricter methods and by a close co-operation with organised charity, to reform a system which it was felt was fostering pauperism and in no true sense helping the poor.
6. That the guardians were especially mindful to guard the entrance to the outdoor relief list and, where circumstances seemed to justify relief in the home of the applicant, it was sought to make it adequate in amount, temporary in duration and conditional upon some personal effort to avoid future recourse to the rates.
7. That the guardians aimed at restricting rather than abolishing outdoor relief, and yet they felt that, in such a district as Whitechapel, the organisation of voluntary effort on behalf of the suffering poor ought to render abolition actually possible.
8. That organised charity was found to be quite abreast of the guardians and in cordial sympathy with their aims; and so it has since been made virtually possible to abolish outdoor relief within the Whitechapel Union.
9. That the statistical results are exemplified in the following figures:—
 - (a) The highest number of paupers which was reached was in the sixth week of the Ladyday Quarter 1870, viz., 6,758; being 1,419 indoor and 5,339 outdoor.
 - (b) The corresponding figures in 1902 were 1,659 indoor and thirty-four outdoor (the latter including twenty-three boarded-out children classified as outdoor); total, 1,693.

APPENDIX No. LXXXIV.—*Continued.*

- (c) The largest amount given in outdoor relief was in 1869, when it reached £7,458.
- (d) In 1902 the corresponding figure was £39.
- (e) Between 1870 and 1902 the indoor poor in Whitechapel—taking the mean number for the year—increased 24·8 per cent., as against an increase of 83·6 per cent. in the Metropolis and of 42·6 per cent. in England and Wales.
- (f) Between 1870 and 1902 the outdoor poor in Whitechapel—taking the mean number for the year and including lunatics in asylums and paupers receiving medical relief only—decreased 88·2 per cent., as against a decrease of 50·5 per cent. in the Metropolis and 34·0 per cent. in England and Wales. (Excluding lunatics in asylums and paupers receiving medical relief only, the mean number of outdoor paupers in Whitechapel in 1902 was but four.)
- (g) Between 1870 and 1902 the expenditure upon indoor relief increased in Whitechapel 60·1 per cent.; in the Metropolis 134·0 per cent.; and in England and Wales 87·3 per cent.
- (h) Between 1870 and 1902 the expenditure upon outdoor relief decreased, in Whitechapel 90·1 per cent.; in the Metropolis 40·1 per cent.; and in England and Wales 21·8 per cent. (or, excluding the cost of boarded-out children, the decrease of expenditure in outdoor relief in Whitechapel was 94·0 per cent.)
- (i) Included in the Outdoor Relief List of 1870 were 418 able-bodied widows, with 1,030 dependent children. This class has disappeared: there being neither widows receiving outdoor relief, nor children of widows in child institutions.
- (j) On January 1st, 1870, there were 2,279 children chargeable to the Whitechapel Union. On the corresponding date of 1900, there were 296. No fewer than 1,861 children had disappeared from outdoor relief lists, whilst the number of children in the workhouse, Poor Law school, or other child institution had decreased from 397 to 278.
10. That, as exemplified above, the policy of administration in the Whitechapel Union has resulted in a diminution both of pauperism and expenditure proportionally beyond either that of the Metropolis, or of the entire country.
11. That there is reason to believe that the policy which has been consistently pursued during the last thirty-seven years has resulted in an improvement in the general condition of the poor; there being, too, evidence of a greater spirit of independence and self-respect among the poor than formerly. (I shall hope to be able to submit some figures brought down to date, to exemplify the nature and extent of the work of voluntary and organised charity in dealing with the more deserving aged poor in the district.)
12. That an examination of the last Parliamentary Return of deaths accelerated by privation in the Metropolis shows that, whilst Whitechapel is made chargeable with seven out of forty-eight, in no case can it be said that the policy of relief administration was a factor; that the number of such cases in the year 1870—the last year of what may be termed the unreformed administration—was thirteen; and that deaths from privation have a greater relation to the number of free and cheap nightly shelters and lodging houses than to the strictness of the Poor Law methods.
13. That side by side with a strict administration of outdoor relief, much has been done to improve the indoor administration.
14. That the sick poor are provided for in a well-equipped infirmary, the healthy aged and infirm and the able-bodied in a separate workhouse, the insane in Metropolitan asylums and the children in a reception home, cottage homes at Grays, in county "boarding-out" homes, or in institutions under the Metropolitan Asylums Board.
15. That the aged indoor poor are provided for in bright and cheerful surroundings and, in the case of females, are under the kindly supervision of paid officers; and that their day-rooms are so broken up by glass partitions, screens and recesses, as to enable them to form their own companionships, thus affording an automatic classification.
16. That the able bodied inmates (who are relatively few in number) are employed, for the most part, in various useful trades and occupations; the guardians relying upon dissociation and continuous occupation for discipline and the absence of extra diet for work, however skilled, as a deterrent.
17. That, during the last twenty-five years, male and female "mental instructors" have been employed at the workhouse; their duty being so to occupy the able-bodied inmates each evening between supper and going to bed as to exercise a salutary restraint upon conduct and conversation, to afford them useful information and to inspire and assist them to renewed efforts to achieve an independent livelihood.
18. That a large measure of co-operation is afforded by lady visitors, who assist in introducing the element of hope into the lives of young women and assisting them to obtain respectable employment; and that considerable numbers have thus become dispauperised.
19. I further submit, as the result of a long experience of Poor Law work in town and country:—
20. That, whatever may be the future of Poor Law administration in England, the boards of guardians have in the past deserved well of the country; and that they have brought to bear upon their work a large amount of intelligence and expert knowledge of social questions.
21. That no fundamental change, either in the constitution of the bodies at present charged with the administration of the Poor Law in England, or in the administration itself, is necessary in the interest of sound and good administration.
22. That the question of Poor Law administration in the Metropolis should be dealt with exceptionally, so as—
- (a) To leave to boards of guardians the administration of outdoor relief out of local funds as at present.
- (b) To provide for the constitution of a Central Poor Law Authority for the financial supervision of all expenditure at present, or in the future, made chargeable upon the Metropolis.
- (c) To provide for the repayment to the guardians out of the funds of the Central Poor Law authority—in addition to the charges already placed upon the common poor fund—of all expenses incurred, with the approval of such authority, in the purchase of sites for Poor Law institutions and in the erection and equipment of such institutions.
- (d) To provide for the classification, as and when found expedient, of Metropolitan Poor Law institutions.
- (e) To provide for all contracts entered into on behalf of the several unions and parishes in the Metropolis being made and entered into by the Central Body; and also for the frequent expert inspection of stores.
- (f) To repeal the law of settlement and removal, as between inter-metropolitan unions and parishes.
23. That provision should be made whereby orders of justices for the maintenance of poor persons under 43 Eliz., cap. 2., sec. 6, may issue upon the information of such poor persons without chargeability to the rates.
24. That justices should be empowered, upon the information of a relieving officer, to order the removal to the workhouse of any person who may be adjudged by such justices to be destitute, to be living under insanitary conditions, or to be in such a state of mind or body as to render such removal desirable.

APPENDIX No. LXXXV.

STATEMENT OF EVIDENCE BY THE WOMEN'S LOCAL GOVERNMENT SOCIETY.

1. The Executive Committee of the Women's Local Government Society desire to draw the attention of the Royal Commission on the Poor Law to some grave defects in the administration of the Poor Law; and further, they beg leave most respectfully to suggest means for improvement.

Appendix No. LXXXV. (A). Society sent out a circular letter and have obtained from guardians of the poor in various parts of the country information in support of the statements herein set forth and opinions on the suggested remedies.

3. The unions from which answers to the circular letter have been received are designated by numbers assigned to them in the order in which their answers were received; where more than one guardian in a union replied the several replies are identified by small Roman numerals following the number assigned to the union.

4. Extracts from the letters are given in *Appendix No. LXXXV. (B).*

5. An analysis of the answers is given in *Appendix No. LXXXV. (C).*

6. The Committee of the Women's Local Government Society have divided the inquiry into two parts:—

I.—Applications for relief and the treatment of applicants; having regard to duties of Relieving Officers which can only fitly be performed by Women.

II.—Arrangements for persons under the charge of the Guardians in Workhouses, Institutions and Homes.

PART I.

APPLICATIONS FOR RELIEF AND THE TREATMENT OF APPLICANTS; HAVING REGARD TO DUTIES OF RELIEVING OFFICERS WHICH CAN ONLY FITLY BE PERFORMED BY WOMEN.

7. Since the year 1897 efforts have been made from time to time to secure the appointment of Women as Relieving Officers, but such appointments have not become general, owing mainly to fear on the part of guardians lest the salaries should be surcharged by the Local Government Board.

8. Where women have not been appointed as Relieving Officers, the Committee of the Women's Local Government Society consider that the following arrangements are objectionable:—

(i.) Women and girls applying for admission to maternity wards have to state their cases to a male Relieving Officer.

(ii.) Women requiring midwifery orders in their own homes have to apply for them to a man, to discuss particulars with him, and in many cases to suffer from his ignorance of their special needs.

(iii.) In affiliation cases young mothers have to give all particulars to a man who may or may not see them alone for this purpose. It is not compulsory that a woman be with the girl.

(iv.) When a girl has to appear before a board on which there are no women guardians, no woman is required to accompany her or to be present in the room.

(v.) When the guardians take an affiliation case into court there is sometimes no woman to accompany the girl. For this reason many girls refuse to have their cases taken into court.

(vi.) Application for admission into the Lock Wards has to be made to the male Relieving Officer.

(vii.) Women lunatics who are also paupers are sometimes prepared for removal and are removed from their homes to the asylum by the male Relieving Officer. The fact that Relieving Officers are bound to employ women as assistants when removing female paupers shows that precautions are necessary. It would be an advantage if the

women deputed to accompany Relieving Officers in removing cases were officials known to and under the control of the guardians. At present the women employed owe their position and pay to the Relieving Officer.

(viii.) For pauper women going into infirmaries and hospitals and removing from one union to another similar arrangements should be made.

(ix.) Women must under all circumstances make their application for outdoor relief to a male official; (iii), they are often suffering from internal complaints, the symptoms of which they should not have to describe to a non-medical man.

(x.) Bedridden, sick and aged persons receiving outdoor relief are visited by the male Relieving Officer, who is obviously unfitted to examine the bedroom sanitary arrangements and the state of the patients and their bedding.

(xi.) Working women, widows and all children receiving outdoor relief are visited by the male Relieving Officer. These visits have in some cases to be made at night, which is unsuitable when the visitor is a man.

(xii.) Apprenticing girls and visiting girls under the age of sixteen years of age in service is a duty of the Relieving Officer.

(xiii.) The Relieving Officers are generally appointed to the post of Inspector under the Infant Life Protection Act. For this post special and technical knowledge is required.

9. The Committee of the Women's Local Government Society consider that the above cited methods furnish sufficient proofs of the defective administration of the Poor Law, and beg leave most respectfully to submit that the PROPER AND SOLE REMEDY IS THE APPOINTMENT OF AN ADDITIONAL NUMBER OF WOMEN AS RELIEVING OFFICERS.

10. So far as this Society is at present informed, two Unions, St. Asaph and Mutford-and-Lothingland, have appointed Women as Relieving Officers. The Clerks to these Boards of Guardians write:—

St. Asaph.—"The guardians on the death, in 1900, of Mr. Henry Williams, the relieving officer of the Abergele district, appointed his widow to succeed him. For some few years prior to his death, his health being very unsatisfactory, his wife did the greater portion of the relieving officer's work during this time, as well as that of registrar of births and deaths, she being his deputy. The guardians have not experienced any difficulty, and are satisfied with the arrangement."

Mutford-and-Lothingland.—"Re Mrs. Arrowsmith, the widow of the late relieving officer, vaccination officer, collector to the guardians, and registrar of births and deaths for the Belton district of this union. This district is a small one as regards population, but comprises eight rural parishes. The board have never had occasion to regret the appointment of Mrs. Arrowsmith. In the event of a lunatic being removed from the Belton district, one of the other relieving officers is always willing to give her assistance."

11. Eight unions have appointed Women as Assistant Relieving officers, viz:—Southwark (1898), Bradford (1903), King's Norton (1904), Camberwell (1905), Leicester January (1906), Derby (1906), Kensington (1907), and Paddington (1907).

12. The board of the King's Norton Union has given evidence before the Royal Commission.

13. The Clerk to the Southwark Union writes:—

"Early in 1898 the guardians found the duties set out in the accompanying list (practically the same as in the circular letter) could not be carried out except with the assistance of a female officer, and they thereupon

APPENDIX No. LXXXV.—*Continued.*

appointed one, the office being assigned at the request of the Local Government Board as Assistant Relieving Officer. The assistance rendered by the officer has been of considerable value to the guardians."

14. The Clerk to the Bradford Union writes:—

"In reply to your inquiry of the 4th inst. as to our female Assistant Relieving Officer, she is employed as Cross-Visitor, and her duties include visiting and reporting upon every case in receipt of out-relief; also upon the homes of children and widows employed at the workhouse as scrubbers, and as to the character and antecedents of inmates of the 'House' for classification purposes.

"The Superintendent Relieving Officer prepares a list of the out-relief cases for her weekly visitation and her reports are made upon prescribed forms. The reports are read by the clerk every Thursday evening to the board sitting as the revision committee, with power to discontinue or amend any order made previously by a relief committee. Such weekly revision leads to greater uniformity in administration, and prevents any case being dealt with as a 'special' or 'pet' case. The reports are afterwards indexed and bound and form 'case-papers' . . . on the relief list. After our three years' experience of the system I have no hesitation in stating that the advantages of such an appointment are many and definite. There cannot be a doubt that a refining influence is introduced wherever a lady officer visits a home. She sees the wives and children, examines every room and bed, and gives a timely hint where necessary as to ventilation, cleanliness, food, clothing, and bedding; and insanitary homes are subsequently reported to the proper authorities.

"From careful observation of the results of a lady Cross-Visitor we find there is a greater personal cleanliness of applicants, children, and homes, and I can therefore confidently say that the appointment has fully justified our action in making such a new departure.

"I have not referred to the financial aspect of cross visiting, but will say this. We found a great reduction in out-relief (in weeding out the unworthy recipients) has followed our methodical system. Our officer holds the Certificate of the Sanitary Institute, and is much interested in her work. Her present salary is £65 per annum, with car fares extra."

15. The Chairman of the Board writes:—

"We have in this Union a very competent officer as superintendent of out-relief, and so far as the first section of your printed circular is concerned, I thought he would be better able than I to express an opinion on the pros and cons of this question. I sent him the circular and enclose copy of his reply.

"While I very much agree with most of what Mr. ——— has expressed, and the practical difficulties that he raises cannot be ignored, my own impression is that in a large Union like this it would be a very good thing to have a woman as Assistant Relieving Officer to visit in all districts as she may be directed by the Superintendent, dealing with some of the special classes of cases that you mention, and making such enquiries as a woman is more suited to undertake, especially in reference to your (a), (b), (c). Indeed she might undertake (c) altogether."

16. A Woman Assistant Relieving Officer writes:—

"The numerous observations made in the discharge of my duties during the past eighteen months, justify me in stating that the appointment of women as Assistant Relieving Officers is necessary.

"In connection with widows with families, in receipt of Out-relief, a woman can, by exercising tact, usually discover where Out-relief would be beneficial or misapplied; and can also give advice in the management of their homes and children.

"It is also very advisable that a woman should investigate all applications for admission to the maternity wards, and also make the necessary enquiries into the affiliation cases. The reasons are obvious. Again, in dealing with the Infant Life Protection Act, who would be more fitted to give advice in the feeding, clothing, and general management of young children than a woman who has had some such practical experience . . . Also in certain cases I have discovered men's clothing where there is supposed to be no man living, thus ascertaining

that the real circumstances of the case differed from that already stated to the guardians.

"In other cases I found that certain women were in the habit of selling their relief grocery, thus depriving the children of the relief granted for their benefit. This I discovered by making a visit to the house on the day on which they received their allowance. On asking to see it I found that it had been disposed of.

"I have also repeatedly pointed out to the women the necessity of properly cleansing and ventilating their dwellings, and after frequent visits I found that the condition of their homes and families was much improved."

17. It is hardly necessary in face of all this testimony to state and rebut the objection brought, by persons without experience, against the appointment of Women as Relieving Officers that they are unable to perform all the duties of the position.

18. The Committee of the Women's Local Government Society therefore pray the Royal Commission TO URGE THE LOCAL GOVERNMENT BOARD NOT ONLY TO RATIFY BUT TO ENCOURAGE TO THE UTMOST SUCH APPOINTMENTS IN THE FUTURE.

INFANT LIFE PROTECTION ACT.

19. With regard to Par. (xiii.) of Part I. of the Memorandum, the Committee of the Women's Local Government Society desire to point out that an Inspector under this Act requires special technical knowledge of the needs of infants.

20. It is not necessary that a woman Relieving Officer should have this special knowledge, and it is improbable that a woman appointed as Relieving Officer would have time to visit adequately any considerable number of infants.

21. The opinion of the guardians, based on practical experience, seems to be that a special officer is required for this work, and that that officer should be a woman.

22. The following extracts from letters support this statement:—

"Here the board refuse the offer of the ladies (guardians) Letter 4. to visit nurse children."

"I am strongly in favour of women being appointed Letter 7. as Inspectors under the Infant Life Protection Act. I have known of two cases of children with unattended broken arms, one a baby who, after its death, at the inquest was found to have had a broken arm of long standing. In the other case the child was left for three weeks with its arm broken. . . . The home in which the baby died was under the care of a very good relieving officer, but he has no time, or proper knowledge, to attend to children."

"I have felt very strongly the great need of women Letter 18 Inspectors under the Infant Life Protection Act. I have been agitating for this during the two years I have been on the board of guardians. It struck me at once as most unsuitable work for men; indeed, so sorry did I feel for the babies that I got myself appointed honorary inspector in conjunction with the relieving officer till some permanent arrangement could be made, though I could ill spare the time needed, and cannot give near so much as I should like to do. Our three relieving officers are paid £10 a year each for this work extra to their salary; so there is some difficulty in arranging the work differently, but I hope it will soon be done. When first I visited I found that the relieving officers paid little attention to the kind of woman who had charge of the babies, or of the care they received, as long as the house was in a sanitary condition."

"We have a first-rate lady Inspector for the Infant Life Letter 37 Protection Act. She has now twenty-eight houses containing forty-three infants to visit, but though she works well and gives splendid reports, many of the men guardians think £100 a year, which includes travelling expenses, too heavy a salary. She visits in her own time and has to give only a monthly report, whereas Miss ——— (name of an infant life inspector in another union) keeps office hours and gives her whole time."

"We have appointed a lady to act as Inspector under Letter 85. this Act; she has no salary, but latterly her travelling expenses have been paid by the guardians. I feel that a paid woman inspector would be able to give more time to look up the cases in our widely scattered union, and

APPENDIX No. LXXXV.—Continued.

that we could demand more from her than from a voluntary worker. The Act would be much better enforced by a paid official, and carried out with greater regularity than is possible with voluntary work."

Letter 100.

"It is highly desirable that women should be appointed to act as inspectors under the Infant Life Protection Act. This is obvious, and needs no demonstrating, but in the case of one of our Relieving Officers appeared to do his duty as Infant Life Inspector with great carelessness. Infants often died, and the mother in one of his recommended houses boasted that the children were better dead."

Letter 143.

"We have a most valuable woman officer who is Inspector under the Infant Life Protection Act, and she also looks after the children who are placed out by the guardians, visiting them regularly until they are eighteen, and reporting on each case to the guardians. She sees if their situations are suitable, and if not, changes them, and that they are not only paid regularly, but that their wages are advanced according to age and experience. She encourages thrift, and is shown their bank-books. The children look upon her as a friend, and write to her if in any difficulty, and the employers understand that they must write to her when they wish to give the child notice, and they undertake not to send it away without her knowledge. We very seldom have a return to the workhouse. We adopt children very largely in our union, and in most cases send them quite away, so that undesirable relations shall not even see them. . . . We have no children boarded without the union now, but some are within, and, of course, epileptics, feeble-minded, deaf and dumb and blind in the homes that are suitable for them. These are also taken charge of by Miss —, the inspector."

Letter 146.

"At present the Infant Life Protection Act is not enforced. The local Society for Prevention of Cruelty to Children has sent a resolution asking the board to appoint a woman inspector. The matter is under consideration."

23. The Committee of the Women's Local Government Society, in view of this expression of opinion pray the Royal Commission TO URGE THE BOARDS OF GUARDIANS TO APPOINT PROPERLY QUALIFIED WOMEN AS INSPECTORS UNDER THE INFANT LIFE PROTECTION ACT.

(In the county of London the Act is administered by the London County Council who, under it, appoint women among their inspectors.)

PART II.

ARRANGEMENTS FOR PERSONS UNDER THE CHARGE OF THE GUARDIANS IN WORKHOUSES, INSTITUTIONS AND HOMES.

24. The Committee of the Women's Local Government Society desire to urge on the Royal Commission the NECESSITY THAT EXISTS FOR THE APPOINTMENT OF AN ADDITIONAL NUMBER OF WOMEN AS INSPECTORS OF WORKHOUSES.

25. At the present time there are in all England and Wales fourteen Inspectors and four Assistant Inspectors under the Poor Law. Of these two are medical men and one is a woman. One of the medical men, the woman, and two of the assistants have charge of thirty-three unions, including the thirty-one of the county of London; the other medical man, thirteen inspectors and one assistant inspector have charge of the remaining 623 unions throughout the country.

26. The Committee of the Women's Local Government Society consider that the following domestic details require supervision by a woman:—

(i.) THE CLOTHING OF ALL THE INMATES, with reference to the quantity and quality provided for women, girls and children, and especially to the quality of that provided for infants.

In many Unions, women and girls are not provided with necessary articles of underclothing.

The underclothing is entirely of calico and the women often complain of being cold. The clothing is not always suited for the time of year.

Nightdresses are not always provided.

Men and boys almost universally sleep in their day shirts. In one union the men have clean shirts for the double use once a fortnight.

The dresses of infants have sometimes very low necks and short sleeves. Letters 20, 104.

The infants have not always a proper supply of flannel, and their shirts are sometimes made of rough unbleached calico. Letter 5.

Boots for infants are too strong and tight. "The infants of twelve months and thereabouts have their feet compressed into tight laced-up boots, over very thick socks doubled under their feet to make them fit into the boots." The shoes for old people are sometimes very stiff and hard. Letters 100, 104, 123.

Stockings of one description and one size are provided for both men and women. Letter 14 (i).

Pocket handkerchiefs are not always provided. Letter 44.

Underclothing is not always changed each week. In one union the women wore their underclothing for five weeks without change. Letter 14 (iv).

Hair brushes are not always provided, nor tooth brushes.

(ii.) SANITARY ARRANGEMENTS FOR WOMEN AND GIRLS BY DAY AND NIGHT.—The Local Government Board Order is for a bath once a month.

There are often too few baths. In one union only one bath for 110 imbeciles. In another union aged and sick men have to cross an open yard to get to a bath. Women are required to leave the dormitories and generally to go downstairs to wash themselves, which they cannot do without being fully dressed. Letters 5, 2, 118, 124.

Arrangements for daily personal washing are inadequate. In one case only two small basins were provided for 120 women. The basins are often quite small and fixed too high for a woman to wash her feet in should she desire to do so. Letters 12 (i), 44, 118, 146.

This lack of opportunity for thorough cleanliness is often a hardship in hot weather.

The water closets are not always available at night. In one case the women and girls complained of being locked in at night and unable to get to the water closets. There is not always paper provided in the water closets. Letters 120, 157 (i).

(iii.) THE METHOD OF BATHING IMBECILES AND OLD PEOPLE.—Old people and imbeciles are not always washed in clean water for each person, nor is decent respect always shown towards them. Letters 5, 82, 120.

"Just the sort of thing a woman guardian gives offence in if she requests an opportunity of being satisfied here. To know that a woman Inspector was satisfied would be an enormous relief to the women guardians. I have received complaints from old women but feel powerless to test the matter."

(iv.) LYING-IN WARDS—There is not always sufficient accommodation. Women just lately confined have to share a room with women in labour. Letter 104.

"We women guardians at had some difference of opinion with the matron about lying-in arrangements and would have been thankful for a Woman Inspector to whom we might appeal." Letter 55.

There is not proper classification of women and girls in the lying-in wards. The married and unmarried occupy the same wards. This is degrading to the married. Young girls in for the first time should not be associated with the elder women. Letter 20.

The attendant for the lying-in ward has sometimes also charge of the infirmaries. Letter 104.

(v.) WOMEN AND GIRLS AWAITING ADMISION TO LYING-IN WARDS are classified as able-bodied or otherwise by the doctor. If classified as able-bodied they are usually employed without discrimination in scrubbing and cleaning, which is sometimes too hard for them. Letters, 86, 100, 104.

In their time, after work hours, they are compulsorily idle. It is against the workhouse rules for them to make preparation for their coming infants. Baby clothes for use in the workhouse are made in the sewing room by the older women. If a girl brings in no clothes for the infant to wear on leaving she has to remain in the workhouse until her friends send the clothes or until the Workhouse Girls' Association gives them to her; where there is a Workhouse Girls' Association a complete outfit

Letters 20, 82, 410, 110, 120, 124.

Letter 100.

Letters 92, 100.

Letters 44, 104, 120.

APPENDIX No. LXXXV.—Continued.

is generally given to the infant to enable the mother to take it away. A woman inspector would probably suggest that women and girls should, in their leisure time, receive instruction in the care of their own health and of that of their coming infants, and that either then or in the sewing room at work they should be encouraged to make the necessary clothing themselves. The clothes so made would be the property of the guardians, but might be supplied to the makers at the cost price of the materials.

(vi.) THE LACK OF INSTRUCTION OF YOUNG MOTHERS IN BATHING AND FEEDING THEIR OWN INFANTS.—In many large workhouses the mothers do not feed the hand fed babies, who are washed by the nurse, the mother only looking on.

(vii.) DIETARIES IN USE AT THE WORKHOUSE.—The dietaries in workhouses are fixed by the Local Government Board but much latitude is allowed in preparing the meals. A woman inspector would report on the recipes used and methods of preparing and serving the food, especially for nursing mothers and young children. Discretion is not always evinced in these matters. Nursing mothers have sometimes only the food prescribed for the able-bodied and their infants suffer greatly in consequence; young children are sometimes put on the diets for able-bodied women. It seems to be the general practice to put all persons, regardless of age, on able-bodied dietary unless a special diet is ordered by the doctor. Special supervision is required as to the food provided for old people who have lost their teeth and as to the mode of serving meals for bedridden persons. Even with adults one drinking mug has in some cases to serve for several persons.

(viii.) INFANTS WEANED BUT UNABLE TO FEED THEMSELVES are sometimes placed in a row and the whole row fed with one spoon.

In one union the assistant matron is said to give biscuits and bread to infants who are not thriving.

Children too Young to Attend School are often in the care of old women, or even of imbecile girls, neither of whom can teach them the common habits of cleanliness. Boys in one union are in the care of an elderly male pauper by day and night. In some workhouses the children have no toys and seldom go beyond the workhouse walls.

(ix.) CASUAL WARDS.—Women casuals are sometimes admitted by the porter. The female attendant of the Casual Ward has to be called by the porter. There should be a woman officially appointed whose duty it should be to admit women casuals at a separate gate from the men.

Casual Wards are frequently insanitary and badly ventilated and a danger to health. The clothing supplied to the women is inadequate for decency or for protection from the weather.

(x.) THE ARRANGEMENTS FOR LUNATIC AND IMBECILE WOMEN INSIDE THE WORKHOUSE need supervision. Their clothing, personal cleanliness, the method of feeding them, and the sanitary arrangements, require inspection by a woman.

(xi.) PAUPER GIRLS IN CERTIFIED HOMES.—Adequate inspection includes undressing the girls to examine for personal cleanliness and freedom from bruises. This cannot suitably be done by a man. Unless a report is specially applied for, no account of the children is sent to the guardians.

(xii.) CHILDREN BOARDED-OUT WITHIN THE UNION.—The persons with whom these children are boarded are often personally known to the guardians, and it is difficult for the guardians to make complaints. The Relieving Officer visits these children and where there are women guardians some-

times one of them volunteers for the work. A lady who visits the children boarded-out beyond the union and also those boarded out within the union considers that the children boarded-out beyond the union are much better treated, owing to the fact that they are visited by a Woman Inspector from the Local Government Board.

(xiii.) WORKHOUSE SCHOOLS AND COLONIES.

The Committee of the Women's Local Government Society have not received much information on this point, but feel confident that the clothing provided for the children, the dietaries, the mode of serving meals, the sanitary arrangements by day and night, the method of bathing, the punishments, the employment of leisure time, and the equipment of playgrounds and playrooms require supervision by a woman.

27. In answer to the objection that the necessity for the appointment of Women as Workhouse Inspectors is an indictment of the women guardians it may be pointed out that the appointment of Male Inspectors has not been considered an indictment of men guardians.

Moreover, THERE ARE 237 UNIONS WITH NO WOMEN GUARDIANS.

Where there are women guardians they are in a very small minority on the Boards, and we have their own testimony that they are for various reasons unable to do all that they desire.

28. That women will be welcomed as Inspectors by women guardians is evident from the letters in Appendix B.—That they will be welcomed by some Boards of Guardians where there are no women is shown in the following extracts from letters received from Chairmen of Boards of Guardians:—

The Chairman writes:—

Letter 135.

"In reference to your question as to Inspectors of Workhouses, I think there can be no doubt at all that if some women were employed in this duty by the Local Government Board considerable advantage would result. Very many of the matters that you mention under this head are not and cannot be undertaken by the male district inspectors. Although the guardians ought themselves to see to these things, a system that would keep them up to the mark would be very desirable."

The Chairman writes:—

Letter 143.

"I have received your circular, and was much interested in it. Generally speaking, I am very desirous that more Women Inspectors should be appointed by the Local Government Board."

The Chairman writes:—

Letter 92.

"I am quite in sympathy with the wishes of your society Many years ago I was Inspector in a Workhouse and asked where the girls' nightdresses were. I was told they slept in what they wore in the daytime. I, of course, immediately altered this."

The Chairman writes:—

Letter 133.

"I favour the suggestion of the society."

The Chairman writes:—

Letter 135.

"Yes, female Inspectors are desirable."

29. The committee of the Women's Local Government Society consider that the above cited domestic arrangements require female inspection and pray the Royal Commission TO URGE THE LOCAL GOVERNMENT BOARD TO APPOINT A SUFFICIENT NUMBER OF FULLY QUALIFIED WOMEN INSPECTORS TO DEAL WITH THESE MATTERS.

JANE STRACHEY, *President.*

MARY WILLIAMS, *Chairman of Committee.*

ANNIE LEIGH BROWNE, *Hon. Secretary.*

APPENDIX No. LXXXV. (A)

Handed in by the Women's Local Government Society.

THE WOMEN'S LOCAL GOVERNMENT SOCIETY FOR THE UNITED KINGDOM.

FOR PROMOTING THE ELIGIBILITY OF WOMEN TO ELECT TO AND TO SERVE ON ALL LOCAL GOVERNING BODIES.

Established on a Non-Party Basis.

President :—Lady Strachey.

[DEAR SIR,—The Women's Local Government Society has received permission from the Secretary to the Royal Commission appointed to inquire into the administration of the Poor Law, to lay before the Commission a report as to the necessity for the appointment of an additional number of fully qualified women : (1) as Relieving Officers, by Boards of Guardians, and (2) as Poor Law Inspectors, by the Local Government Board.

The Women's Local Government Society is collecting evidence of the need for the appointment of women as :—

(1) Relieving Officers.

(a) To receive the applications, and to investigate, in cases for admission to maternity wards.

(b) To assist the male Relieving Officer in inquiring into affiliation cases. In these cases to accompany the Mother to the Court.

(c) To act as Inspectors under the Infant Life Protection Act, outside London.

(d) To prepare female lunatics for removal, and to remove them, with assistance, from their homes to asylums.

(e) To remove female paupers to workhouses, to infirmaries, to hospitals, and from one Union to the other.

(f) To visit houses where the Medical Officer is in attendance.

(g) To visit cases of outdoor relief to sick women, to old and bed-ridden persons, to widows, and to widowers with children, especially the latter.

(2) Inspectors of Workhouses to inspect :—

(a) The clothing of all the inmates ; with special reference to the quantity provided for women, girls and children, and the quality of that provided for infants.

(b) The sanitary arrangements for women and girls by day and night.

(c) The method of bathing imbeciles and old people.

(d) Lying-in wards.

(e) The employment and method of spending the leisure time of persons awaiting entrance to the lying-in wards.

(f) The care taken that young mothers shall be practised in bathing and feeding their own infants.

(g) Dietaries : the recipes in use in the workhouse, the method of preparing the food, the dietaries for nursing mothers and young children.

(h) The method of feeding young children, weaned but unable to feed themselves ; the accommodation both by day and night for young children, and the arrangements for occupying the time of children too young to attend school.

(i) The method of admitting women to the casual wards.

(j) Female paupers in lunatic asylums.

(k) Pauper girls in certified homes.

(l) Children boarded-out within the union.

(m) Workhouse schools and colonies ; clothing provided for the children, dietaries, mode of serving meals, sanitary arrangements by day and night, method of bathing, punishments, employment of leisure time, equipment of play-grounds and play-rooms.

The Women's Local Government Society believes that evidence has been offered by the Workhouse Nursing Association, and that if this evidence is accepted, it will include reasons for the appointment of Women as Inspectors of Infirmaries and of Workhouse Sick-wards. Children boarded-out beyond the Union are already under Women Inspectors.

It will be a great assistance to the Women's Local Government Society if you will state if you desire the appointment of Women as Relieving Officers, and as Inspectors, for any of the purposes set out above, or for any other reasons. Expressions of opinion should be accompanied by the recital of the incidents which have led to the formation of the opinion. If the Board of Guardians of which you are, or have been, a member, has at any time appointed a woman as Relieving Officer, it will be useful to know the advantages which you consider have arisen from the appointment ; if a woman has at any time been nominated, and not appointed, will you state the reasons for not proceeding to the appointment.

The names of the unions from which examples are given and the names of persons giving information are not desired by the Royal Commission. They are required by the Women's Local Government Society only as a guarantee of the value of the information and will be treated as strictly confidential.

Replies to the circular should be sent without delay to Mrs. W. N. Shaw, who has kindly undertaken this inquiry, 10, Moreton Gardens, London, S.W.

ANNIE LEIGH BROWNE,

Hon. Secretary.

Office, 17, Tothill Street, Westminster.

April, 30th, 1907.

APPENDIX No. LXXXV. (B).

Handed in by the Women's Local Government Society.

PART I.

EXTRACTS FROM LETTERS RECEIVED IN REGARD TO WOMEN AS RELIEVING OFFICERS.

1. "I have on our board made public protests as to our young women having to tell the story of their shame to a man clerk instead of to a woman, for which very reason she often refuses to swear the father."

12 (ii). "In my opinion it is essential that every large union or parish should employ a woman to investigate and report on the following cases:—

- (1) Women who enter the lying-in wards.
- (2) Women who receive outdoor midwifery orders.
- (3) Old and infirm persons (of whom the greater number are always women) in receipt of outdoor relief.
- (4) Many cases, specially those of children, who have had medical relief orders.
- (5) Female Lock cases.
- (6) Young servants who, through illness, enter the wards of the infirmary (sometimes the mistress of the girls should also be seen).
- (7) Widows in receipt of relief.

"It is obviously more suitable that a woman should do such work as I have mentioned. It is also better to employ a woman, because a woman officer will, in all probability, be better trained than a man . . . It will be found that a really suitable and capable woman officer will do much to raise the tone amongst the men officers and to set a higher standard of work.

"As a result of over twelve years' experience of Poor Law work, I have come to the conclusion that the questions with which guardians deal are full of immense difficulty, and that pauperism is due more to vice and ignorance than to poverty. If we are to do anything towards stemming the tide of pauperism, the poor must be taught not only relieved. An educated woman can teach young women and girls as no man could attempt to, and it is most necessary that plain advice and warning should be given to many applicants for and recipients of relief.

"With regard to:—

"*Infirm Women* should be visited by a woman at intervals, specially when they are bed-ridden or senile or dirty.

"*Cases in receipt of Medical Relief* often seem to present great difficulties to a man Relieving Officer, who generally has little knowledge of illness. The tendency under the Poor Law, as in the out-patient department of hospitals, is to work hurriedly. A child suffering from epileptic fits may receive occasional bottles of medicine, but the question of food, education and housing require thorough and careful consideration if lasting good is to be received. Parish doctors are of all kinds, some do not encourage the attentions of district nurses to their cases, and a woman could often judge whether nursing in the home would be beneficial.

"*Lock Cases.*—These women need wise, kind and direct talking to. They are often most ignorant on questions connected with health. It is, of course, absolutely demoralising that any man should question these women.

"*Young Widows whose Children are taken into the Schools or who are given Outdoor Relief* want very careful watching and constant visiting. In . . . we found that numbers of these women went wrong, and for years the women guardians made an attempt to visit and get to know them. It is especially difficult to do this, as the women have to work hard and are often out all the day long. Sometimes too they break down in health. It is deplorable when a report reaches the guardians as to a question of the moral character of one of these women if the necessary enquiries have to be entirely entrusted to men officers.

"Perhaps I may add that a woman Relieving Office should, if possible, have had some training as a nurse. Ours is a fully trained nurse, a midwife (C.M.B.) She is experienced in rescue work and has special knowledge of the Poor Law, obtained when she was investigating for the Royal Commission. The appointment is temporary, for one year, and the salary only £90 I am sorry to say.

"*Note.*—A most extraordinary state of things existed not long ago in . . . and women were constantly confined at the Relief Offices in . . . where there are only men officers on the premises. The women guardians in face of great opposition insisted that the infirm midwife and ambulance should always be sent for. Things are better now, but at the time the men officers and guardians thought it quite impossible to introduce any change."

"I am sending you a few instances of cases that have Letter 12 (iii). come under my notice. . . .

"(1) *Mrs. T.*, a young widow had five children. The guardians took four and she supported one by doing laundry work. She went to live just outside the parish. The relieving officer visited once in three months, but since his last visit I heard through one of the children at the school that the woman was ill. I went after her last week, and found her still working but quite unfit and she has now come into the infirmary, and will, I greatly fear, not recover. She struggled on rather than risk losing her home. Had she been visited oftener and by a sympathetic woman, she *might* have been saved.

"These laundry women work often till late, and cannot be seen except in the evening. It is obvious that a man Relieving Officer cannot visit them late in the evenings. It is not advisable where the woman is respectable; where she is not it is practically impossible.

"(2) A widow actually had an illegitimate child between the three monthly visits of the relieving officer and he knew nothing of it.

"(3) Another young woman had serious allegations made against her character by a neighbour. One of the lady guardians undertook to visit and investigate, and disproved the story. But it is not always possible for lady guardians to do this extra work as their time is very fairly filled.

" I feel very strongly on this subject myself and think it would be such a good thing if the public could really realise the fact that *all* investigation is in the hands of men (practically) no matter what the character of the woman is, or what her application may be. It is a degrading thing for both the man and the woman."

"In reply to the circular I have received from the Letter 14 (iii). Women's Local Government Society, *re* the appointment of women as Relieving Officers. . . . I have great pleasure in adding my testimony. . . .

"The duties of the Relieving Officer are often of such a nature as to demand a woman's tact, knowledge, and judgment to prevent injustice; the infliction of unnecessary suffering and the violation of decency.

A Case of Injustice.—A young married woman, living apart from a bad husband, was accused by the Relieving Officer of co-habiting with a man, not her husband, and on this accusation, all out-relief was denied to her and her children. On investigating this case, with the help of another lady, I found that the Relieving Officer had only taken the gossip of another lodger, *without any investigation*, and that the story had originated from the fact that the young woman had given up one of her rooms to her younger brother for a few nights. No woman relieving officer would have made this accusation without inquiry. The woman's character would have been blasted for life and her chance of earning a living as a waitress in private houses would have been rendered

APPENDIX No. LXXXV. (B).—Continued.

Handed in by the Women's Local Government Society.

doubtful. . . . For a time she was rendered ill from grief and despair, and her health was precarious.

"Unnecessary Suffering."—Young nursing mothers, whose husbands are temporarily invalided, are often given work in the laundry, or elsewhere in the workhouse, as out-relief. Sometimes this work is too hard and often impossible without risk while the infant is being weaned. A woman Relieving Officer could represent to the board after visiting the case, where such work is harmful, and where time and judicious treatment is needed.

"The duties of the Relieving Officer often necessitate visiting women in confinement, girls and women in the infirmary; and unmarried women, with illegitimate children, in service or situations. In the case of the last-mentioned, serious harm is inflicted upon a girl, when a Relieving Officer calls and asks to see her, and demands payment for the relief which may have been declared on loan.

"Relieving Officers vary and, of course, some are high principled men, anxious to fulfil their arduous duties honourably; others there are, who are very different from this high standard, and when *intemperate* in their habits, and brutal in their language and demeanour, their visits to unprotected women and girls are a serious evil."

"I am entirely in favour of the employment of women as Relieving Officers and also of the appointment of an adequate number of women to the office of Inspector.

"Inasmuch as the administration of the Poor Law is, to a very large extent, concerned with the care of women, the advice and help of their own sex is essential. Their services would be of great value with regard to all points mentioned in your circular.

"I would like to draw special attention to cases of young mothers with illegitimate children. Cross examination by a male officer—sometimes young and unmarried—if thorough, destroys any modesty a girl may still possess; if not thorough, fails of its purpose.

"The fact that Relieving Officers are bound to employ women as assistants when removing female paupers shows that precautions are necessary, but it does not seem to have struck the authorities that protection is also needed for poor women in their own homes. Cases of, to say the least, harsh treatment, are not unknown. Relieving officers are often of the highest character, but there are exceptions. It would be an advantage if the women deputed to accompany Relieving Officers in removal cases were officials, known to and under the control of the guardians instead of being engaged by the Relieving Officers and under their orders. Officials of the guardians would have it in their power to report any case of maltreatment. At present the women employed owe their position and pay to the Relieving Officer. Are they likely to risk these by saying anything to his disfavour?

"The Clerk of my Union desires me to state on his behalf that an experience of over thirty years has convinced him that almost the whole work of Relieving Officer would be better done if women were appointed instead of men, male assistants being provided where necessary, as in the case of lunatics. He finds women more successful than men in making inquiries and dealing with applicants and it cannot be denied that a large part of the duty of a Relieving Officer consists in reporting on the condition of the house and other matters with which women are naturally more conversant.

"In confirmation of this, I may add from my own observation the fact that when guardians desire to have a case reported on by one of themselves they almost invariably ask a woman to visit the applicant, showing that they consider it more fitting. Such visits are of much the same nature as those paid by a Relieving Officer.

"It is often said that where there are lady guardians on a board, female Relieving Officers or Inspectors are not required. The ladies can do the work. It does not occur to the people who make use of this argument that it might equally be applied in the case of male officers whose work could be performed by the male guardians. Paid officials are necessary to ensure the work being carried on with regularity and promptitude. The duty of the guardians is to supervise and direct their officers which, if properly done, will be found to take up more time than the average volunteer workers can spare. It

is not reasonable to expect ladies to take their share in the ordinary work of a board and to undertake as well the duties of officials. In the case of a large urban union it is physically impossible and the result is seen in the revelations which occasionally come as a shock even in the best ordered communities.

"The co-operation of the two sexes is needed officially as well as unofficially and when this is fully recognised we may hope to see a great improvement in the administration of the Poor Law."

"I most firmly believe that every union should have at least one Woman Relieving Officer, not only for the objects you have sent me, but because I think night visits should be paid to the homes of all widows receiving relief. When I was paying the women during the war, and was any way doubtful of my woman, I paid such a visit, with the result that I *stopped payment* to at least three. Two I found to be leading an immoral life, and in another case I found three women and a man all living in one room. You cannot find out without night visits the lodgers, nor can you find out, as is still too often the case, the grown-up son living in one room with his mother. Only the other day, we had to stop the relief to a mother because we found not only was her son living with her, but they were sleeping in one bed."

"I entirely concur that it is of the utmost importance that there should be women Poor Law Inspectors, and wherever possible female Relieving Officers.

"(a) and (b) There is practically no work done of this kind, affiliation orders are rarely, if ever, made, and cases go in and out of the house without any effort being made to help them. . . .

"(f) and (g) I have known several cases where the out-relief was quite inappropriate, the patient suffering from want of skilled care and should have had infirmary treatment."

"Under Relieving Officers (d) I think it would be a great saving of expense, as now in cases of women being removed a man Relieving Officer cannot go alone, and in cases going to infirmaries or workhouses and harmless cases to asylums a female Relieving Officer would be sufficient; and it is *far more suitable* for a female in cases under (g), also in (b)."

"1 (b) Several instances have recently occurred in my knowledge where a girl has failed to get her affiliation order from want of help with evidence. She cannot get up her case when she is in the workhouse, and is nervous before the magistrate. The male Relieving Officer never helps a girl if he can avoid it. . . . A woman would be of the greatest help to many girls.

"(f) and (g) I consider these very necessary. The Relieving Officer often sends the money and has little personal knowledge of the old and bedridden. A woman Inspector would go herself and see more of them, and the lamentable cases of dirt and neglect which come into the house would cease. Widowers' children are often in a sad plight and require female supervision."

"My own special work on the late board, that of treating maternity cases, showed me the great desirability of having women officers. I can hardly state my opinion on the subject too strongly."

"1 (b) I should be specially in favour of this. I have found many of the girls greatly shrink from going to the courts to be quite alone amongst men. On one occasion in the case of a girl of better class (*enceinte* by a married man) who was brought by the police to the workhouse having been rescued from suicide in the pond I myself spent the morning with her at the police court. She had cried dreadfully on being informed that she would have to appear before the magistrate and begged so pitifully that the nurse should go with her, and finding that none of the officials or nurses could be spared I promised that she should not go alone. Being a ratepayer's candidate I do not wish to multiply the officials, but I sometimes wonder if some of the noble army of district visitors, etc., would not accompany these poor girls in their shame for charity's sake.

"We have a ladies committee for all maternity cases to hinder them coming before the Chairman of the Relief Quorums, but I am distressed that they should be obliged to apply to male Relieving Officers to investigate the case."

APPENDIX No. LXXXV. (B).—Continued.

Handed in by the Women's Local Government Society.

“Our officers dislike making enquiries into such (affiliation) cases, and consequently the enquiries are rarely made.”

“The help of a woman Relieving Officer would be very valuable. We have found great difficulty in getting women to help remove a female lunatic to the asylum. It sometimes means a drive of *thirty miles with the patient*. Some years ago in the . . . Union I called the attention of the Relieving Officer to a woman I knew who was mad with drink, and had been so for several days. Her only relative was a boy of sixteen. The upshot was that she was taken by the Relieving Officer to the workhouse infirmary. She was dressed in a chemise with a blanket put round her, (too excited to be dressed further) and the Relieving Officer had to drive inside the cab with her for four miles! No woman would accompany her!”

“We, the undersigned Women Guardians of the . . . Board, return the circular and heartily approve of the idea of a Female Relieving Officer for the reason stated, desiring at the same time to point out the necessity of adding to (g) the words: “and all other children on out-relief” as we have been much impressed by the desolate and poor condition of many such children in the way of food, housing and clothing, not only from poverty (as out-relief to children here is fairly generous, being at the rate of 2s. a head per week and there is much charity), but from want of some backbone in the mother, some encouragement to persevere under difficulties and some supervision.”

“I am greatly interested in the points you mention. I consider that in a large Union requiring several Relieving Officers it would be very useful to have one woman Relieving Officer. I have talked it over with our experienced Relieving Officer here, and we both thought that as in a large union there will be several districts, each Relieving Officer might send on the applicants for relief that would be better dealt with by a lady to her, after hearing only a few words of the case. Or, better still, in each relief office station there might be a printed notice put up saying that the Woman Relieving Officer would attend at that station at such an hour on such days. I consider that where appointed the Woman Relieving Officer would be useful in all seven cases mentioned in the circular.”

“Having had eighteen years' experience of the work on the . . . Board of Guardians I consider Women Inspectors would be of great benefit in both capacities.”

“(1) *Relieving Officers*:—

“(a) A woman is most essential in our casual ward when the Relieving Officer is absent on his duties of payment, lunacy cases, etc.; the applicants have often been interviewed by a youth who was left in charge of the relief office, or by the tramp ward master. Women guardians have often remonstrated in these cases, but nothing else was considered possible. . . .

“(d) and (e) We employ our district nurses in the removal of many of these cases, but a Woman Relieving Officer would be much more reliable in other parts of the union where there is no district nursing society, and where ordinary nurses are not available.

“(f) and (g) In cases of phthisis when we have enquired if the sleeping accommodation of the patient is satisfactory we have been told by the man Relieving Officer that it is not his business to go into the bedrooms, and in many cases I have gone myself; this is a most important matter for a Woman Relieving Officer to investigate.”

“With regard to (1) Relieving Officers I consider it would be a great advantage for every Board to have a female Assistant Relieving Officer, to carry out efficiently the work suggested. The salary would not be altogether an extra expense, as in the removal of lunatics and in bad cases of sickness it is customary for the Relieving Officer to engage a woman (often one who is a nurse), paying a fee of at least 5s. per case.”

“Conscientious as our officers are, some of the work that falls to them seems to me more suitable for a sensible and kindly woman, with both household, maternity, and trained nursing experience.

“We have such conscientious and kindly women, trained and experienced, within the ranks of our own officials and nurses, who, after some years of responsibility

in our unions and infirmaries, might undertake such duties outside, with advantage, both to the poor, and a change of work for themselves.”

“In selecting homes for boarding-out children we have found that the male Relieving Officers have not given the care and attention in making enquiries that were necessary . . .”

“Nothing is done by the guardians here to affiliate illegitimate children, and a Female Relieving Officer could do much in this way. House orders are given to young women expecting to be mothers, almost without enquiry.”

“(e) In removing female paupers or lunatics, the Relieving Officer has to engage and pay some female to assist him. It is obvious that a female Relieving Officer would be the proper person to do this.

“(f) A male Relieving Officer cannot examine the bedding and person of a bed-ridden out-pauper, to see if she is being properly taken care of. In the same way with widows who are compelled to earn their own living they are often really unable to do this and should not attempt it, but cannot explain matters to a man. In the same way it would be easier for a female to detect cases of malingering.

“(f) In cases where a woman is expecting her confinement a Female Relieving Officer could judge better whether she has made such preparations that she can be safely confined at home, or whether she should be compelled to come into the House.”

“I believe it would be a most valuable and useful thing to have a Woman Relieving Officer to visit outdoor pauper women in a large scattered country district like ours.”

“There are many serious cases of overcrowding in cottages, and much need for the attention of Women being directed to better sanitary methods in nursing and the care of children and cleanliness in household matters. . . .”

“Would it be possible for two or three unions to unite in engaging the services of one woman Relieving Officer?”

“I think it is highly desirable that there should be at least one woman appointed in every district . . .”

“I think it particularly necessary in dealing with children on whose behalf the mothers are receiving out-relief. At the present moment I am not infrequently asked to visit a child by the male Relieving Officers to find out its condition more exactly than it is easy for them to do. Our Superintendent Relieving Officer once remarked to me that he should like a woman on his staff as a sort of Cross-Visitor.”

“As regards the appointment of women as Relieving Officers, I think in connection with the cases for the maternity wards and affiliation (a) and (b) they would be most useful, for the Relieving Officer is always overburdened with work and is apt to think that such cases are not worth the trouble and time that a thorough investigation entails, and are often rather lax about it.”

“(c) Women for this, I think, are much needed

“(f) and (g) For this I think a woman would be most helpful. Men, not having a domestic training, do not and cannot understand the practical difficulties and needs in such cases.”

“(1). *Relieving Officers*:—

“(a) Because being questioned by men tends to harden the applicant”

“Further, no one else is present when a girl or woman applies in the first instance to the male relieving officer.

“(b) A Woman Relieving Officer in nurse's uniform, or a 'sister' or deaconess, has the best chance of gaining information when making inquiries; her 'cloth' is respected by the worst characters. I find men Relieving Officers make much use of bluff and force. As to police court, one of our women guardians who accompanied a girl to court, on the first occasion was not recognised; the magistrate was much too free with the girl until he discovered he was in the presence of a woman guardian, when his manner instantly changed and he treated the girl as he should

“I have accompanied girls myself, and I see plainly enough it is to the girl's advantage.”

* * * * *

APPENDIX No. LXXXV. (B).—*Continued.**Handed in by the Women's Local Government Society.*

"(d) Women lunatics make exhibitions of themselves which the Men Relieving Officers only smile at, whereas a Woman Relieving Officer would stop these unseemly actions and expressions.

"One lunatic made love to every man she came across; a woman officer's presence is necessary, our Woman Relieving Officer acts under this head, much to the chagrin of the Relieving Officer because formerly his wife was paid for this work when necessary. . . .

"On visiting one mother in her home, our Woman Relieving Officer found her without help in filthy condition, and straightway found a neighbour to attend to her. The Man Relieving Officer of that district was most indignant with her for engaging help without first gaining his permission. A Woman Relieving Officer should be fully authorised to deal entirely with such cases. I dare not suggest such a thing here at present. I wish the Royal Commission would strongly recommend this. To be always under a man's thumb not only reduces one's authority but actually prevents a woman from doing a woman's part because the man cannot realise the need."

Letter 122.

"I am strongly of opinion that the appointment of women as *relieving officers* is advisable, especially as regards (a), (b), and (c). In the former cases it does not seem fitting that the investigations and needful questions should be part of the duty of a male relieving officer, while I fully believe that a woman would be more successful in getting at the truth as to affiliation cases, and in persuading the mother to take the necessary steps.

"During the three years that I have been a guardian nothing has surprised me more than the almost total failure to obtain affiliation orders. In many cases this is, of course, the fault of the girls, who absolutely refuse to give reliable information, but much more might be done."

Letter 132.

"A girl, aged twenty, was taken to the asylum in January by the Relieving Officer. She had to wait one day after being certified, as the relieving officer could not get any woman or girl to go with him. Eventually, a young girl, her friend, went.

"One woman Relieving Officer is necessary in every Union.

"(a) Interviewing the applicant for admission to the maternity ward should always be done by a woman. until a woman relieving officer is appointed the application cannot but be received by a man relieving officer but the interviewing of the girl ought to be done by the matron either of the infirmary or of the workhouse, that is, if it is not done by the women guardians. When an applicant is rejected, the steps which she ought to take should be mentioned to her, in the interest of the unborn child.

"(b) I regard this as important. . . .

"(d) An objection to men as relieving officers removing female paupers to lunatic asylums is that in some cases they cannot obtain immediately suitable assistance, whereas a woman relieving officer could promptly be assisted by a male relieving officer or police officer. This argument would cease to exist if asylums on receipt of a telegram sent a qualified attendant, as they ought to be compelled to do in the case of either man or woman. It is greatly for the patient's benefit, being less irritating, and in violent cases it saves damage to the carriage.

"(e) I endorse this.

"(f) A man relieving officer cannot properly see that the medical orders are carried out, and not frustrated by various kinds of neglect.

"(g) My board does not give out-relief to widows and children. Men relieving officers cannot adequately visit and inspect sick or bed-ridden women."

Letter 141 (ii).

"Advantages of a Woman Relieving Officer.—In the inspection of the homes, interviewing the sick (and especially) in cases of midwifery orders, it seems to me such work should be exclusively carried on by women. For instance, the home. There must be times when it would be inconvenient to show her room to a man. This excuse would not hold good in the case of a lady Inspector. With regard to bodily ailments, bad legs, ruptures, etc.

It is obvious that a woman can see for herself whether it is necessary to grant a medical order. To illustrate, I called on a woman who wished for milk, and also to be excused from calling personally for her relief. She was terribly ruptured and showed me. I could see at once here excuse was well-founded; the officer had no idea things were so bad.

"Another case, that of a young widow who told me she was pregnant, and had not liked to tell the officer, who was a single man. Some single women are very coarse and offensive when applying to the relieving officer for midwifery help. It would be much better if they were interviewed *only* by a woman. Very often the girls cannot tell when they are likely to want the doctor, and therefore very *pointed* questions have to be put to them; this is also obviously a woman's work.

"Then in calling on neighbours and late landladies I find they will often communicate things to a woman they would not tell a man. More than one of the more respectable women have said how much nicer it was to be questioned by a woman than a man. Then with regard to interviewing single women, I have sometimes been able to persuade them to go and see a rescue worker, and she has in some cases been able to get them into a 'home' which is better for them than the 'house,' and a saving to the ratepayers. Personally, I think work of this kind amongst women should be done by women."

"Speaking from past experience, I am decidedly of opinion that it should be imperative that all women relieving officers be well educated, and before being appointed should serve a short period under a good Superintendent Relieving Officer, so that they may come to their work with some experience."

"(b) . . . One can well see how very necessary a female Assistant Relieving Officer is, especially under boards composed entirely of men, as it is much better in our opinion for the mothers to have to do with a woman than with a man."

"(c) . . . The woman guardian in charge of our rescue cases always reports any which she comes across; but we are quite convinced that the inspection of such infants would be much more efficiently done by women inspectors, who could examine the children's bodies, clothes, feeding bottles, the day and night accommodation provided, and such matters, which are naturally in a woman's province.

"(d) In all cases of removal of female lunatics in our union, our relieving officer is accompanied by a woman, and we consider this essential.

"(e) We should thoroughly advocate the appointment of Female Relieving Officers to accompany such cases, as described in (d) and (c), as it is not fitting that sick and helpless women should be in the sole care of a male officer.

"(f) Here also a female officer would be more readily supplied with information and details, which could not be told to a male officer."

"I am strongly in favour of an attendant from our own wards going with the patient to the asylum; thus any bruise received on the journey or when undressing at the asylum the attendant can be accountable for. If an Assistant Relieving Officer was a woman she could be the second person to go with the patient."

"(1) *Women Relieving Officers.*— . . . I consider it a most objectionable arrangement that (as at . . . at present) a rather youthful male officer should not only have to interview the unmarried mothers in the workhouse in respect to affiliation proceedings, but that he should have to call on them later in their situations as regards their children in schools or infirmary, etc. As Chairman for some years of the Relief Committee, I have frequently realised the disadvantage of having only a male opinion as regards the homes of widows in receipt of out-relief, and to guide the Committee as to the best form of relief to offer. I have found their opinion as to the character of women applicants often very unreliable. In my opinion while it might be undesirable to have a woman as Relieving Officer in full charge of a district, it would be quite easy and highly advantageous so to re-organise the work as to employ an Assistant female Relieving Officer in every parish for a number of specified duties in which a woman's knowledge would be specially helpful."

APPENDIX No. LXXXV. (B).—*Continued.*

Handed in by the Women's Local Government Society.

et 157 (i) "There was a unanimous feeling in favour of the principle of women Relieving Officers. In 157 this would be met by appointing a woman cross-visitor (there is already a man to whom special cases are submitted) who should have supervision of the whole district; for if there were just an ordinary Relieving Officer, one section or district would be unduly favoured, as the whole area for the administration of outdoor relief is a very large one. Two of our ladies gave instances where a woman had felt quite unable to explain to the man officer the illness from which she was suffering, and which had not been made clear on the order for medical relief; when the lady guardian interviewed her the matter was made clear, and the order for medical relief without work at once granted"

et 157 (ii). "I am convinced of the need for women Relieving Officers. There must be very many cases of women applicants for out-relief and other help, where the causes of need would be more fully stated to a woman official than to a man. . . I have known women hesitate to state the nature of ailment suffered, for instance, in case of rupture and the need for a truss."

PART II.

EXTRACTS FROM LETTERS RECEIVED IN REGARD TO WOMEN AS INSPECTORS OF WORKHOUSES.

er 5. "Women Inspectors of Workhouses would be very useful.

"(a) At one time when we had a careless matron and before we had a superintendent nurse, I found from the lying-in nurse that she had the greatest difficulty in procuring proper flannels, etc., for new-born infants.

"(b) Sanitary arrangements. In one of our own workhouses, I consider that there are too few water closets for aged and infirm women, but have been unable to get this remedied.

"(c) Some years ago, another lady guardian and I found that a good many sick men had to traverse an open yard to get to any bath, this in spite of the doctor's quarterly report, that there were sufficient baths.

"Just lately in another of our workhouses, we have found that 110 female imbeciles had only one bath-room containing one bath.

"(h) At one time the mothers had the charge of their babies during their own meal times, but we found that they gave their infants bits of any kind of food they had themselves, and we never now allow them to take the babies out of the nursery.

"For all matters connected with the treatment of babies, Women Inspectors would be useful."

er 6 (ii). "I think that it is desirable to have a regular lady Inspector for seeing after the boarded-out children—as guardians who know the people who have them often feel it awkward to make a searching enquiry, where a stranger could do so more easily."

er 12 (i). "The standard of personal cleanliness insisted on is not nearly high enough and requires the close attention of Women Inspectors."

er 13. "Having had some experience in boarding-out, both within and outside the Union, I am very strongly of opinion that Women Inspectors should inspect all children boarded-out within the Union, as well as those outside. The control of the guardians is, I fear, not always sufficiently exercised in the former case."

er 14 (iv). "In the management even of well conducted institutions cases of neglect may occur. As for instance I have known women compelled to wear their under-clothing for four or five weeks, stockings only supplied in one size both for men and women, causing much unnecessary suffering to old people, no hair brushes for girls at school, etc.

"In some of these cases it would have been difficult if not impossible for a Male Inspector to have discovered the evidence of neglect."

er 20. "My personal observation has led me to believe that the appointment of Female Relieving Officers and Poor Law inspectors would be desirable for every one of the reasons enumerated in your circular. . . .

"(a) When I became a guardian, drawers were never worn, they are not yet by all female inmates. They

complain of the cold when washing down steps, etc., and greatly dislike having to give up a garment to which they are accustomed outside the house. Chemises were used as nightdresses, no vests were provided for young children. Both they and the babies go about in all weathers with low necks and short sleeves, and their hands are often blue with cold. . . .

"(c) A weekly bath has only lately been introduced.

"(d) and (e) There is no classification between the different classes of lying-in women, or between them and the so-called able-bodied women, who are often feeble-minded or better class imbeciles. Bed and day-rooms are used in common, and much evil may be imparted to the more innocent inmates.

"(f) and (g) This is a most important point. No instruction is given in my workhouse.

"(h) I have often found the nursery under the charge of a classed imbecile, the bottles sour, the babies wet, cold and dirty. The assistant matron herself gives bread, biscuits, etc., for babies of a few months old who are not thriving.

"The boys' and girls' only playground is two small yards in which washing is hung out. In the female one the imbecile alluded to sits with the nursery babies, and the mothers often feed them there. Both classes are undesirable associates for young girls.

"The boys have a shed in their yard for their day-room. None have any notion of playing and one often sees them in holiday time sitting on a bench doing nothing. Lately a field has been hired for them in the summer, but the condition of the children out of school hours leaves much to be desired. Until recently they had their meals in the same room as all the other inmates, including the imbeciles opposite whom the boys sat.

"Under the head of infirmary wards I may say that it is only within the last year we have had a night-attendant, and a few years ago the infirmary was under the charge of one untrained and untrustworthy nurse. Now there are two by day.

"The imbeciles were kept in a room to which the sun never got and their only seat was one wooden form without a back, and they never went out from one year's end to the other. One (who was unable to speak) was allowed to sit all day on a wooden commode chair in obvious pain and was found—on a change of nurse being made—to be covered with bed-sores. I have never seen a worse case, death followed shortly.

"There were no hair or even wool mattresses in the infirmary, no draw sheets, etc. Brushes and combs were in common. There were no screens, dressing-gowns or slippers. Food was kept in the wards and there was no bathroom accessible except by going down stairs to a sort of shed. There was no proper sick dietary and bread was cut into slices on the morning of one day and served for breakfast on the morning of the next."

"In my nine years' experience on our board, and being Letter 21. the only lady, I have seen the need (of *women inspectors*) in looking after the clothing—especially nightdresses in the imbecile wards, also children's clothes."

"(f) (g) (h) No instruction or help of any kind is given Letter 24. to young mothers. There is no one to give it. The girls are set to work as soon as possible and the babies and little children are looked after by the old women who cannot teach them even the common elements of cleanliness. . . .

"(i) The casual wards for women are very bad, mediæval and brutal, and a blot on the workhouse. I saw not long since in the afternoon a pillow still damp from the wet head of a woman the night before. . . . The system is for the woman to be bathed, she is allowed to tie her head in the wet towel she has been dried with, put into a long shift in which she eats her supper and goes to bed; no petticoat or slippers are allowed, and the water closet is a few steps outside. Everything possible is done to lower the woman lower still . . . and one lady guardian is impotent to fight it or to get things altered to be more in accordance with the spirit of the age. A woman inspector would have the power to insist on a humanitarian system which at present is looked on as a *fad* suited to a lady to propose, but impracticable and foolish to perform.

APPENDIX No. LXXXV. (B).—*Continued.**Handed in by the Women's Local Government Society.*

"(1) The moral condition of boarded-out girls I believe to be very bad. . . . The "family" system has broken down in our and other workhouse homes and I am afraid that in the cottages they act on their knowledge that they are brothers and sisters in name only."

Letter 31 (i).

"I should also welcome the appointment of Female Inspectors. A woman would be of far more use to matrons and female officers in many matters than a man can be, and many of the investigations he makes into the cleanliness of female bed-ridden inmates and children would be much more suitably carried out by a woman, as would all the matters suggested in the circular."

Letter 32.

"Children boarded out within the union should certainly be inspected as is the case with those boarded out without the union, as where there is no boarding-out committee the children are often only inspected by the Relieving Officer. In this union for instance, in several districts there is no acting boarding-out committee, and as I am the only lady on the board it is impossible for me to visit these children myself, as the districts are not very accessible and I have not the time at my disposal. In my opinion there should be a Woman Local Government Board Inspector for pauper girls in certified homes, and her report should be presented annually to the board paying for the maintenance of the children; as it is, unless we apply for a report, which our board does, no account is sent of such children."

Letter 33 (iii).

"I should be entirely in favour of Women Inspectors for Workhouses, Poor Law schools, Lunatic Asylums, Casual Wards, etc., as I have seen with my own eyes that men frequently overlook dirt, waste and disorder, and that their opinion upon clothing, drapery, etc., is of a most amateurish kind, never probably having been trained from childhood in the habits of feminine observation on such matters."

Letter 44.

A Member of the Executive Committee of the Women's Local Government Society (not a guardian) writes:—

"In a workhouse in one of the large northern towns the infants who were weaned but not able to feed themselves were seated in a row, about ten in a row, on a low bench with a back, and with a bench in front which might have served for a table but which really served to keep the children in their places, while a person in a nurse's costume fed them all with one spoon from one plate of rice pudding—the spoon went in and out of the mouths all along the row. This method of feeding infants is, I am told, used in many crèches. It must cause the spread of disease amongst children. In a Hospital of a Home for Children two little girls were eating a dinner of beef and vegetables. The chart over the bed heads showed a daily rise of temperature, and a milk diet was prescribed. I pointed this out to the matron and she said the doctor had altered the diet that morning—he had not altered the fluctuation of temperature."

"In a school hospital the children were having bread and butter for supper. The bread was too thick to bite and had to be broken. No plates were provided: the crumbs in the bed must have been very uncomfortable."

"In a large workhouse the bedridden women had their plates of beef and vegetables on a mattress in the bed. They were almost unable to cut the meat on a soft bed. They were some time about it and matters were further complicated by the nurse putting round plates of pudding outside the counterpanes."

"In a large workhouse in the Midland Counties there were no chairs in the old women's dormitories. There was nowhere to place the day clothes at night. There were windows down both sides of the dormitories and beds with their heads against the wall near the windows. The beds thus all faced the light. There were no blinds to draw down. There were pieces of blind holland about a foot deep nailed up to imitate blinds. The women went to bed in full daylight in the summer."

"In this same workhouse the women had to dress and go downstairs to wash. The basins for washing were very small, and fixed against the wall too high up for a woman to wash her feet if she wished to do so."

"A friend who was with me spoke in praise of the soup which was being served for dinner. The matron poured it from the ladle to show us that there were pieces of meat in it, and also spoke of it as excellent soup. Later on, on remarking to the assistant matron that it was

really the day for Irish stew, she answered that that was their Irish stew."

"In a smaller workhouse there was one trained nurse for day duty in all the wards. The men's wards had a different staircase from the women's wards. At night 'a respectable person' from the neighbourhood took charge of all the wards. There was an epileptic man about forty years of age in bed in the old men's ward. He was a powerfully built man and my attention was drawn to him by the fact that he was evidently out of his mind. The master of the workhouse said they had nowhere else to put him. This was some years ago; another provision may have been made by now."

"In the same workhouse the men still sleep in their day shirts. The children too young to go to school are still in the charge of elderly paupers. One child then had a very bad cold in his head but had no handkerchief. Two very young children were in charge of an old woman walking solemnly round a square of grass when they ought to have been playing and running about."

"There was a room called the nursery, furnished with a rocking horse, three stools and a cradle. The door stood open to the outside air and there was a large fire burning; two old women occupied two of the stools and the boy with a cold sat on the third. The baby in the cradle cried, and one old woman tried to take it up but was unable to do so. I understand that these arrangements for the care of the children are still maintained."

"It has often seemed to me that Women Inspectors Letter 55. of Workhouses were necessary as well as men for questions of clothing, food, sanitary arrangements for women and children, etc.,"

"(d) We women guardians . . . had some differences of opinion with the matron about 'lying-in arrangements' and would have been thankful for a woman inspector to whom we might appeal. . . ."

"(e) I feel strongly the advantage it would be to have a woman inspector for children boarded within the union About three years ago I went for the first time to the . . . home at . . . to which some of the . . . children are sent. I feel sure that a Woman Inspector would have been very useful there. Ophthalmia and ringworm were often had and none of the simplest precautions were taken until the Local Government Board doctor insisted on them."

"Bathing was done wholesale; boys slept two or three in a bed and so on."

"(f) Young mothers should have more instruction Letter 60 (ii) than now given in bathing, feeding and general care of their infants"

"I think also that more attention should be paid to the food given to aged persons without teeth, as they are unable to masticate much food that other inmates might enjoy."

"I have been a Poor Law Guardian at . . . for eight Letter 82. and a half years I am certainly in favour of Women Inspectors in connection with the Poor Law Unions"

"I think the bathing in our Infirmary of the old and infirm on their admission should be looked into. This is done by young nurses (at infirmary, not workhouse) who, in my opinion, are not always competent and sympathetic. I have seen the poor things brought back to the wards with their heads still very wet and they themselves very cold."

"Also I think the clothing should be examined, and I consider all pauper women (young women especially) admitted to the workhouse should be made to wear drawers. This is not usual at"

"In every department of the workhouse, I consider Letter 85. the services of a Woman Inspector would be invaluable. . . . The employment or rather non-employment of the quarantine children in the workhouse is very deplorable, and of children suffering from ringworm, who are often detained for weeks at the workhouse without instruction or occupation of any kind"

"(e) I am a member of both a 'within' and 'beyond' union boarding-out committee, and consider that beyond union children are better cared for because they have a paid Woman Inspector."

APPENDIX No. LXXXV. (B).—Continued.

Handed in by the Women's Local Government Society.

e 6 (ii). "Inspectors of Workhouses.—The work indicated under this heading is most important, and, sad to say, is at present very much neglected

"The employment and the method of spending the leisure time of persons awaiting entrance to the lying-in wards, and arrangements for occupying the time of children too young to attend school, are points that are very much neglected. Whatever regulations the guardians may make, they are not always at hand to see them carried out, and the old spirit of officialdom, which first of all makes sure that a pauper shall exist with the minimum of trouble to all concerned, is still too much in evidence. Therefore even young girls awaiting confinement are often put where there is work to do (whether in bad company or not), and the remark is often made that 'it should not be made too easy' for the poor creatures. Little children, too, are often allowed to lead monotonous, aimless lives, entirely without interest, until their minds, instead of awakening to new interests, become vacant.

92. "A proper caretaker may be appointed, but the matron finds her useful at sewing and other work, and the children are left to themselves. . . ."

101. "Many years ago I was inspecting the Workhouse and asked where the girls' nightdresses were. I was told they slept in what they wore in the daytime. I, of course, immediately altered this."

"We are strongly of opinion that there should be more Women Inspectors of Workhouses. At . . . until the advent of the lady guardians the female inmates wore the same cotton dresses winter and summer. They had no extra clothes, and the old women suffered severely from cold. The infants of twelve months and thereabouts have their feet compressed into tight laced-up boots, over very thick socks, doubled under the feet to make them fit into the boots. The young children have very heavy boots and unsuitable clothes. No nightdresses have been provided.

"There has been no careful separation of the young girls of twelve and fourteen and the young women of immoral character, both being allowed to sleep in the same dormitory.

"Until the lady guardians were elected there was no bath in the women's casual ward, the sanitary arrangements were very deficient, and no female officer had anything to do with the casuals.

"The children in the workhouse were greatly neglected. We have frequently found solitary children kept home from school in a large bare room without any toys or books, spending practically whole days in solitary confinement. This has been when colds, toothache or earache has been the cause of detention. . . . It was the custom at . . . to employ inmates to take charge of the nursery, often imbecile old women or weak-minded girls. They neglected and teased the children continually. Infants are often sadly neglected, allowed to become almost raw through lack of attention to their napkins. . . .

"There is no particular attention paid to the needs of young mothers; too often they are worked far too hard right up to the time of their confinement and too soon afterwards. In the case of a healthy mother able to feed her own baby, she had left it from seven in the morning until half-past twelve because she said she had no time to go to her baby. It was only six months old. . . .

"We find that . . . the Local Government Board Inspector is very good in seeing to the women and children, but he has no power to make a Board of Guardians alter their ways. He has been of great help to us in getting a paid caretaker for the children."

er 104. "Women are greatly needed to inspect the workhouse.

"Complaints have more than once reached me from female inmates that they have not been supplied with drawers.

"The men have no night-shirts, they sleep in their day shirts which are clean once a fortnight.

"The infants' dresses often have very low necks and short sleeves.

"The women's underclothing is of calico and they often complain of cold.

"The children are in charge of elderly paupers. There is no one able to take them out except occasionally, and until lately there was no perambulator and so they could not go out at all.

"One spoon goes the round of all the babies in administering medicine.

"According to the dietary no pudding is given to the children excepting on one day in the week, when it forms the whole dinner. There is no jam or cake at all in the dietary.

"Little boys from the age of four or five are by night and day in the charge of an elderly male pauper.

"At night time there is one untrained woman in charge of both male and female infirmaries (i.e. about sixty-five beds). There is a considerable way to go from the female to the male infirmary. She also has charge of the lying-in ward.

"There is no isolation ward for cases of consumption or cancer.

"There is no day-room for maternity cases, and women who have been confined have to share a room with women in labour.

"There is only one nurse for the whole infirmary, which has over sixty beds; she is assisted by paupers.

"Young women who are waiting to be confined and women of bad character mix freely with the other women, including the feeble-minded girls. Their leisure time is spent in conversation. This includes the whole of Sunday with the exception of two services.

"Women Casuals are received by the male porter at the gate, he sends for the tramp attendant. She does not sleep in the Tramp Ward, which is at the gate close to the porter's house. He is an unmarried man. The Receiving Ward for women is also at the gate, close to his quarters, and it sometimes happens that there is one woman alone in the Receiving Ward or Tramp Ward at night."

"I am quite and strongly in favour of the appoint- Letter 110.
ment of more women as Relieving Officers and Inspectors. . . .

"The most old-fashioned ideas as regards women's underclothing are still in force and have never been altered, so that women going in are obliged to give up wearing a most generally worn garment they are used to wearing, to their great and real discomfort. . . ."

"Inspectors of Workhouses.—There is to my mind no question as to the advantage of having Women Inspectors of Workhouses under each heading (a to m). The women Letter 115 (ii)
guardians have neither the time nor the special training necessary for going into all these matters—though they can do something if they will. . . ."

"The arrangements for the inmates' personal washing are still unsatisfactory, and the arrangements for children Letter 118.
and their clothing even more so. . . ."

"Inspectors of Workhouses to inspect:—

"(a) Absolutely necessary, because the temptation is to 'keep down the washing.' Our women inmates were denied drawers on admittance until one or two of us came on the Board and insisted upon these garments being provided for inmates who were self-respecting enough to wear them. Letter 120.

"In our Scattered Homes we make our girls not only wear combinations but closed divided skirts also. Much evil can be laid to the non-wearing of such decent garments.

"We also make our boys at the Scattered Homes wear night-shirts. At many homes they get into bed with the filthy sleeves they have worked and played in.

"I don't understand infants' clothing, and as a guardian I should be thankful for independent superintendence on this point at our workhouse, etc. The Board and the officers are too ready to go on 'as before.'

"(b) The young women at our homes once or twice complained that they were locked in, could not get to w.c. The officers denied this, I was never quite satisfied on this point, and if I knew a Women Inspector were available, I should gladly make much use of her. With

APPENDIX No. LXXXV. (B).—*Continued.**Handed in by the Women's Local Government Society.*

only Men Inspectors we women guardians are handicapped.

"(c) Just the sort of thing a women guardian gives offence in, if she request an opportunity of being satisfied here. To know that a Woman Inspector was satisfied would be an enormous relief to the . . . women guardians. I have received complaints from old women, but feel powerless to test the matter. 'Interfering' would be expected from an Inspector, not from a guardian.

"(d) Vast improvement here since one or two of us came on the Board, and further improvements impending. But it would always be necessary for the best of nurses to be liable to inspection.

"You do not mention Lock Wards. This is where a Woman Inspector has been needed. A number of sweet little children with ringworm locked up with the lowest of the low. Cruel! We women guardians stopped this, but we greatly needed a Woman Inspector at our back. . .

"(g) With us the dietaries for nursing mothers is decided by the medical officer. But the preparation of the food needs strict supervision. I found the milk kept uncovered close to cheese, etc. This has been altered, but an Inspector would have marked it long ago.

"(h) I would gladly welcome advice on this point, and I cannot find that the other women guardians are particularly strong on it. A mother guardian has just joined the Board, and I hope much from her, but what I say of the apparent ignorance of our guardians only points to the need of Women Inspectors. . . .

"(k) Yes, because many of these cases are at such great distance we have neither time nor money to visit, and we should be thankful to know the homes were inspected by a competent person.

"(l) Yes, even where the children are regularly visited by guardians.

"(m) Especially with a view to the efficient training of girls to earn livelihood. Doing the work of the Institution is not necessarily the needful training nor the most suitable for a girl. A boy may choose his line of work, a girl must scrub and sew just on Institution lines."

Letter 121.

"I should like to give my strong opinion on Section 11 (1), viz., the need for Women Inspectors of Children boarded out within the Union. I have been a guardian of the . . . union for the past twelve years. I have felt this need constantly. The children boarded out within the union are in the worst position of any under the care of the guardians. I have known cases of over-crowding, of doubtful moral surroundings, of insanitary and dirty houses, of thoroughly unsatisfactory control and discipline, of insufficient means of subsistence—all allowed because the children were boarded out generally with relatives, and it was thought hard or unkind to move them. No man, however careful, can make the examination needed to ensure the proper physical care of young children, especially girls. And the guardians do not like to make themselves unpopular by removing children from relatives or friends, who are living near to themselves. An Inspector's outside opinion would help them much in this."

Letter 124.

"I think it most desirable that women should be appointed as Poor Law Inspectors.

"As regards the feeding of the young children in the workhouse who are old enough to require more than milk. *Until our present matron came here* some two years ago, such children were just on the ordinary able-bodied women's diet.

"As to clothing, the able-bodied women had no proper night-dresses and none of the women were allowed drawers, which was a considerable hardship to those women who had been used to wear them before coming into the House. The conveniences for washing the women were not suffi-

cient, and the arrangements and rules for bathing the children were not altogether satisfactory. Since this present matron has come, I believe there is nothing to complain of in any of the above matters, but a Woman Inspector would probably have brought in the necessary improvements far earlier."

"The Men Inspectors are unable to do any of this Letter 128(ii) detailed inspection. . . .

"(1) Should be specially emphasised, as the present distinction between in and out boarding-out is absurd. Both equally need inspection.

"(a) I should like to point out shoes need special inquiry. In a country workhouse I know leather boots were provided for infants when short-coated; and no slippers, only the thickest leather boots for the use of the infirm inmates. This is changed now in that workhouse.

"Also the case of inmates' own clothing needs inspection. Letter 146. There may be no proper place or way of putting this away. Things may be lost, and altogether this (if not seen to) may be most careless."

"There are 200 beds here, and the present number occupied is 110. The arrangements for washing are quite inadequate, and consist of two small basins in the passage leading to the water-closets; there is hot and cold water laid on. There is a good bathroom upstairs with two baths; the women bathe once a month and are encouraged to bathe oftener. The water is changed as frequently as possible, although sometimes when there is not enough hot water two women use the same."

"Where there are no women on a Board a Female In- Letter 154. spector is specially needed.

"Female lunatics in asylums are visited by women guardians; but here we feel there is great need for Female Inspectors to look into the methods of bathing, changes of under-clothing, provision of the necessary articles for the special needs of women, and to inspect the beds.

"These girls are visited annually by a guardian, and here a Female Inspector with special knowledge and training would be most valuable.

"Such children are visited by the Boarding-out Committee of ladies, approved by the Local Government Board, but their examination of the children and homes is often not at all thorough, as that of a trained Woman Inspector should be.

"The porter, assistant porter and porter's wife admit, and the latter looks after the women being bathed and passed on to the House from the Receiving Ward. The casuals are bathed in their own department under the surveillance of a woman pauper. . . ."

"We desire above all to urge the need for Women Work- Letter 157(i) house Inspectors. At present any suggestion for improvement in small details, regarding the inmates, comes usually from conversation between the women guardians and the matron; and unless there is a cordial feeling between the two, the suggestions may remain for ever unadopted. It is extremely difficult to remedy abuses or adopt reforms, as the inmates and officers alike fear to report. An Inspector can ask questions and demand answers, while guardians have to work more or less in the dark, and yet with endless tact and caution.

" . . . We had not thought of paper in the water closet, but the matron says she will in future provide squares of newspaper.

" . . . We are of opinion that the Local Government Board's order that the mothers may nurse their babies for two years to be unwise; this detail is under the control of the resident workhouse doctor, who interferes when necessary. We should like to have an attendant to look after the babies (sixteen) when the mothers are at work in the laundry or elsewhere; at present old women are employed in this work, which is hard on them and unfair to the children."

APPENDIX No. LXXXV. (C).

Handed in by the Women's Local Government Society.

SUMMARY OF ANSWERS RECEIVED BY THE WOMEN'S LOCAL GOVERNMENT SOCIETY IN RESPECT TO THE NEED FOR MANY MORE WOMEN RELIEVING OFFICERS AND INSPECTORS.

Letters have been received from 150 unions.

Of these letters 141 are from Women Guardians, three from other women who have knowledge of the subject, and fifty are from men engaged in administration of the Poor Law.

Nine Boards with no women members ordered the letter to be laid on the table.

Eight women and eleven men disapproved the suggestions in regard to Women Relieving Officers, and four women and eight men disapproved the suggestions in regard to Women Inspectors.

The subjoined table shows on what points guardians feel strongly, if we may judge from the number of persons expressing opinions.

PART IV—ENGLISH UNEMPLOYMENT.

APPENDIX No. LXXXVI.

COPY OF CORRESPONDENCE WITH ADMIRALTY AND WAR OFFICE ON THE SUBJECT OF
THE POSSIBILITY OF GREATER REGULARISATION OF GOVERNMENT WORK.

68, Victoria Street,
Westminster, S.W.
May 10th, 1907.

SIR,—My Commission, as you are doubtless aware, are engaged on an enquiry which embraces *inter alia* the subject of distress due to unemployment and the remedies which have been or may be applied in mitigation of such distress.

Among such remedies there has been suggested to the Commission the possibility of a greater regularisation of Government work with a view to discouraging irregular or casual labour; inasmuch as there is a consensus of opinion that it is amongst the casual labourer class that distress due to unemployment is most frequently to be found.

The Commission are aware of the administrative difficulties attending a proposal of this kind, but as an indication of the kind of suggestions and criticisms which are made, I am desired by Lord George Hamilton, the Chairman of the Commission, to forward for the confidential information of the Admiralty, the enclosed extract from a Report made to the Commission by Mr. Cyril Jackson and Mr. Pringle, who were appointed to make a preliminary Report to the Commission on the subject of unemployment.

In the circumstances I am desired to ask whether the Admiralty will be good enough to cause the Commission to be supplied with a Memorandum showing, if possible, over a period of years, to what extent the work undertaken on behalf of the Admiralty, either in Government dockyards, etc., or by contractors, is irregular in amount, either at different seasons of the year or in different years. The Commission would also be glad to know to what

extent it would, in the opinion of the Admiralty, be possible to regularise such work with a view to providing constant work for a regular number of men, and so obviating the necessity for the use of casual labour by, or on behalf of, the State.

The Commission would suggest whether a good test of the irregularity of Government work would not be afforded as regards Government dockyards, etc., by a Return of the fluctuations in the numbers of men employed at different periods; and as regards contract work, by a Return showing for a series of years the dates, periods, and amounts of the contracts given out. The Commission are, however, sensible of the complexity of the subject, and I am to say that they desire to leave the whole scope of the Memorandum to the discretion of the Admiralty, with the explanation that the Commission would not have ventured to trouble them in the matter had they not been deeply impressed with the national importance of discouraging, as far as possible, the resort to casual labour, both by individuals and the State.

In conclusion I am to say that if it should be considered necessary, the Commission will be happy to hear orally in the autumn a witness on behalf of the Admiralty in support of any Memorandum which may be sent in, but it would be a convenience to the Commission if such Memorandum itself could be received by them, not later than the end of July next.

I am, Sir, your obedient servant,

(Signed) R. G. DUFF.

The Secretary,

The Admiralty.

(A similar letter, *mutatis mutandis*, was addressed to the War Office.)

1. REPLY FROM ADMIRALTY.

Admiralty, S.W.

October, 4th, 1907.

SIR,—In reply to your letter of the May 10th last, concerning the regularisation of Government work, I am commanded by My Lords Commissioners of the Admiralty to acquaint you for the information of the Royal Commission on the Poor Law and Relief of Distress that this question has been very carefully examined, and it is considered that the present system of distribution of admiralty work is not antagonistic to uniformity of employment.

There are, unquestionably, many cases in which demands for manufactured material must be met as they arise, but My Lords have never lost sight of the importance of expending the funds at their disposal in a manner calculated to promote continuity of employment, so far as it may be within their power to do so without jeopardising the interests of the Naval service.

My Lords have considered the question of furnishing a return of contract work, but on account of the complexity of the whole question and of the diverse nature of the work involved, they are satisfied that no statement could be prepared which would convey a correct impression of the effect upon the labour market from time to time of orders given by the Admiralty to private contractors.

With regard to the employment of labour within

His Majesty's dockyards, I am to forward for the information of the Royal Commission a statement showing the number of entries and discharges of men at the various yards, quarter by quarter, from June 28th, 1902, to March 30th, 1907. With respect to these men, My Lords, have always exercised the greatest care to ensure that there shall be as little fluctuation in the numbers employed as consistency with other public interests will permit.

I am to add that casual labour is but little resorted to in the dockyards, and for the most part only for the unloading of coal and other stores and similar intermittent duties. Very little casual labour is employed upon the work performed for the Admiralty by contract in various parts of the country, as the execution of these contracts entails for the most part the employment of skilled labour.

In conclusion, My Lords, do not consider that the amount of casual labour employed for naval purposes is sufficient to have any appreciable effect in limiting the distress due to unemployment.

I am, Sir, your obedient servant,

C. I. THOMAS.

The Secretary, Royal Commission on the
Poor Laws and Relief of Distress,

68, Victoria Street, S.W.

APPENDIX No. LXXXVI.—*Continued.***2. REPLY FROM WAR OFFICE.**

70/ General Number 2259 (C. 3).

War Office,
London, S.W.

October 28th, 1907.

SIR,—With reference to your letter of May 10th and subsequent correspondence on the subject of regularising Government work, I am commanded by the Army Council to forward, for the information of the Poor Law Commission, twenty-six statements showing the numbers of operatives in direct War Department employment and some of the more important orders placed with the general trade of the country during the past few years. A brief memorandum is also enclosed in explanation of the statements.

The Army Council are aware that an even course of purchase is both beneficial to trade at large and should, as a rule, conduce to the economical and satisfactory supply of the Army, and it is their constant endeavour to avoid intermittent ordering to the utmost extent.

The paramount consideration with them, however, must be the prompt and effective equipment of the Army as a perfect fighting machine, prepared to strike at all times and at all points, with every advantage of armament and matériel which the latest developments of science and human ingenuity can confer.

It is constantly necessary to meet some new condition of policy, to provide for some new service, to cope with changing climatic and local conditions, to introduce some new store, or to discard one which has hitherto been regarded as almost immutable. All these things must necessarily affect the even tenour of supply, with the result that it often appears spasmodic and erratic to those unacquainted with the conditions by which it is governed. Such conditions must always involve some dislocation of the industries affected by the supply, both as regards *personnel* and locality, and during the past few years the

disturbance has been especially notable owing to the contraction after the war and the completion of large stocks of war reserves. It is hoped that in the immediate future the orders placed with the trade, even if reduced to peace requirements, may be marked by greater stability; while in the War Department establishments themselves a new principle has been laid down, as explained by the Secretary of State in the House of Commons on August 15th last, which is expected to result in constant employment in time of peace to a fixed minimum number of employés, and to obviate the violent fluctuations which have sometimes occurred in the past.

The Army Council are glad to have seen the extracts you have been good enough to send from the Report made to the Commission by Mr. Cyril Jackson and Mr. Pringle. They think it right to repeat in this connection that after a long and costly war the process of contraction to normal peace conditions necessarily follows and produces a period of what appear by comparison with the past to be "lean years," and also to point out that the operation of the principle of competitive tender must frequently involve the transfer of work from one district to another. Nor are they altogether convinced of the strict accuracy of certain statements as to the type of work employed upon Army orders contained in a recent publication, quoted without reservation by the writers of the Report.

Should the Commission desire further information the Army Council will be happy to supply it either in writing or orally.

I am, Sir, your obedient servant,

R. H. BRADE.

The Secretary, Royal Commission on
the Poor Laws and Relief of Distress,
Scotland House, Victoria Embankment,
Westminster, S.W.

MEMORANDUM ENCLOSED IN LETTER FROM WAR OFFICE.

The accompanying tables have been drawn up in response to a request from the Poor Law Commission for information as to the amount of labour directly employed by the War Department and the orders placed with the trade during the past few years.

Tables "A," "A (1)," and "B," show the numbers directly employed in manufacturing and other establishments from April, 1903, to March, 1907; and Tables "C." to "Y." show some of the more important orders placed during the same period.

The annual purchases are classified in the tables according to the dates on which the orders were placed, but as the periods of delivery vary, the actual amount of work

done by the trade in each year may in some cases differ somewhat from that shown in the tables.

Owing to the labour involved, it has been necessary to limit the particulars as regards projectiles, cordite, and guns (Tables "V." to "X.") to three years, and as regards steel (Table "Y.") to one year. As regards steel, the value of the orders placed each month is given, and no attempt has been made to give the periods of the contracts, which are very numerous and for many different varieties.

During the years dealt with there has been abnormal fluctuation in the yearly requirements owing to the existence of large surplus stocks laid in during the war, and also to the re-armament of the Army with new rifles and field guns.

APPENDIX No. LXXXVII.

WAR OFFICE LETTER AND MEMORANDUM AS TO THE FEASIBILITY OF CALLING OUT THE MILITIA DURING THE WINTER MONTHS FOR THEIR ANNUAL TRAINING.

War Office,
London, S.W.
September 12th, 1907.

SIR,—In reply to your letter of the 1st ultimo asking that the Royal Commission on the Poor Laws and Relief of Distress might be furnished with the views of this department as to the feasibility of calling out the Militia during the winter months for their annual training, I am commanded by the Army Council to request you to lay before your Commission the accompanying Memorandum, and, in doing so, to draw their special attention to paragraphs 12 and 13. The Council think it important that the Commission should distinguish clearly between the annual training of the whole Militia and the training (or preliminary drill) of the recruits. The former recurs from year to year during a man's service in the Militia, but is of short duration and will in the future be shorter, while the latter is of longer duration, but does not recur during a man's service.—I have the honour to be, Sir, your obedient servant.

R. H. BRADE.

The Secretary, Royal Commission on the Poor Laws and Relief of Distress,

Scotland House, Victoria Embankment, Westminster, S.W.

WINTER TRAINING OF MILITIA.

1. The present time is not a very favourable one for the consideration of the point raised by the Royal Commission on the Poor Laws and Relief of Distress, *i.e.*, the feasibility of calling out the Militia during the winter months for their annual training, as a measure intended

to remove some portion of the distress which arises from unemployment. The reason why it is unfavourable is that the Militia force as it has hitherto existed is about to undergo a transformation which, when completed, will possibly render much of what might be said in this connection, with regard to the Militia as it is, inapplicable to the Militia as it is proposed it shall become.

2. The utility of having recourse at all to the expedient indicated would appear to depend, from the point of view of the Commission itself (*i.e.*, the social and economic) as distinct from the point of view of the War Office (*i.e.*, the military), largely upon what proportion of the Militia, either as it is or as it may be, are or will be chronically members of those classes, into the unemployment and distress of which the Commission's enquiry is directed. Of the social elements which will enter the Militia force as transformed, when the new system has reached a condition of normal development, it is impossible to say anything; of the social elements which are comprised in the force as it is, it is not possible to say much, but the attention of the Royal Commission on the Poor Laws and Distress is, in this connection, directed to some statistics published with the Report of the Royal Commission on the Militia and Volunteers. These statistics will be found on pages 198, 204, 210 and 218 of the Volume of Appendices to the Minutes of Evidence (Cd. 2064).

3. These statistics were collected in the year 1903, but there is no reason for believing that the broad conclusions which emerge from them are not equally true of the Militia as it is in 1907. At all events, no later information of the kind is available. The following table brings together the statistics:—

	Royal Garrison Artillery.	Royal Engineers.		Infantry.	R.A.M.C.
		Engineers.	Submarines.		
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
(i) Artizans - - - - -	10	29	9	11	45·5
(ii) Miners - - - - -	15	29	2	10	—
(iii) Fishermen - - - - -	3	3	47	4	—
(iv) Mechanical labourers - -	31	27	11	21	21·9
(v) Agricultural „ - - - -	21	3	10	22	5·6
(vi) Other occupations - - -	20	9	21	32	27·
	100	100	100	100	100

The infantry is, of course, the largest arm numerically and therefore the most important. The numbers in the Militia Engineers and R.A.M.C. are, comparatively speaking, inconsiderable.

4. Without laying undue stress on these statistics, which possibly do not give a very scientific classification, the Council think that it may perhaps be assumed that the Militia Commanding Officers, who furnished the returns from which the general percentages given in paragraph 3 were compiled, would have placed in category vi. "other occupations," all those of the men under their command who had no fixed occupation. It results from this that, in the Infantry Militia, 32 per cent. of the strength represents the proportion of that arm who, being

chronically without employment, might conceivably derive benefit, from a breadwinning point of view, from the institution of a system of winter training. It is, however, in the opinion of the Council, a large assumption that the whole of the 32 per cent. may be regarded as belonging to the chronically unemployed. In proportion as the force, in its existing state, consists of men permanently employed, in that degree it does not contribute to the ranks of the chronically unemployed. The Council think there is sufficient reason for believing that the unemployed classes and the Militia only overlap to a small extent, and, if that is true, winter training would not appreciably reduce the total sum of distress due to want of employment.

APPENDIX No. LXXXVII.—*Continued.*

5. The foregoing argument rather assumes that it is only the chronically unemployed members of the Militia who need be considered in this connection. But those who at times suffer from want of employment might be benefited if the training of the units to which they belonged happened to take place at the time when they were out of employment. Universal winter training would not necessarily effect this. The interests of different battalions vary in this respect and, in the case of more than one unit, it has been represented to the Army Council that the men composing it are in more regular employment during the winter than in the summer months.

6. It must be remembered, too, in considering the question of winter training of the Militia as a measure for mitigating distress arising from want of employment, that the prescribed training for the Militia (Artillery and Infantry), though it is somewhat longer for the other arms, is only of twenty-seven days duration.

7. In the opinion of the Council, what has been stated above goes to establish that the adoption of universal winter training for the Militia would not lessen appreciably the total sum of distress from want of employment :—

(a) Because, of the existing Militia there are not, it is considered, a large number of permanently unemployed ;

(b) Because, in the case of those who are during some portion of the year unemployed, the period of unemployment is not in all cases during the winter

8. If the policy of winter trainings for the Militia is adopted with the object of helping the unemployed amongst the general population as distinct from those who are primarily Militiamen and secondarily unemployed, other considerations arise. The Militia would under such circumstances tend to attract and to become a temporary asylum for those unemployed, who probably would not, apart from the fact that they were without employment, ever enter the Militia at all. Such men would form a class of recruits whom most commanding officers do not wish to attract to their units. They would, in their opinion, probably belong mainly to the casual and loafer class and be men not only of no fixed occupation, but also of no fixed home. The Militia rests on a territorial basis and, although its members are probably less fixed to the soil of the counties to whose units they belong than they formerly were, nevertheless, in the interests of the Militia it is desirable that the tendency in this direction should be checked as far as possible rather than encouraged. To whatever extent the policy of winter trainings would fill the ranks of the Militia with casuals and loafers of a more or less nomadic character, to that extent would commanding officers regard it as a measure likely to result in the transformation of their units from military bodies into organizations for administering outdoor relief.

9. From the purely military points of view there are several very important objections to winter training of the Militia. Owing to the state of the country and bad

weather the field training of bodies of men is very difficult. The days being short, it would require in winter a longer period of training to ensure the same amount of efficiency. As every extension of the training involves paying all the men for additional days, this, of course, increases the expense. Musketry training would also be carried out in winter under great difficulties.

10. From an administrative point of view, the chief obstacle in the way of a winter training lies in the difficulty in providing barrack accommodation. The state of the weather makes it quite impossible to put the men under canvas, as is done when training is held in summer, and the majority of commanding officers, on disciplinary grounds mainly, are opposed to billeting.

11. In the previous paragraphs the matter has been considered from the point of view of the rank and file, but from the War Office or Military point of view the interests of the Militia officers have also to be considered. The idea of winter trainings is not popular with the Militia officers, and if the system of winter trainings were adopted for the whole Militia it seems probable that the existing deficiency in officers would be still further increased. Winter training would also be unpopular with a large number of the rank and file, who enjoy the camp life during the training and who look forward to it as an enjoyable outing.

12. An experiment has recently been made which bears to some extent upon the question of winter training raised by the Royal Commission. An extended recruits' training of six months, followed by an extended ordinary training of six weeks, has recently been carried out during the winter and spring in twenty selected Militia battalions. The objects of this experiment were mainly military, viz., to ascertain whether a six months' training could be made of general application without a falling-off of numbers in the Militia and whether recruiting in the line would be seriously affected. The Army Council have not yet received and considered the reports of commanding officers on the results of this experiment, but it is known that there was, as a result, an increase in the number of the recruits who joined the twenty battalions in question during the past year.

13. In view of the approaching reorganisation of the Militia, no steps have recently been taken by the Army Council to consider more closely the question of winter training. The difficulties under the existing organisation are as stated above. In the future it is probable that all recruits will be trained on enlistment for six months and they will be able to do this during the winter. On the other hand the annual training will be shortened to two weeks, with an additional week for musketry. The holding of this two weeks' training in the winter, even if this were done universally, could not, it is considered, have an appreciable effect upon the unemployed problem, but on the other hand the reduction in the duration of the training would make it more than ever undesirable that it should be held in the winter, when the number of hours in a day available for actual field training is so small.

APPENDIX No. LXXXVIII.

STATEMENT OF EVIDENCE BY R. J. ANGEL, ESQ., M.INST.C.E., A.R.I.B.A., BOROUGH ENGINEER AND SURVEYOR TO THE METROPOLITAN BOROUGH OF BERMONDSEY.

1. Only a small amount of work has been executed as a means of relieving the unemployed since the coming into force of the Unemployed Workmen's Act, but previous to that time a considerable amount was done in Bermondsey.

2. For several years large bodies of men were employed, during the period of winter distress, in re-constructing roads, and a far greater portion were employed for a term of three days apiece. The result of this was that the work came out very expensive, owing to the

fact that the men were not used to the class of work, and when the third day had arrived they were stopped to make room for the fresh men, which was just about the time they had become acquainted with the use of the tools. This was found to be so unsatisfactory that the council decided to pick out a number of men who were physically used to the work, and to employ them continuously on the job until same was completed. The result was a marked improvement, both in the economy of the work, and the manner in which it was carried out.

APPENDIX No. LXXXVIII.—*Continued.*

3. In the first instance, on the basis of a three days' employment, the work which was estimated to cost say £686 for labour with the council's workmen, was anticipated to cost with unemployed labour £858, but it actually turned out to be £1,169, and so on, in similar ratio; but as on the other hand with the men who were picked out as suitable for the work, and employed continuously, the result for the labour came out equal to the estimate for the work to be done by the council's employees. There was a great improvement also in the quality of the work in the second instance.

4. I do not see that this class of work improves the men physically, it has no effect on them, except in the case of the three days' employment. It was found that owing to the indiscriminate selection of the men, the work of using the tools was so hard that some of them became exhausted, owing to their ill-fed condition.

5. With regard to the question of whether the unemployed are encouraged to rely on such work instead of seeking ordinary employment, a large number of men applied to the depots as being the first place of relief, the moment the work became slack in the neighbourhood.

6. The regular employees of the council do not seem to mind the introduction of the unemployed labour, and they are not thrown out of work in consequence.

7. I shall be glad to answer any fuller questions you desire, and beg to enclose a Report of the proceedings of the Joint Committee *re* Unemployed 1904-5, of which pp. 8-9 may be of interest to you.*

8. The only work executed since the coming into force of the Unemployed Workmen Act was the laying-out of a disused burial ground as an open space and recreation ground. The estimate was £833. Owing to variations in the design, subsequent to the order to put the work in hand, the job came out at £778 9s. 6d., towards which we received £300 from the Central Body, the amount, therefore, charged to the borough council being £478 9s. 6d. The whole of the work was carried out by men who were otherwise unemployed, the number being forty, and it took eight weeks and three days. The amount paid to the "unemployed" was £313 2s. 3d. The same men were engaged continuously, and they did their work exceedingly well.

* The report has been summarised by Messrs. Jackson and Pringle. *See* pp. 131-4 of Appendix to Report as to "Unemployed."

APPENDIX No. LXXXIX.

STATEMENT OF EVIDENCE BY MR. A. E. CAREY, M.I.C.E.

1. I was engineer of the reclamation works undertaken at Fambridge by the Central (Unemployed) Body for London, and in that capacity had occasion to visit Fambridge at short intervals over a period of about eighteen months. I was not in any way responsible for the arrangements of the Colony or the control of the men. The broad conclusion at which I have arrived, through constantly watching the operation and methods adopted, is that the work of reclamation of land on foreshores and elsewhere is work suited to unemployed labour, but that the question of local supervision is all important. I may say in this respect at Fambridge I noted a marked improvement during the last six months of the operations. Great care is also, I think, necessary in the preliminary selection of men sent on work of this character. Among the ranks of the unemployed are men of every grade and condition of life, and, more especially in the early period of the work, I think a more severe selection of the men sent down would have been judicious. Organisation is all important, and I think the management of a Colony should be kept distinct from engineering control. It is doubtless somewhat difficult to draw a dividing line, but with suitably selected local officers this can, I think, be done.

2. The cost of reclamation work carried out with unemployed labour must of a necessity be extremely high, as compared with ordinary contract work. I see no reason to doubt that sound work can be secured when

unemployed labour is adopted, but, in my judgment, it is necessary to stiffen the unemployed labour by engaging a considerable proportion of skilled "wallers," that is men whose regular vocation it is to carry out such work. By this means the unskilled portion of the work can be entrusted to the unemployed and the more difficult given to skilled men. This plan was adopted at Fambridge with complete success, and, so far as I am aware, no clashing between the two classes of workers occurred. Granted a well-devised organisation, suitable control and careful selection in the work to be attempted, I am of opinion that reclamation work is well suited to unemployed labour.

3. The reclamation at Fambridge was an operation of extreme difficulty; certain portions of the work had of necessity to be carried out by contract, and unemployed labour does not lend itself to rapidity of execution which, on difficult jobs, is often a matter of vital urgency. I think it would be possible to organise this class of labour in such a manner that the best of the unemployed should, after a period of probation and training, be paid a wage and be recognised as more or less skilled "wallers." This would be a considerable incentive to the best men, which the present system does not afford. It would also obviate the necessity of turning men adrift after a given number of weeks, by which time they have more or less acquired skilled training. Under present arrangements these men have to be replaced by raw hands.

APPENDIX No. XC.

STATEMENT OF EVIDENCE AS TO DISTRESS DUE TO UNEMPLOYMENT, BY MR. WILLIAM DAWSON, DEPUTY CITY SURVEYOR, BRADFORD.

1. I had charge of the special work provided by the Bradford Corporation for the relief of distress due to unemployment, prior to the passing of the Unemployed Workmen Act.

2. Work was commenced for the relief of the unemployed on January 22nd, 1903, and extended, off and on, to January 27th, 1906. During the period extending

from October 17th, 1904, to January 27th, 1906, 1,973 men were found employment, and the amount paid to them in wages was £11,902, and the total sum paid for labour, including payments to ordinary workmen and team labour, was £20,609.

3. The work provided included the making of new roads, and the widening of existing roads, the laying out

APPENDIX No. XC.—*Continued.*

of recreation grounds and allotment gardens, and also bowling-greens at various parks, and the excavation work required in the extension of the town hall, fever hospital, and other public buildings.

4. The tramways in the City of Bradford were constructed by the corporation and leased to two tramway companies, but in 1900 the corporation made arrangements with the two companies to take over the leases, with a view to the electrification of the then existing tramways and the construction of various extensions. This work was commenced in 1900 and extended to 1906. During that period £499,741 was expended in carrying out this work.

5. The effect of doing this work during that period was to attract to Bradford a great amount of outside labour, and when the work was finished a number of the men remained in Bradford.

6. The men engaged on the work provided for the unemployed consisted as a rule of machine wool combers, dyers' labourers, and others employed in the textile factories of this district. They were paid the standard

rate of wages usually paid to outside labourers, of 6d. per hour, which was in many cases more than they were receiving when they followed their regular employment.

7. They were treated with kindness and firmness, and if they showed willingness to work they received every encouragement, and very little trouble arose in the management of the men, but they were unable to do the amount of work that the ordinary labourer would have done, and in my opinion the works carried out by the corporation cost more than they would have done had the usual kind of labour been employed.

8. The corporation commenced all the works they possibly could for the relief of distress arising from unemployment during the period to which I have referred.

9. The effect of this was to reduce the amount of work which would have been done by the labourers usually employed by the corporation, and as a matter of fact some of the regular corporation labourers were walking about the streets of Bradford, out of work, at the time when these works were in progress, as they declined to register their names at the labour bureau.

APPENDIX No. XCI.

STATEMENT OF EVIDENCE BY MR. M. W. JAMESON, A.M.Inst.C.E., ENGINEER TO BOROUGH OF STEPNEY.

1. I may say at the outset that all relief works carried out by this Council have been prior to the passing of the Unemployed Workmen Act. In a borough like Stepney it is practically impossible to provide suitable work remunerative in character, such as the formation of new streets, there being no scope for further development.

2. In the past, work has been provided for all applicants, conditionally upon their being residents in the Borough. Very few of the men worked for any considerable period, relays being taken on from time to time owing to the large number of applicants to be dealt with, so that it was not possible to note any improvement in their physique as a result of the short time they were employed. It should be borne in mind that in many cases relief is merely a temporary expedient for alleviating distress during the rigours of winter, so that for men who remain unemployed from various causes, a short term of regular work would scarcely have any lasting beneficial results.

3. Experience shows that all are not equally desirous of employment as, in the most ordinary labouring work, men in a few instances return their implements within two hours of making a start. It would appear that about 45 per cent. of the applicants are capable and willing to work and earn their wages; the remainder can only be classed as non-efficient. It has been observed that continuity of labour tends to eliminate those who are incapable and indolent; many, in fact, were unsuited

to the work owing to physical disability and want of stamina.

4. The most profitable occupation available for the employment of a promiscuous body of men in addition to the ordinary staff was found to be street paving, and the defective condition of several macadamised roads afforded an outlet for the employment of a considerable number of unskilled workmen. In the winter of 1904-5 a concrete river wall at the Council's wharf was constructed, by far the greater part of the labourers being recruited from the ranks of the temporary men. Road scavenging was also resorted to as a measure of relief, and in 1904 the Council decided to replace the road-sweeping machines by hand labour. This course, although not financially a success, was adopted in consequence of the exceptional distress prevailing at the time, and continued without cessation from December 1st, 1904, to March 31st, 1905. A large number of men also received work in connection with the clearance of snow, and in all cases the work done by the unemployed was carried out in conjunction with the regular employees of the Council.

5. The cost is not proportionate to the value of the unemployed labour, as the inevitable inexperience of an indiscriminate assembly of workless men of all trades heavily discounts their usefulness. By no means are they encouraged to rely solely on this work for sustenance.

APPENDIX No. XCII.

STATEMENT OF EVIDENCE AS TO RATING AND LAND TENURE IN CONNECTION WITH UNEMPLOYMENT, BY WILLIAM R. LESTER, M.A.

1. I have for many years given close attention to the questions of poverty and unemployment, more especially in their relationship to our systems of land tenure and taxation. I have written pamphlets dealing with these questions from this point of view. I am president of the English League for the Taxation of Land Values, and member of the parish council, Clifton, Bedfordshire.

2. I do not propose to deal with the facts of unemployment or with the distress that arises therefrom. I assume

that the existence of both is admitted, and that they are a standing menace to present institutions.

3. No society can indefinitely continue if threatened by a class who either find it impossible to get work at all, or whose chances of doing so become more and more precarious. In my view, two of the underlying causes of unemployment are the present systems of rating and land tenure. I deal first with the rating system and its effect on employment.

APPENDIX No. XCII.—*Continued.*

4. In final analysis employment can only be secured through access, direct or indirect, to land; but the use of land is distinctly discouraged by our present system of rating, for, if an owner only imperfectly develops his property, he has to bear a lesser burden of rates than if he puts it to its most productive use. Landlords are thus discouraged from developing the resources of their estates, and as estates cannot be developed without employing labour, our present system of rating amounts to a fine on the employment of labour. Whether the owner of the land do the work himself or whether he hire the labour, in either case our present system of rating discourages employment, and therefore ultimately leads to unemployment.

5. Land, whether urban or rural, can be developed in one way alone, viz., by working on it. At present the burden of the rates increases automatically in measure as the landlord or his tenant develops and employs labour on the land, which is equivalent to saying that the burden rises automatically as labour is employed.

6. When we bear in mind that rates vary from 4s. to as much as 20s. in the £ of rental, we realise how this at least is one potent cause of unemployment. Under the present system a vacant site, near a town, however much it may be wanted for the employment of labour, either escapes assessment altogether or is assessed at little more than its agricultural value, but no sooner is labour employed on it in building a factory, tenement, school, farmhouse, or for any other useful purpose, than the combined value of site and building is entered in the valuation roll, and this forms the basis of charge. The rate payable on the building is equivalent to an increase in its cost, and is therefore added to its rent, so that in places where the rates amount to 6s. 8d. in the £, £9 has to be paid for a house which, but for the rates, would rent at £6. The higher rent of houses thus brought about means that the effective demand for them is correspondingly reduced and, therefore, fewer buildings erected. This implies a lessened demand for the services of builders and the trades dependent on them.

7. As showing how this system of rating tends to discourage employment, the following facts may be quoted:—In 1901 Sir Samuel Montague, Bart., M.P., offered to the London County Council as a free gift an estate of about twenty-five acres at Edmonton, to be devoted to the erection of dwellings for the working class. The council's standing orders prohibit the carrying out of building schemes unless there is a reasonable prospect that the rents received will cover all expenses, including interest and sinking fund to liquidate the capital outlay. The policy of the council has always been to avoid throwing any loss upon the rates in connection with their dwellings. After very careful calculations, the council was most reluctantly compelled to decline the gift, because the development of this estate, notwithstanding the exclusion of land value from the question, would have thrown upon the London rates a charge of over £700 per annum. The largest estimated item of outgoing was one of over £2,000 in respect of rates. Had the value of the houses been excluded from the basis of rating and land value alone been taken as the basis, this item would have been reduced more than one-half, and the estimated deficiency would have been converted into a surplus, but under the existing system of rating houses could not be erected on this land, even when got for nothing, on a remunerative basis. Labour, therefore, was forced to go idle and the much-needed houses remained unbuilt.

8. To further illustrate how production and employment are discouraged by the present system of imposing rates in measure as good use is made of land, I take the case of the Penrhyn Quarries which, owing to a dispute, partly stopped operations in 1902. The following are the figures before and during the dispute, and it will be seen from them that the rateable value of the quarry was reduced from £24,800 to £10,514 on the ground that the production had diminished. This was equivalent to an invitation from the rating authority to the proprietor to restrict the production and amount of employment available.

9. Suppose that the assessment committee had held and exercised the power to refuse this reduction, and had instead—looking only to the public value of the quarry and its use as an opportunity for giving employment—insisted on levying a rate on its full value.

10. The pressure of local taxation would then have had precisely the opposite effect to what it now has. That is, its tendency would have been to keep the quarries fully employed instead of shut down as they were.

COUNTY RATE BASIS.—*Penrhyn Quarries*

	Gross.	Rateable Value.
1899— <i>Valuation.</i>		
Slate Quarry, 96,000 tons @ 5/2 - - - -	24,800	24,800
Buildings, Machinery and Plant - - - -	3,229	2,177
	28,029	26,977
Port Penrhyn Railway -	824	661
Port Penrhyn - - -	1,628	1,428
	30,481	29,066
1902— <i>Altered by Quarter Sessions.</i>		
Slate Quarry, 40,700 tons @ 5/2 - - - -	10,514	10,514
Buildings, Machinery and Plant - - - -	3,229	2,177
	13,743	12,691
Port Penrhyn Railway -	824	661
Port Penrhyn - - -	1,628	1,428
	16,195	14,780

11. As further showing how our present system of rating improvements checks the demand for labour, and how the reverse would be the case under a reformed system where improvements were excluded from the basis of taxation, take the case of three plots of land each of equal value:—

No. 1 is being used for the erection of labourers' cottages, and so providing a maximum of employment.

No. 2 is being used as a market garden, and so giving a fair amount of employment, though less than No. 1.

No. 3 is unoccupied, and therefore providing no employment.

12. Our present system of including all structures and improvements in the basis of assessment entails the heavy rating of No. 1, the lesser rating of No. 2, and the complete exemption of No. 3. It therefore penalises the employment of labour by raising the burden of the rates as the owner of each subject is enterprising in making the best use of his opportunity.

13. The reformed system which I advocate is to exclude improvements from the basis of rating and to make land value alone the basis. Notice what this would mean in the case of these three plots. As, by hypothesis, they are of equal value, they would therefore bear an equal burden of rates. The uses to which the subjects were put would not enter into the reckoning.

14. The effect on the labour question of this change in the basis of rating would be that No. 1 would be relieved of much of the burden it now bears, so that the building of cottages and the employment of labour would be stimulated where it is at present impeded. The position of No. 2 might not be much altered, but No. 3, which previously escaped altogether, would now be called upon to contribute to the rates and would therefore be pushed

APPENDIX No. XCII.—*Continued.*

into productive use. That use might be the building of cottages or it might be market gardening, but in any case it would mean the widening of the field for employment and a lessening of the distress caused by unemployment due to the growth of the demand for labour.

15. I therefore suggest that our present system of raising public revenue from improvements is a serious cause of distress, because it tends to check work at its source. By adding to the cost of production it lessens the number of persons who can afford to buy labour products. This leads to a diminished production of these things, and consequently to loss of employment.

16. I also call attention to the adverse effect of our rating system on the development of building sites on the outskirts of growing towns. In these situations the value of the buildings is much greater than the value of the land they occupy, so that by the inclusion of the buildings in the rateable value the development of these outlying districts is retarded. If the land value alone were taken as the basis of assessment, the districts around growing towns would be more quickly developed and a correspondingly greater demand for labour would arise.

17. Another and closely related cause of distress is the system of land tenure now prevailing. Industries may be divided into two categories:—

- (i) Primary or extractive.
- (ii) Secondary or manufacturing.

18. By the primary industries I mean those which depend for their existence on direct access to the earth, such as agriculture, mining, and building. By the secondary industries I mean those which treat the raw material supplied to them by the primary industries and work them up into finished articles; like engine-building, weaving, or baking. The distinctive characteristic of the primary industries is that they must have direct access to the land, so that in measure as obstacles are put in the way of such access these industries are obstructed. But our present system of land tenure does impose obstacles, for not only is it common to demand very burdensome terms for the use of land, but in some cases leave of use is refused on any terms whatever. In and around growing towns the rent commonly asked for the use of land on lease or to feu is not the economic value of the land at the present time, but the value the owner anticipates it will have at some future time after further growth of the district has taken place. Thus many industries which are established to-day are over-rented, and to that extent their operations are hampered. Much as this speculative rent restricts the demand for labour, it is not the worst that happens. It is not so injurious as where the use of land is altogether refused, as in the case of sporting estates or where land is held up for a rise in rapidly growing districts. In all such cases employment of any kind is, of course, absolutely barred and would-be workers being forced into the ranks of the unemployed keep down the wages of those in work. The unnatural kind of competition which arises in consequence of these things is an immediate cause of poverty and distress.

19. I have personal knowledge of a coalfield which has been unworked for years and is still unworked, not because of the absence of capital and labour ready to develop it, or because the coal is not wanted, but because the royalties demanded by the superior are prohibitive under existing conditions. If terms were granted which would give fair prospects of profit to the lessee, employment would be found in this case for an extra 200 hands, but, as a matter of fact, this source of employment being closed down, 200 men must now be competing for work elsewhere, and to that extent depressing the wage level in general. It is through the operation of causes like this that the demand for labour is restricted. I believe that cases like this are by no means uncommon, but it should be noted that to depress the wage level it is not necessary that the number of unemployed be large, because a comparatively few men kept out of work or irregularly employed are sufficient to make their presence felt over the whole labour market. The shutting up of a few natural opportunities is enough for the purpose. The competition of the unemployed men with those who have work is sufficient to affect the wage

level over the whole field of industry and to account for distress and uncertainty of employment among large masses of people. Suppose the wage for common labour in any particular industry is 3s. per day, and that a few unemployed men nearly as efficient as those in work offer their services for 2s., it is clear that the wages of the former must fall to say 2s. 6d. at the highest, or the inferior labourers will be the cheaper workers. I call special attention to one of the provisions usually entered by landlords in mineral leases, and suggest that were the State to make a similar stipulation with ground landlords in general no land for which there is a demand could long remain idle. I refer to the "dead rent" clause in mineral leases, under which the lessee agrees to pay the ground landlord (or superior) a fixed sum whether he is winning coal or not. The landlord's motive in inserting this clause in the lease is, of course, to make certain that the lessee will work the field.

20. Now, if the State were in like manner to make it a condition of ownership that all landlords (or superiors) should pay to the community a "dead rent" commensurate with the value of their natural opportunities, it is certain that the tendency would be to encourage the proper development of all lands and to increase the demand for labour.

21. The general application of this plan to all landlords would be "the taxation of land values."

22. In further illustration of how want of work is bound up with the present system of land tenure, I refer to the crofters in the western parts of Inverness-shire.

23. They complain that their standard of comfort is lower than it should be owing to the smallness of their crofts, and that the reason for this smallness is that much good land, quite suitable for cultivation, is at present under deer forest. This gives rise to what in effect is a land famine, which not only reduces the standard of comfort of the crofters, but accounts for the existence of the "cotter," i.e., the landless class.

24. The landless cotter class being denied the chance of employing themselves have to seek for work from sheep farmers, etc., at a low wage, and as this is not always forthcoming, many of them have to migrate to the industrial centres of Scotland, there to compete for work, keep down wages, and aggravate distress. This is typical of what goes on in greater or less degree throughout the country. The remedy is to bring into full use land now withheld from use or only partially used. The most effective means of accomplishing this would be to remove the present rates and taxes from improvements and concentrate them on the value of the land as divested of such improvements. The result would be the absorption of the unemployed and a rise in the wage level consequent on their withdrawal from the competition with those in work. Wages are governed by the ratio between the number of men seeking employment and the amount of employment available. I have tried to show that our land system, by making work artificially scarce, increases the number of the former in relation to the latter.

25. Turning now to the secondary industries, there also the field of employment is artificially restricted for the same reason. These industries are dependent on the primary industries because they are fed by them. Biscuit-making cannot be carried on without wheat, and engine-building will come to a stop in the absence of coal and iron. In measure as the primary industries are checked through difficulty in securing the use of land, so far is the demand for the products of the secondary industries adversely affected, because the general consuming capacity is lessened.

26. The proximate cause of enforced idleness with one set of men may be the cessation of demand on the part of other men for what they produce. Men in the secondary trades, who do not need to be in direct touch with the land, are often thrown out of work because men in the primary trades are denied access to land. There is thus no effective demand by the latter for the products of the former. In other words, the withholding of land causes unemployment and slackness of trade, not only in such industries as farming, building, or mining, but also in tailoring,

APPENDIX No. XCII.—*Continued.*

watchmaking, printing, and bicycle-making. If out-of-work agriculturists, miners, and builders, who are at present prevented from working on the land, were allowed to do so, they would not only employ themselves, but would employ workers in every other kind of trade as well.

27. Where, in all trades, men willing to work cannot find the opportunity of doing so, it must be because, in the primary trades which create a demand for and supply the raw materials for all other trades, labour is shut out from the land. I quote the following personal experience in a northern manufacturing town.

28. In one of the overcrowded quarters two unemployed builders' labourers were noticed engaged in turning a barrel-organ. The audience were the overcrowded inmates of the overcrowded houses, and the out-of-work labourers happened to stand on a vacant "eligible building site." The scene gave rise to the query as to why the builders' labourers were not engaged in building houses on the "eligible building site" for the people who needed them, and the two-fold answer came that an almost impossible price was asked for leave to use the site and that even in the event of houses being built and occupied they were forthwith subject to rates amounting to 8s. in the £. Not only was there urgent need for the houses, but labour and capital were ready to supply them. The vacant site was also there. Here were all the necessary elements for the solution of the problem, but still it remained unsolved; first, because of a vicious system of land tenure which encourages the withholding of land from use, and, secondly, because of a burdensome system of rating which imposes a penalty on the building of houses. If, instead of imposing taxes on the houses, the vacant site had been taxed on its value as bare land it would quickly give employment to the labourers and tradesmen by coming into use, and at the same time the rents of the houses would be reduced at least to the extent of the abolished taxes, or in this case by fully one-third. The effect would be that the unemployed builders would find work and the overcrowded people would get houses at more reasonable rents. And once more there would be a tendency towards a higher level of wages through the absorption of unemployed men. My desire is to bring into sharp contrast the anomaly of a demand for houses existing alongside a slackness in the building trade, and to suggest the reason for it.

29. In evidence of what can be done even by a partial application of the principle I advocate, I refer to the "Papers Relative to the Working of Taxation of the Unimproved Value of Land in New Zealand, New South Wales, and South Australia," published in a Blue-book, issued by Government (C.D. 3191), November, 1906.

30. Dealing with New South Wales, I extract the following from page 22:—

"The operation of the tax (the tax on land values) has been to a certain extent to reduce the value of house property, and in a stronger sense has affected the value of land held for purely speculative purposes. It has had the effect of forcing large areas of country lands on the market which otherwise might have been allowed to remain inactive, and in this way the producing interests of the country have been benefited."

Page 23:—"The tax has considerably affected land held solely for speculation and has compelled many owners to sell for a lower figure than previously required.

"In the city and suburbs very little land speculation has been in operation. Buyers now, in view of the land tax, mostly secure properties with the definite idea of speedily making a home and not, as heretofore, waiting for a rise in land values."

31. Page 24, New Zealand:—"There can be no doubt whatever that the total exemption of improvements on land from all rates and taxes has led to a very large increase in the outlay on improvements, which comprise materials and labour, and the beneficial effect of this on trade and the demand for labour has been great. It is estimated that the expenditure on buildings since 1893 amounts to £17,000,000, free from all rates and taxes, except in those cases where the local authorities have not yet adopted the rating of unimproved values."

Page 26, New Zealand:—"The effect has certainly been to greatly stimulate the building trade. The object and tendency of this system of taxation is to compel land being put to its full use, so that the greatest amount of income may be derived from it, and rendering it unprofitable to hold land for prospective increment in value. It has been the direct cause of much valuable suburban land being cut up and placed on the market . . . The effect on urban and suburban land has been very marked. It has compelled owners of these to build or sell to those who would; it has thus caused a great impetus in the building trade. An owner of land occupied by buildings of little value, finding that he has to pay the same rates and taxes as an owner having his land occupied by a valuable block of buildings, must see that his interests lay in putting his land to its best use. The rebuilding of this city (Wellington), which for some years past has been rapidly going on, is largely attributed to the taxation and rating on land values, so that the supply of building materials could not at times keep pace with the demand."

APPENDIX No. XCIII.

MEMORANDUM and tabular Statement prepared by the Local Government Board showing extent to which Guardians have resorted to exceptional measures for the Relief of Distress arising from Want of Employment.

1. In order to comply with the request of the Royal Commission, the Board have requested the General Inspectors to report to what extent and with what results Boards of Guardians have since 1886 had recourse to Labour Yards, Workhouse Farms, or other special means of providing relief for able-bodied persons out of employment.

2. Reports which have been summarised in the accompanying table have accordingly been received in respect of most of the Inspectors' districts. Owing to vacancies in the office of Inspector, reports could not be obtained as regards Districts Nos. 2 and 13, comprising the Union Counties of Kent, Sussex, Durham, Northumberland and the North Riding of York, together with parts of Surrey and Cumberland. Moreover, Mr. Bagenal, the Inspector for the East and West Ridings of Yorkshire, has confined his enquiries to 21 of the larger unions in his district, and Mr. Wethered, whose district includes the County of Gloucester and parts of Herefordshire, Somersetshire, Staffordshire, Wilts and Worcestershire has limited his enquiries to ten Unions.

3. Besides the Unions enumerated in the accompanying table work has been provided by the Corporation or District Council or by a specially constituted "Town Committee" for persons sent by the Guardians as being unemployed in seven Unions, namely Bramley, Cheltenham, Kidderminster, King's Lynn, Ringwood, Sculcoates and Winchester; and work at a labour test is, particularly in the northern counties, available in many Unions throughout the year for persons who claim to be unemployed. This practice usually appears only when the Outdoor Relief Regulation Order is in force, but is found where the Prohibitory Order has been supplemented by an Outdoor Labour Test Order. On the view that these permanently open tests are not covered by the term used by the Royal Commission, but are rather a part of the ordinary machinery of relief, they are not, as a rule, mentioned in the accompanying statement. Nineteen Unions in which such a test is always available are mentioned in the report for No. 11 District and six in that for No. 12 District.

Local Government Board,

Whitehall, S.W.

18th February, 1908.

APPENDIX No. XCIII.—Continued.

HANDED in by the Local Government Board.

TABLE showing Extent to which Guardians have Resorted to Exceptional Measures for the Relief of Distress arising from Want of Employment.

Poor Law Union.	Month of Opening Yard.	Duration in Weeks of Yard.	Task.	Scale of Relief.	Numbers.	Cost of Relief.	Observations.
No. 1 DISTRICT.—34 UNIONS, 14 LABOUR YARDS.							
Bermondsey	January 1895	11½	Stonebreaking	3s. 6d. per day	Daily average: 893	£ 10,782	Opening due to the election pledges of the new Board. At one time as many as 85 temporary officers were required. Total cost, £17,000.
Croydon	December 1885	23	—	—	Men. 339	185	Relief all in kind.
	November 1886	22	—	—	Persons. 1,654	1,383*	*? Add cost of dinners, £66.
	November 1887	21	—	—	1,316	1,725	—
	January 1889	15	—	—	991	2,142	Five days work per week were required in lieu of three.
	December 1894	4	—	—	811	—	Net cost.
Fulham	January 1904	9	—	Per week.	Men. 96	—	Also relieved:—
	November 1905	18	—	s. - - - 6s. 3d.	Persons. 509	—	Without task. "Sudden and urgent."
	November 1906	17	Stonebreaking, 8 bushels	m. - - - 6s. 3d.	72	—	Men. Persons.
	1904-5	—	Stonebreaking and wood-chopping.	c. - - - 1s.	—	—	1904-5 27 - 140 - 26 - 141
Hackney	December 1886	19	—	—	Daily Average.	812	In 1902-3-4-5 unemployed were also given painting work at wages by the Guardians, the numbers being:
	October 1887	29	—	—	98	1,803	Men employed.
	January 1889	12	—	—	126	342	Total average.

APPENDIX No. XCIII.—*Continued.*Table showing Extent to which Guardians have Resorted to Exceptional Measures for the Relief of Distress arising from Want of Employment—*continued.*

Poor Law Union.	Month of Opening Yard.	Duration in Weeks of Yard.	Task.	Scale of Relief.	Numbers.	Cost of Relief.	Observations.
West Ham— <i>cont.</i>	January 1904	4	Trades and yard	Daily. m. 1 c. - 1s. 8d. m. 2 c. - 1s. 10d. m. 3 c. - 2s. 2d. m. 4 c. - 2s. 6d. m. 5 c. - 2s. 10d. s. - 3s. 0d. s. - 1s. 2d. Good Character. s. - 1s. 2d. m. - 1s. 10d. c. - 4d. Bad Character. s. - 4d. m. - 1s. 4d. c. - 3d. Later in all cases. m. - 1s. 6d. c. - 3d.	Daily Average. 249 - 171 - 89 - 67 - 82 - 184 - 335 - 345 - Daily Maximum. 415 - 261 - 137 - 154 - 155 - 304 - 511 - 592 -	—	Usually (except in 1887-8, when 6 days) open for 3 days per week.
	January 1905	12	Farm work at Forest House.		894 - 1,199 -	— £3,856	3 days a week, later 2 days. At Forest House the men were very disorderly.
	December 1905	20	Trades, etc., and farm and road work at Forest House	—	968 - 1,095	£3,582	Open only 2 days per week.
Woolwich	? 1889 ? 1894-5 ? 1902 ? 1904-5 ? 1905-6 ? 1906-7	— — — 21 19	— { Stonebreaking, Later, for all but refractory men, planting, levelling, etc. }	— — — — — —	A few sporadic cases - — — 101 71	— — — — — —	A reference by an R.O. suggests that a labour test was regularly available in the winter. Of 37 offered the workhouse, only 6 accepted. The R.O.'s regard the increase as due to agitation rather than distress, but consider the distress of 1905-6 less than that of 1906-7.

No. 2 DISTRICT.—48 UNIONS.

No Report.

No. 3 DISTRICT.—50 UNIONS, 2 LABOUR YARDS.

				Per day.			Total.		
				s.	m.	c.			
King's Norton	February 1894	65	Stonebreaking (12 cwts.) ; Excavating (6 hours).	-	-	-	109	-	12 of these were relieved in the later year, and 6 later still, by the Distress Committee.
	December 1903	26	Stonebreaking (8 cwts.) - Increased on 30th May, 1904, to 12 cwts. for men over 1 week at the yard and 14 cwts. for men over 6 weeks. Further, on 1st January, 1905, to 15 cwts. for men over 3 weeks at the yard.	-	-	-	288	-	53 have since been assisted by the Distress Committee, but for whose help the yard might have had to be re-opened, notwithstanding the great improvement in trade.
Kingston	December 1904	12	Wood-sawing, 20 bushels, or work on land.	Per day.			325	-	Many were employed by the Wimbledon and Kingston Councils, who would otherwise have come to the Guardians. It appears that the insufficiency of the inquiries made by the inadequate staff of Relieving Officers led to an influx of persons attracted by the relief and its accompanying light employment. The yard is open again this year. The Board have declined to establish a Distress Committee for Kingston Borough.
	December 1905	14	The yard was opened at 8 a.m. to allow of walking the 3 miles to Norbiton, but a philanthropic person provided railway tickets from Wimbledon whence most applicants were expected.	m.	-	1s. 4d.	246	-	
	January 1907	8		m. and 2 c.	-	1s. 9d.	303	-

No. 10 DISTRICT.—44 UNIONS, 1 LABOUR YARD.						
Leicester	The yards have been open for the last 3½ years.		Spade cultivation or bund- ling, chopping or sawing firewood. Task by time.	Per day. m. - - - 1s. 6d. each c. up to 5 2d.	Daily average during year ended March 31st, 1907. At Labour Yard, 86. At Gihoes Farm, 48. At North Evington Farm, 99.	Opening due to slackness in building trade and the introduction of machinery in the boot trade. Many men have been almost continuously in the yards ever since the test was begun. The certainty of obtaining relief at need in this way operates to prevent men from migrating. At least one market gardener is now reported to dismiss men to the Guardians farm till he should again require them. Men are allowed to work 3, 4, 5 or 6 days a week according to their supposed needs, and when not working only idle.

No. 11 DISTRICT.—39 UNIONS, 10 LABOUR YARDS.							
Barrow-in-Furness.	November 1887	16	Stonebreaking, a fixed task	Per week. m. . . . 4s. c. . . . 1s.	Total. 88	£ —	Under regulations approved by the Local Government Board. The yard appears to have been well managed and justified its temporary existence. It was closed when trade improved and the men refused to accept outside work. Distress due to slackness in ship yards and closure of Corporation relief works.
Chorlton	January 1887	10	Stonebreaking and wood-cutting.	Per day.	Total.		Opened as a result of popular agitation. No definite task. The continuance of the yard was probably a misfortune.
	March 1895	4	Stonebreaking	1s. 6d. — kind	239		
	November 1904	28	Farm work, excavating and a little stonebreaking.	Per week. m. . . . 6s. and dinner c. . . . 1s.	Average, March, 1905. 102 to 45. Total. 493 men 2,312 persons	1,286	
Cockermouth	August, 1891	42	Stonebreaking on seashore	—	Maximum at one time : 400	—	Distress due to closing of ironworks. Closed owing to mitigation of distress and unsatisfactory management. There was no proper supervision and no enclosed yard.
Kendal	November 1885	24	Work by time in stone quarries.	Per day. m. . . . 10d. c. . . . 2d.	—	—	The work prior to 1893 appears to have been rather in the nature of normal test work. The subsequent history of persons relieved in 1894-5 gives no evidence of their pauperisation. This relief appears now to be dealt with by private bodies (C.O.S., &c.). Very few men have since become chargeable. No fixed task in either year. The arrangements were lax and the supervision bad, and there was a deficit of £783 apart from the cost of out-relief. The failure of this yard led to the separation of the three Unions.

APPENDIX No. XCIV.

LETTER TO LOCAL GOVERNMENT BOARD AND THEIR REPLY THERETO AS TO THE MEANS WHICH HAVE BEEN ADOPTED APART FROM THE POOR LAW FOR RELIEVING DISTRESS DUE TO UNEMPLOYMENT.

Scotland House,
Victoria Embankment,
Westminster, S.W.

May 8th, 1907.

Sir,—In connection with their enquiry into the means which have been adopted apart from the Poor Law for relieving distress due to unemployment, my Commission are anxious to obtain as much information as possible on the subject of work provided for the unemployed by local authorities, prior to the Unemployed Workmen Act, 1905. I am accordingly to enquire whether the Local Government Board will furnish the Commission with the undermentioned information in connection with this subject:—

(1) A Memorandum setting forth the grounds for the policy embodied in the various circulars which were issued by Mr. Chamberlain and other presidents of the Local Government Board, with a view to urging local authorities to provide work for the unemployed in times of special distress.

(2) A Memorandum embodying any available information as to the extent to which work was provided for the unemployed by municipalities in the period between 1885 and 1905.—I am, Sir,

Your obedient servant,

R. G. DUFF.
Secretary.

The Secretary,
Local Government Board, Whitehall, S.W.

Local Government Board,
Whitehall, S.W.
September 19th, 1907.

Sir,—I am directed by the Local Government Board to advert to the letter which you addressed to them asking for certain information on the subject of the provision of work for the unemployed by local authorities prior to the passing of the Unemployed Workmen Act, 1905.

The grounds for the policy embodied in the various circulars issued by the Board to which the paragraph marked 1 in your letter relates, with the view of urging local authorities to provide work for the unemployed in times of special distress, may be gathered generally from the terms of those circulars.

It will be observed that the circulars relate to distress of an exceptional character, and that it was to meet temporary emergencies that the local authorities were urged to expedite the execution of public works for the purpose, mainly, of enabling persons who did not ordinarily seek poor relief to tide over a season of exceptional distress without incurring such disqualification as attaches to pauperism. The men to be employed were those whom, owing to their previous condition and circumstances, it was undesirable to relieve by an order for admission to the workhouse or to treat as subjects for outdoor pauper relief.

It was anticipated that the machinery of the Poor Law assisted by help from local charitable funds and the thrift of the men would meet the necessities of ordinary times.

The Board would refer the Commission to the Memorandum by Sir Hugh Owen, which is printed at the beginning of the Return entitled "Pauperism and Distress," printed by order of the House of Commons in March, 1886, and numbered 69, and to his evidence, which is reported with the First Report of the Select Committee on Distress from Want of Employment, issued in 1895.

As regards the particulars referred to in the concluding paragraph of your letter I am to state that the only available information would appear to be that contained in the Report of the Board of Trade as to the unemployed (C—7,182), issued in 1893 (vide pp. 188-208) and the Parliamentary Return of 1905 (H.C. Paper 193) as to London.—I am, Sir,

Your obedient servant,

H. C. MONRO,
Assistant Secretary.

The Secretary to the
Royal Commission on the Poor Laws.

APPENDIX No. XCV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY ARTHUR PRIESTMAN, J.P., CHAIRMAN OF THE BRADFORD CORPORATION HEALTH COMMITTEE.

Extent.

1. At the present time the trade of Bradford is in a more vigorous condition than it has been for many years. The income-tax returns will probably reveal a very prosperous state of things. Although the employers are receiving large additions to their incomes, the wages of the workers in Bradford have received very little increase.

2. The people now unemployed are those least efficient from an industrial point of view, including the old and infirm. The development of machinery in Bradford has resulted in a greater production of wealth, without corresponding employment of a greater number of people. The hours of labour have not been reduced to absorb a greater number of workers.

3. The returns of the Education Office show a greater number of half-timers employed. In 1900 there were 2,200 employed in Bradford; in 1906 the number rose to 5,000. The demand for women weavers, and the

employment of married women in our mills, who enter into competition with their fathers and brothers, ought to be checked in the interests of humanity. The high infantile death-rate is undoubtedly due, in part, to the employment of mothers in our mills.

4. Our lady health inspectors are continually reporting overcrowding, due to low wages or irregular work. The greatest and most urgent need is work for the unemployed. We could then deal more efficiently and thoroughly with those who are lazy and thriftless, but at present we cannot discriminate. Greater efficiency is more and more demanded of the workers by employers, to the more rigorous exclusion from employment of the least efficient.

5. Casual employment is also a source of great hardship. The night woolcombers, particularly in slack times, going to the woolcombing establishments in the hopes of getting a job. Outdoor labourers also suffer from this lack of regular employment. To obtain a

APPENDIX No. XCV.—*Continued.*

man occasionally for a day or a week's work may be a boon to the employer, but it is very hard on the casual labourer's wife and family. Casual labour tends to keep the wages low of those regularly employed.

6. In the winter of 1893-4 I took part on a voluntary committee to find out, by means of a census of the unemployed, the extent of unemployment. Though there may have been many mistakes, owing to the committee not being adequately provided with funds, and not employing trained investigators, the census revealed 27 per cent. of the population of Bradford at that time wholly or partially unemployed, exclusive of the floating population residing in lodging-houses and workhouse. The 27 per cent. included the families dependent upon the work of these people. I do not remember a time when want of employment caused more suffering in Bradford than in the winter of 1893-4. Since then we have had periodic changes, always most acute in winter, when the outdoor labourers have been unable to work. Changes of foreign tariffs, fashion in dress goods, and in men's wear, have all tended to aggravate the unemployed evil.

7. The fluctuations of trade are very disastrous to the condition of our workers.

8. When prices are rising, the woolcombing industry absorbs a large number of unskilled workers of both sexes, but when prices of wool fall, then short time and unemployment are everywhere in evidence, because the employing class cease to buy the raw material, in order that they may purchase at the lowest possible point. The speculative nature of our trade causes intense suffering to the least skilled workers.

Remedies.

9. I do not think the special work provided by the municipality before the 1905 Act has been effective. It has helped a part of the unemployed in the winter, but has been more of the nature of a palliative and has not gone to the root of the evil.

10. The *Labour Register*, whilst causing hopes which have not been gratified (for we could not find work for more than a very small proportion of the applicants), has generally been regarded as a failure.

11. Is it not worth while considering whether special taxation should not be imposed on the income-tax-paying class, with the object of providing useful work for the unemployed, the income-tax payer furnishing the funds to repay the community, the added cost which unskilled labour would entail, over the cost of the work if done at the ordinary contractor's price?

12. I believe that the existence of the unemployed is due to the lack of proper organisation in our industrial system. So long as our industrial system is controlled by men whose only object is to make profit for themselves, we always shall be subjected to these periodical dislocations of industry. I have no hope of getting at the root of the evil, except by the organisation of industry in the hands of the State and municipality in the interests of all the people, and not in the interests of those who seek private profit for themselves, regardless of the injury to the weakest and least efficient of the workers.

PART V.—SCOTTISH UNEMPLOYMENT.

APPENDIX No. XCVI.

STATEMENT OF EVIDENCE AS TO DISTRESS DUE TO UNEMPLOYMENT, BY MR. A. BLACK, SUPERINTENDENT OF THE ASSOCIATION FOR THE IMPROVEMENT OF THE CONDITION OF THE POOR IN LEITH.

EXTENT.

1. *Number.*—The number of applicants for relief has averaged 731 per annum during the thirty-five years of this association's existence, and the number has gradually diminished. In the last ten years it is only 700. Even in a bad year the cases of distress due to unemployment alone may probably not exceed 300 at one time so far as these are known to the association. The population is about 81,000.

2. *Classes.*—Mechanics, skilled workmen and labourers in building and allied trades, mill and garden workers. Locally, however, the casual and intermittent labour at the docks provides far the largest number of cases, and constitutes the main economic problem.

3. *Character:*—

- (a) Industrious, fair workmen.
- (b) Intermediate class, with decent homes.
- (c) Loafers and idlers, given to drink, etc.

4. *Duration of Distress.*—There is little permanent unemployment, but there is always a percentage of men who are not readily employed owing to unfitness, bad character, age, etc. Painters, garden hands and others are subject to periodic unemployment.

CAUSES.

5. *Personal.*—Defects of character (laziness, improvidence, intemperance, etc.). Mental and physical defects.

6. *Economic.*—Land laws, concentration of industries, trade competition, labour-saving appliances (primary effect).

EFFECTS.

7. Abandonment of efforts at self-support, neglect of foresight and thrift, insufficient food and clothing. The farmed-out house. There are many cases of those who have been helped through such a time and have become the ready helpers of others.

REMEDIES.

8. *Special Work provided by Municipalities.*—In periods of exceptional distress this association has frequently requested the town council to provide work, and when possible they have readily complied. These efforts have alleviated the distress, but obviously work of a useful kind cannot always be provided when it is most needed. This association has also provided permanent or temporary work for an average number of 137 persons annually during the last thirty-four years.

The work has been secured by keeping in touch with employers of labour, and chiefly through the superintendent of the docks. Of the men who received orders for work about 35 per cent. did not use them, or left in a day or two. Otherwise the results were fairly satisfactory, and of great value as a test.

9. *Unemployed Workmen Act, 1905.*—This has not been of much practical value in Leith, and matters were probably as effectively managed when they were in the hands of the town council. In the first five months there were 911 applicants enrolled by the Distress Committee and in the following twelve months only 208. Of these 1,119 men, 282 were given temporary employment by the Town Council, and 70 got work directly through the Distress Committee. Forty persons, including wives and children, were sent to Canada.

10. Unemployment is, of course, the result of a discrepancy between the demand for and the supply of labour, and it is difficult to conceive of any scheme that could bring the demand and supply into permanent correspondence. Such a scheme would have to take account of, if not to control, variations in the population. But the problem, in its practical aspect, is one of the fitness of the individual—that is, a very large proportion of unemployment is really due to the unfitness of individuals for any employment.

11. To meet this there might be systematic instruction in the proper rearing of children, and much physical weakness and incapacity might thus be prevented. Friendly societies and savings banks might be organised in connection with schools, so that a habit of thrift and forethought might be formed. Parents ought to be encouraged to apprentice their children to skilled trades and train their daughters for domestic service, where the demand is greater than the supply. The practice of temperance, cleanliness, and thrift is of the first importance. It is the unfortunate tendency of much recent and prospective legislation to relieve parents and others of the necessity for thrift or provision for the future, and to encourage them to rely, not on their own efforts, but on some outside agency to provide their necessities.

12. Further police powers are urgently required to deal effectively with persons who are wilfully and habitually idle and drunken, and fail to maintain those for whom they are responsible. Money expended by any public board in feeding neglected children should be recoverable from the parents' employers direct, as a deduction from wages.

APPENDIX No. XCVII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. WILLIAM J. CHRYSAL, CHEMICAL MANUFACTURER, RUTHERGLEN, NEAR GLASGOW.

17th June, 1907.

1. The chief reason why I am unable to give you details seem to me to be the total absence of distress due to unemployment so called during the last three or four years in the district in which my works are situated. There has been practically no unemployment to those people who really wanted work, and therefore there has been no distress from that cause. There are, of course,

some people out of employment, but as far as my experience goes, at the present time this is due entirely to intemperance and those who never will work if they can get any other means of livelihood.

2. These being my views, you will understand it is difficult for me to fill up the various questions which you have put to me under the headings named.

**STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY T. S. CREE, LL.D., AUTHOR OF
 "A CRITICISM OF THE THEORY OF TRADES UNIONS," "EVILS OF COLLECTIVE
 BARGAINING," "BUSINESS MEN AND MODERN ECONOMICS."**

1. I have no statistics to give as to the extent of distress, nor as to the operation of tried remedies. My position is that of a business man, with such an acquaintance with the subject as that implies, along with a reasonable knowledge of its economics. I have had a long and very varied experience of business, both manufacturing and distributive, successful and unsuccessful, of such a nature as to cause me to think on the principles involved. I have been for many years a frequent contributor of letters to the daily and weekly Press on economic subjects. The above-named pamphlets have attracted considerable attention both from economists and men of business. They have been translated and published quite independently of me, by leading economic journals in Germany and France. I have no specific remedy for the evil of want of employment, but shall confine myself to trying to state what in my opinion are some of its causes, in the hope that, so far as these are due to economic errors, I may be able to help to avoid them in the future. I understand that I am asked for a short and simple statement of my views, and I shall try to confine myself to that.

2. I am of opinion that there must always be a certain amount of unemployment. Every improvement in method of manufacture, every labour-saving machine causes a temporary unemployment. Some men are thrown out of work. But the greater production leads to a fall in the price of the article and a greater demand for it. And so the men are gradually employed again, and generally in greater numbers than before. And in any case, as the consumers spend less on this article, they have more to spend on other things. And so there is soon an increased demand both for commodities and labour, and greater employment all over. A temporary slackness of demand in certain markets from changes of fashion or other causes, will also locally decrease employment. And too rapid an investment in fixed capital, buildings and machinery has often the same effect for a time. These are occasional causes of want of employment which we cannot hope altogether to escape. They are normal, though variable in amount.

3. It is doubtful if there is much more than a normal want of employment at the present time, but if there is, there are several causes for it. The San Francisco earthquake, for instance, has caused our insurance companies to send away great sums to rebuild the city, which money is withheld from industrial enterprise here. But a much greater cause is the cost of the South African War. Nations, like individuals, cannot spend beyond their income without suffering for it. The worst period of want of employment in our modern history was after Waterloo, when we were suffering from the burdens of the Napoleonic wars. We are still paying heavy taxes on account of the Boer War. And the Russian and Japanese War has hurt our customers and diminishes our employment by them, or, to put it in another way, the capital required to repair the damage done in Manchuria has been withdrawn from other places and is not available for employment in these other places. And then there is our growing extravagant municipal expenditure and increased debt. The Yarrow Company has to leave Poplar on account of the high rates, and employment is lessened everywhere by the same cause. The amount we have to pay in rates and taxes, so far as these are unproductive, reduces our power of giving employment.

4. In cases of unavoidable monopoly, such as our Glasgow tramway system, a public monopoly may be a less evil than a private one. But wherever municipal enterprise comes into competition with private firms, its faults are apparent. It is comparatively wasteful, inefficient and corrupt. West Ham is an extreme case, but it is quite a typical one of what goes on, and is increasing, and, I fear, is likely to increase.

5. But now we come to a more serious and permanent and preventible cause of want of employment—the influence of trades unions. To have employment you must have employers—and the more the better. Even

what is called a "bad employer" is an advantage. Whatever his faults, he increases employment. But the trades unions and their friends would drive him out of the trade, and so employment would be reduced by his demand at least. It is said he is inefficient, and would be better away. But if he is very inefficient, his inefficiency will cause him to fail. If he can exist, that proves that he has some efficiency. The economic law will punish him far more certainly and justly than any human power can. There is every degree of efficiency in employers as well as in workers. The highly efficient employer will get the most efficient workers, and can afford to pay them well. The less efficient will get the inferior workers, and probably employ them in making a lower class of goods, for which there is a demand, at a lower price. And all are entitled to live as best they can. There is an old Scotch proverb, "It taks a' kinds o' folk to mak a world." And that is true of an economic world. The uniformity that is demanded in hours, in wages, in quality or quantity of output, in efficiency, is not possible or desirable. It does not exist anywhere in Nature. It would stifle larger and finer growths without advantage.

6. But the antagonism of the unions is not confined to those "bad" employers. It is extended to employers as a class. It has been said, "We cannot yet do without the capitalist, but we can make him bearable." That is like the Irish cure for absenteeism, shooting landlords. But it is more unreasonable, for the land is still there, while if you ruin or hurt a capitalist you lose the benefit of his capital and keep others away. The harassment of employers by troublesome and often quite useless legislation and oppressive and mischievous trades union interference drives and keeps away many employers and makes those who remain masters of the situation. The fear of socialistic legislation is preventing investment of fixed capital, and so greatly reduces employment.

7. But in addition to this indirect effect, the unions directly diminish employment in several ways. The restriction of the number of apprentices in many trades prevents many young men from learning any trade, and allows them to grow up unemployed and unemployable. We force an academic education on all at the public expense, but youths must not be taught these trades except in small numbers, with the consent of union officials. There are thousands of youths in London, and Glasgow, and all large cities, who might be respectable tradesmen at home or all over the world but for this trades union rule, and are now growing up fit only to run errands, hawk newspapers and occasionally snatch purses, or walk in "unemployed" processions. And we talk of the need of technical education. The unions say they only "regulate" the supply of labour. Did they ever do anything to increase it? The restriction of learners is unjust and unwise, and it is a great cause of unemployment.

8. The demarcation of trades throws men out of employment. It is impossible to arrange work so that the activity of different departments shall coincide. To give steady employment to all, surplus men in the slack or decaying trades should be free to go to the busy trades. But trades union rules do not allow this, and so the surplus men are left unemployed till, if ever, activity in their own trade returns. That this demarcation of trades should be considered necessary for the efficiency of trades unions, ought alone to be sufficient to condemn their principles. It is a return to barbarism. Hindoo caste is gradually weakening; the old trade guilds, after ruining the cities which clung longest to them, have passed away, and here we have the old bad principle that a man is not to be allowed to do work which he is able and willing to perform, re-affirmed and enforced. This is a great and growing evil in the shipbuilding trade. Two or more trades, as for instance engineers, plumbers and coppersmiths, frequently claim the same piece of work as being within their own exclusive right, with the result of continual quarrels, strikes, and great loss of time and money. This also tends to unemployment.

APPENDIX No. XCVIII.—*Continued.*

9. But all these are minor causes compared to the "minimum wage" rule, or, as some call it, the common rule. That is a very great cause of unemployment. The minimum wage is generally fixed not much below the maximum wage, and all who cannot give value for it are thrown idle. And the principle is thoroughly bad. Every economist and every business man knows that with a certain amount of a commodity to sell you may get rid of so much, say, at 35s., so much more at 33s., and perhaps the whole at 31s. If you insist on 35s. as a minimum you will have some left unsold, and, if the article is perishable, altogether lost. It is exactly the same with labour. The wage should be that at which all can be employed, and each at his proportionate value. The minimum wage rule in bad times leaves many unemployed. All old and weak men are thrown out except in booming times, and their work is lost to the community. The total production to divide is lessened, and total employment still further reduced. The minimum wage in the coal trade lies like an incubus not on that trade alone but on every trade where coal is used. The colliers even get no benefit, as it is a minimum daily wage, and they lose one or two days' wages per week. That is their unemployment. But other trades have to bear the cost of the high price of coal which this involves, and the burden of their own minimum wage as well. So the cost of their commodities is increased or kept up, their sale decreased and many of the workers thrown out of employment.

10. But many of our economists and best social reformers defend "the minimum wage" on the ground that it ensures a high standard of efficiency among the workers. It is said, "Other things being equal, the better fed man will be the better workman." Now, as I have argued above, that might be so, and yet be unfair, as limiting the number who can be employed at that higher wage. But in this case of the minimum wage, other things are not equal. The fact that the wage is fixed is the element of inequality which makes the axiom inapplicable to the circumstances. The workman may have strength to work better, but he will not be willing to do so if he has a guaranteed minimum wage to rely on. Consider for a moment. If a man is working for himself on a piece of land of his own, and can by a certain amount of labour and skill reach the best result that the land is capable of giving, will he give more labour and skill to it if he is to get nothing more from it? I think not. How, then, can you expect a hired man to do his very best, to work harder, and try to improve himself, if he is to get no advantage? He gets his minimum wage in any case.

11. It may be said, "The minimum wage is not the maximum, and that remains as a stimulus." But as the employer has to employ some men who are not worth the minimum, he has, in order to make an average which will pay him, to give his best men less than their full value. And besides, "horsing," which means working harder than the average, is denounced and often punished by the unions. And Mr. Webb says, "It is a necessary element of the collective bargain that one man shall not underbid another by taking a less wage, or doing more work for the same wage." And so there is now little or no difference between the minimum and maximum wage. All are on nearly the same level, instead of being estimated and paid individually their value, as bargained for between themselves and their customer, the employer, or his foreman, according to their skill and industry. Competition is weakened or abolished. The present high standard of efficiency has been reached by the keen stress of competition over many generations. Without competition efficiency must decline indefinitely. And indeed it has already done so.

12. Many employers have told me that the standard of work is much lower than when they were young. Apprentices formerly got only what the employer thought them worth when their time was up, and got advances gradually. So they learned their trade, and went on improving themselves for long afterwards. But now apprentices play themselves, because they know that when their time is up they must get the full minimum wage if they are employed at all, and they have no inducement to improve afterwards. And so, both directly and indirectly, by lowering the standard both of quantity and quality, the minimum wage rule is a great cause of un-

employment. This rule and the Workmen's Compensation Acts are the chief reasons for the demand for old age pensions. These things press heavily upon employers and they cannot afford to employ men who from age or other causes are not in possession of all their faculties and are therefore not able to give full output to machinery and are specially liable to cause and to suffer from accidents. We hear great complaints that men over forty can hardly get into a new employment. The trades unions having driven these men out of employment, now find them a burden on their funds, and want to put the support of the older men on the taxpayer.

13. If trades unions are successful, as they claim to be, in raising general wages above the normal rate, the rate which would be fixed by the unaided operation of the law of supply and demand, to the extent of that rise they cause unemployment. But they do not raise general wages. If they sometimes manage to raise the wages in their own restricted trades a little it is by means which deserve no sympathy. It is by forcing men and women out of the organised and better paid trades, to scramble for the employment that is left for them outside. This increases the competition among unskilled workers, and lowers their wages unfairly. This is a cause of what is called sweating, for which employers are unjustly blamed, though they are quite powerless to prevent it. They cannot pay more than the market rate, and avoid failure. Sweating is largely the fault of the trades unions.

14. Now, I have no fault to find with trades unionists as men. They do their best according to their lights. But they base their practice on false theories of economics. They think abundance and cheapness an evil, and scarcity they think to be a good thing. They cannot see beyond the first effect of an increased production, a local and temporary unemployment, and they conclude that the cure for unemployment is to produce less. All their policy is in that direction. Besides the incidental effect of some of their principles, there are many trades union rules in restraint of production. I never heard of one intended to increase it. This, of course, is all wrong. Increased production and abundance is the parent of increased employment. Capital for employment comes from the savings of surplus production. Check that production and you reduce employment. Produce! produce! produce! is the first and last word in industrial economics. The law of supply and demand, working in a multitude of individual transactions, will give to each member of the community the nearest possible approach to his just share. (See Professor Smart, who cannot be called an unsympathetic economist, on "The Distribution of Income.") A much nearer approach to exactitude in a true economic division would take place, and unemployment would be much reduced if labour were more mobile. But the chief obstacles to this mobility are the trades union rules.

15. I think it is a truism to say that the amount of employment depends on the amount available for paying, and actually employed in paying, wages. Nothing that can be said against the wages fund theory (which controversy Professor Marshall says is mainly a dispute about words) can alter the fact that that amount in any particular part of the world depends on the inducements offered to the capitalist in that place as compared with what it is evident he can get by investing elsewhere. But if that be so (and the slightest acquaintance with the habits and motives of investors shows the principle in operation), then what we may still call the wages fund is, at any particular time and place, not unlimited, and any section of the working classes that gets more than a competitive wage does so at the expense of another section which is either sweated or unemployed. What is called sweating is caused by trades unions excluding people from the skilled trades, and reducing the wages fund from which they would be better paid. As long as the banker and private investor, who are behind the *entrepreneur*, can direct their unemployed capital to any part of the globe by merely signing a cheque, so long I believe that a scientific squeeze on the capitalist, so nicely adjusted that he can be compelled to submit to a diminution of interest and profit and still keep his capital here in undiminished quantity, is quite chimerical.

16. The cure for want of employment does not lie in appeals to the Government for work or help. Ever charity should be most carefully given. The cure lies in peace and retrenchment, and in giving free play to

APPENDIX No. XCVIII.—*Continued.*

economic laws, which are as inevitable as the laws of gravitation, as inexorable when resisted, as beneficent when submitted to. Our workers should give up their unions, work full time at the reduced market rate of wages, the rate at which all the available labour would be taken up. This would increase general production, reduce prices and bring out more demand, to be followed again by good times, full employment and high wages. Hard work and saving are the only cure for bad times, either for individuals or communities. Edmund Burke warned his contemporaries that Government interference in such matters would be mischievous and dangerous, as it would teach people to depend on Government and not on themselves, and in the inevitable disappointment that would follow, to turn to riot, anarchy and revolution. That was one of the causes of the fall of the French Monarchy of his day, and again, fifty years later, of the second French Republic, when it established municipal workshops. It is as true now as it was a hundred years ago, and if we follow the same course we shall reach the same catastrophe.

17. The conclusion of the whole matter is this, that the way to increase employment is to attract employers. The trades union policy is calculated to drive away employers. The union is quite unnecessary, as the true wage is much more exactly arrived at without it. The true policy of the workers would be to welcome employers, who are just their customers, into the shop, and treat them so well that they will come again in greater numbers. Once in the shop (that is, tied to works which they must keep going) their competition for workers would force them to pay higher wages than will ever be got by combination and collective bargaining, while it would restore friendly relations instead of the hateful ones now so common between the parties.

18. But now, if I were asked if there is no means of bringing peace into the industrial world, instead of that war, which I have argued is so great a cause of unemployment, I say yes, there is a way, but it is at present so far removed from practical politics that I have not mentioned it till now. But yet it is perfectly simple, just, practicable and efficacious. It is a return to individual bargaining. There is a letter of Cobden's in which he deprecates unions, either of men or masters. But he says, "If the masters are obliged to combine, I hope they will do so for self-defence only." I take that as my keynote, and I say that there should be, in every trade where there is a trade union, a strong association of masters with a large central fund. Their power should be used for defence only; not to reduce wages or to lengthen hours, not to strengthen them in dealing with the men, for that would be collective bargaining, which I think so mischievous.

Their business should be to ensure the freedom of the labour market, the greatest possible mobility of labour, and to give the law of supply and demand free play. And their method should be to fight every strike, large or small, without the slightest regard to the merits of the dispute. They should say to the men, "You may be right, the conditions may not be good enough. If they are not, some of the men will gradually drift away to other jobs, and the conditions will be improved to replace them. The employer is tied to his mill, and must get workers to keep it going. To get them he must pay the market wage. The strike is, therefore, unnecessary and therefore wrong. Go back to your work. We shall fight this principle out to the very end." If that were done there would be a few big fights, but the masters would win. They are not stronger in peaceful individual bargaining than the men, but they are stronger in fighting a strike. Very soon the men would get tired of the game and would work on quietly. The unions, both of masters and men, would decay. To be an employer would once more be an honoured, as well as a profitable, position. There would be more employers and more employment, and from their competition higher wages.

19. I have said nothing about drink, because it is a constant factor as a cause of unemployment. But I believe that it is a gradually diminishing cause. And I should not be inclined to try to hurry the improvement very much by coercive methods. I should trust more to the higher powers of the human mind, to the increased "strength of the people." Individual freedom is a necessary condition of any moral improvement. Here again trades unionism is mischievous. We are told of the improved moral status which trades unions give to their members. It is a delusion. A very large proportion of the members are forced into the unions, and kept there by the fear of violence and boycotting, and unwillingness to lose the money they have contributed to the benefit funds. They are absolute slaves to a more cruel and degrading tyranny than that of any employers. The right to cast a vote once a year for the election of union officials, and occasionally on a strike is, for moral and intellectual training, a poor substitute to the individual for the continuous personal management of his own affairs.

20. My main contention, then, is that a large part of what is called sweating and unemployment is caused by trades unions under the influence of an economic error, namely, that increased employment comes from scarcity. The very reverse is the case. Increased employment comes immediately from increased competition among employers for workers, and that again comes from increased capital and increased production.

APPENDIX No. XCIX.

STATEMENT OF EVIDENCE BY MR. GEORGE B. ESSLEMONT, M.P., J.P., TOWN COUNCILLOR, ABERDEEN.

1. Previous to my election as Member of Parliament for Aberdeen (South) I was for many years connected with local boards. I am a Justice of the Peace for the city of Aberdeen. Have been member of the Town Council, Senior Magistrate, 1905-6. Served on Harbour Board, School Board, Distress Committee. Trustee and manager of savings bank, and have acted on committees of management of various charitable and benevolent institutions.

UNEMPLOYMENT.

2. *Extent.*—I submit (*Appendix No. XCIX. (A)*), table showing number and classes of registered unemployed persons in Aberdeen from June 1st, 1906, to March 31st, 1907. It will be noted that about three-fourths consist of unskilled labourers. The total, 1,250, does not represent the full extent of unemployment during the period, as very few

of the better class artisans with trade union connections registered at the labour bureaux. In the majority of the registered cases I am of opinion that unemployment is chronic, but a considerable proportion would be in fairly regular work except during the winter months, when out-of-door employment of all kinds is very uncertain.

3. *Causes.*—In Aberdeen the chief cause of unemployment during the past two years has been the collapse of the building trades. In other departments the trade of the city is, and has been, in a satisfactory condition. I see no immediate prospect of revival in these depressed trades, as the number of unoccupied houses shows that the supply has largely outrun the demand. In addition, several large public works and buildings are now completed, and nothing of a similar character is likely to be undertaken for some considerable time. In the majority

APPENDIX No. XCIX.—Continued.

of cases of chronic unemployment the cause is traceable to general inefficiency, physical defect and irregular habits.

4. *Effects*.—The effect of unemployment on the respectable and efficient labourer and artisan is very bad. It forces the individual into debt or to accept charity, and generally undermines his self-respect.

5. *Remedies.*—With reference to remedies, I produce statement regarding relief work afforded by the town council and Harbour Board in recent years. The results from an economic point of view were in several cases disappointing. This was caused to some extent by men “going easy,” but was chiefly due to the fact that the men were not picked, and as a consequence quite a large number had never before engaged in the class of work to which they were allocated, while some were unfit for any sustained manual labour. The new road at Girdleness cost £5,264. Had the work been done in the usual way by contract or by the corporation workmen, the burgh surveyor estimated that the work could have been completed for £3,500.

6. In the case of the Harbour Board, an effort was made to select the most suitable men. The works in the aggregate cost £2,258, and the harbour engineer is of opinion that a sum of £890 would have been saved if they had been executed in the ordinary way.

7. In addition to the works undertaken, the town council during the past three years voted sums amounting to £300 for relief of distress. The chief constable, with the assistance of his staff, distributed the provisions. This method was found to work very well, many pressing and most deserving cases being relieved.

8. The total amount voted for relief work by the town council and Harbour Board during the past three years has been £11,042. (*See Appendix No. XCIX. (B).*) In addition, the distress committee has requisitioned the town council for the sum of £1,450 in payment of administration and emigration expenses.

9. Had it not been for the sympathy and co-operation of local boards and the grants from the "Queen's Fund," the work of the burgh distress committee would have been much circumscribed. Various appeals to the public were made, but the response was disappointing. The consequence has been that the cost of administration relatively to the real work done has been proportionately high. I am of opinion that the work could quite well have been done by a committee of the town council, and that all the necessary clerical work could have been accomplished without the appointment of special officers.

10. I am of opinion that the Act of 1905 has not been a success. I think that the constitution of the distress committee is objectionable. The duty of relieving unemployed persons should be imposed on the local authority, which alone can initiate works of public utility. I am satisfied that this course would be more effectual and economical.

11. *Labour Farms or Colonies* are in my view satisfactory only when it is found necessary for personal reasons to divorce the individual from an undesirable environment. Any form of relief which involves the separation of a man from his home and family is objectionable.

12. *Emigration* of unemployed persons with dependents presents a serious difficulty. If wives and families are left they usually become chargeable to the parish, and cases of subsequent complete desertion have been not infrequent. On the other hand, the cost of sending away whole families is very heavy.

13. It is difficult to suggest practical remedies for unemployment. In consequence of its conglomerate nature it is impossible to legislate with success directly upon it. Sound education and thorough technical training during youth are essential to continuous success in any trade. It is seldom that the thrifty, industrious and temperate suffer serious hardship. There is urgent need for further legislative restrictions on the sale of intoxicating liquor, and I strongly advocate the isolation and curative treatment of inebriates of both sexes.

POOR LAW.

14. There has been an alarming increase of pauperism in Aberdeen during recent years. I produce Return (*Appendix No. XCIX. (C)*), showing number of paupers and dependents as at May 15th, 1907, and corresponding figures for the previous five years, table showing ratio of pauperism in Aberdeen, Glasgow, Edinburgh, and Dundee for the past six years, total amount expended on aliment and clothing to outdoor poor during the like period.

15. I also submit (*Appendix No. XCIX. (D)*) particulars of payments to outdoor poor as at May 15th, 1907, showing the number of recipients and the various allowances, with particulars of the earnings of the various families whose incomes from other sources exceed £1 a week. The total number of persons in receipt of parochial relief at above date was 2,087, with 1,463 dependents (*See Appendix No. XCIX. (E.)*) Of the 2,087, no less than 785, more than one-third of the whole, were between the ages of sixteen and sixty years.

APPENDIX No. XCIX. (A).

APPENDIX No. C.

STATEMENT OF EVIDENCE AS TO DISTRESS DUE TO UNEMPLOYMENT, BY MR. JAS. GOLDIE, MANAGING DIRECTOR OF JAS. GOLDIE & SON, LTD., BUILDERS AND CONTRACTORS, GLASGOW.

1. I am late Deacon Convener of the Trades of Glasgow ; am presently Hon. President of the Building Trades Exchange ; and have been an employer of labour for over forty years.

2. My statement of views are based on the conditions of labour in the building trade, including brick-making and quarrying.

EXTENT AND CAUSE.

3. While not a "season" trade in the ordinary sense, it is liable to complete stoppage from long-continued frost or other severe weather.

4. Excluding workmen who are idle from choice, the unemployed is not great, and consists of men who are unable, either from age or other causes, to work up to the level of the standard rate of wages, and are in consequence the first to be paid off and last to be taken on when the volume of trade fluctuates.

REMEDY.

5. Were trades unions to permit all such to work at rates within their capacity, employment would be more equitably distributed and any distress in emergencies almost disappear.

6. *Special Work.*—Where temporary relief work is provided it should always have as a basis a labour test ; the deserving will not object to this, and it at once separates the two distinct classes—those who want work and those who do not. Such special work should never be managed by a municipality, nor subsidised by local rates.

7. *Labour Farms or Colonies.*—A large proportion of unemployed are men idle from choice—partly through drink and vice—but who come into prominence and clamour loudest when work is not to be had. These men's mode of living is a menace to the community. While most are irreclaimable, some might be dealt with in a labour colony, where, freed from evil communication, they might work themselves back to respectability. The labour colony I would strongly recommend.

8. *General.*—The difficult part of the whole problem, to my mind, is what to do with the man who will neither work nor want—whose life, while he is outside the work-house, is bordering on crime, and when inside the work-house looks upon it as a sanatorium. Drastic measures should be taken to compel this man to work for his living.

APPENDIX No. CI.

**STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. J. M. HODGE, PARTNER IN
THE FIRM OF MESSRS. KEAY & HODGE, FRUIT-GROWERS IN THE BLAIRGOWRIE
DISTRICT OF PERTHSHIRE.**

1. There is during the winter time in this district a considerable amount of distress due to want of employment, because the people to a large extent are dependent upon outside work. The only relief given is given by the parish council and by charitable people. I do not suppose, however, that it is in this connection that you want my opinion. I rather think my name has been suggested to you because we are large fruit-growers in this district, and we employ about 1,000 women from the cities in the summer time, women who might otherwise be unemployed at that time, and who in any case require a month in the country from a health point of view.

2. I enclose a circular which we are issuing this year, and which will give you a good deal of information in connection with the scheme. (*See Appendix No. CI. (A).*) The women are supposed to be respectable. Many of them are extremely poor. Some of them make very good wages, and this is an advantage to themselves and to their friends, whom they have left in the towns behind them. I think I may say that practically the whole of them benefit from a physical point of view. Our scheme might be largely developed if there were some organisation in the different towns of Scotland to develop it. It would undoubtedly mean congenial, healthy employment to thousands of city women who can not possibly get a month in the country in any other way.

APPENDIX No. CI. (A).

Handed in by Mr. J. M. Hodge, Blairgowrie.

A MONTH IN THE COUNTRY FOR WORKING GIRLS.

Messrs. Keay & Hodge, fruit growers, in the Blairgowrie district of Perthshire, offer employment in raspberry gathering on their model fruit farms at Essendy, to 1,000 respectable women and girls for about one month during the season 1907.

The farms are situated three miles from Blairgowrie, in one of the loveliest districts of the Perthshire Highlands, where the air is particularly pure and bracing. The Essendy estate lies between the beautiful Lochs of Marlee and Clunie, and is surrounded by fine hill scenery. On Saturday afternoons, the workers are encouraged to organise expeditions to the famous Beech Hedge, Meikleour, and to other places of interest in the neighbourhood.

On week nights concerts are held in the dining-hall. A part of the hall is reserved for recreation, and will be available for writing, reading, etc.

The scheme was started in the summer of 1903 by Messrs. Keay & Hodge with the object of improving the conditions of work, and attracting a superior class of women to an important and growing industry. It offers a delightful, pleasant, profitable, and bracing country holiday to village, town, and city working girls and women. Hundreds have availed themselves of the opportunity of thus spending a month in the country. The results of the experiment have been very gratifying to all concerned, and the gain in health and strength to the workers very marked indeed.

LODGINGS.

These are provided by the firm to the workers at a charge of 1s. per week. The workers are lodged in buildings specially erected for them. These comprise a large dining-hall, refreshment bars, well-lighted and ventilated dormitories, containing iron bedsteads with comfortable bedding. The beds accommodate two persons each; there is accommodation for washing and drying clothes. There are also lavatories, toilet basins, boot brushes, blacking, and mirrors.

BILL OF FARE.

Meat or mince and potatoes	-	-	-	3d.
Soup	-	-	-	1d.
Pudding	-	-	-	1d.
Ham or meat sandwich, each	-	-	-	1d. and 2a.
Porridge and milk	-	-	-	1½d.
Tea or cocoa, per cup	-	-	-	½d.
Bread and butter, per slice	-	-	-	1d. and ½d.
Plate of cold boiled ham or meat	-	-	-	2d.

Eggs, fish, cheese, milk, cakes, sweets, etc., also on sale.

Messrs. Keay and Hodge have arranged this year to have the catering and dining-hall arrangements directly under their own control. The comfort and convenience of workers will be carefully attended to.

WAGES.

The fruit is picked at ½d. per lb. The wages may run, with favourable conditions of the weather and crops, to 3s. or 4s. a day, or even more. First-class pickers make over 5s. a day. Wages are to be paid daily.

RAILWAY FARES.

Each worker is supplied with a coupon, which on presentation at the principal Caledonian and North British Railway station booking offices, entitles holder to travel

to Blairgowrie at single fare for the double journey. On their arrival at Blairgowrie conveyances are provided by the firm to drive the workers and their luggage to the farms.

TIME FOR STARTING.

The time for starting is usually about the *third week of July*, this is determined very much by the weather. One week's notice will be given. Railway time table and coupon for ticket will be enclosed with exact date.

TERMS OF ENGAGEMENT.

The application form enclosed must be carefully filled up and the number of weeks the worker can remain, clearly stated in the spaces provided for that purpose. On receipt of fee the worker is registered in our books, and supplied with regulations, and registration ticket, which must be presented at Blairgowrie before entering the conveyances. The duplicate half is given up to the superintendent on arrival at farms. The worker retaining the other half during residence. It is delivered up on departure, and fee returned. No worker can be engaged for a less period than two weeks.

CLOTHING.

Workers are advised to provide themselves for working purposes with cotton blouses, sun bonnets or straw hats for good days. These, however, are not suitable for showery weather, and pickers should, whatever else they bring with them, bring a thick woollen skirt with thick bodice, strong boots, or clogs, old jackets or waterproofs. Old gloves, and stockings from which the feet have been cut are very necessary for protecting the hands and arms from the prickles of the bushes. A few pairs will be found most useful.

ARRANGEMENTS.

The entire arrangements are under the supervision of our experienced manager and his wife, who are resident at the farm. In cases of serious sickness that cannot be dealt with by the manager's wife, the services of a doctor has been specially retained for the workers' benefit. An isolation ward is provided. Post office and shop on the premises.

ENROLMENT.

Those wishing to enrol are invited to fill up accompanying application form, and return it at the very earliest, as the applications will be dealt with in the order received. Address: "Manageress, Isla Cottage, Blairgowrie." As it is the desire of Messrs. Keay & Hodge to maintain, in the interest of the workers themselves, a high standard of character and conduct, only women of guaranteed respectability will be engaged. A satisfactory reference from a clergyman (either Protestant or Catholic), an employer, or some other well-known person, must be given.

It has been found to be a pleasant and suitable arrangement for a mother and daughters, sisters, or a group of friends to go together. In no case will young children be allowed to accompany their mothers. Girls under thirteen years of age cannot be accepted; girls under sixteen years of age must be accompanied by a parent or guardian.

APPENDIX No. CII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. ALEXANDER JEWELL,
SUPERINTENDENT OF THE DUNDEE LABOUR EXCHANGE.

1. From October 31st, 1906, to May 15th, 1907, I have had 635 applications on the unemployed list, classified as follows:—

Males	-	-	-	-	-	-	625
Females	-	-	-	-	-	-	10
Total	-	-	-	-	-	-	635
Married	-	-	-	-	-	-	400
Single	-	-	-	-	-	-	140
Widowers	-	-	-	-	-	-	85
Females	-	-	-	-	-	-	10
Total	-	-	-	-	-	-	635

2. So far as can be ascertained, the character of the above-mentioned is good with the exception of eight males whose character was found to be bad.

3. The period of unemployment lasts for from one to twelve months. It is periodic in the individual, and chronic in the city.

4. The causes of distress due to unemployment may be stated as follows:—Drink, thriftlessness, and low wages, especially the last, as the wages even for tradesmen are lower in Dundee than elsewhere.

5. At many of the homes I have visited I have found the people selling their furniture and pawning their household effects, which would require to be redeemed after the owners got employment. Thus they are kept continuously in a state of chronic poverty, which has a very depressing effect upon the individual.

6. I would suggest the following as remedies:—Labour farms or colonies, more means for distress committees to deal with the question of finance, etc.

7. Prior to the passing of the Unemployed Act, 1905, the municipality opened a labour bureau for unemployed, and in 1904 provided work as follows:—

Names on register	-	-	-	-	1,643
Tickets issued for works	-	-	-	-	916
Commenced work	-	-	-	-	556

8. The Unemployed Workmen Act, so far as my experience goes, is found to be cumbersome.

9. Through the agency of the distress committee, 274 were employed during the past winter for a period of over two months each.

10. The labour bureau is to be kept open all the year round for the registration of the unemployed. A list of names has been handed to many employers of labour throughout the city. Only a limited number of employers have taken advantage of the labour bureau, they having always been in the habit of either advertising or taking men in from the gates.

APPENDIX No. CIII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. D. LAIDLAW, OF MESSRS.
R. LAIDLAW & SON, LIMITED, ENGINEERS AND IRON PIPE FOUNDERS, GLASGOW.*Causes of Distress due to Unemployment.*

1. My experience in connection with a section of our workmen who are paid by piece and make very large wages, ranging on average about 60s. a week, has been for many years, that whenever they have been off work, for probably no more than a week, they come in wishing money to be given them. You can easily see that if men of this class were at all provident there would be no necessity for them to do this, making as they do wages very much bigger than tradesmen, such as fitters. The cause of this distress must, therefore, be laid down to their extremely improvident habits, and the amount of money that they spend on drink. Of course there are men belonging to the same section who are generally well off.

2. Also when I was a member of the Stevenston Parish Council in the County of Ayr for six years, I had frequent opportunities of hearing of cases exactly similar. The police there have often told me that men who were making the biggest wages in the district were living in houses that could only be described as hovels, and in the most abject state of disgraceful poverty even when employed. When unemployed the matter was much worse, and all this was caused simply by their squandering of money, principally in buying drink. On the other hand, with respectable people the causes of distress arise entirely through any savings that they may have made being all used up during unemployment, and their being often compelled, when long unemployed, to pawn or sell their various articles of furniture.

Effects of Distress due to Unemployment.

3. The effects of such distress is, of course, to throw a large amount of extra expense on the Parish Council Poor Law authorities, expense which, in the case of the improvidence to which I have referred, could be to a

large extent obviated, as, of course, it is in the case of the decent people with some sort of self-respect, who do everything in their power to support themselves by selling their own belongings before coming on the parish council. So far as my experience of such work went, it was generally the improvident people who had no compunction whatever in applying for relief, and who naturally caused the greatest amount of expense; it was generally with the greatest reluctance that respectable people made any such application.

Remedies for Distress due to Unemployment.

4. As regards special work provided by municipalities prior to the Unemployed Workmen Act, in many cases it seems to me the work that was provided was work that was specially inaugurated in order to give the employment; in short, was work that was not necessary work in any sense of the term. The community was, therefore, saddled with the expense of this work, which was often undertaken out of a pure charity, and not with any idea of being of permanent utility. In the case of works undertaken that were of permanent value, the work as a rule was not so well done as it would have been by men whose trade or occupation it was to work at it, as all sorts of men were taken in to do the work. The result of it not being so well done was, of course, increased expense to the community. The same remarks, it seems to me, would almost apply on all fours to provided work of any kind, whether under the new act or not.

5. Trades union unemployment benefit is undoubtedly a great factor in relief of distress for tradesmen, and my experience in Ayrshire was that where it was a question of tradesmen falling into distress, the amount required by tradesmen who were members of trades unions (if required at all) was, of course, very much less than by those who were not. I expect that this will be found of general application all over the country.

APPENDIX No. CIII.—*Continued.*

6. As to remedies to be employed to combat such distress, it is a very difficult matter to speak, as in many cases the relief does not reach the people for whom it is intended. During the construction, for instance, of the Caledonian Underground Railway in Glasgow some years ago, it was common knowledge that many of the labourers there employed were in the habit of going to the soup kitchens, which were at that time in operation to relieve distress, and receiving their ration along with those who had a better right to it. Unless, therefore, some system can be devised to prevent those who are not in need from obtaining assistance, all such remedies where anything is given free, very largely defeat themselves. Where clothes are distributed as one society does in Glasgow, to clothe poor children, even with all the precautions of marking them to prevent their being pawned, in many instances they find their way into the pawnbrokers' hands.

7. While it is impossible to make men either sober or thrifty by Act of Parliament, it seems to me that Poor Law authorities would require to get some more drastic powers of dealing with cases of distress due to notorious improvidence and insobriety. From my experience, already referred to, there was often a tendency to deal so leniently with cases of this sort that on several occasions I had to remind the members of the parish council that we were not an organisation for the distribution of charitable relief. In Germany, I understand, they have some methods of compulsion which produce results such as we cannot obtain in this country, and it seems to me that compulsion of some kind will be necessary to deal with the evils as they at present exist. At present such characters go in and out of the poor-houses at will, and there is no power either to refuse or to detain them.

APPENDIX No. CIV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. ROBERT T. LEITCH,
SECRETARY OF THE DUNDEE FREE LABOUR BUREAU.

1. In my official capacity as honorary secretary of the Dundee Free Labour Bureau, I am not in a position to deal with the questions you refer to in the syllabus as applying to unemployment generally in the town, but as secretary of the above-named bureau, which deals with dock labour and riverside labour generally at this port, I can give you a little evidence which may be of some assistance to your Commission.

2. Briefly, we have about 700 dock labourers during the six winter months, which is the busy period at our docks here; during that time these dock labourers may average about 15s. weekly wage. During the six summer months, when trade is slack at the docks, the number is reduced to about 300 men, the weekly average wage being about 10s. A large number of the younger men usually migrate to the country during the summer months, where they find employment as casual labourers in

connection with building, farm work, or otherwise. During the whole year employment is very precarious, and considerable distress, due to unemployment, is frequently in evidence.

3. There is, however, no trades union in the district from which those in distress can draw any benefit while unemployed. Many of the dock labourers are married men with families, and the young boys and girls, after they pass the half-time age of twelve, find employment as half-timers in the local mills and factories. The women in the families, if too old to work in the mills, frequently find employment at sack-sewing at home, at which they can make a few shillings a week. The lot, therefore, of the married dock labourer with a family is, on the whole, more favourable than is the case with single men who have to find employment for themselves otherwise during the slack summer months.

APPENDIX No. CV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. JAMES MACFARLANE, OF
MESSRS. MACFARLANE, LANG & CO., BISCUIT MAKERS, GLASGOW.

1. The number of unemployed bakers in Glasgow may be pretty accurately stated at from 550 to 600. They belong almost entirely to the class known as "table hands," *i.e.*, ordinary journeymen, *who, when in constant employment, earn a minimum wage of 34s. per week.* The character of these men (*i.e.*, the non-constant men) can be described as for the most part unsteady.

2. The question as to the period of duration may be answered by describing the conditions of the baking trade in Glasgow. The quantity of bread required varies from day to day, and the average daily demand on the first five days of the week is doubled, and sometimes more than doubled, on Saturday. Employment is, to a large extent, affected also by the demand for early morning bread, and employers who, for example, require twenty men to turn out their day's work, instead of employing twenty constant men, will work with possibly fifteen constant men, and as against the other five, draw from the unemployed section ten men whom they employ for the first half-day only, and these are engaged and paid from day to day. Therefore of the 550 to 600 unemployed, a considerable proportion obtain half-a-day's work during a part of the week, and they are all probably employed all day on Saturday.

CAUSES.

3. Looking to the wages paid in the baking trade and the number of hours worked in the week, the causes of distress due to unemployment I should consider chiefly due to want of thrift on the part of men when young and able to keep a good situation.

EFFECTS.

4. The unemployed section of operative bakers gradually become confirmed in unsteady habits, and among them there are very few cases where a little help would be of much service.

REMEDIES.

5. *Trades Union Unemployed Benefit.*—This undoubtedly is a good means of affording help where it is needed, and where assistance would be properly taken advantage of, and is one way of the men co-operating to obtain what I believe is the only effective remedy for distress due to unemployment, *viz.*, thrift.

6. The same remarks might apply to municipal insurance, but when I state that we are just on the point of raising our minimum wage to journeymen to 35s. per week, that one class of men who have more responsible work earn from 38s. to 40s., another from 45s. to 50s., and that foremen are paid up to as high as £5 and £6 per week, I think with the facilities which are offered on all hands for providing against old age or misfortune, no man of steady habits need be absolutely without help when he comes through age to be incapacitated for work. The men work an eight hours' day, forty-eight hours per week.

7. I enclose a Statement with regard to the state of trade over Scotland, from which you may be able to obtain some additional information. (*See Appendix No. CV. (A).*)

APPENDIX No. CVI.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. R. B. MACOUAT, OF THE RIVET, BOLT, AND NUT COMPANY, GLASGOW.

1. I am of opinion that facilities should be given for employing more people on the land, and I hail the introduction of the Small Landholders Bills as an important step in this direction.

2. Regarding the lower strata, or what may be called "Unemployables," increased powers should be given to local authorities to acquire land, and to equip farm

colonies for the purpose of giving these wasters an opportunity of getting back to the employable class.

3. I am aware that this would not solve the difficulties that arise in times of severe trade depression for which other remedies would have to be provided, but as to what these should be I am not prepared to offer an opinion.

APPENDIX No. CVII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY MR. THOMAS MASON, PARTNER OF THE FIRM OF MESSRS. MORRISON AND MASON, BUILDERS AND CONTRACTORS, POLMADIE, GLASGOW.

1. At the present time I represent the Merchants' House in the Town Council as Lord Dean of Guild. Some years ago I was also in the Town Council: (a) as Deacon Convener of the Trades House; and (b) as representative of one of the City Wards. I am also a Director in Sir William Arrol & Co., engineer and bridge builders; Young's Paraffin Oil Works; Fleming and Fergusson, ship builders—all employing a large number of workmen. Generally the following remarks apply to the workmen employed in these large works.

2. In the execution of numerous large contracts, and the employing of a considerable body of men, both tradesmen and labourers, I have come to the conclusion that many men who, from some cause or other, have fallen into the lower stratum, are none too willing, when given the chance, to avail themselves of the opportunity of regular work. I am also of the opinion that few men who are willing and able to work, are unable to obtain employment. An employer of labour, of course, when given the choice, naturally selects the man who seems best able to discharge the work required; consequently the tradesman or labourer who, from whatever cause, has been out of employment for a considerable period, is frequently, from his general appearance alone, passed over.

3. Dealing with the extent of distress due to unemployment in the building trade, I think that can undoubtedly be generally classed as periodic—only to an infinitesimal extent chronic—the building trade being one which

periodically is subject to booms and depressions. That trade in Glasgow is at the present time at a very low ebb, with little prospect of early improvement. This can probably be attributed to the fact that, owing to recent over-building in the city, and migration of the townspeople to the suburbs, the number of unlet houses in the city, over 14,000, is quite unprecedented. Slackness in the building trade proper has, of course, an immediate effect on allied trades, viz.: painters, plasterers, plumbers, etc. It is also, too, at once felt at the brick-fields.

4. In connection with the building trade, I would strongly advocate the adoption of a scheme of idle benefit. Any such provision, however, would require to be very carefully safeguarded against abuse, to which it would be very liable.

5. Generally, I am of opinion that a large amount of unemployment is due not only to drink but to want of thrift in times of prosperity.

6. The man who, when in regular employment, does not fail to make provision for the reverse state of matters which inevitably at some time follows, will be the first to obtain employment when the slack period is over. Not only will he be physically better able for work than his thriftless companion, but his appearance will favour him when applying for employment.

7. For the man who wanders over the country with no desire for work and quite happy without it—the habitual vagrant—I recommend a penal colony.

APPENDIX No. CVIII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT IN THE PAINTING TRADE BY MR. JOHN ORR, OF MESSRS. JOHN ORR & SONS, DECORATORS, GLASGOW.

1. There must always be a considerable amount of distress amongst the painters during the winter months; but this is quite chronic in the painting trade, and has always been. Outside work is at a standstill, and people, except under exceptional circumstances where houses are changing hands, will not do any interior work during the winter, on account of discomfort.

2. In large towns and cities there is always a large amount of public work to be done, which helps, to some extent, to mitigate distress.

3. Our municipalities might do a great deal more by way of letting their contracts for painting work to be executed during the winter months—such work as museums, baths, electricity works, slaughter-houses,

hospitals, etc. The Government also could do a good deal in connection with Post Offices, Inland Revenue Offices, etc.

4. Painters as a rule, who are careful and thrifty (and I think the majority are), need never be much idle, especially in large towns, if what I say in paragraph 3 were carried out. In small towns it might be otherwise.

5. It is impossible for me to say with any degree of accuracy in how far drink and improvidence have to do with this chronic distress in the winter season, but no doubt these two things, especially the former, is accountable for some of it.

APPENDIX No. CIX

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. GEORGE RANKINE,
SUPERINTENDENT OF THE CURR NIGHT REFUGE, DUNDEE.*Extent (Navvies, Shipyard Labourers and Boys).*

1. During the last twelve months there have come to Dundee and its neighbourhood, seeking work at ship-building, Fife Railway, and Arbroath Waterworks, hundreds of Scotch and Irish navvies, hundreds of navvies from North of England and hundreds of labourers from the Clyde. The latter contingent was partly composed of young men under twenty, who thus made their first acquaintance with the privations of the road.

2. This rush occurs occasionally, depends on the state of trade in general in some measure, but is greatly emphasised by any local demand such as the railway or water-works.

Causes.

3. Where there is a true home life, thrift, and sobriety, the family stands by the unemployed member, and the unemployment becomes little more than an inconvenience that is soon remedied. But when men and boys are thrust forth from home life and home ties by the impatience and abuse of those who might have seen them through the period of unemployment it is generally found on inquiry that there has been a want of thrift and a decay of natural affection at home, and there is little difficulty in tracing these to the still deeper root—the baleful ever-spreading custom of week-end drinking.

Effects.

4. These effects manifest themselves in the absence of home ties; in the refusal—determined and often irrevocable—to apply to relations for help; in the utter denial of their existence; in a rushing here and there after employment in desperate earnestness; latterly in an aimless wandering to and fro; still later in such a deterioration of the man, morally and physically, as makes any tragedy possible.

Paragraphs 3 and 4 apply chiefly to the city labourer.

Remedies.

5. Much evil and distress might be avoided by each municipality providing work for its own unemployed, so as to render the privations of the road unnecessary.

6. Also by the provision of thorough information where work is to be found, for hundreds take the road, misled by advertisements which can only be characterised as false.

7. The labour farm or yard serves to discriminate between the worker and the idler. *But it is necessary to compel the idler to work until he begins to like it.*

8. The teaching of temperance and thrift to the children and youth of the nation, and legislation in the interests of temperance.

9. Consequently the encouragement and promotion—rather the insistence on temperance principles among teachers of children.

10. The settlement or rather retention of the country labourer in the country by every possible means. Why should it be necessary for men of Skye and Ross, men of Ulster, men of Yorkshire—men—genuine labouring men of the most splendid physique—to wander up and down the country, homeless and without home ties, in search of work. It is surely the most pitiable sight a patriot can look on, to see young men of twenty-four years, some of them discharged soldiers, six feet and upwards, applying for a night's shelter, as they are homeless and friendless and do not know where next to seek for work. These remarks apply to the country labourer as distinguished from the city labourer. His native strath offered him no inducement to stay, nor does it now offer any inducement to return. He is also, for many obvious reasons, ashamed to face the old folks at home.

APPENDIX No. CX.

STATEMENT OF EVIDENCE ON BEHALF OF THE SCOTTISH FIREWOOD MANUFACTURERS' ASSOCIATION, BY MESSRS. JNO. & W. D. HALL, F.S.A.A., ACCOUNTANTS AND AUDITORS, GLASGOW, SECRETARIES OF THE ASSOCIATION.

1. As secretaries of the Scottish Firewood Manufacturers' Association we have for a long time been endeavouring to get the charitable and philanthropic institutions and the parish councils who make firewood to work in harmony with us in fixing a standard size of bundle and a standard price per gross to the shopkeepers.

In Glasgow it has been customary for some time to supply the bundles of wood with the one end dipped in rosin, but recently the market price of that commodity has risen so much that the firewood manufacturers found it quite impossible to continue supplying rosined wood at 4s. per gross of bundles which has long been looked upon here by the shopkeepers as the price at which their supplies of wood should be obtained.

3. Accordingly at a meeting of our Association in June, 1905, it was resolved to dispense with the use of rosin in the manufacture of firewood for the following reasons, viz. :—

(1) It is quite unnecessary.

(2) The danger attending its use, and the frequent fires which have occurred in consequence.

(3) The high rates of premium charged by insurance companies when it is used; and

(4) The high price at present ruling in the market for rosin, which renders the sale of firewood at its present price at a profit quite impossible.

4. We communicated with the charitable institutions and the parish councils, inviting them to co-operate with us in this matter and in the fixing of prices and dealing with questions affecting the trade which might arise from time to time.

5. We may say, however, that we have received little or no consideration at the hands of the charitable institutions, whilst the parish councils have refused to discuss the matter with us, or remedy our grievances in any way whatever.

6. As you are doubtless aware, these charitable and philanthropic institutions—the principal of which in this locality are the Church Army Home, The Church of Scotland Committee on Social Work, and the Charity Organisation Society—get their work done by vagrants, tramps, and other wastrels in exchange for, in some cases, a night's lodgings, a meal or two of food, with, perhaps, a small money payment, whilst the parish councils do not make any payments in cash in name of wages, as the whole work is done by their inmates composed as they are of the classes already referred to.

APPENDIX No. CX.—*Continued.*

7. It is needless to say that as the charitable institutions are subsidised by subscriptions from a generous public, and as the parish councils do not require to pay wages at all in cash, and are subsidised by the public rates, none of these bodies require to earn a profit on their trading, and they are well able, as they do, to compete unfairly with the private traders who, of course, are all ratepayers.

8. The private traders had never any difficulty in meeting the demands of the public for firewood, so that it follows that any trade the institutions and parish councils secure is consequently diverted from, and harmful to the private traders.

9. So clamant has this unfair competition and the underselling become that numbers of the employers are being driven out of the trade, and their employees—both men and women—who at the best could only earn a meagre livelihood have had to seek relief from the very institutions which have wrought such havoc, or have become a charge upon the parish poor rates.

10. We may say that all our negotiations with the charitable institutions and the parish councils have been of the nature of an appeal to their sense of fairness, but it is quite evident from the way our advances have been treated that some action based upon or supported by direct legal authority must be taken before we can expect redress.

11. We feel convinced that it was never contemplated by the Legislature that competition with private traders should be entered into by parish councils, and that measures should be adopted forthwith to put a stop to it.

12. We take it that the Truck Acts apply to all employers of labour whether these be charitable institutions, parish councils or ordinary bodies, and it is quite clear that the Acts are totally disregarded by these public bodies.

13. If, however, such institutions and the parish councils do not come within the scope of the Act, our members are unanimous in asking that the Act be amended in such a way as will rectify this clamant injustice.

APPENDIX No. CXI.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. THOMAS SCRIMGEOUR, OUT-DOOR SUPERINTENDENT OF THE ABERDEEN DISTRESS COMMITTEE.

1. I was an inspector of the National Society for the Prevention of Cruelty to Children for over six years. During the first one and a quarter years I was stationed in Glasgow, and was afterwards transferred to Aberdeen, where I was inspector for five years. For the past eighteen months I have been outdoor superintendent of the Aberdeen Distress Committee, and my duties have consisted of visiting the homes of applicants, and dealing with the men making application for employment at relief works.

2. With regard to the extent of distress due to unemployment, of 1,310 applicants registered, 880 are general labourers, 220 are artisans (more or less skilled) connected with the building trade, sixty-six are women, mostly casual workers, while the remaining 144 are tradesmen, almost of every class. The majority are of good character. A goodly percentage are of advanced years.

3. From October to March, inclusive, depression is marked. With nearly 50 per cent. unemployment is chronic, *i.e.*, the same individuals need relief again and again; with the other 50 per cent. it is periodic, and short periods of relief tide them over the periods of distress.

4. Distress is caused by want of steady employment, by insufficient earnings, by improvidence and intemperance, but chiefly by the men being irregularly or only casually employed. Depression in the building trade has been acute during the past year.

5. The effects of distress due to unemployment are the physical, mental and moral deterioration of the individuals, suffering of their dependants and the creation of a spirit of reliance upon others, and a growing tendency to accept charitable assistance by a class who formerly did not care to do so.

June, 1907.

6. Special work provided at different periods by municipalities, while it has no doubt afforded relief to large numbers, has not been of lasting benefit.

7. The operation of the Unemployed Workmen Act has also afforded a great amount of relief (over £3,000 being spent), and in many cases has tided the applicant and dependants over the period of depression until he is again able to get work for himself; in other cases the applicant is in the same position as formerly—in a chronic state of distress through unemployment. The work provided by the Aberdeen Distress Committee has consisted chiefly of stone-breaking and road-making. The majority of the applicants employed at road-making performed the work allotted to them with efficiency and nearly up to the standard of men employed at this class of work.

8. In connection with the work of stone-breaking, while a large number of men performed the work in a satisfactory manner, a considerable proportion, either from lack of experience or from physical disability, did not do efficient work, and a considerable loss resulted on this class of work. During the early part of the year the weather was very severe, and as the situation of the work was much exposed, this may to some extent account for the loss.

9. The most that can be said in favour of emigration is that, on the whole, it has been the best class of applicant who has availed himself of this provision in the Act. With one or two exceptions the family has been left behind. So far as can be learned, those emigrated are doing well.

10. The labour bureau has not been taken advantage of by employers to any great extent, probably because labour is so plentiful.

11. Members of the various trades unions, whom I presume were in receipt of unemployed benefit from their union, have not registered with this committee.

12. The training of the younger men on labour colonies is worthy of a trial.

APPENDIX No. CXII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. ALEXANDER SMELLIE,
OUTDOOR MANAGER WITH MESSRS. JAMES CURRIE & CO., SHIPOWNERS, LEITH.*Extent.*

1. As many of the casual labourers who work with us also work with other shipowners and stevedores I cannot give the actual numbers, but approximately we employ from twenty to 250 daily, that is to say, on those days when there is little work doing we may have only twenty men employed and when we are exceptionally busy there may be 250. About half of the 250 may be good workers and fairly steady, but I do not think that I am far wrong when I say that about three-fourths of the remainder are just the opposite, and it is this class who suffer in dull times, as their earnings are largely spent in dissipation, leaving them unprovided for the proverbial rainy day. Dock labourers are recruited from all classes. A few have been so almost from boyhood, but the majority are men who have failed at other occupations, such as bakers, butchers, grocers, blacksmiths, coopers, moulders, coachmen, sailors, firemen, etc., and a good many are discharged soldiers.

2. Work is fairly plentiful throughout the year with the exception of a month or two in the winter when there is, no doubt, some distress due to unemployment, but such distress is insignificant when compared with that due to and caused by dissipation and unwillingness to work. Distress from this cause is chronic.

Causes.

3. The chief cause is that the supply of dock labour exceeds the demand. The docks seem to be the refuge of most of those who cannot obtain work at the occupations to which they have been accustomed, which makes it a hardship for those who depend upon dock labour alone for their livelihood; but I have no doubt that temporary work at the docks has enabled many a one to keep the wolf from the door until he could obtain employment at his legitimate trade. I am also of the opinion that the Workmen's Compensation Act and co-operation have added to the casual labour class, thereby increasing the competition.

Effects.

4. Distress due to unemployment no doubt adds to the criminal classes and inmates of poor houses.

Remedies.

5. Seeing that one of the chief causes of unemployment among casual labourers is the competition from discharged soldiers, which has been intensified since the short service system was introduced into the Army, this evil would be got rid of if the Government would make it their duty to see that these men were provided with employment on leaving the Army instead of being thrown on the country, many of them to become vagrants and

criminals. I think that the men are entitled to better treatment.

6. As the skilled tradesman out of work also enters largely into competition with the casual labourer, this hardship would be mitigated if the workmen could get work at their own trade, and this might be brought about by increased outlets for manufactured goods.

7. As regards unemployed wastrels it is possible that a municipal factory, labour farm or colony, where the men could earn sufficient to maintain their families until more remunerative employment offered, might be beneficial; but as steady work is not what these men want, I am afraid such an institution would be of little use unless the men were coerced to work.

8. Taking the question of unemployment generally, I am of opinion that much of it is the offspring of modern legislation. Too much has been done for the working man and this has not been for his good. Looking back a quarter of a century I would ask any unbiassed observer if, notwithstanding the many Acts of Parliament passed since then, presumably for his good, he has improved either morally or physically or does he take a greater interest in his work. Does he take the same pride in his work which made the British workman famous all the world over? If the answer be given honestly it must be no, and in face of so much foreign competition may this not be a fertile cause of unemployment? He has now a great deal of leisure time and has got rid of the expense of educating his children, and it has been proposed that he should even be relieved of the expense of feeding them. I am afraid that the majority of them do not employ their leisure time profitably, neither do they spend wisely the money that should have been used in educating and feeding their children. Such legislation has a tendency to demoralise and destroy the spirit of independence, but it is evident that it is now too late to recede and he would be a bold politician who would suggest a change. Considering the result of the legislation I am convinced that if the Education Act had been passed in a different form the result would have been more beneficial. I would certainly have given the children of the working man free education, and I would also have given them free meals. I would even have given them free clothing (a great many of them need it greatly, especially in the winter time) if the parents were incapable even under compulsion of providing such; but I would have made this proviso, that those who were so relieved should be disfranchised. This would have acted as a stimulus and an incentive to the working man who wished to do well and have a voice in the government of the country, and it would also have had the effect of showing among the working class those who were predisposed to well-doing and those who were not.

ADDENDUM.

ANSWERS BY THE ABOVE-NAMED WITNESS TO QUESTIONS SUBMITTED BY PROFESSOR SMART.

Question I.—Trade unions among dockers: if strong or weak? Your own policy regarding them?

Answer I.—There is a trade union among dockers at this port, but it is not strong, the great majority being non-unionists. When we employ men we ask no questions, but give work to unionists and non-unionists alike, when we can provide it.

Question II.—Old soldier dockers: what proportion of the whole?

Answer II.—Of the men employed by us as dockers, I think that discharged soldiers form from 15 to 20 per cent. of the whole.

Question III.—The nature and number of your own staff of dockers: the forty-six week men: how paid? (Please make it clear that the 20-250 mentioned are outside of this staff.)

Answer III.—With regard to our permanent stevedoring staff, we have five foremen who are paid a weekly wage without any allowance for overtime, and we have also forty-six experienced men who are paid weekly, but at a rate per hour, their ordinary pay being 7d. per hour, and overtime 8d. per hour. These comprise shoot-end men, winchmen and cranemen, hold-men, and quaymen, and although paid weekly, they only get payment for the time they work. They are not included in the number of casual labourers.

APPENDIX No. CXII.—*Continued.*ADDENDUM—*Continued.*

Question IV.—How the dockers are taken on: if any preference is given; rate of wage per hour, etc.; wage of overtime?

Answer IV.—We usually appoint a foreman to superintend the work at each steamer, and it rests with him to employ as many casual labourers as are required. The head foreman allots the experienced winchmen, shoot-end men, hold-men, and quay-men, to each steamer. Casual labourers are paid at 6d. per hour, with 25 per cent. more for overtime, which counts from 6 p.m. to 6 a.m., but when a man of this class acts as shoot-end man or quay-man, which is sometimes the case, he gets 6d. per day or part of a day extra.

Question V.—If the trade of Leith is steady throughout the year, and what staple imports and exports it depends on?

Answer V.—With the exception of a month or two in winter, the trade of Leith is pretty steady throughout the year. The staple imports are sugar, flour, case and bale goods, flax, hemp, timber, manure salts, grain, manufactured iron, oil, glassware, etc., and the principal exports are coal, pig-iron, salt herrings, fresh herrings, machinery, sulphate of ammonia, oil, case and bale goods, etc.

Question VI.—What lines have staffs of their own?

Answer VI.—The following shipping lines in addition to ours have their own stevedoring staff at this port:—

George Gibson & Co., owners of the Rotterdam, Antwerp, and Ghent steamers.

North of Scotland Shipping Co.

M. Langlands & Sons, agents for the Liverpool, Moray Firth, Aberdeen, etc., steamers.

London & Edinburgh Shipping Co.

Question VII.—What kind of ships are worked by stevedore contractors: if wage the same as with you?

Answer VII.—The lines that employ stevedore contractors are:—

W. Thomson & Co., owners of the St. Petersburg steamers.

James Cormack & Co., owners of the Riga, Windau and Archangel steamers.

G. V. Turnbull & Co., agents for the Aarhus, etc., steamers.

Henderson & McIntosh, agents for the Montreal steamers.

All tramp steamers.

The ordinary docker's pay with contractors is the same as with us, but some of them pay 9d. per hour for overtime. Their work is intermittent, however, the men employed by us getting much more constant work.

Question VIII.—How the Compensation Act affects you: as doing your own insuring?

Answer VIII.—The Compensation Act has not affected us greatly, although we do our own insuring. We have now done our own stevedoring for about fifteen years, and from the first until the passing of the Compensation Act gave every man who was injured at least half-pay, and that from the time of the accident until he was again able for work. As we use the best gear, and exercise strict supervision, serious accidents are few, considering the number of men we employ, and the nature of the work. The Act has, however, prevented us from employing, as we used to, elderly men, or men who suffer from any disablement, however slight.

Question IX.—If there is any specialisation among the dockers, and if different rates of wages are accordingly paid?

Answer IX.—There is no specialisation among the dockers we employ other than that the experienced men who form our permanent staff get a higher pay.

APPENDIX No. CXIII.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. J. S. TEMPLETON, SENIOR PARTNER OF THE FIRM OF JAMES TEMPLETON AND CO., CARPET MANUFACTURERS, GLASGOW, WHICH EMPLOYS OVER 2,600 WORKPEOPLE IN ITS FOUR MILLS, OR RATHER GROUPS OF MILLS.

1. The evils of want of employment do not come much under my personal notice for the reason that during the past thirty years our looms and machinery have been well kept running. I can therefore only express some general opinions which I have formed from experience other than my own.

2. In the first place let me say that want of employment is to a considerable extent due to the discouragement of manufacturers by the Government. There must be employers as well as men and women to be employed, and capable employers with adequate capital are as necessary to success in procuring the means of employment as capable generals with sufficient commissariat are necessary for success in war. But it seems to me that the trend of recent domestic legislation has taken the direction of harassing employers with petty, vexatious, and costly obligations, and has even taken the direction of supporting workpeople when they arbitrarily and wrongfully try to interfere with and coerce their employers. We want statesmen of wide views, such as Colbert, the great Minister of Louis XIV., who did so much to promote the industries of France. We want also more of the spirit of the people of the United States, who nursed their infant manufactures until they have become, as they are to-day, immense in volume and splendid in excellence. I may say parenthetically that I believe that the production of carpets alone in America is more than double that of this country, and we all know how America stands relatively to Great Britain in the production of iron and steel.

3. Possessing, as I believe I do, much general knowledge of the fabrication of textiles, I am painfully observant of the large quantities of cloths imported from France, Germany, and Austria which could be, and ought to be, made by ourselves. Why should we not help our young men to become manufacturers of such goods and so

provide employment for the people of this country? In one word, let us deal with unemployment by prevention rather than by cure. [As to this cf. page 10, vol. 5, of "The Cambridge Modern History."]

4. But whatever be the causes of want of employment, whether discouragement to capitalists, closure of markets, growth of population and the like, it is an evil we can never wholly escape. How is it to be met under present circumstances? My answer must turn very much on the following consideration. We ourselves are part of the scheme of things we call Nature. A struggle for existence pervades all life. The weak perish. Nature is ruthless to the few in order to be merciful to the many. Have we not therefore reason to ask ourselves whether we are not thwarting a really beneficent law when we try to support lives which are past all cure? In other words, when human beings have become spoiled by vice, by self-indulgence, by inveterate laziness, and have resisted every appeal to their conscience and reason, does there not come a time when we should stand aside and let Nature take its course? The practical issue of this line of thought is that philanthropic societies and municipalities, in providing work for the unemployed, should do so under carefully restricted conditions and with great discrimination. In my opinion no work should be offered to men known to be habitual drunkards, wife beaters, cruel to their children, constant loafers or incorrigible criminals. I am persuaded that philanthropy, which is sentimental rather than scientific, does harm and not good.

5. What I have now written is, I fear, not a specific answer to the headings and sub-headings of your syllabus. If so, I quite expect that my letter will be consigned to your waste basket. At the same time I would respectfully submit that the settlement of sound principles should precede all remedial action and that it is to some of these fundamental principles that I venture to call attention,

APPENDIX No. CXIV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY MR. A. TRAN, FOREMAN OF THE GLASGOW CITY COUNCIL'S RELIEF WORKS AT WESTERHILL.

1. Relief work started on November 19th, 1906, with thirty-five men, and increased week by week up to 400 men—the maximum. Since the work started up to the present date, upwards of 850 men have been given employment at Westerhill.

2. *Wages.*—Men start at 12s. per week, rising to 15s. per week, according to zeal and ability. One-fourth of the men were able to attain the higher rate of pay; half of the men being in receipt of 13s. 6d. per week; remainder, 12s. per week.

3. *Nature of Employment.*—The men are engaged in excavating and removing a large hill, the material being suitable for brick-making purposes, the stones being removed and the strata mixed and weathered in the process. After removal the ground to be utilised as a building site, being unsuitable in its existing form for that purpose. The men, being unaccustomed to the work, take some time to adapt themselves to the use of the pick and barrow, a very small percentage having had experience in the work previously.

4. *Return compared with Outlay.*—The small return for the outlay is accounted for partly owing to the inexperience of the men, the spirit of the men to do as little as they can get off with, a good many of the men being unemployable, and the ground being priced on contract method of removal, or manual power against steam.

5. A considerable number of the men are chronic unemployed, and remained at the relief work as long as permitted, their age, appearance, and health being against them in securing employment elsewhere. These men would be more suitable for a labour colony than a temporary relief work.

6. The majority of the men found the relief work of great assistance during their period of idleness, and were thankful for the temporary employment.

7. The men work from 8 a.m. to 4 p.m., with one hour for meals during winter; from 7 a.m. to 5 p.m., one hour meals; from April 1st with no alteration in the rate of pay for the two extra hours' work.

8. During wet and stormy weather, of which there is a considerable amount in the West of Scotland, the men are permitted to remain at the huts until it is seen there is no possibility of clearing up for the day; they are then permitted to leave the work. Total number of days lost with wet weather, during which no work was done, nineteen days, no reduction being made in the men's pay.

9. The men also have the privilege of getting away occasionally to seek employment, of which they take full advantage.

10. I have no doubt that overtime and piece-work have a good deal to do with scarcity of labour. Workmen, as a rule, are apt to skulk every opportunity they get, and the solution from the master's point of view is piece-work, which is the really most effective solution to securing a fair day's work.

11. The writer has been on work where it was quite common for men to work thirty and even forty hours on end, with the usual break for meals, such as bricklayers, miners, labourers, etc.

The work here alluded to being drainage schemes, tunnelling operations and public works.

APPENDIX No. CXV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT BY MR. ROBERT WILSON, MEMBER OF THE PARISH COUNCIL OF URR; EX-TOWN COUNCILLOR OF THE BURGH OF DALBEATTIE; EX-MEMBER OF THE CENTRAL BODY AND DISTRESS COMMITTEE UNDER UNEMPLOYED WORKMEN'S ACT; SURVEYOR AND SANITARY INSPECTOR FOR THE BURGH OF DALBEATTIE; EXPERIENCE AS JOINER AND BUILDING CONTRACTOR; SUPERINTENDENT OF WORK UNDER THE UNEMPLOYED WORKMEN'S ACT.

Extent.

1. Unemployment in 1905-1906 extended over twenty weeks, and towards the close of 1906 and early in 1907 over ten weeks.

2. In 1905-1906 250 workmen were out of work; 1906-1907, fifty workmen, principally quarry labourers.

3. Unemployment is periodic but irregular.

Causes.

4. Its causes may be stated as follows:—Local and general depression in the granite industry caused by slackness in the building trades; a tendency on the part of corporations to restrict expenditure; the completion of a number of Corporation and other tramway schemes; and, in some measure, by foreign competition.

Effect.

5. Closing (temporary) the local quarries and consequently throwing the workmen out of employment.

Remedies.

6. So varied are the causes that lead to the want of employment that to find a remedy for the evil appears to me a very difficult matter

7. But to mitigate the distress caused by the want of employment when it arises should not be beyond the scope or powers of any corporate body (granted that legal powers have been given to enable them to do so). Experience leads me to the conclusion that to mitigate this evil local authorities should be given the power to purchase (if necessary by compulsory sale) waste or other lands in their respective districts, so that when distress through want of employment arises useful work could be given (without delay) in improving such lands. Our difficulty here has been to find useful work for the unemployed.

8. In small communities such as ours, where the unemployed applicants for work and their circumstances are well known to the members of the distress committee, the inquisitorial particulars required by the Unemployed Workmen's Act should be relaxed or omitted; necessity and residence should be the only qualification demanded. The average wage earned by the general labourer makes it almost impossible, even with the greatest care and economy, to provide for times of distress caused by the want of employment. The application of the Unemployed Workmen's Act in this district has been beneficial and satisfactory in results.

Part V.—*continued.*

SCOTTISH UNEMPLOYMENT.

APPENDIX No. CXVI.

STATEMENT OF EVIDENCE BY MR ROBERT BAIRD, GLASGOW.

1. I have been general manager and secretary to The Scottish Mine Owners' Defence and Mutual Insurance Association, Limited, since it was reconstituted in 1898 to deal with claims for accidents under the Workmen's Compensation Act, 1897, The Employers' Liability Act, 1880, and at Common Law; and which embraces in its members the principal iron and coal masters of Scotland.

2. I have also been secretary to the Lanarkshire Coal Masters' Association since it was formed in 1886 to deal with wages questions and disputes with workmen in connection with their employment.

3. I am also secretary to the Coal Owners' Members of the Conciliation Board, which was formed in 1900.

4. For fifteen years I was general manager and secretary to a colliery company, and for eight years afterwards was managing director of another colliery company.

5. I am sixty-one years of age, and have had a life-long connection with collieries, my father having been a colliery manager, so I have had ample opportunities of seeing the conditions under which workmen live at collieries, and also, although to a less extent, at iron works.

6. So far as collieries are concerned, there is very little to say on the subjects upon which information is desired by the Commissioners, but the following are my views with regard to the questions put to me:—

UNEMPLOYMENT.

(1.) Its extent:—

7. In coal mining it cannot be said that at any period of the year is there any number of workmen thrown entirely out of employment. In the recurring periods of depression which overtake the coal trade in a cycle of years it is not the custom to discharge workmen; but, instead, the pits do not work so steadily as in better times, and idle days are more frequent. For many years back I would say that, so far as Scotland is concerned, the average time lost in these dull times would be less than a day per week for perhaps three to four months in the summer season in Lanarkshire and Ayrshire, and a similar period in the spring in Fifeshire, when the demand for shipping coal is usually at its lowest. The periods of depression continue for a much shorter time now than they formerly did, and at present the supply of miners is scarce, and therefore full time is being worked in every district in Scotland.

8. The number of workmen engaged in coal mining in Scotland last year, according to the Government Returns, is 94,381 underground and 21,318 aboveground. The idle time referred to applies more particularly to underground workers, but when the miners are thrown idle the aboveground workers are more or less affected thereby, and the majority of them work only the same number of shifts as the miners.

9. In coal mining there is no overtime worked. The miners have a certain daily output of coal, which they reckon as their day's work. This varies with the condition and thickness of the coal seam, and when that fixed quantity is obtained they go home, irrespective of the number of hours worked.

10. The number of days worked per week varies in the different coal districts of Scotland.

11. In Lanarkshire, with few exceptions, the miners work only five days a week, which they rigidly observe, even although there may be a brisk demand for coal, and they could get working every day. So rigid are they in observing the idle day that, even although a day's work may be lost in the other days of the week, through want of waggons or other cause, they will remain idle on their fixed idle day, to the serious loss of themselves and their employers.

12. In Fifeshire and the Lothians eleven days a fortnight are worked, and in Ayrshire, until recently, six days a week were worked; but by a resolution of the Miners' Federation the number of working days has been recently reduced to eleven per fortnight.

(2.) Its causes:—

13. It is difficult to say what is the specific cause of the periodical times of dulness. The coal trade, like every other trade, is affected by the ebb and flow of depression and prosperity which affect the trade of the country.

14. To a considerable extent the coal trade of Scotland is affected more directly by the state of shipbuilding and by the condition of the iron and steel trade. It is also affected in most districts by the demand for shipping coal abroad, which, of course, fluctuates with the state of trade in other countries.

(3.) Its effects:—

15. When trade is dull, and the demand for coal falls off, prices fall, and the coal owners are forced to reduce wages. In former times the fall of wages was sometimes pretty severe, but for the past five years a minimum wage has been in operation, equal to 5s. 6d. per day in Lanarkshire, Fifeshire, and the Lothians, and consequently the effects of dulness have not been so much felt as formerly.

16. I would say that any miner who wished to work during the past ten years was able to earn not less than from 20s. to 30s. per week at any time; and at times, of course, very much more could be earned. In 1900 the wage per day rose to 8s., and at present it is about 6s. 9d.

(4.) Its remedies:—

17. For miners and colliery workers generally there is absolutely no need for the Unemployed Workmen's Act. More or less work can always be had, and for many years back they have been able to earn sufficient to keep themselves and families without the help of outside agencies. Of course, during periods of dulness their income is less than usual, and they may be forced to economise their expenditure, but that is a condition applicable to all grades of society.

18. As a class, miners are rather improvident, and when wages are good the great majority of them do not make any provision for the dull times that are sure to follow, and just spend on food, clothing, and drink in accordance with their income. There are, however, a few who take advantage of the good times by laying past for the inevitable "rainy day," but they are the exception to the general rule.

APPENDIX No. CXVII.

STATEMENT OF EVIDENCE BY MR WALTER BELL, PRESIDENT, EDINBURGH TRADES AND LABOUR COUNCIL.

1. Being a joiner to trade, and a member of the Amalgamated Society of Carpenters and Joiners for twenty years, I have taken an active part in the work of the society, and have served on the management committee of this district to promote the betterment of our conditions. I have represented the Edinburgh first branch in the Trades Council for fifteen years, and have taken a prominent part in their deliberations. The objects of the council are to assist in organising trade societies, to endeavour to bring about an amicable adjustment in cases of dispute, to agitate for a reduction of the hours of labour, to petition Parliament on such questions as may affect the right and interest of the working classes.

UNEMPLOYMENT.

2. The numbers of men out of employment vary greatly, and it would probably be about the mark to say that in Edinburgh during the past winter (1906-7) there have been from 3000 to 5000 unemployed. The class of men out of work included nearly every branch of industry.

3. Edinburgh is largely a residential town, the principal industries being building, printing, and brewing. Unskilled labour, of course, always suffers when the skilled trades are depressed, and unskilled labourers have bulked largely in the city's unemployed army.

4. The extent over time is difficult to arrive at, as there is always a reserve army of unemployed. The worst months in Edinburgh for the building trades are December, January, and February.

5. The causes of unemployment are many. Among the foremost is the constant displacement of labour by the introduction of machinery, divisional, female, and boy labour. This is accentuated by the formation of syndicates

and joint-stock companies, which have as one of their objects the securing of the latest improved machines, so as to employ less labour.

6. These causes help to create a large class of men whose skill is rendered useless, and who go to swell the ranks of the unskilled labourer.

7. The effects of unemployment are a greater competition for work, thereby reducing the standard of living all round. Further, poverty, misery, pauperism, crime, prostitution, and underfed children may be reckoned as the effects of unemployment.

8. With regard to the remedies for unemployment, the first thing to realise is that the unemployment has become chronic, and must be dealt with by the State. The most effective step would be the reduction of the hours of labour to eight per day.

9. In regard to the Unemployed Workmen's Act, the great defect in the Act has been the restriction placed upon Distress Committees in regard to the payment of wages. Another point is that when the Distress Committee supplies men from their labour exchange to the Town Council of Edinburgh for necessary work, the men are only paid 2s. 6d. per day, the Distress Committee paying half from public subscription or Government Grant.

10. Distress Committees should be given power to rate, or should be given funds by the Government for the employment of men and the payment of their wages.

11. Distress Committees should have compulsory power to acquire land not in cultivation.

12. The Government should help, by instituting schemes of afforestation, foreshore reclamation, building harbours of refuge, etc. etc.

APPENDIX No. CXVIII.

STATEMENT OF EVIDENCE BY REV. DUNCAN CAMERON, MINISTER OF THE PARISH OF BRIDGE OF ALLAN (STIRLINGSHIRE).

CONDITIONS OF EMPLOYMENT IN THE COUNTIES OF INVERNESS AND ARGYLL.

1. A small proportion of the working classes in the country districts are shepherds and gamekeepers. The number of shepherds is decreasing, as farms are turned into deer forests. The number of gamekeepers and deer-stalkers is increasing for the same reason. Both the shepherd and gamekeeping class are well off, and are employed throughout the year—the amount of their work, of course, varying at different periods of the year. The great proportion of the working class in the country districts are crofters. A croft means a certain amount of arable land, varying from several acres to thirty. Along with the croft generally goes the right to pasturage on common hill grazing. The right is in proportion, as a rule, to the size of the croft. Generally speaking, the proceeds from the cultivation of a croft are not sufficient for the maintenance of a crofter and his family, and the crofter cannot be profitably employed on his croft the whole year round. He usually combines some other employment with the cultivation of his croft, such as road-making, work on the larger farms, work on the moors, and, along the seaboard, fishing. Labour on the croft is done throughout spring, summer, and autumn. It is during these seasons, too, that employment additional to croft culture can be got. The consequence is that the care of the croft is sacrificed, to a considerable extent, to the exigencies of employment. The winter for the crofter is more or less an idle time, and in many cases he runs into debt then and cripples himself for the future.

2. Where work external to the croft is obtainable, the crofter is fairly well off. Where there is difficulty in

getting work, and where the crofter has to rely upon the croft for the maintenance of himself and his family, his lot is a poor one. The crofter in Lochaber, for instance, can as a rule get work on the railway or on the moors, and he is comfortable. In the south of Mull work is not available, and the consequence is that the crofter and his family are poorly housed, poorly fed, and poorly clothed. At the same time, it would be a great mistake to suppose that the crofter is in a worse plight than the man who lives on the wage earned in casual labour in the great towns. The poverty in the crofting districts of Inverness-shire (mainland) and Argyllshire is not so debasing or so sordid as the poverty in some of the working-class districts of Glasgow.

3. The tendency for all crofters is to become discontented with their lot. The crofting system was suitable to a simpler age than ours. Wherever the modern standard of living among the working classes is accepted, the crofter becomes discontented with his lot. This is very marked in districts where communication with the South is good. But even in districts where the communication is not quite so good, *e.g.* Ardnamurchan, there is discontent with the life on the croft, and the younger generation are rapidly leaving the homes of their fathers. It is commonly supposed that it is education that is causing the crofter to look with disfavour upon his life on the croft. I am rather inclined to think that it is the spirit of the age rather than education that is responsible for this. Education is as well imparted in the Outer Hebrides as in Lochaber, but Lochaber is accessible to the ideas of the Lowland folk and the Outer Hebrides are not, to the same extent at least. In the Outer Hebrides the people are inclined to remain on the land; in Lochaber they are not.

APPENDIX No. CXVIII.—*continued*.

4. I am convinced that there is no future for the crofting industry in the Highlands. The inclemency of the weather and the poverty of the soil make it impossible for the crofter to win from the croft a living up to the standard of the ideas of his class in the Lowlands. As the crofter occupies a high place, morally and intellectually, among the working classes of this country, this fact will inevitably lead to depletion of the population in the Highlands.

I am aware that I have not answered directly the question as to the condition of unemployment in the Highlands. As a matter of fact, I do not think it could be answered directly, owing to the unique conditions of life there. To say that a Highlander is unemployed during the winter is not to say that he is in straitened circumstances. The question resolves itself into this: whether or not the conditions of existence are sufficient for a reasonably comfortable life. The exodus from the Highlands proves, I think, that in the estimation of the Highlander it is not.

5. There is no doubt whatever that the Crofters Act has been a great boon to the crofting community. Where the crofter has been able to amass a little money, he very often spends it on improving his croft, and, sometimes with and sometimes without the help of the proprietor, rebuilding or renovating his house. But even the improved holding does not attract his children. Well educated, of good character, of pleasant manner, and infected by the spirit of the age, they go to the South, and, as a rule, succeed very well there. Though holding somewhat advanced views on the land question, I confess I do not think that land legislation, even of the most drastic kind, would keep the crofter on the soil.

6. There are village communities in Inverness-shire and Argyllshire—e.g. Fort-William, Tobermory—where the villagers have small crofts, which they cultivate when not engaged in employment of any other kind. As a rule, this class of crofter is able to get work as an artisan or labourer, and is fairly well off. Being intelligent and energetic, when work fails him he leaves the village and gives up his croft altogether. The croft, in his case, however, is merely accessory, and not essential. In villages such as I describe there is the usual helpless residuum of weak and unenterprising men, who may or who may not have a small holding, and who are poor and ill-fed and ill-clothed.

7. Such communities as Oban, Grantown, and Kingussie are enriched by the stream of tourists and summer and autumn residents, and need not come within review. During the summer and autumn months many men in these places make sufficient money to keep them in comparative comfort during the remainder of the year. But it is not a desirable way of living, inasmuch as the money is too easily got, and makes an indolent life during winter and spring possible. In the tourist and summer resorts generally there is a good deal of money which filters into the hands of the whole population one way or another. Except when the season is bad, there is always a sufficiency of the means of existence in such places.

8. On the seaboard of Argyllshire—from such places as Tignabruaich, Ardrishaig—men go on to pleasure yachts during the summer and autumn months, and may earn in this way sufficient to keep them during the winter and spring months. Of course, in the Loch Fyne districts a large part of the population are fishermen. When the fishing on Loch Fyne and in the neighbourhood is good, the fishermen and their families are well off; when it is not, there is much distress.

9. There is what may properly be called industrial life in Ballachulish and Easdale, where there are slate quarries, in Kinloch-Leven and Foyers, where there are, or are soon to be, aluminium works. In Kinloch-Leven and Foyers advantage is taken of the great water-power available. In all these places the wage is sufficient, the people are comfortable, and the standard of living is good. The best hope of the Highlands, I am firmly convinced, lies in the direction of developing the use of the vast water-power now running to waste. I do not think it is possible to combine industrial with crofting labour. The industrial should have a plot of ground, but not a croft, which he has neither the time nor the skill to cultivate properly. Round these industrial centres the crofting industry might flourish, the crofter giving his time and energy to the cultivation of his croft alone. The crofter might make a fair living from the sale of the produce of the croft, provided it were sufficiently large, to the people of the industrial community. The development of industries such as aluminium would bring a new life into the rather stagnant existence in the Highlands. Afforestation also would employ a certain number of people, and certain

parts of the Highlands are adapted to the growth of timber.

10. My conclusions are:—

(1) That the future of the crofting industry is exceedingly doubtful, if indeed it is not doomed.

(2) That the livelihood provided by the croft is not up to the modern standard of living among the working classes.

(3) That when the crofting industry is supplemented by employment external to the croft, the crofter and his family are, as a rule, ambitious and enterprising, and the crofters of the younger generation almost invariably turn their thoughts to the South and leave the croft.

(4) That the best hope of maintaining a population, cultured and prosperous, in the Highlands, lies in the direction of making use for industrial purposes of the vast water-power in the North.

(5) That afforestation of land in the Highlands would provide a good deal of employment.

(6) That the combination of croft culture with lucrative employment outside the croft usually ends in neglect of the croft, and even in dislike of the culture of the croft; that in order to provide anything like a livelihood, the croft would require to be developed into a small farm, and that the crofter should give his undivided energy and attention to its cultivation.

SOCIAL WORK OF THE CHURCH OF SCOTLAND.

11. I understand that the Master of Polwarth is to speak in detail of the work of the Social Work Committee, of which he is convener. I therefore will confine myself to the statement of some conclusions at which I have arrived in regard to the operations of the Social Work Committee of the Church of Scotland:—

(1) That compulsion ought to be brought to bear upon lads whose present occupation and mode of life almost invariably lead to their becoming afterwards merely loafers and criminals. That the Church is more likely to reform these youths and set them on the way of a good and useful life than the State.

(2) That while it may be expedient to compel idle and vicious men, who cannot give a proper account of themselves and their prospects, to go into labour colonies provided and maintained by the State, it seems advisable that there should not be any compulsion used in getting them to go to labour homes and labour colonies provided and maintained by the Church. That should they be suitable and willing to go to church homes or colonies, they should be obliged to stay there until such time as it may be expedient to set them free; that the Church should not attempt, and is not qualified for, the management of labour colonies, intended to be more or less places of detention and forced labour for the habitual and incorrigible loafer.

(3) That there is a great field open for the peculiar work of the Church—that is, the restoration of character—among fallen and vicious women; that this work can be effectively done by means of agencies such as the Church of Scotland has at present in operation; that the apparently hardened and hopeless characters should be sent to colonies under the control of the State.

(4) That the relations of the Church and State in dealing with the vicious and unfortunate are exceedingly difficult to define; that it would be as great a mistake for the State to ignore the Church as for the Church to ignore the State in the matter; that, broadly speaking, a line of demarcation between their spheres of operation can be found in the distinction between the reform of character on the one hand, and detention, with a view to useful labour, of the idle and vicious on the other.

(5) That the experience of the Social Work Committee of the Church of Scotland shows that the labours of the committee have resulted in the reformation of character.

(6) That the question of character lies at the root of a considerable amount of the poverty in our great cities.

APPENDIX No. CXIX.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY MR F. M'CULLOCH CRAIG,
GLASGOW.

1. I am fifty-three years of age, and for over thirty years I have been an employer of labour as a stevedore, loading and discharging ships in the harbour of Glasgow. My father preceded me in the business.

2. *Unemployment.*—I should say there will be somewhere between 6000 and 7000 labourers about the harbour, and I consider unemployment is chronic as regards about one-half of them.

3. Several remedies might be suggested—for example, when night and day work is being done at a ship, the men

should be changed, *i.e.* the day men not being allowed to continue working through the night, and *vice versa*. This would permit a greater number of men to find employment.

4. I would further remark that were the whole of the labourage at the harbour in the hands of the Clyde Trust or the Corporation of Glasgow, in my opinion matters would be very much better than they are at present. There are, of course, other minor points that might affect unemployment.

APPENDIX No. CXX.

STATEMENT OF EVIDENCE BY MR CHARLES DOUGLAS, AUCHLOCHAN, LESMAHAGOW,
LANARKSHIRE.

1. The problem that confronts us in relation to the non-employment of the able-bodied poor is twofold. It presents two distinct aspects which it is fatal to confuse, and which yet cannot be considered quite separately.

2. There is, on the one hand, the lack of demand for labour, with its periodic aggravations.

3. On the other hand, there is an unemployable element in the population. There are, that is to say, a number of persons who are unfitted to maintain themselves, not by age, youth, illness, or accidental misfortune, but by moral, mental, or physical incapacity for labour.

4. It is disastrous, either in theory or in practice, to confuse these problems, or to treat them as if they were the same—to apply the same measure to those who are idle because there is an inadequate demand for efficient labour, and to those who are idle because they are inefficient. In the one case we are dealing with a difficulty which is primarily economic, while in the other case the problem is complicated by personal factors which lie outside strictly economic consideration, because they involve a departure from that normal reaction of human nature upon circumstances which economic theory postulates.

5. Yet it is necessary to consider these separate problems together. We see, when we examine them in detail, how closely they react upon one another. The problem of unemployment is, as has been said, fundamentally economic. On the other hand, in its actual occurrence it is determined by and has an influence upon the personal no less than the economic condition of the population. It is, no doubt, erroneous to regard unemployment as a mere effect of the inefficiency of the unemployed. On the other hand it is, broadly speaking, true that the incidence of unemployment is determined largely by the relative efficiency of the competitors for work. It is also true that the inevitable tendency of unemployment is to reduce the industrial efficiency of the unemployed persons.

6. Remedial or palliative measures to deal with unemployment ought to be so devised as to meet these aspects of the case.

7. It is scarcely open to doubt that the amount of unemployment in normal periods is capable of being very greatly reduced by better organisation. A well equipped system of labour registries, managed in such a way as to attract the confidence of employers and employed, and making full use of modern facilities for communication and transport, would greatly increase the mobility of labour and correspondingly reduce unemployment. Such a system appears, indeed, to be an essential part of the administration of an industrial community. Its cost would be insignificant in proportion to its advantages.

8. In times of trade-depression, due to lack of demand, such a remedy would no doubt be inoperative; and it is in such times that the real problem of unemployment occurs.

9. It is generally agreed that neither poor relief nor maintenance by charity properly meets the case of unemployment. They do not offer an adequate substitute for work; since, even apart from their effect on character, they do nothing to maintain the efficiency of the worker; and this objection applies also, though in a less degree, to any scheme of unemployment insurance. Any form of charitable maintenance is open to the objection that it confuses the case of the incapable with that of the man who, in normal circumstances, is not unfit to take a place in the economic process, but who is excluded from it by a lack of demand for labour.

10. It must be admitted that relief work, as now understood, is open, in some degree, to the objections which have been indicated.

11. There is an inevitable element of charity in all payment for work at rates which are in excess of the market value of its product; and it is not open to dispute that any relief work paid for strictly according to its value would fail to yield an adequate maintenance for efficient labour. It must be recognised, further, that many forms of relief work are likely, speaking generally, to impair rather than to increase the efficiency of all who engage in them, with the doubtful exception of purely unskilled labourers.

12. The justification for expenditure on relief works, in excess of the actual value of their material result, must be found in the obligation to maintain those who would otherwise be in want, or in the view that the public interest requires the maintenance of available labour in an efficient state, just as it requires the compulsory education of children, or the provision of opportunities of technical instruction at the public cost.

13. The justification which rests on the obligation to provide a maintenance is, of course, precisely that which warrants any other form of charitable maintenance; and a preference for relief work over any other form of relief must depend on its being cheaper, better for the character of the recipient, or less attractive, and therefore less likely to be taken advantage of needlessly. It is by no means certain that relief work is the cheapest form of relief, or that its influence on industrial character is better than that of other forms. It is quite evident that, in order to make it substantially less attractive than ordinary unskilled labour, its conditions must be such as seriously to impair the efficiency of the labourer. To make its conditions deterrent is inevitably to make them injurious, and to defeat an essential part of its object.

14. Relief work has, in point of fact, an object which differentiates it from mere eleemosynary aid. It aims at the maintenance of the labour which it employs in a state of industrial efficiency; and in so far as it attains this object it is a proper expenditure of national resources. Its title to a national support, which is not given to any form

APPENDIX No. CXX.—*continued.*

of poor relief, can only be justified by the specific national service which it should render in maintaining the efficiency of labour.

15. This is a service of most vital importance. We have seen that unemployment has a highly adverse influence on the efficiency of the unemployed; and we have also seen that, speaking generally, the labour which falls most readily out of employment is that which is least efficient, and which is therefore most likely to undergo deterioration in unfavourable circumstances. There is thus a very strong case for the encouragement of special precautions to maintain the efficiency of the unemployed. Their case forms the danger point of the efficiency of labour.

16. While the mere maintenance of the ordinary poor is left to the locality to which they belong, provision for the unemployed is increasingly recognised as a function of the central government. Experience shows the desirability of greater uniformity in the treatment of this problem than is likely to result from its being dealt with purely as a matter of local administration; and its issues are in reality national rather than local. The object of the central government in dealing with unemployment through local authorities ought to be to prevent it from degenerating into a form of poor relief with a labour test. It very readily assumes this character; and in so far as it does so it fails to remedy the evils of unemployment. When no better form of relief work than the usual unskilled labour can be provided, it is vital that, at all events, the character and efficiency of this work should be maintained. When the administrative difficulties of piecework are insuperable, efficient supervision makes it possible to grade the labourers in groups in such a way as to stimulate their energy. It is also, from this point of view, of the utmost importance to confine relief work to the capable and industrious unemployed.

17. If it be regarded, as it should be, as a means for the maintenance of efficient labour, only those should be admitted to it who can and do, in ordinary times, maintain themselves by their own labour; and the industrial record of all applicants for it should be carefully examined. No automatic check or deterrent can take the place of a thorough scrutiny of the persons admitted to relief work; and the admission to it of the incapable, idle, or unemployable is fatal to its utility in maintaining efficient labour.

18. It is desirable that all grants made by the central government for dealing with unemployment should be carefully restricted to such work as is really calculated to serve the purpose of maintaining industrial efficiency, and should not be devoted to the mere purpose of relieving poverty. In this way local administrators would be stimulated to develop methods of securing the essential objects of relief work in order to obtain state assistance in providing work for those who must otherwise be dealt with as ordinary paupers at the expense of the locality.

19. A period of unemployment might even, in many cases, be made an occasion for the re-education of those affected by it. In particular, it might sometimes be utilised to train them in rural pursuits. Some labour might in this way be redirected to work upon the land; and, in other cases, rural work might be usefully learned as a supplementary or subsidiary occupation. The improvement of transport from industrial centres gives an increased opportunity for the combination of urban and rural occupations; and this might substantially mitigate the incidence of unemployment, and especially of that which is seasonal in its character.

20. Both on account of the influence of the unemployables in aggravating unemployment and on more general grounds, active measures should be adopted for dealing with them. Charity and poor relief are useless to them, and merely aggravate their incapacity by enabling them to evade the necessity for exerting themselves. Their position should be so regulated as to give them, on the one hand, the utmost opportunity of becoming efficient producers if they can; and, on the other hand, if they fail to become fit for a place in the ranks of free labour, to reduce the burden which they lay on the whole community, and especially on the poorest of its efficient members.

21. In relation to unemployment and its periodic treatment, the unemployables create one of the greatest of practical difficulties. The task of providing for the unemployed who, in ordinary times, habitually and continuously live by their labour, is enormously complicated and confused by the presence, in any period of unemployment, of a large number of men who are not capable of so maintaining

themselves. Relief work not only confers on these men no permanent benefit; it becomes, from their employment in it, less useful to those for whom it is intended. But they not only make it more difficult to alleviate unemployment when it occurs. They tend to bring it about. They are constant uneconomic competitors for employment in unskilled labour. They do not maintain themselves by it. But they are, in greater or less degree, constantly driven to seek it; and their competition for employment by which they do not live is a factor that constantly tends to drag down the reward of unskilled labour. It depresses the standard of life at precisely the point at which it most needs to be maintained and at which its maintenance is most difficult.

22. The unemployable are a steady burden on the resources of the community. Whether they live by charity, or seek occasional refuge in the poorhouse, or in whatever way they obtain their livelihood, they are in point of fact being maintained. They receive a livelihood, for which no return has at any time been made to the resources of industry as a whole. But they are chiefly a burden upon the poorest people in the community. They belong or gravitate to the poorest class, and are often related to its industrious members. Poverty drives together those who may have nothing else in common. It compels them to live near to one another. It gives them certain common anxieties and common interests. The unemployables are largely maintained by the poorest wage-earners.

23. A society which fails to separate those who maintain themselves, however poorly, by their labour from those who make no return for their maintenance misses a distinction not only vital to its own well-being, but essential to a just consideration for its poorest members. That two classes so fundamentally distinct in their whole relation to society as the self-maintaining poor and the unemployables should be left to live under the same conditions and in habitual unavoidable association, is a sheer social misfortune. The unemployables are a danger to society as a whole. They are the curse of the poor. It is on all these grounds a vitally important object to separate from the industrial population those who are unemployable; and this must be accomplished by establishing labour colonies.

24. The institutions which we speak of as labour colonies, taken together, present a broad and diversified effort to deal with social difficulties. They aim at the segregation in industrial institutions of the "unemployable" or inefficient element in the population, at the provision of work and maintenance for those who are out of employment, at the restoration to industrial efficiency of those who, through physical or moral deterioration, have become unfit for labour, at the employment on the land of those who cannot maintain themselves otherwise.

25. To one or more of these various objects each colony addresses itself.

26. I need not recapitulate the list of colonies—some fifty in number—in which, in various countries, those objects are being pursued, or recount in detail the methods that are adopted.

27. But it may be useful to distinguish the colonies that exist according to the methods which they employ, in order to discover how the various types of colony relate themselves to the problems which confront us. The fundamental distinction which meets us on the threshold is that between free and compulsory colonies—between those into which a man enters and in which he remains of his own free will, and those to which he is sent by legal compulsion. This is a distinction which differentiates the whole methods and results of the institutions. It is also one which ought to govern their relations to the State.

28. Of compulsory colonies, perhaps no more typical instance could be studied than Merxplas, the "Beggars' dépôt" of Belgium. Merxplas is the colony to which those who have shown themselves incapable of industrial life are relegated for periods of from two to seven years. The Belgian law proceeds on the principle that vagrancy and begging—as proofs of industrial incapacity—are a social danger requiring repression and treatment. It provides for this purpose five colonies, two for women and three for men. Of the colonies for men, two at Hoogstraeten and Wortel form a "House of Refuge," where men are sent on first convictions for vagrancy, and where, also, infirm paupers are provided for. To Merxplas those who have become habitual beggars—the idle, the disorderly and those incapacitated by alcoholism—are sent to be subjected to the discipline of labour under strict control and regulation.

29. Merxplas is thus a great community of 5000 men who have, for the time at least, proved themselves incapable of

APPENDIX No. CXX.—*continued.*

employment. Its colonists are there because they have been adjudged unfit for free industry. They work, under close supervision, at various tasks—metal work, carpenter's work, the making of mats, tiles, cow hair yarn, and boots, and a variety of other occupations. A large, well-managed farm employs nearly 1500 men. The industrial part of the work is highly successful; and it provides, on the one hand, for the most economical maintenance of 5000 men who would otherwise contribute nothing to the cost of their own livelihood; while, on the other hand, it prevents the deterioration and loss of skill which idleness, either at large or in a work house, brings with it. Utilisation of all labour is the principle of the colony. Those who are fit for no other occupation drive great wheels, which are made to do duty for mechanical power. The whole industry of the colony is as self-sufficing as it can be made. The food of the colonists and materials of manufacture are produced as far as possible on the farm. The fabric and maintenance of the colony are almost entirely the work of its inmates. Superfluous products are utilised by State departments. Buying and selling are reduced to a minimum.

30. Encouragement is given to those who are industrious by small wages, which are paid in a token currency, and may be spent on such luxuries as tobacco and white bread.

31. Two facts stand out in the results of the Merxplas colony. The physical condition of the inmates is much better than it would be outside the colony, and they work with greater vigour and interest than would naturally be expected.

32. On the other hand, of those who enter the colony only a small number ever return to the free life of the community. If they escape, their custodians are not perturbed, since the cause which brought them there once will bring them back; and if not, so much the better. But 90 per cent. of the inmates of this great sinister scrap-heap of human life are habitual and hopeless inefficient.

33. It does not need to be pointed out that an institution of this type serves no direct purpose in relation to unemployment, and plays little part in the restoration of its individual inmates to a place in society. It does maintain, with the least possible cost and injury to society, and in a fair degree of physical comfort, those who have failed to support themselves by free labour.

34. Of Free Colonies the principal development is that which has taken place in Germany since 1882, under the inspiring influence of the venerable Pastor von Bodelschwing. The German labour colonies are, in principle, institutions of Christian charity for the relief and restoration of men who have lost their power to maintain themselves, but who are able-bodied and willing to work.

35. They aim primarily at the moral elevation of the colonists. Their discipline is maintained by no punishment except dismissal. They are subsidised by grants from provincial governments and municipalities and by private donations. The average number of colonists is about 4000; and their periods of residence range from a few weeks upwards, a considerable proportion remaining for periods longer than a year. There seems to be a growth of opinion among those who conduct the colonies in favour of retaining some, at all events, of the colonists for long periods. This is a natural outcome of the fact that no less than 60 per cent. of the admissions in each year are of men who have already been inmates of a colony, while upwards of 10 per cent. are of men who have had to seek refuge already more than four times.

36. It appears from all this that these colonies are actually engaged in the task to which they already set themselves—that they are giving an opportunity of returning to industrial life, to men whose characters imperil their position as free workers.

37. Amid many diversities certain characteristics belong to all these voluntary colonies.

38. They are, to begin with, genuinely free institutions in their whole management and tendency. Beyond the order and discipline necessary for their efficient management, and the performance of a reasonable amount of labour, they require nothing from their inmates.

39. They maintain, in the face of all difficulties, an atmosphere of hopefulness; and they rely for their result on persuasion and encouragement. Such institutions depend for their whole success on the inspiration and personality of the men who preside over them. The direction of each colony is in the hands of a House Father, carefully trained for the duties of his post; and all who have seen anything of the German colonies unite in their admiration of the

House Fathers, whose unremitting labours keep alive the spirit of their institutions.

40. Among the Free Colonies we find a broad distinction between two groups—a smaller group of Town Colonies, of which the chief are in Berlin, Hamburg, and Magdeburg, and a larger group of farm colonies scattered throughout Germany.

41. The Berlin colony is a typical example of the former group. Founded in 1883, it is capable of accommodating about 140 inmates.

42. Its principal object has been to employ men out of work; and it has, of course, been found very difficult to do this, in town conditions, without competing with ordinary employment. Straw-work, mat-making, brush-making, and simple joiner-work have all been tried; and firewood splitting occupies those who can do nothing else. In this colony the practice is to charge each inmate a small sum for his maintenance (5s. 3d. per week), and to pay him a small daily wage (rising from 6s. to 12s. per week), as an inducement to industry. The wages paid are, usually, accumulated to give the colonist a fresh start in life. The colonists are for the most part townsmen, and the great majority are unskilled labourers. A considerable proportion of those who come to the colony come as the result of drunkenness.

43. Among farm colonies two types must be distinguished, which are organised to carry out somewhat different objects.

44. There is, in the first place, the ordinary farm colony which exists in order to receive men who have become incapable of self-support, and to restore them to the ranks of industry as soon as possible. Of this set of colonies that of Wilhelmsdorf, Bielefeld, is a typical example.

45. This colony, which was founded in 1882, is in fact the prototype of voluntary labour colonies. Its inmates are employed in labour on the land and in the maintenance of the colony itself. Apart from ordinary agricultural work, they carry out, on a large scale, the work of land reclamation by spreading a subsoil on the surface soil of a peat moss.

46. A large proportion of the colonists—perhaps 60 per cent.—are men who, at one time or another, have been imprisoned; and a proportion, probably as great, have been debilitated by alcoholic excess. Under the influence of the House Father the spirit and discipline of the colony are admirable. But its practical difficulties are very great, and are representative of those of Free Colonies as a whole.

47. These institutions, in serving the purpose for which they are intended, inevitably contain a very large proportion of men who, if not actually belonging to the criminal class, are but little removed from it. These men come to the colonies, as a last resort, weak, dispirited, and demoralised. A long time must pass before they are actually capable of maintaining themselves. Many of them, however, weary of the labour and discipline of the colony before they have even reached that point. Others return to ordinary labour as soon as they have become capable of remunerative employment. In these circumstances, and with the additional fact that admission to colonies is most sought after in winter when farm labour is difficult, the average cost of a colonist's maintenance is much greater than the average value of his labour. It is a further result of the short average stay of colonists that only a small proportion (perhaps 20 per cent.) seem to be permanently benefited by the fresh opportunity that is given them of returning to self-supporting labour.

48. It is probably this last fact which has led to the formation of a farm colony of another kind in Schäferhof. This colony, which is in close connection with the Hamburg Town Colony, differs from other voluntary farm colonies in endeavouring to retain its inmates for much longer periods instead of returning them as quickly as possible to the open labour market. It encourages colonists to contract for a two years' residence; and the average stay of last year's inmates, including newcomers, was well over eighteen months each. The object is not to replace men in the circumstances in which they have previously failed, but to re-establish their character by a prolonged discipline, and to give them a thorough training in agricultural work to fit them for country life. They are kept constantly and closely at work; but good provision is made for their recreation; they are encouraged to work by such wages as they can earn; and they are promoted, as they improve their position, from the larger dormitories to rooms where they have greater privacy. In particular, they are treated with very great consideration and confidence. The result of all this appears in the working of

APPENDIX No. CXX.—*continued.*

the colony. The longer residence and better average experience of the colonists makes for a much higher level of agricultural work than is possible when a very large proportion of the men employed are new to their work, and debilitated by alcoholism or by prolonged and recent poverty.

49. Schäferhof is an actively conducted farm—specialised for dairying and pig-breeding, but carrying on general agricultural operations. Its colonists profit by its vigorous and successful management; and their prolonged stay enables them really to acquire a new occupation. More than half of them have previously been unskilled labourers, while the rest belong to various trades. Those who have special trades practise them so far as the needs of the colony require. For all alike the work of the farm and of land reclamation is the staple employment.

50. It is not surprising that in its eight years of work Schäferhof should present a satisfactory record, though the maintenance of labour which cannot be usefully employed in winter makes financial profit impossible here as in other farm-colonies.

51. The great majority of the Schäferhof colonists—upwards of 80 per cent.—are, or profess to be, single men, while almost all the rest are widowers, or are divorced or separated from their wives. It is evident, indeed, that no colony conducted on such lines as Schäferhof can, in any but most exceptional circumstances, admit men who have family obligations.

52. An attempt to provide, on somewhat similar principles, for families, is carried on in the Dutch colonies of Willemsoord and Frederiksoord, which were established in 1818. In these colonies men who have been for the most part unskilled labourers, and who have failed to support themselves, are first established as labourers, in separate cottages. They work on the colony farm for small wages; and after a period of probation they are promoted to be “free farmers,” cultivating small holdings of about six acres on what is practically a life tenure, subject to good conduct. They pay a small rent, and also repay in annual instalments the cost of the stock which is supplied to them on credit. The farms on the whole are in good condition, and the debts of the farmers to the colonies are diminishing. On the other hand, the colonists are not self-supporting, and their condition is unprogressive. The opportunity given to them of entering on agricultural work does not lead them to seek a larger sphere outside the colonies. The net result is that, at some cost to the Dutch public, a certain number of men who have failed as unskilled labourers are maintained by a subsidy as small farmers. But the colonies do nothing to restore those who enter them to a position in free industry.

53. It appears, from a general view of free labour colonies, that the circumstances which call them into existence are such as to prevent them from being, even approximately, self-supporting. They are, in their actual working, institutions to deal with labour which is relatively inefficient, and which returns to the outside labour market whenever it becomes really capable of self-support. Their help is most necessary at the time of year when it is most difficult to employ labour with advantage. They are thus not profitable organisations of labour. Their employment of it is to be regarded either as relief employment or as a discipline for the restoration to industry of men who have for the time ceased to be self-supporting.

54. It appears from this general description of labour colonies that we must recognise under that name two distinct types of institution, which ought to be considered separately. We need not differentiate them according to their industrial character, which, from the point of view of their social effect, is of secondary although considerable importance. We define them, rather, in their bearing upon the character and future of their inmates, and find in this the fundamental distinction between them. That distinction lies in their relation to the will of the colonists. For when we examine the work of labour colonies we have left the field of economic action. We are considering that which economic theory deliberately excludes—labour which is incapable of maintaining itself. We are aiming at that which lies beyond economic calculation—the modification of character. We need not, therefore, make the industrial distinction between labour colonies our chief consideration. We consider them as institutions related to the will of their members.

55. Here the very plainest division immediately presents itself—a division which is morally fundamental. For some colonies are compulsory while others are free.

56. There is all the difference in the moral world between an institution which a man enters of his own accord—even if physical need be his reason for doing so—and one to which he comes at the bidding of the law; and the difference is not merely formal or imaginary. In point of fact it pervades the institutions. They take their character from the basis on which they rest. They maintain, throughout their administration, the same relation to the will of those with whom they deal which they originally had. I do not believe that it would be possible to find better administration than exists in such institutions as the Belgian Colony of Merxplas, or the similar institution of Rummelsburg, near Berlin. Firm, careful, humane, the governors of those great institutions do all that can be done by officials for the welfare of those who are committed to them. But within the whole admirable system of administration is the hard central fact of compulsion.

57. The inmates are brought by compulsion, and kept by compulsion. Punishment lies behind the whole discipline. Obedience rather than consent is sought. Incessant watchfulness pervades the moral atmosphere. This is inevitable. It is not possible to alter the compulsory character of a compulsory institution, nor to carry on its work by methods alien to the principles on which it rests.

58. In the free colonies all this is different. Here there is no compulsion. Men come of their own accord. They come because they have found the outer world, for the time at least, too much for them. Fault or folly or misfortune, or the common combination of all three, has driven them to take shelter. As they have come freely, they remain at liberty. If a contract, or a debt for necessary clothing holds them, it is legally a flimsy bond. They are in reality bound only by their consent to stay. Even the discipline of the house is supported by no punishment. If a man will not work, or if he will not be orderly, he goes. But while he remains he obeys freely. No force is used except persuasion. Instead of watchfulness, there is confidence—confidence carried to the utmost possible limit, and sustained by constant hopefulness. This method of administration is only possible in free colonies; for where compulsion begins there confidence and persuasion end. The methods are not merely different, but opposite. The fundamental distinction between the types of labour colony—the free and the compulsory—is in the relation which they respectively bear to the development of free action and self-respect in their inmates. It follows from this that they are adapted to quite different purposes. They are not interchangeable institutions. They are fitted to deal with essentially different cases.

59. In so far as labour colonies are to be regarded as curative or restorative institutions, designed to bring back to efficiency men who have lost their place in industrial life, they ought to be so conducted as to give the utmost possible encouragement to free effort and the largest scope to personal liberty, and to make the least possible inroad upon self-respect and the sense of responsibility. These are, in the end, the only forces on which we can reckon for improvement in men who are on the verge of becoming unemployable. Any discipline which fails to develop them, or which makes inroads upon them, defeats the object of qualifying men for a future life of free labour. Freedom, no less than labour, is an essential part of the curative treatment of the man who has for the time become unemployable.

60. On the other hand, there is a point at which compulsion becomes the inevitable duty of the State. The interests at stake are too large and too vital to be indefinitely sacrificed to the uncertain hope of reforming by persuasion men who have continuously failed to support themselves by labour; and when freedom has failed, and compulsion comes in, all the resources of humane administration can only temper and not obviate the use of compulsory methods.

61. Compulsory labour colonies have become an essential part of the administration of an industrial State. They offer the only possible means by which society can be protected against the sinister influence of the unemployable population which forms an element in every industrial community.

62. The first steps must be to prevent by law every form of begging, vagrancy, and mendicancy, to investigate the means of livelihood of the constant procession of small offenders, and to exclude from ordinary poor relief and transfer to labour colonies men who are physically capable of labour. In this way, we should reveal at once the unemployable members of the community, and in labour colonies where they would make some contribution to their

APPENDIX No. CXX.—*continued.*

own maintenance, they might be detained for specified periods with great advantage to themselves and their neighbours.

63. Such institutions as these would inevitably be compulsory labour colonies, with legal restraint and legal compulsion as the basis of their organisation and discipline. They would provide for the finally unemployable person with the least possible hardship to himself compatible with the general welfare.

64. It ought to be recognised that commitment to compulsory labour by the State is society's last resort in dealing with those who are habitually incapable of maintaining themselves—a resort only to be adopted when their free life and labour have become inconsistent with the public interest. But while compulsory labour colonies are thus the final stage of industrial failure, they should still, so far as their character permits, be reformatory in their tendency. They ought to maintain the industrial efficiency of their inmates. They ought to establish (as is partly done in Mexplas) a rigid classification and separation of those who are committed to them, so that the young and the first offenders shall not have their chance of recovery finally destroyed by contact with the habitually idle and vicious.

65. They ought to provide some gradation of treatment, so as to encourage every impulse to greater industry ; and they should be so administered as to allow men to return to free labour whenever there is reason to hope that they may do so with success.

66. But, when all this has been done, the compulsory labour colony remains no more than a cheaper and more efficient type of poorhouse prison for those who are capable of labour under compulsion, but cannot maintain themselves at liberty. It remains true that, in the vast majority of cases, reclamation of character ends where compulsion begins, and that institutions to which men are sent by compulsion, and in which they are governed by compulsion, offer only a slight and fugitive hope of returning them, as capable workers, to the industrial community.

67. It follows from this that other institutions are required to supplement the work of Compulsory Labour Colonies—institutions designed not to detain the inefficient, but to restore their capacity for labour, and to give them a fresh opportunity of regaining a place in society. If we were provided with such institutions, they would form a refuge for those who, having by fault or misfortune failed to maintain themselves, were willing to make an effort to return to free industry rather than be consigned to compulsory detention and labour.

68. In this aspect free labour colonies are to be regarded as, in a broad sense, educational. They may not only give an opportunity of physical and moral recuperation, but may also help men who have become inefficient through failure to adapt themselves to industrial change. They may give to such men an opportunity of equipping themselves anew for self-support by learning a new occupation.

69. In particular they may do something to enable men to return to rural occupations, and to seek a new career in them either at home or, still more hopefully, in our

agricultural colonies where there is a demand for their labour. It is in this direction that some existing labour colonies find the best outlet for the men whom they train.

70. There are many reasons for this kind of training. There is, to begin with, a good demand for agricultural labour ; and experience goes to show that even town-bred men—more particularly labourers—can be made useful farm workers within a reasonable time. Many of those who have become unemployable, for a time, are men who cannot make headway against the difficulties of town life, but who may more easily maintain themselves in the simpler conditions of the country.

71. Free Labour Colonies may do, perhaps, their best work in redirecting labour that has fallen out of efficiency in town to the life and pursuits of the country ; and they may usefully turn to account periodic crises of unemployment by taking the opportunity, which these occasions offer, of giving a training in rural work.

72. It is for this, among other reasons, that farm colonies are to be preferred to town colonies. But this preference is also to be justified on more general grounds. The open air work of the country is more recuperative than the employment in workshops which town colonies offer. Many men have become inefficient and demoralised partly through the strain of town life. It is an even more important matter for the effectiveness of labour colonies that the conditions of country life afford the most natural opportunity for that free and confident treatment of colonists, without which the best results can never be obtained.

73. It remains a difficult practical question how labour colonies may best be administered. Compulsory colonies must essentially be State institutions. They ought to be directly managed by a public authority ; and their administration ought to be kept in close association with that of the prisons. Specialised as they must be to deal with a type of industrial failure not equally prevalent in all districts, and having for their primary object not the relief of their inmates, but the advantage of the population generally, they should be provided and administered not by local authorities, but under a department of State ; but whether they should be administered by local or by central bodies, or by both together, they require an authority in their administration, and a stringency in their discipline, which can only be secured under statutory provision and by public control. They must be regarded as an essential part of the government of an industrial community.

74. With free colonies it is otherwise. Their essential function is reclamation. Their essential methods are persuasion and encouragement. But these are not to be best attained in State institutions. The State should encourage free colonies, subsidise them, utilise them as alternatives to its compulsory colonies, or as places of probation for those who are unemployable, but who seem likely to surmount their failures without compulsion. But their effective management calls for methods which cannot be secured through direct State action. They depend for their usefulness on the moral impulse of those who conduct them, and on religious influences by which the spiritual life of their inmates may be roused to the task of reformation and reinstatement.

APPENDIX No. CXXI.

STATEMENT OF EVIDENCE BY MR J. G. DUNLOP, JOINT MANAGING DIRECTOR, MESSRS JOHN BROWN AND COMPANY, LIMITED, SHIPBUILDING AND ENGINEERING WORKS, CLYDEBANK.

1. There are over 8000 workmen employed by the company at the present time.

2. On looking over a considerable period of time, I have to inform you that there has been no general unemployment in connection with this establishment for a number of years, and the same may be said of the other large establishments in this district.

3. A large number of the workmen employed here do not reside in the locality, and when, through scarcity of work, we are compelled to dispense with the services of a number of our men, we make it a point, so far as practicable,

of retaining those who reside in the district ; so, confining my remarks to this district alone and to the period under review, I would state as follows :—

(a) The extent of the unemployment and the numbers involved have been comparatively small, and the classes are shipyard workers, *i.e.* boiler-makers, engineers, carpenters, joiners, mechanics in general, and labourers. A percentage of our workmen have, at times during progress of contracts, been unemployed, but such unemployed should be termed periodic.

APPENDIX No. CXXI.—*continued.*

(b) The chief cause of unemployment, when existing, is, of course, general depression in trade, also old age and strikes; there are also a considerable number of men who are irregular at their work, the causes being sickness, and probably intemperance, and in the case of those employed out of doors, bad weather.

(c) Unemployment, at all times, has a demoralising effect, and when prolonged, men lose heart, the results being wretched homes and destitution.

(d) The Unemployed Workmen's Act is not in operation here.

4. In the case of tradesmen who are getting up in years and unable to turn out as much work as younger men, I would point out that they are debarred from accepting

work at a less wage than the minimum allowed for an able-bodied man; and if this restriction was withdrawn, it would have the effect of keeping many elderly men from being ranked among the unemployed when trade is good.

5. The Workmen's Compensation Act, which is at present a heavy burden on many employers of labour, and will be more so when the amended Act comes into force, should certainly be taken into consideration, as employers demur to employ old men and those having physical defects; and had the Act provided for these men (in the case of accidents) being only entitled to compensation on a reduced scale, I may say there would not have been the same hesitation in employing them, whereas at present these men form a considerable portion of the men who have difficulty in finding employment.

APPENDIX No. CXXII.

STATEMENT OF EVIDENCE BY MR W. GORDON, TOWN CLERK, ABERDEEN.

UNEMPLOYMENT.

1. The amount of unemployment in Aberdeen has been on the increase during the last few years. During the past winter (1906-7), the number of persons who registered themselves at the Distress Committee's Labour Bureau was over 1200. This figure, however, does not by any means represent the total number of those who were out of work.

2. The majority of the unemployed are unskilled general labourers, but there is also a large number of artisans belonging to the building trades who are unable to find employment at the present time.

3. With regard to the labouring class, the period of depression extends from November to April, as a rule. In the case of those employed in the building trades the amount of work available has been steadily decreasing for the last three years.

4. The result of this depression, which is common to most branches of trade in the city, has been that a large number of the better skilled tradesmen have emigrated,—chiefly to Canada and the United States—over 900 having emigrated from Aberdeen during the past winter.

5. I am unable to supply any information in regard to the working and results of the Unemployed Workmen Act, as the administration of the statute has not come under my observation.

6. Appended is a list of the works which have been carried out by the Corporation for the relief of unemployed workmen, from 1893 to 1904.

LIST OF WORKS CARRIED OUT BY THE CORPORATION OF ABERDEEN FOR THE RELIEF OF UNEMPLOYED WORKMEN, FROM 1893 TO 1904.

		Cost.	
1893	Laying out Public Park . . .	£1501	4 6
	Construction of reservoir . . .	596	10 4
1894	Laying out Public Park . . .	218	16 6
	Construction of reservoir . . .	762	0 0
1900	Re-dressing granite footways . . .	544	1 7
1904	Construction of new road . . .	583	16 4
	Pitching along sea beach . . .	552	13 4

APPENDIX No. CXXIII.

STATEMENT OF EVIDENCE BY MR ALEX. GRACIE, FAIRFIELD SHIPBUILDING WORKS, GOVAN, GLASGOW.

1. I regret that personally I am not able to give much information on the subject of the "unemployed," but, from my experience in charge of large works, I would like to make the following remarks:—

2. *Unemployment.*—With regard to the question as to the connection between the extent of overtime and unemployment, I beg to say that overtime is not chronic, but only periodic, to enable contracts under definite stipulation as to time to be fulfilled. Employers do not have overtime if they can possibly avoid it, on account of the higher rates to be paid, which are not contemplated in the estimate of cost.

3. There are two chief causes operating towards unemployment:

(1st) That trades unions, by fixing a minimum

rate of wages, make it necessary to engage only such men as can reach a certain standard of work equivalent to the wages to be paid, thereby leaving out men who either by age or incapacity are unable to reach that standard. If employers were free to engage men and pay them according to what they received from them in work, there would be many employed who are at present out of work, and who formerly could obtain employment up to their ability; and who, before trade unions became so aggressive, did have more or less regular work.

(2nd) Employers' liabilities have so largely increased through the Workmen's Compensation Acts that they are unable to give employment to men who are even slightly below the full standard of efficiency either by reason of age or physical defect.

APPENDIX No. CXXIV.

STATEMENT OF EVIDENCE BY MISS AGNES HUSBAND, MEMBER OF DUNDEE DISTRESS COMMITTEE, DUNDEE SCHOOL BOARD, AND DUNDEE SOCIAL UNION; LATE MEMBER OF DUNDEE PARISH COUNCIL.

1. I beg to say that apart from an intense interest in my own class, having lived in close contact with the people most affected by unemployment for the past twenty years, I served a three years' term as member of the Parish Council, am an adopted member of the Distress Committee, and have been a member of the School Board for the past year, also a member of the "Dundee Social Union," and was one of the committee of inquiry into the social and industrial conditions of Dundee, and can testify to the conscientious manner in which a most exhaustive investigation into these conditions was carried through and embodied in a perfectly authentic "Social Union Report."

UNEMPLOYMENT IN DUNDEE.

Extent.

2. The full extent of unemployment in Dundee cannot be gauged with any exactitude by members of Distress Committees. Skilled workmen very rarely register with the Bureau, though it is known that during the months from October till March inclusive, the acute period, large numbers of these were idle in 1905-6, which marked the beginning of a reflux from a rather lengthened spell of dull trade, so the 740 registered during that time represented mostly unskilled labour, just as in 1906-7, with the reflux to really good trade, the acknowledged condition for the past year, the 567 registered were mostly the same class. Chronic I should say as to lack of work, though periodic as to individuals.

Causes.

3. There are several minor causes, such as "dull trade," "wages disputes," "losing work through sickness or misadventure." But the main two causes are due to local conditions of work, which demands a preponderance of low-paid labour, such as "women and girls," "boys." The women's wages, approximating to the lowest men's wage, forms not only a competing factor in regard to wages, but also excludes them from many suitable processes of work.

Effects.

4. These are extremely far-reaching and of vital importance. Even in a year of good trade it means an

army of children underfed and in winter insufficiently clad. It means the children uncared for even if the mother is able to earn enough money for food, and the result is a steady increase of backward and truant children, hampering the cause of education. Through stress of condition the parents are forced to seek exemption either for full or half time in very large numbers, and the need is so apparent that the School Board cannot refuse. The increase in number exempted in 1906 was 609, and in 1905 was 446. These in the case of boys, while relieving the parent at the moment, soon become the same competing factors as the woman, but with a worse feature—for the man at eighteen or twenty is required in much smaller numbers. The surplus gets shunted on to the mass of casual labour, and becoming dependent on women through the prevalence of immature marriages, rapidly degenerates to the unemployable; while the girl, disadvantaged from the first, becomes the ignorant, incompetent mother.

Remedies.

5. Outside the Distress Committee the most potent remedy would be to better regulate the conditions of work by a general shortening of the hours of labour, and a still further shortening during a dull period so as to keep the greater number employed.

6. The vital drawback to the Unemployed Workmen's Act is the want of funds. A legally constituted Board required to do vitally important work with the mere cost of its machinery assured, finds itself—but for the provision of appeal for assistance to the Town Council, which may or may not be in a position to respond—in an extremely helpless condition. Fortunately the Dundee Town Council had the opening of new streets under consideration, and were willing to assist the Committee as far as possible in providing the work. But it was felt that the Town Council, when there was great need, had done as successfully the same thing without the new machinery.

7. Two outstanding facts about the working of the Act are—

- (i.) That the unemployed and the unemployable are not one and the same thing, very few indeed of the latter having made application for work; and
- (ii.) That there exists a genuine desire for work.

8. The one really good result of the Act is in establishing the right to work.

APPENDIX No. CXXV.

STATEMENT OF EVIDENCE BY MR JAMES M. JACK, GENERAL SECRETARY, ASSOCIATED IRONMOULDERS OF SCOTLAND.

UNEMPLOYED.

The Cause of Unemployment.

1. In my opinion unemployment is largely due to—

- (1) The influx from the country to the industrial centres.

Suggested remedy.—An extensive measure of land reform, whereby this influx might be stayed, and that men accustomed to working on the land may be induced to go back to the land. Further afforestation of waste land, as also reclamation of foreshores.

- (2) Displacement of labour by machinery, the speeding-up process, and the general increase in methods of production.

Suggested remedy.—A curtailment of the hours of labour to, say, eight per day, which would have the effect of spreading the work over a greater number of people.

- (3) The periodic and systematic working of overtime.

Suggested remedy.—That the curtailment or abolition of overtime should be the aim of employer and employed, and thus bring about a more even distribution of work. Both parties declare against it, and in the different localities by conferences it could be put down, as it is cruel to see men for six or eight months in the year that may be working *double time*, and for the remainder of the year aimlessly walking our streets, and which is true, while in almost every instance the money earned by working overtime is ill-gotten gain, and does not benefit as it should—in short, it may be termed seasons of hunger and burst, upsetting the habits of people entirely, and in too many instances tending from intemperance to debauchery, and next in order to unemployment, and latterly to unemployables. Of course it will be said employers want to take all out of their running

APPENDIX No. CXXV.—*continued.*

plant possible, but the system is degrading, and to my knowledge fills our streets with the unemployed. Hasten slowly would be better, as it would be a spreading of all the work.

The Working of the Unemployed Act.

2. So far as my knowledge goes, this Act has not been a success, largely due to the inherent faults in same; as, for instance, while a committee may acquire land by purchase or leasing, by rating with the sanction of Local Government Board up to 1d. per £ of rental, and through its power of rating, borrow money for this purpose.

3. But they cannot apply any of the money to pay wages

to the unemployed; and this is a remedy desired, as the voluntary contributions cannot be found to pay wages, and it is a mistake to have to lean upon voluntary effort.

4. Then there is the question of emigrating the unemployed with their families, the cost of which I have heard stated to be in Glasgow something like £25, 10s. per family. I am not in favour of emigration, as those looked upon as eligible are not the class we want to get rid of, they being the desirous-to-work class, while the wasters are refused when they apply.

5. Emigration, in my opinion, is the most futile, while the most costly, of all schemes. Better to give powers to spend money in experimenting and paying wages for, say, market gardening and other such schemes.

APPENDIX No. CXXVI.

STATEMENT OF EVIDENCE BY MR WM. LONGAIR, LORD PROVOST OF DUNDEE.

DISTRESS DUE TO UNEMPLOYMENT.

Extent of Distress due to Unemployment.

A. Numbers, Classes, and Character of Persons Affected.

1. In all, 635 persons—625 males and 10 females—applied during the year, from 15th May 1906 to 15th May 1907, to the Dundee Distress Committee for employment. It is believed that this number does not really represent the extent of unemployment in the city, for the reason that Dundee is an industrial centre, where employment is found in mills and factories for a large proportion of female workers, who may be to a large extent the wives and daughters of the temporarily unemployed. The applicants were mostly of the casual labouring class, although a considerable number are ordinarily employed as masons' or bricklayers' labourers, a class which commands a fair wage while in employment. The building trade is somewhat depressed at the present time, and, consequently, a considerable number of these labourers are idle.

B. Period of Duration: whether Chronic or Periodic, &c.

2. In my view the question of unemployment is more acute in the winter season than in the summer time, when out-door labour is usually more plentiful.

CAUSES AND EFFECTS OF DISTRESS DUE TO UNEMPLOYMENT.

3. The untrained labourer usually lives from hand to mouth, and, unless he has the female members of his family to fall back upon in times of distress, he must seek relief from philanthropy or the Parish Council. The effect of such a state of matters usually is that the furniture in the household is sold to supply the necessary means of livelihood; then usually follows the removal to a lower class of dwelling-house, and if the period of unemployment be unduly prolonged, the poorhouse is the usual resort.

4. Among the unemployed who registered at the Dundee Labour Exchange were several men who were well qualified labourers. A selected party of twenty were sent recently to the Loch Leven Water Power Works at Ballachulish, and the contractor, Sir John Jackson, Limited, wrote to the Town-Clerk, under date 15th July 1907, as follows:—

"We have tried unemployed from several towns, and in most cases they have only stopped a few days, and proved quite unsatisfactory. We are, however, glad to say that up to the present your men are the best 'unemployed' we have had, and if in the course of another week or ten days we find they are still going to be satisfactory, we will ask you to send us another 40-50."

It is right to say, however, that the majority of these men left the works two or three days after their arrival and never returned, giving as the reason for their leaving that they were not provided with proper accommodation or proper food supplied.

REMEDIES FOR DISTRESS DUE TO UNEMPLOYMENT.

A. Special Work provided by Municipalities prior to the Unemployed Workmen Act.

5. For many years prior to the passing of this Act the Town Council of Dundee found work for large numbers of the periodic unemployed in such work as making new streets, sewers, breaking road metal, and other similar work. In this way the Town Council was able to confer a vast amount of benefit upon people in need of work. So much so was this the case that it is believed the Town Council were able, before the passing of the Act, to provide in a better manner, and at less expense, for the relief of the unemployed than under the somewhat cumbrous procedure now necessary under the Unemployed Workmen Act. As regards the work of making new streets, it is not thought that more of this can meantime be done, as already the streets are many years ahead of present requirements.

APPENDIX No. CXXVII.

STATEMENT OF EVIDENCE BY BAILIE J. H. MARTIN, J.P., VICE-CHAIRMAN OF DUNDEE DISTRESS COMMITTEE; MEMBER OF DUNDEE TOWN COUNCIL, ETC. ETC.

1. I am a Justice of the Peace, a member of the Dundee Town Council, have held office as a Magistrate for a number of years, am Vice-Chairman of the Dundee Distress Committee, am President of the Dundee Gospel Temperance Union (formed 1838).

EXTENT OF UNEMPLOYMENT.

2. From 31st October 1906 to 25th March 1907, 567
429—IX.

enrolments were made at the Labour Exchange, viz.—

(1) Unskilled labourers,	559
(2) Tradesmen,	8
Total,	567

As showing the extent to which those applying one year recur again the next, it may be noted that our last

APPENDIX No. CXXVII.—*continued.*

year's total enrolment was 779. Of this number 336 are again enrolled in the above total of 567. Then, again, of these 336, no fewer than 114 had work from the Distress Committee last year. It has been found that not a few of the unemployed have withheld their names from registration this year owing to their having discovered that only urgent cases could possibly be dealt with.

3. The cases are periodic :—

559 were idle from 1 day to 6 months,
8 " " 1 week to 3 months.

4. In addition to the above, concurrent unemployment (not enrolled) may be cited :—

- (1) Women workers—casual labour.
- (2) Artisans—according to season and nature of trade.

CAUSES OF UNEMPLOYMENT.

5. Of the 567 enrolled, the following causes were given by the men themselves :—

Dull trade, ...	400
Disputes as to wages, etc., ...	59
Sickness and bad health, ...	100
Slept in, and had places filled (millworkers), ...	8
Total, ...	567

6. Of the 400, a considerable number are sure of employment at the harbour during the busy months there.

7. From my experience in the J.P. Court, as also my knowledge in general of the social conditions of the people, I would add that unemployment is not unfrequently caused by intemperate and lazy habits.

8. The abundance of female employment in our mills, etc., has a tendency towards creating a class of idle men (husbands of the workers), who quickly avail themselves of the opportunity of enrolment, in the hope of securing easy benefits.

EFFECTS OF UNEMPLOYMENT.

9. The effects of unemployment may be summarised thus :—

- (a) Depletion of the home.
- (b) Removal to a lower-class dwelling.
- (c) Wives forced to find any sort of labour.
- (d) Children neglected, and obliged to become street vendors.
- (e) Men discouraged and rendered hopeless, afraid that the law will deal with them for seeming neglect of their children.

Generally speaking, a lowering effect on character, making them regardless and reckless.

REMEDIES FOR UNEMPLOYMENT.

10. So far as Dundee is concerned, the greater part of unemployment is in connection with the unskilled labourer, and that only for a part of the year.

11. There is likely always to be a sufficient amount of work available, provided the loss which is sure to accrue by the employment of unskilled and unaccustomed hands could be guaranteed.

12. In my opinion, this is the weak point of the Unemployed Workmen's Act. It trusts to this deficiency being made up by voluntary efforts, whereas experience has proved that the general public will not respond.

13. Then again, the burden of making such provision is too heavy to lay on the local taxes, and the Act should be so amended as to provide the necessary funds for its efficient working from imperial sources.

14. It should further be borne in mind that work such as has been provided in Dundee—viz. (a) laying out of new streets, (b) construction of sewers, and (c) stone-breaking—is such as would fall to be done sooner or later in the ordinary way, and to that extent the relief of distress takes away work that would come to the ordinary worker in the natural course of events.

15. Developments on the lines of afforestation or reclamation of land and foreshores would seem to obviate this difficulty.

APPENDIX No. CXXVIII.

STATEMENT OF EVIDENCE BY MR W. H. BLYTH MARTIN, J.P., TOWN CLERK AND CLERK TO THE DISTRESS COMMITTEE, DUNDEE.

1. I am the Town Clerk of Dundee, and have, since its institution, been also the Clerk to the Distress Committee in this city. I am a Justice of Peace for the county of Forfar, and also for the county of the city of Dundee, and I have for many years past taken an interest in all social problems, particularly in those which seem to form the subject of the present inquiry.

UNEMPLOYMENT.

Its Extent.

2. The number of unemployed registered at the Labour Bureau from 31st October 1906 till 22nd March 1907 was 567, classified as follows :—

559 unskilled labourers (1 day to 6 months).
8 tradesmen (1 week to 3 months, all periodic).

3. The number of unemployed registered last year was a little larger than this year, the number registered to April 1906 being 779.

Its Causes.

4. 400 idle from dull trade; 59 idle caused by disputes, re wages, etc.; 100 idle from bad health; 8 slept in and lost their employment. It is difficult to specify the real causes of unemployment.

5. There is abundant outlet for female labour in Dundee in the jute mills and factories, and in this way men who are unwilling to work in certain cases remain idle, living on the earnings of their womenkind. Any loss of work, therefore, by their women relatives results in compelling such men to seek for work, and they are then driven to

enrol at the Bureau. It is to be feared that the drunken habits of certain of the unemployed count to a large extent for their being out of work, and in the case of not a few their indolent roving habits contribute greatly to the want of employment, while others, it must be confessed, are thrown out of work owing to circumstances over which they have no control, and through no fault of their own.

Its Effects.

6. As to the effects of non-employment it is unnecessary to say anything except this: that not only is it very depressing and discouraging so far as the person employed is concerned, but the fact of his being unable, though willing, to earn a livelihood, and to provide for those who may be dependent upon him for support, has a most deleterious effect upon such dependants. The want of employment has also, doubtless, an injurious effect upon the constitution.

Its Remedies: with an especial Reference to the Working and Results of the Unemployed Workmen Act.

7. The Unemployed Workmen Act, 1905, has proved, so far as Dundee is concerned, a most unsatisfactory Act, unworkable and practically a failure. The Act enjoins us to enrol all applicants, and make elaborate inquiry into their circumstances. The difficulty created by the Act is this—that the Distress Committee are only allowed to provide work and pay wages therefor out of voluntary contributions, and as but few voluntary contributions have been received in Dundee, the Distress Committee

APPENDIX No. CXXVIII.—*continued.*

are not in a position to pay wages without receiving a substantial Grant in Aid from Government.

8. It is respectfully suggested that the Unemployed Workmen Act, 1905, should be amended to the following effect:—

(a) That it should be so amended as to give Distress Committees power to pay the wages of the unemployed out of the rates, the rate contribution to be limited as at present.

(b) That it should be so amended as to give Distress Committees compulsory powers to acquire land, subject to the consent of the Local Government Board being obtained.

(c) That vagrants and loafers should be dealt with by the Government establishing penal colonies or otherwise, as such a course, if adopted, would greatly facilitate the work of the Distress Committee.

(d) That powers be extended either to Parish Councils or Distress Committees to relieve temporary distress without pauperising recipients. And

(e) That the record papers for keeping a record of every application required under article vi. of the regulations of 14th November 1905 are far too elaborate, as they contain no fewer than seventeen questions which fall to be answered by each applicant for employment. Experience has proved that the answering of so many questions is obnoxious to many applicants, and that they resent the multiplicity of questions. In Dundee, many of the applicants refuse to answer the questions, and leave the Bureau and never return. The following suggestion may also be worthy of consideration. Although a goodly number of the unemployed are able-bodied men and fit for engaging in such work as street-making and stone-breaking, yet there are doubtless a number who could not tackle such laborious work, but who might manage work requiring less muscular strength. The kind of work the Town Council or Distress Committee provide is not very suitable unless for the strong and able-bodied.

An Account of Municipal Relief Works for Unemployed prior to passing of Unemployed Workmen Act.

9. During the year 1887-8 work was provided for 70 unemployed men at Craigie Quarry. Of this number only about one-half took advantage of the offer. The men were paid at the rate of 1s. 6d. per cubic yard of whinstone broken. In 1892-93 work was offered to 417 persons. Out of that number 299 took advantage of the offer, but 101 of these only continued at work from one to fourteen days, showing that out of the gross number of 417, 198 had taken real advantage of the work provided. In 1895 a register was opened and 206 names were enrolled. The Committee considered the matter, but saw no cause to provide work in the meantime. In March of the same year 188 men were taken on to clear snow off the roads. In 1904-5, 1643 names were registered, 916 cards for work were sent out, and in response thereto 556 men commenced work.

10. The present position of Distress Committees in Scotland cannot continue. It seems absurd that a body of representative men should be called together, instructed to open a register, receive 700 applicants, investigate the applications, and find nearly all applicants deserving and necessitous, and yet, for want of voluntary contributions, be unable to institute any work to assist the applicants. Yet that is the position to-day. The result is that several members of the Dundee Distress Committee have resigned their appointment, and such a contingency as the whole Distress Committee resigning is a perfectly possible one. The Act has, on the one hand, dried up the springs of private benevolence, and, on the other hand, instructed the Committee to provide work with the contributions from private benevolence. The other alternative is for the Distress Committee to go on with the work, looking in faith to the Government repaying them out of some Grant the moneys they have expended. In this way personal responsibility is placed upon members of the Committee, a position which is manifestly wrong.

APPENDIX No. CXXIX.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY MR WILLIAM NICOL, J.P., MEMBER OF GLASGOW TOWN COUNCIL AND OF GLASGOW DISTRESS COMMITTEE.

1. I am a proprietor of lodging-houses in the east end of Glasgow. I am a member of the Corporation of Glasgow, a Justice of the Peace for the County of the City of Glasgow, and a member of the Glasgow Distress Committee. Prior to entering the Town Council I was a member of the Calton Ward Committee for over twenty years, and I have been intimately associated with the east end of the city for the last thirty years.

Prior to the formation of the Distress Committee I was for several years a member of the Corporation Committee on Relief Employment, and in the work of that Committee I took a very deep interest. I have been a member of the Distress Sub-committee on Relief Employment, and in that capacity I have given much valuable time and consideration to the numerous applications brought before me.

2. *Numbers and Classes of Men out of Work.*—Statements have already been furnished to the Secretary of the Commission, relative to the number of applications received from Glasgow this year and last, and I am prepared to speak with reference to these.

3. It is undoubtedly the case that, for several years back—I am speaking both as a member of the Corporation Relief Committee and also as a member of the Distress Committee—the proportion of skilled labourers who made application to participate in the relief work was very small: 15% would, I think, be a liberal estimate of applications from skilled labourers in each year, received during the three years prior to the present. For reasons which can be more fully explained under examination, I am prepared to state that the proportion of skilled labourers applying for relief has considerably increased during the past year.

4. A large proportion of the cases dealt with during the

last few years would, to my mind, be met with in almost any set of circumstances, provided relief works were opened by a Local Authority. It was the painful experience of myself and my colleagues who sat day after day investigating these applications, that we had numerous applications from men who had not worked a single hour between the closing of the relief work one winter and its opening the next.

5. From the foregoing it will be seen that I consider a certain proportion of the applicants come under what we might term the "chronic" class of unemployed, and this, I think, preponderates over the "periodic" class.

6. *Causes.*—Recent legislation—*i.e.*, the Workmen's Compensation Act—has undoubtedly largely contributed to the congested state of the labour market. Numerous illustrations which have come under my own notice can be given.

7. *Effects.*—The effects of unemployment are:—a general and very marked deterioration of the lower working classes, socially, physically, and morally; a growing feeling of unrest and dissatisfaction with surroundings; and a desire to emigrate. With regard to emigration: Selection Committees naturally send out the best specimens of the class coming before them, so that there is left a substratum of the mentally, morally, and physically degenerate.

8. *Remedies.*—With regard to the remedy, I am strongly of opinion that the establishment of labour colonies, both voluntary and penal, would go a long way towards the settlement of this question. At the same time, I recognise that there must always be a remnant which will be in-different and beyond the reach of ameliorating influences.

9. The opening up of large tracts of land for fruit and vegetable cultivation would, to my mind, go a long way towards a solution of this difficult problem.

APPENDIX No. CXXX.

STATEMENT AS TO UNEMPLOYMENT BY MR PETER REID, J.P., MEMBER OF DUNDEE SCHOOL BOARD.

1. I am a working printer and Trade Unionist of upwards of thirty years' standing. Was for four years President of Dundee Branch of Scottish Typographical Association, occupied a seat on the local Board of Management for a much longer period, and was recently elected the representative of a group of branches on the Central Executive at Glasgow. Was a member of Dundee Trades Council for fourteen years, during five of which I held the position of Secretary and for four years that of President, and also represented that body on the Dundee Technical Institute Committee. Am at present a member of Dundee School Board, and was for two years one of the representatives of the municipal ratepayers on Dundee Harbour Board. Am a Justice of the Peace for the County of the City of Dundee, and may be presumed to have some little knowledge of the state of employment in the city.

UNEMPLOYMENT.

2. *Its Causes.*—In Dundee, as in other communities, within recent years improved machinery and other labour-saving appliances have been largely introduced, thereby displacing various classes of workmen. In the building trades, for instance, considerably fewer masons (hewers chiefly) are required than formerly, owing to the stones being now dressed and prepared at the quarries and brought to the jobs merely to be placed in position. As in the building, so in other trades. In the staple industry, viz. jute manufactures, the system which prevails in the mills and factories is, in my view, largely responsible for increasing the unemployed list. Young lads after leaving school are attracted to that class of work by the comparatively high wages they receive to begin with. After several years, however, in the majority of cases—of course, there are exceptions: in the jute, as in other industries, ability

generally counts—they have either to be content with, for a man, a very small wage, or give place to the younger lads, when they go to swell the ranks of unskilled labour. The employment of married women in this industry is another contributory cause and one which will be very difficult to get rid of. They are employed to such an extent at present that their withdrawal would probably for a time seriously dislocate the industry.

3. *Its Effects.*—In Dundee the effects of unemployment are precisely the same as in other cities, whether the trouble be periodic or chronic. In the one case, the out-of-work is tided over the idle periods by other members of his family in employment, or, after his own little store (if he has one) is exhausted, is indebted to friends for assistance, and, of course, gets into debt. Beyond this, generally speaking, nothing worse happens than the miserable feeling one has who is willing and anxious to work, but cannot obtain it. In the case of the chronic out-of-work it not infrequently happens that he loses all desire for work and drifts into the "loafer."

4. *Its Remedies.*—A certain amount of good has resulted from the operation of the Unemployed Workmen's Act in the establishment of the Distress Committee of the Labour Bureau and the keeping of a register of those out of employment, and in endeavouring as far as possible to obtain work for them. Practically that is all. It is true, a proportion were found employment, at roadmaking principally. A great deal more, however, is necessary, to meet the wants of the case. Turning the unemployed into farm-workers is a remedy I favour. The establishment of a Farm Colony on similar lines to those of some of the Salvation Army would, in my opinion, materially help towards a solution of the unemployed question.

APPENDIX No. CXXXI.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY SIR CHARLES BINE RENSHAW, BART., BAROCHAN, HOUSTON (RENFREWSHIRE).

1. I have been engaged in business as a manufacturer in this county for nearly forty years, and during that period have been Chairman of a large School Board in the County, and a member of the County Council since 1889, and for many years I have farmed a considerable acreage of land. For fourteen years I represented the Western Division of the county of Renfrew in Parliament. I have therefore had special opportunities of knowing what the conditions in respect of employment have been, not only in the county itself but in the burghs situated within it. During the period I can speak of there has been a great increase in the population and wealth of the county and of the burghs within it, a substantial evidence of the latter being the fact that Glasgow, Paisley, Greenock, and Johnstone are all at this moment seeking to extend their boundaries.

2. General employment has been and is good throughout the county, and the condition and wellbeing of the working classes has greatly improved. This is largely due to the varied industries of the county and to the fact that any temporary or seasonal depression in one industry is frequently accompanied by expansion in others. The shipbuilding trade is one which has been subject to perhaps the most violent fluctuations, but this seems to be the case with this trade generally, owing to special causes which affect the demand for new steamers and ships, and the fact that comparatively few of those engaged in the industry build ships except against actual orders.

3. Overtime is worked in some industries, especially in the works engaged in making machines and tools, but this is mostly periodic, and the men engaged in the work possess special aptitude and qualifications which it would be impossible to find in casual labour.

4. There has been no general "unemployment" in the

county except such as is and must be due to the causes to which I have referred and to seasonal demand, or the effect of weather on such an industry as the building trade, in respect of which, however, the wages paid are high relatively to other trades, and with ordinary care in the busy months provision can be made, and is made by some, to tide over the periods during which work cannot be done.

5. As far as I am aware, the Unemployed Workmen's Act, 1905, has never been availed of anywhere in this district except in Glasgow, but no doubt if severe depression occurred now in such a trade as shipbuilding, recourse would be had to its provisions. In regard to this Act, I think there is a danger that if in the future employers of labour found a charge made on them under the provisions of the Act, or any considerable extension of the application of rates to the relief of "want of employment," that they would be less disposed to do what many do now, viz., work for stock during periods of depression in order to keep their workpeople employed. There is always a certain amount of risk in working for stock, as the particular class of goods or machinery made may not be in demand in a subsequent season, and it is more costly to make for stock, as it involves storage, loss of interest, etc.; and if employers who do their best in this way at present found they had also to help the unemployed of other industries, they might very possibly argue that their own employees should be equally assisted from the common fund—and in this way the number of unemployed might be largely augmented.

6. I think the establishment and support of labour bureaux, and assistance in migrating labour from localities where demand has slackened or ceased to exist to localities where it is wanted, is most valuable. Great local changes do take place. In this county at the early part of last

APPENDIX No. CXXXI.—*continued.*

century there were a great number of mills engaged in spinning cotton yarns, and many hands were employed. The last of these mills in the county has now ceased to work, and the industry has passed to Lancashire. In Paisley between 1839-41, I think, owing to a failure in the demand for a certain class of shawls made there, there was a period of great want and suffering which formed the subject of a Parliamentary inquiry. The trade in twisting cotton thread and many other industries are now most prosperous in Paisley, and from its bankrupt condition at the date to which I have referred it has become one of the wealthiest towns in Scotland, having regard to its population and area.

7. Industries must sometimes suffer from changing conditions of markets, from changes of fashion, and sometimes from the entire cessation of demand for particular articles, and everything that facilitates the rapid movement of those engaged in decadent industries to newer and more vigorous centres of industry must be valuable.

8. In regard to agricultural labour, there is difficulty in

some parts of this county in finding sufficient summer labourers, and casual and migratory labour from Ireland finds employment. In the autumn and winter months men engaged in field work in spring and summer could many of them find employment in thatching, draining, mole catching, dyke building, hedging, etc., if they were qualified, if there was only some central or co-operative system established by which this most necessary labour could be instructed and organised. If young men had some prospect of continuous employment which such a system would render possible, I believe they would more readily engage in agricultural work, which is more healthy and much less monotonous than much of the work in foundries or mills.

9. On this subject, however, it must not be overlooked that the long continuance of a high rate of income-tax and the severity of the death duties on owners of landed property militate against the employment of as large an amount of labour in estate management as used to be the case.

APPENDIX No. CXXXII.

STATEMENT OF EVIDENCE BY CAPTAIN W. H. SHINGLER, SUPERINTENDENT,
CHURCH ARMY LABOUR HOME, EDINBURGH.

1. I have been connected with the social work of the Church Army in different parts of the United Kingdom for the last nineteen years, and what I may say on this matter will be from personal contact with the unemployed and also the unemployable. The information which I have got has been what I have gathered from the men themselves, when asking them the cause of their present state.

EXTENT OF UNEMPLOYMENT.

2. At the present time there are fifteen hundred unemployed men on the register.

3. The great majority of them are of the labouring class; a certain percentage of them will rank as unemployable.

4. In reference to the extent of overtime that is being made, from what I can gather it is only in cases of breakdowns or in urgent cases.

CAUSES OF UNEMPLOYMENT.

5. Its causes are many:—a great number of men are out of employment through their own fault; through drink; some through laziness; some men prefer temporary labour.

6. But one of its chief causes, I think, is that the working men do not consume their fair share of manufactured goods—that is, in proportion to their income.

7. They prefer to squander their money rather than purchase clothing, food, and other comforts of life, which would create labour for their fellow-workmen.

8. To a great extent they are producers, and not consumers.

EFFECTS OF UNEMPLOYMENT.

9. This greatly depends upon the man himself, as its effects are many.

10. Upon a *bona fide* unemployed man the effects are very depressing. I have known one or two cases where the worry and the trouble have brought about a physical breakdown.

11. In other cases the men have become chronic loafers, taking to drink and other vices, and in some cases entirely depend upon the labours of their wives.

REMEDIES FOR UNEMPLOYMENT.

12. I consider that the remedy is in the hands of the working men themselves and not with the Government.

13. One of the reasons of the present state of things is the deliberate waste of money, private and public.

14. On the list of the submerged tenth we find a large percentage of ex-soldiers, pensioners, and reserve men. In many cases, owing to the pension and the reserve money being paid quarterly, in twenty-four hours after receiving the pension the men are again penniless, and live on the general public for the next three months.

15. I think if arrangements could be made whereby these men, from the rank of sergeant down to private, could receive their pension and reserve money weekly, they would have a little each week to live on. More than one ex-soldier and reserve man have told me they wished they could draw their money weekly. There would not then be the same temptation for them to give way to their quarterly bout of drinking, which causes them in many cases to lose their situations, and to find themselves in the hands of the law. If this could be done I feel sure it would save thousands of our ex-soldiers and reserve men from want.

16. Another thing that I think we want is a distinction between the unemployed and the unemployable.

17. Further, all unemployed men that are found work by the Unemployed Committee ought to be compelled to show the same result of labour as if working for a private employer. Otherwise these men would prefer to work for the Distress Committee, although they may earn sixpence or one shilling per day less. If that rule was enforced there would be fewer applicants for relief work. The value of the work done by the unemployed was variously estimated by the Town Councils. In Glasgow, the total amount of the wages paid up to 15th May 1906 was £3634, 17s. 2d. The value of the work done was estimated by the Corporation at £1114, 4s. 4d., leaving £2520, 12s. 10d. to be paid by the Distress Committee. In Edinburgh the Distress Committee paid to the Corporation a sum of £1391, 7s. 6d., the total wages paid being £2927, 6s. 3d. In other words, the Glasgow Distress Committee paid 69·3 per cent. of the total wage bill, and the Edinburgh Distress Committee 47·5 per cent. In one instance the local authority appear to have been satisfied with the value of the labour given and paid the wages in full, making no claim on the Distress Committee.

18. In reference to the unemployable, nothing can be done for these men until the Government steps in and establishes a Penal Colony, where they can be detained and compelled to work until such time as they have proved themselves willing to support themselves and their dependants by their own industry. This includes women as well as men.

19. They would then become consumers as well as producers.

APPENDIX No. CXXXIII.

STATEMENT OF EVIDENCE BY PROFESSOR SIME, UNIVERSITY COLLEGE, DUNDEE.

1. The concrete problems of political and social organisation have a genuine interest for me; and in particular, for personal reasons, I have been brought closely in touch with the questions of employment and the conditions of the workers in our local industries.

2. At the present time the problem of unemployment is not a serious one. The jute and linen trades—our *main* industries—are enjoying a period of unparalleled prosperity. No machinery is idle, and several works which had been closed down have been re-started. Workers are being paid much higher wages than formerly. If any difficulty exists, it is that the employers cannot always rely on the regularity of their people. In this connection, it is suggestive that since the recent increase in wages irregularity of attendance has been more noticeable. I have heard several complaints on this point from employers.

3. It is, however, generally recognised that there is an element of serious danger in our industrial situation. Dundee is pre-eminently a city of one trade, and periods of depression, such as occurred in, *e.g.*, 1893-4, cause suffering of a very widespread character. From the report of the Dundee Charity Organisation Society (which, I understand, will be laid before your Commissioners), it will be noticed that the condition of the *jute* industry is strikingly reflected in the annual summaries. There has been much talk about the introduction of new industries, but, with the exception of the establishment of a linoleum factory, nothing has, so far, been done.

4. Those out of work at present are mainly unskilled labourers; the secretary of the Labour Home estimates

that these form 90 per cent. of the total. The general opinion is that a large proportion of these men prefer *not* to work; they are the usual parasites of society, and nothing short of sheer compulsion by the State would induce them to earn their livelihood by honest labour. The officials of the Charity Organisation Society report that work offered has been refused;—a *free* meal is always welcome! One characteristic of our local industry encourages this type of man. The women engaged in spinning and weaving receive a good wage; it is suggestive that a large proportion are married.

5. Apart from the usual causes of unemployment—trade depression, shiftlessness, drunkenness—there is a special reason why, in Dundee, there should always be a large number of unskilled workers out of employment. Much of the work in the mills can be done by boys; they are at first paid a higher wage than is earned by apprentices learning a skilled trade. They are tempted—their circumstances may compel them—to take what is for the moment more lucrative work. But there is no career before them, and ultimately they are ousted by younger workers. This difficulty is inherent in the conditions of our industry, and it is hard to see how it can be met. Nothing short of removing from such work the attractions of a higher wage, and the introduction of new or extension of existing industries involving skilled labour, will save the situation.

6. As to the general question of remedies in periods of depression, I understand that the local authorities are submitting to your Commission a report of the relief work carried on by them.

APPENDIX No. CXXXIV.

STATEMENT OF EVIDENCE BY MR ROBERT STIRTON, DUNDEE.

1. My only qualification for submitting a statement to you lies in the fact that I am a workman of forty years' experience, with some powers of observation. I am, however, no Gradgrind or statistician, and give you no references as you seek—persons, institutions, or documents,—so you must just take my replies to your inquiries at their face value. If they are of any use to you, I shall be glad; if not, there is no harm done.

EXTENT OF UNEMPLOYMENT.

2. During the last six years about 40 per cent. fewer men have been employed in the building trades of this district than during the six years previous to that time. Emigration may have disposed of one half of this number, one quarter may have fallen back on lower paid jobs in public works or foundries, and the rest intermittently employed.

3. The above refers to artisans or tradesmen; but labourers are similarly affected, and with less power of adaptation. Very few of them are able to emigrate, so the proportion of unemployed amongst them in times of periodic distress is much greater than amongst tradesmen.

CAUSES OF UNEMPLOYMENT.

4. The causes of unemployment (still speaking with special reference to the building trades) are mainly, I think, economic. Cheap money tempts men to speculate in building, a boom in which may last over five years. During this time many young men rush to learn the trade, to find that, when they have finished their apprenticeship, the boom is over, and no work for them to do in the particular branch for which they have fitted themselves, and much suffering and loss is entailed on them before they can adapt themselves to some other kind of work.

5. One feature of the problem is increasingly obvious, *viz.* that this power of adaptation becomes daily more difficult, and that a condition of unemployment tends more and more to become chronic; for during the last three

years, while the gross trade returns have been unprecedented for magnitude, the unemployed have been with us all the time in ever-increasing numbers.

6. The fact is, that in *every branch of industry* men are being displaced by machinery, which is continually being improved upon and made more effective, more productive, and worked as long hours as before, often by women and children, with the inevitable consequence that men must stand idly by, as there is little chance of adaptation in other directions when every industry has numbers of its skilled hands unemployed.

EFFECTS OF UNEMPLOYMENT.

7. The effect of this state of things is to reduce the rate of wages, through excessive competition for the opportunity to work, which in turn so affects the spending power of the mass of the people that home trade generally suffers. Capital absorbs *all* the advantages accruing from the use of improved machinery, labour and internal trade suffering loss.

REMEDIES FOR UNEMPLOYMENT.

8. While our commercial system is run on its present lines, it would seem that remedies are vain to seek. The Unemployed Workmen's Act is only a palliative of a very indifferent kind, offering only the roughest kind of work to men in many cases entirely unfit to perform it, and costing more than it would do in the regular way of contract, in spite of the fact that the men receive less for their work per hour. It is good so far as it, in a way, admits that men belonging to a country or nation are entitled to an opportunity of earning a living in their country, but it provides no adequate means for supplying this opportunity, and it is my opinion that, while the present system of land monopoly and trust and company monopoly continues, the rich are bound to become richer and the poor poorer, and the unemployed will, in spite of all efforts, continue to increase.

APPENDIX No. CXXXV.

STATEMENT OF EVIDENCE AS TO UNEMPLOYMENT, BY MR W. S. WORKMAN, GLASGOW.

1. I may say I have been a member of the firm of George Smith & Sons, of the City Line of Steamers to India, for over thirty years. Since 1901 we have been our own stevedores.

2. In the year 1894 we came to the conclusion it was in the interest of the line to employ Lascars in our fleet, as we found the British seaman most unreliable and unsatisfactory, principally through drink, and we have had no reason to regret the change. Of course our officers and quartermasters are British.

3. In connection with social work, I have come across the working-men in their homes, and know something of their difficulties and trials.

4. On board ship we could hardly wish a happier state of matters than at present exists, as we find everyone most interested in their work, the greatest harmony and loyalty prevails, and there is a disposition to remain in the Line.

5. In the stevedoring department the problem is a much more difficult one. At times, generally lasting only a few days and nights, we will employ five hundred hands, at other times we may only have the permanent staff of, say, twenty men employed.

6. Taking the whole year round, we give employment to about two hundred men per week.

7. The effect of such work is rather demoralising, and in some cases utterly bad, for a man may earn in two or three days and nights as much as will keep him for a week, and if he is disposed to be lazy, will not return to work until he has spent it all. Even a steady man must find it very difficult to regulate his household expenses, where he may be earning, say, £2 one week, and almost nothing the next. Again, it is very disheartening for the dock labourer to be hanging about doing nothing, or, in his anxiety to provide for his family, visiting one berth after another in the hope of finding employment, only to receive a rebuff, and perhaps to discover later in the day that had he remained where he first was he would have got a job.

8. No shipowner or stevedore could afford to keep a staff sufficiently large to meet all circumstances; and even with a regular line, the amount of work is so uncertain that what might be ample one week would be much too little the next.

9. As far as casual labour, such as stevedoring, is concerned, it would seem that what is wanted is, say, three or four bureaus (with perhaps a suitable place attached in which the men could rest) in a city like Glasgow, with telephonic connections with leading centres of work, so that the necessary men could be secured with the least possible delay.

10. The danger of this is, of course, the risk of the men spending their time in gambling or other amusements, and not being disposed to go off to work at a moment's notice on a job that is maybe not very inviting.

11. If the scheme, however, were under careful management, I can believe it would be worth the trial.

12. The working of the Acts relative to compensation to workmen is undoubtedly doing harm, as far as I have seen in connection with our own men. We naturally have covered our risk by insurance, and the company, as naturally, pay small claims rather than incur the heavy expense of defending a case in Court, even should the claim be absolutely unjustifiable. The result is, that for the most trifling damage, to which before the passing of the Acts no attention would have been paid, he knocks off work, and probably receives sufficient compensation to keep him idle for a week. This is not only demoralising to the men, but does not encourage that harmony which should exist between employer and employed.

13. There are men about the docks who make their living by acquainting lawyers of accidents.

14. With reference to young lads and girls, the Government might appoint some individual or board to guide the parents in providing suitable employment for them.

15. With our present system of compulsory education, the parents have little hold on their children up to fourteen, and by that time they have lost control or possibly interest in their training. After fourteen they become wage-earners, and soon treat their home merely as a lodging, paying so much for their board.

16. The effect of this want of parental control between the ages of fourteen and twenty-one is a great loss to the community in moral training, and something ought to be done to secure the interest of these young people between these ages in such pastimes as will materially benefit them, both morally and physically.

ROYAL COMMISSION ON THE POOR LAWS AND RELIEF OF DISTRESS.

LIST OF APPENDIX VOLUMES TO THE REPORTS OF THE POOR LAW COMMISSION FOR ENGLAND AND WALES, SCOTLAND, AND IRELAND.

APPENDIX VOL. I.—ENGLISH OFFICIAL EVIDENCE.

Minutes of Evidence mainly of the Officers of the Local Government Board for England and Wales. 1st to 34th Days: 8th January to 22nd May, 1906: Questions 1 to 14,880.

APPENDIX VOL. I. A.—ENGLISH OFFICIAL EVIDENCE.

Appendices to the Minutes of Evidence included in Vol. I., being mainly the evidence of the Officers of the Local Government Board for England and Wales.

APPENDIX VOL. I. B.—INDEX.

Index to Appendix Vols. I. and I. A.

APPENDIX VOL. II.—LONDON EVIDENCE.

Minutes of Evidence (with Appendices) mainly of London witnesses. 35th to 48th Days: 28th May to 23rd July, 1906: Questions 14,881 to 24,739.

APPENDIX VOL. II. A.—INDEX.

Index to Appendix Vol. II.

APPENDIX VOL. III.—ASSOCIATIONS AND CRITICS.

Minutes of Evidence (with Appendices) mainly of critics of the Poor Law and of witnesses representing Poor Law and Charitable Associations. 49th to 71st Days: 1st October to 17th December, 1906: Questions 24,740 to 35,450.

APPENDIX VOL. III. A.—INDEX.

Index to Appendix Vol. III.

APPENDIX VOL. IV.—URBAN CENTRES.—LIVERPOOL, MANCHESTER, WEST YORKS, AND MIDLANDS.

Minutes of Evidence (with Appendices) containing the oral and written evidence of the British Medical Association and of witnesses from the following provincial urban centres—Liverpool and Manchester districts, West Yorkshire, Midland Towns. 72nd to 89th Days: 14th January to 26th March, 1907: Questions 35,451 to 48,347.

APPENDIX VOL. IV. A.—INDEX.

Index to Appendix Vol. IV.

APPENDIX VOL. V.—URBAN CENTRES.—SOUTH WALES AND NORTH EASTERN COUNTIES.

Minutes of Evidence (with Appendices) containing the oral and written evidence of witnesses from urban centres in the following districts:—South Wales and North Eastern Counties, 90th to 94th Days: 15th April to 30th April, 1907: Questions 48,348 to 53,067.

APPENDIX VOL. V. A.—INDEX.

Index to Appendix Vol V.

APPENDIX VOL. VI.—SCOTLAND.

Minutes of Evidence (with Appendices) relating to Scotland. 95th to 110th Days, and 139th and 149th Days: 6th May to 21st June, 1907, and 13th January and 2nd March, 1908: Questions 53,068 to 67,565; 88,667 to 89,046; 94,629 to 95,323.

APPENDIX VOL. VI. A.—INDEX.

Index to Appendix Vol. VI.

APPENDIX VOL. VII.—RURAL CENTRES.—FRIENDLY SOCIETIES, ETC.

Minutes of Evidence (with Appendices) containing the oral and written evidence of witnesses from various rural centres in the South Western, Western, and Eastern Counties, from the Parish of Poplar Borough and from the National Conference of Friendly Societies. 111th to 122nd Days: 9th July to 7th October, 1907: Questions 67,566 to 77,734.

APPENDIX VOL. VII. A.—INDEX.

Index to Appendix Vol. VII.

APPENDIX VOL. VIII.—UNEMPLOYMENT.

Minutes of Evidence (with Appendices) containing the oral and written evidence of witnesses relating chiefly to the subject of "Unemployment." 123rd to 138th Days: 14th October to 10th December, 1907: Questions 77,735 to 88,666.

APPENDIX VOL. VIII. A.—INDEX.

Index to Appendix Vol. VIII.

APPENDIX VOL. IX.—UNEMPLOYMENT.

Minutes of Evidence (with Appendices) containing the oral and written evidence of further witnesses relating to the subject of Unemployment, etc. 140th to 148th Days: 150th to 156th Days, and 158th Day: 14th January, 1908, to 11th May, 1908. Questions 89,048 to 94,628; 95,324 to 99,350; 100,020 to 100,590.

APPENDIX VOL. IX. A.—INDEX.

Index to Appendix Vol. IX.

APPENDIX VOL. X.—IRELAND.

Minutes of Evidence (with Appendices) relating to Ireland. 157th and 159th Days: 25th April and 12th May, 1908: Questions 99,351 to 100,019; 100,591 to 100,928.

APPENDIX VOL. X. A.—INDEX.

Index to Appendix Vol. X.

APPENDIX VOL. XI.—MISCELLANEOUS.

Miscellaneous Papers. Communications from Boards of Guardians and Others, etc., etc.

APPENDIX VOL. XII.—COMMISSIONERS' MEMORANDA.

Reports, Memoranda, and Tables prepared by certain of the Commissioners.

APPENDIX VOL. XIII.—DIOCESAN REPORTS.

Diocesan Reports on the Methods of administering Charitable Assistance and the extent and intensity of Poverty in England and Wales.

APPENDIX VOL. XIV.—INVESTIGATORS' REPORTS.—MEDICAL RELIEF.

Report on the Methods and Results of the present system of administering Indoor and Outdoor Poor Law Medical Relief in certain Unions in England and Wales, by Dr. McVail.

APPENDIX VOL. XV.—INVESTIGATORS' REPORTS.—CHARITY.

Report on the Administrative Relation of Charity and the Poor Law, and the extent and the actual and potential utility of Endowed and Voluntary Charities in England and Scotland, by Mr. A. C. Kay and Mr. H. V. Toynbee.

APPENDIX VOL. XVI.—INVESTIGATORS' REPORTS.—INDUSTRIAL AND SANITARY CONDITIONS.

Reports on the Relation of Industrial and Sanitary Conditions to Pauperism, by Mr. Steel Maitland and Miss R. E. Squire.

APPENDIX VOL. XVII.—INVESTIGATORS' REPORTS.—OUT-RELIEF AND WAGES.

Reports on the effect of Outdoor Relief on Wages, and the Conditions of Employment, by Mr. Thomas Jones and Miss Williams.

APPENDIX VOL. XVIII.—INVESTIGATORS' REPORTS.—CHILDREN : ENGLAND AND WALES.

Report on the condition of the Children who are in receipt of the various forms of Poor Law Relief in certain Unions in London and in the Provinces, by Dr. Ethel Williams and Miss Longman and Miss Phillips.

APPENDIX VOL. XIX.—INVESTIGATORS' REPORTS.—UNEMPLOYMENT : ENGLAND AND WALES.

Report on the Effects of Employment or Assistance given to the Unemployed since 1886 as a means of relieving Distress outside the Poor Law in London, and generally throughout England and Wales, by Mr. Cyril Jackson and the Rev. J. C. Pringle.

APPENDIX VOL. XIX. A.—INVESTIGATORS' REPORTS.—UNEMPLOYMENT : SCOTLAND.

Report on the Effects of Employment or Assistance given to the Unemployed since 1886 as a means of relieving Distress outside the Poor Law in Scotland, by the Rev. J. C. Pringle.

APPENDIX VOL. XIX. B.—INVESTIGATORS' REPORTS.—UNEMPLOYMENT : IRELAND.

Report on the Effects of Employment or Assistance given to the Unemployed since 1886 as a means of relieving Distress outside the Poor Law in Ireland, by Mr. Cyril Jackson.

APPENDIX VOL. XX.—INVESTIGATORS' REPORTS.—BOY LABOUR.

Report on Boy Labour in London and certain other Typical Towns, by Mr. Cyril Jackson, with a Memorandum from the General Post Office on the Conditions of Employment of Telegraph Messengers.

APPENDIX VOL. XXI.—INVESTIGATORS' REPORTS.—REFUSAL OF OUT-RELIEF.

Reports on the Effect of the Refusal of Out-relief on the Applicants for such Relief, by Miss G. Harlock.

APPENDIX VOL. XXII.—INVESTIGATORS' REPORTS.—OVERLAPPING OF MEDICAL RELIEF IN LONDON.

Report on the Overlapping of the Work of the Voluntary General Hospitals with that of Poor Law Medical Relief in certain districts of London, by Miss N. B. Roberts.

APPENDIX VOL. XXIII.—INVESTIGATORS' REPORTS.—CHILDREN : SCOTLAND.

Report on the Condition of the Children who are in receipt of the various forms of Poor Law Relief in certain parishes in Scotland, by Dr. C. T. Parsons and Miss Longman and Miss Phillips.

APPENDIX VOL. XXIV.—INVESTIGATORS' REPORTS.—ABLE-BODIED AND "ORDINARY" PAUPERS IN ENGLAND AND SCOTLAND.

Report on a Comparison of the Physical Condition of "Ordinary" Paupers in certain Scottish Poorhouses with that of the Able-bodied Paupers in certain English Workhouses and Labour Yards, by Dr. C. T. Parsons.

APPENDIX VOL. XXV.—STATISTICAL.

Statistical Memoranda and Tables relating to England and Wales, prepared by the Staff of the Commission and by Government Departments, and Others, and Actuarial Reports.

APPENDIX VOL. XXVI.—CHARITIES.

Documents relating more especially to the Administration of Charities.

APPENDIX VOL. XXVII.—REPLIES OF DISTRESS COMMITTEES.

Replies by Distress Committees in England and Wales to Questions circulated on the subject of the Unemployed Workmen Act, 1905.

APPENDIX VOL. XXVIII.—VISITS.

Reports of Visits to Poor Law and Charitable Institutions and to Meetings of Local Authorities in the United Kingdom.

APPENDIX VOL. XXIX.—REPORT BY GENERAL ASSEMBLY OF CHURCH OF SCOTLAND.

Report on the Methods of Administering Charitable Assistance and the extent and intensity of Poverty in Scotland, prepared by the Committee on Church Interests appointed by the General Assembly of the Church of Scotland.

APPENDIX VOL. XXX.—SCOTLAND.

Documents relating specially to Scotland.

APPENDIX VOL. XXXI.—IRELAND.

Statistical Memoranda and Tables relating to Ireland, etc.

APPENDIX VOL. XXXII.—FOREIGN LABOUR COLONIES COMMITTEE.

Report on Visits paid by the Foreign Labour Colonies Committee of the Commission to certain Institutions in Holland, Belgium, Germany, and Switzerland.

APPENDIX VOL. XXXIII.—FOREIGN POOR RELIEF SYSTEMS.

Foreign and Colonial Systems of Poor Relief, with a Memorandum on the Relief of Famines in India.

APPENDIX VOL. XXXIV.—LIST OF WITNESSES.

Alphabetical Lists of Oral and Non-oral Witnesses.
